The crop year for sugar begins on August 1st. and ends on July 31st. of the following year. The total output of the factories for 1913–14 amounted to 249,703 tons of sugar out of which 241,990 were exported. With the exception of the crop for 1909–10, this is the largest crop the island has produced. The conditions during crop-time were favourable and the juices were of high quality and easy of manipulation.

The average selling price as determined by the Department of Agriculture was approximately Rs. 6.95 per 50 kilos giving to the crop a monetary value of 34.7 millions of rupees and, on the assumption that the cost of producing 50 kilos of sugar is about Rs. 5.50, leaving a profit of over seven millions rupees. The average selling price was about Rs. 7.00 in 1912–13, the highest price recorded for the last nine years being Rs. 9.71 in 1904–05, and the lowest Rs. 6.60 in 1906–07.

The weight and monetary value of the crop for the last 5 years is shown below :—

Years.	Total Produce Tons.	Monetary value unit Rs. 1,000,000.
—	—	—
1909–10	252,000	42.5
1910–11	222,830	31.6
1911–12	169,550	32.9
1912–13	213,059	29.8
1913–14	249,703	34.7

Considerable activity took place during the year towards the further improvement of the machinery of the sugar factories.

Ten new boilers were installed in the furnaces of the factories, economizers were increased by two, and two " secheries " or bagasse driers were dispensed with. Defecators have been increased by 44 and settling tanks reduced by 31. In the crystallizing sections of the factories large improvements have been made.

Nine additional vacuum pans have been erected and 103 new crystallizers-in-motion installed. Thirty-five centrifugals of the Weston type were installed during the year and further economies in labour resulted thereby.

ALOES.

The fibre industry is, after sugar, the most important agricultural industry of the Colony. The fibre is obtained almost entirely from forms of *Furcraea Gigantea* which are now to be found growing in practically all the Districts of the Island. The area under aloes is estimated at 20,000 arpents (1 arpent = 1.043 acre).

In 1913 there were 42 factories in operation. They are small ones, their individual output ranging from 50 to 100 tons a year.

The following figures show the exports of aloe fibre and their value for the last 5 years :—

	Metric tons.	Rs.
1909	1878.6	530,700
1910	2021.2	627,495
1911	2129.3	600,495
1912	2249.0	681,975
1913	2912.7	853,575

TEA.

The area under tea cultivation is increasing slowly. Some new plantations were made during the year. The crop was a large one and a slight reduction in price has resulted. The locally grown tea is almost entirely disposed of on local markets and the demand is limited.

VANILLA.

The prices for vanilla were satisfactory during the year and some new plantations have been made. Vanilla disease is prevalent in some localities, but it appears to be probable that if this disease is kept in check some further plantings of vanilla may be expected.

LIVE STOCK.

Data relating to stock on sugar estates show that there has been an increase of 3,608 head of horned stock, the number of animals for 1913 and 1912 being 22,141 and 18,533 respectively. This increase is partly accounted for by the fact that surra has not recently been so prevalent as in some former years, partly because implemental tillage is increasing on sugar estates, and partly by reason of the fact that Indians resident on sugar-estates are encouraged to keep cows in order that the estate may readily obtain its supplies of farmyard manure. The number of goats was 8,925 compared with 5,571 in 1912.

PRICES OF ARTICLES OF CONSUMPTION.

The prices of many articles of consumption have generally increased during the year. A large increase took place in the prices of rice by reason of the shortage of the Indian crop, and the price of coffee was considerably above normal.

CO-OPERATIVE CREDIT SOCIETIES.

Ordinance No. 4 of 1913 which was promulgated on the 19th. of November of the same year, provides for the constitution and control of Co-operative Credit Societies with the object of encouraging thrift, self-help and co-operation among agriculturists, artisans and persons of limited means. At the end of 1913 eleven societies had been registered under the provisions of that Ordinance with a total membership of over 1,000 and a capital of about Rs. 20,000.

Shipping.

The following comparative tables show the number, tonnage and nationality of ships entered and cleared during the years 1912 and 1913.

Nationality.	1912.						1913.					
	Steam vessels.		Sailing vessels.		Total.		Steam vessels.		Sailing vessels.		Total.	
	No.	Tons.	No.	Tons.	No.	Tons.	No.	Tons.	No.	Tons.	No.	Tons.

Total cleared ...	148	377,810	36	10,024	184	387,834	170	407,028	27	8,380	197	415,408

These tables show that 197 vessels with a tonnage of 417,619 reported during the year against 187 with a tonnage of 385,258 in the previous year, giving a total increase of 10 in the number of vessels and of 32,361 in tonnage. 197 vessels with a tonnage of 415,408 cleared as against 184 with a tonnage of 387,834 in the previous year, showing an increase of 13 vessels and of 27,574 in tonnage.

The increase in the number reported is divided between those reporting with cargo and those reporting in ballast as follows :

Reported with cargo	2	tonnage	30,499
„ „ ballast	8	„	1,862
	10		32,361

The clearances show an increase of 13 vessels and of 27,574 in tonnage. Divided between vessels cleared with cargo and vessels cleared in ballast, the figures are as follows :

Cleared with cargo	– 4	tonnage	9,801
„ „ ballast	+17	„	17,773
	+13		27,574

Distinguishing steam vessels from sailing vessels there has been a decrease of 23 in the number reporting and of 35,779 in tonnage as compared with the previous year and an increase of 22 in the number cleared and of 29,218 in tonnage. The number of steamers reporting with cargo is 13 more than in the previous year with an increase of 33,863 in tonnage, and the number of steamers reporting with ballast is 10 more than in the previous year with an increase of 1,916 in tonnage. Four more steamers cleared with cargo than in the previous year with a corresponding increase of 10,033 in tonnage ; the number of steamers clearing in ballast was greater by 18 with a corresponding increase of 19,185 in tonnage.

The number of sailing vessels reporting with cargo, was less by 11 with a corresponding decrease of 3,364 in tonnage, the number of those reporting in ballast was less by 2 with a corresponding decrease of 54 in tonnage. There was a decrease of 8 in the number of sailing vessels cleared with cargo with a corresponding decrease of 232 in tonnage ; the number of sailing vessels cleared with ballast was less by 1 with a corresponding decrease of 1,412 in tonnage.

III.—LEGISLATION.

The following are the most important legislative measures of the year :—

The Co-operative Credit Societies Ordinance 1913, (No. 4) gives a legal status to the Co-operative Credit Societies which now exist in the Colony. It is borrowed from the Ceylon Co-operative Credit

Societies Ordinance No. 7 of 1911 and from the Indian Co-operative Societies Act No. 11 of 1912.

The Patents (Amendment) and Designs Ordinance 1913, (No. 7) amends the existing law relating to Patents and makes provision for the registration of Designs on the lines of the Patents and Designs Act 1905.

The Trade Marks (Amendment) Ordinance 1913, (No. 8) amends the existing law relating to Trade Marks on the lines of the Trade Marks Act 1905.

The Opium Ordinance 1913, (No. 9) renders effective the measures decided upon in the International Convention signed at the Hague on the 23rd. January 1912 and regulates the importation into, exportation from, and the storage and disposal in, the Colony of Opium, Morphine, Cocaine and similar drugs.

Wireless Telegraphy (Amendment) Ordinance 1913, (No. 11) consolidates the laws on wireless telegraphy by providing for the framing and issue of special Regulations concerning the use of wireless telegraphy on board merchant ships while in the territorial waters of the Colony.

The Crown Prosecutors (Repeal) Ordinance 1913, (No. 12) does away with the posts of Crown Prosecutors while maintaining the police under the direction and control of the Ministère Public, i.e., of the Procureur General and of his two Substitutes.

The Mountain Reserves (Removal of Trees) Ordinance 1913, (No. 14) allows the removal from the mountain reserves by the owners thereof of certain dead, dying and fallen trees with a view to the improvement of the growing stock in such reserves.

The Sanitation Works Ordinance 1913, (No. 15) empowers the Governor in Executive Council to order the execution of certain specified anti-malarial works and provides for the incidence of the cost of execution of such works.

The Dangerous Substances Consolidating Ordinance 1913, (No. 17) consolidates the several laws on Dangerous Goods, Petroleum, Inflammable Substances and Explosives.

The Agricultural Loan (Amendment) Ordinance 1913, (No. 18) enacts that privilege and mortgage creditors whose claims are inscribed, and chirograph creditors whose titles are subscribed, after the coming into force of the Ordinance shall be debarred of the right of objecting to the Agricultural loans provided for by Ordinance No. 4 of 1898 so long as in the contract with the lender provision is made for the payment of interest and of such part of the capital as may fall due during the continuance of the contract.

The District Courts (Jurisdiction of Magistrates Amendment) Ordinance 1913, (No. 19) makes the posts of District Magistrate of Mauritius and of Magistrate of Rodrigues interchangeable and empowers the Governor to order any Magistrate to visit the Lesser Dependencies without extra allowance.

The Court of Rodrigues Jurisdiction (Extension) Ordinance 1913, (No. 20) extends to Rodrigues Ordinances Nos. 21, 22 and 23 of 1888 dealing with the constitution, powers and jurisdiction of District Courts in criminal as well as in Civil matters.

The Lepers Ordinance 1913, (No. 22) provides for the detention and treatment in asylums of convict, vagrant, pauper and other lepers in the Colony and for the notification of cases of leprosy and subjects to certain regulations the lepers who are unwilling to undergo treatment in an asylum.

The Quarantine Consolidation Ordinance 1913, (No. 26) consolidates and amends the existing legislation on Quarantine. It substitutes fumigation and disinfection for the former detention of ships, it provides for the segregation or "surveillance" according to circumstances, of the passengers and crew during certain fixed periods. It does away with the Quarantine Committee and entrusts the Port Health Officer under the supervision of the Director of the Health Department with the execution of the Ordinance and of the Regulations made under it.

The Public Health (Amendment) Ordinance 1913, (No. 31) makes the Public Health laws less rigid and complex and repeals all the provisions which are proper matter for regulations or for general or departmental orders. It also abolishes the Board of Health constituted under the Public Health Ordinance 1894-95.

The Public Officers' Guarantee Fund (Consolidation) Ordinance, (No. 33) consolidates and amends the laws providing for the establishment of the Public Officers' Guarantee Fund.

The Customs (Security Bonds and Forms of Entry Amendment) Ordinance 1913, (No. 34) compels the owners or occupiers of bonded warehouses to enter into a general security bond and dispenses the importers using such warehouses with the obligation of entering into special security bonds.

The Education (Amendment) Ordinance 1913, (No. 35) replaces the Committees of Primary and of Superior Instruction by the Committee of Public Instruction which ceases to be an administrative and executive body and becomes a purely consultative and deliberative one; it further does away with the "A" and "B" Codes which are replaced by the Education Code.

The Municipality (Amendment) Ordinance 1913 (No. 36) substitutes one of the Magistrates of Port Louis to be appointed by the Governor, for the Assessorial Committee which has hitherto been entrusted with the duty of revising the Electoral Roll and of conducting the Municipal elections. It also amends the provision dealing with the preparation of the list of 6 Councillors from which the Governor appoints the Mayor and the Deputy Mayor.

The Port Louis Sewerage (Extension) Ordinance 1913, (No. 42) provides against the waste of water in Port Louis by the introduction of meters for the supply of water. It entrusts the Public Works Department with the duty of fixing, examining and repairing the meters and of noting the consumption of water.

The Supreme Court (Amendment) Ordinance 1913, (No. 43) provides against any interruption in the despatch of business of the Court, in view of the reduction of the number of Judges to three. It dispenses with the necessity of immediately appointing a provisional Judge in the case of the death or of the temporary absence from the Colony on vacation leave of the Chief Judge or of one of the Puisne Judges.

The Curepipe (Market and Slaughter Houses) Ordinance 1913, (No. 44) transfers to the Board of Commissioners for the Town of Curepipe the powers and duties of the Health Department in respect of Slaughter houses, Public markets and Butcher's shops and stalls in Curepipe, but retains the sanitary control of all such places by the Health Department.

The Police (Amendment) Ordinance 1913, (No. 47) amends the Police Ordinance 1893 in respect of the enlistment and re-enlistment of, and the oath to be taken by, members of the Police Force, and gives to Inspectors of Police the right of issuing search warrants in cases of urgency.

The Prisons (Amendment) Ordinance 1913, (No. 48) amend-Ordinance No. 8 of 1887 so as to subject the enlistment and re-enlistments of, and the oath to be taken by, Warders to the same rules as those of the Police Force. It also modifies the articles dealing with prison offences.

The Fisheries (Amendment) Ordinance 1913, (No. 49) prohibits the use of nets for fishing in certain parts of the sea to be designated by Proclamation.

IV.—EDUCATION.

Primary Education.

The Primary schools at the end of the year 1913 numbered 149 of which 60 were Government and 89 Aided schools. The number of Government schools has been reduced from 64 in 1909 principally by the amalgamation of separate schools for Boys and Girls in the same locality. Of the Aided schools there were 66 Roman Catholic, 18 Church of England, 2 Presbyterian, 2 Mahomedan and 1 Hindoo which is a newly opened school. One Roman Catholic school was closed.

The number of Primary schools, Government and Aided, and the number of pupils for the years 1909 to 1913 are shown in the following table :—

	Government Schools.			*Aided Schools.*		
Years.	Number of Schools.	Annual average number of pupils on roll.	Annual average number of pupils in attendance.	Number of Schools.	Annual average number of pupils on roll.	Annual average number of pupils in attendance.
1909	64	8,634	5,433	88	10,651	7,234
1910	61	9,326	5,951	88	11,621	7,934
1911	60	9,421	6,030	88	11,589	7,972
1912	60	9,522	5,775	89	11,987	7,635
1913	60	9,223	5,693	89	11,735	7,717

The average attendance in Government and Aided schools for the year was 13,410 with a roll of 20,958 showing an average attendance of 63.98 o/o of the number of pupils on the roll. There is a slight decrease in the number of pupils on the roll but an increase in attendance as compared with 1912 when with a roll of 21,509 there was an average attendance of 13,410 or 62.34 o/o of the number of pupils on the roll.

The increase in the number of Indian children attending the Primary schools is maintained, the figures being as follows : 8,413 in 1913—8,316 in 1912—8,175 in 1911—7,462 in 1910 and 7,125 in 1909.

Of the total number of pupils on the roll in the six standard classes 61 o/o passed the examination tests as compared with 56 o/o in 1912 and 60 o/o in 1911, while of the number of pupils who were presented for examination 64 o/o passed in 1913 as compared with 59 o/o in 1912 and 63 o/o in 1911.

The total expenditure for the year on the salaries of, and grants to, Teachers in Primary schools amounted to Rs. 296,118 of which Rs. 134,681 was expended on Government schools and Rs. 161,437 on Aided schools. The figures for 1912 were Rs. 296,860, Rs. 133,438 and Rs. 163,422 respectively. The cost to Government of a pupil in a Government School was Rs. 19.70 and in an Aided School Rs. 15.39, as compared with Rs. 19.09 and Rs. 15.14 in 1912.

There are open annually to pupils of Primary schools six scholarships and six exhibitions at the Royal College for which there is keen competition. The exhibitioners receive free tuition and the scholars free tuition and an allowance of Rs. 100 a year. There were

148 candidates in 1913 against 145 in 1912. Twelve candidates failed in the test examination and 30 scored the minimum number of marks. The number of candidates from Government schools was 97 and from Aided schools 51, as compared with 105 from Government and 40 from Aided Schools in the previous year.

Secondary Education.

Secondary Education is provided by the Royal College, one school in connection with it, (the Port Louis School having been closed), and associated schools. 358 candidates from 14 associated schools were presented for examination of whom 156 passed. There were in December 1913, 208 pupils at the College, and 76 at Curepipe School. Of the 284 pupils at the College and its schools, 97 did not pay fees.

The attendance at the associated schools average 419.

There were 25 candidates for the London Matriculation Examinations in 1913. Eight out of the 21 candidates from the Royal College passed, 4 in the First Division, and 4 of the others passed in the Second Division.

There were 111 candidates for the Senior Cambridge Examination, 39 out of the 80 candidates from the Royal College and 5 of the 31 others passed. Out of 26 candidates from the Royal College for the Junior Cambridge Examination 10 passed.

There are scholarships and exhibitions in nearly all the classes of the Royal College and there are two valuable scholarships to enable pupils of the College to continue their studies in Europe.

There are 14 girls' schools which are affiliated to the Royal College in connection with the scheme for the Higher Education of Girls. The number of candidates who were presented for examination was 425 of whom 186 obtained Honours Certificates and 53 Pass Certificates. Twenty-three girls entered for the Senior Cambridge Local Examination of whom 10 passed. Ten entered for the Junior Division and 5 passed. The total sum expended in 1913 on the Higher Education of Girls was Rs. 9,320, as compared with Rs. 9,288 in 1912.

Training of Teachers.

There are Government Training Schools for men and for women. There were 8 candidates from the Men's Training School for the second class teachers' certificate, of whom 4 passed. There were 6 candidates from the Women's Training School for the second class certificate, of whom 3 passed. Neither of the Schools presented students for the third class examination.

The following table shows the number of candidates for certificates and the number who passed during the year :

Class of Certificate.	Candidates.			Successful.		
	Men.	Women.	Total.	Men.	Women.	Total.
Second	35	16	51	10	5	15
Third	42	22	64	7	5	12
Monitors' ...	117	111	228	22	25	47
Total	194	149	343	29	35	74

There are 656 certificated Teachers employed in Government and Aided Schools, of whom 151 are Head Teachers, 156 Assistant Teachers and 349 Monitors.

Technical Education.

There are 8 mechanical engineering apprenticeships for which there were 110 candidates as against 73 in 1912. There are 2 agricultural apprenticeships for which there were 27 candidates as against 29 in 1912 and 2 engineering studentships for which there was 1 candidate only, but he did not satisfy the Examiners.

Needlework receives attention in Girls' schools and the work of the pupils continues to show improvement. 46 candidates entered for the needlework competition, to 4 of whom apprenticeships were awarded.

There are carpentry classes in one Government and three Aided schools.

V.—GOVERNMENT INSTITUTIONS.

Hospitals and Dispensaries

There are 11 Hospitals, including 3 in connection with the Prisons and Reformatory, and there is also a Hospital ward with 30 beds attached to the Lunatic Asylum. The number of Hospitals shows a reduction of 2 when compared with the previous year's figure owing to the closure of Flacq and Savanne Prisons. The eight public Hospitals have 1,026 beds. The total number of "cases" treated at all hospitals was 16,280, as compared with 18,641 in 1912. The number of "cases" treated at 27 dispensaries was 48,356.

Lunatic Asylum.

There is a Lunatic Asylum and a Lunatic Ward in connection with the Poorhouse of Barkly Asylum. There were 467 patients in the Asylum on the 31st. December 1913 as compared with 437 on the corresponding date of the previous year, and the daily average rose from 441.1 in 1912 to 455.74. The total number of certified lunatics in the Colony on the 31st. of December 1913, including patients out on probation and patients in the Lunatic Ward of Barkly Asylum, was 668, giving a proportion of one insane to 558 of population. There were 31 criminal lunatics of whom 25 were males and 6 females.

Poor Relief.

Barkly Asylum is the only institution under the direct control of the Poor Law Commissioner at which paupers receive institutional relief.

The buildings of Barkly Asylum were originally acquired for the purpose of affording institutional relief to the poor. The hospital was later placed entirely under the control of the Medical Department and has come to be used as a general hospital for the district. Arrangements also exist at various religious institutions for the maintenance of aged and infirm paupers at fixed rates, and there is an asylum for pauper lepers in which patients are maintained at the public expense.

Exclusive of the number of patients treated free at the Public Hospitals and Dispensaries of the Colony, 1,462 paupers, as compared with 1,579 in 1912, received institutional relief during 1913, of whom 125 were maintained at public expense at the St. Lazare Leper Asylum, 257 at the Canal Street Convent Hospital and the remainder at the Barkly and the Lunatic Asylums and different religious Institutions.

2,929 paupers, 741 males and 2,188 females, received outdoor relief (pecuniary) permanently or temporarily during 1913 against 3,151 in 1912.

Savings Bank.

At the Government Savings Bank there was on the 30th. June 1913 a sum of Rs. 3,291,656 to the credit of 28,841 depositors as compared with Rs. 3,261,252 to the credit of 28,318 depositors on the 30th. June 1912. The investment funds amounted to Rs. 3,494,171. Interest is allowed at the rate of 3 o/o.

The following table shows the number of depositors who belonged to the General and Indian populations and the amount standing to their credit on the 30th. June 1913 :

	Number	Rs.
General Population	17,915	2,037,085
Indian population	10,926	1,254,571

VI.—JUDICIAL STATISTICS.

Police.

The authorised strength of the Police on the 31st. of December 1913 was 1 Inspector General, 1 Deputy Inspector General, 6

Inspectors, 12 Sub-Inspectors, 1 Staff Sergeant Major, 43 Sergeants, 3 Mounted Orderlies, 50 Corporals, 402 European and Creole Constables, and 205 Indian Constables. 87 men were enlisted in 1913 and the total number of dismissals was 34.

Criminal Statistics.

The number of offences reported to the Police in 1913 was 24,350 as against 23,790 in 1912.

They may be classified as follows :

Homicide	24
Other offences against the person	8,729
Prædial Larceny	316
Other offences against property	5,167
Other offences	10,114
	24,350

In connection with these offences 13,999 persons (including 524 persons arrested on suspicion) were apprehended by the Police or summoned before the Magistrates. In 13,891 of the cases no person was charged.

The total number of persons brought before the Magisterial Courts (District, Stipendiary and Bench of Magistrates) in 1913 was 22,530; of these the number prosecuted was 19,790 including persons tried before a Bench of Magistrates or committed to the Court of Assizes. The number discharged for want of prosecution by party complaining or for want of evidence was 2,741.

The cases prosecuted in the District Courts (including preliminary inquiries with a view to commitment to the Assizes and Bench cases) were distributed as follows :—

Offences.	Discharged for want of prosecution or evidence.	Dismissed on the merits.	Convictions.	Committed to the Assizes.
Against the person	150	483	962	23
Prædial Larceny	3	32	166	...
Other offences against property	624	343	1,333	5
Offences against Revenue, Municipal, Road and other laws relating to the social economy of the Colony	339	503	11,733	...
Other offences	92	241	1,797	...
Total... ...	1,208	1,602	15,991	28

The total number of persons prosecuted before the District Courts during the last five years was distributed as follows :

Year.	Offences, against the person.	Prædial Larceny.	Other offences against property.	Other offences (including Revenue cases &c.)	Total.
1909	1,192	432	2,699	12,086	16,409
1910	1,323	206	1,935	12,035	15,499
1911	1,398	174	2,368	12,273	16,213
1912	1,486	397	2,022	14,152	17,957
1913	1,468	198	1,681	14,274	17,621

The convictions (including committal to the Assizes) before the District Courts for the same period were as follows :—

Year.	Offences against the person.	Prædial larceny.	Other offences against property.	Other offences.
1909	849	370	2,223	11,235
1910	1,003	175	1,493	11,449
1911	954	159	1,876	11,697
1912	1,073	280	1,645	13,587
1913	985	166	1,338	13,530

There were 19 cases in which 23 persons were brought before the Assizes in 1913. Of these 5 persons were acquitted and 1 found insane. The number of convictions was 16. No verdict was arrived at in one case.

The following table shows the number of persons convicted at the Assizes during the last five years and the offences for which they were convicted.

Year.	Murder, other than wife and child murder.	Manslaughter and attempt at.	Attempt at murder.	Murder of wife, reputed wife or concubine.	Including attempts to commit the several offences.									
					Child Murder.	Concealment of birth.	Abortion.	Rape.	Unnatural crimes.	Other offences against the person.	Malicious injury to property.	Larceny with aggravating circumstances.	Other offences against property.	Miscellaneous.
1909	3	1	...	...	...	...	...	2	...	30	3	12	1	...
1910	...	3	...	...	...	...	...	6	...	24	3	8	...	1
1911	...	1	...	...	...	...	...	...	...	2	49	2	...	...
1912	...	...	1	...	...	...	...	...	...	6	2	2	1	...
1913	...	2	...	...	1	...	...	...	...	7	...	6	...	...

In 1913 fifteen persons were tried at the Assizes for offences against the person as compared with 9 in 1912, the number convicted being 10 in 1913 and 7 in 1912. The number of persons tried at the Assizes for offences against property was 7 in 1913 of whom 6 were convicted, as against 5 in 1912 all of whom were convicted.

PRISONS AND REFORMATORY.

There was a decrease of 611 in the number of prisoners admitted to prison after conviction as compared with 1912, the figures being :—

	Males.	Females.	Total.
1912	4,213	172	4,385
1913	3,580	194	3,774

The number of prisoners under detention on the 31st. of December 1913 was 778 as compared with 717 on the corresponding date in the previous year. The daily average number under detention shows a decrease of 85.49 as compared with 1912, the daily average for that year being 808.80 as against 723.41 in 1913.

The deaths in the Prisons numbered 15 as compared with 25 in 1912. The daily average number under treatment in the Prison Hospitals was 26.91 in 1913 as compared with 36.54 in 1912 : the prevailing diseases were malaria and dysentery.

There were 12 escapes during the year as against 18 in 1912. Nine of the prisoners who escaped were recaptured.

The numbers admitted to the Reformatory in 1913 were 104 new boys, 49 ex-Reformatory boys and 29 untried, a total of 182 as against 218 in 1912. There was a decrease of 5.14 in the daily average as compared with 1912.

Of the 153 boys who were admitted on conviction, 122 entered the Institution with sentences of 6 months or less, of whom 68 were sentenced to a month or less, and 33 of these to sentences varying between 2 and 7 days.

No deaths occurred during the year. The general state of health of the boys was good. The admissions to hospital decreased by 39 as compared with the previous year.

The discipline among the boys was satisfactory ; there were 34 departmental offences as against 54 in 1912, the offences being committed by 26 boys. None of the offences were of a serious nature.

There were 5 escapes during the year.

VII.—VITAL STATISTICS.

The total population of the Island on the 31st. December 1913 is estimated in the Registrar General's Annual Report at 373,185, exclusive of the Dependencies (6,668).

Births and deaths.

There were 13,827 births registered during the year. The law allows a delay of 45 days for free registration and the number of births which were not registered owing to death intervening before registration was 1,326. The total number of births was accordingly 15,153, of which 7,700 were males and 7,453 females, giving a proportion of 40.8 infants born to 1,000 persons living. The deaths registered numbered 13,201, giving a proportion of 35.5 deaths to 1,000 persons living.

The birth rate amongst the general population was 38.2 per thousand as compared with 32.6 per thousand in 1912, and amongst the Indian population 41.9 per thousand as compared with 36.7 per thousand in 1912. The death rate amongst the general and Indian populations was 36.3 and 36.6 per thousand respectively, as against 39.6 and 38.4 per thousand respectively in the previous year.

Public Health.

Malaria though still causing more deaths than any other disease showed a decrease of 618, the number of deaths ascribed to fever being 4,001 in 1913 as against 4,619 in 1912.

Malarial fever accounted for 2,546 of the cases appearing on the hospital returns. The following are figures for the years 1909 to 1913:—

Year ...	1909	1910	1911	1912	1913
Cases ...	3,929	2,338	2,117	2,554	2,546

The case mortality was 1.84 o/o, against 1.4 o/o for 1912. There was a decrease in the number of cases of splenic hypertrophy, the figures for 1909, 1910, 1911, 1912 and 1913 being 886, 561, 380, 481 and 444 respectively.

The spleen census and treatment of school children with quinine has been continued and a number of anti-malarial works have been carried out under the supervision of the officers of the Sanitary Branch of the Medical and Health Department, notably on the Citron River and Rivière Sèche in Flacq and at Tamarin in Black River District.

Plague also was not so active as in 1912, the number of cases recorded during 1913 being 313 of which 261 ended fatally. The death rate, 83.4 o/o, for that disease, however, exceeded that of any previous year. In 1912 there were 656 cases with 541 deaths giving a death rate of 82.5 o/o.

The Colony was visited by a severe outbreak of small-pox during 1913. The exact date of the occurrence of the first case and the manner it was introduced were not discovered. There is every reason to believe from cured cases seen during the epidemic that the disease existed in Port Louis before the end of 1912. None were reported and no deaths were recorded as having been due to small-pox until March 14th., when several cases were discovered. Immediate steps were taken for the isolation and treatment of the sick, segregation and vaccination of contacts and disinfection of infected premises. The disease had gained such a start that it was impossible to prevent it from spreading to the country districts. Port Louis was practically free by the end of July but the disease did not finally disappear until the end of the year. It attacked 1,914 persons and caused 196 deaths.

General revaccination of the population was attempted and 232,353 persons were vaccinated, mainly with lymph prepared at the Laboratory at Réduit.

The epidemic of whooping cough which broke out in 1912 continued during the first three months of 1913 and then became endemic. The number of deaths ascribed to that disease in 1913 was 793.

Vaccination.

The number of children presented for vaccination at the public vaccine stations was 8,925 as compared with 10,931 in 1912. Of this number the Public Vaccinators certified 8,769 to have been successfully vaccinated ; 26 vaccinations were unsuccessful. The percentage of successful vaccination was 98.2%.

VIII.—METEOROLOGICAL.

Meteorological observations are taken at the Royal Alfred Observatory, Pamplemousses, and at nine second-order stations. The Observatory is about three miles from the West coast and is 179 feet above sea level. There are considerable variations both in temperature and humidity in the different parts of the island, the coast districts being hotter and drier than the higher altitudes in the interior. Hurricanes occur between December and April, which is the hottest season.

The mean rain-fall from 49 stations was 75.83 inches as compared with 96.34 inches in 1912 (69 stations) and an average of 79.55 inches. Heavy rains, relatively to the normal, fell in January and June. The rain-fall for the remaining months was below normal as compared with an average of 47.95 inches for the period 1875–1910, and the number of " rainy days " recorded was 197 as compared with an average of 204, a " rainy day " being one in which .005 inch or more of rain is measured.

The mean temperature of the air at the Observatory was 72°.4 as compared with an average of 73°.4, the highest temperature recorded being 92°.1 on the 6th. of December, and the lowest 52°.4 on the 26th. of July and 1st. August. The highest and lowest temperatures recorded at the Observatory between 1875 and 1913 were 94°.7 on the 23rd. of December 1900 and 49°.9 on the 8th. of August 1907.

Temperature was above normal in only one month (June, +.01 F.) the low temperatures which set in in October of 1912 continuing throughout the year. In December the curve showed no sign of recovery.

During the year 1913 there were thirteen cyclonic disturbances in the South Indian Ocean as follows :—

January 7 to 12
„ 16 to 19
„ 28 to 29
February 22 to 24
„ 25 to 28
„ 26 to March 1
February 28 to March 2
March 3 to 5
„ 4 to 8
April 1
„ 2
December 7
December 21

The exact tracks of these cyclones have not yet been determined.

IX.—POSTAL AND TELEGRAPH SERVICES.

The total number of Post Offices open in 1913 was 63 of which 57 were also Telegraph Offices. Forty-eight of the Post Offices are at Railway Stations and 15 are in districts at a certain distance from the Railway system.

The revenue for the year 1913 was Rs. 191,854 as compared with Rs. 218,993 in 1912. The expenditure was Rs. 178,992 in 1913 and Rs. 160,751 in 1912, leaving an excess of Revenue over Expenditure of Rs. 12,862 in 1913 and Rs. 58,242 in 1912.

The total estimated number of letters, post cards, newspapers and postal packets, exclusive of parcels, which passed through the Post Office in 1913 was approximately 3,872,292 as compared with 3,703,756 in 1912. Inland letters, post cards and newspapers showed increases, as did foreign letters and post cards, while there was a decrease in foreign newspapers. The number of reply coupons sold during the year was 355 and the number paid was 45. The number of inland parcels dealt with amounted to 290 as against 308 in 1912. The number of postal parcels received from and despatched abroad decreased by 612, the figures being 15,519 for 1913 and 14,907 for 1912. The number of parcels received from abroad increased by 90 and the duty collected amounted to Rs. 49,450.

The number of Inland money orders issued and paid was 48,056 and their value Rs. 487,424, being an increase of 5,596 in number and of Rs.66,498 in value as compared with the previous year. The number of money orders issued in Foreign countries was 8,457 and their value Rs. 261,011, being a increase of 228 in number and of Rs. 32,762 in value as compared with the previous year.

There was a decrease in the number of postal orders sold (18) and paid (53) but an increase in value *i.e.* Rs. 1,049.88 and paid Rs. 1,253.96.

There are 402 miles of Telegraph and 119 miles of Telephone wires under the charge of the Department. The Railway has not a telegraphic system of its own and the ordinary messages for the working of the traffic and for the administration of the Department are transmitted over the Post Office wires. The number of Railway messages and signals transmitted in 1913 was 182,105. The number of messages sent by the public increased by 222 in 1913 : out of a total number of 284,020 messages forwarded 44,675 were sent by the public as compared with 44,453 out of a total of 255,084 in 1912. The receipts for the messages sent by the public amount to Rs. 24,708 in which charges for porterage (Rs. 10,400) are included.

X.—RAILWAYS.

There is a single line of Railway of about 120 miles in length, exclusive of the Bois Chéri light Railway. The gauge is 4 feet inches.

The earnings from all sources for the year amounted to Rs. 2,914,020 as compared with Rs. 2,619,714 in 1912 being an increase of 11.24 o/o. Excluding Government traffic, the earnings amounted to Rs. 2,658,767 being Rs. 267,750 more than in 1912. The services performed for Government Departments for which no cash payments were made would at ordinary rates have cost Rs. 255,253, of which Rs. 203,787 for passenger traffic, Rs. 44,533 for goods traffic and Rs. 6,933 for parcels, representing 8.75 o/o of the total traffic as compared with 8.73 o/o in 1912.

The receipts for passenger traffic amounted to Rs. 1,248,701, being more than those of the preceding year by Rs. 58,448, and in excess of the mean of the last five years by Rs. 143,220.

The following table shows the tonnage of goods traffic, exclusive of Government traffic, carried in 1912 and 1913 :

	1912.	1913.	Increase.	Decrease.
	—	—	—	—
Sugar Canes ...	...144,627	154,737	10,110	...
Sugar	...143,229	189,692	46,463	...
General Merchandize	...179,141	188,383	9,242	...
Total	...466,997	532,812	65,815	...

The total tonnage carried was 65,815 tons or 14.09 o/o more in 1913 than in 1912. The aggregate earnings for goods traffic were Rs. 1,866,340 or 18.78 o/o above those of 1912. The earnings for sugar cane traffic were Rs. 115,158 or 74.42 cents of a rupee per ton carried, as compared with 74.23 cents in 1912. The earnings for sugar traffic were Rs. 731,369 or Rs. 3.85 per ton carried, as against Rs. 3.99 in 1912. The earnings for general merchandize were Rs. 519,813 or Rs. 3.03 per ton carried as against Rs. 2.63 in 1912. The total expenditure charged to capital account including all sums paid from general revenue, surplus balances or loans up to 31st. of December 1913 was Rs. 32,087,483 in which is included Rs. 3,521,565 advanced on account of the re-equipment of the Railways and which is eventually to be met from loan funds. The working expenses for 1913 amounted to Rs. 2,023,054. The ratio which working expenses bore to total earnings showed an increase of 4.78 o/o as compared with 1912, the figures being 69.42 o/o and 64.64 o/o respectively. The net earnings amounted to Rs. 890,966 or 2.77 o/o on the capital.

The Plaine Lauzun Deviation Line was all but finished at the end of the year. Rose Hill new station was completed. A new platform and passenger shed and an overbridge at Curepipe were begun and almost completed. A water tank was put up at Montagne Blanche. Cart weighbridges were supplied and erected at Rose Belle, Beau Bassin and Sebastopol Stations. The construction of new Goods Sheds at Tamarin and Medine Stations was begun.

All the bridges on the Moka-Flacq and Savanne lines were completed with the exception of the Deep River Bridge on the Moka-Flacq Line, which was begun but not finished before the end of the year.

Bois Chéri.

There is a light railway of 2 feet 6 inches gauge running from Rivière du Poste Station on the Savanne Branch of the Midland Line to Mexico. The length of the line is 10 miles. The total goods traffic carried in 1913 amounted to 18,726 tons, of which 15,507 tons were sugar cane as against a total traffic of 10,894 tons and 6,792 tons of sugar cane in 1912. The actual working expenses for 1913 were Rs. 15,578, the earnings Rs. 10,834 and the work done for Government Departments was valued at Rs. 2,755. The corresponding figures for the previous year were Rs. 12,544, Rs. 5,840 and Rs. 2,821.

XI.—PUBLIC WORKS.

The more important works undertaken by the Public Works Department during the year were in connection with the enlargement of the Royal College, which was completed, and of the Station Agronomique buildings for the accommodation of the Department of Agriculture, the reconstruction of road bridges, the Mare-aux-Vacoas water and the Port Louis drainage works.

Bridges.

The Molino bridge—three spans of 32 feet, 30 feet above river bed, requiring two high abutments and two piers in substantial masonry—begun the year before, was completed. The erection of a new bridge was started at Rivière des Anguilles, a foot bridge 90 foot span has been erected over Black River in the district of the same name, for the benefit of pedestrians and cyclists who are unable to cross the river in times of flood. Seven other bridges of less importance have been completed—one in Plaines Wilhems and the remainder in Grand Port.

Roads.

Considerable improvement has been effected with the Steam Roller received, the whole of the Main Road through the town of Curepipe has been remetalled and rolled and good work of this description will be extended gradually.

Prisons.

The Port Louis Prisons have been largely improved by removing a block of buildings (which intercepted air and light) and modifying the existing arrangement for sick prisoners, officers, &c. At Beau Bassin, large additions have been effected in the shape of new workshops, well lighted and ventilated, a bakery, quarters for the two warders in charge, and two more stores.

Department of Agriculture.

The buildings of the Station Agronomique have been extended the available accommodation having been practically duplicated, the quarters formerly occupied by the Superintendent of the Bacteriological Laboratory and allotted to the Director of Agriculture have been enlarged, the main house by one room, the servants' quarters also by one room, and a garage has been built ; the quarters of the other Officers of the Station Agronomique have been overhauled, repaired and painted throughout. Additional buildings such as an insectary are being completed, furniture required by the Director of Agriculture has been supplied, and two nursery sheds for the Pamplemousses Gardens are in course of completion.

Mare-aux-Vacoas Water Works.

The reservoir at Mare-aux-Vacoas, where the average annual rainfall is 137 inches, has a catchment area of about 5 square miles. The top water level is 1,840 feet above the mean sea level and the reservoir has a maximum capacity of 570 millions of gallons. The water flows from the Reservoir for 4,900 feet in an open channel and for a further distance of 7,700 feet is taken in a 16″ cast iron pipe to the filtering establishment at " La Marie, " which is 1,645 feet above sea-level.

At the filtering establishment there is a depositing reservoir with a capacity of 1,500,000 gallons and a covered service reservoir with a capacity of 500,000 gallons. Owing to the water being at times heavily charged with organic matter the " Anderson process " for the purification of water was installed and concrete partitions were erected in the depositing reservoir to improve the settlement of solids. Originally there were only 4 filter beds with a superficial area of 6,720 square feet, but 5 additional filter beds have since been constructed with a superficial area of 18,000 square feet and extra aerating trays have been added. These additional works and the increased filtration enable two filters to be always left exposed to sun and air and with a slower process of filtration.

The daily consumption of water exceeds 1,600,000 gallons and with the exception of the supply to the town of Curepipe, the water flows by gravitation to the lower districts. The supply for Curepipe is pumped by means of hydraulic rams to two reservoirs standing 368 feet above the filtering establishment, the motor being driven by water power from the 16″ supply main. The increase in the population of Curepipe has necessitated additions to the pumping plant and the reconstruction of the reservoirs. A masonry building was erected at the filter beds for the pumping machinery and a second 16″ cast-iron pipe has been laid to supply the motive power. An additional set of hydraulic motors and pumps have been erected and work satisfactorily. It is expected that the concrete covered channel which is to replace the open conduit from the reservoir to the filter beds will be completed in 1915. An additional service reservoir is in course of construction at Curepipe.

Port Louis Drainage Works.

The Port Louis Drainage Works were begun in 1895, the sewers being designed on the separate system and the surface drainage being carried in the street gutters to the various streams which flow into the harbour. The town is divided for drainage purposes into four districts, three of which drain by gravitation sewers into separate collecting wells which are connected by means of syphon pipes to the pumping station near Caudan Basin. From there, the sewage is pumped through cast iron pipes for 7,000 feet to the sea outfall at the mouth of Grand River North West and is discharged in 10 feet of water at low tide, a thousand feet from the shore. The total length of sewers laid is 23.70 miles and 1090 properties have been connected. The amount expended on construction works in districts 2, 3 and 4 is Rs. 890,746 and on house services Rs. 562,567.

XII.—FORESTS.

The area of forests, mountain and river reserves and Curatelle lands under the care of the Forest Department was 84,964 acres, of which about 68,602 acres were Crown Lands, 10,122 acres Mountain Reserves, 6,000 acres River Reserves and 240 acres Vacant Estates.

Forest Utilization.

The improvement fellings in the Grand Bassin Forest were continued, yielding about 2,069 cubic feet of timber at Coutanceau; 469,000 shingles and 27,000 railway keys were also manufactured from the off-fall of trees. For the supply of fuel to public establishments 3,997 cords of firewood were felled in Crown Lands. Thinnings in forest plantations (chiefly Pines and Eucalyptus) yielded a revenue of Rs. 4,657, and clear-cuttings on Pas Géométriques (chiefly Casuarina) Rs. 11,158. The lessees replanted the areas cleared.

Forests Plantations.

About 224 acres were artificially restocked with 318,850 plants in Crown Lands, chiefly in the gathering grounds of important rivers. This should be added to about 2,559 acres replanted during the eleven previous years. The species propagated included Natte, Colophane, Olive, Benjoin, For, Juniper, Cryptomeria japonica, Eucalypts, Mahogany, Auraucarias and Terminalia.

Nurseries.

The Botanical Gardens at Pamplemousses and Curepipe and the Réduit grounds having been handed over to the Department of Agriculture, nurseries were started by the Forests Department for the raising of plants for sale to the public or for restocking the Crown Forests. The most important of the new nurseries is at Bras d'Eau, Flacq.

XIII.—DEPENDENCIES.

The Dependencies comprise a large number of small Islands situated between 5° and 19° 50′ South Latitude and 51° and 72° 30 East Longitude, of which the nearest is 230 miles, and the most remote about 1,200 miles distant from Mauritius.

Rodrigues, the largest and most important, is administered by a resident Magistrate, has an area of 40 square miles and had at the Census of 1911 a population of 4,829 of whom 2,523 were males and 2,306 females. The total population showed as compared with 1901 an increase of 1,667.

The increase was almost entirely in the general population which numbered 4,667, or 1,567 more than in 1901. The Indo-Mauritian population numbered 102, other Indians 36 and Chinese 24. The male agricultural population has increased considerably in the last 10 years and development is noticeable in the trade of the island. The Customs return show that 92 cattle were sent to Mauritius in 1913 as against 40 in 1912. In 1913, 932 pigs value Rs. 14,542 were sent to Mauritius as against 1,246 value Rs. 19,725 in 1912, and 4,216 goats and sheep value Rs. 24,518 as against 3,682 value Rs. 13,789 in 1912. 389 kilos of salted fish were exported during 1913. The exports of tobacco shewed a decrease of 19,748 kilos when compared with those of the previous year, when 24,748 kilos were exported.

At the Rodrigues branch of the Government Savings Bank there was on the 30th. of June 1913 a sum of Rs. 16,710 to the credit of 63 depositors,as compared with Rs. 22,198 and 55 depositors on the corresponding date of 1912.

Most of the Islands in the Lesser Dependencies have been conceded or sold with the exception of a few Islands in the St. Brandon Group and two islands in the Diego Garcia Group, Tromelin Island, and one near the great Chagos Bank, which are leased. The islands are administered by two Magistrates who are resident in Mauritius and pay regular visits to the Dependencies. The chief exports from the Dependencies are coconut oil, coconuts, guano and fish (dried and salted).

H. HENNIKER HEATON,

September, 1914.

Acting Colonial Secretary.

REPORT ON THE MAURITIUS BLUE BOOK FOR 1914.

I.—FINANCIAL.

General Revenue and Expenditure.

Revenue.

The revenue for the year 1913–14 amounted to Rs. 11,142,611, being Rs. 872,161 above the estimate and Rs. 697,518 above the average for the five years immediately preceding.

The following is a comparative statement showing the actual revenue from normal sources collected during the financial years 1912–13 and 1913–14 :

Head of Revenue.	1912–13.	1913–14.	Increase.	Decrease.
	Rs.	Rs.	Rs.	Rs.
1. Customs	4,024,768	4,202,476	177,708	...
2. Harbour	224,615	208,883	...	15,732
3. Licenses, Excise, &c. ...	2,753,694	2,789,440	35,746	...
4. Fees of Court, &c.... ...	340,121	369,873	29,752	...
5. Post and Telegraphs ...	224,360	228,765	4,405	...
6. Railways	2,480,554	2,691,430	210,876	...
7. Rent	69,368	74,170	4,802	...
8. Interest	865,241	536,900	...	328,341
9. Miscellaneous	52,139	40,071	...	12,068
	11,034,860	11,142,008	463,289	356,141
10. Land Sales...	781	603	...	178
Total	11,035,641	11,142,611	463,289	356,319
Net increase of normal revenue	...	...	106,970	...

The revenue of 1912–13 amounted to Rs. 11,035,641 and exceeded that of any previous year. The revenue of 1913–14 showed a still further increase of Rs. 106,970 notwithstanding a decrease of Rs. 328,341 in the collections under "Interest" due to the repayment of the mechanical transport loan having been completed.

The sources which principally contributed to the total increase in revenue over the previous year were: Customs, Rs. 177,708; Licenses, Excise, Rs. 35,746; Fees of Court, Rs. 29,752; Railways, Rs. 210,876. Import and Export duties yielded Rs. 81,023 and Rs. 96,686 more respectively than in the previous year. The receipts from the main lines of Railway showed increases of

Rs. 53,631 in passenger traffic and Rs. 186,154 in goods traffic. The total receipts of the Railways reached Rs. 2,691,430, which is the highest amount encashed in any one year.

As has already been stated, the decrease in revenue under the head of "Interest" was due to the completion, previous to the 30th. of June, 1913, of the repayment of the Mechanical Transport Loan (1903), with the exception of the sum of Rs. 13,811, which is shown as collected in the financial year under review.

There was on the 30th. of June 1913 a surplus balance of Rs. 3,693,944. The revenue for the year 1913–14 exceeded the expenditure by Rs. 926,141 bringing up the surplus balance at the 30th. of June 1914 to Rs. 4,620,085. This surplus after deducting Rs. 3,689,173 advanced for the re-equipment of the Railway and Rs. 90,719 for Irrigation Works was reduced to Rs. 840,193. The accounts for the first half of the current financial year show that the revenue amounted to Rs. 6,244,962 and the expenditure to Rs. 7,002,896. It should however be observed that there was credited to Revenue the sum of approximately Rs. 500,000 in respect of the unallocated stores of the Railway Department at the opening of the financial year and that there is included in the total expenditure the sum of Rs. 1,500,000 which had been expended on the re-equipment of the Railway and which has been finally charged to surplus balances. The amount which has been advanced for Railway Re-equipment and which is eventually to be met from Loan Funds has been correspondingly reduced and stood at Rs. 2,306,807 on 31st. December 1914. At the same date the advances made for Irrigation Works amounted to Rs. 417,204 leaving a surplus balance of Rs. 1,138,140.

Expenditure.

The expenditure for the year 1913–14 amounted to Rs. 10,216,470 or Rs. 223,116 above the estimate and Rs. 470,761 above the average for the preceding 5 years. The following are the principal heads under which the expenditure exceeded the original estimate: Public Works Extraordinary, Rs. 182,148; Medical and Health, Rs. 156,917; Miscellaneous, Rs. 43,213; Pensions, Rs. 24,920; Military Expenditure, Rs. 24,278; Agriculture, Rs. 23,671. The items which chiefly contributed to the excess under Public Works Extraordinary were the acquisition of a Rum Warehouse and alterations to the building, the purchase of a site for and the construction of part of the buildings of the Victoria Hospital at Candos, and the carrying out, more rapidly than had originally been intended, of the improvement of the shed accommodation at the Customs Department. The heavy expenditure of the Medical Department was due chiefly to an epidemic of small pox. The expenditure was less than the estimate by appreciable amounts under Immigration, Rs. 63,700 ; Police, Rs. 61,846 ; Law and Justice, Rs. 35,033 ; Prisons, Rs. 27,166.

The following is a comparative statement of the Expenditure for the years 1912–13 and 1913–14 :—

HEAD OF SERVICE.	1912-13.	1913-14.	Increase.	Decrease.
	Rs.	Rs.	Rs.	Rs.

30. Loan Commission... ...	9,928	9,875	......	53
Total	10,235,605	10,216,470	581,857	600,992
Net Decrease	......	......	......	19,135

The total expenditure for the year 1913–14 was less than the expenditure for the year 1912–13 by Rs. 19,135. The principal heads under which the expenditure in 1913–14 was greater were : Public Works Recurrent and Extraordinary, Rs. 290,975 ; Medical and Health, Rs. 109,706 ; Agriculture, Rs. 68,527 ; Pensions, Rs. 42,463 ; Education, Rs. 31,005 ; Military Contribution, Rs. 24,556. The extraordinary works on which the largest expenditure was incurred were : Anti-Malarial Works of a permanent character, Rs. 148,239 ; Royal College, Rs. 83,177 ; Reconstruction of Bridges, Rs. 68,815 ; Rum Warehouse, Rs. 63,887 ; Drainage of Port Louis, Rs. 59,324 ; Victoria Hospital, Rs. 54,910 ; Improvement of Customs Shed accommodation and quays, Rs. 47,962 ; Renewal and relaying of moorings in Port Louis Harbour, Rs. 27,665.

The principal heads under which the expenditure in 1913–14 was less than in 1912–13 were : Public Debt, Rs. 316,797 ; Railways, Rs. 110,832 ; Miscellaneous, Rs. 53,291 ; Police, Rs. 34,169 ; Immigration and Poor Relief, 24,536.

Assets and Liabilities.

The assets of the Colony on 30th. of June 1914 were Rs. 2,989,641 and the liabilities Rs. 2,149,448, the assets thus exceeding the liabilities by Rs. 840,193.

The assets included :	Rs.
Cash in hands of the Receiver General and sub-accountants	454,600
Investments at cost	688,200
Temporary investments at Bank rate—£78,000 at 1s. 4d.	1,170,000
Miscellaneous advances	544,677
Co-operative Credit Societies	37,550
Unallocated Stores Mauritius Railways ...	94,615

The liabilities were :—	
General Deposits	2,028,282
Government of India	88,378
Drafts and Remittances...	32,741
Loan Funds, unexpended	47

There was brought to account up to the 30th June 1914 expenditure amounting to Rs. 3,689,173 on Railway re-equipment, and Rs. 90,719 on Irrigation Works.

Public Debt.

The total indebtedness of the Colony on the 30th. of June 1914 was £1,279,990 and the Sinking Funds amounted to £354,334, leaving a net debt of £925,656 as against £957,441 on 30th. June 1913, as compared with a debt of £1,147,409 and a revenue of £471,172 in 1894.

Under Ordinances No. 10 of 1876, No. 1 of 1879 and No. 2 of 1887, outstanding debentures are redeemed by annual drawings. Provision is made for the repayment of other loans by means of a sinking fund.

The Railway (Improvement) Loan Ordinance, 1910, authorizes the raising of a loan of £270,000 for the improvement and re-equipment of the Railways and the Irrigation Works Loan Ordinance, 1914, authorizes the raising of a loan of £100,000 to meet the cost of certain Irrigation Works. These loans have not yet been raised, and it is proposed to reduce the amount of the Railway Loan to £ 170,000, £100,000 of the expenditure already incurred on Railway re-equipment having been finally charged to the General Revenue and Surplus Balances of the Colony.

Currency and Banking.

The Currency of the Colony consists of :—

(1) The following Mauritius bronze and silver coins which are legal tender up to Rs. 5 :
  (a) Bronze : 1 cent, 2 cents, 5 cents.
  (b) Silver : 10 cents, 20 cents.
(2) The silver Rupee of India with its silver subdivisions.
(3) Mauritius Government notes of Rs 50, Rs. 10 and Rs. 5.

The average value of Currency notes in circulation during the year 1913–14 was Rs. 4,613,583 as compared with Rs. 5,030,250 in 1912–13. The average amount of specie held amounted to Rs. 2,075,333 as compared with Rs. 2,651,000 in 1912–13. The Investment and Depreciation Funds on 30th. June 1914 amounted to Rs. 2,538,250 and Rs. 386,602 respectively.

The Banks which do business in the Colony are the Bank of Mauritius Limited and the Mauritius Commercial Bank.

MUNICIPALITY OF PORT LOUIS.

The following is a comparative statement of the revenue and expenditure of the Municipality of Port Louis for the five years 1910 to 1914 :—

Year.	Revenue.	Expenditure.
—	—	—
	Rs.	Rs.
1910	523,494	504,058
1911	510,285	498,614
1912	515,504	509,944
1913	529,332	535,447
1914	501,790	468,769

The indebtedness of the Municipality up to the end of the year and the provision for payment are shown below :—

Loan.	Amount.	Repayments to be made in 1915.
Conversion Loan... ...	£ 104,400	£ 2,500
Electric Lighting Loan ...	7,000	333
Municipality Loan, 1908	3,143	143
Municipality Loan, 1909	4,107	179
	£118,650	£ 3,155
Government Hurricane Loan, 1892...	Rs. 26,645	Rs. 8,536
Manure Factory and Night Soil Service Loan	4,000	2,000
Municipality Loan, 1903	8,000	2,000
	Rs. 38,645	Rs. 12,536

LOCAL BOARDS.

There are Boards of Commissioners for the towns of Curepipe, Beau Bassin and Rose Hill, and Quatre Bornes, which are entrusted with the general improvement and conservancy of these towns. By Ordinance No. 4 of 1913, the Board of Curepipe has been entrusted with the powers and duties, sanitary control excepted, of the Health Department in respect of Slaughter Houses, Public Markets and Butchers' Shops.

The Board of Curepipe receives the amount of taxes on vehicles and animals collected in the town and of licenses paid by traders and others. The Board may also levy a tax not exceeding one per cent. on house property and a tax on every tenant of any house, building or property. The two other Boards receive the amount of the taxes paid on vehicles and animals in the towns and may also levy a similar tax on house property.

The following tables show the revenue and expenditure of the Boards for the past five financial years :—

Curepipe.

	1909–10.	1910–11.	1911–12.	1912–13.	1913–14.
	Rs.	Rs.	Rs.	Rs.	Rs.
Revenue ...	90,966	68,510	73,136	74,883	86,718

Quatre Bornes

—	1909–10.	1910–11.	1911–12.	1912–13.	1913–14.
	Rs.	Rs.	Rs.	Rs.	Rs.
Revenue ...	12,513	12,748	13,374	13,216	12,659
Expenditure ...	12,615	11,096	11,720	14,152	12,519

Below will be found a statement of the debts of the Boards :—

Curepipe	Net amount of Debt	Rs. 37,500
Beau Bassin and Rose Hill ...	„	Rs. 1,100
Quatre Bornes	„	Nil

There is a District Board for each of the eight rural districts of the Island. To them is entrusted under Ordinance No. 9 of 1900 the maintenance of the branch roads.

They receive as revenue a contribution from Government equivalent to 10 % of the direct taxes collected in each district during the year and an addition of 10 % to the direct taxes to be levied in each year in each district, exclusive of Port Louis and the Townships. The additional 10 % to be levied on the direct taxes may be increased to 25% subject to the approval of the Governor in Executive Council. The Government contribution amounted in 1913–14 to Rs. 12,085.

The powers of the District Boards were extended by Ordinance No. 35 of 1902 to include the construction, maintenance and management of water works. For this purpose they receive an annual contribution from Government, which in 1913–14 amounted to Rs. 76,000, and also the proceeds of water rates and of charges paid for water supplies.

II.—TRADE, AGRICULTURE AND INDUSTRIES.

Imports and Exports.

The Customs returns for the year shew the aggregate value of of Imports and Exports, excluding specie, for the year 1914 to be Rs. 95,199,269 or Rs. 27,042,860 above the figure for the previous year. This increase appears under Exports and is due to the rise in the value of sugar exported during the last half of the year 1914 as compared with the year 1913 and to the larger quantity available for export.

The aggregate value of Imports and Exports, excluding specie, for the years 1910 to 1914, was as follows :—

Year	Imports.	Exports.	Total
1910	Rs. 35,014,664	Rs. 36,528,536	Rs. 71,543,200
1911	37,440,332	40,414,328	77,854,660
1912	32,002,440	36,893,269	68,895,709
1913	35,864,703	32,291,706	68,156,409
1914	35,674,864	59,524,405	95,199,269

The value of Imports from, and Exports to the United Kingdom, British Possessions and Foreign Countries during the same years is shown below (specie is not included) :—

Year.	Imports from (Unit Rs. 1,000)			Exports to (Unit Rs. 1,000)		
	United Kingdom.	British Possessions.	Foreign Countries.	United Kingdom.	British Possessions.	Foreign Countries.
1910	11,282	16,225	7,506	8,267	27,863	397
1911	11,995	18,130	7,313	13,397	22,170	4,846
1912	11,504	14,117	6,382	4,467	32,038	389
1913	12,149	15,599	8,117	5,955	24,886	1,450
1914	11,818	16,716	7,140	32,116	26,270	1,138

The following tables show the percentage of Imports from, and Exports to, the United Kingdom, British Possessions and Foreign Countries during each of the last five years :—

Imports.

From	1910.	1911.	1912.	1913.	1914.
United Kingdom	32.2	32.1	36.0	33.9	33.1
British Possessions	46.4	48.4	44.1	43.5	46.9
Foreign Countries	21.4	19.5	19.9	22.6	20.0

Exports.

To	1910.	1911.	1912.	1913.	1914.
United Kingdom	22.6	33.1	12.2	18.4	54.0
British Possessions	76.3	54.9	86.8	77.1	44.1
Foreign Countries	1.1	12.0	1.0	4.5	1.9

There is a marked increase in the export trade with the United Kingdom, due to the purchase by His Majesty's Government of 161,000 tons of crystal sugar, of which 123,000 tons had been cleared up to the 31st December.

Owing to the war there is a falling off in the trade with Foreign Countries, there being reductions both under Imports and Exports. The value of the trade with India shows a rise as compared with the previous year, and the trade of the Colony with India and the United Kingdom represents more than 85 per cent. of the aggregate Export and Import trade of the Colony.

The Customs Revenue shows an increase of Rs. 84,000 as compared with 1913. The chief articles contributing to the Revenue from Imports in 1914 were :—

Tobacco and Cigars	Rs. 850,000
Grain (including rice, dholl, etc) ...	565,000
Cotton Manufactures	150,000
Wines	150,000
Oils	166,000
Spirits	130,000
Matches...	129,000

The export duty on sugar yielded Rs. 865,000.

Imports.

Specie to the value of Rs. 2,285,075 was imported in 1914 as compared with Rs. 395,538 in 1913. The value of the imports, exclusive of specie, in 1914 was practically the same as in the previous year.

The largest increases as compared with 1913 occur under the following heads :—

Corn, Grain &c., ...	Rs. 1,580,000
Bags and Pockets	785,000
Soap	125,000
Edible Oils......	100,000

The largest decreases occur under the following heads :—

Coal	Rs. 1,355,000
Manures and Fertilizers	675,000
Machinery for Local Industries ...	380,000
Haberdashery...	330,000
Hardware and Cutlery	200,000

The imports of rice, which is the chief article of food of the majority of the population, was 62,700 tons (metric), as compared with 63,600 tons in the previous year, the value of the importations being Rs. 10,013,000 in 1914 and Rs. 8,514,000 in 1913. India supplied most of the rice imported but the importations from Cochin China rose from 1,871 tons in 1913 to 6,442 tons in 1914; Madagascar supplied 1,658 tons and Hong-Kong 1,169 tons. 7,375 tons of wheat flour valued at Rs. 1,178,000 were imported as against 7,789 tons valued at Rs. 1,002,000 in 1913; Australia supplied 3,858 tons and India 3,516 tons. India supplied all the dholl imported, the importations being 4,087 tons valued at Rs. 627,000 in 1914 as against 5,219 tons valued at Rs 585,000 in 1913.

The importations of coal decreased from 61,090 to 58,933 tons, the United Kingdom continuing to be the principal source of supply. Natal supplied 10,590 tons.

There was a decrease of Rs. 380,000 in the value of imports of machinery for local industries and of Rs. 182,000 in machinery for mechanical transport.

The following tables give the value and country of origin of importations under the heads Machinery and Mechanical Transport for the years 1910 to 1914 :—

Machinery.

Total ...	646,958	252,157	160,480	473,302	291,209	1,824,106

The value of machinery for local industries imported in 1914 was Rs. 779,878 and the imports during the last five years amounted to Rs. 5,351,483. Practically all the machinery comes from the

United Kingdom, the rolling stock for the light tramways being of foreign manufacture.

The use of motor cars and motor cycles has developed rapidly in the last few years. In 1907, 13 cars and 2 cycles were imported and in 1908, 6 cars and 3 cycles, while during the last 6 years 350 cars valued at Rs. 1,597,000 and 105 cycles valued at Rs. 77,000 have been imported. The number of motor cars imported in 1914 was 56 valued at Rs. 179,000, and of cycles 30 valued at Rs. 27,000.

The following table shows the principal countries which export goods to Mauritius and the value of the goods exported, exclusive of specie, in the years 1913 and 1914 :—

Country.	Exports to Mauritius.	
	1913.	1914.
British India	Rs. 13,463,000	Rs. 14,510,000
United Kingdom	12,149,000	11,818,000
France	3,444,000	2,230,000
Cochin China	293,000	987,000
Australia	608,000	956,000
Madagascar	996,358	892,000
United States	863,000	686,000
Belgium	593,000	500,000
Reunion	373,000	404,000
Sumatra	322,000	359,000
Cape Colony	789,000	335,000
Germany	431,000	309,000
Straits Settlements	178,000	289,000
Natal	159,000	242,000

The United Kingdom, British India or British Possessions are the largest suppliers of wearing apparel, bacon, gunny bags, beer, books, bran, chemicals for manures, cement, coal, confectionery, dholl, gram, oats, rice, flour, cotton, salt fish, ghee, hardware and cutlery, iron nails, wrought iron, boots and shoes, machinery for local industries, manure (bone), salt, soap, whisky, stationery, tea, tin, umbrellas (cotton), shooks, sleepers, timber, woollen goods.

Foreign countries are the main source of supply for oxen, butter, lard, clocks and watches, enamelled ware, glassware, haberdashery, jewellery, machinery for mechanical transport, matches, motor cars, petroleum, cigarette paper, perfumery, potatoes, brandy, wine, sulphur, tobacco (manufactured) and cigars, toys.

Exports.

The total value of the Exports, excluding specie but including charges, was in 1913 Rs. 32,291,706 and in 1914 Rs. 59,524,405.

The following table shows the value and the destination of the principal products of the Colony, other than sugar, which were exported in 1913 and 1914 :—

Product.	Year.	Exported to			Total.
		United Kingdom.	British Possessions.	Foreign Countries.	
		Rs.	Rs.	Rs.	Rs.
Aloe Fibre ...	1913	703,654	49,365	100,549	853,568
„ ..	1914	452,010	6,240	125,976	584,226
Copra ...	1913	12,900	...	16,200	29,100
„ ...	1914	141,390	...	...	141,390
Molasses ...	1913	4	61,298	8	61,310
„ ...	1914	...	112,665	...	112,665
Rum ...	1913	4,416	17,914	...	22,330
„ ...	1914	5,783	11,531	...	17,314

The following table shows the principal countries to which sugar was exported during the calendar years 1913 and 1914 :—

Country.	1913. Tons*.	1914. Tons*.
United Kingdom	31,170 ...	... 155,912
British India	127,620 ...	... 115,563
Cape Colony	14,387 ...	... 7,190
France	5,378 ...	... 3,107
Ceylon	629 ...	... 2,620
Australia	2,132 ...	... 1,525
Hong-Kong	3,293 ...	... 1,096

Out of 289,372 tons of sugar exported in 1914, the United Kingdom and British India purchased 271,475 tons.

---

* Metric ton = 1,000 kilogrammes.

AGRICULTURE.

Sugar.

A total of 159,172 arpents was under cultivation in sugar-cane on December 31st. 1914, or an extension of 5,756 arpents over the area recorded for 1913. This increase is made up as follows :—

On Estates			+ 74 arpents.
By Planters	As " metayers " on Estates	+7,754 arpents	+5,682 arpents.
	Off Estates	−2,072 ,,	

The area under cultivation by estates has not varied to any extent, relatively large increases in some districts being set off by the " morcellement " of estates in others. The increase in area under sugar-cane is due to " planters " cultivations. Of the total area of 159,172 arpents under sugar-cane, planters cultivated 66,584 arpents of which 53,127 arpents were cultivated by small planters of Indian origin. The principal extensions in sugar-cane cultivation have taken place, as during the year 1913, in the districts of Pamplemousses, Grand Port and Rivière du Rempart.

The total output of the factories for the 1914–15 crop—year was 277,180 metric tons, of which 252,302 were exported up to the 31st. of May 1915. This is the largest crop the island has ever produced and with the high prices realised has placed the industry in a very sound financial condition.

The information in respect of the average selling price, gathered by the Statistical Division of the Department of Agriculture, shows that it will approximate Rs. 11.20 per 50 kilograms, giving to the crop a monetary value of Rs. 62,088,000.

The weight and monetary value of the crop for the last 5 years is shown below.

Years.	Total Produce Tons *	Monetary Value. (unit : Rs. 1,000,000)
—	—	—
1910–11	222,830	31.6
1911–12	169,550	32.9
1912–13	213,059	29.8
1913–14	249,703	34.7
1914–15	277,180	62.1 (estimated).

The high price realised for the 1914–15 crop was due to the war in Europe. Of this crop, over 161,000 tons were sold to His Majesty's Government, and the planters of the colony presented for the use of His Majesty's Army and Navy a free gift of 1,000 tons of high-grade vesou sugar.

---

* Metric ton = 1,000 kilogrammes.

During 1914 some improvements were made in the machinery of factories. Two mills were added during the year, and the number of boilers added was five. "Secheries" or megass driers were decreased by three and economisers increased by seven. The number of decanters was increased by 164 and defecators reduced by 29. The number of crystallisers-in-motion was increased by 80, and 5 Weston-type centrifugals were installed.

Aloes.

The area returned as being under cultivation with " aloes " shows a considerable increase, particularly in the district of Flacq. The total area of cultivated and wild aloes however remains stationery. The fibre industry flourished up to the outbreak of war, when sales stopped and most factories closed down. At the end of 1914 enquiries for fibre began to be made, and gradually with a hardening of prices, the factories began operations again.

Vanilla.

The vanilla crop was about 1,500–1,600 kilos, but the war closed the markets and except for a few local sales no business was done.

Other Cultivations.

There has been a reduction in the cultivation of manioc, particularly in the district of Pamplemousses, while there has been an increase in the area under maize notably upon estates in Grand Port.

Live Stock.

The number of horned Stock upon estates was returned at 21,305, a reduction of 836 on the returns for 1913. Milch cows held by people residing upon estates numbered 3,282 against 4,096 in 1913, and it is presumed that, owing to the increased cost of living brought about by the war and to the increases in the prices of imported foodstuffs, the Indian residents on estates have been compelled to dispose of some of their animals. The numbers of pigs and goats held by residents upon estates were 4,856 and 7,718 respectively, against 6,981 and 8,220 for the year 1913.

Co-Operative Credit Societies

At the 30th. June 1914, fifteen societies, with unlimited liability, had been registered under the provisions of the Co-operative Credit Societies Ordinance (1913). The aggregate working capital of these Societies amounted to Rs. 125,676, of which a sum of Rs. 37,550 or less than 30 % was lent by the Government.

SHIPPING.

The following comparative tables show the number, tonnage and nationality of ships entered and cleared during the years 1913 and 1914.

Nationality.	1913.						1914.

These tables show that 207 vessels with a tonnage of 438,029 reported during the year against 197 with a tonnage of 417,619 in the previous year, giving a total increase of 10 in the number of vessels and of 20,410 in tonnage. Two hundred and three vessels with a tonnage of 436,940 cleared as against 197 with a tonnage of 415,408 in the previous year, showing an increase of 6 vessels and of 21,532 in tonnage.

The increase in the number reported is divided between those reporting with cargo and those reporting in ballast as follows :

Reported with cargo	+ 4	tonnage	−20,635
„ „ ballast	+ 6	„	+41,045
	10		20,410

The clearances show an increase of 6 vessels and of 21,532 in tonnage. Divided between vessels cleared with cargo and vessels cleared in ballast, the figures are as follows :

Cleared with cargo	+19	tonnage	+45,847
„ „ ballast...	−13	„	−24,315
	6		21,532

Distinguishing steam vessels from sailing vessels there has been an increase of 3 in the number reporting and of 15,285 in tonnage as compared with the previous year and an increase of 3 in the number cleared and of 18,544 in tonnage. The number of steamers reporting with cargo is 4 less than in the previous year with a decrease of 25,832 in tonnage and the number of steamers reporting with ballast is 7 more than in the previous year with an increase of 41,117 in tonnage. Twenty-one more steamers cleared with cargo than in the previous year with a corresponding increase of 46,165 in tonnage ; the number of steamers clearing in ballast was less by 18 with a corresponding decrease of 27,621 in tonnage.

The number of sailing vessels reporting with cargo was greater by 8 with a corresponding increase of 5,197 in tonnage. No sailing vessel reported with ballast during the year as against 1 with a tonnage of 72 in 1913. There was a decrease of 2 in the number of sailing vessels cleared with cargo with a corresponding decrease of 318 in tonnage ; the number of sailing vessels cleared in ballast was greater by 5 with a corresponding increase of 3,306 in tonnage.

III.—LEGISLATION.

Among the more important legislative measures of the year are the following :—

The Exportation of Plumage Birds Ordinance, 1914 (*No.* 3), as amended by The Exportation of Plumage Birds (Amendment) Ordinance, 1914, (No. 34), prohibits the exportation of the plumage or skins of certain birds.

The Irrigation Works Ordinance, 1914 (*No.* 4), as amended by The Irrigation Works (Amendment) Ordinance, 1914 (No. 33), provides for the execution of certain Irrigation works and traces out the procedure for the acquisition of the required lands and rights of aqueduct.

The Aerial Navigation Ordinance, 1914 (*No.* 9), provides for the protection of the Public and the Colony against dangers arising from the navigation of aircraft. It is borrowed from the Aerial Navigation Acts, 1911, and 1913.

The Electric Lighting and Power (Amendment) Ordinance 1914 (*No.* 11), enacts the procedure for enabling the undertaker to fix poles, stays or struts on private property, in the event of the owner of the property refusing the required permission.

The Prevention of Injury to Telegraph Poles and Wires (Amendment) Ordinance, 1914 (*No.* 12), gives similar powers to the Colonial Postmaster.

The Copyright Ordinance, 1914 (*No.* 13), provides for the importation of copies under the Copyright Act, 1911, and for the penalties for dealing with infringing copies. It is borrowed from Section 14 of the aforesaid Act and from Section 11 of the Commonwealth of Australia Act No. 20 of 1912.

The Boards (Road Improvement) Amendment Ordinance, 1914 (*No.* 14), simplifies the procedure traced out by Ordinance No. 16 of 1907 for the purchase of land required by the Boards of Townships, or by the District Boards.

The Customs (Naval and Military) Rebate Ordinance, 1914 (*No.* 19), provides for the refund of Customs duty on goods purchased by the Naval or Military Authorities, or supplied by Contractors, for the public use of His Majesty's Sea or Land Forces in the Colony.

The Game Laws (Amendment) Ordinance, 1914 (*No.* 20), prohibits the taking or destroying of the eggs and nests of all birds except those of the bul-bul and of the sparrow ; and empowers the Governor to proclaim certain reserved areas in which the killing and taking of any bird will be prohibited at all times.

The Pilotage Ordinance, 1914 (*No.* 23), which is borrowed from

Section 15 of the Pilotage Act, 1913, extends the liability of the owner or master of a vessel to cases of compulsory pilotage.

The Woods and Forests (Amendment) Ordinance, 1914 (*No.* 24), abolishes the Woods and Forests Board as constituted by Ordinance No. 5 of 1901.

The Trading with the Enemy Ordinance, 1914 (*No.* 28), which is borrowed from the Trading with the Enemy Act, 1914, prohibits trading with the enemy ; it also provides for the issue of warrants of inspection and for the appointment of controllers to certain firms and companies.

The Bills of Exchange Ordinance, 1914 (*No.* 32), reproduces the Bills of Exchange Act, 1882, with a few modifications necessitated by local circumstances.

The Civil Status (Christian Marriages) Amendment Ordinance, 1914 (*No.* 35), validates the marriage celebrated by the Ministers of the several Christian churches in the Colony, and provides for the requisite formalities and for the registration of the Acts of Marriage.

The Council of the Bar Ordinance, 1914 (*No.* 36), provides for the establishment and organisation of a Council of the Bar in the Colony.

The Curepipe (Amendment) Ordinance, 1914 (*No.* 38), extends the powers and duties and increases the revenue of the Board of Curepipe.

The Stamp (Amendment) Ordinance, 1914 (*No.* 41), exempts money order and postal order receipts from the stamp duty of 4 cents levied on all receipts under article 2 of Ordinance No. 41 of 1888.

The Forest Produce Protection Ordinance, 1914 (*No.* 43), provides for the control of dealers in forest produce and for the repression of larceny of timber.

The Labour (Amendment) Ordinance, 1914 (*No.* 45), substitutes the finger print system as a means of identification for Immigrants in place of the photograph.

The Filiation Ordinance, 1914 (No. 46), allows the proof of paternal descent in certain specified cases. It is borrowed from the French law of the 16th. November 1912.

The Succession Duties (Amendment) Ordinance, 1914 (No. 47), increases the succession duties and provides for the better recovery thereof.

The Reformatory (Amendment) Ordinance, 1914 (No. 52), amends the law relative to Reformatory schools and to Juvenile offenders and abolishes short periods of detention in the Reformatory.

IV.—EDUCATION.

Primary Schools.

The Primary Schools at the end of the year 1914 numbered 151 of which 60 were Government and 91 Aided Schools. Of the Aided Schools there were 67 Roman Catholic, 19 Church of England, 2 Presbyterian, 2 Mahomedan and 1 Hindoo. Two schools, one Roman Catholic and one Church of England, which had been working for some time in accordance with the Code, were placed on the list of Aided Schools during the year.

The number of Primary Schools, Government and Aided, and the number of pupils for the years 1910 to 1914 are shown in the following table :—

Year.	Government Schools.			Aided Schools.		
	Number of Schools.	Annual average number of pupils on roll.	Annual average number of pupils in attendance.	Number of of Schools.	Annual average number of pupils on roll.	Annual average number of pupils in attendance.
1910	61	9,326	5,951	88	11,621	7,934
1911	60	9,421	6,030	88	11,589	7,972
1912	60	9,522	5,775	89	11,987	7,635
1913	60	9,223	5,693	89	11,735	7,717
1914	60	9,906	6,435	91	12,762	8,684

The average attendance in Government and Aided schools for the year was 15,119 with a roll of 22,668, showing an average attendance of 66.7 % of the number of pupils on the roll. There is a considerable increase in the number enrolled and the percentage of attendance as compared with the number on the roll has also risen. The numbers for 1913 were: On roll, 20,958; average attendance, 13,410; percentage attendance, 63.98. The average number in attendance for the year exceeded that for 1911, the highest recorded, by 8 %.

The increase in the number of Indian children attending the Primary schools is maintained, the figures being as follows :— 9,369 in 1914, 8,413 in 1913, 8,316 in 1912, 8,175 in 1911 and 7,462 in 1910.

Of the total number of pupils on the roll in the six standard classes 62 % passed the examination tests as compared with 64 % in 1913 and 56 % in 1912, while of the number of pupils who were presented for examination 64 % passed in 1914 as compared with 64 % in 1913 and 59 % in 1912.

The total expenditure for the year on the salaries of, and grants to, Teachers in Primary schools amounted to Rs. 319,245, of which Rs. 142,439 was expended on Government schools and Rs. 176,806 on Aided schools. The figures for 1913 were Rs. 296,118, Rs. 134,681 and Rs. 161,437, respectively. The cost to Government of a pupil in a Government school was Rs. 19.26 and in an Aided school Rs. 15.66, as compared with Rs. 19.70 and Rs. 15.39 in 1913.

There are open annually to pupils of Primary schools 6 scholarships and 6 exhibitions at the Royal College for which there is keen competition. The exhibitioners receive free tuition and the scholars free tuition and an allowance of Rs. 100 a year. There were 165 candidates in 1914 and 148 in 1913. Six candidates failed in the test examination and 31 scored the minimum number of marks. The number of candidates from Government schools was 100 and from Aided schools 65, as compared with 97 from Government and 51 from Aided schools in the previous year.

Elementary instruction in Hygiene and Malaria prevention has been given to the children in the Primary Schools. Hygiene was taken as a special subject of examination for grants in 14 Government and 4 Aided Schools. In these 631 children were presented for examination and 472 obtained certificates.

A course in Elementary Agricultural Science for Teachers was given at the Royal College and was attended by 35 Head Teachers of Government and Aided schools.

Secondary Education.

Secondary Education is provided by the Royal College, and associated schools. 409 candidates from 14 associated schools were presented for examination of whom 201 passed. There were in December 1914, 252 pupils at the Royal College, the average number for the year being 268. Of 252 pupils at the College in December, 96 did not pay fees.

The attendance at the associated schools was 505.

There were 34 candidates for the London Matriculation Examinations in 1914. Six out of the 31 candidates from the Royal College passed in the Second Division, one of the 3 others passed in the First Division.

There were 101 candidates for the Senior Cambridge Examination : 33 out of the 71 candidates from the Royal College and 3 of the 30 others passed. Out of 25 candidates from the Royal College for the Junior Cambridge Examination, 15 passed.

There are scholarships and exhibitions in nearly all the classes of the Royal College and there are two valuable scholarships to enable pupils of the College to continue their studies in Europe.

There are 10 girls' schools which are affiliated to the Royal College in connection with the scheme for the Higher Education of Girls. The number of candidates who were presented for examination was 400 of whom 202 obtained Honours Certificates and 33 Pass Certificates. Twenty-eight girls entered for the Senior Local Examination of whom 15 passed. Five entered for the Junior Division but none passed. The associated schools for Boys and the schools for the Higher Education of Girls have been placed under a common set of regulations and will be called Aided Secondary Schools.

Training of Teachers.

There are Government Training Schools for men and for women. There were 9 candidates from the Men's Training School for the second class teacher's certificate, of whom 3 passed. There were 4 candidates from the Women's Training School for the second class certificate and 2 for the third class; they all passed.

The following table shows the number of candidates for certificates and the number who passed during the year :—

Class of Certificate.	Candidates.			Successful.		
	Men.	Women.	Total.	Men.	Women.	Total.
Second ...	26	11	37	4	6	10
Third	45	24	69	6	5	11
Monitor's ...	112	114	226	8	8	16
Total ...	183	149	332	18	19	37

There are 672 certificated Teachers employed in Government and Aided schools, of whom 153 are Head Teachers, 162 Assistant Teachers and 357 Monitors.

Technical Education

There are 8 mechanical engineering apprenticeships for which there were 84 candidates in 1914 as against 110 in 1913. There are 2 horticultural apprenticeships for which there were 23 candidates as against 27 in 1913, and 2 engineering studentships for which there were 4 candidates as against 1 in 1913.

Needlework receives attention in girls' schools and the work of the pupils continues to show improvement. Thirty-three candidates entered for the needlework competition, to 4 of whom apprenticeships were awarded.

Manual work is taught in 1 Government and 5 Aided schools.

V.—GOVERNMENT INSTITUTIONS.

Hospitals and Dispensaries.

There are 11 Hospitals, including 3 in connection with the Prisons and Reformatory, and there is also a Hospital Ward with 30 beds attached to the Lunatic Asylum. The total number of "cases" treated at all hospitals was 18,563 as compared with 16,280 in 1913. The number of "cases" treated at the dispensaries was 62,944.

Lunatic Asylum.

There is a Lunatic Asylum and a Lunatic Ward in connection with the Poorhouse of Barkly Asylum. There were 488 patients in the Asylum on the 31st. December 1914 as compared with 467 on the corresponding date of the previous year, and the daily average rose from 455.74 in 1913 to 470.45. The total number of certified lunatics in the Colony on the 31st. of December 1914, including patients out on probation and patients in the Lunatic Ward of Barkly Asylum, was 706, giving a proportion of 1 insane to 532 of population. There were 22 criminal lunatics of whom 19 were males and 3 females.

Poor Relief.

Barkly Asylum is the only institution under the direct control of the Poor Law Commissioner at which paupers receive institutional relief.

The buildings of Barkly Asylum were originally acquired for the purpose of affording institutional relief to the poor. The hospital was later placed entirely under the control of the Medical Department and has come to be used as a general hospital for the district. Arrangements also exist at various religious institutions for the maintenance of aged and infirm paupers at fixed rates, and there is an asylum for pauper lepers in which patients are maintained at the public expense.

Exclusive of the number of patients treated free at the Public Hospitals and Dispensaries of the Colony, and at St. Lazare Leper

Asylum 1,252 paupers, as compared with 1,337 in 1913, received institutional relief during 1914 at the Barkly and Lunatic Asylums and different religious institutions.

2,343 paupers (561 males and 1,682 females) received outdoor relief (pecuniary), permanently or temporarily, during 1914, against 2,929 in 1913.

Savings Bank.

At the Government Savings Bank there was on the 30th. June 1914 a sum of Rs. 3,237,874 to the credit of 29,409 depositors, as compared with Rs. 3,291,656 to the credit of 28,841 depositors on the 30th. June 1913. The investment funds amounted to Rs. 3,494,171. Interest is allowed at the rate of 3 %.

The following table shows the number of depositors who belonged to the General and Indian populations and the amount standing to their credit on the 30th. June 1914 :

	Number	Rs.
General Population	17,848	1,917,566
Indian Population	11,561	1,320,308

VI.—JUDICIAL STATISTICS.

Police.

The authorised strength of the Police on the 31st. of December 1914 was 1 Inspector General, 1 Deputy Inspector General, 5 Inspectors, 6 Sub Inspectors, 1 Staff Sergeant Major, 36 Sergeants, 49 Corporals, 496 Constables. Fifty-four men were enlisted in 1914 and the total number discharged was 122.

Criminal Statistics.

The number of offences reported to the Police in 1914 was 21,262 as against 24,350 in 1913.

They may be classified as follows :

Homicide	15
Other offences against the person	7,920
Prædial Larceny	210
Other offences against property	4,798
Other offences	8,319
	21,262

In connection with these offences 11,784 persons (including 409 persons arrested on suspicion) were apprehended by the Police or summoned before the Magistrates. In 12,443 of the cases no person was charged.

The total number of persons brought before the Magisterial Courts (District, Stipendiary and Bench of Magistrates) in 1914 was 22,136; of these the number prosecuted was 19,903 including persons tried before a Bench of Magistrates or committed to the Court of Assizes. The number discharged for want of prosecution by party complaining or for want of evidence was 2,233.

The cases prosecuted in the District Courts (including preliminary inquiries with a view to commitment to the Assizes and Bench cases) were distributed as follows :—

Offences	Discharged for want of prosecution or evidence.	Dismissed on the merits.	Convictions.	Committed to the Assizes.
Against the person	167	400	917	23
Prædial Larceny	5	24	127	...
Other offences against property	436	343	1,457	6
Offences against Revenue, Municipal, Road and other laws relating to the social economy of the Colony.	134	431	12,141	...
Other offences	39	80	1,405	...
Total	781	1,278	16,047	29

The total number of persons prosecuted before the District Courts during the last five years was distributed as follows :—

Year.	Offences against the person.	Prædial Larceny.	Other offences against property.	Other offences (including Revenue cases, &c.)	Total.
1910	1,323	206	1,935	12,035	15,499
1911	1,398	174	2,368	12,273	16,213
1912	1,486	297	2,022	14,152	17,957
1913	1,468	198	1,681	14,274	17,621
1914	1,340	151	1,806	14,057	17,354

The convictions (including committal to the Assizes) before the District Courts for the same period were as follows :—

Year.	Offences against the person.	Prædial Larceny.	Other Offences against property.	Other Offences.
1910 ...	1,003	175	1,493	11,449
1911 ...	954	159	1,876	11,697
1912 ...	1,073	280	1,645	13,587
1913 ...	985	166	1,338	13,530
1914 ...	940	127	1,463	13,546

There were 24 cases in which 26 persons were charged at the Assizes in 1914. Of these 12 persons were acquitted and 13 were convicted. In one case a nolle prosequi was entered.

The following table shows the number of persons convicted at the Assizes during the last five years and the offences for which they were convicted.

Year.	Murder, other than wife and child murder.	Manslaughter and attempt at.	Attempt at murder.	Murder of wife, reputed wife or concubine.	Including attempts to commit the several offences.									
					Child-Murder.	Concealment of birth.	Abortion.	Rape.	Unnatural crimes.	Other offences against the person.	Malicious injury to property.	Larceny with aggravating circumstances.	Other offences against property.	Miscellaneous.
1910	...	3	...	...	...	...	...	6	...	24	3	8	...	1
1911	...	1	...	...	...	...	...	...	...	2	49	2	...	...
1912	...	...	1	...	...	...	...	...	...	6	2	2	1	...
1913	...	2	...	...	1	...	...	...	...	7	...	6	...	...
1914	...	2	2	...	...	...	...	1	...	7	..	1	...	...

In 1914 twenty-three persons were tried at the Assizes for offences against the person as compared with 15 in 1913, the number convicted being 12 in 1914 and 10 in 1913. The number of persons tried at the Assizes for offences against property was 3 in 1914 of whom 1 was convicted, as against 7 in 1913 of whom 6 were convicted.

Prisons and Reformatory.

There was a decrease of 198 in the number of prisoners admitted to prison after conviction as compared with 1913, the figures being:—

	Males.	Females.	Total.
1913	3,580	194	3,774
1914	3,454	122	3,576

The number of prisoners under detention on the 31st of December 1914 was 562 as compared with 778 on the corresponding date of the previous year. The daily average number under detention shows a decrease of 132.68 as compared with 1913, the daily average for the year being 590.73 as against 723.41 in 1913.

The deaths in the Prisons numbered 8 as compared with 15 in 1913. The daily average number under treatment in the Prison Hospitals was 22.21 in 1914 as compared with 26.91 in 1913: the prevailing diseases were malaria and dysentery.

There were 18 escapes during the year as against 12 in 1913. Fifteen of the prisoners who escaped were recaptured, and in addition to these 3 prisoners who had escaped previous to the 1st. of January 1914 were recaptured.

The numbers admitted to the Reformatory in 1914 were 74 new boys, 49 ex-Reformatory boys and 32 untried, a total of 155 as against 182 in 1913. There was an increase of 2.17 in the daily average as compared with 1913.

Of the 123 boys who were admitted on conviction, 74 entered the Institution with sentences of 6 months or less, of whom 36 were sentenced to a month or less, and 21 of these to sentences of 7 days or less.

No deaths occurred during the year. The general state of health of the boys was good. The admissions to hospital decreased by 66 as compared with the previous year.

The discipline among the boys was satisfactory; there were 24 departmental offences as against 34 in 1913, the offences being committed by 17 boys. None of the offences were of a serious nature.

There were 2 escapes during the year; both boys were recaptured on the day of their escape.

Short periods of sentence have been abolished by the Reformatory (Amendment) Ordinance, 1914.

VII.—VITAL STATISTICS.

The total population of the Island on the 31st. December 1914 is estimated in the Registrar General's Annual Report at 376,233, exclusive of the Dependencies (7,024).

Births and Deaths.

There were 14,024 births registered during the year. The law allows a delay of 45 days for free registration and the number of births which were not registered owing to death intervening before registration was 1,205. The total number of births was accordingly 15,229, of which 7,520 were males and 7,709 females, giving a proportion of 40.8 infants born to 1,000 persons living. The deaths registered numbered 12,134, giving a proportion of 32.5 deaths to 1,000 persons living.

The birth rate amongst the general population was 38 per thousand as compared with 38.2 per thousand in 1913, and amongst the Indian population 42 per thousand as compared with 41.9 per thousand in 1913. The death rate amongst the general and Indian populations was 30.4 and 33.4 per thousand respectively, as against 36.3 and 36.6 per thousand respectively in the previous year.

Public Health.

The general health conditions were not favourable during the year 1914. The number of patients treated at the public hospitals and dispensaries shows an increase over that recorded in 1913. From the returns of the Civil Status Officers the diseases that caused the largest number of deaths in 1914 were Malaria (3,914), Pneumonia (919), Tuberculosis (974) and Influenza (268), but it should be observed that a medical certificate is not required in all cases. The statistics from the public hospitals and dispensaries also shew that the rise in admissions was principally due to malaria and influenza, the admissions for those diseases being more numerous between March and August.

There were 125 cases of plague registered during 1914. This is the lowest number in any year since the outbreak of the disease; 111 cases were fatal giving a death rate of 88.8%. In 1913 there were 313 cases with 261 deaths, giving a death rate of 83.4%.

The number of cases of enteric fever increased from 172 in 1913 to 234 in 1914. The cases occurred principally in the districts of Plaines Wilhems, Port Louis and Moka.

Malaria.

Malaria still causes more deaths than any other disease.

The number of deaths ascribed to fever was 3,914, showing a decrease of 87 on that recorded in 1913; 2,925 cases were treated in the hospitals. The following are the figures for the years 1910 to 1914.

Year ...	1910	1911	1912	1913	1914
Cases ...	2,338	2,117	2,554	2,546	2,925

The case mortality was 1.77 % as against 1.84 % in 1913. The death rate for the whole Colony per thousand of the population was 10.4.

The spleen census and the treatment of school-children with quinine, as well as the free house to house distribution of quinine, have been continued under the supervision of the Sanitary Wardens. The Sanitary Branch of the Department has carried out major anti-malarial works, at Rivière Sèche and Rivière Françoise in Flacq district and at Rivière Citron, Ville Bague Canal, Ruisseau Sec, Rivière Terre Rouge, Le Hochet, Tombeau River and the Cocoterie Marshes in Pamplemousses district.

Vaccination.

The number of children presented for vaccination at the public vaccine stations was 12,537 as compared with 8,925 in 1913. Of this number 12,460 were certified by the Public Vaccinators to have been successfully vaccinated; 54 vaccinations were unsuccessful and in the remaining 23 cases the result of the operation could not be ascertained. The percentage of successful vaccinations was 99.3 %.

VIII.—METEOROLOGICAL.

Meteorological observations are taken at the Royal Alfred Observatory, Pamplemousses, and at nine second-order stations. The Observatory is about three miles from the West coast and is 179 feet above sea level. There are considerable variations both in temperature and humidity in the different parts of the island, the coast districts being hotter and drier than the higher altitudes in the interior. Hurricanes occur between December and April, which is the hottest season.

The mean rain-fall from 49 stations was 59.10 inches as compared with 75.83 inches in 1913 and an average of 74.94 inches. Heavy rains, relatively to the normal, fell in February and June. The rain-fall at the Observatory was below normal, being 43.12 inches as compared with a normal of 47.95 inches, and the number of "rainy days" recorded was 215 as compared with an average of 204, a "rainy day" being one in which .005 inch or more of rain was measured.

62507

The mean temperature of the air at the Observatory was 73.°7 as compared with an average of 73°.4, the highest temperature recorded being 89.°9 on the 10th of March, and the lowest 54° on the 23rd of July. The highest and lowest temperatures recorded at the Observatory between 1875 and 1914 were 94°.7 on the 23rd of December 1900, and 49°.9 on the 8th of August 1907.

From February to September the temperature remained generally above normal, falling to below normal in the last quarter of the year.

During the year 1914, there were, so far as is yet known, nine cyclonic disturbances in the South Indian Ocean, as follows:—

January	14	to	16	March	1	to	3
„	21	to	26	„	16	to	24
„	24	to	26	April	1	to	6
„	27	to	30	May	12	to	26
February	20	to	29				

IX.—POSTAL AND TELEGRAPH SERVICES.

The total number of Post Offices open in 1914 was 63 of which 56 were also Telegraph Offices. In the course of the year 2 Post Offices were closed leaving at the end of the year 61 Offices of which 46 are at Railway stations and 15 are in districts at a certain distance from the Railway system.

The revenue for the year 1914 was Rs. 216,510 as compared with Rs. 233,154* in 1913. The expenditure was Rs 164,302 in 1914 and Rs. 171,331* in 1913, leaving an excess of revenue over expenditure of Rs. 52,208 in 1914 and Rs. 61,824 in 1913.

The total number of letters, post cards, newspapers and postal packets, exclusive of parcels, which passed through the Post Office in 1914 was approximately 3,764,086 as compared with 3,645,281* in 1913. There is an increase of 168,419 in newspapers, commercial papers and samples and a decrease of 49,614 in the number of letters, postcards, &c., as compared with the previous year. The number of reply coupons sold during the year was 493 and the number paid was 61. The number of postal parcels received and despatched decreased from 15,319 in 1913 to 10,900 in 1914. The number received from abroad decreased by 3,478 and the duty collected amounted to Rs. 33,136.

The number of Inland money orders issued was 52,962 and their value Rs 569.595, being an increase of 4,906 in number and of Rs. 82,170 in value as compared with the previous year. The number issued on other countries was 6,753 and their value was

---

*The figures given in the Report for 1913 have since been revised. The correct figures are now given.

Rs. 273,193 being a decrease of 1,704 in number and an increase of Rs. 26,460 in value as compared with the previous year.

There were decreases of 549 in the number of postal orders sold and of 613 in the number paid. The decreases in value being Rs. 5,503 and Rs. 5,364 respectively.

There are 405 miles of Telegraph and 109 miles of Telephone wires under the charge of the Department. The Railway has not a telegraphic system of its own and the ordinary messages for the working of the traffic and for the administration of the Department are transmitted over the Post Office wires. The number of Railway messages and signals transmitted in 1914 was 295,721. The number of messages sent by the public increased by 9,462 in 1914. Out of a total number of 415,423 messages forwarded, 54,137 were sent by the public as compared with 44,675 out of a total of 284,020 in 1913. The receipts for the messages sent by the public amounted to Rs. 24,024, in which charges for porterage (Rs. 10,187) are included.

X.—RAILWAYS.

There is a single line of Railway of about 120 miles in length exclusive of the Bois Cheri Light Railway. The gauge is 4 feet 8½ inches.

The earnings from all sources for the year amounted to Rs. 3,169,960 as compared with Rs. 2,914,020 in 1913 being an increase of 7.32 %. Excluding Government traffic the earnings amounted to Rs. 2,888,918 being Rs. 230,151 more than in 1913. The services performed for Government Departments for which no cash payments were made would at ordinary rates have cost Rs. 281,042 of which Rs. 237,306 for passenger traffic, Rs. 35,786 for goods traffic and Rs. 7,950 for parcels, representing 8.99 % of the total traffic as compared with 8.75 % in 1913.

The receipts for passenger traffic amounted to Rs. 1,273,350 being higher than those of the preceding year by Rs. 24,649 and in excess of the mean for the last five years by Rs. 109,919.

The following table shows the tonnage of goods traffic, exclusive of Government traffic, carried in 1913 and 1914 :

	1913 —	1914 —	Increase —
Sugar Canes...	154,737	176,682	21,945
Sugar	189,692	200,233	10,541
General Merchandize	171,068	183,112	12,044
Total... ...	515,497	560,027	44,530

The total tonnage carried was 575,112 tons or 7.94 °/₀ more in 1914 than in 1913. The aggregate earnings for goods traffic were Rs. 1,514,398 or 10.70 °/₀ above those of 1913. The earnings for sugar cane traffic were Rs. 164,227 or 92.30 cents of a rupee per ton carried, as compared with 74.42 cents in 1913. The earnings for sugar traffic were Rs. 807,746 or Rs. 4.03 per ton carried, as against Rs. 3.85 in 1913. The earnings for general merchandize were Rs. 539,599 or Rs. 2.72 per ton carried as against Rs. 2.76 in 1913. The total expenditure charged to capital account including all sums paid from general revenue, surplus balances or loans up to the 31st. of December 1914 was Rs. 32,374,697* in which is included Rs. 2,308,777 advanced on account of the re-equipment of the Railways and which is eventually to be met from loan funds. The working expenses for 1914 amounted to Rs. 1,898,819. The ratio which working expenses bore to total earnings showed a decrease of 9.52 °/₀ as compared with 1913, the figures being 69.42 °/₀ and 59.90 °/₀ respectively. This large decrease in the working expenses is due to the establishment of a Materials and Stores Account to which is charged in the first instance the cost of all purchases of stores. As the stores are issued to works the items of the Estimates, under which provision is made for the works, are debited with the cost of the stores. The net earnings amounted to Rs. 1,271,141 or 3.92 °/₀ on the capital.

A covered platform and an overbridge at Curepipe Station were completed. The passenger platform at Montagne Blanche was lengthened. A new station was built midway between Midlands and Fressanges to replace these two stations. A carriage shed was put up at Port Louis and the reconstruction of the Trou Fanfaron viaduct was commenced.

Bois Chéri

There is a light railway of 2 feet 6 inches gauge running from Rivière du Poste Station on the Savanne Branch of the Midland Line to Mexico. The length of the line is 10 miles. The total goods traffic carried in 1914 amounted to 19,593 tons of which 17,518 tons were sugar cane as against a total traffic of 18,726 tons and 15,507 tons of sugar cane in 1913. The actual working expenses for 1914 were Rs. 16,196, the earnings Rs. 12,664 and the work done for the Government Departments was valued at Rs. 818. The corresponding figures for the previous year were Rs. 15,578, Rs. 10,834 and Rs. 2,775.

---

* Figure subject to revision by the Treasury.

XI.—PUBLIC WORKS.

The more important works undertaken by the Public Works Department during the year were in connection with the construction of the Victoria Hospital, Irrigation works at La Ferme, improvement of the shed accommodation at the Customs, Port Louis drainage, the reconstruction of Road bridges and the Mare aux Vacoas water works.

Buildings.

The Victoria Hospital with accommodation for 242 beds is being constructed near Quatre Bornes; the buildings form a long rectangle with an inner court, the wards being placed at right angles to the long side of the inner court. An administration block, operating room, maternity ward and wards for private patients are also provided.

The Port Office coal shed has been converted into an export shed for sugar and another shed which will be used for the same purpose is being erected. A coal shed will be erected on another site.

Bridges and Roads.

The rebuilding of timber bridges in ferro-concrete has been continued during the year. The Rivière-des-Anguilles bridge has been completed and 12 other smaller bridges have been rebuilt. Progress has been made in the improvement of roads by the use of the steam roller.

Irrigation.

The sites for reservoirs at La Ferme and La Nicolière have been acquired. The dam for the La Ferme reservoir is in course of construction and the reservoir will be completed to its full capacity of 417 million cubic feet. Progress has been made with the diversion weirs on the rivers Sèche, Papayes and du Rempart, the feeder channels from the above weirs to La Ferme reservoir and the northern distribution channel from La Ferme reservoir.

Mare aux Vacoas Water Works.

The reservoir at Mare aux Vacoas, where the average annual rainfall is 137 inches, has a catchment area of about 5 square miles. The top water level is 1,832 feet above the mean sea level and the reservoir has a maximum capacity of 570 millions of gallons. The water flows from the reservoir for 4,900 feet in an open conduit, which is being replaced by a covered concrete channel, and for a further distance of 7,700 feet is taken in a 16″ cast iron pipe to the filtering establishment at "La Marie", which is 1,645 feet above sea level.

At the filtering establishment there is a depositing reservoir with a capacity of 1,500,000 gallons and a covered service reservoir with a capacity of 500,000 gallons. Owing to the water being at times heavily charged with organic matter the "Anderson process" for the purification of water was installed and concrete partitions were erected in the depositing reservoir to improve the settlement of solids. Originally there were only 4 filter beds with a superficial area of 6,720 square feet, but 5 additional filter beds have since been constructed with a superficial area of 18,000 square feet and extra aerating trays have been added.

The daily consumption of water exceeds 1,600,000 gallons and with the exception of the supply to the town of Curepipe, the water flows by gravitation to the lower districts. The supply for Curepipe is pumped by means of hydraulic rams to two reservoirs standing 368 feet above the filtering establishment, the motor being driven by water power from the 16" supply main. The increase in the population of Curepipe has necessitated additions to the pumping plant and to the service reservoirs. The concrete covered channel which is to replace the open conduit from the reservoir to the filter beds is nearing completion. An additional service reservoir at Curepipe has been constructed.

Port Louis Drainage Works.

The Port Louis Drainage Works were begun in 1895, the sewers being designed on the separate system and the surface drainage being carried in the street gutters to the various streams which flow into the harbour. The town is divided for drainage purposes into four districts, three of which drain by gravitation sewers into separate collecting wells which are connected by means of syphon pipes to the pumping station near Caudan Bassin. From there, the sewage is pumped through cast iron pipes for 7,000 feet to the sea outfall at the mouth of Grand River North West and is discharged in 10 feet of water at low tide, a thousand feet from the shore. The total length of sewers laid is 25.75 miles and 1,231 properties have been connected. The amount expended on construction works in districts 2, 3 and 4 is Rs. 974,467 and on house services Rs. 615,519.

XII.—FORESTS.

The area of forests, mountain and river reserves and Curatelle lands under the care of the Forest Department was about 84,964 arpents of which about 68,602 arpents were Crown Lands, 10,122 arpents Mountain Reserves, 6,000 arpents River Reserves and 240 arpents Vacant Estates.

Forest Utilization.

The improvement fellings in the Grand Bassin Forest were continued, yielding about 3,370 cubic feet of timber; 21,200 railway keys and 213,150 shingles were also manufactured from the off-fall of trees. Improvement fellings were also begun during the year in Crown Land Gouly fils and yielded 732 cubic feet of timber.

For the supply of fuel to public establishments 1,800 cords of firewood were felled in Crown lands.

Thinnings in forest plantations (chiefly Pines and Eucalyptus) yielded 1,760 cubic feet of timber, which was used for the construction of quarters for the Forestry staff and wood to the value of Rs. 1,708 which was sold.

The cuttings of casuarina on the Pas Geometriques yielded fuel valued at Rs. 21,960 which was sold to the lessees who replanted the areas cleared.

In Mountain Reserves three owners were allowed, subject to an obligation to replant, to remove the dead and dying trees.

Nurseries and Plantations.

About 433 arpents of Crown Lands were artificially restocked with 485,410 plants at a total cost of Rs. 27,096, as compared with an area of 224 arpents restocked with 318,850 plants in 1913. About Rs. 2,200 were realized from the sale of plants raised in nurseries.

XIII.—DEPENDENCIES.

The Dependencies comprise a large number of small islands situated between 5° and 19° 50′ South Latitude and 51° and 72° 30′ East Longitude, of which the nearest is 230 miles, and the most remote about 1,200 miles distant from Mauritius.

Rodrigues, the largest and most important, is administered by a resident Magistrate, has an area of 40 square miles, and had at the census of 1911 a population of 4,829 of whom 2,523 were males and 2,306 females. The total population showed as compared with 1901 an increase of 1,667.

The increase was almost entirely in the general population which numbered 4,667, or 1,567 more than in 1901. The Indo-Mauritian population numbered 102, other Indians 36, and Chinese 24. The male agricultural population has increased considerably in the last 10 years and development is noticeable in the trade of the island. The Customs returns show that 72 cattle were sent to Mauritius in 1914 as against 92 in 1913. In 1914, 1,290 pigs, value Rs. 18,275, were sent to Mauritius as against 932, value Rs. 14,542, in 1913, and 3,249 goats and sheep, value Rs. 19,341 as against 4,216, value Rs. 24,518, in 1913. 238,505 kilos of salted fish were exported during 1914. The exports of tobacco shewed an increase of 21,420 kilos as compared with those of the previous year when 13,957 kilos were exported.

At the Rodrigues branch of the Government Savings Bank, there was on the 30th of June 1914 a sum of Rs. 25,775 to the credit of 70 depositors, as compared with Rs. 16,710 and 63 depositors on the corresponding date of 1913.

Most of the islands in the lesser Dependencies have been conceded or sold with the exception of a few Islands in the St. Brandon Group, and one near the great Chagos Bank, which are leased. The islands are administered by two Magistrates who are resident in Mauritius and pay regular visits to the Dependencies. The chief exports from the Dependencies are coconut oil, coconuts, copra, guano and fish (dried and salted).

J. MIDDLETON,

June, 1915.

Colonial Secretary.

REPORT ON THE MAURITIUS BLUE BOOK
FOR 1915.

I.—FINANCIAL.

GENERAL REVENUE AND EXPENDITURE.

Revenue.

The revenue for the year 1914–15 amounted to Rs. 12,113,810, being Rs. 1,576,060 above the estimate and Rs. 1,205,087 above the average for the five years immediately preceding.

The following is a comparative statement showing the actual revenue from normal sources collected during the financial years 1913–14 and 1914–15 :

Head of Revenue.	1913–14.	1914–15.	Increase.	Decrease.
	Rs.	Rs.	Rs.	Rs.
1. Customs	4,202,476	4,183,290	...	19,186
2. Harbour	208,883	213,257	4,374	...
3. Licences, Excise, &c. ...	2,789,440	3,032,984	243,544	...
4. Fees of Court, &c. ...	369,873	378,660	8,787	...
5. Post and Telegraphs ...	228,765	215,337	...	13,428
6. Railways	2,691,430	3,457,395	765,965	...
7. Rent	74,170	86,474	12,304	...
8. Interest	536,900	512,747	...	24,153
9. Miscellaneous	40,071	32,048	...	8,023
	11,142,008	12,112,192	1,034,974	64,790
10. Land Sales...	603	1,618	1,015	...
Total	11,142,611	12,113,810	1,035,989	64,790
Net increase of normal revenue	...	...	971,199	...

The revenue of 1913-14 amounted to Rs. 11,142,611 and exceeded that of any previous year. The revenue of 1914-15 showed a still further increase of Rs. 971,199, notwithstanding decreases under various Heads, including "Customs", aggregating Rs. 64,790: Import Duties showed a decrease of Rs. 94,864, and Export Duties an increase of Rs. 75,678 as compared with the previous year.

The sources which principally contributed to the total increase in revenue over the previous year were: Licences, Excise &c., Rs. 243,544; and Railways, Rs. 765,965. The items which contributed to the increase under Licences, Excise &c., are: Excise Duties, Taxes, Fines and Registration and Mortgage Fees. The receipts from the main lines of Railways showed increases of Rs. 49,684 in passenger traffic and Rs. 202,237 in goods traffic. The total receipts of the Railways reached Rs. 3,457,395,—the highest amount encashed in any one year.

It should however be observed that there was credited to Revenue at the opening of the financial year, a sum of Rs. 530,187 in respect of the unallocated stores of the Railway Department.

There was on the 30th of June 1914 a surplus balance of Rs. 4,620,085. The revenue for the year 1914–15 fell short of the expenditure by Rs. 22,613, reducing the surplus balance on the 30th of June 1915 to Rs. 4,597,472. This surplus, after deducting Rs. 2,383,063 advanced for the re-equipment of the Railway and Rs. 801,975 for Irrigation Works, was reduced to Rs. 1,412,434. The accounts for the first half of the current financial year show that the revenue amounted to Rs. 6,302,672 and the expenditure to Rs. 5,750,324. The amount advanced for Railway re-equipment and to be eventually met from Loan Funds stood at Rs. 2,411,276 on 31st December 1915; At the same date the advances made for Irrigation Works amounted to Rs. 1,076,588, leaving a surplus balance of Rs. 1,661,956.

Expenditure.

The expenditure for the year 1914–15 amounted to Rs. 12,136,423 or Rs. 1,899,839 above the estimate and Rs. 2,271,712 above the average for the preceding 5 years. The following are the principal heads under which the expenditure exceeded the original estimate: Railways, Rs. 1,676,475; Military Expenditure, Rs. 198,940; Port and Marine, Rs. 75,211; Medical, Health and Quarantine, Rs. 43,127; and Miscellaneous, Rs. 47,265. The Items which chiefly contributed to the excess under Railways are: Re-equipment,—Rs. 1,500,000 in respect of which were finally charged to surplus balances,—rise in price of coal, and repairs to carriages and waggons. The increase under Military Expenditure is due to a Special Vote of Rs. 150,000 and to an increase of revenue on which Military contribution is payable. The expenditure was less than the estimate by appreciable amounts under Police, Rs. 68,081, and Immigration and Poor Relief, Rs. 34,668.

The following is a comparative statement of expenditure for the years 1913–14 and 1914–15 :—

Head of Service.	1913–14.	1914–15.	Increase.	Decrease.
	Rs.	Rs.	Rs.	Rs.
1. Charge on account of Public Debt	950,166	938,064	......	12,102
2. Pensions	735,756	782,026	46,270	......
3. Governor and Legislature.	67,079	70,491	3,412	......
4. Colonial Secretariat ...	89,312	100,111	10,799	......
5. Treasury	171,686	156,340	......	15,346
6. Audit	44,270	43,966	......	304
7. Customs	116,097	107,255	...	8,842
8. Port and Marine	133,370	229,083	95,713	......
9. Observatory	15,741	16,554	813	......
10. Public Library and Museum	9,874	9,440	......	434
11. Registrar General... ...	71,135	66.577	......	4,558
12. Law and Justice	369,455	364,915	......	4,540
13. Ecclesiastical	152,636	152,636	......	......
14. Police	492,938	461,363	......	31.575
15. Prisons and Reformatory...	146,388	151,922	5,534	......
16. Medical and Health and Quarantine	1,075,883	977,640	......	98,243
17. Education	625,419	617,591	......	7,828
18. Immigration and Poor Relief	259,102	232,076	......	27,026
19. Dependencies	57,538	64,588	7,050	......
20. Military Expenditure ...	492,060	680,223	188,163	......
21. Miscellaneous	612,559	610,942	......	1.617
22. Post and Telegraphs ..	167,374	161.173	......	6,201
23. Forests	177,382	197,845	20,463	......
24. Agriculture	103,539	120,759	17,220	....
25. Railways	1,778,515	3,510,606	1,732,091	......
26. Public Works Department.	110,508	111,555	1,047	......
27. Public Works Recurrent...	517,970	592,508	74,538	......
28. Public Works Extraordinary	662,843	598,290	......	64,553
29. Loan Commission... ...	9,875	9,884	9	......
Total...	10,216,470	12,136,423	2,203,122	283,169
Net Increase	......	......	1,919,953	.....

The total expenditure for the year 1914–15 exceeded the expenditure for the year 1913–14 by Rs. 1,919,953.

The principal heads under which the expenditure in 1914–15 was greater were : Railways, Rs. 1,732,091 ; Military Expenditure, Rs. 188,163 ; Port and Marine, Rs. 95,713 ; Public Works Recurrent, Rs. 74,538 ; Pensions, Rs. 46,270 ; and Forests, Rs. 20,463. The expenditure of Rs. 76,074 on a twin-screw steam tug, which had not been provided for, is the main cause of increase under " Port and Marine ". The extraordinary works on which the largest expenditure was incurred were : anti-malarial works of a permanent character, Rs. 177,297 ; Victoria Hospital, Rs. 123,569 ; Reconstruction of bridges in ferro-concrete Rs. 161,156 ; Drainage of Port Louis, Rs. 60,009 ; and fitting of a block of Curepipe barracks for quarters for European Constables, Rs. 23,456.

The principal heads under which the expenditure in 1914–15 was less than in 1913–14 were : Medical, Health and Quarantine, Rs. 98,243 ; Public Works Extraordinary, Rs. 64,553 ; Police Rs. 31,575 ; Immigration and Poor Relief, Rs. 27,026.

Assets and Liabilities.

The assets of the Colony on 30th. of June 1915 were Rs. 4,536,529 and the liabilities Rs. 3,124,096,—the assets thus exceeding the liabilities by Rs. 1,412,433.

The assets included :

	Rs.
Cash in hands of the Receiver General and sub-accountants	952,064
Investments at cost	696,860
Temporary investments at Bank rate—£14,000 at 1s. 4d.	210,000
Value of Land and Buildings taken from War Department	28,565
Miscellaneous advances	804,720
Co-operative Credit Societies	45,550
Unallocated Stores Mauritius Railways ...	757,140
Rice, Ghee, Sugar	1,041,631

The liabilities were :—

General Deposits	2,570,844
Government of India	196,144
Colonial Military Lands Fund	28,565
Drafts and Remittances...	328,496
Loan Funds : unexpended	47

There was brought to account, to the 30th June 1915, expenditure amounting to Rs. 2,383,063 on Railway re-equipment, and Rs. 801,975 on Irrigation Works.

Public Debt.

The total indebtedness of the Colony on the 30th of June 1915 was £1,274,390 and the Sinking Funds amounted to £366,073 leaving a net debt of £908,317 as against £925,656 on 30th. June 1914.

Under Ordinances No. 10 of 1876, and No. 10 of 1879 outstanding debentures are redeemed by annual drawings. Provision is the repayment of other loans by means of a sinking fund.

The Railway Improvements and Irrigation Works Loan Ordinance, 1915, authorizes the raising of a loan of £270,000 to meet the cost of improvements to the Railways and of certain Irrigation Works. Pending the raising of the loan, these works are being financed from surplus balances.

Currency and Banking.

The Currency of the Colony consists of :—

(1) The following Mauritius bronze and silver coins which are legal tender up to Rs. 5 :

(a) Bronze : 1 cent, 2 cents, 5 cents.

(b) Silver : 10 cents, 20 cents.

(2) The silver Rupee of India with its silver sub-divisions.

(3) Mauritius Government notes of Rs. 50, Rs. 10 and Rs. 5.

The average value of Currency notes in circulation during the year 1914–15 was Rs. 5,280,250 as compared with Rs. 4,613,583 in 1913–14. The average amount of specie held was Rs. 2,742,000 as compared with Rs. 2,075,333 in 1913–14. The Investment and Depreciation Funds on 30th June 1915 amounted to Rs. 2,538,250 and Rs. 417,021 respectively.

The Banks which do business in the Colony are the Bank of Mauritius Limited and the Mauritius Commercial Bank.

MUNICIPALITY OF PORT LOUIS.

The following is a comparative statement of the revenue and expenditure of the Municipality of Port Louis for the five years 1911 to 1915 :—

Year.	Revenue.	Expenditure.
	Rs.	Rs.
1911	510,285	498,614
1912	515,504	509,944
1913	529,332	535,447
1914	501,790	468,769
1915	547,746	543,144

The indebtedness of the Municipality up to the end of the year and the provision for payment are shown below :—

Loan.	Amount.	Repayments to be made in 1916.
Conversion Loan	£101,900	£2,500
Electric Lighting Loan ...	6,667	333
Municipality Loan, 1908	3,000	143
Municipality Loan, 1909	3,928	179
	£115,495	£3,155
Government Hurricane Loan, 1892...	Rs. 18,110	Rs. 8,536
Manure Factory and Night Soil Service Loan	2,000	2,000
Municipality Loan, 1903	6,000	2,000
	Rs. 26,110	Rs. 12,536

LOCAL BOARDS.

Boards of Commissioners exist for the towns of Curepipe, Beau Bassin and Rose Hill, and Quatre Bornes, which are entrusted with the general improvement and conservancy or these towns.

The duties and powers of the Board of Curepipe in regard to sanitation, anti-malarial works and other local services have recently been extended. Similar extensions applying to Beau Bassin and Rose Hill and Quatre Bornes have not yet been made operative.

The Board of Curepipe is also entrusted with the powers and duties,—sanitary control excepted,—of the Health Department in respect of slaughter houses, public markets and butchers shops. The other township Boards will be given similar powers and duties on a date to be fixed by Proclamation.

The Board of Curepipe receives the value of the taxes collected on vehicles and animals in the town, and of licences paid by traders and others. The Board may also levy a tax not exceeding one per cent on house property and a tax of not more than six per cent on every tenant of any house, building or property ; and is entitled to all fines resulting from contraventions prosecuted by the Board, together with such contributions from the Treasury as may be annually voted by the Council of Government.

The Board is also authorised to levy a tax of five per cent on the premiums of all fire insurance policies in respect of property in Curepipe, the proceeds of which shall be applied in aid of the Fire Engine Establishment of the Board.

The two other Boards receive the amount of the taxes paid on vehicles and animals in the towns and such contributions from the Treasury as may be annually voted by the Council of Government. They may also levy a tax on house property of not less than one per cent ; and, when the enactments extending their powers and duties are brought into operation, the Boards will be empowered to levy a tanants tax similar to that levied in Curepipe, and will also be entitled to fines resulting from contraventions prosecuted by those bodies, and to a tax on fire insurance policies similar to that levied in Curepipe, with the same object.

The following tables show the revenue and expenditure of the Boards for the past five financial years :—

Curepipe.

	1910–11.	1911–12.	1912–13.	1913–14.	1914–15.
	Rs.	Rs.	Rs.	Rs.	Rs.
Revenue ...	68,510	73,136	74,883	86,718	80,707
Expenditure ...	72,008	76,420	71,148	85,198	83,665

Beau Bassin and Rose Hill.

	1910–11.	1911–12.	1912–13.	1913–14.	1914–15.
	Rs.	Rs.	Rs.	Rs.	Rs.
Revenue ...	36,996	34,811	37,959	36,732	39,663
Expenditure ...	36,651	36,507	37,921	36,708	38,320

Quatre Bornes.

	1910–11.	1911–12.	1912–13.	1913–14.	1914–15.
	Rs.	Rs.	Rs.	Rs.	Rs.
Revenue ...	12,748	13,374	13,216	12,659	16,156
Expenditure ...	11,096	11,720	14,152	12,519	15,767

The following is a statement of the debt of the Boards :—

Curepipe	Net amount of Debt	Rs. 65,000
Beau Bassin and Rose Hill ...	,,	Nil.
Quatre Bornes	,,	Nil.

There is a District Board for each of the eight rural districts of the Island to which is entrusted the maintenance of the branch roads under Ordinance No. 9 of 1900.

These Boards receive as revenue a contribution from Government equivalent to 10% of the direct taxes collected in each district during the year and an addition of 10% to the direct taxes to be levied in each year in each district, exclusive of Port Louis and the Townships. The additional 10% to be levied on the direct taxes may be increased to 25 % subject to the approval of the Governor in Executive Council. The Government contribution amounted in 1914–15 to Rs. 12,276.

The powers of the District Boards were extended by Ordinance No. 35 of 1902 to include the construction, maintenance and management of water works. For this purpose they receive an annual contribution from Government, which in 1914–15 amounted to Rs. 79,000, and also the proceeds of water rates and of charges paid for water supplies.

The District and Township Boards are empowered to acquire any lands as well as any building erected thereon for the public benefit, subject to a right of appeal before the Executive Council.

II.—TRADE, AGRICULTURE, AND INDUSTRIES.

Imports and Exports.

The Customs returns for the year shew the aggregate value of Imports and Exports, excluding specie, for the year 1915 to be Rs. 97,697,762 or Rs. 2,495,493 above the figure for the previous year. This increase appears under "Imports" and is due to the rise in the value of articles imported as compared with the year 1914.

The aggregate value of Imports and Exports, excluding specie, for the years 1911 to 1915, was as follows :—

Year	Imports.	Exports.	Total.
—	—	—	—
1911 ...	Rs. 37,440,332 ...	Rs. 40,414,328 ...	Rs. 77,854,660
1912 ...	32,002,440 ...	36,893,269	68,895,709
1913 ...	35,864,703 ...	32,291,706	68,156,409
1914 ...	35,674,864 ...	59,524,405	95,199,269
1915 ...	41,682,251 ...	56,015,511	97,697,762

The value of Imports from, and Exports to the United Kingdom, British Possessions and Foreign Countries during the same year is shown below (specie is not included) : —

Year.	Imports from (Unit Rs. 1,000)			Export to (Unit Rs 1,000)		
	United Kingdom.	British Possessions.	Foreign Countries.	United Kingdom.	British Possessions.	Foreign Countries.
1911	11,995	18,130	7,313	13,397	22,170	4,846
1912	11,504	14,117	6,382	4,467	32,038	389
1913	12,149	15,599	8,117	5,955	24,886	1,450
1914	11,819	16,716	7,140	32,116	26,270	1,138
1915	13,851	19,131	8,700	35,636	16,449	3,931

The following tables show the percentage of Imports from, and Exports to, the United Kingdom, British Possessions and Foreign Countries during each of the last five years :—

Imports.

From	1911.	1912.	1913.	1914.	1915.
United Kingdom	32.1	35.9	33.0	31.5	29.4
British Possessions	48.4	43.8	42.4	49.8	52.5
Foreign Countries	19.5	20.4	24.6	19.2	18.1

Exports.

To	1911.	1912.	1913.	1914.	1915.
United Kingdom	33.1	12.0	17.7	53.6	63.4
British Possessions	54.9	86.2	76.9	44.3	29.3
Foreign Countries	12.0	1.8	5.4	2.2	7.3

The Imports from India, including specie, show a considerable rise as compared with the previous year, whilst the Exports to that country show a marked decrease when similarly compared. The aggregate value of the trade with India, shows a decrease when compared with 1914. The trade of the Colony with India and the United Kingdom represents nearly 80 per cent. of the aggregate Export and Import trade of the Colony.

The Customs Revenue shows an increase of Rs. 235,000 as compared with 1914. The chief articles contributing to the Revenue from Imports in 1915 were :—

Tobacco and Cigars	Rs. 886,000
Grain (including rice, dholl, etc) ...	563,000
Cotton Manufactures	236,000
Oils	209,000
Wines	167,000
Matches	113,000

The export duty on sugar yielded Rs. 676,000.

Imports.

Specie of the value of Rs. 6,381,374 was imported in 1915 as compared with Rs. 2,285,075 in 1914. The value of the imports, exclusive of specie, in 1915 shows a considerable increase over the previous year.

The largest increases as compared with 1914 occur under the following heads :—

Yarns and Textile Fabrics	Rs. 2,012,000
Machinery	1,802,000
Food and Drink (exclusive of Meat)	1,248,000
Chemicals, Drugs, Dyes and Colours	833,000
Iron, Steel and Manufactures thereof.	556,009
Tobacco (including Gandia and Opium)	547,000
Coals, Coke and Patent Fuel ...	367,000
Oils, Fat and Gums...	303,000

The principal decrease occurs under Hardware and Cutlery Rs.187,000.

The imports of rice, which is the chief article of food of the majority of the population, was 58,500 tons (metric), as compared with 62,700 tons in the previous year, the value of the importations being Rs. 9,590,000 in 1915 and Rs. 10,013,000 in 1914. India supplied most of the rice imported but less than in 1914. The importations from Madagascar rose from 1,658 tons to 7,308 tons and those from China and Singapore showed a marked increase over the previous year. 8,250 tons of wheat flour valued at Rs. 1,388,000 were imported as against 7,376 tons valued at Rs. 1,179,000 in 1914. India supplied 8,224 tons, and the United States 25 tons. India supplied all the dholl imported, the importations being 4,460 tons valued at Rs. 747,300 in 1915 as against 4,088 tons valued at Rs. 627,000 in 1914.

The importations of coal increased from 58,934 to 60,709 tons; the United Kingdom continued to be the principal source of supply. The importations from South Africa increased by over 9,000 tons.

There was an increase of Rs. 1,405,000 in the value of imports of machinery for local industries and of Rs. 226,000 in machinery for mechanical transport.

The following tables give the value and country of origin of importations under the heads Machinery and Mechanical Transport for the years 1911 to 1915:—

Machinery.

Country.	1911.	1912.	1913.	1914.	1915.	Total.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
United Kingdom.	1,125,953	667,535	1,078,799	735,029	2,174,309	5,781.625
France	428,267	121,746	58,799	33,135	6,562	648.509
Belgium	786	2,101	6,328	6,336	...	15.551
Germany ...	...	646	11,743	3,074	...	15,463
Other Countries...	4,281	...	3,406	1,804	3,416	12.907
Total ...	1.559,287	792,028	1,159,075	779,378	2,184,287	6,474.055

Mechanical Transport.

Country.	1911.	1912.	1913.	1914.	1915.	Total.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
United Kingdom.	29,338	17,472	221,096	34,829	140.691	443.426

France	...	...	62	...	...	62
Italy	...	...	148	...	...	148
United States of America ...	...	...	...	...	376,484	376,484
Total ...	252,157	160,480	473,302	291,209	517,175	1,694,323

The value of machinery for local industries imported in 1915 was Rs. 2,184,287 and the imports during the last five years amounted to Rs. 6,474,055. Practically all the machinery comes from the United Kingdom, except that for mechanical transport.

The use of motor cars and motor cycles has developed rapidly in the last few years. In 1907, 13 cars and 2 cycles were imported while the number of cars imported in 1915 was 214 valued at Rs. 601,540 and of cycles 15 valued at Rs. 10,700. The importation of cars from the United States of America increased more than six fold in 1915.

The following table shows the principal countries from which goods have been imported into Mauritius and the value of the goods so imported, exclusive of specie, in the years 1914 and 1915 :—

From	Imported into Mauritius : 1914.	1915.
British India	Rs. 14,510,000	Rs, 16,808,000
United Kingdom	11,819,000	13,851,000
France	2,230,000	2,431,000
Cochin China	987,000	...
Australia	957,000	388,000
Madagascar	892,000	1,913,000
United States	687,000	2,172,000
Belgium	500,000	28,000
Reunion	404,000	712,000
Sumatra	360,000	163.000
Cape Colony	335,000	517,000
Germany	310,000	37,000
Natal	243,000	623,000
Transvaal	66,000	187,000

The United Kingdom, British India and the British Possessions are the largest suppliers of wearing apparel, bacon, gunny bags, beer, books, bran, chemicals for manures, cement, coal, confectionery, dholl, gram, oats, rice, flour, cotton, salt fish, ghee, hardware and cutlery, iron nails, wrought, iron, enamelled ware, boots and shoes, machinery for local industries, manure (bone), salt, soap, whisky, stationery, tea, tin, umbrellas (cotton), shooks, sleepers, timber, woollen goods.

Foreign countries are the main source of supply for oxen, butter, lard, clocks and watches, glassware, haberdashery, jewellery, machinery for mechanical transport, matches, motor cars, petroleum, cigarette paper, perfumery, potatoes, brandy, wine, sulphur, tobacco (manufactured) and cigars, and toys.

Exports.

The total value of the Exports, excluding specie but including charges, was in 1914 Rs. 59,524,405, and in 1915, Rs. 56,015,511.

The following table shows the value and the destination of the principal products of the Colony, other than sugar, which were exported in 1914 and 1915 :—

Product.	Year.	Exported to			Total.
		United Kingdom.	British Possessions.	Foreign Countries.	
		Rs.	Rs.	Rs.	Rs.
Aloe Fibre ...	1914	452,010	6,240	125,976	584,226
„ ...	1915	411,361	90	64,675	476,126
Copra ...	1914	141,390	...	...	141,390
„ ...	1915	124,382	...	...	124,382
Molasses ...	1914	...	112,665	...	112,665
„ ...	1915	...	181	...	181
Rum ...	1914	5,783	11,531	...	17,314
„ ...	1915	21,735	13,153	40	34,928

The principal countries to which sugar was exported during the calendar years 1914 and 1915 are :—

	1914. Tons (metric).	1915. Tons (metric).
	—	—
United Kingdom	155,912	145,680
British India	115,564	65,575
Egypt	... ...	11,834

Of 225,439 tons of sugar exported in 1915, the United Kingdom and British India purchased 211,255 tons. The exportations of sugar to Cape Colony, Australia, Ceylon, Hong Kong and France decreased considerably.

AGRICULTURE.

Sugar.

A total of 163,409 arpents was under cultivation in sugar cane on December 31st 1915, or an extension of 4,237 arpents over the area recorded for 1914. This increase is made up as follows :—

On Estates			− 683 arpents
By Planters	As " metayers " on Estates	− 3,447 arpents	+ 4,920 ,,
	off Estates	+ 8,367 ,,	
			+ 4,237 arpents.

The area under cultivation by estates decreased somewhat. Of the total area of 163,409 arpents under sugar cane, small planters cultivated 71,504 arpents of which 57,223 arpents were cultivated by small planters of Indian origin. The principal extensions in sugar cane cultivation took place in the districts of Flacq, Moka and Plaines Wilhems.

The total output of the factories for the 1915–16 crop-year was 214,520 metric tons, of which 209,254 tons were exported up to the 30th June 1916.

The information in respect of the average selling price, gathered by the Statistical Division of the Department of Agriculture, shows that it will approximate Rs. 11.75 per 50 kilograms, giving to the crop a monetary value of Rs. 50,412,000.

The weight and monetary value of the crop for the last 5 years is shown below.

Years.	Total Produce Tons (metric)	Monetary Value. (unit : Rs. 1,000,000)	
1911–12	169,550	32.9	
1912–13	213,059	29.8	
1913–14	249,703	34.5	
1914–15	277,360	62.8	
1915–16	214,520	50.4	(estimated)

The high price realised for the 1915–16 crop is due to the war in Europe. Of this crop, over 143,000 tons were sold to His Majesty's Government, and the planters of the colony presented for the use of His Majesty's Army and Navy a free gift of about 225 tons of high-grade vesou sugar.

Attention was given during the year to improvements in machinery of factories. Some new mills were imported and considerable changes were effected in the " furnace " department with a view to reducing fuel consumption, and in the " evaporating " department. Crystallisers-in-motion were again increased in number, and a large number of Weston type centrifugals installed. Labour saving was effected by some factories in the " sugar-bagging " department. A trial with the Hoist system of mechanical unloader, having given satisfactory results, further orders have been placed for the coming crop.

The science of the sugar industry was organised during the year and provision made for the registration, on qualification at examinations, of agricultural chemists.

Implemental tillage made some progress during the year, but there is still room for considerable improvement in the direction of labour saving in the fields.

Aloes.

The fibre industry suffered considerably during 1915 owing to want of transport facilities. The prices, however ruled high ; and, in spite of reduced output and excessive cost of freight, profits were normal.

A new Corona decorticating machine was installed during the year, which produced fibre of apparently better quality than that produced hitherto.

Vanilla.

Vanilla yielded an average crop, but difficulty was experienced in disposing of the produce, on account of the closing of European markets as a result of the war.

Tea.

The tea crops were satisfactory and found a ready sale at good prices on the local market. Experiments with improved methods of cultivation resulted in very satisfactory increases of yields.

Other Cultivations.

" Pistache " showed an increased area under cultivation and the crop was readily sold at remunerative prices.

The maize cultivation was slightly extended, and the crop found a ready market.

Live Stock.

The number of horned stock upon estates was returned at 19,863, a reduction of 1,442 on the returns for 1914. Milch cows held by people residing upon estates numbered 2,708 against 3,282 in 1914. The numbers of pigs and goats held by residents upon estates were 3,761 and 6,053 respectively, against 4,856 and 7,718 for the year 1914.

Co-operative Credit Societies.

The Director of Agriculture was appointed Registrar of Co-operative Credit Societies in 1915. The number of Societies with unlimited liability, registered under the provisions of the Co-operative Credit Societies Ordinance (1913) was, at the end of June 1915, 21.

The aggregate working capital of these Societies amounted to Rs. 198,468, of which a sum of Rs. 45,550 was lent by the Government.

SHIPPING.

The following comparative tables show the number, tonnage and nationality of ships entered and cleared during the years 1914 and 1915.

Nationality.	1914. Steam Vessels.		Sailing Vessels.		Total.		1915. Steam Vessels.		Sailing Vessels.		Total.	
	No.	Tons.	No.	Tons.	No.	Tons.	No.	Tons.	No.	Tons.	No.	Tons.

Total cleared ...	173	425,572	30	11,368	203	436,940	154	370,836	38	17,528	192	388,364

These tables show that 190 vessels with a tonnage of 374,810 reported during the year against 207 with a tonnage of 438,029 in the previous year, giving a total decrease of 17 in the number of vessels and of 63,219 in tonnage; 192 vessels with a tonnage of 388,364 cleared as against 203 with a tonnage of 436,940 in the previous year, showing a decrease of 11 vessels and of 48,576 in tonnage.

The decrease in the number reported is divided between those reporting with cargo and those reporting in ballast as follows:

Reported with cargo	− 9	tonnage	− 35,365
„ „ ballast	− 8	„	− 27,854
	− 17		− 63,219

The decrease in clearances is divided between vessels cleared with cargo and vessels cleared in ballast, as follows:

Cleared with cargo	− 8	tonnage	− 36,863
„ „ ballast	− 3	„	− 11,713
	− 11		− 48,576

Distinguishing steam vessels from sailing vessels there was a decrease of 26 in the number reporting and of 69,288 in tonnage as compared with the previous year and a decrease of 19 in the number cleared and of 54,736 in tonnage. The number of steamers reporting with cargo was 16 less than in the previous year with a corresponding decrease of 41,236 in tonnage; the number of steamers reporting with ballast was 10 less than in the previous year with a decrease of 28,052 in tonnage. The steamers cleared with cargo decreased by 14, in number and 37,747 in tonnage; the number of steamers clearing in ballast was less by 5 with a corresponding decrease of 16,989 in tonnage.

The number of sailing vessels reporting with cargo was less by 2 with an increase of 5,871 in tonnage. Two sailing vessels of a tonnage of 198 reported with ballast during the year as against none in 1914. There was an increase of 6 in the number of sailing vessels cleared with cargo with a corresponding increase of 884 in tonnage; the number of sailing vessels cleared in ballast was greater by 2, with a corresponding increase of 5,276 in tonnage.

III.—LEGISLATION.

Among the more important legislative measures of the year are the following:—

The Boards (Roads Improvement) Amendment Ordinance, 1915 (No. 3) empowers the Township Boards to acquire any lands as well as buildings erected thereon for the public benefit and gives a right of appeal before the Executive Council to the owner against any such proposed acquisition.

The District Court (*Criminal Jurisdiction*) *Amendment Ordinance* 1915 (No. 5) relieves accused parties of the necessity of paying two or more bail bonds in allowing the District Clerks in the absence of the Magistrate, to receive bail for the appearance of the parties charged before the Magistrate, not merely at the next sitting as required by article 133 of Ordinance No. 23 of 1888, but also at any subsequent sitting to which the case may be adjourned.

The Penal Code (*Amendment*) *Ordinance,* 1915 (No. 6) brings the counterfeiting of notes issued by the Government of any British Possession or of any Foreign Country, and the introduction, uttering or possession of such counterfeit notes within the scope of the Penal laws.

The Evidence (*Amendment*) *Ordinance,* 1915 (No. 7) dispenses with the sworn testimony of the Government Analyst and of the Government Veterinary Surgeon in cases where a certificate is sufficient.

The Rivers (*Amendment*) *Ordinance,* 1915 (No. 8) provides for the adoption of a uniform procedure in respect of the division of the waters of a river among the riparian owners.

The Trading with the Enemy (*Amendment*) *Ordinance,* 1915, (No. 9) and *The Trading with the Enemy* (*Amendment* : No. 2) *Ordinance* 1915 (No. 40) reproduce the Trading with the Enemy Amendment Act (5 Geo. V Cap. 12) and the Trading with the Enemy Amendment Act 1915 (5 & 6 Geo. V. Cap. 79), respectively, with certain modifications.

The Animal Diseases (*Consolidation*) *Ordinance,* 1915 (No. 11). consolidates all the local laws on animal diseases.

The Crown Lands (*Right of Way*) *Ordinance,* 1915 (No. 12) provides a speedier procedure for the acquisition of a right of way from Crown lands across private property.

The Buildings Consolidation Ordinance, 1915 (No. 13) consolidates and amends the laws relating to the construction, repair and alteration of buildings.

The Common Lodging Houses Ordinance, 1915 (No. 15) makes better provision for the control and supervision of Common Lodging Houses.

The Registration of Agricultural Chemists Ordinance, 1915 (No. 20) provides for the keeping at the Department of Agriculture of a register in which are to be entered the names of persons provided with Colonial or Foreign diplomas as Agricultural Chemists.

The Public Health (*Amendment*) *Ordinance,* 1915 (No. 21) allows the Director of the Health Department to prohibit by regulation the hawking of all articles of food without exception within a radius of one kilometre from public markets.

The Municipality (*Shares of Water*) *Amendment Ordinance.* 1915 (No. 22) allows the Municipality of Port Louis to grant shares of water, when available, to owners of property situate outside the Town and the District of Port Louis.

The Civil Status (*Amendment*) *Ordinance*, 1915 (No. 26) facilitates the publication of marriage of British subjects coming from the United Kingdom, so as to meet the requirements of section 1 (1) (b) of the Marriage of British Subjects (Facilities) Act, 1915,

The Vanilla Consolidation Ordinance, 1915 (No. 27) amends and consolidates the laws on Vanilla.

The Post Office and Telegraphs (*Amendment*) *Ordinance*, 1915 (No. 28) prevents the unlawful introduction of correspondence into the Colony and provides that letters to the Lesser Dependencies shall be carried free by all vessels conveying mails from Mauritius.

The Beau Bassin and Rose Hill (*Amendment*) *Ordinance*, 1915 (No. 29) and *The Quatre Bornes* (*Amendment*) *Ordinance*, 1915 (No. 30) extend the powers and duties of the Boards of Commissioners for Beau Bassin and Rose Hill and for Quatre Bornes, respectively.

The Evidence (*Amendment* : No. 2) *Ordinance*, 1915 (No. 31) enacts that the English law on Evidence, when applicable to the Colony, shall be the law in force for the time being instead of the law which was in force in 1881.

The Licences (*Consolidation*) *Ordinance*, 1915 (No. 32) consolidates and amends all the laws dealing with licences.

The Patents, Designs and Trade Marks (*Temporary Rules*) *Ordinance*, 1915 (No. 33) extends the powers of the Governor in Executive Council, during the continuance of the present hostilities to make Rules under the Patents (Amendment) and Designs, Ordinance 1913 and the Trade Marks (Amendment) Ordinances 1913. It is borrowed from the Patents, Designs and Trade Marks (Temporary Rules) Acts 1914 (4 & 5 Geo. V. Caps. 27 & 73).

The Official Secrets Ordinance, 1915 (No. 34) reproduces with the necessary terminology sections 1 to 9 and 12 of the Official Secrets Act 1911.

The Sales of Immoveable Properties (*Amendment*) *Ordinance* 1915 (No. 35) and *The Partition of Successions* (*Amendment*) *Ordinance*, 1915 (No. 36) reduce the cost of liquidation and partition of small successions, the assets of which do not exceed Rs. 3,000 and fix the fees payable to Sworn Land Surveyors, Attorneys-at-law and Notaries, respectively, appointed ex-officio for that purpose.

The Curepipe (*Amendment*) *Ordinance*, 1915 (No. 38) transfers to a special Board of Appeal the powers hitherto conferred on the Board of Commissioners for the Town of Curepipe for the hearing of appeals from the decisions of the valuer appointed for the assessment of real property situate within the town.

The Church Temporalities (*Amendment*) *Ordinance*, 1915 (No. 41) empowers the Bishop of Mauritius to veto the appointments of the Auditors and of the Seat Holders' Church Wardens in case the persons appointed are ineligible.

The Volunteer Force Ordinance, 1915 (No. 42) provides for the establishment and regulation of a Volunteer Force in Mauritius. It reproduces the provisions of the Ceylon Volunteer Ordinance No. 8 of 1910 with some modifications.

IV.—EDUCATION.

Primary Schools.

The Primary Schools at the end of the year 1915 numbered 148 of which 57 were Government and 91 Aided Schools. Of the Aided Schools there were 67 Roman Catholic, 19 Church of England, 2 Presbyterian, 2 Mahomedan and 1 Hindoo. Three Government schools, were closed during the year.

The number of Primary Schools, Government and Aided, and the number of pupils for the years 1911 to 1915 are shown in the following table :—

Year.	Government Schools.			Aided Schools.		
	Number of Schools.	Annual average number of pupils on roll.	Annual average number of pupils in attendance.	Number of of Schools.	Annual average number of pupils on roll.	Annual average number of pupils in attendance.
1911	60	9,421	6,030	88	11,589	7,972
1912	60	9,522	5,775	89	11,987	7,635
1913	60	9,223	5,693	89	11,735	7,717
1914	60	9,906	6,435	91	12,762	8,684
1915	57	10,127	6,433	91	12,638	8,451

The average attendance in Government and Aided schools for the year was 14,884 with a roll of 22,765, showing an average attendance of 65.4% of the number of pupils on the roll. There is a slight increase in the number enrolled but the percentage of attendance as compared with the number on the roll has fallen. The numbers for 1914 were : on roll, 22,668 ; average attendance, 15,119 ; percentage attendance, 66.7% .

The increase in the number of Indian children attending the Primary schools is maintained, the figures being as follows :— 10,677 in 1915, 9,369 in 1914, 8,413 in 1913, 8,316 in 1912, and 8,175 in 1911.

Of the total number of pupils on the roll in the six standard classes 56% passed the examination tests as compared with 62% in 1914 and 64% in 1913, while, of the number of pupils who were presented for examination, 57 % passed in 1915 as compared with 64% in 1914 and 64 % in 1913.

The total expenditure for the year on the salaries of, and grants to, Teachers in Primary schools amounted to Rs. 324,579 of which Rs. 141,667 was expended on Government schools and Rs. 182,912 on Aided schools. The figures for 1914 were Rs. 319,245, Rs. 142,439 and Rs. 176,806, respectively. The cost to Government of a pupil in a Government school was Rs. 18.75 and in an Aided School Rs. 16.09, as compared with Rs. 19.26 in 1913 and Rs. 15.66 in 1914.

There are open annually to pupils of Primary schools 6 scholarships and 6 exhibitions at the Royal College for which there is keen competition. The exhibitioners receive free tuition and the scholars free tuition and an allowance of Rs. 100 a year. There were 174 candidates in 1915 and 165 in 1914; 23 candidates failed in the test examination and 46 scored the minimum number of marks. The number of candidates from Government schools was 108 and from Aided schools 66, as compared with 100 from Government and 65 from Aided schools in the previous year.

Elementary instruction in Hygiene and Malaria prevention continued to be given to the children in the Primary Schools. Hygiene was taken as a special subject of examination for grants in 23 Government and 19 Aided Schools. In these 1,637 children were presented for examination and 857 obtained certificates.

A course in Elementary Agricultural Science for Teachers was given at the Royal College and was attended by 80 Head and Assistant Teachers of Government and Aided schools.

Secondary Education.

Secondary Education is provided by the Royal College and by 15 Aided Secondary Schools. New regulations provide for the number of classes in Secondary Schools in which public examinations are held has been reduced in the case of girls, from 7 to 4 and in the case of boys from 5 to 2; 119 candidates from girls schools were examined of whom 33 passed. In 1914 the figures were 400 and 235 respectively but on 7 classes instead of 4. In boys schools 123 candidates were examined in 2 classes and 32 passed, as compared with 409 in 5 classes in 1914 of whom 201 passed.

There were in December 1915, 206 pupils at the Royal College, the average number for the year being 229. Of 206 pupils at the College in December, 83 did not pay fees.

The attendance at the boys Secondary Schools was 737 and at the girls Secondary Schools 518.

One pupil of the Royal College passed the London Matriculation examination in 1915 in the Second Division.

There were 113 candidates for the Senior Cambridge Examination: 12 of 75 candidates from the Royal College and 7 of 38 others passed. Of 29 candidates from the Royal College for the Junior Cambridge Examination, 12 passed; of 16 others 3 passed.

Twenty-two girls entered for the Senior Local Examination, of whom 11 passed; 18 entered for the Junior and 4 passed.

There are scholarships and exhibitions in nearly all the classes of the Royal College and there are two valuable scholarships to enable pupils of the College to continue their studies in Europe.

Training of Teachers.

There are Government Training Schools for men and for women. There were 11 candidates from the Men's Training School for the second class teacher's certificate, of whom 2 passed. There were 3 candidates from the Women's Training School for the second class certificate and 2 for the third class ; they all passed.

The following table shows the number of candidates for certificates and the number who passed during the year :—

Class of Certificate.	Candidates.			Successful.		
	Men.	Women.	Total.	Men.	Women.	Total.
Second ...	29	13	42	3	10	13
Third	37	26	63	6	8	14
Monitor's ...	115	121	236	4	6	10
Total ...	181	160	341	13	24	37

There are 700 certificated Teachers employed in Government and Aided schools, of whom 150 are Head Teachers, 165 Assistant Teachers and 385 Monitors.

Technical Education

There are 8 mechanical engineering apprenticeships for which there were 80 candidates in 1915 as against 84 in 1914. There are 2 horticultural apprenticeships for which there were 28 candidates as against 23 in 1914, and 2 engineering studentships for which there were 4 candidates, the same number as in 1914.

Needlework receives attention in girls' schools and the work of the pupils continues to show improvement. Thirty-four candidates entered for the needlework competition, to 4 of whom apprenticeships were awarded.

Manual work is taught in 1 Government and 5 Aided schools.

V.—GOVERNMENT INSTITUTIONS.

Hospitals and Dispensaries.

There are 11 Hospitals, including 3 in connection with the Prisons and Reformatory, and there is also a Hospital Ward with 30 beds attached to the Lunatic Asylum. The total number of cases treated at all hospitals, including a few cases admitted in 1914, was 20,142 as compared with 18,979 in 1914. The number of cases treated at the dispensaries was 57,716.

Lunatic Asylum.

There is a Lunatic Asylum and a Lunatic Ward in connection with the Poorhouse of Barkly Asylum. There were 479 patients in the Asylum on the 31st December 1915 as compared with 488 on the corresponding date of the previous year, and the daily average rose from 470.45 in 1914 to 484.98. The total number of certified lunatics in the Colony on the 31st of December 1915, including patients out on probation and patients in the Lunatic Ward of Barkly Asylum, was 722, giving a proportion of 1 insane to 519 of population. There were 23 criminal lunatics of whom 20 were males and 3 females.

Poor Relief.

Barkly Asylum is the only institution under the direct control of the Poor Law Commissioner at which paupers receive institutional relief.

The buildings of Barkly Asylum were originally acquired for the purpose of affording institutional relief to the poor. The hospital was later placed entirely under the control of the Medical Department and has come to be used as a general hospital for the district. Arrangements also exist at various religious institutions for the maintenance of aged and infirm paupers at fixed rates, and there is an asylum for pauper lepers in which patients are maintained at the public expense.

Exclusive of the number of patients treated free at the Public Hospitals and Dispensaries of the Colony, and at St. Lazare Leper Asylum 1,112 paupers, as compared with 1,252 in 1914, received institutional relief during 1915 at the Barkly and Lunatic Asylums and different religious institutions.

2,330 paupers (460 males and 1,870 females) received outdoor relief (pecuniary), permanently or temporarily, during 1915, against 2,343 in 1914.

Savings Bank.

At the Government Savings Bank there was on the 30th June 1915, a sum of Rs. 3,482,531 to the credit of 29,749 depositors, as compared with Rs. 3,237,874 to the credit of 29,409 depositors on the 30th June 1914. The investment funds amounted to Rs. 3,494,171. Interest is allowed at the rate of 3 o/o.

The following table shows the number of depositors who belonged to the General and Indian populations and the amount standing to their credit on the 30th June 1915 :

	Number	Rs.
General Population	17,946	2,145,286
Indian Population	11,803	1,337,245

VI.—JUDICIAL STATISTICS.

Police.

The authorised strength of the Police on the 31st of December 1915 was 1 Inspector General, 1 Deputy Inspector General, 5 Inspectors, 1 Pay and Quarter Master 6 Sub Inspectors, 1 Staff Sergeant Major, 36 Sergeants, 49 Corporals, and 496 Constables. Eighty-eight men were enlisted in 1915 and the total number discharged was 76.

Criminal Statistics.

The number of offences reported to the Police in 1915 was 19,974 as against 21,262 in 1914.

They may be classified as follows :

Homicide	17
Other offences against the person... ...	7,180
Prædial Larceny	260
Other offences against property	4,402
Other offences	8,115
	19,974

In connection with these offences 11,661 persons (including 341 persons arrested on suspicion) were apprehended by the Police or summoned before the Magistrates. In 11,129 cases no person was charged.

The total number of persons brought before the Magisterial Courts (District, Stipendiary and Bench of Magistrates) in 1915 was 23,188 ; of these the number prosecuted was 20,656 including persons tried before a Bench of Magistrates or committed to the Court of Assizes. The number discharged for want of prosecution by party complaining or for want of evidence was 2,503.

The cases prosecuted in the District Courts (including preliminary inquiries with a view to commitment to the Assizes and Bench cases) were distributed as follows :—

Offences	Discharged for want of prosecution or evidence.	Dismissed on the merits.	Convictions.	Committed to the Assizes.
Against the person	164	424	921	20
Prædial Larceny	10	31	325	...
Other offences against property	456	351	1,350	9
Offences against Revenue, Municipal, Road and other laws relating to the social economy of the Colony.	170	237	10,665	...
Other offences	75	205	2,626	...
Total	875	1,248	15,887	29

The total number of persons prosecuted before the District Courts during the last five years was distributed as follows :—

Year.	Offences against the person.	Prædial Larceny.	Other offences against property.	Other offences (including Revenue cases &c.)	Total.
1911	1,398	174	2,368	12,273	16,213
1912	1,486	297	2,022	14,152	17,957
1913	1,468	198	1,681	14,274	17,621
1914	1,340	151	1,806	14,057	17,354
1915	1,365	356	1,710	13,733	17,164

The convictions (including committal to the Assizes) before the District Courts for the same period were as follows :—

Year.	Offences against the person.	Prædial Larceny.	Other Offences against property.	Other Offences.
1911 ...	954	159	1,876	11,697
1912 ..	1,073	280	1,645	13,587
1913 ...	985	166	1,338	13,530
1914 ...	940	127	1,463	13,546
1915 ...	941	325	1,359	13,291

Twenty-four persons were charged at the Assizes in 1915 ; of these, 6 were acquitted and 15 convicted. In three cases a *nolle prosequi* was entered.

The following table shows the number of persons convicted at the Assizes during the last five years and the offences for which they were convicted.

Year.	Murder, other than wife and child murder	Manslaughter and attempt at.	Attempt at murder.	Murder of wife, reputed wife or concubine.	Including attempts to commit the several offences.									
					Child-Murder.	Concealment of birth.	Abortion.	Rape.	Unnatural crimes.	Other offences against the person.	Malicious injury to property.	Larceny with aggravating circumstances.	Other offences against property.	Miscellaneous.
1911	...	1	...	...	...	...	...	...	...	2	49	2	...	...
1912	...	...	1	...	...	...	...	...	...	6	2	2	1	...
1913	...	2	...	...	1	...	...	...	...	7	...	6	...	...
1914	...	2	2	...	...	...	..	1	...	7	...	1	...	...
1915	1	3	...	...	...	...	...	...	...	8	...	3	...	...

In 1915, the number of persons tried at the Assizes for offences against the person, was 17 as compared with 22 in 1914; the number of convictions was 12 in 1915 and 11 in 1914. Seven persons were tried at the Assizes for offences against property in 1915, three of whom were convicted; 4 were tried in 1914, of whom 2 were convicted.

Prisons and Reformatory.

The number of prisoners admitted to prison after conviction shows an increase of 29 as compared with 1914, the figures being:—

	Males.	Females.	Total.
1914 ...	... 3,454	122	3,576
1915 ...	... 3,471	134	3,605

The number of prisoners under detention on the 31st of December 1915 was 665 as compared with 562 on the corresponding date in 1914. The daily average number under detention shows an increase of 31.26 as compared with 1914, the daily average for the year being 621.99.

The deaths in the Prisons numbered 15 as compared with 8 in 1914. The daily average number under treatment in the Prison Hospitals shows an increase, the figures being 22.21 in 1914, and 28.96 in 1915. The prevailing diseases were Malaria, and Dysentery at the Beau Bassin and the Port Louis Prisons, and Enteritis at the latter Prison.

Twelve prisoners escaped whilst on out door work, as against 18 in 1914; of these, 10 were recaptured. In addition to these, a prisoner who had escaped in 1914 was recaptured.

The number of boys admitted to the Reformatory in 1915 shows a decrease of 28 when compared with 1914, the admissions for 1915 being 127, as follows: 45 new boys, 24 ex-Reformatory boys, and 58 untried .The daily average shows a decrease of 1.64 as compared with 1914.

The admissions on conviction numbered 69. Of these, 62 entered the Institution with sentences of from one year to five years. It was enacted at the end of 1914, and the measure became operative in 1915, that juvenile offenders not deserving detention in the Government Reformatory for a period of not less than one year should not be admitted to that Institution, but should be cautioned or birched if a male offender. The convictions, in consequence fell from 123 in 1914 to 69 in 1915.

No deaths occurred during the year. The general state of health of the boys was satisfactory. The admissions to hospital increased by 23 as compared with the previous year.

The discipline among the boys was satisfactory; there were 42 departmental offences as against 24 in 1914, the offences being committed by 29 of the boys. None of the offences were of serious nature.

There were 7 escapes during the year; all were recaptured.

VII.—VITAL STATISTICS.

The total population of the Island on the 31st December 1915, exclusive of the Dependencies (7,320), is estimated in the Registrar General's Annual Report at 375,420, showing a decrease of 813 on the population returns for 1914.

Births and Deaths.

There were 11,893 births registered during the year. The law allows a delay of 45 days for free registration, and the number of births which were not registered owing to death intervening before registration was 1,201. The total number of births was accordingly 13,094, of which 6,747 were males and 6,347 females, giving a proportion of 34.8 infants born to 1,000 persons living. The deaths registered numbered 13,101, giving a proportion of 34.8 deaths to 1,000 persons living.

The birth rate amongst the general population was 36.1 per thousand as compared with 38 per thousand in 1914 and amongst the Indian population 34.3 per thousand as compared with 42 per thousand in 1914. The death rate amongst the general and Indian populations was 34.2 and 35.1 per thousand respectively, as against 30.4 and 33.4 per thousand respectively in the previous year.

Public Health.

The general health conditions were not satisfactory during the year 1915. The number of patients treated at public hospitals shows an increase over that recorded in 1914. There was a considerable reduction in the number of patients attending dispensaries, but more out door patients were treated in hospitals. From the returns of the Civil Status Offices the diseases that caused the largest number of deaths in 1915 were Malaria (4,401), Tuberculosis (959), Pneumonia (710) and Dysentery (636), but it should be observed that a medical certificate is not required in all cases. The statistics from the public hospitals and dispensaries also shew that the rise in admissions was principally due to Malaria and Dysentery.

Only 33 cases of plague were registered during the year as against 125 in 1914. The death rate being 75.8% as compared with 88.8% in 1914. The number of plague cases notified in 1915 is the lowest in any year.

There was a marked reduction in the number of admissions for Enteric Fever from 234 in 1914 to 188 in 1915. The cases occurred principally in the districts of Plaines Wilhems, Savanne, Rivière du Rempart and Port Louis. The greatest number of cases occurred in September and October.

Malaria.

Malaria still causes more deaths than any other disease.

The number of deaths ascribed to fever was 4,401, showing an increase of 487 on that recorded in 1914; 3,728 cases were treated in the hospitals. The following are the figures for the years 1911 to 1915.

Year	...	1911	1912	1913	1914	1915
Cases	...	2,117	3,063	2,546	2,925	3,728

The case mortality was 1.63 o/o as against 1.77 o/o in 1914. The death rate for the whole Colony per thousand of the population was 11.7

Malaria was most prevalent in March, April and May, after the comparatively heavy rainfalls in February and March.

The spleen census and the treatment of school-children with quinine, as well as the free house to house distribution of quinine, have been continued under the supervision of the Sanitary Wardens.

The execution of Major anti-malarial works was continued during the year, and attention was given to the upkeep of completed major works, and minor anti-malarial works. The more important major works were carried out in Lataniers River in Port Louis, in Deep River, Rivière Sèche and Rivière Françoise in Flacq district and at Rivière Citron, Pamplemousses River, Tombeau River, Powder Mills and Cocoterie Marsh in Pamplemousses and Ruisseau Sec, Rose Belle, and Case Noyale in Black River.

Vaccination.

The number of children vaccinated during the year was 10,358 as compared with 12,537 in 1914. Of this number 10,318 were certified by the Public Vaccinators to have been successfully vaccinated; 15 vaccinations were unsuccessful and in the remaining 25 cases the result of the operation could not be ascertained. The percentage of vaccinations was 79.1 o/o of the total births.

VIII.—METEOROLOGICAL.

Meteorological observations are taken at the Royal Alfred Observatory, Pamplemousses, and at nine second-order stations. The Observatory is about three miles from the West coast and is 179 feet above sea level. There are considerable variations both in temperature and humidity in the different parts of the island, the coast districts being hotter and drier than the higher altitudes in the interior. Hurricanes occur between December and April, which is the hottest season.

The mean rain-fall from 42 stations was 58.20 inches as compared with an average of 75.84 inches.

Rainfall was greatly in defect in the total for the year although the falls of February and March were markedly above normal. This defect was a continuation of the general shortage of rainfall which set in in 1914 over all the Southern Stations from Africa to Australia. The drought at the end of 1915 was exceptionally severe, October being the driest month on record: 99 o/o below normal in the Port Louis district and 75 o/o below normal in the other districts.

The temperature of the air was slightly above normal in the mean and considerably above in the early months of the year.

The highest temperature occurred on January 28 was 91.5 the lowest was 54.0 on August 22.

A feature of the year was the weak cyclonic activity in the region round Mauritius. Only 5 cyclones being recorded in the South Indian Ocean as follows :

February	18	... South of Madagascar
„	19	... Between Mauritius and Rodrigues
March	4–5	... North of Mauritius
„	10	... West of Mauritius
„	11	.. Between Mauritius and Réunion.

IX.—POSTAL AND TELEGRAPH SERVICES.

The total number of Post Offices open in 1915 was 62 of which 55 are also Telegraph Offices ; 47 of these are at Railway stations.

The revenue for the year 1915 was Rs. 223,829 as compared with Rs. 216,510 in 1914. The expenditure was Rs. 157,283 in 1915 and Rs. 164,302 in 1914, leaving an excess of revenue over expenditure of Rs. 66,546 in 1915 and Rs. 52,208 in 1914.

The total number of letters, post cards, newspapers and postal packets, exclusive of parcels, which passed through the Post Office in 1915 was approximately 3,670,948 as compared with 3,764,086 in 1914. There is an increase of 12,453 in newspapers, commercial papers and samples and a decrease of 105,591 in the number of letters, post cards, &c., which passed through the Post Office as compared with the previous year. The number of reply coupons sold during the year was 56 and the number paid was 129. The number of postal parcels received and despatched decreased from 10,900 in 1914 to 9,455 in 1915. The number received from abroad decreased by 1,450 and the duty collected amounted to Rs. 32,849.

The number of Inland money orders issued was 53,603 and their value Rs. 573,972, being an increase of 704 in number and of Rs. 4,377 in value as compared with the previous year. The number issued on other countries was 7,521 and their value was Rs. 303,945 being an increase of 768 in number and an increase of Rs. 30,752 in value as compared with the previous year.

There were decreases of 422 in the number of postal orders sold and of 283 in the number paid. The decreases in value being Rs. 2,010 and Rs. 2,773 respectively.

There are 432 miles of Telegraph and 120 miles of Telephone wires under the charge of the Department. The Railway has not a telegraphic system of its own and the ordinary messages for the working of the traffic and for the administration of the Department are transmitted over the Post Office wires. The number of Railway messages and signals transmitted in 1915 was 331,507. The number of messages sent by the public decreased by 5,419 in 1915. Out of a total number of 460,489 messages forwarded, 48,718 were sent by the public as compared with 54,137 out of a total of 415,423 in 1914. The receipts for the messages sent by the public amounted to Rs. 26,960, in which charges for porterage (Rs. 11,835) are included.

X.—RAILWAYS.

The Mauritius Railways consist of two main lines with a common terminus in Port Louis and four branch lines. The track is single and is about 120 miles in length exclusive of the Bois Cheri Light Railway. The gauge is 4 feet 8½ inches.

The earnings from all sources for the year amounted to Rs. 3,158,424 as compared with Rs. 3,169,960 in 1914, being a decrease of .99 o/o. Excluding Government traffic the earnings amounted to Rs. 2,896,769 being Rs. 7,851 more than in 1914. The services performed for Government Departments for which no cash payments were made would at ordinary rates have cost Rs. 261,654 of which Rs. 200,365 for passenger traffic, Rs. 52,880 for goods traffic and Rs. 8,409 for parcels, representing 8.28 o/o of the total traffic as compared with 8.99 o/o in 1914.

The receipts for passenger traffic amounted to Rs. 1,410,771 being higher than those of the preceding year by Rs. 137,421 and in excess of the mean for the last five years by Rs. 142,213.

The following table shows the tonnage of goods traffic, exclusive of Government traffic, carried in 1914 and 1915.

	1914	1915	Increase + Decrease –
Sugar Canes … …	176,682	183,937	+ 7,255
Sugar … … …	200,233	173,496	– 26,737
General Merchandize …	183,112	239,544	+ 56,432
Total… …	560,027	596,977	+ 36,950

The total tonnage carried was 628,427 tons or 9.27 o/o more in 1915 than in 1914. The aggregate earnings for goods traffic were Rs. 1,476,680 or 2.55 o/o under those of 1914. The earnings for sugar cane traffic were Rs. 150,976 or 82.09 cents of a rupee per ton carried, as compared with 92.30 cents in 1914. The earnings for sugar traffic were Rs. 707,261 or Rs. 4.07 per ton carried, as against Rs. 4.03 in 1914. The earnings for general merchandize were Rs. 616,096 or Rs. 2.27 per ton carried as against Rs. 2.72 in 1914. The total expenditure charged to capital account including all sums paid from general revenue, surplus balances or loans up to the 31st of December 1915 was Rs. 32,515,325 in which is included

Rs. 3,949,407 advanced on account of the re-equipment of the Railways and which is eventually to be met from loan funds. The working expenses for 1915 amounted to Rs. 2,201,430. The ratio which working expenses bore to total earnings showed an increase of 9.80 o/o as compared with 1914 the figures being 59.90 o/o and 69.70 o/o respectively. This increase is due to the rise in the price of materials and stores caused by the war. The net earnings amounted to Rs. 956,994 or 2.94 o/o on the capital.

Bois Chéri.

A small gauge line of 2 ft. 6 in. known as the Bois Chéri Light Railway runs from Rivière du Poste Station on the Savanne Branch of the Midland Line to Mexico. The length of the line is 10 miles. The total goods traffic carried in 1915 amounted to 16,346 tons of which 13,627 tons were sugar cane as against a total traffic of 19,593 tons and 17,518 tons of sugar cane in 1914. The actual working expenses for 1915 were Rs. 25,088, the earnings Rs. 12,269, and the work done for the Government Departments was valued at Rs. 1,870. The corresponding figures for the previous year were Rs. 16,196, Rs. 12,664 and Rs. 818.

XI.—PUBLIC WORKS.

The principal works undertaken by the Public Works Department during the year 1915 were in connection with the La Ferme Irrigation Works ; New District Court, Police Station and Police Barracks, at Curepipe ; Victoria Hospital ; Leper Asylum and the replacing of wooden road bridges by ferro-concrete structures.

Buildings.

The walls of was in connection with the Victoria Hospital have been completed and the roofing of such wards as material has been received for is proceeding. Delay has however occurred due to certain of the steel sections ordered not being obtainable owing to the war. A first class paying-patients ward is also under construction. The installation of a drainage system has been commenced.

A District Court was completed at Curepipe during the year and a new Police Station is in course of erection, both in the neighbourhood of the Royal College.

Buildings purchased from the War Department have been divided into quarters for the European Police.

The construction of the new sugar shed for the Customs Department has been delayed owing to the non-arrival of steel sections required for the roof ; the design has been slightly altered to permit of the employ of sections obtainable locally and the work will be continued.

Bridges and Roads.

Ten bridges have been constructed in reinforced concrete or masonry during the year to replace old timber bridges and so reduce cost of maintenance. Two steam rollers have been at work and improvements have been effected not only in the surface of the roads but in gradients and dangerous corners. Widths of roadways have been increased in several places to make them more suitable for motor traffic which is rapidly on the increase.

Irrigation.

The dam of the La Ferme reservoir was raised to level 463 and the conservation of the water commenced. It is estimated that the capacity of the reservoir at this level is sufficient to supply water to 1,600 acres of land.

Four diversion dams have been constructed on Rivers Sèche, Mesnil, Papayes and Rempart with connected feeder channels to carry water to La Ferme and supplement the amount collected on the drainage area of the dam itself.

Distributary channels are in course of construction to convey water from La Ferme Reservoir to the cane fields.

Mare aux Vacoas Water Works.

The level of the water in the Mare aux Vacoas reservoir is being raised five feet from 1832 to 1837 ft above Mean Sea Level. This will increase the storage capacity from 570 to 1168 million gallons or rather more than double the former capacity and is being done with the double object of improving the quality of the water stored in the reservoir for drinking purposes during dry weather and to enable a larger amount of flood water to be stored during rains. The water so stored will be sent by way of River du Rempart to the diversion dam already constructed, where it will be turned by way of the feeder channel into La Ferme Reservoir and will so become available to still further augment the supply of the latter reservoir for irrigation purposes. Much of the masonry work in connection with the raising of the water level has been completed but it will be necessary to raise all existing earthen dams also ; this work should be completed in 1916. Tumbling shutters will be provided on the top of the new masonry dam ; these will fall when the water level reaches a certain height and provide additional spillway to prevent the earthen dams being topped.

A second service reservoir was completed for Curepipe during the year.

Port Louis Drainage Works.

Little construction work was done during the year owing to shortage of materials and the fact that the existing pumps are already fully loaded. The pipes previously laid in District No. 4 were connected with the Pumping Station.

The total length of sewers laid up to the end of 1915 is 26.62 miles ; 1,266 properties were connected to the system. The total amount expended in Districts Nos 2, 3 and 4 is Rs. 1,000,531 on construction works and Rs. 621,130 on house services.

XII.—FORESTS.

The area of forests, mountains and river reserves, and Curatelle lands under the care of the Forests Department was about 85,352 arpents, including 381 arpents acquired this year in the gathering ground of rivers, under the land-purchase scheme sanctioned by the Secretary of State.

Forest Utilization.

Improvement fellings in Grand Bassin Forest yielded 12,030 cubic feet of timber of indigenous species, including 5,000 broad gauge Railway sleepers ; also 359,000 shingles and 11,600 Railway keys.

The Public Establishments were supplied with 210,000 cubic feet of fuel from Crown Lands.

Thinning in forest plantations, chiefly Pines and Eucalyptus, yielded 2,844 cubic feet of timber used for building and repairing quarters for the staff, and Rs. 4,055 worth of timber and firewood sold.

The sale of filaos (casuarina) fuel to lessees of Pas Geometriques amounted to Rs. 11,316. The areas cleared were replanted by the lessees.

The utilization of dead and dying trees in mountain reserves by owners thereof was effected under control, with obligation to replant.

Nurseries and Plantations.

Rs. 1,268 worth of forest plants were sold to the public, from the Nurseries ; 750,000 plants were reared and planted at a cost of Rs. 37,291.

XIII.—DEPENDENCIES.

The Dependencies comprise a large number of small islands situated between 5° and 19° 50′ South Latitude and 51° and 72°30′ East Longitude, of which the nearest is 230 miles, and the most remote about 1,200 miles distant from Mauritius.

Rodrigues, the largest and most important, is administered by a resident Magistrate, has an area of 40 square miles, and had at the census of 1911 a population of 4,829 of whom 2,523 were males and 2,306 females. The total population showed as compared with 1901 an increase of 1,667.

The increase was almost entirely in the general population which numbered 4,667, or 1,567 more than in 1901. The Indo-Mauritian population numbered 102, other Indians 36, and Chinese 24. The male agricultural population increased considerably in the last 10 years and development is noticeable in the trade of the island.

The Customs returns show that 24 cattle were imported from Rodrigues in 1915 as against 72 in 1914. In 1915, 1,624 pigs, value Rs. 21,391, were sent to Mauritius as against 1,290, value Rs. 18,275 in 1914; and 5,592 goats and sheep, value Rs. 50,990 as against 3,249, value Rs. 19,341, in 1914. The importation of salted fish from Rodrigues was of 340,570 kilos as against 238,505 in 1914. The imports of tobacco from that dependency amounted to 34,344 kilos, and shewed a slight decrease as compared with those of the previous year.

At the Rodrigues branch of the Government Savings Bank, there was on the 30th of June 1915 a sum of Rs. 20,120 to the credit of 68 depositors, as compared with Rs. 25,775 and 70 depositors on the corresponding date of 1914.

Most of the islands in the lesser Dependencies have been conceded or sold with the exception of a few islands in the St. Brandon Group, and one near the great Chagos Bank, which are leased. The islands are administered by two Magistrates who are resident in Mauritius and pay regular visits to the Dependencies. The chief exports from the Dependencies are coconut oil, coconuts, copra, guano and fish (dried and salted).

H. HENNIKER HEATON,
Ag. Colonial Secretary.

MAURITIUS.

REPORT ON THE BLUE BOOK FOR 1916.

I.—FINANCIAL.

The revenue of the Colony for the year 1915–16 was Rs. 12,975,041, and the expenditure Rs. 11,490,946, thus showing an excess of revenue over expenditure of Rs. 1,484,095.

2. The financial year ended with accumulated surplus funds amounting to Rs. 6,081,567. This surplus, after deducting the sums advanced for the re-equipment of the Railway (Rs. 2,460,830) and for Irrigation Works (Rs. 1,285,582), was reduced to Rs. 2,335,154.

REVENUE.

3. The total revenue for 1915–16 which amounted to Rs. 12,975,041 showed an excess of Rs. 2,325,891 over the estimate, and an increase of Rs. 861,231 over that of the preceding year.

4. The following table shows the revenue for the last five years:—

1911–12	Rs.	10,435,648
1912–13		11,035,642
1913–14		11,142,611
1914–15		12,113,810
1915–16		12,975,041

5. The revenue has thus increased by more than 24 per cent. in five years. The figure of 1914–15 exceeded that of any previous year and it is remarkable that in the second year of war that record was exceeded by Rs. 861,231.

6. The principal increases over the estimate were Licences, Excise, &c., Rs. 1,008,918; Import duties Rs. 634,741 and Railways Rs. 523,310. One item fell below the estimate, "Harbour (Pilotage, towage etc.) etc.," by Rs. 32,192.

EXPENDITURE.

7. The actual expenditure was Rs. 11,490,946 or Rs. 965,467 above the estimate, and Rs. 645,478 below the expenditure of the previous year.

8. Fourteen heads of expenditure exceeded the estimate by Rs. 1,276,179 and fourteen showed savings amounting to Rs. 310,532.

9. The following table shows the expenditure for the last five years:—

1911–12	Rs.	9,843,980
1912–13		10,235,605
1913–14		10,216,470
1914–15		12,136,424
1915–16		11,490,946

MILITARY EXPENDITURE.

10. The contribution of the Colony payable under Ordinance No. 33 of 1897 was Rs. 477,092. An annual grant of Rs. 35,000 is in virtue of Ordinance No. 6 of 1900 also made instead of Customs rebate under Ordinance No. 19 of 1904.

11. At the instance of the unofficial members of the Council of Government an additional sum of Rs. 150,000 was voted as a contribution towards the cost of the present war.

12. A sum of Rs. 91,825 was provided in the Estimates for the expenses of the Mauritius Volunteer Force created under Ordinance No. 42 of 1915.

ASSETS AND LIABILITIES.

13. On 30th June 1916 the assets of the Colony stood at Rs. 8,852,548 while the liabilities amounted to Rs. 6,517,394, thus showing a balance of Rs. 2,335,154 in favour of assets.

PUBLIC DEBT.

14. The amount of the Public Debt, on 30th June 1916, was £1,268,590 in respect of which the sinking funds amounted to £347,302. The charge on account of the public debt was Rs. 937,533 for the financial year 1916–17.

15. The loan of £270,000, authorized by Ordinance No. 19 of 1915 to meet the cost of Railway Improvements and Irrigation Works, has not been floated, and these works are being financed from surplus balances. The amount advanced for Railway re-equipment stood at Rs. 2,460,831 on 30th June 1916, and at the same date the advance made for Irrigation Works amounted to Rs. 1,285,582.

CURRENCY AND BANKING.

16. All accounts are kept in rupees and cents of a Rupee which is the currency of the Colony.

17. The average value of notes circulating in 1915–16 was Rs. 6,336,160 as against Rs. 5,280,250 in 1914–15.

18. The average amount of specie held was Rs. 3,797,914 as compared with Rs. 2,742,000, the average for the previous year.

19. The investments which stood at Rs. 2,538,250 on 1st July 1915 remained the same at the close of the financial year. The Depreciation Fund was increased from Rs. 417,026 to Rs. 446,987.

20. The banks established in the Colony are the Mercantile Bank of India, Limited, and the Mauritius Commercial Bank.

21. A Government Savings Bank was established in 1865 and had on 30th June 1916 Rs. 3,612,390 deposited.

MUNICIPALITY OF PORT LOUIS.

22. The management of the affairs of the Town of Port Louis is vested in a Municipality elected by the ratepayers.

23. The revenue and expenditure of the Municipality for the last two years is shown in the following statement :—

	Receipts.	Expenditure.
1915 ...	Rs. 547,746 ...	Rs. 468,769
1916 ...	518,567 ...	522,394

24. The indebtedness of the Municipality up to the end of the year and the provision for payment are shown below :—

Loan.	Amount.	Repayment to be made in 1917.
Conversion Loan	£99,300	£2,800
Electric Lighting Loan ...	6,333	333
Municipality Loan, 1908 ...	2,857	143
Municipality Loan, 1909 ...	3,750	179
	£112,240	£3,455
Government Hurricane Loan, 1892...	Rs. 9,232	Rs. 9,232
Municipality Loan, 1903 ...	4,000	2,000
	Rs. 13,232	Rs. 11,232

LOCAL BOARDS.

25. The smaller towns of the Colony—Curepipe, Beau Bassin-Rose Hill, and Quatre Bornes—are controlled by Boards of Commissioners appointed annually by the Governor.

26. The revenue of the town of Curepipe consists principally of the receipts from the house property and tenant tax, taxes collected from vehicles and animals, licences and market dues. The Board is also entitled to all fines resulting from contraventions prosecuted by the Board, and to a contribution voted annually by the Council of Government.

27. The debt of the Curepipe Board to the Treasury for loans made on account of public works &c., amounted at the close of the year 1916 to Rs. 132,500.

28. The revenue of the two other Boards consists of the amount of the taxes paid on vehicles and animals, receipts of the house tax, supplemented by a contribution voted annually by the Council.

29. The revenue and expenditure of the Board for the last two years are shown in the following comparative statement :—

Curepipe.

	Receipts.	Expenditure.
1914–15 ...	Rs. 80,707 ...	Rs. 83,665
1915–16 ...	115,915 ...	176,161

	Beau Bassin–Rose Hill.		*Quatre Bornes.*	
	Receipts.	Expenditure.	Receipts.	Expenditure.
1914–15	Rs. 39,663	Rs. 38,230	Rs. 16,156	Rs. 15,767
1915–16	38,870	39,496	15,196	13,895

30. The totals of the annual contributions made by Government to the Boards amount to Rs. 65,600 annually, thus :—

Curepipe	Rs. 47,000
Beau Bassin–Rose Hill	13,600
Quatre Bornes	5,000

31. There is a Branch Roads Board for each of the eight rural districts of the Island to which is entrusted the maintenance of the branch roads under Ordinance No. 9 of 1900. These Boards receive as revenue a contribution from Government equivalent to 10 per cent. of the direct taxes collected in each district during the year and an addition of 10 per cent. to the direct taxes to be levied in each year in each district, exclusive of Port Louis and the Townships. The additional 10 per cent. to be levied on the direct taxes may be increased to 25 per cent. subject to the approval of the Governor in Executive Council. The Government contribution amounted in 1915–16 to Rs. 12,500.

32. The powers of these Boards were extended by Ordinance No. 35 of 1902 to include the construction, maintenance and management of water works. For this purpose they receive an annual contribution from Government, which in 1915–16 amounted to Rs. 79,000, and also the proceeds of water rates and of charges paid for water supplies.

II.—TRADE, AGRICULTURE AND INDUSTRIES.

33. The total values of imports and exports, excluding specie, for the last five years are as follows :—

	Imports.	Exports.	Total.
1912	Rs. 32,002,440	Rs. 36,893,269	Rs. 68,895,709
1913	35,864,703	33,291,706	68,156,409
1914	35,674,864	59,524,405	95,199,299
1915	41,682,251	56,015,511	97,697,762
1916	53,615,754	72,682,170	126,294,924

IMPORTS.

34. The imports during 1916 exceeded those of the previous year by Rs. 11.933,503, equal to 26.6 per cent. in value.

35. Of the total imports the United Kingdom supplied 30.2 per cent., British Possessions 48.1 per cent., and Foreign Countries 21.7 per cent.

EXPORTS.

36. The exports, excluding specie but including charges, exceeded those of the previous year by Rs. 16,666,659, equal to 29.8 per cent. in value.

37. As compared with 1915 the export of sugar increased by 5,120,189 kilograms in weight and Rs. 15,204,476 in value. The total weight exported was 230,559,715 kilograms valued at Rs. 69,309,970, as against 225,439,526 kilograms valued at Rs. 54,105,494 in the previous year, an increase in value of 28.1 per cent.

38. All the sugar is exported save that kept for local consumption, between 5,000 and 6,000 tons. Previous to the war the principal market was India and the average annual export to that country for the five years 1909—1913 was 127,000 metric tons.

The other principal markets were during the same period :

United Kingdom (annual average)	T. 39,500
Cape Colony	14,700
Australia	7,000
Hong Kong	2,600

39. Veson production which represented some years ago 73 to 75 per cent. of the total output is increasing yearly and reaches now 90 per cent. of the total sugar manufactured.

40. The export of aloe fibre during 1916 amounted to 1,460,102 kilograms valued locally at Rs. 422,050, being an increase of 126,198 kilograms in weight and a decrease of Rs. 54,076 in value over the figures of the preceding year.

AGRICULTURE.

Sugar.

41. At the close of 1916 the total area of land reported to be under cane cultivation was 167,560 arpents (1 arpent = 1.043 acre), the largest area yet planted in the Colony, showing an increase of 14,750 arpents since 1913.

42. New plantations continue to increase steadily, chiefly in irrigation areas, owing to the high prices ruling for sugar.

43. The area under cultivation by Indians has passed in four years from 50,067 arpents to 62,381, or 40 per cent. of the total cane area, and showing an increase of 12,314 arpents.

44. The normal sugar production is about 255,000 metric tons. The sugar crop for 1915–16 was below the average, yielding 214,518 tons. The standing crop since harvested was seriously affected by the unprecedented cyclone of May 26th owing to which the registered loss in sugar was 20 per cent. The total crop made was about 209,000 tons.

45. The bulk of the crop 1915–16 was sold to His Majesty's Government at prices ranging from 16s. 8d. to 17s. 4d. per cwt. The total quantity of vesou exported was 177,600 tons. The output of syrup was only 47 tons.

46. All the output of vesou sugar of the outstanding crop (1916–17) estimated at 165,000 tons was purchased by the Imperial Government at prices ranging from 17s. 4d. to 18s. per cwt. The output of syrup is estimated at 43 tons.

Aloe Fibre.

47. The aloe fibre industry has been much hampered by lack of shipping facilities. However, with the satisfactory prices in the home markets, remunerative prices were obtained locally and a certain quantity of good fibre turned out.

48. Experiments with the new Corona decorticating machine were continued during the year. In the treatment of sisal leaves (Agave) it has proved to be a complete success, and further trials are contemplated for dealing with the local plant (Furcræa).

Maize.

49. An important agricultural work of the year has been the efforts made to develop the production of maize in the Colony: and the erection of an American plant for the kiln-drying of maize is expected to give this industry a much desired impetus.

Food Crops.

50. Encouragement was also given to foster the cultivation of manioc, sweet potatoes and other provision crops by peasant cultivation on Government lands.

Tobacco.

51. The services of an expert tobacco grower and curer from the French colony of Réunion have been secured with the object of manufacturing tobacco of the Réunion type. Trial crops have been established and a large yield is expected.

Foot and Mouth Disease.

52. This disease was diagnosed in September and was soon established throughout the central districts of the Island. The attack was remarkably benign and the preventative measures proved effective.

Live-stock.

53. According to a census taken by the Department of Agriculture in 1914 the number of horned cattle stood at 41,300 of which 16,000 were cows.

54. Several fine specimens of Hissar bulls and cows were imported by Government from India with a view to the improvement of the local stock. This policy is being greatly appreciated by cattle owners.

55. Two large Punjabi goats were also introduced for loan to Estates.

Entomological.

56. Special attention was devoted to insect pests and the most satisfactory point in this connexion was the discovery early in the year that the wasp parasitic on Phytalus (*Tiphia parallela*) had established itself in certain fields and appeared to be increasing.

57. Important work was also undertaken with the distribution of parasites of the Gros Moutouc (*Oryctes tarandus*) throughout the Colony.

Co-operative Credit Societies.

58. The co-operative credit movement is working on satisfactory lines. There have been no additions to the number of Societies in operation during the year. The total number of Societies operating has been 23, comprising 2,869 shareholders.

SHIPPING.

59. There was an increase in the number of vessels which entered and cleared during 1916. 396 vessels with an aggregate tonnage of 857,858 entered and cleared as against 382 vessels with an aggregate tonnage of 763,174 in 1915, showing an increase of 14 vessels and an increase of 94,684 tons.

60. Of the aggregate tonnage entered, British steamships accounted for 632,324 tons, and foreign steamships 193,602 ; while British sailing vessels amounted to 28,398 tons, and foreign sailing vessels to 3,534.

61. The steam vessels entered and cleared showed an increase of 33 British, of a tonnage of 95,648, while foreign steam vessels decreased by 2 with a tonnage of 3,206.

III.—LEGISLATION.

62. The number of Ordinances passed by the Legislature during the year was 25. Several of these owe their origin to the war. They were :—

No. 1 of 1916.—To provide for the extension of the restrictions relating to Trading with the Enemy to Persons to whom, though not resident or carrying on business in Enemy Territory, it is by reason of their Enemy Nationality or Enemy Associations expedient to extend such restrictions.

No. 2 of 1916.—To prohibit payments to Enemy Subjects by Custodian of Enemy Property.
No. 16 of 1916.—To amend the Pensions Ordinance No. 30 of 1881.
No. 24 of 1916.—To empower the Colonial Government to raise a War Loan.

63. Other important enactments of the session were :—

The Pharmacy (Amendment) Ordinance, 1916 (No. 5) allows practising students in Pharmacy of ten years' standing and upwards to pass a modified examination which is more of a practical than of a theoretical kind, so as to entitle them to act as qualified assistant pharmacists.

The Customs (Amendment) Ordinance, 1916 (No. 6) fixes a delay of three months for the removal of goods landed on the quays and makes it lawful for the Collector of Customs to have them sold by public auction after that period.

The Forest Produce Protection (Extension) Ordinance, 1916 (No. 8) provides for the control of dealers in imported timber converted from trees of the same species as trees of indigenous species and for the repression of larceny of timber.

The Weights and Measures (Amendment) Ordinance, 1916 (No. 11) has for its chief object the enabling ot Revenue Officers to prosecute for certain offences against the law dealing with weights and measures, it having been decided that such Officers could not prosesute under the Penal Code.

The Habitual Criminals and Licensed Convicts Ordinance, 1916 (No. 12) facilitates the identification and supervision of habitual criminals. The portion dealing with habitual criminals is borrowed from the Ceylon Ordinance of 1914 with certain modifications to suit local convenience. Revised clauses are incorporated dealing with convicts out on licence. The original clauses were in the Prisons Ordinance of 1887.

The Co-operative Credit Societies (Amendment) Ordinance, 1916 (No. 13) allows rules to be made prescribing the conditions under which a Society may enter into contracts for the sale of agricultural products on behalf of such of the shareholders as shall have given their authorization to the Society.

The Public Health Amendment Ordinance, 1916 (No. 15) provides for the removal of vegetable growth, &c., from river courses and banks by the responsible party in cases of small importance.

The Pensions (Amendment) Ordinance, 1916 (No. 17) provides for the case of officers seconded from a pensionable post for temporary employment in a non-pensionable one. It adopts a practice which obtains in the Straits Settlements and other Colonies.

The Animal Diseases Consolidation (Amendment) Ordinance, 1916 (No. 18) authorizes the landing of animals coming from Great Britain and Ireland if accompanied by an official export certificate. It also empowers the Governor in Executive Council to regulate or restrict the movement of animals in certain defined areas of the Colony during outbreaks of epidemic diseases.

IV.—EDUCATION.

PRIMARY.

64. The number of children on the registers of the Government and Grant-Aided Schools in the Colony during the year 1916 was 23,273 as against 22,765 in the year 1915. The annual average attendance was 15,661 or 67.4 per cent., as against 14,884, or 65.4 per cent. for the previous year.

65. The distribution of the Primary Schools among the several denominations is as follows:—

	Number of Schools.	Number enrolled.	Average Attendance.
Government Schools ...	57	9,433	6,156
Aided Schools :			
Denominations.			
Roman Catholic ...	67	9,612	6,542
Church of England.	19	,704	1,944
Presbyterian ...	2	180	119
Mahomedan ...	2	266	201
Hindu	1	266	185
	148	22,461	15,147

66. Compared with the previous year, these figures show a slight decrease in the roll number, but an increase of 263 in the average attendance.

67. The total expenditure for the year on salaries and grants to teachers was Rs. 331,269 as compared with Rs. 324,579 in the previous year. The cost to Government of a pupil in a Government School was Rs. 19.63 and in an Aided School Rs. 15.44 as compared with Rs. 18.75 and Rs. 16.09 in 1915.

68. There were 711 certificated teachers employed in Government and Aided Schools, of whom 150 are head teachers, 171 assistant teachers and 390 monitors and monitresses.

69. Six scholarships and six exhibitions are awarded every year under which boys from the primary schools can pass on to the Royal College. There were 186 candidates in 1916 as against 174 in 1915. The number of candidates from Government Schools was 112 and from Aided Schools 74, as compared with 108 from Government and 66 from Aided Schools in the previous year.

70. For the examination for the four Girls' scholarships giving free tuition in a secondary school and money payment of Rs. 100 a year for 3 years, the number of candidates was 69 : from Government Schools 45, from Aided Schools 22, and from non-Christian Schools 2.

71. The Men's Training School presented 9 candidates for the 2nd Class Teachers' Examination of whom 2 passed, and 9 candidates for the 3rd class of whom 2 passed. The Women's Training presented 2 candidates for the 2nd Class Examination of whom 1 passed and 3 candidates for the 3rd class of whom all passed.

SECONDARY EDUCATION.

72. The Royal College in Curepipe is the Government Institution for affording Secondary Education to boys. There were in December 1916 209 pupils, the average number for the year being 220. There are also 14 Secondary Schools for boys and girls, assisted by grants from Government.

73. Out of 264 candidates examined from the Colony at the last Cambridge Local Examination, 89 passed.

74. The Matriculation examination of the University of London was not taken in the Colony.

75. Two Government Scholarships tenable in England are offered annually to students of the College of the value of £1,000 each extending over four or five years, with £150 for travelling expenses.

V.—GOVERNMENT INSTITUTIONS.

HOSPITALS.

76. The Civil Hospital in Port Louis, with 275 beds, is the most important of the Colony. The number of patients admitted at this institution during the year was 6,411, the number discharged 6,060 and the daily average in hospital 246. The number of deaths was 529.

Of those discharged 3,128 were reported as cured, 2,605 were relieved and 327 were not improved.

77. District Hospitals are also maintained by Government at Barkly Asylum (Beau Bassin), Mahebourg, Souillac, Long Mountain, Poudre d'Or, Flacq and Moka, with an aggregate accommodation of 592 beds.

The total number of cases treated at all district hospitals was 12,164 as against 12,782 in 1915.

A new hospital is under construction at Candos, Quatre Bornes, to replace the present hospital buildings at Barkly Asylum.

The outlying districts are served by dispensary hospitals and dispensaries for the treatment of emergency and pauper cases.

The Immigration law also requires the maintenance of hospitals on every estate on which there are 20 Indian indentured labourers.

78. The Lunatic Asylum contained on 31st December 1916 486 patients (285 males and 201 females) and the Lunatic branch wards at Barkly Asylum 99 inmates (69 males and 30 females).

79. There were 72 inmates in the Leper Asylum at the close of the year, a decrease of 9 as compared with 1915.

POOR RELIEF.

80. There is only one institution under the direct control of the Poor Law Commissioner at which paupers receive institutional treatment and this is Barkly Asylum situated at Beau Bassin.

81. Exclusive of the pauper cases treated at the public hospitals and dispensaries 1,064 paupers, as compared with 1,112 in 1915, received institutional relief during 1916 at the Barkly Asylum and different religious institutions.

2,233 paupers received pecuniary outrelief, permanently or temporarily, during 1916, against 2,330 in 1915.

VI.—JUDICIAL STATISTICS.

PRISONS AND REFORMATORY.

82. 3,142 persons were committed to prison during the year, being 463 less than in the previous year. Of this number 3,000 were males and 142 females. The daily average in prison was 627.67; this is an increase of 5.68 on the average of 1915.

83. The Government Reformatory contained, on 31st December, 59 inmates, 92 were admitted during the year 1916 and 91 were discharged, leaving 60 boys at 31st December 1916.

84. The majority of inmates in the Industrial School are trained in agriculture and a small number as carpenters and tinsmiths.

85. The regulations for the instruction and training of youthful offenders in the Government Reformatory and Industrial School were published in consolidated form during the year under Government Notification No. 213 of 1916.

CRIMINAL STATISTICS.

86. The total number of offences reported to the Police was 19,638, being 336 less than in the previous year.

87. The number of persons brought before Magistrates' Courts was 21,625, a decrease of 1,563 compared with the previous year.

88. There was a decrease of praedial larceny, 154 cases being reported as against 260 cases in 1915.

89. 10 persons were tried in the Assizes in 1916 for offences against the person, compared with 17 in 1915. The convictions were 9 in 1916 and 12 in 1915. 2 persons were tried for offences against property in 1916, 1 of whom was convicted. 7 were tried in 1915, of whom 3 were convicted.

VII.—VITAL STATISTICS.

90. The estimated population, inclusive of the Dependencies, on the 31st December 1916 was 384,253, an increase of 1,513 on that of the previous year, and in the proportion of 492 males and 1,021 females.

91. There were 13,161 births during the year or 67 more than in 1915. The birth-rate was 35.0 per 1,000 of the estimated population, as compared with 34.8 per 1,000 for 1915.

92. Of the births registered 4,280 or 32.5 per cent. were legitimate and 8,881 or 67.5 per cent. illegitimate.

93. The deaths registered were 11,432 or 1,669 less than in the previous year. The death-rate was 30.4 per 1,000 of the estimated population, as against 34.8 the death-rate in 1915, or a decrease of 4.4.

94. Comparing the infant mortality with the births during the year, 13,161 infants were born and 1,932 died at one year of age or under, equal to 16.9 per cent. The percentage under 5 years was 30.5.

PUBLIC HEALTH.

95. The principal causes of death throughout the Colony during the year were: malaria 32.6 per cent.; phthisis and other forms of tuberculosis 18 per cent.; dysentery 9.8 per cent.

96. 227 cases of enteric fever were notified with 52 deaths.

97. Plague registered 22 attacks with 15 deaths, giving a death-rate of 68.2 per cent. Port Louis has been plague free since the 6th April 1915.

Trapping and poisoning of rats is carried out continuously. Rat-catchers accounted for 55,532 rats in Port Louis and 66,860 in the districts.

98. Anti-malaria and anti-mosquito measures were continued during the year. The more important major works were carried out in connection with Mon Goût, Espérance, Mon Rocher, Mon Plaisir and Beau Plan marshes, and with Rivers des Pamplemousses and Calebasses, in Pamplemousses District, as well as in Rivière Sèche, Rivière Françoise, Rivulets Pont Blanc and Grande Barbe in Flacq District. In Port Louis the digging of the Champ de Lort drain was undertaken.

VIII.—METEOROLOGICAL.

99. The annual rainfall for the Island was 1937.22 mm. compared with an average of 1927.07 mm.

100. A cyclone was experienced on the 26th May which as to the epoch and longitude of its occurrence was unprecedented. High wind velocities were recorded in the central, eastern, south-eastern and southern districts and considerable damage was done to the crops in these districts.

IX.—POSTAL AND TELEGRAPH.

101. There are 62 Post Offices in the Colony, of these 55 are Telegraph Offices.

102. The total Post and Telegraph Revenue was Rs. 240,394, an increase of Rs. 16,565 as compared with 1915. The expenditure was Rs. 157,283 in 1915, leaving an excess of revenue of Rs. 71,504 in 1916 and Rs. 66,546 in 1915.

The ratio of expenditure to earnings in 1916 was 70.25%, against 70.26 in 1915.

103. The estimated number of postal articles (excluding parcels) exchanged was 4,437,028 as against 3,670,948 in 1915.

104. The number of postal parcels handled was 12,366 to the value of Rs. 424,036, as against 9,455 and Rs. 300,141 respectively in 1915. Increase in the number of parcels : 2,911 ; and in value : Rs. 123,895.

105. The number of parcels received was 10,356 to the value of Rs. 393,235 and that despatched 2,010 for Rs. 30,801, as against, in 1915, 7,599 received, value Rs 261,426 and 1,856 despatched value Rs. 38,715.

106. Foreign Money Orders to the value of Rs. 254,573 were issued during 1916 against Rs. 303,945 in the previous year. Foreign Money Orders to the amount of Rs. 98,962 were paid as against Rs. 91,970 in 1915.

107. Inland Money Orders were issued to the value of Rs. 597,585 as against Rs. 573,972 in 1915.

108. British Postal orders were sold for Rs. 19,525 compared with Rs. 19,525 in the year before or a decrease of Rs. 396. Orders for Rs. 53,063 were cashed in the Colony.

109. There was an increase of 38,809 in the number of telegrams sent and an increase of Rs. 934 in the telegraph revenue.

X.—GOVERNMENT RAILWAYS.

110. The total earnings exclusive of Government traffic amounted to Rs. 3,078,149 as compared with Rs. 2,884,501 in 1915.

111. The total traffic including transport on Government service amounted to Rs. 3,344,283 against Rs. 3,144,285 in 1915.

112. The expenditure exclusive of debt charges was Rs. 2,876,631 as compared with Rs. 2,222,060 in 1915. This figure however includes Rs. 96,549 for new works, thus reducing the working expenditure to Rs. 2,780,082 leaving a nett profit of Rs. 564,201 or 1.72% on the capital expenditure to December 31, 1916.

113. The passenger traffic, including miscellaneous receipts, amounted to Rs. 1,862,405, being higher than the 1915 traffic by Rs. 195,367.

114. The total tonnage handled was 582,403 tons or 46,024 tons less than in 1915. The goods earnings amounted to Rs. 1,481,878 or Rs. 5,918 more than in the previous year.

115. The ratio of working expenses to total earnings showed an increase of 23.23% as compared with 1914 and 13.63 as compared with 1915, the figures being 83.13, 59.90, 69.50 % respectively.

BOIS CHÉRI LIGHT RAILWAY.

116. The Light Railway was lengthened by 5 miles in 1916. The receipts showed an increase of Rs. 5,058 over 1915 or 26.34%. The tonnage carried was 21,236 against 16,346 tons in 1916. The bulk of the traffic was sugar canes—20,961 tons.

XI.—PUBLIC WORKS.

117. All works that could be postponed were deferred on account of the war. The only important public works completed by the Department during the year were: the new Police station and the European police quarters at Curepipe.

118. A large amount of repair work was also put in hand and accomplished. Three works of some importance are in hand: the Victoria Hospital at Quatre Bornes, the extension of quay sheds at Cerné Dock and Mariners' Point and the Leper hospital at Powder Mills.

LA FERME IRRIGATION WORKS.

119. Work was continued throughout the year on the Irrigation Reservoir at La Ferme but owing to the stringency of the labour market the progress was not well maintained.

120. At the end of the year the dam was raised to a height of 16 feet above the sluice level so that 13 feet more have to be added; but on a much greater length, as the work has been started at the lowest portion of the ground. The reservoir began to fill on the 2nd January 1916 and the first supply for irrigation purposes was issued on the 27th June. The revenue derived from water delivered for irrigation purposes is increasing steadily and there is now no doubt that the undertaking will be remunerative.

121. The amount spent to 31st December 1916 was Rs. 1,051,115.11. Another sum of Rs. 280,338.42 was spent on the acquisition of land for the La Nicolière project and Rs. 130,765.39 on projects and studies. The cost of the final work will not exceed the estimate submitted by the Irrigation Expert.

122. The revenue collected was as follows :—

Quarter ending 30th September 1916	...	Rs. 508.07
Do. 31st December 1916	...	Rs. 2,170.25

123. About 36,000 feet of main distributaries were excavated and 10,000 feet of minor distributaries, together with the necessary masonry works requiring skilled labour viz. : 6 main road culverts, 30 estate road culverts, 6 minor culverts, 27 troughs to take private channels over distributaries, 3 drainage crossings, 5 drainage superpassages, 3 regulators, 5 drainage syphons, 1 large aqueduct over Bosquet Ravine and 14 supply sluices with basins and V notches to measure the water delivered on the fields. The distributaries were still incomplete at the end of 1916.

MARE-AUX-VACOAS RESERVOIR.

124. Works for increasing the storage capacity of the reservoir were proceeded with during the year, the additional volume to be collected is intended to feed the La Ferme Irrigation Reservoir. The increase will be a substantial one, as the Mare will hold 187 million cubic feet against 91.5 million cubic feet, with an increased submerged area of 78 acres.

ROADS AND BRIDGES.

125. The total length of roads at the end of the year was 433 miles.

126. The system of rolling the surfaces of the roads has been continued with good results. Over 9 miles of surface were so treated.

127. Twelve timber bridges were reconstructed in ferro-concrete. A new bridge has been erected over Grand River South-East to serve the inhabitants of Belle Rive—7 spans of 35 feet on masonry piers—old railway girders were used with a ferro-concrete platform. A second bridge is in course of construction to connect the new road from Beau Champ to Grand River South-East and Mahebourg.

XII.—FORESTS.

128. The area of forests, mountain and river reserves, and Curatelle land under the control of the Forest Department was about 86,367 arpents.

129. The revenue obtained by the Forest Department was Rs. 220,000 in 1916 as against Rs. 153,000 in the previous year, an important increase attributed to the heavier consumption of fuel wood owing to the increased price of coal.

130. The plantations of the island were added to by 843,000 seedlings, mostly pines and eucalyptus, including some 40,000 seeds of indigenous species, especially natte.

XIII.—DEPENDENCIES.

131. Rodrigues island lies about 320 miles to the eastward of Mauritius of which it is the largest dependency : area 42 square miles = 26,170 acres. The island is under the administration of a magistrate who takes his instructions from the Governor of Mauritius. Cable communication through a branch of the Eastern and South African Telegraph Company was opened on 16 May 1902.

132. The population at the 1911 Census was 4,829 and with the natural increase it was estimated at 7,598 at the end of 1916.

133. The health conditions of the island are very favourable. The number of births was 259 as against 266 in 1915. The number of deaths was 51 as against 66 in 1915. The birth-rate was 35.9 per thousand of the population and the death-rate 7.05.

134. The value of the imports in 1916 was Rs. 71,986. The exports of the island produce show a gradual increase and in 1916 they were valued at Rs. 329,112.

The principal exports are beans, salt fish, cattle, pigs, goats, poultry, tobacco in leaf and acacia seed.

The whole trade is with Mauritius and is maintained by a Government steam service running four times a year between Mauritius and Rodrigues.

135. The Lesser Dependencies are : Diégo Garcia, Six Islands, Peros Banhos, Solomon Islands, Agalega, St. Brandon group, Farquhar Islands, Trois Frères. These islands are administered by two Magistrates who are resident in Mauritius and pay regular visits to the islands.

136. The chief exports to the Colony are coconut oil, nuts, copra, guano and salted fish.

137. The export of nuts increased from 369,245 to 505,600, whilst in addition 937,900 litres of coconut oil were received in Mauritius in 1916. By far the greater number of nuts grown are used in the islands for the manufacture of oil or copra. 471 tons of copra were exported to England in one shipment during 1916.

138. Guano is obtained from St. Brandon and Farquhar Islands; an annual average of 1,000 tons being received into the Colony.

XIV.—GENERAL.

Major Sir J. R. Chancellor, R.E., K.C.M.G., who had been Governor of Mauritius since July 1911, left the Colony on 28th January 1916 to take up his new appointment of Governor of Trinidad.

The Honourable J. Middleton, C.M.G., Colonial Secretary, administered the Government pending the arrival of Governor Sir H. Hesketh Bell, K.C.M.G., who assumed the Government on 18th May 1916.

The general condition of the island has been prosperous in 1916 and the effect of the war on the trade and prosperity of the Colony has, if anything, been beneficial.

It has to be noted that the Colony's revenue during the year was the highest on record. The increased cost of living has been to a great extent counterbalanced by higher wages and abundance of employment.

L. KŒNIG,
Assistant Colonial Secretary.

January 1918.

MAURITIUS

THE GOVERNOR TO THE SECRETARY OF STATE

Government House,
Port Louis,
5th September, 1918.

SIR,

I have the honour to transmit herewith the Blue Book on Mauritius for the year 1917, together with the Colonial Secretary's report thereon.

2. The Revenue surpassed all previous records and considerably exceeded the expenditure on all ordinary and recurrent services.

3. Although the military establishment represented a mere *cadre* of the usual establishment, the contribution to the Imperial Government, for military purposes, amounting to Rs. 575,886, was, as in previous years, paid in full. The Colony also contributed largely to the separation allowances due to the men of the Mauritius Labour Battalion, which is rendering good service in one of the principal theatres of the war.

4. The gross excess of Assets over Liabilities at the close of the financial year 1916–17, represented a total of Rs. 7,136,804. After deduction of the large advances made for Railway improvements and Irrigation Works, and which are unlikely ever to be reimbursed to the Treasury, the net balance to the credit of the Colony, on the 30th June 1917, stood at Rs. 3,060,000.

5. The net total of the Public Debt now stands at £907,788, and represents an indebtedness of less than £3 per head.

In spite of the war the public finances may be considered to be in a highly satisfactory condition.

6. The sugar crop was considerably lower than those of preceding years, but the price paid by the Sugar Commission for a large proportion of the *vesous* enabled the planters to realize a satisfactory profit and to maintain the industry in good condition. A large portion of the crop was also purchased by the local Government for shipment to India in order to finance the supplies of foodstuffs and essential supplies imported from that country.

7. The general health of the Colony still leaves much to be desired. Although plague has been stamped out and anti-malarial works are showing a very beneficial effect, the death rate of the island is far higher than it should be. The city of Port Louis especially is very unhealthy and shows a mortality of over 5% per annum. There can be no doubt that the high price of all food is reacting injuriously on the health of the labouring classes and that, in many cases, there is an impaired power of resistance to many diseases which, under better conditions, would not prove fatal. It is almost needless to say that the improvement of sanitary conditions and the provision of good supplies of water are subjects which chiefly engross my attention, and I trust that, in spite of the enormous increase in the cost of cement and of all other materials, progress will gradually and steadily continue to be made.

I have, &c.,
H. HESKETH BELL,
Governor.

The Right Honourable
WALTER HUME LONG, M.P.,
Secretary of State for the Colonies.

REPORT ON THE BLUE BOOK FOR 1917

I.—FINANCIAL

Revenue

1. The revenue for the year 1916–17 was Rs. 13,844,060, or Rs. 2,193,810 more than estimated. The revenue however includes Rs. 232,588 being the proceeds of the export tax on sugar collected under Ordinance No. 3 of 1917, to meet the Planters' Gift of Rs. 500,000 to the Imperial Government.

2. The principal excesses of revenue over the Estimates were in respect of Licences, Excise &c. Rs. 1,273,806 ; Customs duties Rs 237,310 ; Railways Rs. 173,965.

3. The changes in taxation during the year were : (1) An additional export duty on sugar of 12 cents per 100 kilogrammes to meet the payment of the Planters' Gift of Rs. 500,000 towards the expenses of the War (Ordinance 3 of 1917). (2) A further additional export duty of 16 cents per 100 kilogrammes on all sugar carried by the Railways in lieu of an increase in the rates for goods traffic (Ordinance 16 of 1917).

Expenditure

4. The expenditure was Rs 11,816,140, or Rs. 403,644 more than estimated. In addition special expenditure was incurred amounting to Rs. 972,684 thus :

Colony's Gift to the Imperial Government	Rs. 500,000
Planters' Gift to the Imperial Government	235,963
Interest on Imperial War Loan	236,721

5. The principal excesses of expenditure over the Estimates were : Medical, Health and Quarantine Rs. 105,508 ; Military Expenditure Rs. 100,572 ; Miscellaneous Rs. 100,945 ; Railways Rs. 357,692.

Military Expenditure

6. The military contribution to the Imperial Government for the financial year 1916–17 amounted to Rs. 575,886. An annual grant of Rs. 35,000 is also payable to the local Military Authorities in lieu of refunds of Customs duties.

7. The Colony also contributes towards the expenses of a Labour Battalion for service in Mesopotamia to the extent of one half of the amount of the separation allowances up to a sum not exceeding Rs. 6,000 per mensem, and of one half of the pensions and gratuities up to a limit of Rs. 30,000 per annum.

8. The expenditure for the local Volunteer Force during 1917 was approximately Rs. 92,000.

Assets and Liabilities

9. The excess of assets over liabilities on the 30th June 1917 stood at Rs. 3,060,952.

10. The loan of £270,000, authorized by Ordinance No. 19 of 1915 to meet the cost of Railway Improvements and Irrigation Works has not been raised, and there was brought to account up to 30th June 1917

expenditure amounting to Rs. 2,550,000 on Railway re-equipment, and Rs. 1,525,851 on Irrigation works.

PUBLIC DEBT

11. The amount of the Public Debt, on 30th June 1917, was £1,262,990, in respect of which the sinking funds amounted to £355,202. The charge on account of the public debt was Rs. 937,533 for the financial year 1916–17.

CURRENCY AND BANKING

12. The average value of notes in circulation in 1916–17 was Rs. 6,927,065 as against Rs. 6,336,160 in 1915–16. The average amount of specie held was Rs. 3,563,384 as compared with Rs. 3,797,914, in the previous year.

13. The investments on account of the Currency Commissioners which stood at Rs. 2,538,250 on 1st July 1916 amounted to Rs. 3,614,250 at the close of the financial year. The Depreciation Fund was increased from Rs. 446,987 to Rs. 470,704.

14. There are two private banks established in the Colony—the Mercantile Bank of India, Limited, and the Mauritius Commercial Bank.

MUNICIPALITY OF PORT LOUIS

15. The management of the affairs of the Town of Port Louis is vested in a Municipality elected by the ratepayers.

The revenue and expenditure of the Municipality for the last two years is shown in the following statement :—

	Receipts.	Expenditure.
1916 ...	Rs. 518,567 ...	Rs. 522,394
1917 ...	534,061 ...	504,621

The funded debt of the Municipality at the end of the year was £ 108,785. Provision for repayment is made regularly every year.

LOCAL BOARDS

16. The smaller towns of the Colony : Curepipe, Beau Bassin-Rose Hill, and Quatre Bornes, are controlled by Boards of Commissioners appointed annually by the Governor.

17. The revenue of the town of Curepipe, the largest town after Port Louis, consists principally of the receipts from the house property and tenant taxes, taxes collected from vehicles and animals, licences and market dues. The Board also receives all fines resulting from contraventions prosecuted by the Board, and a contribution voted annually by the Council of Government.

18. The revenue of the two other Boards consists of the amount of the taxes paid on vehicles and animals, receipts of the house tax, supplemented by a contribution voted annually by the Council.

19. The revenue and expenditure of the Boards for the last two years are shown in the following comparative statement :—

Curepipe

	Receipts.	Expenditure.
1915–16 ...	Rs. 115,915 ...	Rs. 176,161
1916–17 ...	122,799 ...	167,302

	Beau Bassin–Rose Hill		*Quatre Bornes*	
	Receipts.	Expenditure.	Receipts.	Expenditure.
1915–16	Rs. 38,870	Rs. 39,496	Rs. 15,196	Rs. 13,895
1916–17	37,140	38,046	19,072	19,605

20. The following sums were contributed by Government in th financial year 1916–17 :—

Curepipe	Rs. 67,982
Beau Bassin–Rose Hill	13,600
Quatre Bornes	5,000

21. There is a Branch Roads Board for each of the eight rural districts of the Island to which is entrusted the maintenance of the branch roads under Ordinance No. 9 of 1900. These Boards receive as revenue a contribution from Government equivalent to 10 per cent. of the direct taxes collected in each district during the year and an addition up to 25 per cent. to the direct taxes which is levied in each year in each district, exclusive of Port Louis and the Townships. Additional percentages on such taxes up to 25 per cent. may also be imposed. The Government contribution amounted in 1916–17 to Rs. 12,500.

22. The powers of these Boards were extended by Ordinance No. 35 of 1902 to include the construction, maintenance and management of water works. For this purpose they receive an annual contribution from Government amounting to Rs. 79,000, and also the proceeds of water rates and of charges paid for water supplies.

II.—TRADE, AGRICULTURE AND INDUSTRIES

23. The total values of imports and exports, excluding specie, for the last five years were as follows :—

	Imports.	Exports.	Total.
1913 ...	Rs. 35,864,703 ...	Rs. 33,291,706 ...	Rs. 68,156,409
1914 ...	35,674,864 ...	59,524,405 ...	95,199,269
1915 ...	41,682,251 ...	56,015,511 ...	97,697,762
1916 ...	53,615,754 ...	72,682,170 ...	126,297,924
1917 ...	42,152,460 ...	58,319,728 ...	100,472,188

24. The value of the total trade of the Colony in 1917 was below that of 1916 by Rs. 25,825,736 but it was still above the figures for 1915 by Rs. 2,774,426 and also above the average of the last four years by Rs. 3,633,347.

25. The difference between the figures for 1916 and 1917 is fairly evenly divided between imports and exports, the imports being Rs. 11,463,294 and the exports Rs. 14,362,442. The decrease in the volume of imports may be attributed to the shortage of freight.

26. In 1916 the value of exports exceeded that of imports by Rs. 19,066,416. In 1917 the excess was Rs. 16,167,268.

27. The amount of Customs duties collected on imports during the year was Rs. 3,273,920 as compared with Rs. 4,143,085 in 1916. Owing to the shortage of shipping there was a falling off in the revenue from import duties.

28. The principal reductions in imports in 1917, as compared with 1916, occur under the following heads :

Grain and Flour	Rs. 4,450,000
Yarns and Textiles	1,130,000
Chemicals, Drugs	900,000
Food and Drink	750,000

The principal increases in imports were :

Manures and Fertilizers	Rs. 420,000
Chemicals for local manufactures ...	59,700
Tobacco	40,000

29. The principal items of export are sugar and aloe fibre, the quantities and values of these products exported during the year 1917 being as follows : Sugar, 187,815 tons, valued at Rs. 54,539,232 ; aloe fibre 1,194 tons, valued at Rs. 411,600. The other or minor exports were : Coconut oil 112,000 litres valued at Rs. 62,500 ; molasses Rs. 29,000 ; rum Rs. 26,600 ; vanilla Rs. 4,100.

30. The amount of export duties collected on sugar in 1917 was Rs. 832,916, being an increase of Rs. 10,998 on the duties collected in 1916. The increase in duty received on the sugar exported is due to the additional duty levied under Ordinances Nos. 3 and 16 of 1917.

Sugar

31. The total area under cane cultivation at the commencement of 1917 was 168,366 arpents, being 806 arpents more than at the commencement of the preceding year. Of this total 92,538 arpents were cultivated by large estates and 75,828 arpents by planters.

32. The area under cultivation by Indian proprietors or tenants amounted to 72,633 arpents or 43.1 per cent. of the total cane area. This represents a further increase of 245 arpents over the area cultivated by Indians in the preceding year.

33. The rise in the cost of living and materials owing to war conditions have combined to increase the cost of production of both sugar in the factory and cane in the field. It is estimated that owing to these causes the cost of production of sugar has increased since the commencement of the war by as much as 55.4 per cent. while the increase in the average sale price of sugar is computed at 50 per cent. compared with the pre-war average prices.

34. The total crop made for 1916–17 was 209,035 tons, the lowest recorded since 1911, and about 15 per cent. below the normal sugar production.

35. The crop for 1917–18 now harvested, has been substantially heavier, being 226,000 tons.

36. Arrangements were concluded in July with the Royal Sugar Commission for the whole of the vesou crop of 1917 to be sold for exportation to England on the basis of 17s. per cwt. f.o.b. for the first grade sugar. Subsequently the arrangements were modified to allow of a portion of the vesou to be shipped to India, together with the whole of the first syrup sugar, for financing the export of foodstuffs and essential supplies to Mauritius.

Aloe fibre

37. High prices have continued to prevail during the year for Mauritius fibre, but the output has been very much restricted owing to the difficulty of shipping.

Tobacco

38. The experiments made in the cultivation of Reunion tobacco have shown good results ; the tobacco is regarded as distinctly promising.

Food Crops

39. The erection of the Government Maize Sécherie at Mahebourg was completed during the year and in December the drying corn for estates had been commenced.

40. Considerable further efforts were made during the year to promote the production of maize and of provision crops and it is satisfactory to find that their effect has been already felt. It is estimated that at close of the year 15,675 arpents were under the cultivation in foodstuffs, representing an increase of 66.7 per cent. on the area previously cultivated.

41. A scheme of short term leases of Crown lands at nominal rentals has been devised by the Department of Agriculture for garden produce, as maize, manioc and sweet potatoes. In all some 500 acres of Crown land have been leased in this way.

Limes

42. During the year, His Excellency the Governor invited attention to possibilities of development in the cultivation of limes in Mauritius where there is abundance of the suitable soil. In October the Council of Government voted a sum of Rs. 2,000 for the establishment of a Government demonstration area in the southern part of Flacq.

Cattle

43. The outbreak of foot and mouth disease which occurred at the end of 1916 continued during the early part of the year but was finally stamped out in April.

Entomological

44. *The Phytalus Smithi* campaign was conducted on previously established lines and steps were taken to assist the spread of the parasite (*Tiphia parallela*) in the infected area. Special measures of quarantine and barrier protection continue to be enforced.

Co-operative Credit Societies

45. The Co-operative Credit movement continues to make satisfactory progress. One new Society was registered during the year making the total number operating at 31st December, 24, with a working capital of approximately Rs. 259,572.

The general situation is sound and great possibilities of development are contained in the movement.

SHIPPING

46. The number of merchant vessels entered and cleared during 1917 was 301, with a tonnage of 592,854 giving a decrease of 95 vessels and of 265,004 tonnage, as compared with the previous year. British tonnage was 74 per cent. of the total.

There was a decrease of Rs. 68,724 in the revenue of the port owing to the bulk of the shipping frequenting the port being under Government charter and consequently paying no Harbour dues.

III.—LEGISLATION

47. The number of Ordinances passed by the Council of Government are 24 in number. The most important Ordinances are :—

The Volunteer Force (Amendment) Ordinance, 1917 (No. 1) which empowers the Governor to call out the Volunteer Force or a proportion thereof for active service by means of an order in writing addressed to the Officer Commanding the Mauritius Volunteer Force, instead of by Proclamation.

The Stamp Laws (Amendment) Ordinance, 1917 (No. 2) which provides for certain duties being paid in cash in lieu of stamps, thus carrying into effect a recommendation of the Royal Commissioners (1909).

The Port Louis Sewerage (Extension) Amendment Ordinance, 1917 (No. 7) which makes the owner of the premises in which a meter has been fixed liable to a fine in case of damage to, or destruction of, such meter whereby water is consumed and not paid for, unless he proves his *boná fides.*

The Customs (Amendment) Ordinance, 1917 (No. 10) which makes provision to prevent smuggling (a lacuna in our laws) and is borrowed from the Malta Ordinance No. 7 of 1909.

The British Nationality and Status of Aliens (Payment of Fees) Ordinance, 1917 (No. 14), the Schedule whereof is borrowed from article 14 of the British Nationality and Status of Aliens Regulations, 1914, local legislation being necessary in view of sub-section 2 of section 19 of the British Nationality and Status of Aliens Act, 1914.

The Registration of Agricultural Chemists Ordinance, 1917 (No. 17) which reproduces the Registration of Agricultural Chemists Ordinance, 1915, with the following modifications :—

(1) Persons holding the diploma of Fellow or Associate of the Institute of Chemistry of Great Britain and Ireland have been added to the list of persons entitled to registration.

(2) The qualification of candidates for the preliminary and final examinations has been omitted from the Ordinance, the matter being now dealt with by Regulations.

The Stamp (Amendment) Ordinance, 1917 (No. 21) which reduces the stamp duty on small policies of insurance not exceeding Rs. 500, thus facilitating the issue to the poorer classes of "Industrial Policies."

The Irrigation Works (Management) Ordinance, 1917 (No. 22) which provides for the management of the works undertaken under the Irrigation Works Ordinances Nos. 4 and 33 of 1914.

IV.—EDUCATION

PRIMARY

48. The average number of children on the registers of the Government and Aided Schools in the Colony during the year 1917 was 23,835 against 22,461 in the year 1916, being more than 1,000 in excess of the highest number previously recorded, 22,765 in 1915. The annual average attendance was 15,197 as compared with 15,147 in the previous year.

49. The number of Indian children attending the Primary Schools was 10,244 compared with 10,677 in 1915 and 10,501 in 1916. There has thus been a slight fall of about 4 per cent. since 1915, the year in which the number was the highest.

50. Out of the total number of children in attendance in December, 13,604 were Roman Catholics, 528 belonged to the Church of England and 211 to other Christian denominations. The Mahomedans and Hindoos were 2,670 and 6,738 respectively.

51. There were 720 certificated teachers employed in Government and Aided Schools, of whom 151 were head teachers, 167 assistant teachers and 402 monitors and monitresses.

52. Six scholarships and six exhibitions are awarded every year under which boys from the primary schools can pass on to the Royal College. There were 214 candidates in 1917 against 166 in 1916.

53. For the examination for the four Girls' scholarships giving free tuition in a secondary school and money payment of Rs. 100 a year for three years, the number of candidates was 49.

54. The Men's Training School presented 9 candidates for the 2nd Class Teachers' Examination of whom 2 passed, and 2 candidates for the 3rd class of whom 1 passed. The Women's Training School presented 5 candidates for the 2nd Class Examination and 1 for the 3rd Class, of whom all passed.

55. A technical school was opened during the year for pupils belonging to the primary schools in Port Louis. 92 boys joined the elementary classes and the number allowed to take the full course was about 25 at the end of the year.

56. Elementary agricultural instruction is supplied by a scheme of school gardens in connection with primary schools. Gardens have been established at 17 Government Schools and 9 Aided Schools.

57. A new Education Code came into operation at the beginning of the year. One of the main changes is the introduction of inspection grants to be based on the quality of work done in the school and the general conduct of it.

SECONDARY EDUCATION

58. The Royal College in Curepipe is the Government institution affording Secondary Education to boys. There were in December 1917 215 pupils, of whom 76 were free pupils, the average number for the year being 221. Thirteen Secondary Schools for boys and girls receive grants from Government.

59. Out of 263 candidates examined at the last Cambridge Local Examination, 56 passed.

60. Two Government Scholarships tenable in England are offered annually to students of the Royal College of the value of £1,000 each, extending over 4 or 5 years, with £150 for travelling expenses.

61. A Commission was appointed during the year to enquire into the general administration of the Royal College, with particular reference to the efficiency and suitability of the staff of Professors and Masters.

V.—GOVERNMENT INSTITUTIONS

HOSPITALS

62. The Civil Hospital in Port Louis, with 290 beds, is the most important of the Colony. The number of patients admitted to this institution during the year was 6,595, the number discharged 6,205 and the daily average in hospital 257. The number of deaths was 384.

Of those discharged 2,931 were reported as cured, 2,876 relieved and 398 not improved.

63. District Hospitals are also maintained by Government at Barkly Asylum (Beau Bassin), Mahebourg, Souillac, Long Mountain, Poudre d'Or, Flacq and Moka, with an aggregate accommodation of 655 beds.

The total number of cases treated at these district hospitals was 13,656.

Little progress was made during the year with the new hospital at Candos, Quatre Bornes, to replace the present hospital buildings at Barkly Asylum, owing to the difficulty and cost of getting materials.

The outlying districts are served by dispensaries for the treatment of emergency and pauper cases.

64. The Lunatic Asylum contained on 31st December 1917, 478 patients as compared with 486 on the corresponding date of the previous year. The total number of certified lunatics including patients on probation and patients in the Lunatic branch wards at Barkly Asylum was 766, giving a proportion of 1 in 491 or 20.34 per 10,000 of the population.

65. There were 68 inmates in the Leper Asylum at the close of the year, a decrease of 4 as compared with 1916.

POOR RELIEF

66. There is only one institution under the direct control of the Poor Law Commissioner at which paupers receive institutional treatment and this is Barkly Asylum situated at Beau Bassin.

67. Exclusive of the pauper cases treated at the public hospitals and dispensaries, 1,026 paupers, as compared with 1,064 in 1916, received institutional relief during 1917 at the Barkly Asylum and different religious institutions.

2,359 paupers received pecuniary out relief, permanently or temporarily, during 1917, against 2,233 in 1916.

SAVINGS BANK

68. At the Government Savings Bank there was on the 30th June 1917 a sum of Rs. 3,640,091 to the credit of 30,564 depositors, as compared with Rs. 3,612,390 to the credit of 30,154 depositors on the 30th June 1916. The amount of deposits during the financial year was Rs. 1,516,387 and the withdrawals amounted to Rs. 1,491,960 an excess of deposits over withdrawals of Rs. 24,427.

The balance to the credit of 12,890 Indian depositors on 30th June 1917 was Rs. 1,473,388, being Rs. 332,964 more than the previous year.

The total sum invested on behalf of the Savings Bank by the Crown Agents for the Colonies in securities approved by the Secretary of State is Rs. 3,772,495. The amount realised by interest on sums invested for the Savings Bank was Rs.121,367 and the expenditure incurred, including the payment of interest to depositors, amounted to Rs. 113,832 thus leaving a balance in favour of the Bank of Rs. 7,534.

VI.—JUDICIAL STATISTICS

POLICE

69. The strength of the Police Force on the last day of the year 1917 was 11 officers and 572 non-commissioned officers and men, being 3 officers and 12 men below the authorized strength.

61 men were enlisted during the year against 58 struck off the strength. Of this latter number 38 were pensioned off or resigned, 9 were dismissed, and 11 died. 1 officer, 3 non-commissioned officers and 3 men were seconded for service in the Mauritius Labour Battalion and are now serving in Mesopotamia.

The health of the Force was on the whole good, although there were many cases of malaria. 834 cases were admitted to hospital, chiefly suffering from fever.

The number of departmental offences was 273 as compared with 381 in the previous year.

CRIMINAL STATISTICS

70. The Police held 252 inquiries into cases of sudden death. Of these 33 cases were attributed to suicide and 18 to homicide.

Reports of criminal offences made at the various stations numbered 21,796 as compared with 19,638 reports in 1916. Altogether 11,806 persons were arrested in respect of such offences (inclusive of 504 arrested on suspicion). Of these 10,488 were actually taken before the Courts and 9,192 were convicted. 522 persons were still untried at the beginning of the year.

There were 2,361 cases of serious crime in 1917, as compared with 2,107 in 1916. 12 persons were tried at the Assizes in 1917 of whom 8 were convicted. There was no conviction for murder.

PRISONS AND REFORMATORY

71. 3,350 persons, as compared with 3,142 in 1916, were admitted to prison after conviction. Of this number 3,214 were males and 136 females. The average daily number of convicted prisoners was 624.61, as against 627.67 in 1916.

1,836 of the prisoners admitted during 1917 were recidivists, 558 with 3 or more convictions, 460 with 2 previous convictions and 818 with 1 previous conviction.

The average daily number of in-patients was 28.92. There were 25 deaths compared with 18 in 1916, of which 6 deaths were due to dysentery. The death-rate was 4.03 as against 2.87 in 1916.

72. The Government Reformatory contained, on 31st December 1916, 60 inmates, 123 were admitted during the year and 112 were discharged, leaving 71 boys on 31st December 1917, 1 of whom was untried.

The general health was satisfactory, the prevailing disease being malaria. The discipline is said to have shown improvement.

VII.—VITAL STATISTICS

73. The estimated population, inclusive of the Dependencies, on the 31st December 1917 was 384,951, an increase of 698 on that of the previous year. There was a decrease of 542 in the number of males and an increase of 1,240 in the number of females.

There were 13,887 births during the year or 726 more than in 1916. The birth-rate was 36.9 per 1,000 of the estimated population as compared with 35.0 per 1,000 for 1916. Of the births registered 4,606 or 33.2 per cent. were legitimate and 9,281 or 66.8 per cent. illegitimate.

The deaths registered were 12,234 or 802 more than in the previous year. The death-rate was 32.5 per 1,000 of the estimated population, as against 30.4 the death-rate in 1916, or an increase of 2.1.

74. Infant mortality continues very high, the rate being 16.55 per cent. that is about a sixth of the children born die before they are a year old.

PUBLIC HEALTH

75. The public health during the year 1917 cannot be considered as satisfactory, the deaths showing an increase of 2.1 per thousand of the population compared with 1916.

The general character of the prevalent diseases has been maintained and as in previous years malaria accounted for the greatest number of cases of illness in the island.

76. Measures for the prevention of the disease were systematically maintained throughout the year. The execution of major anti-malarial works has been handed over to the Public Works Department; but the control of the minor works and of the free distribution of quinine are retained by the Medical Department.

77. No disease broke out in epidemic form and plague may be considered to have disappeared from the Colony.

VIII.—METEOROLOGICAL

78. The temperature ranged between 12.2° C. on August 22, 1917, and 31.6° on December 15. The mean temperature was 22.5° C.

The rainfall was 1734.79 mm. compared with an average of 1926.71. Its distribution throughout the year was irregular. The wettest months were April, October and November, and the driest February, March and December. On the whole, however, the year was a satisfactory one. No cyclone visited the Colony.

Observations at the Observatory are now recorded in metric units: temperatures in centigrade, rainfall in millimetres, wind velocities in metres per second and pressure in millibars.

IX.—POSTAL AND TELEGRAPH

79. At the end of the year the total number of offices of all classes was 61 of which 56 were telegraph offices. One post office was closed during 1917 owing to lack of business.

The estimated number of postal articles (exclusive of parcels) which passed through the post office was 3,956,207, or 480,821 less than in 1916; 192,648 fewer letters and post cards were dealt with; foreign letters and post cards were 6,030 more, and printed matter, 294,203 less. The number of postal parcels handled was 10,721, a decrease of 1,645 over the figures of the preceding year.

The number of insured parcels received was 8,796 to a value of Rs. 386,768, and the number despatched 36, to a value of Rs. 4,658, as against, in 1916, 10,356 received, valued Rs 393,235 and 68 despatched, valued Rs. 10,356.

There was an increase of Rs. 82,731 in Inland money order transactions and an increase of Rs. 450,453 in Foreign money order transactions.

The amount collected as commission on Foreign money orders issued was Rs. 20,836 in excess of the previous year's figure. This large increase is due to the rate of commission on money orders drawn on India having been raised from 2 to 4 per cent. in April, from 4 to 6 per cent. in May and from 6 to 9 per cent. in November, to protect this Government against loss in the adjustment of accounts with the Government of India. Postal Order business showed a reduction of Rs. 8,576.

80. The expenditure of the Department, including Telegraphs, in 1917 was Rs. 199,100 and in 1916 Rs. 168,890; while the revenue for the two years was Rs. 220,180 and Rs. 240,394 respectively.

The sale of stamped postal matter produced Rs. 35,597 less than in 1916.

The total number of telegrams handed in shows a decrease of 35,767 and an increase of Rs. 2,076 in paid telegrams.

X.—GOVERNMENT RAILWAYS

81. The gross revenue for 1917 amounted to Rs. 3,289,803, the working expenses to Rs. 3,016,041 and the net revenue to Rs. 3,032,638.

The passenger traffic, including miscellaneous receipts, amounted to Rs. 1,860,428 or Rs. 1,977 less than in 1916. The passenger traffic has shown a fairly consistent increase and has risen from Rs. 1,190,253 in 1912 to Rs. 1,565,273 in 1917, or an increase of Rs. 375,020 within five years.

The total tonnage of goods carried in 1917 was 573,990 tons or 8,413 tons less than in 1916 and the earnings were correspondingly less, amounting to Rs. 1,429,326 as compared with Rs. 1,481,878 in the previous year.

The ratio of working expenses to total earnings showed an increase of 32.69 as compared with 1914 and 9.46 as compared with 1916, the figures being 92.59, 59.90 and 83.13 % respectively.

When compared with 1913, the last normal year, the increase of working expenditure due to the war shows a rise of over one million rupees.

82. Owing to the large increase in the cost of all railway supplies and in view of providing additional revenue to meet the increased expenses of the railway, the Council of Government on the 17th July 1917 voted a resolution imposing an additional export duty on all sugar carried by the railway. This special tax was fixed at 16 cents per 100 kilos. and was estimated to realize Rs. 281,000.

It was also decided to reduce the passenger train service on week days and to suspend all traffic on Sundays with the object of effecting economy in the wear and tear of the rolling stock and in the consumption of coal.

BOIS CHÉRI LIGHT RAILWAY

83. The tonnage carried, including the Government timber traffic, was 21,146 against 21,236 tons in 1916. The bulk of the traffic was sugar canes—20,072 tons. The crop in the district served by the Light Railway was comparatively small and the total tonnage of cane handled was 1,500 tons less than in the previous year.

XI.—PUBLIC WORKS

84. No new works were undertaken during the year, due to enforced economy, and, as was the case last year, expenditure on public works was confined to maintenance and repairs.

85. Work connected with La Ferme reservoir has continued on normal lines and the distribution system was carried to an advanced stage. Throughout the year a supply of water for irrigation was maintained and the reservoir is already supplying water to irrigate 1,500 arpents. The revenue from rent of water amounted to Rs. 34,982.

86. The main roads were maintained in fair order and over eleven miles of surface were rolled.

XII.—FORESTS

87. The area of Crown Lands and Mountain and River Reserves under the custody of the Forest Department was about 86,441½ arpents, showing an increase of 74¾ arpents representing properties acquired during the year in the catchment area of River du Poste de Flacq for Rs. 5,101.

The revenue obtained by the Forest Department was Rs. 185,117 in 1917, showing a decrease of Rs. 34,960 over last year, but an increase of Rs. 31,947 over 1915.

XIII.—MISCELLANEOUS RETURNS

88. A contribution, known as the Ecclesiastical Grant, is made by the Colonial Government to the authority of the various recognized churches, on the basis of the number of adherents of each body. The apportionment in 1917 was as follows :

Roman Catholic	Rs. 111,520
Church of England	34,533
Presbyterian	5,583

89. The number of churches in the Colony are as follows :—In Mauritius, Roman Catholic 83, Church of England 28, Presbyterian 17, and in Rodrigues, the largest Dependency, Roman Catholic 2, Anglican 1.

90. Statistics under the head of immigration show that during 1917, 301 old and infirm Indians were repatriated. Imported labour from India has been discontinued.

91. The material prosperity of the Indians is evidenced by the value of landed property acquired by them. During the year under review the value is returned at Rs. 1,478,000 and property which changed hands among the Indian population is valued at Rs. 5,448,000.

92. The amount to the credit of the Public Officer's Guarantee Fund on 31st December, 1917, was Rs. 125,277, of which Rs. 123,500 have been invested through the Crown Agents.

XIV.—DEPENDENCIES

93. The population of Rodrigues was estimated at 6,105 at the end of 1917. The general health of the island during the year has been very favourable. The number of births was 293 as against 259 in 1916. The number of deaths was 66 as against 51 in 1916. The birth-rate was 48 per thousand of the population and the death-rate 10.8.

94. The value of the imports in 1917 was Rs. 286,279. The exports of island produce show a gradual increase and in 1917 they were valued at Rs. 379,595. The principal exports are beans, salt fish, cattle, pigs, goats, poultry, tobacco in leaf and acacia seed. The whole trade is with Mauritius.

95. The Lesser Dependencies are : Diégo Garcia, (the most important of the Oil Islands group), Six Islands, Peros Banhos, Solomon Islands, Agalega, St. Brandon group, Farquhar Islands, Trois Frères. These islands are supervised by two Magistrates who are resident in Mauritius and pay regular visits to the islands. The population of the Lesser Dependencies was estimated at 1,760 at the end of 1917. The chief exports to the Colony are coconut oil, nuts, copra, guano and salted fish.

XV.—GENERAL REMARKS

96. There have been few incidents in the past year to record. The food supply has been adequate in spite of difficulties of freight. The cost of the chief necessaries of life has however risen considerably and presses heavily on the poorer inhabitants.

The Volunteer Force has maintained its efficiency and a useful force is in existence. The first Volunteer Camp was held in June.

Eleven Government servants from various Departments, who had responded to a special appeal from the Secretary of State to members of the Civil Service, were allowed to proceed to the United Kingdom to offer their services for the period of the war. Six other officials are now serving with the British and French Armies.

A public collection for France's Day (14th July) amounted to Rs. 46,850. October 19 was observed as "Our Day" when a sum of Rs. 91,952 was raised for the British Red Cross Society.

Numerous sums have also been raised by private effort for the various patriotic funds and remitted otherwise than through Government.

20th July, 1918.

L. KŒNIG,
Assistant Colonial Secretary.

COLONIAL REPORTS, &c.

The following recent reports, &c., relating to His Majesty's Colonial Possessions have been issued, and may be obtained from the sources indicated on the title-page:—

REPORT ON THE BLUE BOOK OF MAURITIUS AND ITS DEPENDENCIES FOR 1918

I.—FINANCIAL

1. The revenue for the financial year 1917–18 amounted to Rs. 12,607,384, being Rs. 1,004,087 below the revenue for the previous year and Rs. 431,670 above the average of the last five years.

Revenue

2. The chief excesses of the revenue over the preceding year were in respect of Licences, Excise, etc. Rs. 878,993; Fees of Court or Office Rs. 112,202; Interest Rs. 35,406; while the chief decreases were under Customs Rs. 525,746 and Port and Harbour dues Rs. 93,276.

3. The following table shows the revenue for the last five years:—

1913–14	Rs. 11,142,611
1914–15	12,113,810
1915–16	12,975,041
1916–17	13,611,473
1917–18	12,607,384

Expenditure

4. The expenditure for the year amounted to Rs. 12,015,394, or Rs. 199,254 above the expenditure of the previous year and Rs. 836,278 above the average expenditure of the previous five years.

5. The following table shows the expenditure for the last five years:—

1913–14	Rs. 10,216,470
1914–15	12,136,424
1915–16	11,490,946
1916–17	11,816,140
1917–18	12,015,394

Assets and Liabilities

6. There was brought to account, up to the 30th June 1918, expenditure amounting to Rs. 2,545,000 on Railway re-equipment, and Rs. 1,654,079 on Irrigation works. The net balance to the credit of the Colony on 30th June stood at Rs. 3,771,991, against a net surplus for the previous financial period of Rs. 3,060,952.

Public Debt

7. The amount of the public debt on 30th June 1918 was £1,255,590 in respect of which the sinking funds amounted to £386,115. The charge on account of the public debt for the last financial year was Rs. 938,000.

Currency and Banking

8. The average value of notes in circulation in the year 1917–18 was Rs. 7,301,750, against Rs. 6,927,065 in the previous year, while the average amount of silver held was Rs. 2,842,000 compared with

Rs. 3,563,384 in the previous year. The investments on account of the Currency Commissioners which stood at Rs. 3,614,250 on 1st July 1917 were increased to Rs. 4,854,250. The Depreciation Fund was increased from Rs. 470,704 to Rs. 505,726.

9. There are two private Banks established in the Colony—the Mauritius Commercial Bank and the Mercantile Bank of India Limited. The usual Government accounts at both banks were maintained during the year.

MUNICIPALITY OF PORT LOUIS

10. The management of the affairs of the town of Port Louis is vested in a Municipality elected by the ratepayers. The revenue and expenditure of the Municipality for the last two years is shown in the following statement :—

	Receipts.	Expenditure.
1917 ...	Rs. 534,061 ...	Rs. 504,621
1918 ...	534,712 ..	557,261

The debt of the Municipality at the end of the year was £110,655. Provision for repayment is made regularly every year and the total amount repaid on 31st December 1918 was £52,668.

LOCAL BOARDS

11. The smaller towns of the Colony—Curepipe, Beau Bassin—Rose Hill, and Quatre Bornes are controlled by Boards of Commissioners appointed annually by the Governor.

12. The revenue of the Town of Curepipe consists principally of the receipts from house property and tenant taxes, taxes collected from vehicles and animals, licences and market dues. The Board also receives all fines resulting from contraventions and a contribution voted annually by the Council of Government.

13. The receipts and expenditure of the Boards for the last two years are shown in the following comparative statements :—

Curepipe	Receipts	Expenditure
1916–17 ...	Rs. 122,799 ...	Rs. 167,302
1917–18 ...	141,697 ...	162,329

	Beau Bassin—Rose Hill		*Quatre Bornes*	
	Receipts	Expenditure	Receipts	Expenditure
1916–17	Rs. 37,140	Rs. 38,046	Rs. 19,072	Rs. 19,605
1917–18	41,176	40,995	21,094	22,994

14. The following sums were contributed by Government to the Boards in the year 1917–18 :—

Curepipe	Rs. 68,000
Beau Bassin—Rose Hill	13,600
Quatre Bornes	5,000

The debts of the Boards to the Treasury for advances made on account of public works amounted at the close of the year to Rs. 48,000, thus :—

Curepipe Board	Rs. 45,000
Quatre Bornes	3,000

15. There is a Branch Roads Board for each of the eight rural districts of the island to which is entrusted the maintenance of the branch roads under Ordinance No. 9 of 1900. These Boards receive as

revenue a contribution from Government equivalent to 10 per cent. of the direct taxes collected in each district during the preceding year and an addition of 10 per cent. to the direct taxes to be levied in each year in each district, exclusive of Port Louis and the townships. Additional percentages on such taxes up to 25 per cent. may also be imposed.

16. The powers of these Boards, excluding Plaines Wilhems, were extended by Ordinance No. 35 of 1912 to include the construction, maintenance and management of water works. For this purpose they receive an annual contribution from Government, which in 1917-18 amounted to Rs. 79,000, and also the proceeds of water rates and of charges paid for water supplies.

II.—TRADE, AGRICULTURE AND INDUSTRIES

Imports and Exports

17. The following table shows the total value of imports and exports, excluding specie, in each of the years from 1913 to 1918 :—

	Imports.	Exports.	Total.
1913 ...	Rs. 35,864,703 ...	Rs. 35,291,706 ...	Rs. 68,156,409
1914 ..	35,674,864 ...	59,524,405 ...	95,199,269
1915 ...	41,682,251 ...	56,015,511 ...	97,697,762
1916 ...	53,615,754 ...	72,692,170 ...	126,297,924
1917 ...	42,094,708 ...	58,319,728 ...	100,414,436
1918 ...	42,921,250 ...	55,652,480 ...	98,573,730

18. Taking the exports and imports together, there is a decrease of Rs. 1,840,000 in 1918 as compared with 1917. It may be observed that the increase in the total trade in the island during each year of the war is an increase of values rather than of quantities.

19. The percentages of imports, exports and total trade held by the United Kingdom, British Possessions and Foreign Countries are as follows :—

	1916	1917	1918
Percentage of total trade held by :	%	%	%
United Kingdom ...	31.7	42.3	28.6
British Possessions ...	29.7	29.7	62.8
Foreign Countries ...	38.6	28.	8.6
	100.	100.	100.
Percentage of import trade held by :	%	%	%
United Kingdom ...	29.7	26.	16.3
British Possessions ...	48.1	52.4	70.2
Foreign Countries ...	22.2	21.6	13.5
	100.	100.	100.
Percentage of export trade held by :	%	%	%
United Kingdom ...	33.2	54.	38.1
British Possessions ...	16.2	13.4	57.1
Foreign Countries ...	50.6	32.6	4.8
	100.	100.	100.

20. The great bulk of the trade was done with British Possessions and the country having the largest share was British India. The value of the total trade to that country rose from Rs. 35,032,927 in 1916 to Rs. 50,265,217 in 1918. Owing to the war there is a falling off in the trade with Foreign Countries, the decline affecting both imports and exports.

21. The value of imports from, and exports to, the United Kingdom, British Possessions and Foreign Countries during the years 1914 to 1918, is shown below (specie is not included) :—

	Imports from (unit Rs. 1000)			*Exports to* (unit Rs. 1000)		
	U. Kingdom	B. Possessions	F. Countries	U. Kingdom	B. Possessions	F. Countries
1914...	11,819	... 16,716	... 7,140	32,116	... 26,270	... 1,138
1915...	13,851	... 19,131	... 8,700	35,636	... 16,449	... 3,931
1916...	15,903	... 25,786	... 11,927	24,140	... 11,757	... 36,785
1917...	10,939	... 22,050	... 9,106	31,489	... 7.789	... 19,041
1918...	7,016	... 30.123	... 5,782	21,258	... 31,810	... 2,664

22. The chief articles contributing to the Revenue from imports in 1918 were :—

Tobacco and Cigars	Rs. 695,000
Grain	501,000
Oils, raw	168,000
Cotton manufactures	151,000
Wines	141,000
Matches	93,000
Haberdashery	60,000
Spirits	53,000

Imports

23. The general rate of duty under the Customs Tariff is 12 per cent. *ad valorem*. Special specific rates are fixed for some goods, and some goods are admitted free of duty. No increased import duties were imposed during the year.

24. The following statement is of interest as showing the principal countries suplying goods to the Colony with the figures for 1913 for comparison :—

	1913		1918
1. British India ...	Rs. 13,536,419	...	Rs. 24,401,249
2. UnitedKingdom	12,218,219	...	7,016,235
3. South Africa ...	1,163,361	...	4,555,435
4. France ...	3,696,209	...	963,692
5. United States...	862,527	...	1,492,722
6. Madagascar ...	1,739,326	...	398,377
7. Reunion ...	372,527	...	919,275
8. Japan ...	3,336	...	903,100
Total	Rs. 33,591,924	...	Rs. 40,650,085

The British share of the trade before the war was very large and it has continued for the most part British.

25. No specie was imported in 1918. The value of the specie imported in 1917 was Rs. 46,740. The value of the imports, exclusive of specie, in 1918 as compared with 1917, shows an increase of Rs. 827,000. The largest increases occur under the following heads :—

Corn, Grain, etc.	Rs. 5,633,000
Wood and Timber	42,000

The largest decreases occur under the following heads :—

Manures and Fertilizers	Rs. 3,518,000
Machinery for local industries ..	671,000
Coals, Coke and Patent Fuel	623,000
Motor Cars and Cycles	216,000
Tobacco of all kinds	183,000
Haberdashery	179,000
Cotton manufactures	139,000

26. The imports of rice, which is the chief article of food of the majority of the population, were 59,723 metric tons, as compared with 48,414 metric tons in the previous year, the value of the importations being Rs. 15,308,000 in 1918 and Rs. 8,985,000 in 1917. The great bulk of the supply was from Rangoon (33,000 tons) ; Singapore supplied only 7 tons and China 14 tons, against 314 and 145 tons respectively in the previous year.

27. 2,385 tons of wheat flour valued at Rs. 922,000 were imported as against 8,427 tons valued at Rs. 1,981,000 in 1917. India supplied 2,188 tons and the Union of South Africa 118 tons. India supplied all the dholl, lentils and gram imported, the importations being . —

Dholl 4,451 tons valued at Rs. 1,350,000 as against 3,615 tons valued at Rs. 783,000 in 1917 ; lentils 1,526 tons valued at Rs. 490,000 as against 792 tons valued at Rs. 188,000 in 1917 ; gram 995 tons valued at Rs. 278,000 as against 1,687 tons valued at Rs. 358,000 in 1917.

28. The importations of coal decreased from 71,077 tons in 1917 to 30,965 tons in 1918, the Union of South Africa being the principal source of supply with 27,000 tons in 1918 as against 54,000 tons in 1917.

29. The following table shows the principal countries which supply goods to Mauritius and the value of the goods supplied, exclusive of specie, in the years 1917 and 1918 :—

Country	*Imports into Mauritius*	
	1917	1918
British India	Rs. 17,107,000 ...	Rs. 24,401,000
United Kingdom ...	11,043,000 ..	7,016,000
Union of South Africa ...	4,359,000 ...	4,555,000
United States of America	2,267,000 ..	1,493,000
Chili...	1,746,000 ...	....
France	1,721,000 ...	964,000
Madagascar	1,028,000 ...	398,000
Réunion	1,019,000 ...	919,000
Sumatra	251,000 ..	184,000
Japan	232,000 ...	903,000
Sweden	185,000 ...	248,000

Exports.

30. The following table shows the items of export with quantities and values for 1917 and 1918.

	1917		1918	
	Tons (metric)	*Value Rs.*	*Tons (metric)*	*Value Rs.*
Sugar ...	190,821 ...	54,539,232	183,222 ...	53,882,000
Aloe fibre ...	1,214 ...	411,631	391 ...	140,135
	hectol.			
Coconut oil	1,115 ...	62,530	966 ...	72,572
Rum ...	1,283 ...	26,669	475 ...	15,952
	Tons			
Molasses ...	581 ...	29,185	8 ...	125
Copra ...	75 ...	18,750	15 ...	400
Vanilla ...	¼ ..	4,163	⅓ ...	7,485

31. The quantity of sugar shipped to the United Kingdom has amounted to 74,022 tons for the year, a decrease of 37,352 tons on the figures for 1917. India has purchased 86,586 tons, representing in value Rs. 25,844,728.

32. The following table shows the principal countries to which sugar was exported during the calendar years 1917 and 1918:

Country	1917 *Metric tons*	1918 *Metric tons*
United Kingdom... ...	111,373 ...	... 74,022
British India	24,477 ...	... 86,586
France	52,639 ...	... .
Union of South Africa ...	417 ...	.. 6,145
Portuguese East Africa ...	730 ...	... 4,790
British East Africa ...	396 ...	.. 2,087
Australia	373 ...	... 1,002
Egypt	....	... 5,523
Seychelles	242 ...	... 593
Zanzibar	48 ...	... 1,429

Out of 183,222 tons of sugar exported in 1918, the United Kingdom and British India purchased together 160,608 tons.

The export duty on sugar yielded Rs. 842,000. Export duty is levied on sugar at the rate of 51 cents per 100 kilos.

33. The following table shows the value and the destination of the principal products of the Colony, other than sugar, which were exported in 1917 and 1918:

Product	*Year*	*United Kingdom*	*British Possessions*	*Foreign Countries*	*Total*
Aloe Fibre ...	1917	Rs. 250,437	Rs. 129,931	Rs. 31,263	Rs. 411,631
...	1918 ...	...	... 140,135 ...	...	... 140,135

...	1918 ...	... ...	6,985 ...	500 ...	7,485

AGRICULTURE

Sugar

34. The area under sugar cane for the production of sugar at the commencement of the year was estimated to be 168,356 arpents, an increase of 806 arpents over the previous year. Of this total 92,538 arpents were cultivated by estates and 75,828 arpents by farmers. The area under cultivation by Indians amounted to no less than 72,633 arpents or 43 per cent. of the whole.

35. The number of factories in Mauritius has decreased from 104 to 55 from the year 1892 to 1918, but on the other hand the tendency has been to centralise the industry, so that the total capacity is much greater than it was formerly. There is not much scope for the extension of the Sugar Industry in Mauritius as practically the whole of the lands which are suitable for cane cultivation are at present under that crop.

36. The sugar crop of 1917-18 did not exceed 225,970 tons, which is below the average production of the last five years ; the chief cause of the reduction being unfavourable weather. The description of sugar manufactured is 95.5 per cent. of white sugar and 4.5 per cent. of low grade sugar. Of the total crop about 6,000 tons are used for local consumption.

The total sugar crop in each year of the war is shown below in metric tons with the pre-war average for comparison :—

	1914-15	1916	1917	1918	5 years' average 1914-18	5 years' average 1909-13
Tons	214,518	209,035	225,970	252,370	235,800	221,400

It will be seen that the crop of 1918 was the best of the five, that of 1917 being the next best. When it is remembered that in 1917, and still more in 1918, the stringency in supplies and the scarcity of land fertilizers were more acute than in previous years, the result is highly satisfactory.

Aloe fibre

37. The output was much restricted during the year owing to the want of shipping space. Some small areas were planted with Sisal but the cultivation of this plant shows no great progress.

Tobacco

38. There was an extension of the local manufacture of tobacco of the Reunion type, or *tabac bleu,* during the year, and the trials carried out on the initiative of His Excellency the Governor have been justified by success. The results have shown that a thoroughly satisfactory and marketable article can be produced and that the production of this tobacco for local consumption may eventually attain considerable importance.

Tea

39. Little or no extension of this cultivation is taking place although tea growers receive preferential treatment to the extent of 30 cents per lb. import duty on foreign tea. The local demand is chiefly for foreign tea.

Limes

40. Interest is being taken in the experimental plantation of limes made by the Department of Agriculture. The results of trials have proved very satisfactory as regards growth, and indicate the probability of the opening up of a profitable industry in this direction.

Vanilla

41. There is no progress to report in relation to the vanilla industry and there is no sign of any improvement. The acreage under cultivation shows little signs of increasing.

Food Crops

42. Renewed efforts have been continued to bring about an extension of the cultivation of food crops. Considerably increased areas were planted in maize during the early part of the year but owing to the heavy rainfall during the growing season the results were adversely affected in certain districts. Operations at the Maize *Sécherie* at Mahebourg were much restricted owing to the high prices realized by locally grown maize.

The scheme by which about 500 acres of Crown land were made available for cultivation by small planters during the year made satisfactory progress but it is not an easy matter to induce landowners to produce foodstuffs when sugar cultivation is so remunerative.

Live Stock

43. A general census of cattle taken in the month of August revealed the fact that since 1914 the horned stock has diminished by over 8,000 head, the diminution being chiefly marked in the case of milch cows and young animals.

Legislation was passed during the year to restrict the slaughtering of cattle which it is hoped will materially improve the position and maintain the herds of the country.

Entomological

44. Strong measures have been taken to guard against the spread of Phytalus Smithi and have been productive of good results; but despite the Government action and genuine effort on the part of the planters, the presence of the insect has been observed to a greater extent this year than on previous occasions. The work of encouraging the spread of the parasite (*Typhia parallela*) is being vigorously prosecuted.

Co-operative Credit Societies

45. Progress continues to be made with Co-operative Credit Societies. The number working at the end of December 1918 was 23. The total number of members is now 2,781 an increase of 14 on the year 1917, and the working capital has been increased by Rs. 9,749 to a total of Rs. 310,461.

SHIPPING

46. The net tonnage (sailing and steam) visiting Port Louis in 1918 amounted to 53,290 tons. In addition 135 vessels with a tonnage of 192,771 entered, and 136 vessels with a tonnage of 194,494 cleared during 1918, a decrease of 12 vessels and a tonnage of 955,490 entered, also a decrease of 18 vessels cleared and a tonnage of 110,040 as compared with the previous year.

The comparative distribution according to nationality for 1917 and 1918 is shown below :—

1917	*Entered*	*Cleared*
British	108	115
Dutch	1	1
French	28	29
Japanese	4	3
Norwegian	2	2
Spanish	3	2
Swedish	2	1
	148	153

1918	*Entered*	*Cleared*
British	86	85
American	2	1
Chinese	2	2
Dutch	2	2
French	28	28
Japanese	8	8
Norwegian	2	3
Portuguese	1	1
Spanish	2	2
Swedish	3	3
	136	135

III.—LEGISLATION

47. During the year 1918, 34 Ordinances were passed. Of these the following are the more important :—

(*a*) The Slaughtering of Cattle Restriction Ordinance, No. 1 of 1918, which was passed with the object of maintaining the live-stock of the Colony.

(*b*) The Sugar Purchase Ordinance, No. 8 of 1918. The object of this Ordinance was to validate the special conditions under which the purchase by the Colonial Government of certain categories of vesou sugar of the 1918-19 crop was effected.

(*c*) The Fisheries Ordinance, No. 9 of 1918, which amends and consolidates the law on fisheries.

(*d*) The Vanilla Consolidated Ordinance, No. 10 of 1918, which reproduces, with certain modifications, the Vanilla Ordinance of 1915.

48. The Ordinances of lesser importance are:

(*a*) The Copyright Ordinance, No. 5 of 1918, which empowers the Collector of Customs to perform the duties and exercise the powers imposed on or given to the Commissioners of Customs and Excise of the United Kingdom by Sec. 14 of the Imperial Copyright Act, 1911.

(*b*) The Animals Destruction Ordinance, No. 20 of 1918. The object of this Ordinance is to stimulate the development of foodstuffs by affording better protection against the depredations of certain animals.

IV.—EDUCATION

Primary

49. In December 1918 there were 57 Government Primary Schools and 91 Aided Schools attended by 23,794 pupils, as compared with 23,835 in 1917. The average attendance was 15,073 as against 15,197 in 1917, which shows a small decrease both in the enrolment and in the average attendance.

50. The number of Indian children attending the Primary Schools was 10,675 as compared with 10,244 in 1917 and 10,501 in 1916. Of the total number of pupils 12,417 were described as Roman Catholics, 481 as belonging to the Church of England and 207 to other Christian denominations. The Mohammedans and Hindoos were 2,886 and 6,925 respectively. One Hindoo and two Mohammedan Schools are also assisted.

51. The percentage ot passes at the annual examinations in the obligatory subjects on the number examined and on roll in Government Schools was 72.95 and 70.62 respectively, as against 67.66 and 66.12 in 1917. The percentages for Aided Schools were 71.19 and 68.82, as against 72.5 and 70.2 in 1917. The examinations were held for the first time under the new Education Code.

52. There are 724 teachers employed in Government and Aided Schools, of whom 151 are head teachers, 136 assistant teachers and 437 monitors.

53. The encouragement offered by Government takes the form of scholarships and exhibitions. Under that system six scholarships and six exhibitions are offered every year to boys from the primary schools and those who take the first twelve places pass on to the Royal College. The exhibitioners receive free tuition and the scholars free tuition and an allowance of Rs. 100 a year, for three years. Of the 216 candidates who entered in December 1918, 126 failed to satisfy the preliminary test and 27 of the remainder reached the pass standard.

There is also keen competition for the four girls' scholarships giving free tuition in a secondary school and money payment of Rs. 100 a year for 3 years. The number of candidates that entered in 1918 was 112, of these 9 obtained the minimum marks required.

54. There are Government Training Schools for men and for women. The training school for men presented 8 candidates for the Teachers' certificate examinations, of whom one obtained a 2nd and one a 3rd class certificate. Of the three candidates presented by the Women's Training School none passed.

Technical Education

55. There are 8 mechanical engineering apprenticeships for which there were 52 candidates in 1918 as compared with 91 in the previous year. For the two horticultural apprenticeships only three candidates entered their names and failed to qualify. There were no entries for the civil engineering apprenticeships.

56. There are four needlework apprenticeships in the Girls' Schools and 37 candidates entered for the competition, as against 49 in the previous year.

57. Instruction in woodwork and mechanical drawing was given to 187 boys in the Port Louis Technical School, being 95 in excess of the number attending during 1917, the year in which the scheme was developed. Woodwork is also taught in five country schools.

58. Elementary agricultural instruction is supplied by a scheme of School Gardens conducted in connection with primary schools. Gardens have been established at 17 Government schools and 9 Aided schools.

Secondary Education

59. There were in December 1918, 245 pupils on the Royal College roll. The number on 31st December 1917 was 215. Thirteen secondary schools for boys and girls receive grants from Government.

60. There are two Government Scholarships to enable pupils of the College to continue their studies in England, of the value of £ 1,000 each extending over four or five years, with £150 for passage expenses.

61. The Senior and Junior Cambridge Local Certificate Examinations were held in December, the number of entries being 131 for the Senior and 97 for the Junior Certificate. The number of passes was 38 for the Junior and 31 for the Senior Certificate. The total expenditure on education in 1917-1918 amounted to Rs. 632,507.

V.—GOVERNMENT INSTITUTIONS

Hospitals and Dispensaries

62. The Civil Hospital in Port Louis, to which are attached a Maternity ward and a Police hospital, is the most important of the Colony. It contains 290 beds. 6,672 patients were admitted during the year, which, with 194 patients remaining from last year, makes a total of 6,866 patients treated, against 6,595 for last year. There were 388 deaths, against 384 for last year. A striking feature of this institution is the amount of surgical work carried out. During the year 1,039 operations were performed and the number of deaths was 22. The number of out-patients was 433 against 427 for 1917.

The Maternity ward has treated 104 cases during the year as against 114 in the previous year. The training of midwives under the de Chazal scheme has been a marked feature of this ward.

63. District Hospitals are also maintained by Government with an aggregate accommodation of 659 beds. The total number of cases treated was 14,824 during the year, chiefly suffering from malaria.

64. There are Government outdoor dispensaries for the treatment of emergency and pauper cases. The number of "cases" treated at the public dispensaries was 57,025, or 308 less than in the previous year. Owners of estates provide estate hospitals of which there are 83.

Lunatic Asylum

65. The Lunatic Asylum contained on 31st December 1918 485 patients of all races, of whom 267 were males and 218 females, as compared with 478 in the corresponding date of the previous year. The patients in the Lunatic branch wards of Barkly Asylum were 99 (66 males and 33 females). The total number of certified lunatics in the Colony, including patients out on probation, was 771, giving a proportion of one to 488 of the population or 20.46 per mille. The number of criminal lunatics was 23 (21 males and 2 females).

Leprosy

66. The Leper Asylum is situated on the outskirts of Port Louis. There were 68 inmates at the close of the year and 21 admissions during the year. 9 inmates were discharged and the number of deaths was 19. The Government is erecting a new leper colony at Powder Mills in the district of Pamplemousses, a few miles out of Port Louis.

Poor Relief

67. Barkly Asylum, situated at Beau Bassin, Plaines Wilhems, is the only institution under the direct control of Government for the infirm and destitute poor. A large number of aged and infirm paupers are maintained at the expense of Government in private religious institutions and pauper orphans also receive public relief at the Barkly Asylum and at benevolent and other charitable institutions. Exclusive of the pauper cases treated at the public hospitals and dispensaries of the Colony and at St. Lazare Leper Asylum, 1,161 paupers, as compared with 1,026 in 1917, received institutional relief during 1918 at the Barkly Asylum and different religious institutions.

2,179 paupers (376 males and 1,803 females) received pecuniary out-relief, permanently or temporarily, during 1918, as against 2,359 in 1917.

Crèche

68. There has been no improvement in the death-rate of children in the first five years of life. The total number for the whole island in 1918 was 4,096, equivalent to a rate of 312.4 per 1,000 births. To the total Port Louis contributed 672 or 388.9 per 1,000 births, and the remainder of the island 3,424 deaths or 300.8 per 1,000 births.

Systematic neglect and lack of care are largely responsible for this great waste of life : and with the object of improving the conditions of infant life an appeal was made by His Excellency the Governor during the year for the opening of a crèche in the city of Port Louis for the sick infants of the poor, who not being sufficiently ill to be taken to a hospital are in danger of dying through the sickness, neglect or poverty of the mothers. The appeal met with sympathy and the work is to be extended subsequently to other centres.

Savings Bank

69. At the Government Savings Bank there was on the 30th June 1918 a sum of Rs. 3,678,416 to the credit of 31,234 depositors, as compared with Rs. 3,640,091 to the credit of 30,564 depositors on the 30th June 1917. The amount of deposits during the year was Rs. 1,419,120 and the withdrawals amounted to Rs. 1,380,457 an excess of deposits over withdrawals of Rs. 38,663.

70. The balance to the credit of 12,481 Indian depositors on 30th June 1918 was Rs. 1,304,740 being Rs. 168,648 less than the previous year.

VI.—JUDICIAL STATISTICS

Police

71. The authorized strength of the Force on the last day of the year was 598, the actual strength being 594. During the year 1 inspector, 3 non-commissioned officers and 3 men were on war service in Mesopotamia.

74 men were enlisted against 66 struck off the strength. Of this latter number 28 were pensioned off or discharged, 4 were transferred to other departments, 16 were dismissed and 18 died. The number of departmental offences was 175, as against 273 in the previous year.

Criminal Statistics

72. Reports of criminal offences made at the various stations numbered 20,591 in connection with which 11,397 persons were arrested, being a decrease of 1,205 cases and 409 persons, as compared with 1917.

There were 2,620 cases of serious offences in 1918 in which 3,409 persons were charged. Of these 2,548 or 74.74 per cent. were either summarily convicted or committed to assizes. 386 persons were still untried at the beginning of the year.

73. The amount of property declared to have been stolen was valued at Rs. 47,226 of which Rs. 25,203 or 53.56 per cent. was recovered.

74. There was an increase of praedial larceny, 516 cases being reported as against 280 in the preceding year and 154 in 1916. 22 persons were tried at the Assizes in 1918 of whom 17 were convicted. There was no convictions for murder.

Prisons and Reformatory

75. There was an increase of 531 in the total number of admissions of convicted prisoners during 1918. The figures are as follows: 1917—3,673; 1918—3,142. Of this number 3,536 were males and 137 females. The daily average in prison was 739.38 which is an increase of 114.78 on the average of 1917.

76. The number of deaths has been fewer than in 1917. The total number of deaths in jail was 21 as against 25 in 1917 and the death-rate per 1000 of the admissions during the year was 2.84 as against 4.03 in 1917 and 2.87 in 1916.

77. The daily average sick shows an increase. The numbers are 34.81 as against 28.92 in 1917. The number of punishments inflicted during the year for prison offences was 1,479 as against 1,334 in 1917. There were 22 cases of corporal punishment, as against 16 in 1917.

The usual industrial labour has been carried out at the prisons, the cash earned amounting to Rs. 6,214, as compared with Rs. 4,156 in 1917.

78. The numbers admitted to the Reformatory in 1918 were 47 new boys, 11 ex-reformatory boys and 73 untried, a total of 131, against 123 in 1917. Of the 58 admitted on conviction 13 were non-penal boys and 45 reformatory boys.

No deaths occurred during the year and the general state of health of the boys was satisfactory. The admissions to hospital increased by 91, as compared with the previous year and the prevailing disease was malaria. The discipline among the boys was satisfactory; there were 48 departmental offences, the offences being committed by 22 boys.

The results of the annual school examinations were exceptionally good, the percentages of passes being 91 for the Industrial School and 82 for the Reformatory. In 1917 they were 71 and 72 respectively.

VII.—VITAL STATISTICS

79. The estimated population of the Colony exclusive of the Dependencies (8,144) was 376,813 on the 31st December 1918 which is 273 less than the return for the previous year.

The population according to the 1911 Census was 370,393. The number of Indians was 257,887 or 69.6 per cent. of the total population.

Marriages

80. The marriages registered numbered 1,665 in 1918, of which 717 were among the General population and 948 in the Indian population.

Births and Deaths

81. There were 13,109 births during the year or 778 less than in 1917, corresponding to a birth-rate of 34.8 per 1,000 of the estimated population, as compared with 36.9 in 1917 and 35 in 1916. The mean birth-rate for the last five years was 36.4.

The deaths registered were 12,794 or 560 more than in 1917, corresponding to a death-rate of 33.9 per 1,000 of the estimated population, it being 1.4 per 1,000 higher than in 1917 and 1.1 per 1,000 higher than the average for the five years 1914–1918. The highest mortality was in Port Louis and corresponded to a rate of 50.4 per 1,000 of the estimated population it being 7.6 higher than the average for the five years 1914–1918.

82. The number of deaths ascribed to malaria was 3,460, which is higher by 103 than in the preceding year, but compares favourably with the mean for the last five years (3747). The percentage on total deaths was 27.0 for 1918, 27.4 for 1917 and 30.3 for the five-year period.

The other principal causes of death have been pulmonary tuberculosis, dysentery, bronchitis and pneumonia with percentages on total deaths of 7.3, 7.1, 5.8 and 5.6 compared with five-year mean of 7, 4, 5, 4, 5, 0, and 5.8 per cent.

Public Health

83. No outbreak of serious infectious disease occurred, but the general health conditions of the Colony were not favourable for a considerable part of the population. The constant rise in the prices of all commodities caused much hardship and suffering with consequent deterioration of health, and the most hard-hit were the labouring classes. The rainfall which was exceptionally heavy during the first part of the year necessarily acted as a stimulus to the breeding of anopheles mosquitos and malaria has been prevalent throughout the island.

Malaria

84. A Committee has been appointed to report on the incidence of malaria in Port Louis and to make recommendations for its gradual reduction.

The free distribution of quinine has been continued throughout the year. Under the supervision of the Director of Public Works anti-malarial works have been carried out and efforts have been concentrated chiefly in the districts of Pamplemousses, Moka and Flacq where the progress though slow cannot be denied. Anti-mosquito measures and drainage works have also been undertaken by the Sanitary Authority and minor works which also include the upkeep of the works already effected has formed part of the scheme.

A more extensive spleen census among school children has been taken. A total of 15,616 children were examined during the second half of the year ; of these 13,638 were found without enlargement of spleen, 1,440 were returned with slight enlargement, 401 and 237 had medium and great enlargement of the organ respectively. These figures give a spleen rate of 13.02 for the whole island shewing an increase of .31 on the rate of the corresponding half year.

Plague

There was no case of plague discovered but provision continues to be made to guard against a possible outbreak of the disease.

Meteorological

85. The annual rainfall for the island (mean of 38 stations) was 2693.67 m.m. (106.03 inches) compared with an average of 1796.51 m.m. (70.71 in.) The rainfall was in excess during the first half of the year and in defect during the second half. The total for the year was 10.9 m.m. above normal. Temperature of the air was above normal in all months except December.

VIII.—POSTAL AND TELEGRAPH

86. The number of Post Offices open in 1918 was 62 of which 55 are also Telegraph Offices. The total revenue for the year was Rs. 230,752, an increase of Rs. 10,572 as compared with 1917. The expenditure was Rs. 184,461 showing an excess of revenue over expenditure of Rs. 46,291.

The sale of stamped postal matter amounted to Rs. 142,842 or 61.9 per cent. of the revenue.

The estimated number of postal articles (excluding parcels) dealt with was 3,403,050 or 553,184 less than in 1917. The number of parcels received from abroad amounted to 10,367, an increase of 1,571 and the number despatched was 1,777, a decrease of 148. The duty collected amounted to Rs. 59,830 an increase of Rs. 52,697 over 1917.

Foreign Money Orders to the value of Rs. 438,117 were issued during 1918 against Rs. 705,026 in 1917 and Rs. 254,573 in 1916. Foreign Money Orders to the amount of Rs. 85,248 were paid during the year against Rs. 85,619 in 1917 and Rs. 95,964 in 1916. Inland Money Orders were issued to the value of Rs. 831,795 as against Rs. 679,382 in 1917, an increase in value of Rs. 152,413. British Postal Orders were sold for Rs. 12,630 compared with Rs. 17,906 in the year before. Orders for Rs. 48,075 were cashed in the Colony in 1918 compared with Rs. 45,710 in 1917.

The number of telegrams transmitted in 1918 shews an increase both as regards official messages and as regards unofficial messages over the number transmitted in 1917. The collections amounted to Rs. 31,739 as compared with Rs. 29,970 in 1917. No serious breakdown occurred during the year.

There are 621 miles of telegraph, including the block system for the Railway, and 145 miles of telephone under the charge of the Department.

IX.—GOVERNMENT RAILWAYS

87. The length of line open for traffic at the end of 1918 was 119.65 miles of standard gauge, exclusive of the Bois Chéri light railway (of 2′.6″ gauge) which is 24 miles in length. The gauge of the main line is 4 feet 8½ inches.

The gross earnings for the year amounted to Rs. 3,498,643 and working expenses to Rs. 2,805,106 showing an excess of receipts over working expenses of Rs. 693,537 or a percentage of expenses to total receipts of 87.50. The ratio in the previous year was 92.59 per cent. These results do not include debt charges and interest on Treasury advances.

88. The Government traffic in 1918 amounted to 8.68 per cent. of this total against 7.82 per cent in the previous year.

The receipts for passenger traffic show a decrease of Rs. 77,398 as compared with 1917 owing to the suppression of Sunday trains and the curtailment of the passenger train service on week days. There was less tonnage carried in 1918 than in the preceding year but the earnings show an increase of Rs. 14,070 over those of 1917. The following table shows the tonnage of Goods traffic, exclusive of Government traffic, carried in 1917 and 1918 :—

	1917	1918	Decrease Tons
Sugar canes ...Tons	170,362	157,862	12,490
Sugar ...	203,711	188,602	15,009
General merchandize	199,917	197,182	2,735
Total ...Tons	573,990	543,756	30,234

89. The earnings for sugar cane traffic were Rs. 149,799 or 94.88 cents per ton carried, as compared with 90.05 in 1917.

The earnings for sugar traffic were Rs. 713,617 or Rs. 3.78 per ton as compared with Rs. 3.47 in 1917. The earnings for general merchandize were Rs. 574,783, or Rs. 2.91 per ton, as compared with Rs. 2.82 in 1917.

X.—PUBLIC WORKS

90. The only works of importance in course of construction are the Victoria Hospital near Candos and the Leper Hospital at Pamplemousses. These projects had to be suspended owing to the high cost of building materials. The expenditure on public works was thus confined to maintenance and repairs. Necessary and urgent requirements were also met.

Bridges and Roads

91. Seven small bridges have been reconstructed in ferro-concrete. The total length of main roads maintained during the year was 440 miles. Six more miles of road surface were re-metalled by the use of the steam roller. The branch roads were well maintained by the respective District Boards. The average cost of ordinary maintenance of main road for the whole island was Rs. 500 per mile.

Irrigation Works

92. The area irrigated from La Ferme Reservoir and paying rate during 1918 was estimated at 1,760 arpents. A further area of irrigable land of 500 acres is ready for development.

The revenue for the year has amounted to Rs. 49,352. The amount spent to 31st December 1918 was Rs. 1,244,533 on the La Ferme scheme proper. In addition the following sums were spent on surveys and studies for the two schemes (La Nicolière and La Ferme) Rs. 137,067 ; on acquisition of lands for La Nicolière Reservoir Rs. 236,964 ; on storage works Mare-aux-Vacoas Rs. 100,504 ; the grand total being Rs. 1,719,070.

Mare-aux-Vacoas Water Works

93. The actual capacity of the reservoir is now 186 million cubic feet and the submerged area about 477 acres. A constant supply of water was maintained throughout the year. The standard of purity of the water was good.

Port Louis Drainage

94. The pumping installation worked satisfactorily and no large repairs were necessary.

House Service.—14 new properties were connected and to 8 others extensions were carried out. The total length of sewers laid is 27.3 miles and 1,190 properties have been connected.

XI.—FOREST DEPARTMENT

95. The Crown Lands, including the islets around the coast, together with mountain and river reserves, represent about 88,200 arpents, which is a little less than 20 per cent. of the area of the colony. During the year the area of plantations was increased by 655 arpents.

96. Public Departments were supplied during 1918 with: 18,047 broad gauge sleepers, 2,780 cubic feet of timber, 2,578 cords of firewood. The value of these supplies was Rs. 171,784. Since 1914 the Forest Department has supplied the Railways with 32,500 broad gauge sleepers at an average cost of Rs. 8 per sleeper.

XII.—DEPENDENCIES

97. The Dependencies comprise a large number of small islands situated 5° and 19°50 South Latitude and 51° and 72°21 East Longitude, of which the nearest is 230 miles, and the most remote about 1,200 miles, distant from Mauritius.

Rodrigues island lies about 320 miles to the eastward of Mauritius of which it is the largest dependency: area 42 square miles or 26,170 acres. The island is under the administration of a resident Magistrate who takes his instructions from the Governor of Mauritius. Cable communication through a branch of the Eastern and South African Telegraph Company was opened on 16 May 1902.

The population at 1911 Census was 4,829 and with the natural increase it was estimated at the end of 1918 at 6,315. The health conditions of the island are distinctly favourable. The number of births was 285 as against 293 in 1917. The number of deaths was 54 as against 66 in 1917.

The value of the imports in 1918 was Rs. 475,981 or Rs. 96,368 more than in 1917. The exports of island produce were valued at Rs. 335,030 against Rs. 282,211 in 1917. The total trade has thus amounted to Rs. 811,000, or about Rs. 130 per head of the population.

The Customs returns show that 26 cattle were sent to Mauritius in 1918 as against 57 in 1917. In 1918, 686 pigs value Rs. 13,071 were sent to Mauritius as against 492 value Rs. 23,136 in 1917, 3,249 goats and sheep value Rs. 37,638 as against 2,162 value Rs. 18,920 in 1917. 232,890 kilos salted fish were exported during 1918. The exports of tobacco (37,951 kilos) showed an increase of 28,517 kilos, as compared with 9,434 kilos in 1917. Acacia seed exported was valued at Rs. 68,946 against Rs. 73,347 in 1917.

At the Rodrigues Branch of the Government Savings Bank there was on the 30th June 1918 a sum of Rs. 38,794 to the credit of 99 depositors as compared with Rs. 30,068 and 99 depositors on the corresponding date of the previous year.

98. The Lesser Dependencies are: Diego Garcia (the most important of the Oil Islands Group), Six Islands, Peros Banhos, Solomon Islands, Agalega, St. Brandon group, Farquhar Island, Trois Freres. These islands are supervised by two Magistrates who are resident in Mauritius and pay regular visits to the islands. The population of the Lesser Dependencies, according to the 1911 Census, was 1861 of whom 1097 were males and 764 females. The number of births in 1917 was 73 and the number of deaths 52. The chief exports to the colony are :—

		1917		1918	
		Quantity	*Value*	*Quantity*	*Value*
Coconut oil...	litres	959,200	Rs. 129,012 ...	843,408	Rs. 113,149

MAURITIUS

ANNUAL GENERAL REPORT FOR 1919

SITUATION AND AREA

Mauritius lies off the coast of Africa, in the Indian Ocean, some 500 miles East of Madagascar, between latitude 19°50′ and 20°31′ South, and on longitude 57°48′ East of Greenwich. With an area of no more than 720 square miles, the population (about 365,000) is very dense the number of persons per square mile being over 500.

The Dependencies comprise a large number of small islands the nearest of which is 230 miles, the most northerly being about 1,200 miles away, 6° South Latitude. Rodrigues, the largest, with an area of 42 square miles, is 350 miles to the East of Mauritius, while lesser islands of importance comprise Agalega, the Carcados Carajos group, and Diego Garcia, the largest of the Chagos Archipelago.

HISTORY

Mauritius is said to have been first visited by the Portuguese in the first years of the sixteenth century, on one of their voyages to India. Pedro Mascarenhas, the commander of the fleet, called the island Cerné and conferred his own name on its neighbour to the West (now Reunion). This celebrated navigator is still honoured in the designation Mascarenes given to the three islands Reunion, Mauritius and the third (added to the group by its later Dutch discoverers as Diego Ruys island) which is now Rodriguez.

The Portuguese made no act of occupation but remained in undisturbed possession for nearly a century when the island was accidentally sighted by a Dutch squadron under Admiral Warwick who took possession of it and called it Mauritius after Prince Maurice, the then Dutch Stadtholder. Even the Dutch made no attempt at colonisation. They finally evacuated the island in 1710 when the French established themselves, naming it Isle de France. The colony continued under the rule now of the French Crown, now of the French East India Company, till it was, after a severe struggle, captured by the British in 1810 and the possession of the island was confirmed to England by the Treaty of Paris, 1814, when the ancient name of Mauritius was restored.

CLIMATE

Being just within the tropics, Mauritius has a warm climate but seldom too hot for comfort. The temperature even during the warm season is never excessive, and during the winter months from May to September the climate in the elevated plateaux is often bracing and generally delightfully cool.

Mauritius lies in the track of cyclones, the critical months being December to April. Of late years the colony has been remarkably fortunate in the absence of these visitations. The last cyclone occurred on the 26th May 1916 passing about 80 miles eastward. It caused little damage but was unprecedented both as to the epoch and longitude of its occurrence.

The rainfall varies considerably according to locality. In the central portion of the island an average yearly rainfall of 175 inches is recorded whereas the dry area in the west coast plains receives less than 40 inches of rain. The greater part of the rainfall falls during the cyclone season. The dry season occurs in September and October.

GENERAL OBSERVATIONS

The material prosperity of the Colony increased during the past year owing to the high prices obtained for sugar and cane. The growth of trade was remarkable, but the oppressive rise in the cost of food, clothing and other necessaries was a very adverse factor. The year was an unfortunate one owing to a severe epidemic of influenza which was attended by an alarming mortality before it began to decline, entailing much distress and suffering.

Vital Statistics and Public Health

The estimated population on 31st December 1919 was 364,493 which is 12,320 less than the return for the previous year. The population according to the census of 1911 was 370,393.

The births in 1919 numbered 13,261 as against 13,109 in 1918.

The deaths were 24,455 as against 12,794 in 1918 and exceeded the births by 11,194. The birth-rate was 35·2 and death-rate 64·9 per 1,000.

This abnormal mortality must be attributed to the violent outbreak of influenza which prevailed in the island in the months of May, June and July, and it is estimated that the deaths from this epidemic numbered more than 11,000. The mortality was especially high in Port Louis, and was chiefly due to the poverty and decreased power of resistance of the people.

The general death-rate for the whole island after abstraction of the epidemic rate was thus 35·5 per 1,000, which compares unfavourably with previous years.

The most prevalent disease was malaria. It takes a large toll of human life, and still larger toll of health and capacity. Increased attention is being devoted to measures of prevention and no expense is being spared. The measures taken in recent years to cope with the disease have proved of benefit and if more fully organised and extended are capable of still more satisfactory results.

The other principal causes of death are given as follows :—

Phthisis and other forms of tuberculosis, which appear to be on the increase, pneumonia and bronchitis, dysentery.

Public General Hospitals

The aggregate accommodation is 975 beds.

During the year 25,073 patients were treated.

The daily average number of inmates was 68.6.

There were 1905 deaths in hospitals.

The number of patients who attended the public dispensaries during the year was 78,546 as against 57,025 in the previous year.

Lunatic Asylum

The total number of patients under treatment during the year was 447; the daily average number resident was 470·61; 134 patients were admitted; 117 were discharged; there were 56 deaths.

St. Lazare Leper Asylum

There were 67 patients on 31st December 1918, and 14 were admitted during the year. During the year 2 patients absconded, 8 were discharged, and 19 died.

Poor Relief

Exclusive of the number of patients treated free at the public hospitals and dispensaries of the Colony and at St. Lazare Asylum, 1,496 paupers as compared with 1,161 in 1918 received institutional relief during the year. 2,840 paupers (385 males and 2,455 females) received outdoor relief during 1919 against 2,179 in the previous year.

Criminal Statistics

The cases of "serious offences" reported to the Police numbered 2,925, as against 2,620 for 1918. The increase was chiefly for praedial larceny, the numbers being 391 cases in which 495 persons were charged, compared with 274 cases and 73 persons for the previous year. This was only to be expected in view of the paucity of food and the harder conditions of life among the poorer classes which were felt in 1919 more than previously during the war.

GOVERNMENT FINANCE

The revenue of the Colony for the financial year ended 30th June 1919 amounted to Rs. 13,813,069 exceeding that of any previous year.

The total expenditure for the year amounted to Rs. 14,711,349 being Rs. 898,280 in excess of the revenue. The general rise in prices entailed a considerable increase in the cost of Departments and institutions and included in the total expenditure is a sum of Rs. 1,267,102 being the payments on the working account of H.M.C.S. *Secunder* which was passed to expenditure.

The revenue and expenditure for the last five years were as under :—

Year	Revenue	Expenditure
1914–15 ...	Rs. 12,113,810	Rs. 12,136,424
1915–16 ...	12,975,041	11,490,946
1916–17 ..	13,611,473	11,816,140
1917–18 ..	12,607,384	12,015,394
1918–19 ...	13,813,069	14,711,349

ASSETS AND LIABILITIES.

The balance sheet of the Colony on the 30th June 1918 showed a net surplus of assets over liabilities of Rs. 7,971,071, and that of the 30th June 1919 a surplus of assets over liabilities of Rs. 7,072,792. The financial transactions of the year thus resulted in a deficit of Rs. 898,279.

From this surplus, up to 30th June 1919, advances amounting to Rs. 2,545,000 for Railway re-equipment and Rs. 1,787,379 for Irrigation Works have been made pending the raising of a loan as authorized by Ordinance No. 19 of 1915.

PUBLIC DEBT.

At the close of the financial year the public debt of the Colony stood at £1,249,990 as compared with £ 1,255,590 at 30th June 1918. Against this liability there was an accumulated sinking fund of £ 431,633 as compared with £ 386,115 at 30th June 1918.

CURRENCY AND BANKING.

The currency of the Colony consists of

(1) The following Mauritius bronze and silver coins which are legal tender up to Rs. 5 :—
  (a) Bronze : 1 cent, 2 cents, 5 cents.
  (b) Silver : 10 cents, 20 cents.
(2) The silver Rupee of India with its silver sub-divisions.
(3) The Mauritius Government notes of Rs. 50, Rs. 10, Rs. 5 and R. 1.

The average value of currency notes in circulation during the year 1918–19 was Rs. 8,197,200 compared with Rs. 7,301,750 in 1917–18. The average amount of silver held amounted to Rs. 3,097,000 as compared with Rs. 2,842,000 in 1917–18. The investment and depreciation funds on 30th June 1919 amounted to Rs. 6,054,250 and Rs. 403,849 respectively.

Government Savings Banks are established in nine districts with a head office in Port Louis. The total number of depositors at 30th June 1919 was 31,691 with deposits amounting to Rs. 3,726,724. The Savings Banks are largely made use of by the Indians, of whom at the 30th June there were 12,863 depositors with Rs. 1,446,390 to their credit.

Interest is paid at the rate of 3 per cent.

The private banks are the Mauritius Commercial Bank (paid-up capital Rs. 2,000,000), and the Mercantile Bank of India (paid-up capital £562,500). A branch of the National Bank of South Africa was established towards the end of the year.

TRADE, AGRICULTURE AND INDUSTRY.

ANNUAL PROGRESS OF TRADE.

The Customs statistics show an increase in the value of trade unprecedented in the history of the Colony. The growth of the trade during the past five years may be gathered from the following statement :—

Year	Imports	Exports	Total Trade
1915	Rs. 41,682,251	Rs. 56,015,511	Rs. 97,697,762
1916	53,615,754	72,682,170	126,297,924
1917	42,094,708	58,319,728	100,414,436
1918	42,921,250	55,652,480	98,573,730
1919	47,037,024	127,806,321	174,843,345

IMPORTS.

The total value of Imports during 1919 was Rs. 47,037,024, as against Rs. 42,921,250 during the previous year, an increase of Rs. 4,115,774, due not so much to an increase in imports as to the inflated prices for imported goods. It should be noted in this connection that for the years 1915 to 1918 and the first seven months of 1919, the sterling equivalent was Rs. 15 to the £1, and Rs. 12 between the 21st July and the 20th of October and Rs. 10 subsequently.

The value of goods imported for consumption was Rs. 45,745,607. In addition, goods valued at Rs.1,291,417 were re-exported.

The following table which shows the sources of supply for the last five years is of interest as indicating the percentage of imports obtained by the various countries :—

	1915		1916		1917		1918		1919	
	Value 000's Rs.	per cent.	Value 000's Rs.	per cent.	Value 000's Rs.	per cent.	Value 000's Rs.	per cent.	Value 000's Rs.	per cent.
United Kingdom ...	13,851	33·3	15,903	29·7	10,939	26·0	7,016	16·3	11,423	24·3
British India	16,808	40·3	22,476	41·9	17,107	40·6	24,401	56·9	14,433	30·7
Other Brit. Possessions	2,377	5·7	3,310	6·1	4,943	11·8	5,722	13·3	8,956	19·0
Foreign Countries ...	8,646	20·7	11,927	22·2	9,106	21·6	5,782	13·5	12,225	26·0
Total... ...	41,682	100·	53,616	100·	42,095	100·	42,921	100·	47,037	100·

The share of the United Kingdom dropped from 33·3% in 1915 to 24·3% in 1919. The falling off was greatest in 1917 and 1918 which coincides with the intensity of the submarine campaign and the restrictions on exports from the United Kingdom. This set-back was only temporary as imports of United Kingdom manufactures have gone up since the Armistice. There is ample opportunity for United Kingdom firms to increase their business.

The following table shows that coals and machinery are the chief items under which decreases have occurred :—

Imports from the United Kingdom	Increase (+) or Decrease (−) as compared with 1915 000's Rs.
Coals	− 602
Machinery for local industries ...	−1,484
Cotton piece goods	− 601
Other articles	+ 259

Most kinds of goods were imported in 1919 in smaller quantities than in 1915 and yet cost very much more. The following table shows some of the more important items :—

Imports from U. Kingdom	Decrease (−) in quantities compared with 1915	Increase (+) in value compared with 1915
	(metric)	Rs.
Ammonia, Sulphate...	−3,472 Tons	+ 422,000
Oil, Linseed ...	− 938 Hectol.	+ 10,000
Iron Nails (n.g.) ...	− 3 Tons	+ 40,000

The falling off in the imports from India is due in a large measure to the decline in the exports of rice and flour as follows : —

Imports from India	Increase (+) or Decrease (−) in quantities as compared with 1915	Increase (+) or Decrease (−) in value as compared with 1915
	Tons (metric)	Rs.
Rice	−18,099	−1,405,000
Wheat flour ...	− 8,141	−1,345,000
Other articles ...	...	+ 375,000

Owing to the high freights from England, there was an increase in the trade from other British Possessions, from 5.7% in 1915 to 19% in 1919. The largest increase in this trade has been from the Union of South Africa which has superseded the United Kingdom for coals and France for wines, as shown in the subjoined table :—

Imports from Union of S. Africa	Increase (+) or decrease (−) in quantity as compared with 1915	Increase (+) or decrease (−) in value as compared with 1915
Coals	+18,708 tons	Rs. 1,804,000
Wine (claret in casks)	+ 1,807 hectol.	112,000
Other articles (chiefly maize & flour)...	...	2,700,000
Total increase South Africa ..	...	Rs. 4,616,000

Australian wheat flour also shows an increase of Rs. 2,013,000 as compared with 1915.

The fluctuations of trade with Foreign Countries is shown in the following table :—

Foreign Countries	Increase (+) or decrease (−) as compared with 1915 000's Rs.
Chili	+ 1,585
China and Siam ...	+ 1,620
Madagascar	+ 986
France	− 815
Other Foreign Countries ...	+ 203

The large increase in regard to Chili was due to the fact that most of the fertilizers were supplied from that country in 1919. The shortage of Indian rice has tended to increase the volume of that trade from Madagascar and Siam. The same influences have been at work in the trade with France as with the United Kingdom.

The United States and Japan have made no advance since 1915 as may be seen from the following table which shows the percentage of trade obtained by the United Kingdom, the United States and Japan during the last five years :—

	1915 per cent.		1916 per cent.		1917 per cent.		1918 per cent.		1919 per cent.
United Kingdom...	33.3	...	29.7	...	26.0	...	16.3	...	24.3
United States ...	5.2	...	5.	...	5.3	...	3.5	...	5.1
Japan ...	.3	...	9.6	...	.5	...	2.1	...	.3

The following goods which formerly all came from the United Kingdom are being supplied to some extent from the United States, as shown below :

Articles imported	Decrease (−) for the United Kingdom		Increase (+) for the United States	
	Quantity	Value	Quantity	Value
Leather manufactured ..	...	Rs. 42,000	...	Rs. 12,000
Turpentine ...	−252$^{\text{h.lit.}}$	− 8,000	+ 22 h.lit.	6,000
Iron bars (n.g.) ...	...	− 20,000	...	+ 22,000
Machinery for local industries ...	tons −3,226	−1,484,000	+ 82 tons	+ 105,000

The import of motor cars which was of a value of Rs. 452,490 in 1915 was only Rs. 89,500 in 1919. These were supplied almost entirely by the United States.

The imports from Japan were chiefly limited to imitation cheap goods such as earthenware, glassware, haberdashery and cotton goods which formerly came from Europe.

EXPORTS.

The total value of exports during 1919 was Rs. 127,806,321 as against Rs. 55,652,480 in 1918, an increase of Rs. 72,153,181.

The value of local products and manufactures amounted to Rs. 126,514,904 and the value of re-exports to Rs. 1,291,417.

The following table gives the direction of the export trade for the last five years :—

	1915 value 000's Rs	per cent.	1916 value 000's Rs	per cent.	1917 value 000's Rs	per cent.	1918 value 000's Rs	per cent.	1919 value 000's Rs	per cent.
United Kingdom ...	35,636	63.6	24,140	33.2	31,489	54.	21,258	38.2	96,362	75.4
British India ...	15,770	28.2	11,057	15.2	6,926	11.9	25,864	46.5	12,479	9.8
France	113	.2	34,511	47.5	15,874	27.2	1	...	8,960	7.0
Other Countries ...	4,496	8.0	2,974	4.1	4,031	6.9	8,530	15.3	10,605	7.8
Total... ...	56,015	100	72,682	100	58,320	100	55,653	100	127,806	100

Nearly the whole export trade is represented by sugar.

The quantity and value of the principal local products exported during the year were :

		Quantity	Value in Rupees
Sugar	...kilos	302,826,129	125,103,201
Aloe fibre	... „	2,176,521	782,285
Rum	..litres	233,687	52,436
Coprah	...kilos	133,500	32,700
Coconut oil	...hectol.	2,411	97,028
Hides (salted)	...kilos	58,880	61,578
Vanilla	... „	2,995	40,595
Molasses	... „	102,935	6,677
Tea	... „	500	1,010
Shells, tortoise	... „	...	38,835

The approximate value and quantity of Mauritius sugar exported in each of the years 1914 to 1919 is shown in the following table :—

Year	Quantity in kilog.	Value in Rupees
1914	269,372,102	57,874,421
1915	225,439,526	54,105,494
1916	230,559,715	69,309,970
1917	190,820,657	54,539,232
1918	183,221,889	53,882,002
1919	302,826,129	125,103,201

SHIPPING

The number of vessels entered and cleared during the year 1919 was 347 with a tonnage of 648,358, an increase of 75 vessels and 261,093 tons as compared with 1918.

There were 173 arrivals of 321,525 tons and 174 departures of 326,883 tons, of which 77.1 per cent. were British as summarised below :—

		Number	Tons	Number	tons
British steamers	entered	104	247,800		
do.	cleared	101	246,650		
British sailing vessels					
	entered	30	7,758		
	cleared	31	7,109		
Total British				266	509,317
Foreign Steamers	entered	37	64,671

Foreign sailing vessels					
	entered	2	1,296		
	cleared	3	2,669		
Total Foreign				81	139,041
Total number and tons		...	...	347	648,358

AGRICULTURE AND INDUSTRIES

The following table shows the cultivated area of the island :

		arpents	acres
Total area of the island		441,802 =	460,799
Alienated	368,218		
Unalienated or repurchased	73,584		
		441,802	
Total area under cultivation ...	216,770 =		226,091 acres.
Sugar	175,923		
Aloe	20,860		
Tea	313		
Vanilla	261		
Tobacco	52		
Food crops	20,756		
Orchard	834		
Coconut	834		
	219,833		
Pasture...	6,258		——226,091 acres.
Crown Land Forests reserves	90,067		
	316,158		
Uncultivated	144,641		
Total ...	460,799 acres		

It will be seen that the only important crop grown in Mauritius is sugar, upon the harvest of which so much is dependent that it is difficult to find any occupation which is not directly or indirectly influenced by it.

The year 1919 was characterized by great prosperity in the sugar industry, the prices of sugar and cane having passed all previous standards : and in all probability the colony has before it a few years of considerable prosperity. The high water mark of production has however been reached as practically all the areas suitable for cane cultivation are at present under that crop. Increased yield might however be anticipated as a result of the adoption of improved agricultural methods and milling.

The total output of the factories for the 1918–19 crop year was 252,772 metric tons, which was the largest on record. The crop since harvested fell short of that figure but was above the average of pre-war seasons ; and it is stated that the yield of the present crop may be considerably larger than last year's. How far the sugar industry benefited by the increased prices due to the war may be gauged by the fact that while the average value of the sugar shipped from Mauritius was about 40 millions during the pre-war years the average for the five years 1915–1919 reached more than 70 millions. There is thus an enormous amount of capital to be utilised which offers special facilities for the development of subsidiary industries ; but the large profits made by producers of sugar are so attractive that there is no new agricultural industry of importance in view at present.

ALOE FIBRE

The aloe fibre industry which, but a few years ago, was considered an industry of much promise, has been reduced to so low an ebb, that less than 1 per cent. of the exports represents its position in the colony's market. The tendency to plant canes on lands which were formerly occupied by aloes continues, but a demand for fibre may improve the situation and the industry will afford opportunities for profitable investments. The export of aloe fibre in 1919 was 2,177 tons of a value of Rs. 782,285, against 391 tons in 1918, valued at Rs. 140,135. Production was maintained throughout the war, but the lack of shipping has militated against the industry.

Increasing attention is paid to the possibilities of growing sisal and trial plantations are being established. Certain lands seem well adapted to sisal hemp but the planters are not enthusiastic about it.

TOBACCO

For several years past the establishment of plantations of the Réunion type of tobacco has received energetic attention. The result of the experiments of growing the crop on a commercial scale indicates the possibility of opening up a profitable industry for the supply of local requirements, and its further development is only a question of capital and labour.

VANILLA

There is no change to report in regard to vanilla and there is little likelihood that vanilla will regain its former position on the market owing to competition with vanillin. The cultivation is being continued but does not make great progress.

TEA

Greater attention is being given to local preparation of the leaf but there is no new development in the tea industry as a branch of farming.

LIMES

The development of trial plantations is making satisfactory progress and experience appears to show that the cultivation of limes may become an important industry.

FOOD CROPS

The large proprietors have done little to aid the supplies and the work has been left to the small holders. Owing to the efforts to maintain interest in local food products, the area planted in the Colony at the end of the year 1918 was 20,000 acres, which represents an increase of 109 per cent. over the area planted in 1917, but the population is almost entirely dependent for its sustenance on importations from abroad.

Owing to the food shortage special leases on easy terms of vacant blocks of Crown Land were allowed to groups of individuals for the cultivation of foodstuffs, and the total area of Crown Land leased in this way amounted to 500 acres at the end of 1919.

COCONUTS

Very small areas have been put into coconuts although the cultivation of this product offers considerable scope for extension as there are indications that a boom in coconuts is coming, due to the increased demand for margarine and lard.

The planting of coconuts is however the mainstay of the development of the Lesser Dependencies (commonly called the Oil islands) most of which have been definitely conceded and are owned by private companies ; oil and copra being the chief products of these islands. The quantity of oil produced in 1919 amounted to 8,844 hectolitres valued at Rs. 132,812 and the value of copra is given as Rs. 16,427. Copra was formerly shipped to Hamburg but most of it is now sent to England where it is crushed and converted into oil.

SALT MANUFACTURE

The average outturn of salt is 1,800 tons per annum and the supply is mostly drawn from the District of Black River which affords facilities for the easy and cheap manufacture of good salt, being one of the drier districts of the island. By more extensive use of machinery for water lifting and mechanical appliances for transport and storage, the existing salt pans should be able to yield all the salt required for local consumption and for fish curing. The annual consumption is estimated at 3,000 tons the bulk of which is imported from Aden and Liverpool. There is thus ample scope for development in the production of salt locally.

ALCOHOL

The production of alcohol from the waste molasses of the sugar factories is also capable of considerable extension by improvement in methods of production. There is a profitable market locally in the distillation of rum, the annual consumption being about 350,000 gallons.

Of late years increasing attention has been devoted to the utilisation of alcohol for power purposes but so far the experiments that have been conducted have been failures owing to lack of technical assistance.

The enterprise when successful would have many beneficial effects, and one of the most important for the development of the resources of the Colony would be the manufacture of pulp or paper from sugar cane megass. At the present time megass, which is an excellent paper making material, is needed as fuel by the factory owners and its value at the moment is only equivalent to that of the fuel which it replaces in the manufacture of sugar, while there is a world shortage of the raw material it represents.

CO-OPERATIVE CREDIT SOCIETIES

Co-operative credit societies continue to make progress and the total number working at the end of 1919 was 26, with a membership of 2,781. Lectures and demonstrations on agricultural subjects are given in the various centres by the Agricultural Instructor. The societies have shown their usefulness in several ways specially in the growing of provision crops.

LANDS

Most of the available Crown lands have long since been alienated, with the exception of Pas Geometriques which form a belt all round the shore and are inalienable. There is thus little unconceded crown land available for concession or sale.

The price of land in Mauritius at present is high. There are difficulties in regard to the supply of labour and cultivation cannot be undertaken without previous local experience and a large amount of capital.

MINES

No minerals of commercial interest are known to exist in the Colony.

FORESTS

The area of Crown Land forests forms about 20 per cent. of the extent of the Colony. The high forests contain a moderate quantity of fine timber, suitable for building and other purposes but no wood is available for export. Of the indigenous species the most valuable are Natte, Makak, Colophane, Tambalacoque, Benjoin, and Puant.

During the year 1919, the area of forest plantations was increased by 634 arpents. This was planted mostly in Eucalyptus, Pines, Cryptomeria, Casuarinas etc., and the growth shown by these species is satisfactory.

The revenue derived from all sales of forest produce on account of timber, fuel and minor produce during the year was Rs. 221,477, as compared with Rs. 215,384.51 during the year 1918. Against this the expenditure was Rs. 258,147 as compared with Rs. 264,076 during the previous year.

FISHING

Fish is plentiful and of excellent quality but the whole of the catch is consumed by the local market, the price being inflated by intermediate profits and transportation charges. Local fisheries however have remained in their primitive condition and though there are rules for the protection of the fish the resources of the sea are little attended to. With capital accustomed to the business and ready to undertake developments there is certainly much more room for fishing on a large scale.

In Rodrigues and the Lesser Dependencies a profitable industry in fish drying and salting exists but it is confined within hereditary methods.

LEGISLATION

26 Ordinances were passed during the year, of which the following are those which are likely to be of interest outside the Colony:

The Former Enemy Aliens Ordinance, 1919 (No. 15 of 1919) which provides that a former enemy alien shall be required to have a permit signed by the Colonial Secretary before he can enter the Colony or any of its Dependencies.

The Deportation Ordinance, 1919 (No. 26 of 1919) which provides for the deportation of former enemy aliens whenever the Governor deems such a course conducive to the public good.

EDUCATION

Owing to the severe Influenza epidemic which prevailed during four months of the year, there was a considerable decrease in the number of pupils attending the various schools.

The total number of Primary Schools open during 1919 amounted to 148 (of which 57 were Government and 91 Aided Schools) with an enrolment of 22,120 pupils as compared with 23,794 in 1918. Of the Aided Schools, 67 are Roman Catholic, 10 belong to the Church of England and 2 to the Presbyterian Church; there are also 1 Hindoo and 2 Mahomedan Schools.

The average number of pupils in attendance was 14,326 as against 15,073 in 1918, owing to the epidemic of influenza during the year. The Indian community furnished 10,530 pupils, a very small number compared with the proportion of Indians to the rest of the population.

212 candidates sat for the Boys' Scholarship Examination; 104 failed to satisfy the preliminary test and of the remainder 15 reached pass standard. Scholarships and exhibitions were awarded to twelve who joined the Royal College.

There were 208 students who entered for Teacher's certificates during the year 10 of whom passed. Two First Class certificates were issued.

Technical instruction in woodwork was given in 5 primary schools. The number of pupils receiving instruction in the senior or full-time section of the Port Louis Technical School was 41 and the daily attendance 20. The corresponding numbers for the primary classes were 272 and 68 respectively. The Inspector reports an improvement in the work of the elder pupils.

Agricultural instruction is given by a scheme of school gardens conducted in connection with the Government Schools. The number of gardens attached to Government Schools was 18 and to Aided Schools 12.

There were 29 entries for the 8 Mechanical Engineering apprenticeships. The two handicraft apprenticeships were secured and 35 candidates competed for the four needlework apprenticeships.

The teaching of elementary hygiene and sanitation is compulsory in all schools under Government inspection and fair progress is being made.

SECONDARY EDUCATION

In January 1919, 108 new boys joined the Royal College, being 64 more than in January 1918; and the highest number of pupils on the College roll in 1919 reached the total of 321, being 61 more than the highest total in the previous year.

The result of the Senior Cambridge Local Examination in 1919 showed that 113 candidates presented themselves, 46 of whom passed.

Thirteen secondary schools for boys and girls receive grants from Government. There are two scholarships offered annually in the highest class of the Royal College of the value of £1000 each tenable for four or five years, with £75 passage allowance to and from England. The holders may join any British University, or study at any recognised institution in the United Kingdom.

MEANS OF COMMUNICATION

RAILWAYS

The total length of the Mauritius Government Railway is 119 miles, exclusive of the Bois Chéri light railway of about 10 miles in length. The gauge of the main line in 4 feet 8½ inches.

The revenue derived during the year was Rs. 2,980,840 against Rs. 3,007,924 in 1918, or a decrease of Rs. 27,043 as compared with the preceding year. This figure does not include Government traffic which amounts to Rs. 327,335.

The receipts for passenger traffic showed an increase of Rs. 76,568 as compared with last year. As regards goods traffic the tonnage conveyed was 524,978 tons as compared with 516,183 tons in the previous year.

The working expenses for the year amounted to Rs. 3,523,520 as against Rs. 2,805,106 in the preceding year.

The capital cost was Rs. 32,857,745 at 31 December 1919.

The results of the year's working is as follows :

Receipts	Rs. 3,432,935
Working expenses ...	3,523,520

Bois Cheri

There is a light railway of 2 feet 6 inches gauge running from the Savanne branch. The total goods traffic carried in 1919 amounted to 21,498 tons of which 18,644 tons were sugar cane, as against a total traffic of 16,947 tons and 13,985 tons of sugar cane in 1918. The actual working expenses for 1919 were Rs. 50,800, the earnings Rs. 18,708 and the work done for Government Departments was valued at Rs. 3,259.

Post and Telegraphs

At the end of the year there were 60 post offices open in the island, of which 57 were also telegraph offices.

The total revenue of the Department was Rs. 263,737 and the total expenditure Rs. 228,333 showing an excess of revenue over expenditure of Rs. 35,404. The sale of stamped postal matter amounted to Rs. 172,633.

There were 665 miles of Government telegraph lines and 142 miles of telephone lines in operation during the year.

Telegrams can be sent to all parts of the world from any railway station through the Eastern Telegraph Company in Port Louis. There is also an Admiralty Wireless Telegraph Station erected during the war as a war station and utilised since the Armistice for commercial traffic.

Telephonic communication constituted and owned by the Oriental Telephone Company has been gradually increasing and at the close of the year there were 6 public exchanges open, with a total of 850 subscribers.

Steamships

Mails are regularly received and despatched by steamers of the British India Steam Navigation Company, Castle Line, Clan Line and Messageries Maritimes Company. Since the war, these services have been irregular and uncertain.

Communication with Rodrignes is maintained by H.M.C.S. *Secunder* and with the other Dependencies by sailing vessels at regular intervals.

Roads and Bridges

The road system of the Colony consists of main roads under the control of the Director of Public Works and branch roads under local District Boards. The main roads with a total mileage of 441.3 miles were maintained at a cost of Rs. 215,068, or at an average rate of Rs. 488 per mile. The branch roads comprising some 150 miles were maintained at a cost of Rs. 42,259 or an average rate of Rs. 281 per mile.

Improvements continue to be made in the main roads by the system of rolling the surfaces of the roads. Over 5 miles of surface were so treated during the year.

A sum of Rs. 29,665 was also spent by the Public Works Department in reconstructing timber bridges in reinforced concrete. One large bridge, 3 spans of 35 feet, and 3 smaller bridges, spans 12 feet, 11 feet and 10 ft. 6 in., were so dealt with. The introduction of reinforced concrete for bridges has proved succcessful, and the policy will eventually result in a considerable saving, because if teak had continued to be employed, with the abnormally high prices prevailing, the annual outlay would have been no less than Rs. 60,000, exclusive of labour, transport to site and other charges which represent Rs. 50,000 approximately.

IRRIGATION

The revenue derived from water delivered for irrigation from La Ferme reservoir amounted to Rs. 52,910, compared with Rs. 49,352 in the previous year. It is estimated that 1,000 additional arpents of irrigable land will be ready for development when the sanctioned programme has been completed.

Surveys and investigations for La Nicolière project, which had almost ceased during the War, were revived and measures are being taken to raise, by means of a local loan, the funds required for the execution of the scheme which will benefit the Northern Districts of the island.

MAURITIUS

ANNUAL GENERAL REPORT FOR 1920

SITUATION AND AREA

Mauritius lies off the coast of Africa, in the South Indian Ocean, some 500 miles East of Madagascar, between latitude 19°50′ and 20°31′ South, and on longitude 57°48′ East of Greenwich. Its extreme length is 39 miles, its breadth 28 miles ; and its area covers 720 square miles = 460,800 acres. The density of population is very high being estimated at 507 persons per square mile for the whole island.

The largest town is Port Louis, the chief port and administrative capital, which has a population of 50,300. The towns of the interior are all of recent growth. Curepipe, the residential capital which lies at an altitude of 1,800 feet, has 19,500 inhabitants.

The Dependencies comprise a large number of small islands the nearest of which is 230 miles, the most northerly being about 1,200 miles away, 6° South Latitude. Rodrigues, the largest, with an area of 42 square miles, and a population of 6,573, is 350 miles to the East of Mauritius, while lesser islands of importance comprise Agalega, the Carcados Carajos group, and Diego Garcia, the largest of the Chagos Archipelago.

HISTORY

Mauritius is said to have been first discovered by the Portuguese in the first years of the sixteenth century, on one of their voyages to India. Pedro Mascarenhas, the commander of the fleet, called the Island Cerné and conferred his own name on its neighbour to the West (now Réunion). This celebrated navigator is still honoured in the designation Mascarenes given to the three islands Réunion, Mauritius and the third (added to the group by its later Dutch discoverers as Diego Ruys islands) which is now Rodriguez.

There is no record of any settlement during the Portuguese occupation which lasted nearly a century, and the Island only served as a point of call for repair and supply. No trace of human habitation was found when on the 18th of September 1598 the Dutch Admiral Wybrand van Warwyck annexed the Island to Holland calling it Mauritius after Prince Maurice of Nassau the then Stadtholder.

The Dutch made various attempts at colonisation but were discouraged by the difficulties of the enterprise and finally abandoned the Island in 1710. In 1715 the French established themselves and annexed the Island under the name of Isle de France. In 1719 it was granted by charter to the French East India Company and the Colony continued under the rule of the Company till 1764 when it was again transferred to the French Crown. The Island was lost to the French after an occupation of nearly a hundred years and came under British rule, on the 10th December 1810. By the Treaty of Paris, 1814, the Isle of France was ceded to Great Britain in full sovereignty and the ancient name of Mauritius was restored.

CLIMATE

The climate is tropical but owing to the high elevation of the central plateau, a large part of the island enjoys a temperate and bracing climate. The average temperature of this highland region is about 80° Fah. (26.6° C) and the maximum about 50 Fah. (10° C). The low lying coastal region has naturally a higher average temperature ranging from 90° F. (32° C) to 70° F. (21° C).

Mauritius lies in the track of cyclones, the critical months being December to April. Of late years the Colony has been spared severe visitations.

The rainfall is irregular and varies according to locality. In the central portion of the Island an average yearly rainfall of 175 inches is recorded whereas regions where there is the lowest rainfall receive less than 40 inches. The rainfall of the coastal districts varies between 25 and 30 inches.

GENERAL OBSERVATIONS

The prosperity which Mauritius experienced during the war has continued during 1920 and the prices realized for the main product of the Colony exceeded expectations. In order to appreciate what these prices have meant to the producers it must be borne in mind that while the average value of the sugar shipped for the five years before the war was about 40 millions of rupees, the value of the last sugar crop has exceeded 225 millions. During and since the war practically the whole of the exportable sugar has been purchased by the Impérial Government and the payments made to Mauritius by the Imperial Government since the beginning of the purchase have been no less a sum than £48,147,000 or in other words, roughly the equivalent of the value of the total exports for twenty years on pre-war standards.

War conditions have also brought about a phenomenal rise in land value. Prices as high as Rs 3,000 per acre have been paid for cane land and prices from Rs 2,000 upwards are common. A good deal of land has changed hands at these prices. Although it is too early yet to form a definite idea of what may be expected with regard to the produce of the present crop, there are signs that a limit has been set to buying land at war values.

Meanwhile, a special Fund has been created, amounting to nearly £ 950,000, from the proceeds of a special export duty on sugar levied on the crop of 1920–21 for the improvement of the sanitation of the colony and for development generally.

The enhanced cost of supplies and the upward tendency of prices of all commodities have continued and the increased cost of living has led to a general increase of wages. In the Public Service additions were made to salaries on varying percentages but generally on the basis of a 30 per cent. permanent increase.

VITAL STATISTICS AND PUBLIC HEALTH

At the Census of May 21, 1921, the Civilian population was returned as 376,108 (194,070 males and 182,838 females) giving an increase of 7,317 on the previous Census Enumeration in 1911.

The Military stationed in the Colony were returned as 206 and the foreign shipping in the Harbour of Port Louis as 859 making a total population of 377,173.

There were 2,126 marriages, as compared with 1,563 in 1919, an increase of 563.

The births in 1920 numbered 12791 (6,440 males and 6,351 females) being 470 less than in the previous year. The number corresponds to a rate of 35.1 per 1,000 of the estimated population, which is slightly below the rate of the previous year.

The deaths were 11,773 (6,188 males and 5,585 females) and correspond to a rate of 32.3 per 1,000 which is somewhat lower than the average rate of the last six years.

The death-rate among children under 12 months was 156.3 per 1,000 births, as against 188.9 in the previous year. The rate among children below the age of 5 years in proportion to the total number of deaths was 316.6 to 1,000, as compared with 205.7 to 1000 in the previous year. Crêches have been established for the children of the poor in Port Louis under Government and private control.

The most prevalent disease in the Colony is malaria. Anti-malaria and anti-mosquito measures were continued during the year.

A preliminary survey as to the extent of hookworm infection in the Island was made during the year under the auspices of the International Health Board (Rockfeller Foundation), and the disease was found very prevalent throughout the Island.

PUBLIC GENERAL HOSPITALS

The aggregate accommodation is 1,046 beds.

The total number of cases treated in Government hospitals was 22,872.

The daily average number of inmates was 62.5. There were 1,074 deaths.

The number of patients who attended the dispensaries during the year was 65,302 as against 78,546 in the previous year.

ASYLUMS

The total number of patients under treatment in the Lunatic Asylum on 31st December 1920 was 456; the daily average number resident was 442.20; 131 patients were admitted; 90 were discharged and 32 died. All types of insanity were represented.

At the Leper Asylum there were 43 patients on 31st December 1920 and 15 were admitted during the year. During the year, 12 were discharged, and 6 died.

POOR RELIEF

1,122 paupers, as compared with 1,496 in 1919, received institutional relief during the year. 2,505 paupers (303 males and 2,202 females) received outdoor relief, against 2,840 in 1919.

During the epidemic of Influenza it was necessary largely to increase the number of pensioners and to give special assistance or increase the amount of the pensions in many cases not only in Port Louis but elsewhere. With the rise in prices of necessaries which has seriously affected old age pensioners and widows dependant on their pensions for subsistence, it was found almost impossible to reduce the pensions again to their former level and the new pensions are likely to become permanent.

CRIMINAL STATISTICS

The total number of offences reported to the Police was 19,930 in connection with which 12,098 persons were apprehended by the Police or summoned before the magistrates. These figures compared with those of 1919 show :—

A slight increase in serious crime against the person.

A considerable decrease in offences against property, especially in praedial larceny.

A considerable increase in minor offences especially for drunkenness ; 1,098 persons were charged for this offence in 1920 against 686 in 1919—an increase of 56%.

PRISONS

The number of prisoners sentenced to imprisonment was 2,971 of whom 2,830 were males and 141 females. In the previous year the number was 3,647 (3,459 males and 188 females).

The number of prisoners under detention on 31st December 1920 was 534 as against 741 on the same date of the previous year.

The number of offences against Prison discipline was 1,071, as compared with 980 in 1919. The general health of the prisoners was satisfactory.

The number of juvenile offenders was 132 as against 169 in the previous twelve months.

GOVERNMENT FINANCE

The Revenue of the Colony for the financial year ended 30th June 1920 amounted to Rs. 18,605,595 exceeding the revenue of the preceding financial year, which was the highest on record, by Rs. 4,792,526.

The Expenditure for the year amounted to Rs. 19,422,903 being Rs. 817,308, in excess of the revenue. The expenditure included Rs. 2,545,000 advanced in previous years for Railway re-equipment.

The revenue and expenditure for the last five years were as given below :—

Year	Revenue	Expenditure
1915–16 ...	Rs. 12,975,041	Rs. 11,490,946
1916–17 ...	13,611,473	11,816,141
1917–18 ...	12,607,384	12,015,394
1918–19 ...	13,813,069	14,711,349
1919–20 ...	18,605,595	19,422,903

Assets and Liabilities

The balance sheet of the Colony on the 30th June 1920 showed a net surplus of assets over liabilities of Rs. 6,255,484.

This surplus after deducting Rs. 1,582,946 spent on irrigation works at La Ferme which will be charged to next year's expenditure and Rs. 106,150 spent on La Nicolière Irrigation Works which will be covered by a loan was reduced to Rs. 4,566,388.

Public Debt

At the close of the financial year the public debt of the Colony stood at £ 1,243,690 as compared with £ 1,249,990 at 30th June 1919. Against this liability there was an accumulated sinking fund of £ 414,087 as compared with £ 431,633 at 30th June 1919.

Currency and Banking

The currency of the Colony consists of

(1) The following Mauritius bronze and silver coins which are legal tender up to Rs. 5 :—
  (a) Bronze : 1 cent, 2 cents, 5 cents.
  (b) Silver : 10 cents, 20 cents.
(2) The silver Rupee of India with its silver sub-divisions.
(3) The Mauritius Government notes of Rs. 50, Rs. 10, Rs. 5 and R. 1.
(4) Indian currency notes of Rs. 50, Rs. 10 and Rs 5.

The average value of currency notes in circulation during the year was Rs. 10,215,903 compared with Rs. 8,197,200 in 1918-19. The average amount of silver held amounted to Rs. 2,436,667 as compared with Rs. 3,097,000, in 1918-19. The investment and depreciation funds on 30th June 1920 amounted to Rs 4,854,251 and Rs. 598,226 respectively.

Government Savings Banks are established in nine districts with a head office in Port Louis. The total number of depositors at 30th June 1920 was 33,625 with deposits amounting to Rs. 4,171,644. The Savings Banks are largely make use of by the Indians, of whom at the 30th June there were 13,925 depositors with Rs. 1,753,469 to their credit.

Interest is paid at the rate of 3 per cent.

The private banks are the Mauritius Commercial Bank (paid-up capital Rs. 2,000,000), the Mercantile Bank of India (paid-up capital £ 562,500) and a branch of the National Bank of South Africa.

TRADE, AGRICULTURE AND INDUSTRY

Annual Progress of Trade

The total volume of trade for 1920 has been the highest on record, being estimated at Rs. 213,868,458, representing an increase Rs. 39,025,113 over the preceding year when the highest figures were recorded.

The comparative values of imports and exports for the last five years are as follows :—

Year	Imports		Exports	Total
1916	Rs. 53,615,754	- - -	Rs. 72,682,170	Rs. 126,297,924
1917	42,094,708	- - -	58,319,728	100,414,436
1918	42,921,250	- - -	58,652,480	98,573,730
1919	47,039,024	- - -	127,806,321	174,843,345
1920	86,371,153	- - -	127,497,305	213,868,458

IMPORTS.

There has been a considerable increase in the value of goods imported in 1920 as compared with 1919. In comparing the figures of the present with past years due consideration must be given to the changes in the relative value of the rupee which have actually taken place during the period under review. Whilst the published figures have been given previous to July, 1919, in the normal sterling equivalent of Rs. 15 to the £1, those for the three months July to October 1918 have been converted at Rs. 12 to the £1, and after that date and for the whole year 1920, at the rate of Rs. 10 to the £1.

The imports during 1920, despite the additional cost due to increased prices and freights, are valued at Rs. 86,371,153, an increase of over 39 million rupees over 1919.

Increases in the actual quantity of goods received occur under the following items: Rice shows an increase of 20,000 tons over 1919: the diminished import of the previous year accounts for much of this increase; metal manufactures, chiefly galvanized iron sheets, 1492 tons in 1920 as against 352 tons in 1919, manures and fertilizers, wines and spirits, motor cars, of which the numbers imported rose from 34 in 1919 to 292 in 1920.

Rice.—Rice is by far the largest importation representing about 25% of the total import trade. The following are the importations for the last three years:—

	Tons	Value
1918	59,723	Rs. 15,307,708
1919	43,826	10,499,803
1920	64,432	24,204,358

In 1920 45,000 tons came from Burmah, 12,000 tons from Saigon and 6,000 tons from Madagascar.

Manures and Fertilizers.—The second largest item in order of value is manures and chemicals for the preparation of manures. The total value under this heading was Rs. 7,345,198 in 1920 as compared with Rs. 4,537,469 in 1919.

Machinery—.Machinery occupies the third place in the value of commercial imports, showing increases of 4 million rupees over the figures for 1918 and 1919. Of these imports machinery imported for local industries and mechanical transport shows increases of Rs 3,714,000 and Rs. 3,343,000 over the figures of the two preceding years.

Sewing machines and typewriters.—Importations in these lines deserve mention and the following will show the quantities imported during the past three years:

	Sewing Machines	Typewriters
1918	488	12
1919	343	26
1920	1503	72

Wheat-flour.—There was a considerable increase in the importation of this article of diet. The quantity imported in 1920 increased by 3,845 tons and the value by Rs. 1,694,772 over the previous year. On a total of about 10,640 tons, 5,200 came from Australia and 4,300 tons from India.

The imports during the last three years were :—

		Tons			Value
1918	- - -	2,385	- - -	Rs.	921,837
1919	- - -	6,800	- - -		2,582,160
1920	- - -	10,645	- - -		4,276,932

Cotton manufactures.—The total value of cotton manufactures imported last year rose to Rs. 3,780,000, an increase of Rs. 1,354,000 over 1918 and Rs. 1,475,000 over 1919.

The following table shows the quantity in metres of cotton piece goods imported during 1918, 1919 and 1920 :

		Grey and White		Printed
1918	- - -	3,144,698	- - -	2,194,936
1919	- - -	1,951,282	- - -	1,658,131
1920	- - -	2,516,269	- - -	3,781,294

Coals.—Coals, coke and patent fuel imported in 1920 amounted to Rs. 3,677,000 in value against Rs. 3,017,000 in 1919 and Rs. 1,914,000 in 1918, and the quantity of coal imported shows increases of 15,000 and 31,000 tons over the two preceding years. South Africa supplied almost all the coals.

Bags, Gunny.—Imports of bags, gunny (for the sugar export) represent an increase in value as compared with the previous year of Rs. 407,390. The number of gunny bags imported in each of the last three last three years is as follows :—

1918	- - -	2,284,800
1919	- - -	3,376,400
1920	- - -	3,902,800

Tobacco.—The total value of tobacco imported in 1920 was Rs. 2,341,123 showing an increase of Rs. 1,099,622 or 88 per cent over the previous year.

While the consumption of manufactured tobacco appears to be fairly stable, the quantity of cigarettes imported hss increased enormously, being nearly five times that of the preceding year. The following are the figures :

1920	- - -	156,946 kilos.
1919	- - -	31,738
	- - -	
an increase of	- - -	125,208 kilos.

Most of the cigarettes imported come from the United Kingdom. A similar increase showing the abundance of money in the island occurs in the quantity of champagne imported, the annual consumption of which rose from 6,770 bottles in 1918 to 22,251 bottles in 1920.

Motor Cars.—The number of motor cars imported rose from 34 in 1919 to 292 in 1920 valued at over one million rupees.

Specie. Large quantities were imported in 1920. The total quantity of specie is shown at Rs. 9,811,787. No coins were imported in any two of the previous years.

Imports for Home consumption.—The value of imports for home consumption was Rs. 93,949,715. In addition, goods valued at Rs. 2,236,615. were re-exported.

Sources of Imports.—The following countries are the principal sources of supply ; percentages of values are given for each :

	1916 value Rs.1000	per cent.	1917 value Rs.1000	per cent.	1918 value Rs.1000	per cent.	1919 value Rs.1000	per cent.	1920 value Rs. 1000	Per cent.
United Kingdom ...	15,903	29.7	10,939	26.	27,016	16.3	11,423	24.3	23,771	27.5
India	22,476	41.9	17,107	40.6	4,401	56,9	14,433	30.7	28,297	32 8
Other parts of the British Empire.	3,310	6,1	4,943	11.8	5,722	13.3	8,956	19	11,209	12.6
Foreign Countries ...	11,927	22.2	9,106	21.6	5,782	13.5	12,225	26	23,094	26.8
Total	53,616	100	42,095	100	42,921	100	47,037	100	86,371	100

It will be seen from the above statement that the United Kingdom's share of Mauritius import trade is very satisfactory and has not been affected by the war. The largest imports from the United Kingdom are in manufactured articles of every description and there is evidence from the following table that importations from the United Kingdom, which had greatly diminished during the war, show encouraging signs of restoration.

Total value in Rupees of imports from United Kingdom :

1916	- - -	Rs. 16,208,222
1917	- - -	11,043,426
1918	- - -	7,016,235
1919	- - -	11,422,848
1920	- - -	23,827,889

The increase is most marked when it is remembered that the figure of 23 million for 1920 is arrived at by converting at the rate of Rs. 10 to the £ 1. Had the rate been calculated at Rs. 15, as in 1916, the total value of imports from the United Kingdom would have been more than double the 1916 value.

As compared with 1919, most of the principal imports show increases both in quantity and value :—

Principal Imports from United States	1919		1920	
	Quantities	Value in Rs.	Quantity	Value in Rs.
		Rs.		Rs.
Cotton, coloured metres ...	1,105,359	667,853	2,643,828	1,571,369
Hardware ...	---	352,047	---	830,362
Iron Sheets (galvd) Kil ...	344,902	160,873	1,283,790	778,218
Machinery for local industry ..	532,631	689,861	2,193,335	2,389,008
Machinery for Tramways ...	---	8,026	---	1,614,655
Manures, Ammonia Sulphate for.	5,169,624	2,496,332	8,013,855	3,435,313
Tobacco, Cigarettes and Cigars...	5,916	71,598	56,409	939,861
Wollen, Mixed metres ...	14,587	66,361	119,249	289,825

As compared with 1916, iron goods (including machinery) and tobacco cigars and cigarettes show considerable increases both in quantity and value, as follows :

Imports from United Kingdom	Year	Quantity in Kil.	Value in Rs.
Iron sheets (galvanized) - - -	1916	513,131	238,871
	1920	1,283,790	778,218
Machinery for local industry	1916	1,234,106	1,141,886
	1920	2,193,335	2,389,008
Tobacco cigars and cigarettes	1916	2,730	33,005
	1920	56,409	939,861

Some items however show increases in value but decreases in quantity compared with 1916 due to inflated prices. Thus :—

	Year	Quantity	Value in Rs.
Cotton coloured - - -	1916	5,308,835 met.	1,366,960
	1920	2,643,828	1,571,369
Manures ammonia sulphate for	1916	10,140 tons	3,174,805
	1920	8,014 ,,	3,435,313

India. The largest share of the import trade is held by India and a considerable portion of the amount comes under the section of " Food and Drink, " especially grains, oils, seeds and spices. India has also supplied us last year with Rs. 9,758,738 bullion and specie.

The following statement shows the extent of trade with India in each of the years from 1916 to 1920 :

Total value in rupees of imports from India exclusive of specie.

1916 - - -	Rs 22,476,049
1917 - - -	17,107,403
1918 - - -	24,401,249
1919 - - -	14,432,827
1920 - - -	28,246,629

It is of interest to note that whereas large decreases occur in the most important classes of imports from India as compared with 1916, the value of these imports have risen in the reverse order thus —

Principal Imports from India	Year	Quantity	Value in Rs.
Bags, gunny - - -	1916	No. 5,233,000	2,436,945
	1920	3,902,800	3,265,687
Corn, Dholl - - -	1916	Kil. 4,989,988	842,182
	1920	3,072,573	1,006,897
Corn, Rice - - -	1916	68,777,909	12,304,957
	1920	15,599,021	15,149,683
Oil, Mustard - - -	1916	1,022,005	615,657
	1209	713,810	766,130

This table clearly indicates the general rise in value of some of the most indispensable commodities, for those who live largely on goods imported from India.

Other parts of the British Empire.: South Africa shows a considerable increase, the value of importations being Rs. 6,359,243 as compared with Rs. 5,972,640 in 1919; Australia coming next with Rs. 2,927,193 as compared with Rs. 2,202,661 in 1919. South Africa still heads the list of countries from which coal and wines are imported into Mauritius. French wines however show considerable increases over the war figures, but the consumption is not such as to affect the South African products.

The chief import from Australia was flour. Singapore appears next on the list with a total of Rs. 1,063,973 as compared with Rs. 423,621 for the previous year.

Ceylon occupies the next place, with a total of Rs. 203,897 out of which Rs. 179,795 represents the value of tea exported to Mauritius.

Foreign Countries. Saigon heads the list chiefly due to increased shipments of rice the value of which is given as Rs. 6,812,504 out of a total of Rs. 6,814,059. France shows a noticeable increase, Rs. 4,486,291 as compared with Rs. 1,616,090 in the previous year; Madagascar occupies the next place with Rs. 4,349,787, as compared with Rs. 2,898,617 in 1919; then the United States of America the total value of goods supplied amounting to Rs. 2,508,904 as against Rs. 2,419,451 in 1919.

Shipments of bullocks from Madagascar show striking increases thus:—

Cows and Oxen	For food	For other purposes	Total
1918	1119	...	1.119
1919	3125	...	3.125
1920	5925	3822	9.747

The United States are chiefly represented by motor-cars; they are also, with Sumatra, the chief suppliers of petroleum and petrol spirits.

The trade with other foreign countries is thus represented. Reunion Island stands first for manufactured tobacco; Sweden for matches; Holland for margarine and Portugal for provisions preserved. Japan supplies about 30% of the imports of matches and has continued to supply imitation goods and toys. Imports from China are chiefly rice and lard.

The imports from Belgium were valued at Rs. 327,214, whilst German goods only represent in value Rs. 45,703.

EXPORTS

The following table gives the direction of the export trade, with percentage of value taken by each country :—

	1916 value Rs. 1000	per cent.	1917 value Rs. 1000	per. cent.	1918 value Rs. 1000	per cent.	1919 value Rs. 1000	per cent.	1920 value Rs. 1000	per cent.
United Kingdom ...	24,140	33.2	31,487	54.	21,258	38.2	96,362	75.4	96,656	77
India	11,657	15.2	6,726	11.9	25,864	46.5	12,479	9.8	9,646	7.6
France	34,511	47.5	15,874	27.2	1	...	8,960	7.0	6,106	4.7
Other Countries ...	2,974	4.1	4,031	6.9	8,530	15.3	10,605	7.8	13,109	100
Total... ...	72,682	100	55,320	100	58,653	100	127,806	100	127,497	100

The value of local products and manufactures exported during 1920 amounted to Rs. 125,270,690 and the value of re-exports to Rs. 2,236,615.

The Mauritius products and manufactures exported in order of value are as follows :—

		Quantity	Value in Rupees
Sugar	tons	182,465	124,633,854
Alœ fibre	,,	874	248,440
Rum	litres	58,416	26,354
Hides and Skins		—	15,120
Vanilla	kilos	142	1,400
Machinery	,,	—	92,630
Coconut oil	litres	138,113	108,783
Shells tortoise		—	35,922
Postal parcels		—	31,830

Nearly the whole export trade is represented by sugar.

The approximate value and quantity of Mauritius Sugar exported in each of the years 1912 to 1920 is shown in the following table :—

Year	Quantity in kilog.	Value in Rupees
1912	206,066,889	35,237,438
1913	187,771,850	30,700,697
1914	269,372,102	57,874,421
1915	225,439,526	54,105,494
1916	230,559,715	69,309,970
1917	190,820,657	54,539,232
1918	183,221,889	53,882,002
1919	302,826,129	125,103,201
1920	182,464,726	124,633,854

The total value of the sugar crop 1920–21 will be about Rs. 230,000,000 and the quantity shipped up to 31st December represents a little less than half of this amount.

SHIPPING

FOREIGN TRADE

The number of vessels entered and cleared during the year 1920 was 371 with a net tonnage of 716,758, an increase of 56 vessels and 78,133 tons as compared with 1919.

There were 194 arrivals of 375,624 tons and 177 departures of **341,134** tons, of which 80.3 per cent were British as summarised below :—

	Number	Tons
British steamers entered	111	263,469
do. cleared	104	231,441
British sailing vessels entered	44	14,305
do. cleared	31	13,468
Total British	118	530,611
Foreign steamers entered	31	17,851
do cleared	34	88,117
Foreign sailing vessels entered	...	...
do cleared	...	...
Total number and Tons	371	716,758

COASTING TRADE

The number of vessels entered and cleared during the year 1921 was 35 with a tonnage of 11,961, an increase of 2 vessels and 4227 tons as compared with 1919.

There were 18 arrivals of 7147 tons and 17 departures of 6,911, all of which were British.

AGRICULTURE AND INDUSTRIES

The only important crop grown in Mauritius is sugar. There are 170,000 acres, about 35 per cent. of the total area of the Colony, at present under cane cultivation.

The total acreage of estates with factories (of which there are 54 at work) is estimated at 55,000 acres. Of the remainder 38,000 acres are cultivated as estates of over 100 acres without factory and 76,000 by personal proprietors, mostly Indian.

During the year additional areas have been brought under cultivation estimated to amount to at least 2,000 acres. This increase has occurred chiefly in the district of Black River where new areas have been opened under the La Ferme Irrigation Scheme.

ALOE FIBRE

Aloe fibre is produced mainly from the leaves of Fourcroya Gigantea (Mauritius hemp), a plant which grows wild all over the Colony. The area under aloe is estimated as about 20,000 acres. 2,000 tons of fibre are produced annually but the market has been very limited since the war.

A certain area has been put under Sisal for which considerable areas of land is well adapted.

COCONUTS

Coconut plantations are receiving attention in the coastal belt and there are about 800 acres under cultivation in Mauritius. There are no oil mills in the Colony itself but the cultivation of the nuts and extraction of oil etc., constitutes the principal industry of the small islands forming the dependencies of Mauritius.

The exports from these islands in 1920 amounted to:—

Coconut oil	964,708 litres	valued at Rs.	196,622
Copra ...	425 tons	„	73,811
Poonac ...	630 „	„	15,865

As the demand for oils and fats is practically unlimited this industry offers considerable scope for developement.

TOBACCO

Tobacco of the Reunion type grows well in the Colony and a government factory has been recently opened in Port Louis. The produce meets with a ready sale and there appears to be a possibility of opening up a profitable industry for the supply of local requirements.

OTHER CROPS

Exports of vanilla are negligible. In 1920 a little over 3,000 kilos were exported of a value of about Rs. 4,200.

Locally grown tea is consumed on a large scale in this Colony but there is little likelihood of an export trade being built up.

Cocoa grows well and a small amount of chocolate is manufactured locally.

Citrus fruits, especially limes and lemons, are attracting special attention.

Tropical fruits grow freely near the coast but no attempt has been made so far to establish a fruit preserving or jam making industry.

FOOD CROPS

Maize, manioc, sweet potatoes, ground nuts &c., are grown but owing to the high prices received for sugar and cane the efforts to increase the production of food crops have been considerably discounted. It is estimated that, at the end of 1920, the area under cultivation in food crops and vegetables did not exceed 7,000 acres which is far short of what is required.

LIVE STOCK

An important advance was recorded during the year by the inauguration of the Mauritius Stock Breeders' Association to improve the local breed.

SALT INDUSTRY

There are four salines at present operating in Mauritius from which the total production averages about 9,811 tons per annum. The salines consist of a series of basins into which sea water is admitted and concentrated by the heat of the sun. As the solution becomes more concentrated, it is run into successive basins and in the last of these crystallisation takes place.

CO-OPERATIVE CREDIT SOCIETIES

The Director of Agriculture reports as follows: Co-operative Credit Societies were first established in Mauritius in 1913 and their working is regulated under Ordinance 4 of that year. The plan on which these Societies are worked follows closely that which has been established in India; the system may now be regarded as firmly established in the Colony and is proving itself thoroughly well adapted to the requirements of a considerable number of the small planters. At the end of 1920, 32 Societies had been registered and were without exception working satisfactorily. On June 30th 1920, the total amount of Working Capital to the credit of the Societies was Rs. 365,857 of which Rs. 129,919 represented Share Capital and Rs. 66,219 Reserve Fund. The total membership of the Societies on the same date was 1,171. During the latter part of the year, considerable additions were made to the number of Societies and to the total membership, six new Societies being registered between August and December 1919. The result is largely due to increased appreciation of the advantages of the system amongst small planters.

INDUSTRIES—(EXCLUSIVE OF AGRICULTURE)

(a) Nature of Industry	Approximate amount of persons employed	Raw material used	Approximate output Quantity	Annual Value
				Rs.
1. Engineering ...	4,500	...		2,000,000
2. Bakeries	800	Wheat Flour	3,200 T.	2,000,000
3. Docks (landing Shipping etc.)	1,700	...	...	1,000,000
4. Fisheries	1,500	Sea fish	1,000 T.	500,000
5. Lime Burning ...	650	Coral	16,000 T.	330,000
6. Distilleries ...	30	Molasses	1,700,000 lit.	300,000
7. Electric light and Power Supply	70	Hydraulic Power	...	230,000
8. Salt	50	Sea water	1,700 T.	170,000
9. Leather Tanning	30	Hides of some 8,000 oxen		170,000
10. Ice making ...	...	...	900 T.	125,000
11. Oil (ground nuts)	...	...	50,000 lit.	100,000
12. Vinegar making ..	...	Rum	34,000 lit.	10,000

Among minor Industries may be mentioned biscuits, aerated water, manure, furniture, charcoal, pottery, alœ ropes, vacoas bags etc.

Distilleries.—The manufacture of industrial alcohol on a large scale is likely to increase. At present alcohol is produced mainly for consumption as Rum. The raw material used is the molasses produced in the cane sugar industry.

LEGISLATION

59 Ordinances were passed during the year 1920 of which the following are the more important of those which are likely to be of interest outside the colony :—

The Treaty of Peace Ordinance, 1920, (No. 8) which adapts to the circumstances of the Colony the provisions of the Treaty of Peace Order, 1919.

The Pension Law Amendment Ordinance 1920 (No. 10) which makes service in Mauritius continous with service in the following Colonies for pension purposes : Seychelles, Trinidad, the Leeward islands, Jamaica.

The Profiteering Ordinance 1920 (No. 22) which is adapted from the Imperial Act 1919 with certain modifications.

The Merchant Shipping (Amendment) Ordinance 1920 (No. 40) which was introduced for the purpose of recognizing the certificates of competency of Master and Mates, issued in Seychelles.

The Profiteering (Additional Powers) (Amendment) Ordinance, 1920 (No. 52), articles 2 and 3 of which amend Ordinance No. 22 of 1920: article 2 by enabling the Local Committee to disregard the fact of successive sales, when the consequence of such sales has been an undue inflation of price; article 3, by making it an offence on the part of a person against whom a complaint has been lodged, to refuse to sell to the complainant or to certain other persons connected with the complaint. The other articles deal with unreasonable rents, to the investigation and control of which the jurisdiction of the Local Committee is extended.

Those provisions are mainly borrowed from the Increase of Rent and Mortgage Interests (War Restrictions) Act 1915 (5 & 6 Geo. 5 Ch. 97) and from a South Africa Bill entitled "The Rents Act, 1920" published in the "Union Gazette Extraordinary" of the 30th March, 1920.

The Maintenance Orders (Facilities or Enforcement) Ordinance, 1920. No. 58) which reproduces the provisions of the Maintenance Orders (Facilities for Enforcement) Act, 1920.

EDUCATION

At the close of the year there were 147 primary schools in the Colony, 56 Government, and 91 denominational schools assisted by Government grants, of which 67 were Roman Catholics, 19 Church of England, 2 Presbyterians, 1 Hindoo and 2 Mahomedans.

The average attendance was 15,919 compared with 14,326 in 1919. The attendance of Indian children increased considerably from the previous year and now totals 12,599 giving an average of 80 pupils per school.

During the year 254 candidates competed for the Boys' Scholarship Examination which gives admission to the Royal College. Of these 211 failed in the preliminary test and of the others 27 passed. Six scholarships and six exhibitions were awarded.

There were 128 students for the four Girls' Scholarships, of whom 18 passed. 261 students (99 men and 162 women) entered for Teachers' certificates during the year 8 of whom (2 men and 6 women) passed. 40 First class certificates were granted.

Technical instruction in woodwork.—The average number of pupils on roll in the Port Louis Technical school was 30 and the number attending the Primary School classes was 115. The average attendance per day was 21 and 50 respectively.

Manual training as a class subject continues to be popular in the five country schools where such classes exist. Good work was fairly general and over 180 boys received instruction in this subject.

Agricultural instruction is given by a scheme of school gardens conducted in connection with the Government schools. The number of schools possessing gardens was 31—18 Government and 13 Aided schools.

SECONDARY EDUCATION

Eleven secondary schools received grants from Government during the year. Of these schools five are for boys only, the others admitting both boys and girls.

The higher education of boys is conducted at the Royal College.

During the year 105 new boys joined the Royal College and the highest number of pupils on the College roll was reached in 1920 with a total of 324.

There are two scholarships offered annually in the highest form, which is examined by the Cambridge University Examination Syndicate, of the value of £1,000 each, tenable for four or five years, with £75 passage allowance to or from England. The holders may join any University in the British Empire or study at any scientific or technical institution in the United Kingdom.

From 1st January 1920 those scholarship allowances were temporarily increased by 30 per cent.

The following statement gives the results of the Senior Cambridge Local Examinations for the last four years :—

Examination	Entries	Absentees	Candidates sitting for examination	Candidates sitting for full certificate	Passes	Candidates sitting for supplementary certificate	Passes
July 1917 ...	25	...	25	14	6	11	5

Decem. 1920	117	22	95	82	29	13	11

MEANS OF COMMUNICATION

RAILWAYS

The total length of the Mauritius Government Railway is 120 miles, exclusive of the Bois Chéri light railway of about 10 miles in length. The gauge of the main line is 4 feet 8½ inches.

The revenue derived during the year was Rs. 3,830,024 against Rs. 2,980,830 in 1919 or an increase of Rs. 849,194 as compared with the preceding year. This figure does not include Government traffic which amounts to Rs. 380,598.

The receipts for passenger traffic showed an increase of Rs. 613,714 compared with last year. As regards goods traffic the tonnage conveyed was 603,592 tons as compared with 524,978 tons in the previous year.

The working expenses for the year amounted to Rs. 3,614,423 as against Rs. 3,523,520 in the preceding year.

The capital cost was Rs. 32,984,153 at 31 December 1920.

The results of the year's working is as follows :

Receipts	Rs. 3,687,147
Working expenses ...	3,614,423

BOIS CHERI

There is a light railway of 2 feet 6 inches gauge running from the Savanne branch. The total goods traffic carried in 1920 amounted to 32,520 tons of which 29,624 tons were sugar cane, as against a total traffic of 21,498 tons and 18,644 tons of sugar cane in 1919. The actual working expenses for 1920 were Rs. 56,486, the earnings Rs. 17,165 and the work done for Government Departments was valued at Rs. 2,078.

POST AND TELEGRAPHS

At the end of the year there were 60 post offices open in the island, of which 57 were also telegraph offices.

The total revenue of the Department was Rs. 371,098 and the total expenditure Rs. 273,508, showing an excess of revenue over expenditure of Rs. 97,590. The sale of stamped postal matter amounted to Rs. 229,893 against Rs. 172,633 in the previous year.

There were 665 miles of Government telegraph lines and 147 miles of telephone lines in operation during the year.

Telegrams can be sent to all parts of the world from any railway station through the Eastern Telegraph Company in Port Louis. There is also an Admiralty Wireless Telegraph Station erected during the war as a war station and utilised since the Armistice for cammercial traffic.

Telephonic communication constituted and owned by the Oriental Telephone Company has been gradually increasing and at the close of the year there were 6 public exchanges open, with 1,526 miles of wire.

STEAMSHIPS

Mails are regularly received and despatched by steamers of the British India Steam Navigation Company, Castle Line, Clan Line and Msssageries Maritimes Company.

Communication with Rodrigues is maintained by H.M.C.S. *Secunder* and with the other Dependencies by sailing vessels at regular intervals.

ROADS AND BRIDGES

The road system of the Colony consists of main roads under the control of the Director of Public Works and branch roads under local District Boards. The main roads with a total mileage of 442 miles were maintained at a cost of Rs. 367,682, or at an average rate of Rs. 832 per mile. The branch roads comprising some 150 miles were maintained at a cost of Rs. 35,799 or an average rate of Rs. 240 per mile.

Improvements continue to be made in the main roads by the system of rolling the surface of the roads. Over 5½ miles of surface were so treated during the year.

A sum of Rs. 61,500 was also spent by the Public Works Department in reconstructing three small timber bridges in reinforced concrete.

IRRIGATION

The revenue derived from water delivered for irrigation from La Ferme reservoir amounted to Rs. 61,500, compared with Rs. 44,100 in the previous financial year. During the year additional areas under the Reservoir have been brought under cane cultivation estimated to amount to 600 acres. The total area of irrigable land under this reservoir is about 3,000 acres.

In connection with the scheme for the larger project at La Nicolière progress was delayed by lack of labour. The main dam was started and the construction of the culvert for taking the water across the dam was also taken in hand.

MAURITIUS

ANNUAL GENERAL REPORT FOR 1921

SITUATION AND AREA

Mauritius lies off the coast of Africa, in the South Indian Ocean, some 500 miles East of Madagascar, between latitude 19°50′ and 20°31′ South, and on longtitude 57°48′ East of Greenwich. Its official time is four hours fast on Greenwich (Ord. 6 of 1906). Its extreme length is 38 miles, its greatest breadth 29 miles; and its area covers 720 square miles=460,808 acres. The density of population is very high being a little over 500 persons per square mile for the whole island.

The largest town is Port Louis, the chief port and administrative capital, which has a population of 50,300. The towns of the interior are all of recent growth. Curepipe, the residential capital which lies at an altitude of 1,800 feet, situated at the highest part of the central plateau, has 19,500 inhabitants. The smaller towns of Vacoas, Phœnix, Quatre Bornes, Rose Hill and Beau Bassin are situated at lower levels on the same plateau. The principal towns and villages in country districts are Mahebourg, Rose Belle, Souillac, St. Pierre, Moka, Flacq and Pamplemousses.

The Island is essentially of volcanic origin, although signs of an older formation are noticeable at some places (R. Thompson—1880). Its age is difficult to estimate owing to the misleading nature of the effects of cyclones and floods on its rocks. The deep river gorges, cut in hard basalt, point to considerable age, but all that can be said is that it is probably older than its immediate neighbours Réunion and Rodrigues and certainly more stable. (J. S. Gardiner).

The Dependencies comprise a large number of small islands the nearest of which is 230 miles, the most northerly being about 1,200 miles away, 6° South Latitude. Rodrigues, the largest, with an area of 42 square miles, and a population of 6,584—(3,301 males, 3,283 females) is 350 miles to the East of Mauritius, while lesser islands of importance comprise Agaléga, the Carcados Carajos group, and Diego Garcia, the largest of the Chagos Archipelago.

At the census of May, 1921, the population of the Lesser Dependencies was ascertained to be 1810—males 1,038, females 772.

HISTORY

Mauritius is said to have been first discovered by the Portuguese in the first years of the sixteenth century probably between 1507 and 1512, but not later than 1527 when the island is shown on an official map under the name of *Santa Apollonia*, borne in common with the other islands known later as the Mascarenes (Réunion and Rodrigues) after the great navigator Dom Pedro Mascarenhas.

The Portuguese named the island *Itha da Cirnos*, or *Swan Island*, from the big birds resembling swans found on shore.

There is no record of any settlement during the Portuguese occupation which lasted nearly a century, and the Island only served as a point of call for repair and supply.

The Island was still entirely uninhabited when, on the 18th September, 1598, a Dutch squadron of five vessels anchored in the South Eastern Port to which the Commander, Wybrandt Van Warwick, gave his own name. He took possession of the Island for his Government, named it Mauritius, in honour of Prince Maurice de Nassau, but within fourteen days after he set sail leaving nobody on shore.

In 1613 the English seaman Captain Castleton, of the *Pearl*, visited the Island, which he found unoccupied, but it was only in 1638 that a first attempt towards colonisation was made. On the 6th May of that year Cornelisz Simonsy Gooyer, appointed Governor of Mauritius by the " Compagnie Neerlandaise des Indes," landed at Warwick-Haven or South-Eastern Port. Fortifications, stores and dwelling houses were built, at the place now called Old Grand Port, and thirteen families established themselves at the " 13 Cantons " close by. These were followed by other settlers who established themselves in the neighbourhood, where Mahebourg now lies. Twenty years after, on the 16th July, 1658, the Island was abandoned, to be again reoccupied on the 26th July, 1664. During this second attempt at settlement, which extended over a somewhat longer period, the fortifications and houses erected originally and which had been destroyed by a hurricane in 1644 were rebuilt. At Flacq some efforts towards development and cultivation were made without much success whilst the district was only too successfully denuded of its ebony trees. A Royal Garden was created and new regions, such as Port North West, Black River, and perhaps Plaines Wilhems, were inhabited, but the settlement did not prosper, and, discouraged by the difficulties of the enterprise, the Dutch finally abandoned the Island in 1710. Their occupation was disastrous so far as natural resources were concerned as the colonists denuded the forests of their valuable timber and almost exterminated the interesting natural fauna.

On the 20th September, 1715, Guillaume Dufresne, commanding the French vessel *Le Chasseur*, arrived at Port Nord Ouest, took possession of the Island in the name of Louis XV, King of France, and called it Isle de France. Settlement however was only to be effected six years later when, on the 23rd September, 1721, the Chevalier Jean Baptiste Garnier du Fougerai, commanding the *Triton* of St. Malo, resumed possession for the Compagnie des Indes Orientales, after landing at Isle aux Tonneliers in Port Nord Ouest which he named Port Louis. He was accompanied by a few French families from the neighbouring island of Reunion, who had come to settle, and from this time Mauritius never ceased to be inhabited.

In 1735 Mahé de Labourdonnais, succeeded M. Dumas as Governor. He was a man of rare capacity and it is not too much to say that by his own teaching and example he laid the foundation of the future prosperity of the Colony. He left the Island in 1747 and his successors had but to follow the path opened out to them to reap profit and success.

Conditions however soon became difficult for the settlers owing to the ever-increasing exactions of the "Compagnie des Indes," and the French Government was forced to assume direct control of affairs in 1764.

Under the new Government the burden of administration was shared between the Governor and an Intendant. The first of these, Pierre Poivre, introduced spices, then so valuable, from the West Indies, and created in 1767 the now renowned Royal Botanical Gardens of Pamplemousses on the site where Labourdonnais had erected in 1736 the fine dwelling house of "Mon Plaisir," and planted fruit and ornamental trees introduced from India and Europe.

In 1790 Mauritius was to a great extent preserved from the commotions of the French Revolution owing to the unpopularity of the decree of the National Convention abolishing slavery on which local agriculture solely depended. The Jacobin leaders and the agents of the Directoire sent to proclaim emancipation were expelled, a Colonial Assembly was elected and nearly all links with the mother country were severed for some time.

A period of intense military activity under General Decaen during the earlier part of the reign of Napoleon followed, when the French privateers using Mauritius as a point of departure for their activities against British trade gained for the island its reputation still enshrined in its motto as "The Star and the Key of the Indian Ocean." The reputation it had acquired became at length a cause of peril. After several indecisive attempts against the island, the English, determined to root out this rival base, prepared in 1810 for a vigorous attack and after a memorable fight Mauritius was lost to the French and came under British rule, on the 10th December, 1810.

The cession of the Isle de France and its dependencies to Great Britain having been confirmed by the Treaty of Paris, the Island, under its old name of Mauritius, definitively passed in 1814 under British rule and since then it has remained uninterruptedly a British possession.

CLIMATE

The climate is tropical but, owing to the high elevation of the central plateau, a large part of the island enjoys a temperate and even bracing climate. The average temperature of this highland region is about 60° Fah. (15.5° C) and the maximum about 80° Fah. (26.6° C). The low-lying coastal region has naturally a higher average temperature ranging from 90° Fah. (32°C) to 70° Fah. (21°C).

Mauritius lies in the track of cyclones, of which there is the greatest risk during the months of December to April. On March 11, 1921, a cyclone passed within 100 miles North of Mauritius causing appreciable damage to the plantations.

The rainfall is irregular and varies according to the locality and elevation. In the central portion of the Island an average yearly rainfall of 175 inches is recorded, whereas regions where there is the lowest rainfall receive less than 40 inches. The rainfall of the coastal districts varies between 25 and 30 inches.

GENERAL OBSERVATIONS

The year 1921 was prosperous as regards finance and trade. Despite the rapid fall in the prices of sugar, there was no restriction of consumption by the public and imported goods continued to pour into the Colony. The volume and value of imported trade constitute a record, the total value of the trade amounting to over 105 million rupees, being an increase of nearly 20 millions in excess of the preceding year. The Revenue figures also created a new record. Further details will be found under other headings of this report.

The chief difficulty encountered during the year was the shortage of labour, both skilled and unskilled. As a result, progress was much retarded in the carrying on of public works, while planters experienced great difficulties in the reaping of the crop and also in the performance of cultural operations. Wages rose practically 100 per cent. between 1914 and 1921 and have maintained that level since.

The cost of living continued to be abnormally high and was severely felt by almost all classes of the population. The rise in prices of all essential articles is 120 per cent. and the decrease in the value of the rupee plays an important part in connection with the prices of imported articles.

During the year the Colony obtained the services of the eminent sanitarian Dr. Andrew Balfour, C.B., C.M.G., who spent six months in the island and gave most valuable information and advice on the problems of sanitation. It is hoped that when effect has been given to his recommendations there will be a great improvement in the general standard of health and sanitary organisation.

Among other matters which received attention are questions of water supply and sewerage; and arrangements were made to to secure the services of an expert to advise in the matter. Mr. E. L. Mansergh, senior partner of the firm of Messrs. James Mansergh & Sons, who was selected for this task, visited the island in September and October. His report has only just been received and deals with the water supply of Port Louis, the water supply of the Plaines Wilhems towns with Moka and St. Pierre, the sewerage and sewage disposal in Port Louis.

VITAL STATISTICS AND PUBLIC HEALTH

The estimated population of the Colony on the 20th May, 1921, date of the taking of the Census, was 365,375. The ascertained population was 376,680 showing an increase of 6,287 on the previous Census Enumeration in 1911 and of 11,305 between the censused and estimated population.

The number of births and deaths registered during the year was 13,123 and 15,159, respectively.

The birth-rate in the General Population was 39.7 and in the Indian population 37.5 per mille.

The death-rates per 1,000 in the two populations for 1921 were 42.6 and 39.3.

The highest death rate for 1921 is shown in Port Louis and the lowest in Plaines Wilhems. The number of deaths due to malaria and malarial cachexia (highest death-producing factors in Mauritius) is 3,564 against 3,628 the year before. The proportion to total deaths is 23.5%. The next high causes of death are pneumonia and broncho-pneumonia 2,067 in 1921 against 1109 in 1920, and influenza 1,563 in 1921 against 334 in 1920.

There were 291 deaths from plague. The epidemic started in May, reaching its maximum in November and finishing at the end of December. In the whole island 375 cases were recorded. The largest number of cases was, as usual, in Port Louis (318). The percentage of deaths was 79.2.

Enteric fever accounted for 288 cases and caused 28 deaths, giving a mortality rate of 35 per cent.

The infantile mortality (deaths of children under one year) gives a ratio of 176.7 per thousand births against 156.3 in 1920. There were 1,623 still-births registered during the year, corresponding to a rate of 113.0 per thousand live-births, against 107.0 in 1920. The Department has made a good start with the work of training the necessary staff of midwives and also with general maternity work.

PUBLIC HOSPITALS AND DISPENSARIES

The following statement shows in a tabular form the number of cases treated in the public hospitals and at the dispensaries for the last five years:—

	1917	1918	1919	1920	1921	Average
Hospital admissions ...	21,311	22,845	26,820	22.132	19,127	22,447.0
Dispensaries	58,323	57,025	78,546	65,302	60,671	63,973.2
Outdoor cases ...	5,312	5,517	5,300	4,225	5,066	5,084.0
	84,946	85,387	110,666	91,659	84.864	91,504.2

These figures show a decrease as regards hospital admissions and dispensary cases for 1921 compared with 1920, while a small increase is noticeable under the outdoor cases. The total number of cases is however less than that for 1920 and for the five-year period 1917–21.

ASYLUMS

The total number of persons certified insane on 31st December 1921 was 773, or 32 more than the year before. This represents a ratio of insane to total population of 1 in 486 or 20.54 per 10,000.

The admissions into the Lunatic Asylum numbered 153. They are classified into: first admissions 81, second admissions 12, readmission from probation 40, readmission from Barkly Asylum Lunatic Branch Wards 2, and 18 admitted on interim order but found not insane after examination by Commissioners in Lunacy.

The number of inmates left on 31st December was 486 (246 males and 240 females) at the Lunatic Asylum, and 79 (55 males and 24 females) in the Lunatic Branch wards.

At the Leper Asylum there were 43 patients when the year began (males 30. females 13). There were 15 admissions during the year (12 males and 3 females), 11 deaths and 10 discharges. There remained 37 lepers at the end of the year. A new Leper

Colony is being erected a few miles out of Port Louis and when completed the law compelling compulsory segregation of lepers will be brought into use.

POOR RELIEF

Exclusive of the pauper cases treated at the public hospitals and dispensaries 1,017 paupers, as compared with 1,121 in 1920, received institutional relief during 1921 at the Barkly Asylum and different religious institutions.

2,435 paupers received pecuniary out-door relief permanently or temporarily, during 1921, against 2,505 in 1920.

JUDICIAL STATISTICS

There were 3,698 persons committed to prison during the year, being 605 less than in the previous year. Of the total 3,576 were males and 122 females.

The total number in custody on 31st December 1921 was 562 as against 534 in the preceding year.

There were 8 deaths among prisoners during the year. 5 prisoners were subjected to corporal punishment. There was no execution. The number of juvenile offenders was 94 as against 192 in the previous twelve months.

CRIMINAL STATISTICS

The cases reported to the Police numbered 20,793 as against 19,930 for 1920, in connection with which 12,814 persons were apprehended by the Police or summoned by the magistrate. 17 cases were sent for trial before the Supreme Court as against 11 in 1920.

GOVERNMENT FINANCE

The Revenue of the Colony for the financial year ended 30th June 1921 amounted to Rs. 40,168,209, being Rs. 21,562,614 in excess of the revenue of the preceding year, which was the highest on record.

The Expenditure for the year amounted to Rs. 24,729,540, leaving a surplus of Rs. 15,438,670 on the year's transactions.

The Revenue of the year amounted to Rs. 40,168,209 inclusive of a transfer entry of Rs. 13,377,986 arising out of the proceeds of the special export tax of Rs. 40 per ton of sugar which was authorized under Ordinance No. 36 of 1920, to be applied to various developments and improvements, and of Rs. 92,797 being interest on investments of such proceeds.

The actual increase in 1920-21 as compared with the previous year may be put at over eight millions.

The Expenditure amounted to Rs. 24,729,540 inclusive of Rs. 16,192 spent on Dr. Balfour's mission to Mauritius, to be met out of the Improvement and Development Fund.

The net surplus on the year's transactions of Rs. 15,438,670 added to Rs. 6,255,484, the surplus on 30th June 1920, gave a surplus at 30th June 1921 of Rs. 21,694.154, which is inclusive of Rs. 13,154,591 representing the capital of the Improvement and Development Fund at that date.

REVENUE

Nearly all heads of Revenue shewed substantial increases due to the large purchasing power of the community. All classes of imports are affected by this, but especially the more expensive articles of apparel, spirits, wines and tobacco. Owing to the unexpectedly large imports and the increased cost of most commodities, customs receipts exceeded the estimates by Rs. 2,588,000.

EXPENDITURE

Of the actual expenditure Rs. 5,006,931 were paid in personal emoluments and Rs. 19,305,195 under other charges. The corresponding figures for 1919-20 were personal emoluments Rs. 5,017,021 and other charges Rs. 13,940,972.

Nearly all heads of expenditure shewed an increase.

PUBLIC DEBT

At the close of the financial year the public debt of the Colony stood at £1,273,024 as compared with £1,243,690 at 30th June 1920. Against this liability there was an accumulated sinking fund of £456,159 as compared with £414,087 at 30th June 1920.

CURRENCY AND BANKING

The currency of the Colony consists of

(1) The following Mauritius bronze and silver coins which are legal tender up to Rs. 5 :—
    (a) Bronze : 1 cent, 2 cents and 5 cents.
    (b) Silver : 10 cents, 20 cents.
(2) The silver Rupee of India with its silver sub-divisions.
(3) Nickel change 50 and 25 cents.
(4) The Mauritius Government notes of Rs. 50, Rs. 10, Rs. 5 and R. 1.
(5) Indian currency notes of Rs. 50, Rs. 10, Rs. 5.

The average value of currency notes in circulation during the year was Rs. 14,635,100 compared with Rs. 10,215,903 in 1919-20.

The average amount of silver held amounted to Rs. 6,873,260 as compared with Rs. 2,436,667 the average for 1919-20.

The investments (not including Depreciation Fund), which stood at Rs. 4,854,250 on 1st July, 1920, were increased to Rs. 7,854,250 during the year. The Depreciation Fund was increased from Rs. 598,226.92 to Rs. 689,131.50. The Revenue (Interest on investments less addition to Depreciation Fund) was Rs. 181,232.12 and this sum was credited to the General Revenue of the Colony.

The Statement of Assets and Liabilities shows a surplus of Rs. 689,231.50. Valuing the investments at the market rate on 30th June 1921 the surplus would be reduced to Rs. 626,707.50.

Government Savings Banks are established in nine districts with a head office in Port Louis. The total number of depositors at 30th June 1921 was 34,969 with deposits amounting to Rs. 5,436,602. The Savings Banks are largely made use of by the Indians, of whom at the 30th June there were 14,424 depositors with Rs. 2,425,941 to their credit.

Interest is paid at the rate of 3 per cent.

The private banks are The Mauritius Commercial Bank, the Mercantile Bank of India and a branch of the National Bank of South Africa.

TRADE, AGRICULTURE AND INDUSTRY

ANNUAL PROGRESS OF TRADE

The value of the trade for 1921, omitting specie, has been the highest on record, being estimated at Rs 262,994,802, representing an increase Rs 49,126,344 over the preceding year when the highest figures were recorded.

The comparative values or imports and exports for the last five years are as follows :—

Year	Imports Rs.	Exports Rs.	Total Rs.
1917	42,094,708	58,319,728	100,414,436
1918	42,921,250	58,652,480	98,573,730
1919	47,037,024	127,806,321	174,843,345
1920	86,371,153	127,497,305	213,868,458
1921	105,744,980	157,249,822	262,994,802

The value of the re-exports was Rs. 2,112,692.

Rs. 21,371,270 worth of specie was imported during the year of which Rs. 21,234,920 were notes and chiefly Indian notes.

Compared with the mean of the five preceding years, the trade of 1921 shows an increase of Rs. 120,179,385 whilst comparison with the pre-war average shows an increase of over 194 million rupees. In other words, it may be said that the trade value in 1921 increased four-fold from what it was before the war.

This considerable increase may be chiefly attributed to the following causes :—

(a) High prices of articles, as compared with pre-war rates.

(b) Increased quantities of yarns, textiles, apparel, timber &c. imported to renew the stock used up during war-years when there was a slackness in trade.

(c) Abnormal quantities of machinery imported including motor cars and motor lorries.

(d) Materials of all sorts ordered by Government for the Public Works and Railway Departments.

(e) Large quantities of articles of luxury imported owing to the exceptional prosperity of the Colony due to the high prices obtained for sugar of the 1920–1921 crop.

With regard to the Export trade, the great increase in value reflects the very high market prices for the 1920–21 sugar crop, the greater part of which was shipped in 1921. The influence of the low prices in the second half of the year on the crop 1921–22—a small amount of which was exported during the period—did not affect the export trade to a large extent, and was not sufficiently strong to reduce it to the level of any of the previous years.

IMPORTS

Most of the principal imports show increases both in quantity and value. The United Kingdom takes first place with a total of Rs. 40,563,000.

The principal imports from the United Kingdom are cotton goods, machinery, hardware and soap ; and in round figures the value of these imports has risen from 7 million rupees in 1918 to 11 millions in 1919, 24 millions in 1920 and 40 millions in 1921.

India comes next in importance followed by France as suppliers of goods to Mauritius. The value of articles imported from India amounted to 22 million rupees in 1921 against 28 millions in 1920. The decrease is mainly due to the fall in the price of rice. The usual importation of grain, gunny bags, various oils and saltpetre remained stable.

France shows a considerable increase, the value of importations during the last four years being :

1918 ...	Rs. 963,692	1920 ...	Rs. 4,486,291
1919 ...	1,616,090	1921 ...	11,939,070

France is the principal source of supply for haberdashery, drugs, perfumery, olive oil, tyres and indigo.

Imports from the Union of South Africa rose from Rs. 2,635,709 in 1916 to Rs 6,660,398 in 1921. The chief imports are coals (representing 50% of the trade), wines, salted fish, oats and maize.

The trade with the United States also shows a noticeable increase, the figures for 1921 being Rs. 7,246,151 as against Rs. 2,808,904 in 1920, the principal imports being motor cars, petroleum and tobacco.

The number of motor cars imported rose from 26 in 1918 to 420 in 1921, valued at nearly two million rupees, 336 cars being of American makes valued at Rs. 1,381,250.

Manufactured articles are the most important item of the import trade. Foodstuffs, drink and tobacco form the next largest class of imports.

The imports of machinery and implements rose from about half a million rupees in 1918 to over 12 millions in 1921.

EXPORTS

Sugar.—The value of Sugar exported in 1921 reached a total it had never reached in any past year. This is due to a large amount of the crop 1920–21, which obtained such exceptional prices, having been shipped in the early months of 1921.

The following table shows the sugar exports for the last six years :–

	1916	1917	1918	1919	1920	1921
Kilos ...	230,559,715	190,820,657	183,221,889	302,826,129	182,424,726	229,224,689
Rupees ...	69,309,970	54,539,232	53,882,002	125,103,201	124,633,854	154,592,301

Other Domestic Exports.—Other exports than sugar are not of any considerable importance. Aloe fibre heads the list with Rs. 100,234 in 1921, as compared with Rs. 248,140 in 1920.

The quantity of Aloe fibre exported during each of the last six years is shown below :—

	1916	1917	1918	1919	1920	1921
Kilos ...	1,460,102	1,213,736	390,671	2,176,521	874,241	287,106

Machinery appears for Rs. 161,505 (as compared with Rs. 92,630 in 1920) as a domestic export—but this can scarcely be considered as a local product. Other exports are rum, vanilla, undressed skins, coconut oil, &c.

SHIPPING

The following statement shows the number of vessels which entered and left the harbour during the last three years:—

Year	Number of Vessels Inwards	Number of Vessels Outwards
1919	179	177
1920	217	202
1921	229	234

The total tonnage of shipping entered and cleared in 1921 was 896,482 tons; steamers 868,535 tons and sailing vessels 27,947 tons.

In the coastal trade with the Dependencies some 38 calls were made, with an aggregate of 13, 603 tons.

The following steamship lines called at Port Louis although services are irregular :—Union Castle Steamship Company, Limited ; British India Steam Navigation Company, Limited ; Messageries Maritimes ; Clan Line ; Ellerman-Harrison Line and the Compagnie Havraise Pèninsulaire.

AGRICULTURE AND INDUSTRIES

The industries of the island are entirely agricultural ; there is no mineral wealth of any importance. The whole interests of the Colony are bound up in the sugar industry and practically the whole of the land suitable for growing sugar cane is put under that crop. Acreage at present under cane is about 179,000 acres or above one-third of the total area of the Colony and the average production for the past five years nearly a quarter of a million tons. With the exception of British India, Mauritius is thus the largest sugar exporter among the British possessions. Altogether there are 54 sugar factories ranging in productive capacity from 1,500 tons to 15,000 tons, the majority of which are modern factories, the standard of equipment being constantly improved.

A striking feature of the Mauritian industry in recent years has been the rapid increase in the area cultivated by Indians who are a preponderating element in the population, forming over two-thirds of the total.

At the end of 1920 the area cultivated by Indians was estimated to be 77,250 arpents (80,200 acres) or nearly 45% of the total cane cultivation, the figure having almost doubled since 1909. In 1921 an appreciable increase took place but exact figures are not yet available.

Agricultural labour is almost exclusively Indian in origin and is derived from importations of indentured Indian labour which commenced after the abolition of slavery in 1835 and continued until 1910, in which year indentured immigration from India was prohibited. According to the last Census there were remaining on the 31st December, 1921, 20,455 time-expired immigrants settled in the Colony, divided into 14,341 males and 6,114 females. The total number of labourers, including both immigrants and creoles, serving under written contract of service on estates was 23,054 at 31st December 1921 and of that number 1,303 were engaged with small planters.

The average Indian estate population is estimated at 27,390 labourers, and labour is also recruited from the small Indian planters who willingly engage for wages. The last report of the

Director of Agriculture gives the following explanation of the shortage of labour on Estates :—

"As the result of unprecedented prices paid for canes last year," says the Director "a large number of small planters who, as a rule, worked as day labourers, found themselves in a position to dictate their terms to employers. These men, being no longer under the pressure of necessity, hired themselves out with considerable reluctance and at very high prices, thereby causing a dearth of hands and a greatly enhanced rate of wages.

"The following table gives an idea of wages currently paid to day labourers and the cost of agricultural operations during the year :—

Day labourers	...Rs. 2.00—	Rs. 3.00	
Female labourers	... 1.00—	1.50	
Clearing land	... 150.00—	400.00—	per arpent
" Fosseyage "	... 50.00—	100.00	do.
Manuring	... 10.00—	20.00	do.
Weeding	... 50.00—	80.00	do.
Cutting canes	... 25.00—	50.00	do.

"The result is seen everywhere in a marked lowering of the standard of cultivation adopted."

The wages are so much higher than is required to meet the cost of living that all increases are reflected in increased absenteeism. The report looks to the further increase of labour-saving machinery, both in the factories and more especially in the methods of cultivation, to provide a solution of the labour problem, which, in Mauritius, as in other parts of the world, is coming into prominence now that the tide of prosperity has turned.

The Sugar Planters Syndicate which was formed last year to enable the planters to transact their sales with the Royal Commission on Sugar Supply was reconstituted this year under Ordinance No. 7 of 1921 ; practically all planters adhering thereto. The Royal Commission having ceased operations the Syndicate disposed of the local sugars to private buyers on a co-operative basis.

In 1919 the record year, the exports of sugar reached 302,826 tons, valued at Rs. 125,104,000. The quantity fell in 1920 to 182,465 tons but the value was Rs. 124,634,000.

The gross value of the 1921 crop is estimated to have been Rs. 154,592,000 for 229,224 tons exported.

The countries to which the bulk of Mauritius sugar is exported are the United Kingdom, India and British South Africa.

SUBSIDIARY INDUSTRIES

The introduction of agricultural industries other than cane, so as to reduce the economic dependence of the Colony on a single industry, continues to receive attention ; but owing to the superior attraction of sugar it is hard to arouse real interest in subsidiary cultivations. The great drop in the price of sugar has however caused some improvement in the position and revival of interest in the various minor cultivations commonly carried out in the Colony.

ALOE FIBRE

Aloe fibre is produced mainly from the leaves of Fourcroeya Gigantea (Mauritius hemp), a plant which grows wild all over the island and ranks second amongst the domestic products of the Colony. The area under aloe is estimated at about 20,000 acres.

The production has been practically at a standstill since the war but there is evidence of business activity in this trade.

A certain area has been put under Sisal for which considerable areas of land are well adapted.

COCONUTS

Coconut plantations are receiving attention in the coastal belt and there are about 800 acres under cultivation in Mauritius. There are no oil mills in the Colony itself but coconut growing constitutes the principal industry of the small islands forming the dependencies of Mauritius and their total production of copra for the year 1921 amounted to 463,040 kilos, of which 196,040 were exported through Mauritius.

The extension of coconut growing in Rodrigues is receiving consideration.

TOBACCO

Tobacco of the Reunion type grows well in all parts of the colony and the acreage under this crop is rapidly extending. The soils appear well adapted for this tobacco which is heavy and strong.

An experimental Tobacco factory has been inaugurated by the Department of Agriculture at Port Louis and is now regularly turning out limited quantities of tobacco for local consumption and the produce meets with a ready sale.

OTHER CROPS

Vanilla.—This crop is cultivated on a limited scale in the Colony but its export is negligible.

Tea.—The local tea industry is on the decline and locally grown tea is unable to compete with the imported article.

Food Crop.—There is absence of progress in the cultivation of food crops. Maize is a well established crop but the development of the local industry is being adversely affected by importations of South African maize.

LIVE STOCK

There is a small stock raising industry which has increased and improved of recent years partly by reason of systematic Government efforts to foster development, while recently attempts of some importance have been made both through Government and private agency to improve the breeds of dairy cattle, and the conditions under which milk is produced.

An important development which took place during the year was the decision taken by the Government to inaugurate a Government Dairy on Crown land at Curepipe.

The Stock Farm at Barkly Asylum Beau Bassin continues to show excellent progress.

CO-OPERATIVE CREDIT SOCIETIES

The Director of Agriculture reports as follows :

" The Co-operative Credit Societies movement has made steady progress during the year. A considerable number of new shareholders have been admitted and four new Societies registered during the year 1921. On December 31st 1921, 34 Societies were in operation ; the total membership on June 30th 1921 amounted to 3,504 while the total working capital standing to their credit on the same date amounted to Rs. 445,792, an increase of Rs. 79,935 compared with the corresponding position of June 30th 1920.

"As has been mentioned in previous reports, the plan on which these Societies are worked is modelled on and closely follows that which exists in India. The movement is now firmly established in the Colony and the operations of the societies themselves leave little to be desired. The present position may be taken as abundant demonstration of the soundness of the recommendation which led to the establishment of the movement in the Colony."

Other industries.—There are large engineering works in various parts of the Colony principally engaged in the readjustment and repair of Sugar machinery. Apart from manufacturing industries concerned with the preparation of local produce there are few minor industries in Mauritius and it cannot be said that there are any signs of their number increasing in the near future.

The following table will be found of interest :—

INDUSTRIES—(EXCLUSIVE OF AGRICULTURE)

Nature of Industry	Number of establishments or manufactories	Approximate number of persons employed	Raw material used	Approximate output	
				Quantity	Annual Value
					Rs.
1. Engineering works	5	1,600	...	...	2,000.000
2. Bakeries... ...	63	300	Wheat Flour	3,200 T.	2,000,000
3. Docks (landing Shipping etc.)	4	1,700	...	...	1,000,000
4. Fisheries	...	1,500	Sea Fish	1,000 T.	500,000
5. Lime Burning ...	56	500	Coral	16,000 T	330,000
6. Distilleries ...	3	30	Molasses	1,700,000 lit.	300.000
7. Electric light and Power Supply	3	150	Hydraulic Power	...	230,000
8. Salt	3	200	Sea water	1,700 T.	170,000
9 Leather Tanning ...	2	30	Hides of some 8,000 oxen	...	170,000
10. Ice making ...	...	...	...	900 T.	125,000
11. Oil (ground nuts)		...	...	50,000 lit.	100,000
12. Vinegar making ...	...	...	Rum	34,000 lit.	10,000

Among minor industries may be mentioned biscuits, aerated water, manure, furniture, charcoal, pottery, aloe ropes, vacoas bags etc. Boot making is beginning to assume an industrial character.

Distilleries.—At present alcohol is produced mainly for consumption as Rum and the output was approximately 2 million litres. The raw material used is the molasses produced in the cane sugar industry.

The following which is extracted from the report of the Department of Agriculture shows that the manufacture of industrial alcohol is receiving increased attention :—

"The majority of the molasses produced in the Colony is at present used as a fertiliser. Of late years, increased attention has been devoted to the possibilities of alcohol for power purposes. A number of attempts have previously been made to utilise alcohol and mixtures of alcohol and ether as a substitute for motor spirit, but so far, for various reasons, they have not been attended with a very great amount of success.

"During the year, an important development was inaugurated in this direction by one of the largest estates in the north of the Colony where a distillery and etherification plant are in course of erection. The new installation is designed to turn out 5,000 litres of alcohol daily and it is intended that the plant should be exclusively devoted to the production of power alcohol and to manufacture a mixture of alcohol and ether similar to the preparation known as 'Natalite.' It is hoped that the plant will be at work in the course of 1922."

FORESTS

Public Departments were supplied during the year with 2,500 cords of firewood valued at Rs. 28,558, and 5,036 cubic feet of timber valued at Rs. 13,276. The total value of these supplies was thus Rs. 41,834 as against Rs. 53,072 for the previous year.

The revenue derived from sales to the public on account of timber, fuel and minor forest produce during the year was Rs. 143,202 against Rs. 141,922 during 1920, and the miscellaneous revenue Rs. 83,056 against Rs. 75,607.

FISHERIES

The fishing industry is one of some importance but the methods in use and the business in general still need organisation. The catch is entirely for local consumption and the fish market is poorly supplied with fresh fish, compared with the actual demand.

EDUCATION

At the close of the year there were 147 primary schools in the Colony, 56 Government, and 91 denominational schools assisted by Government grants, of which 67 were Roman Catholics, 19 Church of England, 2 Presbyterians, 1 Hindoo and 2 Mahomedans.

The average attendance was 18,362 compared with 15,919 in 1920. The attendance of Indian children increased considerably from the previous year and now totals 14,276 (boys 12,565, girls 1,711).

The number of girls being educated in Primary Schools is 8,830 out of a total of 28,600 pupils—about one-third. The average attendance is only 54 per cent. of the number on roll but varies considerably in different districts being 68 per cent. in Plaines Wilhems and 53 per cent. in Black River. As Education is not compulsory it is a very difficult matter to encourage boys and girls, especially the latter, to attend schools, and parents of Indian children do not care to send girls to schools, and in no case beyond 9 or 10 years of age; most of the girls attend mixed schools where boys also attend.

The attendance for the last three years is as follows:—

1919	1920	1921
6,674 ...	... 7,992 ...	... 8,830

During the year 279 candidates competed for the Boys' Scholarship Examination which gives admission to the Royal College. Of these 217 failed in the preliminary test and of the others 25 passed. Six scholarships and six exhibitions were awarded. There were 121 students for the four Girls' Scholarships, of whom 22 passed.

315 students (113 men and 192 women) entered for Teachers' Examinations during the year 85 of whom (25 men and 60 women) passed. 18 First Class certificates were granted.

A large proportion of the teaching staff in the schools possesses only a Monitor's or Vth or VIth Standard certificate. This is more particularly noticeable among women teachers where the proportion is 70% of the total in Government Schools and 80% in Aided Schools.

It is hoped that with the new training school for teachers both in the Secondary and in the Primary schools which it is proposed to establish and the provision made for increased salaries a great improvement in the general work of the schools in the Colony will follow.

Agricultural instruction is given by a scheme of school gardens conducted in connection with the Primary schools. The number of schools possessing gardens was 28, viz., 17 Government and 11 Aided schools.

SECONDARY EDUCATION

No particular development is to be signalled under this heading during the past year.

The number of Secondary Schools in the Colony was 12. The total number on roll was 722 boys and 439 girls, while the average attendance was 555 and 385 respectively, compared with 636 boys and 492 girls on roll for the previous year with average attendance of 506 and 391.

The passes in the Cambridge Local Examinations for December 1920 were :

	Boys	Girls
Juniors	5	2
Seniors	9	9

The higher education of boys is conducted at the Royal College.

75 new pupils joined the Royal College and the highest number of pupils on the College roll was reached in 1921 with a total of 346.

There are two scholarships offered annually in the highest form, which is examined by the Cambridge University Examination Syndicate, of the value of £1,000 each, tenable for four or five years, with £75 passage allowance to or from England. The holders may join any University in the British Empire or study at any scientific or technical institution in the United Kingdom.

From 1st January 1920 those scholarship allowances were temporarily increased by 30 per cent.

In the Senior Cambridge Local Examinations of December, 1920, 40 boys gained the Senior Certificate, 4 gained Honours and 16 qualified for entrance into the English Scholarship class.

PUBLIC WORKS

The Department was faced with difficulties owing to the competition for the available supply of labour skilled and unskilled and very little of an extensive programme of Public Works could be fulfilled duing the year.

As regards buildings the main items carried out were a gymnasium for the Royal College, a new Police Station at Rose Belle, a new female ward for the Moka Hospital and the erection of a 6-ton crane to relieve the congestion on the Fountain Quay. Victoria Hospital was practically completed during the year. A start was made with the erection of a tuberculous ward at the Civil Hospital and an enlargement of the Printing Office.

In addition to these, special repairs and improvements were carried out to the General Post Office and the Government House Port Louis. Plans were also prepared for the erection of a Training College for teachers at Curepipe and a road bridge over Grand River N.W.

IRRIGATION WORKS

The usual works connected with the maintenance and repair of the irrigation reservoir and channels at La Ferme were carried out satisfactorily. The dam was finally completed in October.

The revenue decided from water in irrigation from La Ferme reservoir amounted to Rs. 71,600 compared with Rs. 61,500 during the previous year.

Good progress was made with the main dam and feeder channel at La Nicolière.

MEANS OF COMMUNICATION

RAILWAYS

The total length of the Mauritius Government Railway is 120 miles exclusive of the Bois Chéri Light Railway of about 24 miles in length. The gauge of the main line is 4 feet 8½ inches. No extensions have been undertaken.

The receipts during the year were Rs. 4,142,264 against Rs. 3,834,695 in 1920 or an increase of Rs. 307,569.

This figure does not include Government traffic which amounts to Rs. 390,580.

The receipts for passenger traffic showed an increase of Rs. 431,074 compared with last year. As regards goods traffic the tonnage conveyed was 581,134 tons as compared with 603,592 tons in the previous year.

The working expenses for the year amounted to Rs. 6,365,875, as against Rs. 3,614,423 in the preceding year.

The capital cost was Rs. 33,684,811 at 31st December 1921.

Working expenses passed even the previous high rations and the results of the year's working are as follows :

Receipts	Rs. 4,142,264
Working expenses	6,365,875
Deficit ...	Rs. 2,223,611

The heavier working expenses are principally due to wages concessions and to the cost of materials.

BOIS CHERI LIGHT RAILWAY

There is a light railway of 2 feet 6 inches gauge running from the Savanne branch. The total goods traffic carried in 1921 amounted to 15,555 tons, of which 11,536 tons were sugar canes, as against a total traffic of 32,520 tons and 29,624 tons of sugar canes in 1920.

The actual working expenses for 1921 were Rs. 61,324, the earnings Rs. 17,531 and the work done for Government Departments was valued at Rs. 2,130.

ROADS AND BRIDGES

With regard to communications the Colony is well served by road communications. Altogether there are 593 miles of road open for traffic. The Public Works Department are responsible for the maintenance of about 443 miles, the remainder being maintained by the Townships and District Boards. The responsibility for maintenance is a heavy one, for many of the roads, bridges and culverts were built for light traffic only and the development of motor transport has put upon many of these roads a strain which they were not primarily intended to bear.

The total number of motor vehicles licensed is 1766—cars 1470, lorries 83, motor cycles 213.

POST AND TELEGRAPH SERVICES

The total revenue from the Post Office in 1921 amounted to Rs. 404, 100 being 33,000 more than that collected in 1920. The net expenditure amounted to Rs. 316,784. The balance of revenue over expenditure was Rs. 87,316.

The Mauritius Wireless Station was closed by the Admiralty in July but was re-opened towards the close of the year, Government paying all the expenses involved.

TELEPHONES

Telephonic communication constituted and owned by the Oriental Telephone and Electric Company, Limited, has been gradually increasing and at the close of the year there were seven public exchanges open, with 1,762 miles of wire. Important improvements are in hand, including the substitution of underground for aerial wires for the trunk lines, as well as for subscribers' lines in the congested areas, and switchboards of modern design for the larger exchanges.

MAURITIUS

ANNUAL GENERAL REPORT FOR 1922

SITUATION AND AREA

Mauritius lies off the coast of Africa, in the South Indian Ocean, some 500 miles East of Madagascar, between 57°18′ and 57°48′ E. long., and 19°50′ and 20°31′ S. lat. Its official time is four hours fast on Greenwich (Ordinance 6 of 1906). Its extreme length is 38 miles, its extreme breadth 29 miles; and its area covers 720 square miles = 460,800 acres. The density of population is very high, being about 500 persons per square mile for the whole island.

The largest town is Port Louis, the chief port and administrative capital, which has a population of about 50,300. The towns of the interior are all of recent growth. Curepipe, the residential capital, which lies at an altitude of 1,800 feet, situated at the highest part of the central plateau, has about 19,500 inhabitants. The smaller towns of Vacoas, Phœnix, Quatre Bornes, Rose Hill and Beau Bassin are situated at lower levels on the same plateau. The principal towns and villages in country districts are Mahebourg, Rose Belle, Souillac, St. Pierre, Moka, Flacq and Pamplemousses.

The Island is essentially of volcanic origin, although signs of an older formation are noticeable at some places (R. Thompson—1880). Its age is difficult to estimate owing to the misleading nature of the effects of cyclones and floods on its rocks. The deep river gorges, cut in hard basalt, point to considerable age, but all that can be said is that it is probably older than its immediate neighbours Réunion and Rodrigues and certainly more stable. (J. S. Gardiner).

The Dependencies comprise a large number of small islands the nearest of which is 230 miles, the most northerly being about 1,200 miles away, 6° S. Lat. Rodrigues, the largest, with an area of 42 square miles, and a population of 6,847—(3,403 males, 3,444 females) is 350 miles to the East of Mauritius, while lesser islands of some importance comprise Agalega, the Carcados Carajos group, and Diego Garcia, the largest of the Chagos Archipelago.

At the Census of May, 1921, the population of the Lesser Dependencies was ascertained to be 1810—(1,038 males, 772 females).

HISTORY

Mauritius is said to have been first discovered by the Portuguese in the beginning of the sixteenth century—probably between 1507 and 1512, but not later than 1527, when the island is shown on an official map under the name of *Santa Apollonia*, borne in common with the other islands known later as the Mascarenes (Réunion and Rodrigues) after the great navigator Dom Pedro Mascarenhas.

The Portuguese named the island *Itha da Cirnos*, or *Swan Island*, from the big birds resembling swans found on shore.

There is no record of any permanent settlement by the Portuguese who, for nearly a century, only used the Island as a port of call for repairs and supplies.

The Island was still entirely uninhabited when, on the 18th September, 1598, a Dutch squadron of five vessels anchored in the South Eastern Port to which the Commander, Admiral Wybrandt Van Warwyk, gave his own name. He took possession of the Island on behalf of his Government and named it Mauritius, in honour of the Statholder, Prince Maurice de Nassau, but within fourteen days he set sail leaving nobody on shore.

In 1613 the English seaman Captain Castleton, of the *Pearl*, visited the Island, which he found unoccupied, but it was only in 1638 that a first attempt at colonisation was made. On the 6th May of that year Cornelisz Simonsy Gooyer, appointed Governor of Mauritius by the "Compagnie Neerlandaise des Indes," landed at Warwick-Haven or South Eastern Port. Fortifications, stores and dwelling houses were built at the place now called Old Grand Port, and thirteen families established themselves at the "13 Cantons" close by. These were followed by other settlers who established themselves in the neighbourhood, where Mahebourg now lies. Twenty years after, on the 16th July, 1658, the Island was abandoned, to be again reoccupied on the 26th July, 1664. During this second attempt at settlement, which extended over a somewhat longer period, the fortifications and houses erected originally and which had been destroyed by a hurricane in 1644 were rebuilt. At Flacq some efforts towards development and cultivation were made without much success whilst the district was only too successfully denuded of its ebony trees. A Royal Garden was created and new regions, such as Port North West, Black River, and perhaps Plaines Wilhems, were inhabited, but the settlement did not prosper, and, discouraged by the difficulties of the enterprise, the Dutch finally abandoned the Island in 1710. Their occupation was disastrous so far as natural resources were concerned as the colonists denuded the forests of their valuable timber and almost exterminated the interesting natural fauna.

On the 20th September, 1715, Guillaume Dufresne, commanding the French vessel *Le Chasseur*, arrived at Port Nord Ouest, took possession of the Island in the name of Louis XV, King of France, and called it "Isle de France." Settlement, however, was only to be effected six years later when, on the 23rd September, 1721, the Chevalier Jean Baptiste Garnier du Fougerai, commanding the *Triton* of St. Malo, resumed possession for the "Compagnie des Indes Orientales," after landing at Isle aux Tonneliers in Port Nord Ouest which he named Port Louis. He was accompanied by a few French families from the neighbouring island of Réunion, who had come to settle, and from this time Mauritius never ceased to be inhabited.

In 1735, Mahé de Labourdonnais succeeded M. Dumas as Governor. He was a man of rare capacity and it is not too much to say that by his own teaching and example he laid the foundation of the future prosperity of the Island. He left the Island in 1747 and his successors had but to follow the path opened out to them to reap profit and success.

Conditions, however, soon became difficult for the settlers owing to the ever-increasing exactions of the "Compagnie des Indes," and the French Government was forced to assume direct control of affairs in 1764.

Under the new Government the burden of administration was shared between the Governor and an Intendant. The first of these, Pierre Poivre, introduced spices, then so valuable, from the West Indies, and created in 1767 the now renowned Royal Botanical Gardens of Pamplemousses on the site where Labourdonnais had erected in 1736 the fine dwelling house of "Mon Plaisir," and planted fruit and ornamental trees introduced from India and Europe.

In 1790 Mauritius was to a great extent preserved from the commotions of the French Revolution owing to the unpopularity of the decree of the National Convention abolishing slavery on which local agriculture solely depended. The Jacobin leaders and the agents of the Directoire sent to proclaim emancipation were expelled, a Colonial Assembly was elected and nearly all links with the mother country were severed for some time.

A period of intense military activity under General Decaen during the earlier part of the reign of Napoleon followed, when the French privateers using Mauritius as a point of departure for their activities against British trade gained for the island its reputation still enshrined in its motto as "The Star and the Key of the Indian Ocean." The reputation it had acquired became at length a cause of peril. After several indecisive attempts against the island, the English, determined to root out this rival base, prepared for a vigorous attack in 1810 and, after a memorable fight, Mauritius was lost to the French and came under British rule, on the 3rd December, 1810.

The cession of the Isle de France and its dependencies to Great Britain having been confirmed by the Treaty of Paris, the Island, under its old name of Mauritius, definitely passed in 1814 under British rule and since then it has remained uninterruptedly a British possession.

CLIMATE

The climate is tropical but, owing to the high elevation of the central plateau, a large part of the island enjoys a temperate and even bracing climate. The average temperature of this highland region is about 60° Fah. (15.5°C) and the maximum about 80° Fah. (26.6°C). The low-lying coastal region has naturally a higher average temperature ranging from 90° Fah. (32°C) to 70° Fah. (21°C).

Mauritius lies in the track of cyclones, which are liable to occur during the months of December to April. There has been no very severe cyclone since 1892.

The rainfall is irregular and varies according to the locality and elevation. In the central portion of the Island an average yearly rainfall of 175 inches is recorded, whereas regions where there is the lowest rainfall receive less than 40 inches. The rainfall of the coastal districts varies between 25 and 30 inches.

GENERAL OBSERVATIONS

The year 1922 was on the whole a normal year as regards trade, and the inflated figures of the two previous years were not reached. The year's transactions show an excess of expenditure over revenue amounting to Rs. 747,664, thus reducing the surplus balances to Rs. 20,946,490; there are clear indications that the temporary wave of exceptional prosperity has now passed.

Labour difficulties were generally less acute, and the various harvesting and milling operations were carried on under better conditions than were at first anticipated.

After protracted negotiations with the Government of India, the temporary resumption of emigration to the Colony on a very moderate scale, has now been authorized and it is hoped that some at least of the expected labourers will be available shortly.

The good results of the legislative enactments recently passed to restrict the use of liquor are now being felt. In spite of extra vigilance on the part of the Police, there has been a marked reduction in the number of cases of drunkenness and of offences due to alcoholism while the physical and moral welfare of the labouring classes has already been affected to an appreciable extent by the benevolent effects of the radical measures which it was found necessary to take.

Dr. Andrew Balfour, C.B., C.M.G., who visited the island in 1921, has now completed his final Report on the result of his investigations in Mauritius, and his recommendations are being gradually and vigorously carried into effect.

In spite of great difficulties encountered at the start of the campaign undertaken last year under the auspices of the International Health Board, Rockefeller Foundation, for the relief and control of hook worm disease in Mauritius, the soil sanitation work has made real progress owing to the pressing recommendations and unsparing efforts of Dr. G. G. Hampton, Director of the newly created Department of Ankylostomiasis, a branch of the Medical and Health Department.

The water supplied to the town of Port Louis from Grand River North West is far from satisfactory, and it is proposed to provide the capital with Mare-aux-Vacoas water as recommended by Mr. E. Mansergh, of Messrs. James Mansergh & Sons, who visited the island in September-October, 1921. But the construction of the necessary works will take some considerable time to complete, and in the meantime a chlorination plant with filter beds is being put up in accordance with Mr. Mansergh's advice, to purify the Grand River water.

The works in connection with the Port Louis sewerage and the sewage disposal are being continued on the lines recommended by Mr. Mansergh.

The recommendations contained in Messrs Coode, Fitzmaurice, Wilson and Mitchell's Report on Port Louis Harbour have been approved generally. To carry out these suggestions, the services of a fully qualified Engineer have been engaged, and Mr. H. C. M. Austen, A.M.I.C.E., the newly appointed Harbour Engineer, arrived in the Colony on the 7th July last and is now engaged on preliminary work in this connection.

His Excellency Sir Hesketh Bell, K.C.M.G., Governor of Mauritius, on the eve of the expiration of his term of office, left the Colony on leave of absence on the 8th May, 1922, and returned on the 3rd March, 1923, His Majesty the King having been pleased to extend His Excellency's term of office for a further period of eighteen months.

Mr. E. B. Denham, C.M.G., Colonial Secretary, administered the Government of Mauritius during Sir Hesketh Bell's absence.

VITAL STATISTICS AND PUBLIC HEALTH

The estimated population of the Island on the 31st December 1922 was 377,594, or an increase of 1,109 on last Census figures (May 20, 1921).

The number of births and deaths registered during the year was 13,955 and 12,967, respectively.

The birth-rate in the General Population was 39.9 and in the Indian population 35.9 per mille, as against 39.7 and 37.5 respectively, for the previous year.

The death-rates per 1,000 in the two populations for 1922 were 35.5 and 33.3, as against 42.6 and 39.3 respectively for 1921.

The highest death-rate for 1922 is shown in Port Louis and the lowest in Plaines Wilhems. The number of deaths due to malaria and malarial cachexia (highest death-producing factors in Mauritius) is 3,526 against 3,564 the year before. The proportion to total deaths is 27.2%. The next high causes of death are pneumonia and broncho-pneumonia 1,538 in 1922 as against 2,069 in 1921, and diseases of early infancy 1,002 in 1922 as against 1,068 in 1921.

There were 98 cases of plague during the year, of which 75 proved fatal; the figures for 1921 being 375 and 297 respectively. The largest number of cases was, as usual, in Port Louis (65). The percentage of deaths was 78.5.

There were 224 cases of Enteric fever registered in the Island as against 288 in the previous year.

The infantile mortality (deaths of children under one year) gives a ratio of 147.9 per thousand births against 176.7 in 1921. There were 1,678 still-births registered during the year, corresponding to a rate of 120.3 per thousand live-births, as against 113.0 in 1921.

PUBLIC HOSPITALS AND DISPENSARIES

The following statement shows in a tabular form the number of cases treated in the public hospitals and at the dispensaries for the last five years :—

	1918	1919	1920	1921	1922	Average
Hospital admissions	22,845	26,820	22,132	19,127	19,337	22,052.2
Dispensaries ...	57,025	78,546	65,302	60,671	85,638	69,436.4
Outdoor cases ...	5,517	5,300	4,225	5,066	6,491	5,319.8
	85,387	110,666	91,659	84,864	111,466	96,808.4

These figures show an increase as regards hospital admissions, dispensary cases and outdoor cases for 1922 as compared with 1921. The total number of cases is also greater than that for 1921 and for the average of the five-year period 1918–22.

ASYLUMS

The total number of persons certified insane on 31st December 1922 was 742, or 31 less than the year before. This represents a ratio of insane to total population of 1 in 510 or 19.6 per 10,000.

The admissions into the Lunatic Asylum numbered 175. They are classified into : first admissions 89, second admissions 8, readmission from probation 31, readmission from Barkly Asylum

Lunatic Branch Wards and Victoria Hospital 21, 25 admitted on interim order but found not insane after examination by Commissioners in Lunacy and 1 released.

The number of inmates left on 31st December was 486 (250 males and 236 females) at the Lunatic Asylum, and 74 (47 males and 27 females) in the Lunatic Branch wards.

At the Leper Asylum there were 37 patients at the beginning of the year (males 24, females 13). There were 12 admissions during the year (10 males and 2 females), 6 deaths and 7 discharges. There remained 36 lepers (24 men and 12 women) at the end of the year. The construction of the new Leper Asylum is nearing completion and the law relative to compulsory segregation of lepers will soon be brought into operation.

POOR RELIEF

Exclusive of the pauper cases treated at the public hospitals and dispensaries 900 paupers, as compared with 1,017 in 1921, received institutional relief during 1922 at the Barkly Asylum and different religious institutions.

2,330 paupers received pecuniary out-door relief permanently or temporarily, during 1922, as against 2,435 in 1921.

JUDICIAL STATISTICS

There were 2,501 persons committed to prison during the year, being 1,075 less than in the previous year. Of the total 2,422 were males and 79 females.

The total number in custody on 31st December 1922 was 434 as against 562 in the preceding year.

There were 14 deaths among prisoners during the year. 12 prisoners were subjected to corporal punishment. There was no execution. The number of juvenile offenders was 79 as against 94 in the previous year.

CRIMINAL STATISTICS

The cases reported to the Police numbered 19,108 as against 20,793 for 1921, in connection with which 11,645 persons were apprehended by the Police or summoned before the Magisterial Courts. 29 cases were sent for trial before the Supreme Court as against 17 in 1921.

GOVERNMENT FINANCE

REVENUE AND EXPENDITURE

The revenue of the Colony for the financial year ended 30th June, 1922, amounted to Rs. 25,599,994 which is Rs. 1,187,800 in excess of the *normal* revenue of the preceding year, the total revenue of which however amounted to Rs. 40,168,210 including Rs. 15,756,016 on account of the special export taxes on sugar collected under Ordinances 36 and 37 of 1920 for general improvements, etc.

The total revenue for the year 1921–22 exceeded the average *normal* revenue for the preceding five years by Rs. 8,751,726.

The expenditure for the year amounted to Rs. 26,347,658, leaving a net deficit of Rs. 747,664 on the year's transactions and reducing the surplus balances on 30th June, 1922, to Rs. 20,946,490 which is inclusive of Rs. 13,784,640 on account of the Mauritius Improvement and Development Fund at that date.

Of the total expenditure for 1921–22, Rs. 5,612,370 were spent on personal emoluments and Rs. 20,735,288 under other charges. The corresponding figures for 1920–21 were : personal emoluments Rs. 5,006,931 and other charges Rs. 19,722,609.

The increase of Rs. 605,439 under personal emoluments is mainly due to the final revision of salaries recommended by the Salaries Commission and approved by the Secretary of State.

The following is a comparative statement of the Revenue and Expenditure for the last five years :—

Year		Revenue		Expenditure
1917–18	...	13,566,420	...	12,732,153
1918–19	...	13,813,070	...	14,711,349
1919–20	...	18,605,596	...	19,422,903
1920–21	...	40,168,210*	...	24,729,540
1921–22	...	25,599,994	...	26,347,658

PUBLIC DEBT

At the close of the financial year the public debt of the Colony stood at £1,269,124 as compared with £1,273,024 at 30th June 1921. Against this liability there was an accumulated sinking fund of £585,860 as compared with £460,239 at 30th June 1921.

CURRENCY AND BANKING

The currency of the Colony consists of

- (1) The following Mauritius bronze and silver coins which are legal tender up to Rs. 5 :—
  - (a) Bronze : 1 cent, 2 cents and 5 cents.
  - (b) Silver : 10 cents, 20 cents.
- (2) The silver Rupee of India with its silver sub-divisions.
- (3) Nickel coins : 4 and 8 annas of India.
- (4) The Mauritius Government notes of Rs. 50, Rs. 10, Rs. 5 and R. 1.
- (5) Indian currency notes of Rs. 50, Rs. 10 and Rs. 5.

The average value of currency notes in circulation during the year was Rs. 20,360,013 as compared with Rs. 14,635,100 in 1920–21.

The average amount of silver held amounted to Rs. 10,005,494 as compared with Rs. 6,873,260 the average for 1920–21.

The investments (not including Depreciation Fund),which stood at Rs. 7,854,250 on 1st July, 1921, were increased to Rs. 9,879,250 during the year. The Depreciation Fund was increased from Rs. 689,131.50 to Rs. 770,857.76. The Revenue (Interest on investments less addition to Depreciation Fund) was Rs. 321,451.52 and this sum was credited to the General Revenue of the Colony.

The statement of Assets and Liabilities shows a surplus of Rs. 770,857. Valuing the investments at the market rate on 30th June 1922, the surplus would be increased to Rs. 806,198.

Government Savings Banks are established in the nine districts with a head office in Port Louis. The total number of depositors at 30th June 1922 was 36,001 as against 34,969 in the preceding year, with deposits amounting to Rs. 5,815,782 as against Rs. 5,436,602 in the preceding year. The Savings Banks are largely made use of by the Indians, of whom at the 30th June, 1922, there were 14,356 depositors with Rs. 2,700,479 to their credit, as against 14,424 depositors with Rs. 2,425,941 to their credit in the preceding year.

---

* Includes Rs. 13,377,987 and Rs. 2,378,029 collected under Ordinances Nos. 36 and 37 of 1920, respectively (special export taxes on Sugar for general improvements, etc.)

Interest is paid at the rate of 3 per cent.

The private banks are The Mauritius Commercial Bank, the Mercantile Bank of India and a branch of the National Bank of South Africa.

TRADE, AGRICULTURE AND INDUSTRY

ANNUAL PROGRESS OF TRADE

The value of the trade for 1922, exclusive of Dependencies and omitting specie, was Rs. 168,146,150, showing a decrease of Rs. 94,848,652 on the preceding year when the highest figures were recorded.

The comparative values of imports and exports for the last five years are as follows:—

Year	Imports Rs.	Exports Rs.	Total Rs.
1918	42,921,250	55,652,480	98,573,730
1919	47,037,024	127,806,321	174,843,345
1920	86,371,153	127,497,305	213,868,458
1921	105,744,980	157,249,822	262,994,802
1922	77,039,447	91,106,703	168,146,150

The value of the re-exports was Rs 2,006,411.

Rs. 340,425 worth of specie was imported during the year, and Rs. 11,280,897 (of which Rs. 9,745,672 in Indian notes) were exported.

The trade value in 1922 is nearly equal to the average value for the five preceding years, viz: Rs 170,138,954, and is about 2½ times the trade value in 1913 (before the war), namely Rs. 68,899,377.

The fall in trade, as compared with 1921, is due chiefly to the following causes:—

(*a*) Lower prices obtained for sugar, as compared with the exceptional prices of the previous year;

(*b*) Reduction in the importation of many articles which, having been exhausted during war years, were ordered in very large quantities in 1921;

(*c*) Decrease in the quantity of machinery imported to replace hand labour on sugar estates and elsewhere, and of motor lorries and cars to supplement the growing insufficiency of the railways and carts—most of the necessary machinery etc. having already been imported in 1921;

(*d*) Less articles of luxury consumed, owing to altered circumstances;

(*e*) Fall in the use of chemicals for manures, owing to the low price of sugar canes.

The decrease in the value of the Export trade is due to the lower prices obtained for sugar.

IMPORTS

The steady increase in the value of imports from the United Kingdom from 7 million rupees in 1918 to 11 million rupees in 1919, 24 in 1920 and 41 in 1921 was not maintained in 1922, when the total value of the imports from the United Kingdom amounted to Rs. 22,662,048 only.

The principal imports from the United Kingdom were cotton goods, machinery, coal, hardware, soap and cigarettes.

India comes first in importance followed by Great Britain and France as suppliers of goods to Mauritius. The value of articles imported from India amounted to over 24 million rupees in 1922 as against 22 in 1921. Rice was mainly responsible for this increase, the figures being about 15¾ million rupees for 1922 as against 8¾ for the previous year. The principal imports from India were grain, gunny bags, various oils, saltpetre, cotton piece goods, seeds and spices.

France shows a decrease of Rs. 4,409,333 as compared with 1921, the value of importations during the last five years being :

1918 ...	Rs. 963,692	1920 ...	Rs. 4,486,291
1919 ...	1,616,090	1921 ...	11,939,070
		1922 ...	7,529,737

France is the principal source of supply for haberdashery, brimstone, cabinetware, perfumery, olive oil, indigo, wines in cases, claret in casks and tyres.

Imports from the Union of South Africa fell from Rs. 6,660,398 in 1921 to Rs. 3,634,576 in 1922, the value of coals imported having fallen from Rs. 3,065,888 in 1921 to Rs. 477,036 in 1922. The chief imports were coals, wines, salted fish, oats and maize.

The trade with the United States also shows a noticeable decrease, the figures for 1922 being Rs. 2,810,687 as against Rs. 7,275,079 in 1921, the principal imports being motor cars, petroleum and tobacco.

88 motor cars of American makes valued at Rs. 345,458 were imported in 1922 as against 336 valued at Rs. 1,381,253 in the previous year, but the numbers in both cases were far greater than those imported from any other country.

Foodstuffs, drink and tobacco formed the most important class of the import trade, having risen from Rs. 29,959,798 in 1921 to Rs. 36,675,594 in 1922; while manufactured articles, the next largest class of imports, fell from Rs. 62,651,011 in 1921 to Rs. 32,419,619 in 1922.

The imports of machinery and implements fell from over 12 million rupees in 1921 to 5½ million rupees in 1922.

EXPORTS

Sugar.—The quantity of sugar exported in 1922 exceeded that of the 5 previous years except 1919, but the amount realised was smaller than those for the last 2 years owing to the lower prices obtained.

The following table shows the sugar exports for the last six years :—

	1917	1918	1919	1920	1921	1922
	—	—	—	—	—	—
Kilos ...	190,820,657	183,221,889	302,826,129	182,464,726	220,224,689	292,744,249
Rupees ...	54,539,232	53,882,002	125,103,201	124,633,851	154,592,301	88,454,321

Other Domestic Exports.—Other exports than sugar are not of any considerable importance. Aloe fibre heads the list with Rs. 385,754 in 1922, as compared with Rs. 100,234 in 1921.

The quantity and value of aloe fibre exported during each of the last six years are shown below :—

	1917	1918	1919	1920	1921	1922
	—	—	—	—	—	—
Kilos ...	1,213,736	390,671	2,176,521	874,241	287,106	1,007,296
Rupees ...	121,631	140,135	782,285	248,140	100,231	385,754

Other exports are copra, rum, vanilla, undressed skins, coconut oil, &c.

SHIPPING

The following statement shows the number of vessels which entered and left the harbour during the last three years :—

Year		NUMBER OF VESSELS Inwards		Outwards
—		—		—
1920	...	217	...	202
1921	...	229	...	234
1922	...	226	...	225

The total tonnage of shipping entered and cleared in 1922 was 908,997 tons : steamers 866,289 tons and sailing vessels 42,708 tons.

In the coastal trade with the Dependencies some 37 calls were made, with an aggregate of 16,873 tons.

The following steamship lines called at Port Louis although services are irregular and uncertain :—Union Castle Steamship Company, Limited ; British India Steam Navigation Company, Limited ; Messageries Maritimes ; Clan Line ; Ellerman-Harrison Line and the Compagnie Havraise Peninsulaire.

AGRICULTURE AND INDUSTRIES

The industries of the island are entirely agricultural ; there is no mineral wealth of any importance. The whole interests of the Colony are bound up in the sugar industry and practically the whole of the land suitable for growing sugar cane is put under that crop. The area at present under cane cultivation is about 174,000 acres or above one-third of the total area of the Colony and the average production for the past five years nearly a quarter of a million tons. With the exception of British India, Mauritius is thus the largest sugar exporter among the British possessions. Altogether there are 52 sugar factories ranging in productive capacity from 1,500 tons to 15,000 tons the majority of which are modern factories, the standard of equipment being constantly improved.

A striking feature of the sugar industry in recent years has been the rapid increase in the area cultivated by Indians who are a preponderating element in the population, forming over two-thirds of the total.

At the end of 1921 the area cultivated by Indians was estimated to be 79,000 arpents (82,400 acres) or nearly 46% of the total cane cultivation, the figure having almost doubled since 1909. In 1922 however there has been an estimated decrease of about 2,000 acres of land cultivated by the Indians due to lower prices of sugar.

Agricultural labour is almost exclusively Indian in origin and is derived from importations of indentured Indian labour which commenced after the abolition of slavery in 1835 and continued until 1910, when indentured immigration from India was prohibited. There were remaining on the 31st December 1922, 19,392 immigrants settled in the Colony, divided into 13,667 males and 5,725 females. The total number of labourers, including both immigrants and creoles, serving under written contract on estates was 18,660 on 31st December 1922 and 6,082 were engaged under verbal contract.

The Indian population on Estates was estimated at 56,351 on 31st December 1922—*i.e.* 22,522 men, 15,034 women and 18,795 children.

The low quotations for sugar, coupled with the high cost of labour, have led to a reduction of about 5,000 acres in the total area under cane cultivation. In facing the labour problem considerable attention was paid to mechanical cultivation, and a number of farm tractors of various types were introduced into the Colony.

The Sugar Planters Syndicate, which was formed in 1920 and was reconstituted under Ordinance No. 7 of 1921, disposed of the local sugars to private buyers on a co-operative basis.

In 1919, the record year, the exports of sugar reached 302,826 tons, valued at Rs. 125,103,000. The quantity fell in 1920 to 182,465 tons but the value was Rs. 124,634,000. The value of the 1921 crop was Rs. 154,592,000 for 229,225 tons exported, the figures for 1922 being Rs. 88,454,000 for 292,744 tons.

The countries to which the bulk of Mauritius sugar is exported are the United Kingdom and India.

SUBSIDIARY INDUSTRIES

The introduction of agricultural industries other than sugar cane, so as to reduce the economic dependence of the Colony on a single industry, continues to receive attention, and the fall in the price of sugar has aroused real interest in various minor cultivations.

ALOE FIBRE

Aloe fibre is produced mainly from the leaves of Furcrœya Gigantea (Mauritius hemp), a plant which grows wild all over the island, and ranks second amongst the domestic products of the Colony. The area under aloe is estimated at about 20,000 acres.

The high prices obtained for aloe fibre at the commencement of 1922, viz: about Rs. 600 per ton, were not maintained for long and, by the middle of the year, had fallen to Rs. 350 per ton—i.e. a figure only slightly above the cost of production.

The advisability of substituting Sisal for Furcrœya is under consideration. The Government Sisal plantation at Plaine Lauzun has been extended up to a total area of 60 acres, while a private plantation of about 300 acres has been established in the North of the Island.

COCONUTS

No extensions of any great importance occurred in connection with coconut plantations during the year, although there appears to be considerable scope for developments in relation to this industry in certain parts of the Island.

The copra production from the Lesser Dependencies amounted to about 500 tons.

TOBACCO

Efforts to develop the tobacco industry have been continued under the auspices of the Government during the year, and a system of permits for the cultivation of tobacco without payment of tax was continued and extended, resulting at the end of the year in a threefold increase over the area planted in previous years.

The Government Tobacco Factory continued its operations during the year and new machinery in connection therewith was imported from England.

OTHER CROPS

Vanilla.—No developments in relation to vanilla have to be recorded during the year.

Tea.—The local tea industry is on the decline and locally grown tea is unable to compete with the imported article.

Food Crops.—The estimated area under food crops was 8,500 arpents, or an increase of about 3,500 arpents as compared with the previous year. Importations of South African maize continue to affect adversely the local industry, which can hardly be expected to stabilize itself under these circumstances.

LIVE STOCK

The local stock raising industry has been very unfavourably influenced by the importation of cattle on a large scale from Madagascar at very low prices.

The Stock Farm of the Department of Agriculture has been maintained during the year and a sale of stock was held in November 1922.

Importations of Afrikander cattle from South Africa and of Sindhi cattle from India were approved during the year and steps taken to order the animals.

The experimental Dairy at Curepipe, for the stocking of which 25 grade Friesland cows were imported from South Africa, can now supply pure milk to Victoria Hospital at Quatre Bornes, and to Civil Hospital at Port Louis.

CO-OPERATIVE CREDIT SOCIETIES

The Co-operative Credit Societies movement continued steadily during the year, when a number of new shareholders were admitted and 2 new Societies registered.

On December 31st, 1922, there were 36 Societies and the total membership on June 30th, 1922, amounted to 3,641, while the total working capital on the same date amounted to Rs. 494,896, or an increase of Rs. 49,104 as compared with the year ended June 30th, 1921.

Other industries.—There are large engineering works in various parts of the Colony principally engaged in the readjustment and repair of sugar machinery. Apart from manufacturing industries concerned with the preparation of local produce there are few minor industries in Mauritius and it cannot be said that there are any signs of their number increasing in the near future.

The following table will be found of interest:

INDUSTRIES—(EXCLUSIVE OF AGRICULTURE)

Nature of Industry	Number of establishments or manufactories	Approximate number of persons employed	Raw material used	Approximate output	
				Quantity	Annual Value
					Rs.
1. Engineering works	5	1,600	...	...	2,000,000
2. Bakeries ...	65	300	Wheat Flour	3,000 T.	2,500,000
3. Docks (landing, shipping etc.)	4	1,700	...	...	1,000,000
4. Fisheries	...	1,500	Sea Fish	1,200 T.	500,000
5. Lime Burning ...	56	500	Coral	600 T.	20,000
6. Distilleries ...	3	30	Molasses	1,750,000 lit.	500,000
7. Electric Light and Power Supply	3	150	Hydraulic Power	...	......
8. Salt	3	200	Sea water	1,500 T.	150,000
9. Leather Tanning...	2	30	Hides of some 8,000 oxen	...	170,000
10. Ice making ...	...	...	...	900 T.	125,000
11. Oil (ground nuts)	...	...	...	50,000 lit.	100,000
12. Vinegar making ...	...	...	Rum	29,191 lit.	10,000

Among minor industries may be mentioned biscuits, aerated water, furniture, charcoal, bricks, tiles, pottery, aloe ropes, vacoa bags and boot making.

Distilleries.—At present alcohol is produced mainly for consumption as Rum and the output was approximately 1,750,000 litres as against 1,688,000 litres in the previous year. The raw material used is the molasses produce in the cane sugar industry.

The erection of a large distillery and etherification plant at St. Antoine Estate, in the North of the Island, was completed during the year. It is intended that this distillery shall produce power alcohol of the Natalite type for consumption in internal combustion engines. By the end of the year the plant had not commenced operations, but the results of this experiment are awaited with considerable interest since, if it be successful, it will be capable of seriously affecting the economy of the sugar industry.

FORESTS

Public Departments were supplied during the year with 2,879 cords of firewood worth Rs. 31,483, and 7,586 cubic feet of timber valued at Rs. 18,048. The total value of these supplies was thus Rs. 49,531 as against Rs. 41,834 for the previous year.

The revenue derived from sales to the public on account of timber, fuel and minor forest produce during the year was Rs.227,007 as against Rs. 143,202 during 1921, and the miscellaneous revenue Rs. 194 against Rs. 831 in 1921.

FISHERIES

The fishing industry is one of some importance but the methods in use and the business in general still need organisation. The catch is entirely for local consumption and the fish market is poorly supplied with fresh fish, compared with the actual demand.

LEGISLATION

During the year 1922, 41 Ordinances were passed of which the following are the most important of those which are likely to be of interest outside the Colony :—

The Labour Ordinance, 1922 (No. 12), the main object of which is to repeal the penal clauses of the Labour Ordinance of 1878; the only clauses of a penal nature which have been retained are for offences not connected with work.

In order to compel employers to carry out certain of their duties to their servants, e. g. in providing hospitals, provision is made for the withdrawal of the hospital certificate, and, if necessary, the removal of the servants from the estate at fault. Further, all employers are under obligation to provide medical care for their servants.

Contracts of service are to be subject to the Civil Law of the Colony, and all disputes and actions in damages with regard to a breach of contract fall within the jurisdiction of the Stipendiary Magistrate.

Immigrants on their arrival in Mauritius will, in all respects, be free men with complete freedom of contract, and any Immigrant may on reasonable grounds be repatriated to India.

The Liquor Ordinance, 1922 (No. 16), which enables Government to deal with the question of intoxicating liquor as a whole. Intoxicating drugs are not included as provision has already been made for them under existing legislation.

The Licenses (Amendment No. 2) Ordinance, 1922 (No. 17), which introduces a number of amendments in the Licensing Laws in so far as they deal with intoxicating liquor. The passing of the Liquor Ordinance, 1922, necessitated changes in the Licensing Ordinances so as to render the whole law uniform and consistent.

The Distilleries Amendment Ordinance, 1922 (No. 18), which assists in carrying into effect the policy of Government to render intoxicating liquor weaker, dearer and more difficult to obtain.

The Maintenance (Facilities for Enforcement) Ordinance, 1922 (No. 20), which amends the Maintenance Orders (Facilities for Enforcement) Ordinance, 1920 (No. 58 of 1920), in providing for the extension of such Ordinance to any other Colony or Dominion which might be willing to enter into reciprocal relations with Mauritius in the matter.

The Opium (Amendment) Ordinance, 1922 (No. 21, the object of which is:—

(a) to render illegal the importation or exportation of raw opium ;

(b) to impose penalties on persons found in possession of prepared opium ; and

(c) to prohibit opium smoking altogether except in the case of persons undergoing treatment for the opium habit.

Opium smoking is an offence under the Ordinance, but an exception is made in favour of patients undergoing treatment, under the control of the Director of the Medical and Health Department, for the opium habit.

The Merchant Shipping (Amendment) Ordinance, 1922 (No. 23), which amends article 12 of Ordinance No. 19 of 1910 and so brings foreign steamers proceeding to sea with more than twelve passengers from any port in the Colony or in the Dependencies to any other port whatsoever, within the scope of Article 13 of that Ordinance.

The Reciprocal Enforcement of British Judgments Ordinance, 1922 (No. 24), which embodies the provisions of Part II of the Administration of Justice Act, 1920. (10 and 11 Geo. V, C. 81).

The Destruction of Mosquitoes Ordinance, 1922 (No. 25), which makes better provision for the destruction of mosquitoes.

The Gun Ordinance 1922 (No. 36), the main idea of which is to require that a permit shall be obtained in all cases for possessing, carrying or dealing in guns and that a small licence shall be paid by permit holders, no charge being made for the permit.

The Profiteering (Amendment) Ordinance, 1922 (No. 40). In view of the frequency of appeals to the Supreme Court on the question of the kind of goods which could be said to be in common use by the public, it was considered advisable to follow the English Profiteering Act, 1919 [9 & 10 Geo. V, C. 66 section 1 (7)], in placing the matter in the hands of the Executive. This has been effected by article 2 of the Ordinance, the Governor in Executive Council being made to occupy the position of the Board of Trade in England.

Articles 3 and 4 render more drastic the punishment for the offence of profiteering. The taking out of a licence being a condition precedent to every form of trading in the Colony (Licenses Consolidating Ordinance, 1915, article 26), it was thought that these clauses might exercise a very effective check.

EDUCATION

At the close of the year there were 149 primary schools in the Colony: 56 Government, and 93 denominational schools assisted by Government grants, of which 67 were Roman Catholics, 19 Church of England, 2 Presbyterians, 3 Hindoo and 2 Mahomedans. The average attendance was 20,112 as compared with 18,362 in 1921. The attendance of Indian children was 15,842 (boys 13,538, girls 2,304), an increase of 1,566 as compared with the previous year.

The total number of girls being educated in Primary Schools was 9,274 as against 8,830 in 1921.

During the year 217 candidates competed for the Boys' Scholarship Examination which gives admission to the Royal College. Of these 17 only passed. Six scholarships and six exhibitions were awarded. There were 118 students for the four Girls' Scholarships, of whom 16 passed.

393 candidates (176 men and 217 women) entered for Teachers' Examinations during the year, 77 of whom (33 men and 44 women) passed. 6 First Class certificates were granted.

The number of candidates was greater than in the previous year, but the results were less satisfactory, especially as regards the Monitors' Examination at which 46 candidates only out of 304 succeeded in securing a pass.

The number of School Gardens, which are now under the entire supervision of the Department of Agriculture, has been reduced from 28 to 17 as it was found that some were not being properly managed by the Head Teachers, while in others the ground proved quite unsuitable.

SECONDARY EDUCATION

The number of Secondary Schools in the Colony was 9, or 3 less than in 1921. The total number on roll was 637 boys and 605 girls, while the average attendance was 521 and 472 respectively, as compared with 722 boys and 439 girls on roll for the previous year with average attendance of 555 and 385 respectively.

The passes in the Cambridge Local Examinations for December 1922 were :

	Boys	Girls
Juniors	8	7
Seniors	Nil	7

The higher education of boys is conducted at the Royal College ; the year opened with 401 pupils on the roll and on 31st December, 1922, the number stood at 425, the highest figure ever reached. The applications for admission to the Royal College are increasing to such an extent that steps will soon have to be taken to face the problem.

In March, 1922, the erection of the Royal College gymnasium was completed, and physical culture has since formed part of the regular school curriculum.

There are two scholarships offered annually in the highest form, which is examined by the Cambridge University Examination Syndicate, of the value of £1,000 each, tenable for four or five years, with £75 passage allowance to or from England. The holders may join any University in the British Empire or study at any scientific or technical institution in the United Kingdom.

From 1st January 1920 those scholarship allowances were temporarily increased by 30 per cent.

In the Senior Cambridge Local Examinations of December, 1922, 17 boys from the Royal College gained the Senior Certificate, one of whom obtained 3rd class honours.

PUBLIC WORKS

The following are the principal works carried out in 1922 :—

Fixing of overhead runways at the Customs Department for the rapid handling of goods.

Fixing of a new light at Flat Island Lighthouse.

Continuation of construction of cottages for the working classes at Cassis and at the foot of Signal Mountain.

The Tuberculous ward at the Civil Hospital was completed and the Dispensary at the same place was enlarged. Besides these, general repairs were also effected to this hospital.

The construction of Victoria Hospital and of the Royal College Gymnasium was completed.

A War Memorial was erected at the Royal College at Curepipe.

New roofs were fitted to Block A, stores and workshops, Beau Bassin Prisons.

The construction of a Leper Asylum at Powder Mills was nearing completion on 31st December 1922.

Large repairs were effected to Long Mountain Hospital and Cannoniers' Point Quarantine Station.

The erection of an Industrial School at Cassis and of a Training College at Curepipe was much advanced, especially the former.

IRRIGATION WORKS

La Ferme.—The usual works connected with the maintenance of the Irrigation reservoir and channels at La Ferme were carried out satisfactorily. The revenue collected from sale of water for irrigation purposes from La Ferme reservoir amounted to Rs. 78,750 as compared with Rs. 71,600 in 1921.

La Nicolière.—The earthwork of the dam was completed for the first 700 feet. The flank dam was nearly completed. The construction of feeder channels was pushed on vigorously and a great portion was completed.

Midlands Reservoir.—Surveys were carried out to decide on the final alignment of the dam. A further study of the site has shewn that it will be possible, by bringing down the alignment about 1,000 feet, to have a much larger reservoir. This will save the building of an additional reservoir at Merlo and a substantial saving will be effected.

MEANS OF COMMUNICATION

RAILWAYS

The total length of the Mauritius Government Railway is 120 miles exclusive of the Bois Chéri Light Railway of about 24 miles in length. The gauge of the main line is 4 feet 8½ inches. No extensions have been undertaken.

The receipts during the year were Rs. 4,213,586 as against Rs. 4,049,247 in 1921, or an increase of Rs. 164,339.

These figures do not include Government traffic which amounted to Rs. 437,207 and Rs. 390,580 in 1922 and 1921 respectively.

The receipts for passenger traffic showed an increase of Rs. 13,059 as compared with 1921. As regards goods traffic the tonnage conveyed was 693,237 tons as compared with 581,134 tons in the previous year, with a corresponding increase of Rs. 152,249 in the earnings.

The working expenses for the year amounted to Rs. 5,633,530 as against Rs. 6,365,875 in the preceding year, or a decrease of Rs. 732,345.

The capital expenditure was Rs. 32,477,381 at 31st December 1922.

The total expenditure, including new works, in 1922 was		Rs. 7,669,693
The earnings during the year were		4,213,586
showing a loss of		Rs. 3,456,107
If to this figure be added :—		
The interest on the Railway Debt	Rs. 381,917	
The Sinking Fund	99,030	
Pensions to retired officials	68,081	
		549,028
		Rs. 4,005,135
and the value of traffic on account of Government Departments (which is not included in the earnings shown above) be deducted		437,207
the total loss to the Colony was		Rs. 3,567,928

Arrangements have now been made for treating the Mauritius Railways as a commercial undertaking, and for keeping the Railway revenue and expenditure separated from those of the Colony. The Railway rates have been recently increased to an appreciable extent and it is hoped that, with the additional revenue to be thus obtained and the gradual formation of a Railway Renewals Fund, the finances of that department will soon be placed on a sound and proper footing.

BOIS CHERI LIGHT RAILWAY

There is a light railway of 2 feet 6 inches gauge running from the Savanne branch. The total goods traffic carried in 1922 amounted to 28,077 tons, of which 25,588 tons were sugar canes, as against a total traffic of 15,555 tons including 11,536 tons of sugar canes in 1921.

The actual working expenses for 1922 were Rs. 67,988 and the total earnings Rs. 23,989, including Rs. 3,271 on account of work done for Government Departments.

ROADS AND BRIDGES

The Colony is well served by road communications, there being altogether 700 miles of road open for traffic. The care and maintenance of the streets of Port Louis, which were formerly under the control of the Municipality, have now passed under the charge of the Public Works Department who are responsible for the upkeep of about 550 miles, the remainder being maintained by the Township and District Boards. The responsibility for maintenance is a heavy one, for many of the roads, bridges and culverts were built for light traffic only and the development of motor transport has put upon many of these roads a strain which they were not primarily intended to bear.

The total number of motor vehicles licensed on 31st December, 1922, was 2,111—cars 1,733, lorries 139, motor cycles 239.

In Port Louis the principal thoroughfares, where there is a heavy traffic, are being reconstructed with tar macadam and tarco is being used for this work.

The bridges are being kept in a proper state of repairs and the old timber bridges in Port Louis are being gradually reconstructed in ferro-concrete. Ten of these were rebuilt during the year, also a good number of small bridges under 20′ span.

POST AND TELEGRAPH SERVICES

The total revenue from the Post Office in 1922 amounted to Rs. 422,806 being 18,706 more than that of the previous year. The total expenditure amounted to Rs. 307,619, showing a decrease of Rs. 9,165 as compared with 1921. The excess of revenue over expenditure was Rs. 115,187 as against Rs. 87,316 in 1921.

The Royal Naval Wireless Telegraph Station at Rose Belle was closed by the Admiralty on June 30, 1922, but has now been taken over by the Mauritius Government. The Station will be provided with less powerful machinery and will be re-opened at an early date. A temporary wireless station on the Tug *Labourdonnais* was opened for public correspondence on August 1, 1922.

TELEPHONES

Telephonic communication constituted and owned by the Oriental Telephone and Electric Company, Limited, has been gradually increasing and at the close of the year there were seven public exchanges open, with 1,762 miles of wire. Important improvements are in hand, including the substitution of underground for aerial wires for the trunk lines, as well as for subscribers' lines in the congested areas, and switchboards of modern design for the larger exchanges. These works are nearing completion and the cables and switchboards will be brought into commission during 1923.

MAURITIUS

ANNUAL GENERAL REPORT FOR 1923

SITUATION AND AREA

Mauritius lies off the coast of Africa, in the South Indian Ocean, some 500 miles East of Madagascar, between 57°18′ and 57°48′ E. long., and 19°50′ and 20°31′ S. lat. Its official time is four hours fast on Greenwich (Ordinance 6 of 1906). Its extreme length is 38 miles, its extreme breadth 29 miles; and its area covers 720 square miles = 460,800 acres. The density of population is very high, being a little over 500 persons per square mile for the whole Island.

The largest town is Port Louis, the chief port and administrative capital, which has a population of about 50,000. The towns of the interior are all of recent growth. Curepipe, the residential capital, which lies at an altitude of 1,800 feet, situated at the highest part of the central plateau, has about 20,000 inhabitants. The smaller towns of Vacoas, Phœnix, Quatre Bornes, Rose Hill and Beau Bassin are situated at lower levels on the same plateau. The principal towns and villages in country districts are Mahebourg, Rose Belle, Souillac, St. Pierre, Moka, Flacq and Pamplemousses.

The island is essentially of volcanic origin, although signs of an older formation are noticeable at some places (R. Thompson—1880). Its age is difficult to estimate owing to the misleading nature of the effects of cyclones and floods on its rocks. The deep river gorges, cut in hard basalt, point to considerable age, but all that can be said is that it is probably older than its immediate neighbours, Réunion and Rodrigues, and certainly more stable. (J. S. Gardiner).

The Dependencies comprise a large number of small islands the nearest of which is 230 miles, the most northerly being about 1,200 miles away, 6° S. lat. Rodrigues, the largest, with an area of 42 square miles, and a population of 6,924—(3,441 males, 3,483 females), is 350 miles to the East of Mauritius, while lesser islands of some importance comprise Agalega, the Carcados Carajos group, and Diego Garcia, the largest of the Chagos Archipelago.

At the Census of May, 1921, the population of the Lesser Dependencies was ascertained to be 1,810—(1,038 males, 772 females).

HISTORY

Mauritius is said to have been first discovered by the Portuguese in the beginning of the sixteenth century—probably between 1507 and 1512, but not later than 1527, when the island is shown on an official map under the name of *Santa Apollonia*, borne in common with the other islands known later as the Mascarenes (Réunion and Rodrigues) after the great navigator Dom Pedro Mascarenhas.

The Portuguese named the island *Itha da Cirnos*, or *Swan Island*, from the big birds resembling swans found on shore.

There is no record of any permanent settlement by the Portuguese who, for nearly a century, only used the Island as a port of call for repairs and supplies.

The Island was still entirely uninhabited when, on the 18th September, 1598, a Dutch squadron of five vessels anchored in the South Eastern Port to which the Commander, Admiral Wybrandt Van Warwyk, gave his own name. He took possession of the Island on behalf of his Government and named it Mauritius, in honour of the Statholder, Prince Maurice de Nassau, but within fourteen days he set sail leaving nobody on shore.

In 1613 the English seaman Captain Castleton, of the *Pearl*, visited the Island, which he found unoccupied, but it was only in 1638 that a first attempt at colonisation was made. On the 6th May of that year Cornelisz Simonsy Gooyer, appointed Governor of Mauritius by the "Compagnie Neerlandaise des Indes," landed at Warwick-Haven or South Eastern Port. Fortifications, stores and dwelling houses were built at the place now called Old Grand Port, and thirteen families established themselves at the "13 Cantons" close by. These were followed by other settlers who established themselves in the neighbourhood, where Mahebourg now lies. Twenty years after, on the 16th July, 1658, the Island was abandoned, and was again reoccupied on the 26th July, 1664. During this second attempt at settlement, which extended over a somewhat longer period, the fortifications and houses erected originally and which had been destroyed by a hurricane in 1644 were rebuilt. At Flacq some efforts towards development and cultivation were made without much success whilst the district was only too successfully denuded of its ebony trees. A Royal Garden was created and new regions, such as Port North West, Black River, and perhaps Plaines Wilhems, were inhabited, but the settlement did not prosper, and, discouraged by the difficulties of the enterprise, the Dutch finally abandoned the Island in 1710. Their occupation was disastrous so far as natural resources were concerned as the colonists denuded the forests of their valuable timber and almost exterminated the interesting natural fauna.

On the 20th September, 1715, Guillaume Dufresne, commanding the French vessel *Le Chasseur*, arrived at Port Nord Ouest, took possession of the Island in the name of Louis XV, King of France, and called it "Isle de France." Settlement, however, was only effected six years later when, on the 23rd September, 1721, the Chevalier Jean Baptiste Garnier du Fougerai, commanding the *Triton* of St. Malo, resumed possession for the "Compagnie des Indes Orientales," after landing at Isle aux Tonneliers in Port Nord Ouest which he named Port Louis. He was accompanied by a few French families from the neighbouring island of Réunion, who had come to settle, and from that time Mauritius never ceased to be inhabited.

In 1735, Mahé de Labourdonnais succeeded M. Dumas as Governor. He was a man of rare capacity and it is not too much to say that by his own teaching and example he laid the foundation of the future prosperity of the Island. He left the Island in 1747 and his successors had but to follow the path opened out to them to reap profit and success.

Conditions, however, soon became difficult for the settlers owing to the ever-increasing exactions of the "Compagnie des Indes," and the French Government was forced to assume direct control of affairs in 1764.

Under the new Government the burden of administration was shared between the Governor and an Intendant. The first of these, Pierre Poivre, introduced spices, then so valuable, from the West Indies, and created in 1767 the now renowned Royal Botanical Gardens of Pamplemousses on the site where Labourdonnais had erected in 1736 the fine dwelling house of "Mon Plaisir," and planted fruit and ornamental trees introduced from India and Europe.

In 1790 Mauritius was to a great extent preserved from the commotions of the French Revolution owing to the unpopularity of the decree of the National Convention abolishing slavery on which local agriculture solely depended. The Jacobin leaders and the agents of the Directoire sent to proclaim emancipation were expelled, a Colonial Assembly was elected and nearly all links with the mother country were severed for some time.

A period of intense military activity under General Decaen during the earlier part of the reign of Napoleon followed, when the French Privateers using Mauritius as a point of departure for their activities against British trade gained for the Island its reputation still enshrined in its motto as "The Star and the Key of the Indian Ocean." The reputation it had acquired became at length a cause of peril. After several indecisive attempts against the island, the English, determined to root out this rival base, prepared for a vigorous attack in 1810 and, after a memorable fight, Mauritius was lost to the French and came under British rule, on on the 3rd December, 1810.

The cession of the Isle de France and its dependencies to Great Britain having been confirmed by the Treaty of Paris, the Island, under its old name of Mauritius, definitely passed in 1814 under British rule and since then it has remained uninterruptedly a British possession.

CLIMATE

The climate is tropical but, owing to the high elevation of the central plateau, a large part of the island enjoys a temperate and even bracing climate. The average temperature of this highland region is about 60° Fah. (15.5°C) and the maximum about 80° Fah. (26.6°C). The low-lying coastal region has naturally a higher average temperature ranging from 90° Fah. (32°C) to 70° Fah. (21°C).

Mauritius lies in the track of cyclones, which are liable to occur during the months of December to April. There has been no very severe cyclone since 1892.

The rainfall is irregular and varies according to the locality and elevation. In the central portion of the Island an average yearly rainfall of 175 inches is recorded, whereas regions where there is the lowest rainfall receive less than 40 inches. The rainfall of the coastal districts varies between 25 and 30 inches.

GENERAL OBSERVATIONS

The year 1923 was on the whole satisfactory as regards trade, and the surplus balances on the 30th June, 1923, amounted to Rs. 8,678,408, exclusive of the unexpended balance of the proceeds of the special tax raised under Ordinance No. 36 of 1920 for general improvements, etc., together with accrued interest, amounting to Rs. 13,784,640.

Weather conditions were unfavourable during the growing season of the sugar-cane and caused an appreciable reduction of the crop, the final production figures for the 1923-24 campaign having been 201,550 Metric tons (198,356 English tons).

Sugar prices were, in the mean, remunerative, the average nett sale price having been Rs. 13.86 per 50 kilogrammes. The conditions under which local sugars were marketed were no doubt greatly improved by the operations of the Planters' Sugar Syndicate.

Labour difficulties were greatly reduced by the considerable progress made in the use of farm tractors, and by the introduction of labourers from India.

Mr. E. B. Denham, C.M.G., Colonial Secretary, was appointed Colonial Secretary of Kenya in August 1923 and was replaced by Mr. E. A. Grannum, C.M.G., Receiver General.

The speech with which His Excellency the Governor (Sir Hesketh Bell, K.C.M.G.,) opened the Session of the Legislature on the 10th June last gives a clear and complete account of the general condition of the Colony during the year 1923 and is here inserted:—

"HONOURABLE GENTLEMEN OF THE COUNCIL OF GOVERNMENT.

" It is once more my privilege to open a Session of this Legisla-" ture, and I am fortunate in being able to do so under circumstances " which point to a continuance of the prosperity and progress which " have characterised the history of the Colony in recent years.

" The twelve months which have elapsed since I last stood on " this dais have covered a period of general welfare and tranquillity. " With the exception of a gale of some severity, which passed over " the Island in January last and which did a moderate amount of " damage, climatic conditions have been all that could be desired " from the point of view of the agriculturalist.

Crop prospects.

"Though the sugar crop of 1923 was considerably " below the average the appearance of our plantations " to-day gives promise of one of the finest crops ever reaped in the " Colony.

" As the subject of *Health* is of the most vital importance to our " community, I will give that matter the first place in the short " review of the state of the Colony which I now propose to lay before " you.

Great improvement in health of Colony.

" The effects of the special measures which were " started three years ago to improve the general health " of the community are already manifesting themselves to a remark-" able degree. The progress is, indeed, far greater than we had

" dared to hope, and I venture to quote a few figures showing the
" steady amelioration of our vital statistics in recent years :—

	1919	*1920*	*1921*	*1922*	*1923*
" Mean Death-Rate for the whole island ...	35.5*	32.3	40.3	34.5	28.5
" Excess or otherwise, of Births over Deaths	−131*	+1,018	−799	+988	+3,101

" The improvement in the health of Port Louis is equally
" striking :—

	1919	*1920*	*1921*	*1922*	*1923*
" Mortality in Port Louis ...	2,605*	1,897	2,723	2,173	1,738

" The fact that the rainfall during 1923 was below the average
" may have had something to do with the reduction of diseases due to
" humidity, but there can be no doubt that the steady reduction of
" the mortality and the growth of the population, shown during the
" past three years, must be due, to a large degree, to the energetic
" measures which have been taken during that period to improve our
" sanitary conditions. We are strengthened in believing that such is
" the case when we note that during the first months of the present
" year the death-rate continues to show a steady reduction in spite of
" the fact that the rainfall has, in many parts of the island, been far
" above the average. We have, in fact, to go back 44 years to find a
" death-rate as low as that recorded for April last. I feel sure that
" credit will be ungrudgingly given to the Officers of the Medical
" and Health Department for their instrumentality in contributing
" to such satisfactory results.

Campaign against hook-worm.

" To the success of the campaign against ankylos-
" tomiasis, which has been conducted during the
" past two years, must also be ascribed much of the improved health
" among the people of those districts in which action has been taken.
" I know that the whole Colony is grateful to the International
" Health Board for the help that has been given to us in that
" connection, and I trust that there will be no relaxation, in the
" future, of the consistent and continuous efforts which are required
" to obtain lasting and radical results in this connection.

High rate of Infant Mortality.

"Notwithstanding the general improvement in the
" death-rate, infant-mortality is still terribly high.
" Children under five years of age accounted last year for one third
" of the total number of deaths, and this high proportion shows how
" very urgent is the need for the better care of maternity cases and
" of new-born infants. The Council will be invited to make special
" provision in that connection.

" The Legislature will also be asked to devote a considerable
" sum to the improvement of our hospital for Mental cases. A
" thorough re-organisation of the whole institution is required, so
" as to bring to those afflicted ones, who are detained there, in-
" creased comfort and greater hopes of recovery.

---

* After deduction of deaths due to the great epidemic of influenza.

Expenditure out of the "Improvement and Development Fund."

"The Improvement and Development Fund, which "was constituted three years ago, has provided the "means for carrying out a number of other measures "which are conducive to the general promotion of "health among our people. That Fund, which originally amounted "to about Rs. 14,000,000 still stands at almost the same figure, "although we have, in the interval, spent more than Rs. 2,500,000 "out of it. The money contributed by the sugar-planters was very "profitably invested and we have, so far, been able to do little more "than spend the income of the Fund. From that source, we have, "during the past two years, spent about Rs. 900,000 on the improvement of the water supplies in the country districts.

Improvement of water supplies.

"Twenty-four different localities now enjoy pure "water in lieu of the heavily polluted liquid which "their people used to be obliged to consume. Much still remains to "be done before adequate supplies of pure water are assured to the "whole population of the island, but there is good reason to hope "that this desirable consummation will in time be attained.

"The scheme for providing Port Louis with water from the "Mare-aux-Vacoas has been held in suspense pending a test of "results that may be obtained from the chlorination of the water "from the Grand River. The chlorinating plant is expected to be "ready for operations in two or three months' time, and we will then "be in a position to say whether it will be necessary or not to incur "the large outlay that would be entailed by bringing water from the "Mare-aux-Vacoas.

New Leper Asylum.

"I am happy to be able to record the fact that the "lepers have at last been transferred from their old and "inadequate quarters to an up-to-date Asylum at Pamplemousses. "Although the expenditure under this head has been considerable it "is a consolation to know that these unfortunate people are now "located in healthy and cheerful surroundings, where they can enjoy "such happiness as may be obtainable under their terrible affliction. "I take this opportunity of recording, once more, our heartfelt "thanks to those admirable Sisters of Charity who are devoting "their noble lives to these pitiful sufferers.

"The improved health of Port Louis is undoubtedly due to the "progressive measures that are being taken by the sanitary authorities "in various directions. The population is evidently becoming alive "to the benefits to be derived from the orderly disposal of house "refuse and the avoidance of conditions that are favourable to the "breeding of mosquitoes. There seems to be reason to believe that "the day is not far distant when Port Louis will be as healthy as any "other city of its size in the tropics. The tarring of some of the "main streets and the steady improvements in buildings are "contributing to make the capital gradually worthy of the Colony.

Improvement of the Harbour.

"Questions relating to the improvement of our "port occupied much of the attention of the last "Council, and a Resolution was finally adopted providing for "dredging the harbour to a depth of 32 feet and for the provision of

" certain deep-water quays. The total expenditure has been estimated " at about Rs. 4,000,000, and it is proposed that the money should be " provided by the Improvement and Development Fund. These " proposals have been submitted to the Secretary of State and are " awaiting his decision.

Workmen's dwellings.

" The solicitude of the Council for the improve- " ment of the conditions under which live the poorer " classes of Port Louis was clearly shown by the alacrity with which " it authorised a loan of a million rupees for the provision of " workmen's dwellings. This scheme is one which is very near my " heart, and it is, I am sure, a satisfaction to everyone to note the " rapidity with which the attractive suburb at Cassis is springing up. " The improved health of everyone living there is clearly manifest, " and applications for cottages are far in excess of our capacity to " meet them. The population of the village is already considerable, " and I hope to hear, in the days to come, that it has become ten " times as great. There is no truer saying that " a man lives up to or " down to the standard of his dwelling." The pretty gardens around " the cottages and the efforts of the occupants to rise to their " surroundings are evidences of the strong desire of our people to " attain a higher social status and especially to obtain improved " conditions for their children. Any judicious help given to them in " this direction will assuredly tend to the general welfare of the " Colony and to a happy community of interests between the various " classes of our population.

Industrial Schools.

" The Industrial School at Plaine Lauzun has " now been thoroughly established, and I trust that " Honourable Members will show their interest in this Institution by " visiting it now and then. Some fifty lads are now in training there " and are rapidly acquiring a knowledge of various trades of daily " utility. A handsome building containing offices and lecture rooms " has just been completed and arrangements are being made for " officers of the Public Works Department to give there, in the " evenings, lectures and instruction to artizans and others on a " number of professional subjects. The Technical School at Port " Louis, which was established four years ago, continues to produce " excellent results, and large numbers of boys from the primary " schools are attending it.

" An Industrial School has also recently been created at Beau " Bassin in the buildings of the Barkly Asylum, and is already " proving a marked success. The boys who used to form the so-called " ' Industrial School ' at Rose Hill have been drafted into this new " Institution, and anyone visiting the place will be most favourably " impressed by the improved physique and general condition of those " waifs and strays. This school is also giving technical instruction to " boys from the Primary Schools of Rose Hill and Beau Bassin.

Brick and Tile factory.

" The Brick and Tile Factory at Calebasses has " now thoroughly proved its value. An additional kiln " has recently been added, and the establishment is now able to " produce about 80,000 bricks a month. The greater part of them

" are now being used in the construction of dwellings in the Model
" Village, and it has already been clearly proved that building in
" bricks is the cheapest, coolest, and most suitable of all forms of
" construction. I venture to prophesy that the day is not far distant
" when the use of bricks will become general in Mauritius. With
" the arrival of the machinery which has been ordered for our
" brickfield the output will be greatly increased and the enterprise
" will then be in a position to accept orders from private parties.

Government dairy.

" It is with satisfaction that I am able to draw
" attention to the success that has attended the project
" for the establishment of a Government dairy at Curepipe. A
" handsome byre on modern lines has been erected, and 50 fine cows
" of the Holstein breed are now installed there. Notwithstanding
" all prognostications to the contrary the results of the dairy during
" the past 2½ years may, I think, be taken to prove conclusively that
" our highlands in the centre of the island are well fitted for the
" raising of cattle, and that milch-cows, under proper conditions,
" thrive remarkably well there. The quantity of milk of high quality
" that is being yielded by our cows is entirely satisfactory. The
" whole of the produce is now being utilised in the various hospitals
" and institutions. I venture to express the hope that this scheme
" will be largely extended so that an absolutely pure supply of milk
" may be secured for the use of infants and invalids at Curepipe
" and elsewhere.

Amendment of the Labour law.

" In order to meet the wishes of the Government
" of India, a most important measure, affecting the
" conditions of labour generally, was passed during the last session
" of this Council. All penal clauses in the Labour Law were repealed,
" and everything savouring of compulsion was removed. I am happy
" to say that, owing to the liberal spirit of the planters, this measure
" has been put into force with a minimum of friction, a fact which
" redounds greatly to the credit of all employers of labour in this
" Colony.

Prospects of the sugar industry through the reduction of the rate of Imperial Preference.

" We are thankful to be able to note that the main
" industry of the island continues to be in a very
" prosperous condition. The prices obtained for the
" last crops were highly satisfactory and good profits
" have been made. Signs are apparent, however, that
" less favourable circumstances may be ahead. The recent reduction
" of the preference in the Home markets, hitherto granted by the
" Imperial Government, is causing much anxiety in the minds of our
" planters. Fears are entertained that the product of this Colony
" may be gradually shut out from its natural market and that it will
" be unable to compete against foreign beet-sugar. It is felt that a
" recurrence of the old unfair conditions, under which the British
" sugar-producing Colonies struggled against bounty-fed beet-sugar
" until they were almost ruined, would be a disaster and it is
" earnestly hoped that a fair and adequate degree of help from the
" Mother Country will always be forthcoming.

Colony's offer of preference to the United Kingdom.

"In this connection I feel sure that the recent "decision of the Imperial authorities to reduce by more "than 50% the preferential rates on sugar will have no "effect on the intention of this Colony to give to certain British "industries the substantial degree of preference in customs duties "which was promised last year. A Bill to that effect will be among "the first to be presented to the Council at its next meeting, and "although its provisions may entail a substantial degree of loss to "the Revenue of this Colony, that loss will be cheerfully borne as "evidence of the desire of Mauritius to assist the industries in the "United Kingdom which are now struggling under difficulties "attributable to the Great War.

Resumption of Indian Immigration.

Great advantages offered.

"The year under review will be notable for the "fact that the immigration of labourers from India was "resumed after a lapse of fourteen years. The conditions offered by this Colony to Indian Immigrants "are so extraordinarily liberal that every objection "against the system which formerly prevailed in this connection has "been removed. Bonuses are given, free passages granted, family "life encouraged, and nothing in the shape of a contract is required. "Every immigrant on arriving here is as free as any other British "subject in the land and enjoys every civil and political privilege. "Work is guaranteed to them at the rates that are current throughout "the Colony, and everthing is done by the Protector of Immigrants "to safeguard their interests. Notwithstanding these remarkable "advantages only some 680 labourers with their families, numbering "altogether 1,236 souls, have arrived from India during the past "twelve months. It is greatly to be regretted that certain political "influences in India should, apparently, persist in dissuading people, "who are now struggling under adverse circumstances, from coming "to this country where hundreds of thousands of their compatriots "have already found wealth, education and political importance. "Negotiations with the Government of India for an extension of the "term during which emigration is to be permitted are still in "progress and will, I trust, shortly be concluded.

Irrigation schemes.

"Closely connected with the main industry of the "Colony are the important irrigation schemes which "have been in progress in recent years. The effects of the great "reservoir at La Ferme are adequately realising the anticipations on "which the project was based. The 'La Nicolière' scheme is "making excellent progress and it is hoped that a certain quantity "of water will be available for distribution next year. The Council "will be asked to authorise a further loan of one million rupees for "the continuation of the work, and it is believed that the original "estimated total cost of Rs. 4,000,000 will not be exceeded. Good "progress is also being made with the construction of a third great "reservoir at Midlands. When these important works shall have "been completed, a large area, which is now unfit for the production "of sugar cane, will be available for that purpose. I cannot pass "away from this subject of irrigation without paying a tribute to "the energy and capacity shown by Mr. de Segrais, the Director of "Public Works, in that connection.

"Important experiments in relation to the effects of irrigation "on our cane lands have been in progress for nearly three years at "Médine, and the deductions that may, before long, be derived, from "those experiments will certainly be of great interest to our sugar-"planters. The keenness shown in this and in many other directions "by the Director of Agriculture and his staff are cordially recognised.

Sugar Planters' Syndicate.

"A Bill was passed during the last Session to "continue the existence of the Sugar Planters' "Syndicate. This Association has abundantly proved its great value "to our leading industry, and enables the voice of sugar-growers of "Mauritius to be heard in the world's markets in a far more powerful "tone than when every planter made his own bargains individually. "I shall always be glad to think that I was not a stranger to the "inception of this very important scheme.

Phytalus Smithi.

"The 'Phytalus Smithi' continues to be a some-"what threatening cloud on the horizon of the sugar-"planter. No less than 43,000,000 of those pernicious little beetles "were captured last year by the organized bands employed for that "purpose, but, although increases of the pest have been noticed in "certain districts, there is every reason to believe that it will "continue to be satisfactorily kept in check.

Necessity for subsidiary industries.

"My desire to see the development of subsidiary "industries has never slackened during the eight years "that I have been in charge of the affairs of this island, "and as the moment of my departure is probably approaching, I feel "that I cannot too strongly reiterate the views that I have often "expressed in the past. So long as Mauritius depends, as she does "at present, entirely on one industry, the position of its people must "always be more or less precarious. Although we believe that, in "the event of less prosperous conditions in the sugar industry, much "could be done by way of concentration of factories and the greater "use of mechanical appliances, there can be no doubt that if the "island possessed other valuable industries besides sugar, the position "of its people would be far safer and more hopeful. It is for this "reason that the object of what is probably my "swan song" is to "adjure the capitalists of Mauritius to give their earnest attention "to various industries which appear to be suited to the conditions of "our island, and which have proved to be remunerative and success-"ful in countries where the conditions of soil and climate closely "resemble those of Mauritius. I know that efforts are, here and "there, being made to establish plantations of cocoanut and fibre, and "that some of these are already proving their success. But I feel "that these efforts are on far too small a scale to be of any avail in "the event of a serious fall in the value of sugar, and it is to be "feared that a long period of stress and difficulty may have to be "traversed before such industries could be of appreciable support to "the life of the Colony. I suggest that it is unwise to postpone "the necessary experiments and efforts until times of distress and "depression are actually upon us, and I venture to urge that now is "the time, when capital is abundant, to take the necessary steps to "safeguard the future. I cannot too strongly urge the

Mauritius hemp.

"advisability of extending without delay our "cultivations of fibre—be they of sisal or of the local "hemp—, and it is therefore, with entire willingness, that I shall, at "an early meeting of the Council, support a petition that has been "addressed to the Government by the aloe-fibre planters of the "Colony for a moderate amount of pecuniary assistance to enable "them to develop their industry.

Sisal fibre plantations.

"Despite the scanty encouragement that has been "given in certain quarters to the Government's "experiments in the cultivation of sisal, the prospects of the small "plantation at Cassis are, I believe, fairly promising. The land is "not as suitable as it might be, and the small area of the venture "precludes pecuniary profits. But the 'Corona' fibre-machine is "now being installed in the neighbourhood of the plantation, and "it is hoped that the presence of this factory, with its immense "possibilities, may encourage the owners of many thousands of "acres of adjacent lands, which are now producing nothing, to grow "sisal and to work the factory on a co-operative basis. It has been "proved in every tropical country that sisal can only be profitably "produced on large areas and unless this project be taken up in a "hopeful spirit by the adjacent owners of land it is foredoomed to "failure. I may say, in this connection, that there is hardly a "British territory, within the tropics, of which its Government has "not considered it wise to make considerable efforts and to spend "much money in trying to encourage the establishment of a sisal "industry. In some cases those experiments have failed, in others "they have proved to be a source of much wealth. I most sincerely "hope that the very small efforts made by my Government in that "direction may find themselves ultimately in the latter category.

Tobacco factory.

"Another of the minor industries which I "commend to the earnest attention of landowners is the production "of tobacco. The experimental efforts of the Government in that "direction, during the past four years, have been so successful that "a notable area of land is now devoted to the production of leaf. "The factory that is being managed by the Department of "Agriculture is now so well equipped that several tons of excellent "tobacco, equal in every way to the product imported from Réunion, "have been produced. Machine-made cigarettes are also now being "turned out. Unfortunately certain parties who are deeply interested "in maintaining the very profitable monopoly which they have "hitherto exercised as regards the sale of foreign tobacco, appear to "be bent on boycotting the product of Mauritius. Sales from the "Government Factory have practically ceased, and this budding "industry, which was so full of promise, is menaced with extinction. "The Council will be asked, at an early date, to take such measures "as will prevent so untoward a result. The magnitude of the "matter will be realised when I state that the imports of tobacco "from Réunion exceed 130,000 kilos a year, valued at about a "million and a half of rupees.

Rodrigues.

"The condition of our chief dependency, Rodrigues, continues to be highly satisfactory. It enjoys a phenomenally low death-rate and the population is increasing to such a degree that it is beginning to advance claims for direct representation in the Legislature. The recent establishment of a branch of the Department of Agriculture is likely to have an appreciable effect on the resources of the island and the prospects of stock-raising, especially as regards the breeding of mules and donkeys, are extremely promising.

Amendment of the Liquor laws.

"I regret to say that the effects of the Liquor Law, passed in 1922 and which were so promising at first, have recently been largely neutralised by the substitution of strongly alcoholised wines for the rum of local production. The excessive consumption of these objectionable wines reached such a stage that, at one of its last meetings, the Council passed a law raising very greatly the import duties on those liquors. In the same way that the consumption of rum has been greatly decreased by making it 'weaker, dearer and harder to get,' so do we now hope that the same measures will reduce to reasonable dimensions the excessive consumption of highly alcoholised wines. The Council will be invited, at an early meeting, to consider proposals for amending certain provisions of the existing liquor laws which need strengthening.

Estimates of Revenue and Expenditure.

"The Estimates of Revenue and Expenditure for the forthcoming financial year have been framed, as usual, on prudent and conservâtive lines, and I commend them to the careful consideration of the Legislature.

Remarkable financial situation.

"The financial position of the Colony continues to be most satisfactory. Although the expenditure on special services and improvements during the past twelve months has been on a considerable scale, it has failed to keep pace with the expansion of the Revenue. Trade has evidently been highly satisfactory, and the Customs receipts have been far in excess of the estimate. So great has been this excess that the Revenue for 1923-24 will exceed the expenditure by nearly 2½ millions of rupees. The balance to the credit of the Colony at the conclusion of this financial year is therefore likely to approach Rs. 11,000,000 without taking into account more than thirteen millions of rupees which are still lying to the credit of the 'Improvement and Development Fund.'

Proposed reduction of taxation.

"It is not often that a Colonial Treasury can complain of being incommoded by its assets, but such is almost the case with us. In spite of liberal expenditure, on a large number of improvements, our surplus balances steadily increase. The moment has evidently arrived for relieving the community, in some degree, of the taxation to which it now submits, and it is with great satisfaction that I may announce to-day that the Secretary of State has authorised me

“ to invite the Council to repeal the law, passed in 1922, under which certain import duties were considerably increased. The degree of preference which it is proposed to grant to certain British manufacturers will also entail a substantial reduction of customs duties on various articles of common use. These measures are expected to entail a loss to the Revenue of about Rs. 550,000 per annum, and provision for this reduction has been made in the Draft Estimates. It appears to me and to my advisers that it would be prudent to postpone the consideration of any other proposals for the further reduction of taxation until the effects of the recent reduction of the advantages lately enjoyed in the English market by our main industry can be ascertained.

Railway Department.

“ The arrangement made last year, by which the accounts of the Railways were kept separately from those of the general administration, has been made definite. The total ordinary expenditure of the Railway department, in 1924–25, has been estimated at Rs. 4,377,293, and the revenue at Rs. 5,108,000. Out of the anticipated surplus, a ‘ Renewals Fund ’ will be formed, so that money may be available in the future for the proper maintenance and improvement of the system without necessitating sudden increases of rates. In the meantime, the Council will be asked to vote Rs. 646,971 from our accumulated surplus for the provision of additional rolling stock and other improvements which are urgently required. I trust that it may be possible at an early date to put into effect many of the recommendations which the recent Commission, appointed to enquire into the administration of the Railway Department, considered it advisable to make for the better working of the system.

Military Contribution.

“ Provision is made in the Draft Estimates for the usual scale of Military Contribution. Mauritius is one of the few British Colonies which enjoys the distinction of paying to the War Office a subsidy in consideration of the maintenance of a garrison of Imperial Troops. The contribution was arranged on the understanding that a considerable force would be stationed in the island, and the subsidy was based on a scale of 5½% of the Colony's Revenue.

Large payments to the Imperial Government.

“ With the growth of the financial operations of the Administration, the contribution has increased in proportion, and the percentage now amounts to a very large sum. These very important subsidies to the War Office have been paid annually by this Government with so little ostentation that few persons outside Mauritius appear to be aware of the fact that, during the past twenty years, this Colony has contributed directly to the British Exchequer a sum of more than eleven and a half millions of rupees (£766,666). I know that I am voicing the sentiments of the Colony when I say that none in Mauritius grudges this contribution to the Mother-Country and that it is given with patriotic sentiments. Nevertheless, there is a "growing feeling that the magnitude of the payment should not be "forgotten when the relations between Mauritius and the United "Kingdom happen to come under consideration. It is also thought "in many quarters that, in view of the disproportion of the payment "to the strength of the garrison, it would be more appropriate if "the contribution were to be divided between the Army and the "Navy.

Extension of Governor's term of office.

"In the course of the last session of the Council, "a Resolution was unanimously adopted, praying that "His Majesty the King might be pleased to extend for "a second time my term of office in this Colony. The members of "the Civil Service, by petition, did me the honour of making the "same request. No definite decision, so far as I am aware, appears "yet to have been arrived at on the matter, but whether my time in "this Colony is to be extended or whether I am soon to hand over "my office to a successor, I can assure the Council, the Civil Service, "and the whole population that I shall ever retain in my heart the "deepest feelings of regard and affection for this charming island in "which I have already spent more than eight years of my life.

"To the Members of this Council, to my colleagues of all ranks "in the Public Service, and to everyone who has given me their "helpful encouragement and loyal advice in the arduous work of "administration, I desire to tender my most earnest and grateful "thanks.

"On behalf of His Majesty the King, I now open this Session "of the Legislature."

VITAL STATISTICS AND PUBLIC HEALTH

The estimated population of the Island on the 31st December' 1923, was 381,678, or an increase of 4,084 on the previous years, figures and of 5,193 on last Census figures (May 20, 1921).

The number of births and deaths registered during the year was 13,879 and 10,778, respectively.

The birth-rate in the General Population was 40.9 and in the Indian population 34.9 per mille, as against 39.9 and 35.9 respectively, for the previous year.

The death-rates per 1,000 in the two populations for 1923 were 29.6 and 28.1, as against 35.5 and 33.3 respectively for 1922.

The highest death-rate for 1923 is shown in Grand Port and the lowest in Plaines Wilhems. The mortality in 1923 was remarkably low. The death-rate for the whole Colony (28.5 per mille) is the lowest since 1891, and for Port Louis the rate (34.1 per mille) is the lowest since 1880. The number of deaths due to malaria and malarial cachexia (highest death-producing factors in Mauritius) was 1,979 as against 3,526 the year before. The proportion to total deaths is 18.3%. The next high causes of death are pneumonia and broncho-pneumonia—1,393 in 1923 as against 1,538 in 1922—and diseases of early infancy—1,026 in 1923 as against 1,002 in 1922.

There were 139 cases of plague during the year, of which 118 proved fatal; the figures for 1922 being 98 and 75 respectively. The largest number of cases was, as usual, in Port Louis (117). The percentage of deaths was 84.8.

There were 150 cases of Enteric fever registered in the Island as against 224 in the previous year.

The infantile mortality (deaths of children under one year) gives a ratio of 139.4 per thousand live-births, as against 147.9 in 1922. There were 1,557 still-births registered during the year, corresponding to a rate of 112.2 per thousand live-births, as against 120.3 in 1922.

PUBLIC HOSPITALS AND DISPENSARIES

The following statement shows in a tabular form the number of cases treated in the public hospitals and at the dispensaries for the last five years :—

	1919	1920	1921	1922	1923	Average
Hospital admissions	26,820	22,132	19,127	19,337	17,069	20,897.0
Dispensaries ...	78,546	65,302	60,671	85,638	53,225	68,676.4
Outdoor cases ...	5,300	4,225	5,066	6,491	12,032	6,622.8
	110,666	91,659	84,864	111,466	82,326	96,196.2

These figures show a decrease as regards hospital admissions and dispensary cases and an increase as regards outdoor cases for 1923 as compared with 1922. The total number of cases is much below that for 1922 and the average of the five-year period 1919–23.

ASYLUMS

The total number of persons certified insane on 31st December, 1923, was 708, or 34 less than the year before. This represents a ratio of insane to total population of 1 in 539 or 18.5 per 10,000.

The admissions into the Lunatic Asylum numbered 194. They are classified into: first admissions 88, second admissions 6, readmission from probation 38, readmission from Barkly Asylum Lunatic Branch Wards 31 and from Victoria Hospital 5 (including 2 from Lying-in-Ward), and 26 admitted on interim order but found not insane after examination by Commissioners in Lunacy.

The number of inmates left on 31st December, 1923, was 457 (253 males and 204 females) at the Lunatic Asylum, and 89 (47 males and 42 females) in the Lunatic Branch Wards.

At the Leper Asylum there were 37 patients at the beginning of the year (males 25, females 12). There were 16 admissions during the year (8 males and 8 females), 2 deaths and 14 discharges. There remained 37 lepers (21 men and 16 women) at the end of the year. The construction of the new Leper Asylum has now been completed, and the transfer of the lepers was effected on the 1st February, 1924. The law relative to compulsory segregation of lepers will be brought into operation at an early date.

POOR RELIEF

Exclusive of the pauper cases treated at the public hospitals and dispensaries 558 paupers, as compared with 900 in 1922, received institutional relief during 1923 at the Barkly Asylum and different religious institutions.

2.104 paupers received pecuniary out-door relief permanently or temporarily, during 1923, as against 2,330 in 1922.

JUDICIAL STATISTICS

There were 1,642 persons committed to prison during the year, being 859 less than in the previous year. Of the total 1,579 were males and 63 females.

The total number in custody on 31st December, 1923, was 358 as against 434 in the preceding year.

There were 8 deaths among prisoners during the year. 21 prisoners were subjected to corporal punishment. There was no execution. The number of juvenile offenders was 58 as against 79 in the previous year.

CRIMINAL STATISTICS

The cases reported to the Police numbered 21,063 as against 19,108 for 1922 in connection with which 12,309 persons were apprehended by the Police or summoned before the Magisterial Courts. 17 cases were sent for trial before the Supreme Court as against 29 in 1922.

GOVERNMENT FINANCE

REVENUE AND EXPENDITURE

The total revenue of the Colony for the financial year ended 30th June, 1923, amounted to Rs. 23,547,734, which is Rs. 2,052,260 below the revenue for the preceding year, but Rs. 4,348,280 above the average revenue for the preceding five years.

The expenditure for the year amounted to Rs. 22,031,176 (exclusive of the sum of Rs. 13,784,640 which has been definitely transferred from Surplus Balances to the special account " Mauritius Improvement and Development Fund ").

The Surplus Balances on the 30th June, 1922, amounted to Rs. 20,946,490, from which should be deducted the sum of Rs. 13,784,640 referred to in the preceding paragraph, thus leaving a balance of Rs. 7,161,850 which, added to the surplus of *normal* revenue over *normal* expenditure during the year, viz.: Rs. 1,516,558, brings the Surplus Balances on the 30th June, 1923, to Rs. 8,678,408.

Of the expenditure for 1922–23, Rs. 5,268,118 were spent on personal emoluments and Rs. 16,763,058 under other charges. The corresponding figures for 1921–22 were : personal emoluments Rs. 5,612,370 and other charges Rs. 20,735,288.

The decrease of Rs. 344,252 under personal emoluments is mainly due to the arrears of salaries as recommended by the Salaries Commission and approved by the Secretary of State having been paid in the year 1921–22.

The following is a comparative statement of the Revenue and Expenditure for the last five years :—

Year		Revenue		Expenditure
1918–19	...	Rs. 13,813,070	...	Rs. 14,711,349
1919–20	...	18,605,596	...	19,422,903
1920–21	...	40,168,210*	...	24,729,540
1921–22	...	25,599,994	...	26,347,658
1922–23	...	23,547,734	...	22,031,176 †

PUBLIC DEBT

At the close of the financial year the public debt of the Colony stood at £ 1,265,724 as compared with £ 1,269,124 at 30th June, 1922. Against this liability there was an accumulated sinking fund of £ 659,832 as compared with £ 585,860 at 30th June, 1922.

CURRENCY AND BANKING

The currency of the Colony consists of :—

(1) The following Mauritius bronze and silver coins which are legal tender up to Rs. 5 :—
  (a) Bronze : 1 cent, 2 cents and 5 cents.
  (b) Silver : 10 cents, 20 cents.
(2) The silver Rupee of India with its silver sub-divisions.
(3) Nickel coins : 4 and 8 annas of India.
(4) The Mauritius Government notes of Rs. 50, Rs. 10, Rs. 5 and R. 1.
(5) Indian currency notes of Rs. 50, Rs. 10 and Rs. 5.

The average value of currency notes in circulation during the year was Rs. 19,175,588 as compared with Rs. 20,360,013 in 1921–22.

The average amount of silver held amounted to Rs. 9,296,338 as compared with Rs. 10,005,494 the average for 1921–22.

The investments (not including Depreciation Fund), which stood at Rs. 9,879,250 on 1st July, 1922, remained the same during the year. The Depreciation Fund was increased from Rs. 770,858 to Rs. 861,370. The Revenue (Interest on investments less addition to Depreciation Fund) was Rs. 418,948 and this sum was credited to the General Revenue of the Colony.

The statement of Assets and Liabilities shows a surplus of Rs. 861,370. Valuing the investments at the market rate on 30th June 1923, the surplus would be increased to Rs. 934,531.

Government Savings Banks are established in the nine districts with a head office in Port Louis. The total number of depositors at 30th June 1923 was 36,103 as against 36,001 in the preceding year, with deposits amounting to Rs. 5,590,934 as against Rs. 5,815,782 in the preceding year. The Savings Banks are largely made use of by the Indians, of whom at the 30th June, 1923, there were 15,150 depositors with Rs. 2,982,994 to their credit, as against 14,356 depositors with Rs. 2,700,479 to their credit in the preceding year.

Interest is paid at the rate of 3 per cent.

The private Banks are The Mauritius Commercial Bank, the Mercantile Bank of India and a branch of the National Bank of South Africa.

---

* Includes Rs. 13,377,987 and Rs. 2,378,029 collected under Ordinances Nos. 36 and 37 of 1920, respectively (special export taxes on Sugar for general improvements, etc.)

† Exclusive of Rs. 13,784,640 transferred to the Mauritius Improvement and Development Fund.

TRADE, AGRICULTURE AND INDUSTRY

ANNUAL PROGRESS OF TRADE

The value of the trade for 1923, exclusive of Dependencies and omitting specie, was Rs. 146,677,496, showing a decrease of Rs. 21,468,654 on the preceding year.

The comparative values of imports and exports for 1913 and the last five years are as follows :—

Year	Imports	Exports	Total
	Rs.	Rs.	Rs.
1913	36,607,671	32,291,706	68,899,377
1919	47,037,024	127,806,321	174,843,345
1920	86,371,153	127,497,305	213,868,458
1921	105,744,980	157,249,822	262,994,802
1922	77,039,447	91,106,703	168,146,150
1923	76,835,565	69,841,931	146,677,496

The value of the re-exports was Rs. 2,141,350.

Rs. 3,200,508 worth of specie were imported during the year, and Rs. 9,453,462 were exported.

The trade value in 1923 was Rs. 37,007,801 below the average value for the five preceding years, viz : Rs. 183,685,297, but was more than twice the trade value in 1913 (before the war) by Rs. 8,878,742.

The fall in trade, as compared with 1922, was mainly due to a large reduction in the sugar exports owing to a smaller crop, the value of the imports for the two years being practically the same, although the quantity of goods imported in 1923 was slightly larger than in the previous year.

IMPORTS

Imported foodstuffs, drink and tobacco fell from Rs. 36,675,594 in 1922 to Rs. 34,174,018 in 1923; while manufactured articles rose from Rs. 32,419,619 in 1922 to Rs. 35,461,532 in 1923, but the imports of machinery and implements fell from 5½ million rupees in 1922 to 2¾ million rupees in 1923.

As in 1922, about two-thirds of the imports in 1923 came from the United Kingdom and India, the latter retaining its position at the head of the list of countries by a narrow margin. France maintained its position in the third place with a slight increase on the preceding year's figures.

The values of the imports from Madagascar, which is our principal source of supply for cattle, and from South Africa were nearly the same as in 1922, whilst increases are recorded from the United States of America, Japan and Germany. Large decreases are shown in the imports from Belgium and China.

The principal imports from the United Kingdom were cotton and woollen goods, machinery, coal, hardware, soap and cigarettes ; and from India grain, gunny bags, various oils, saltpetre, cotton piece goods, seeds and spices.

France is the principal source of supply for haberdashery, brimstone, cabinetware, perfumery, olive oil, indigo, wines in cases, claret in casks and tyres.

The chief imports from the Union of South Africa were wines, salted fish, oats and maize. The value of coals imported from South Africa fell from Rs. 3,065,888 in 1921 to Rs. 477,036 in 1922, and to Rs. 189,065 in 1923.

The principal imports from the United States were petroleum, motor cars, and tobacco.

EXPORTS

Sugar.—The following table shows the sugar exports for the last six years :—

	1918	1919	1920	1921	1922	1923
Kilos ...	183,221,889	302,826,129	182,464,726	229,224,689	292,744,249	223,051,061
Rupees ...	53,882,002	125,103,201	124,633,854	154,592,301	88,454,321	67,227,562

Other Domestic Exports.—Other exports than sugar are not of any considerable importance. Copra and poonac head the list with Rs. 171,094 in 1923, as compared with Rs. 105,720 in 1922 ; aloe fibre coming next with Rs. 164,112 in 1923, as compared with Rs. 385,754 in 1922.

The quantity and value of aloe fibre exported during each of the last six years are shown below :—

	1918	1919	1920	1921	1922	1923
Kilos ...	390,671	2,176,521	874,241	287,106	1,007,296	599,554
Rupees ...	140,135	782,285	248,140	100,234	385,754	164,112

Other exports are rum, undressed skins, coconut oil, &c.

SHIPPING

The following statement shows the number of vessels which entered and left the harbour during the last three years :—

Year	Number of Vessels Inwards	Number of Vessels Outwards
1921	229	234
1922	226	225
1923	207	207

The total tonnage of shipping entered and cleared in 1923 was 928,493 tons : steamers 918,448 tons and sailing vessels 10,045 tons.

In the coastal trade with the Dependencies some 38 calls were made, with an aggregate of 14,794 tons.

The following steamship lines called at Port Louis although services are irregular and uncertain :—Union Castle Steamship Company, Limited ; British India Steam Navigation Company, Limited ; Messageries Maritimes ; Clan Line ; Ellerman-Harrison Line and the Compagnie Havraise Peninsulaire.

AGRICULTURE AND INDUSTRIES

The industries of the island are entirely agricultural ; there is no mineral wealth of any importance. The whole interests of the Colony are bound up in the sugar industry and practically the whole of the land suitable for growing sugar cane is under that crop. The area at present under cane cultivation is about 171,000 acres or about one-third of the total area of the Colony and the average production for the past five years nearly a quarter of a million tons. With the exception of British India, Mauritius is thus the largest sugar producer among the British possessions. Altogether there are

50 sugar factories ranging in productive capacity from 1,500 tons to 15,000 tons, the majority of which are modern factories, the standard of equipment being constantly improved.

A striking feature of the sugar industry in recent years has been the rapid increase in the area cultivated by Indians who are a preponderating element in the population, forming over two-thirds of the total.

At the end of 1923 the area cultivated by Indians was estimated to be 73,600 arpents (76,760 acres) or nearly 45% of the total cane cultivation, the figure having almost doubled since 1909.

Agricultural labour is almost exclusively Indian in origin and is derived from importations of indentured Indian labour which commenced after the abolition of slavery in 1835 and continued until 1910, when indentured immigration from India was prohibited. Immigration was, however, resumed, subject to certain conditions and on a restricted scale, for a period of twelve months ending on 31st May, 1924; and negotiations with the Government of India for an extension of this period are still in progress.

There were on the 31st December 1923, 19,253 immigrants settled in the Colony, divided into 13,639 males and 5,614 females, and including 556 new immigrants (393 males, and 163 females). The total number of labourers, including both immigrants and creoles, serving under written or verbal contract on estates was 18,876 on 31st December 1923.

The Indian population on Estates was estimated at 48,239 on 31st December 1923—*i.e.* 19,063 men, 12,813 women and 16,363 children.

The low quotations for sugar, coupled with the high cost of labour, have led since 1921 to a reduction of about 5,000 acres in the total area under cane cultivation. In facing the labour problem considerable attention was paid to mechanical cultivation, and a number of farm tractors of various types continues to be introduced into the Colony.

The Sugar Planters Syndicate, which was formed in 1920 and was reconstituted under Ordinance No. 7 of 1921, disposed of the local sugars to private buyers on a co-operative basis.

In 1919, the record year, the exports of sugar reached 302,826 tons, valued at Rs. 125,103,000. The quantity fell in 1920 to 182,465 tons but the value was Rs. 124,634,000. The value of the sugar exported in 1921 was Rs. 154,592,000 for 229,225 tons exported, the figures for 1922 and 1923 being Rs. 88,454,000 for 292,744 tons, and Rs. 67,227,000 for 223,051 tons respectively.

The countries to which the bulk of Mauritius sugar is exported are the United Kingdom and, to a smaller extent, India.

SUBSIDIARY INDUSTRIES

The introduction of agricultural industries other than sugar cane, so as to reduce the economic dependence of the Colony on a single industry, continues to receive attention, and the fall in the price of sugar has aroused real interest in various minor cultivations.

ALOE FIBRE

Aloe fibre is produced mainly from the leaves of Furcrœya Gigantea (Mauritius hemp), a plant which grows wild all over the island, and ranked second amongst the domestic products of the Colony until the year 1923, when copra and poonac rose to the second place. The area under aloe is estimated at about 20,000 acres.

The high prices obtained for aloe fibre at the commencement of 1922, viz: about Rs. 600 per ton, were not maintained for long and, by the middle of that year, had fallen to Rs. 350 per ton—i.e. a figure only slightly above the cost of production. In 1923 market conditions were, on the whole, unfavourable.

The advisability of substituting Sisal for Furcrœya is still receiving consideration. The Government Sisal plantation at Plaine Lauzun has been extended up to a total area of 60 acres, while a private plantation of about 300 acres has been established in the North of the Island.

COCONUTS

No extensions of any great importance occurred in connection with coconut plantations during the year, although there appears to be considerable scope for developments in relation to this industry in certain parts of the Island.

The copra production from the Lesser Dependencies amounted to about 800 tons.

TOBACCO

Efforts to develop the tobacco industry have been continued under the auspices of the Government during the year, and the system of permits for the cultivation of tobacco without payment of tax was continued. At the end of the year 1923, 163 acres were under cultivation.

The Government Tobacco Factory continued its operations during the year and new machinery in connection therewith was imported from England.

OTHER CROPS

Vanilla.—No developments in relation to vanilla have to be recorded during the year.

Tea.—The local tea industry is on the decline and locally grown tea is unable to compete with the imported article.

Food Crops.—The estimated area under food crops was practically the same as in the previous year—i.e. about 8,500 arpents. Importations of South African maize continue to affect adversely the local industry, which can hardly be expected to stabilize itself under these circumstances.

LIVE STOCK

The local stock raising industry continues to be very unfavourably influenced by the importation of cattle on a large scale from Madagascar at very low prices.

The Stock Farm of the Department of Agriculture has been maintained during the year but no sale of stock was held in 1923.

The experimental Dairy at Curepipe has been increased and is now housed in a permanent building designed and equipped on the most modern lines. At the Dairy, milk is now being produced in accordance with the dictates of modern sanitary methods, and pure milk is being supplied to Victoria Hospital at Quatre Bornes, and to Civil Hospital at Port Louis. The Dairy now contains 50 Friesland cows.

CO-OPERATIVE CREDIT SOCIETIES

No particular progress has to be recorded during the year in connection with Co-operative Credit Societies.

On the 30th June, 1923, there were 36 Societies and the total membership amounted to 3,660, while the total working capital on the same date amounted to Rs. 442,873, or a decrease of Rs. 52,023 as compared with the year ended June 30th, 1922.

Other industries.—There are large engineering works in various parts of the Colony principally engaged in the readjustment and repair of sugar machinery. Apart from manufacturing industries concerned with the preparation of local produce there are few minor industries in Mauritius and it cannot be said that there are any signs of their number increasing in the near future.

The following table will be found of interest :

INDUSTRIES—(EXCLUSIVE OF AGRICULTURE)

Nature of Industry	Number of establishments or manufactories	Approximate number of persons employed	Raw material used	Approximate output	
				Quantity	Annual Value
					Rs.
1. Engineering works	5	1,600	...	...	2,000,000
2. Bakeries ...	65	300	Wheat Flour	3,000 T.	2,500,000
3. Docks, (landing, shipping, etc.)	4	1,700	...	...	1,000,000
4. Fisheries	...	1,500	Sea Fish	1,200 T.	500,000
5. Lime Burning ...	56	500	Coral	600 T.	20,000
6. Distilleries ...	3	30	Molasses	500,000 lit.	1,431,000
7. Electric Light and Power Supply	4	150	Hydraulic Power	...	......
8. Salt	3	200	Sea water	1,500 T.	150,000
9. Leather Tanning...	2	30	Hides of some 8,000 oxen	...	170,000
10. Ice making ...	...	...	...	900 T.	125,000
11. Oil (ground nuts)...	2	...	...	50,000 lit.	100,000
12. Vinegar making...	...	...	Rum	18,000 lit.	8,000

Among minor industries may be mentioned biscuits, aerated water, furniture, charcoal, bricks, tiles, pottery, aloe ropes, vacoa bags and boot making.

Distilleries.—At present alcohol is produced mainly for consumption as Rum and the output was approximately 500,000 litres as against 1,750,000 litres in the previous year. The raw material used is the molasses produced in the cane sugar industry.

Unexpected difficulties have prevented, so far, the working of the Distillery and Etherification plant at St. Antoine Estate.

FORESTS

Public Departments were supplied during the year with 2,743 cords of firewood worth Rs. 27,857, and 552 cubic feet of timber valued at Rs. 5,394. The total value of these supplies was thus Rs. 33,251 as against Rs. 49,531 for the previous year.

The revenue derived from sales to the public on account of timber, fuel and minor forest produce during the year was Rs.118,435 as against Rs. 227,007 during 1922, and the miscellaneous revenue Rs. 107 as against Rs. 194 in 1922.

FISHERIES

The fishing industry is one of some importance but the methods in use and the business in general still need organisation. The catch is entirely for local consumption and the fish market is poorly supplied with fresh fish, compared with the actual demand.

LEGISLATION

During the year 1923, 37 Ordinances were passed, of which the following are the most important of those which are likely to be of interest outside the Colony :—

The Gandia Ordinance, 1923, (No. 8), which prohibits the cultivation, importation, sale or possession of Gandia (*Cannabis Indica*), was introduced in consequence of a report from the Director of the Medical and Health Department that he was satisfied that, while the average number of male persons confined at any one time in the Lunatic Asylum was about 300, 99 admissions during the last 10 years were solely attributable to the consumption of this substance and that in 20% of all cases of insanity in males Gandia had been the exciting cause. The medicinal preparations specified in the Schedule are excepted as they appear in the British Pharmacopœia and are occasionally prescribed.

The Municipality (Amendment) Ordinance, 1923, (No. 13), which involves a number of changes of great importance to the Municipality, the principal being :—

(1) The abolition of the system of four wards and the return to the old " scrutin de liste " or single general roll for the whole of Port Louis ;

(2) The vesting in the Municipal Council of the power to elect its own Mayor and Deputy Mayor, the only restriction being that such appointment must be confirmed by the Governor ;

(3) The extension of the qualification of voters at Municipal elections to persons in receipt of a yearly salary of Rs. 1,200, and to guardians of minors who are owners of immoveable properties of the value of Rs. 500 ; and

(4) The disqualifying of certain classes of convicted persons and of persons who have allowed judgment debts to remain unsatisfied, from being elected or continuing to sit as councillors.

The Reciprocal Enforcement of British Judgments Ordinance, 1923, (No. 14), under which a judgment obtained in a Superior Court in the United Kingdom, or in any part of His Majesty's Dominions outside the United Kingdom to which this Ordinance applies, may be registered in the Supreme Court of Mauritius.

The Treasury Bills Ordinance, 1923, (No. 20), which provides for the borrowing of money by the issue of Treasury Bills.

The Official Secrets Ordinance, 1923, (No. 22), which adapts to the Colony the Official Secrets Act, 1920, (10 & 11 Geo. 5 Ch. 75). It follows practically *verbatim* the lines of the English Act and of its Schedules except that Section 5 of the Act is omitted. This deals with the registration and regulation of persons carrying on the business of receiving postal packets. Such a business does not exist and is not likely to exist in the Colony.

The Prevention of Cruelty to Animals (Amendment) Ordinance, 1923, (No. 24), the object of which is to help in checking cruelty to animals. By making half of the fine payable to the informer it was considered that more cases would be brought before the Magistrate.

The Veterinary Surgeons Ordinance, 1923, (No. 27), which regulates the practice of Veterinary Surgery. Previous to the passing of this Ordinance there was no law in Mauritius dealing with Veterinary Surgeons.

The Railway (Amendment) Ordinance, 1923, (No. 30), the object of which is similar to that of Ordinance No. 22 of 1880, viz : to render it more difficult for passengers to defraud the Railway. It follows the lines of the latter Ordinance, which it repeals, but is more drastic : a fine of Rs. 50 is introduced in article 3, and increased penalties are throughout enacted for second or subsequent offences.

EDUCATION

At the close of the year there were 151 primary schools in the Colony : 57 Government and 94 denominational schools assisted by Government grants, of which 66 were Roman Catholic, 19 Church of England, 2 Presbyterian, 4 Hindoo and 3 Mohammedan. The average attendance was 22,538 as compared with 20,112 in 1922. The attendance of Indian children was 16,398 (boys 13,863, girls 2,535), an increase of 556 as compared with the previous year.

The total number of girls being educated in Primary Schools was 9,733 as against 9,274 in 1922.

During the year 181 candidates competed for the Boys' Scholarship Examination which gives admission to the Royal College. Of these 33 only passed. Six scholarships and six exhibitions were awarded. There were 140 students for the four Girls' Scholarships, of whom 32 passed.

592 candidates (287 men and 305 women) entered for Teachers' Examinations during the year, 127 of whom (72 men and 55 women) passed. 5 First Class certificates were granted (2 to men and 3 to women).

The number of candidates was greater than in the previous year, but the results were very poor, especially as regards the Monitors' Examination at which 72 candidates only out of 467 succeeded in securing a pass.

The number of School Gardens, which are under the entire supervision of the Department of Agriculture, was 18, as against 17 in the previous year. The progress made in these schools was generally satisfactory.

SECONDARY EDUCATION

The number of Secondary Schools in the Colony was 9, as in 1922. The total number on roll was 708 boys and 618 girls, while the average attendance was 657 and 581 respectively, as compared with 637 boys and 605 girls on roll for the previous year, with average attendance of 521 and 472 respectively.

In the Secondary Schools, exclusive of the Royal College, the passes at the Cambridge Local Examinations held during the year were as follows :—

	Boys	Girls
Juniors ...	8 ..	7
Seniors ...	... ...	10

The higher education of boys is conducted at the Royal College ; the year opened with 500 pupils on the roll and on 31st December, 1923, the number stood at 450, the average attendance for the year being 469.

Since the erection of the Royal College gymnasium in the year 1922, physical culture has been forming part of the regular school curriculum.

There are two scholarships offered annually in the highest form, which is examined by the Cambridge University Examination Syndicate, of the value of £1,000 each, tenable for four or five years, with £75 passage allowance to or from England. The holders may join any University in the British Empire or study at any scientific or technical institution in the United Kingdom.

From 1st January 1920 those scholarship allowances were temporarily increased by 30 per cent.

73 boys from the Royal College sat for the full School Certificate Cambridge Local Examination and 29 passed, of whom 12 qualified for admission to the English Scholarship Class while 12 sat for the supplementary certificate and 7 passed, of whom 3 qualified.

After an interval of about 9 years, the London University Examinations were again held in Mauritius. In January 1923, 3 pupils and 3 Assistant Masters took the Matriculation Examination ; and 2 pupils and 2 Assistant Masters passed in the 1st Division, while 1 pupil passed in the 2nd Division. In July 1923, 3 Assistant Masters sat for the Intermediate Examination in Arts and Science ; of these 2 passed and 1 was referred in one subject.

COLLEGE OF AGRICULTURE

Pending the completion of the buildings for the College of Agriculture, the house at Réduit formerly occupied by the Assistant Director was converted into temporary laboratories and class rooms for the teaching of Sugar Technology, Biology, Agriculture and Physics.

The preliminary works for building the College commenced in March 1923 and on the 11th July, 1923, the foundation stone was laid by Sir Hesketh Bell, K.C.M.G., in presence of the Members of the Council of Government, the Board of Agriculture, and the Board of the Agricultural College. The site selected fronts the main road at Réduit and adjoins the existing head quarters of the Department of Agriculture.

Funds for the maintenance of the College are provided by means of an export tax on sugar of three cents of a rupee per 100 kilos exported, which is levied under Ordinance 2 of 1922 ; the proceeds of this tax are credited to a special fund from which the cost of working is defrayed.

It is proposed to award each year to a former student of the College of Agriculture a laureateship, entitling him to a travelling studentship of two years duration in selected subjects. Selected candidates for laureateships are required to follow courses of instruction prescribed and may, on the completion of their studies, be required to take up positions in the College of Agriculture as Lecturers or Assistant Lecturers on salaries previously fixed.

The first laureateship was awarded in 1922 to Mr. W. H. Edwards, for the purpose of studying Agricultural Entomology and Zoology. Mr. Edwards proceeded to England and was enrolled as a student of the Imperial College of Science and Technology. On the completion of his two years' study in England, his laureateship will be extended for a further period of three months to enable him to study entomological administration in South Africa.

The second laureateship was awarded to Mr. R. Lincoln, who proceeded to England in July 1923 to enrol himself as a student of the School of Agriculture of Cambridge University.

Messrs. Edwards and Lincoln will, it is anticipated, join the College Staff as Lecturers when their courses of training are complete.

PUBLIC WORKS

The following are the principal works carried out in 1923, in addition to maintenance and repairs.

The Leper Asylum at Powder Mills, the Training College at Curepipe and the Industrial School at Cassis have been completed.

Quarters for Postmasters have been erected at Long Mountain and Rivière des Anguilles.

A new Laboratory and Office at Moka Hospital, the Agricultural College at Reduit, a new Dispensary at Curepipe, and an experimental Dairy at Curepipe are under construction.

At Grand River South East and Poudre d'Or, new offices for the Inland Revenue Branch have been built; also a septic tank and filters at Engrais Cathan, Curepipe.

The construction of cottages for working classes at Plaine Lauzun and at the foot of Signal Mountain is being continued.

Large repairs and improvements have been effected to Long Mountain Hospital, Lunatic Asylum, Rose Belle Police and Curepipe District Court.

Pail and Pit Latrines have been constructed in most Government offices and buildings.

WATER WORKS

The hand pump at St. André, Pamplemousses, has been replaced by two pumps driven by oil engines.

Roches Noires Water Supply has been completed.

At "La Cave," large improvements have been made to the pumping plant.

The scheme for supplying water to Quartier Militaire and Providence Jauffret from Rivulet St. Martin has been completed.

The extension of Bambous Water Supply to Medine Railway Station, Medine Estate and La Mecque and the new branch from Mare d'Albert to Malakoff to supply l'Escalier have also been completed.

DRAINAGE WORKS

The construction of the 24" Outfall Sewer is being continued.

A concrete Tipping Chamber has been constructed to receive night soil from undrained portions of the town of Port Louis.

IRRIGATION WORKS

La Ferme.—Revenue collected from sale of water amounted to Rs. 55,900 as compared with Rs. 78,750 in 1922.

La Nicolière.—The earthwork on the main dam has been completed for the first 1,300 feet, the puddle trench excavated and filled all along. Progress on Feeder Channels has been continued and an aqueduct built on Ruisseau Jamblon sixty feet above the river bed, 5 spans of 50 feet on ferro concrete pillars.

Midlands.—The surveys being completed the necessary plans and designs have been prepared and work started on the construction of the dam. The works at the head of the Feeder Channel have been finished and the channel dug on a length of about one mile.

MEANS OF COMMUNICATION

RAILWAYS

The total length of the Mauritius Government Railway is 120 miles exclusive of the Bois Chéri Light Railway of about 24 miles in length. The gauge of the main line is 4 feet 8½ inches. 2¼ miles of the line between Petite Rivière and Beau Bassin Stations have been doubled.

Arrangements have now been made for treating the Mauritius Railways as a commercial undertaking, and for keeping the Railway revenue and expenditure separated from those of the Colony ; and it has been decided that the report on the Railway Department should in future cover the financial year from July 1st to June 30th instead of the calendar year as in the past : hence the following figures for the half-year ending 30th June, 1923.

The receipts during the half-year January to June, 1923, were Rs. 1,867,601 as against Rs. 1,748,474 during the corresponding half-year of 1922, or an increase of Rs. 119,127.

These figures do not include Government traffic which amounted to Rs. 285,376 and Rs. 235,665 during the first half-year in 1923 and 1922 respectively.

The receipts for passenger traffic showed an increase of Rs. 92,429 as compared with the corresponding half-year of 1922. As regards goods traffic the tonnage conveyed was 209,633 tons as compared with 167,749 tons in the corresponding half-year of 1922, with a corresponding increase of Rs. 1,710 in the earnings.

The working expenses for the half-year January to June, 1923, amounted to Rs. 1,899,723, as against Rs. 3,216,971 in the corresponding half-year of 1922, or a decrease of Rs. 1,317,248.

The capital expenditure was Rs. 32,776,002 at 30th June, 1923.

The total expenditure for the half-year ending 30th June, 1923, was		Rs. 3,062,230
from which should be deducted the cost of new works chargeable to capital, amounting to		1,162,507
showing the working expenses to be ...		Rs. 1,899,723
The earnings including Government traffic for the same period were		2,152,977
showing a surplus of		Rs. 253,254
If the interest on the Railway Debt	Rs. 190,959	
„ the Sinking Fund	49,515	
„ Pensions to retired officials ...	31,754	
amounting to		Rs. 272,228
be taken into account, there is a deficit of...		Rs. 18,974

BOIS CHERI LIGHT RAILWAY

There is a light railway of 2 feet 6 inches gauge running from the Savanne branch. The total goods traffic carried from January to June, 1923, amounted to 871 tons, as against 1,447 tons in the corresponding half-year of 1922.

The actual working expenses for the half-year were Rs. 14,906 and the total earnings Rs. 1,036, including Rs. 69 on account of work done for Government Departments.

Proposals are under consideration for placing this line on a sound financial basis, and it is hoped that future returns will show an excess of Revenue over Expenditure.

ROADS AND BRIDGES

The Colony is well served by road communications, there being altogether 700 miles of road opened for traffic, out of which 550 miles are under the charge of the Public Works Department, and the remainder maintained by the District Boards and Townships.

In spite of the heavy motor traffic, the roads have been kept in a very fair condition.

The tarring of roads is being extended and done as rapidly as possible, as it has proved very satisfactory.

The gradual reconstruction of timber bridges in ferro concrete is being continued.

Tombeau bridge was started in 1923 and is well advanced; it is nearly 200 feet long and there are 7 spans of 20 feet each.

The timber bridges in Port-Louis are also being reconstructed in ferro concrete, and it is expected that they will have been completely reconstructed by the end of 1924, thus requiring no further maintenance.

The total number of motor vehicles registered on 31st December, 1923, was 2,433—cars 1,991, lorries 197 and motor cycles 245.

POST AND TELEGRAPH SERVICES

The total revenue from the Post Office in 1923 amounted to Rs. 413,487, being Rs. 9,319 less than that of the previous year. The total expenditure amounted to Rs. 295,176, showing a decrease of Rs. 12,143 as compared with 1922. The excess of revenue over expenditure was Rs. 118,011 as against Rs. 87,316 in 1922.

The Royal Naval Wireless Telegraph Station at Rose Belle was closed by the Admiralty on June 30, 1922, but has now been taken over by the Mauritius Government. The Station was re-opened on the 1st March, 1924.

TELEPHONES

Telephonic communication, constituted and owned by the Oriental Telephone and Electric Company Limited, continues to increase and there are now seven public exchanges open to the public with 3,812 miles of wire (2,085 miles underground and 1,727 miles aerial), giving service to 1,130 subscribers. The system in vogue is Magneto, the switchboards at Port Louis and Curepipe being of the " Reverse Central Battery " variety.

MAURITIUS

ANNUAL GENERAL REPORT FOR 1924

SITUATION AND AREA

Mauritius lies off the coast of Africa, in the South Indian Ocean, some 500 miles East of Madagascar, between 57°18′ and 57°48′ E. long., and 19°50′ and 20°31′ S. lat. Its official time is four hours fast on Greenwich (Ordinance 6 of 1906). Its extreme length is 38 miles, its extreme breadth 29 miles; and its area covers 720 square miles=460,800 acres. The density of population is very high, being a little over 500 persons per square mile for the whole Island.

The largest town is Port Louis, the chief port and administrative capital, which has a population of about 50,000. The towns of the interior are all of recent growth. Curepipe, the residential capital, which lies at an altitude of 1,800 feet, situated at the highest part of the central plateau, has about 20,000 inhabitants. The smaller towns of Vacoas, Phœnix, Quatre Bornes, Rose Hill and Beau Bassin are situated at lower levels on the same plateau. The principal towns and villages in country districts are Mahebourg, Rose Belle, Souillac, St. Pierre, Moka, Flacq, Pamplemousses, Poudre d'Or and Bambous.

The island is essentially of volcanic origin, although signs of an older formation are noticeable at some places (R. Thompson—1880). Its age is difficult to estimate owing to the misleading nature of the effects of cyclones and floods on its rocks. The deep river gorges, cut in hard basalt, point to considerable age, but all that can be said is that it is probably older than its immediate neighbours, Réunion and Rodrigues, and certainly more stable. (J. S. Gardiner).

The Dependencies comprise a large number of small islands the nearest of which is 230 miles, the most northerly being about 1,200 miles away, 6° S. lat. Rodrigues, the largest, with an area of 42 square miles, and an estimated population of 6,783—(3,245 males, 3,538 females), is 350 miles to the East of Mauritius, while lesser islands of some importance comprise Agalega, the Carcados Carajos group, and Diego Garcia, the largest of the Chagos Archipelago.

At the Census of May, 1921, the population of the Lesser Dependencies was ascertained to be 1,810—(1,038 males, 772 females).

HISTORY

Mauritius is said to have been first discovered by the Portuguese in the beginning of the sixteenth century—probably between 1507 and 1512, but not later than 1527, when the island is shown on an official map under the name of *Santa Apollonia*, borne in common with the other islands known later as the Mascarenes (Réunion and Rodrigues) after the great navigator Dom Pedro Mascarenhas.

The Portuguese named the island *Ilha da Cirnos*, or *Swan Island*, from the big birds resembling swans found on shore.

There is no record of any permanent settlement by the Portuguese who, for nearly a century, only used the Island as a port of call for repairs and supplies.

The Island was still entirely uninhabited when, on the 18th September, 1598, a Dutch squadron of five vessels anchored in the South Eastern Port to which the Commander, Admiral Wybrandt Van Warwyk, gave his own name. He took possession of the Island on behalf of his Government and named it *Mauritius*, in honour of the Statholder, Prince Maurice de Nassau, but within fourteen days he set sail leaving nobody on shore.

In 1613 the English seaman Captain Castleton, of the *Pearl*, visited the Island, which he found unoccupied, but it was only in 1638 that a first attempt at colonisation was made. On the 6th May of that year Cornelisz Simonsy Gooyer, appointed Governor of Mauritius by the "Compagnie Néerlandaise des Indes," landed at Warwick-Haven or South Eastern Port. Fortifications, stores and dwelling houses were built at the place now called Old Grand Port, and thirteen families established themselves at the "13 Cantons" close by. These were followed by other settlers who established themselves in the neighbourhood, where Mahebourg now lies. Twenty years after, on the 16th July, 1658, the Island was abandoned, and was again reoccupied on the 26th July, 1664. During this second attempt at settlement, which extended over a somewhat longer period, the fortifications and houses erected originally and which had been destroyed by a hurricane in 1644 were rebuilt. At Flacq some efforts towards development and cultivation were made without much success whilst the district was only too successfully denuded of its ebony trees. A Royal Garden was created and new regions, such as Port North West, Black River, and perhaps Plaines Wilhems, were inhabited, but the settlement did not prosper, and, discouraged by the difficulties of the enterprise, the Dutch finally abandoned the Island in 1710. Their occupation was disastrous so far as natural resources were concerned as the colonists denuded the forests of their valuable timber and almost exterminated the interesting natural fauna.

On the 20th September, 1715, Guillaume Dufresne, commanding the French Vessel *Le Chasseur*, arrived at Port Nord Ouest, took possession of the Island in the name of Louis XV, King of France, and called it *Isle de France.* Settlement, however, was only effected six years later when, on the 23rd September, 1721, the Chevalier Jean Baptiste Garnier du Fougerai, commanding the *Triton* of St. Malo, resumed possession for the "Compagnie des Indes Orientales," after landing at Isle aux Tonneliers in Port Nord Ouest which he named Port Louis. He was accompanied by a few French families from the neighbouring island of Réunion, who had come to settle, and from that time Mauritius never ceased to be inhabited.

In 1735, Mahé de Labourdonnais succeeded M. Dumas as Governor. He was a man of rare capacity and it is not too much to say that by his own teaching and example he laid the foundation of the future prosperity of the Island. He left the Island in 1747 and his successors had but to follow the path opened out to them to reap profit and success.

Conditions, however, soon became difficult for the settlers owing to the ever-increasing exactions of the "Compagnie des Indes," and the French Government was forced to assume direct control of affairs in 1764.

Under the new Government the burden of administration was shared between the Governor and an Intendant. The first of these, Pierre Poivre, introduced spices, then so valuable, from the West Indies, and created in 1767 the now renowned Royal Botanical Gardens of Pamplemousses on the site where Labourdonnais had erected in 1736 the fine dwelling house of "Mon Plaisir," and planted fruit and ornamental trees introduced from India and Europe.

In 1790 Mauritius was to a great extent preserved from the commotions of the French Revolution owing to the unpopularity of the decree of the National Convention abolishing slavery on which local agriculture solely depended. The Jacobin leaders and the agents of the Directoire sent to proclaim emancipation were expelled, a Colonial Assembly was elected and nearly all links with the mother country were severed for some time.

A period of intense military activity under General Decaen during the earlier part of the reign of Napoleon followed, when the French Privateers using Mauritius as a point of departure for their activities against British trade gained for the Island its reputation still enshrined in its motto as "The Star and the Key of the Indian Ocean." The reputation it had acquired became at length a cause of peril. After several indecisive attempts against the island, the English, determined to root out this rival base, prepared for a vigorous attack in 1810 and, after a memorable fight, Mauritius was lost to the French and came under British rule on the 3rd December, 1810.

The cession of the Isle de France and its dependencies to Great Britain was confirmed by the Treaty of Paris, and the Island, under its former name *Mauritius*, has, since 1814, remained uninterruptedly a British possession.

CLIMATE

The climate is tropical but, owing to the high elevation of the central plateau, a large part of the island enjoys a temperate and even bracing climate. The average temperature of this highland region is about 60° Fah. (15.5°C) and the maximum about 80° Fah. (26.6°C). The low-lying coastal region has naturally a higher average temperature ranging from 90° Fah. (32°C) to 70° Fah. (21°C).

Mauritius lies in the track of cyclones, which are liable to occur during the months December to April. There has been no very severe cyclone since 1892.

The rainfall is irregular and varies according to the locality and elevation. In the central portion of the Island an average yearly rainfall of 175 inches is recorded, whereas regions where there is the lowest rainfall receive less than 40 inches. The rainfall of the coastal districts varies between 25 and 30 inches.

GENERAL OBSERVATIONS

The total value of the Trade of the Colony in 1924 amounted to Rs. 128,698,181 as compared with Rs. 146,677,496 in 1923. The Customs Revenue from Imports was Rs. 8,003,463 as against Rs. 7,765,980 in 1923; but the Revenue from Exports amounted to Rs. 2,414,052 as compared with Rs. 2,945,801 in the preceding year.

Weather conditions were markedly unfavourable during the harvesting and milling season, and, as a result, although the tonnage in the field was generally excellent, the sucrose content of the cane was considerably below normal. The Sugar production, however, amounted to 221,000 metric tons as compared with 201,550 metric tons in 1923–24.

The mean prices at which sugar was sold in 1923-24 were Rs. 18.94, but it is estimated that the mean sale price for the 1924–25 season will be about Rs. 12.50 per 50 kilos.

In August 1924, Sir Herbert James Read, K.C.M.G., C.B., was appointed Governor of Mauritius in the place of Sir H. Hesketh Bell, G.C.M.G., whose term of office was on the eve of expiration. Sir Hesketh left Mauritius on the 16th August, 1924, and Mr. E. A. Grannum, C.M.G., Colonial Secretary, assumed the administration of the government from the same date, pending the arrival of Sir Herbert Read.

VITAL STATISTICS AND PUBLIC HEALTH

The estimated population of the Island on the 31st December, 1924, was 387,743 or an increase of 6,065 on the previous year's figures and of 11,258 on the last Census figures (May 20, 1921).

The number of births and deaths during the year was 15,430 and 10,558 respectively.

The birth-rate in the general population was 42.3 and in the Indian population 39.6 per mille, as against 40.9 and 34.9 respectively for the previous year.

The death-rates per 1,000 in the two populations for 1924 were 27.5 and 27.7, as against 29.6 and 28.1 respectively for 1923.

The highest death-rate for 1924 is shown in Black River (36.5) and the lowest in Plaines Wilhems (20.6). The mortality in 1924 was remarkably low. The death-rate for the whole Colony (27.7 per mille) is the lowest since 1880 (28.71), and for Port Louis the rate (34.6 per mille) is the lowest since 1880 (33.5) excepting 1923 (34.1). The number of deaths due to malaria and malarial cachexia (highest death-producing factors in Mauritius) was 1,732 as against 1,979 in 1923. The proportion to total deaths is 16.4%. Other diseases commonly fatal are pneumonia and broncho-pneumonia—1,296 in 1924 as against 1,393 in 1923—and diseases of early infancy—1,075 in 1924 as against 1,026 in 1923.

There were 161 cases of plague during the year, of which 144 proved fatal; the figures for 1923 being 139 and 118 respectively. The largest number of cases was, as usual, in Port Louis (101). The percentage of deaths was 89.4.

There were 107 cases of Enteric fever registered in the Island as against 150 in the previous year.

The infantile mortality (deaths of children under one year) gives a ratio of 129.6 per thousand live-births as against 139.4 in

1923. There were 1,608 still births registered during the year representing a rate of 104.2 per thousand live-births, as against 112.2 in 1923.

PUBLIC HOSPITALS AND DISPENSARIES

The following statement shows in a tabular form the number of cases treated in the public hospitals and at the dispensaries for the last five years :—

	1920	1921	1922	1923	1924	Average
Hospital admission	22,132	19,127	19,337	17,069	18,663	19,266
Dispensaries ...	65,302	60,671	85,638	53,225	52,641	63,495
Outdoor cases ...	4,225	5,066	6,491	12,032	15,570	8,677
	91,659	84,864	111,466	82,326	86,874	91,438

The total number of cases is above that for 1923, but is below the average of the five-year period 1920–24.

MENTAL HOSPITAL

The total number of persons certified insane on 31st December, 1924, was 686, or 22 less than in 1923. This figure represents a ratio of insane to total population of 17.69 to 10,000.

The admissions into the Mental Hospital numbered 240. They are classified into : first admissions 102, second admissions 7, fifth admission 1, readmission from probation 44, readmission from Barkly Asylum Mental Wards 54, from Civil Hospital 6, readmission from leave 1, and 25 admitted on interim order but found not insane after examination by Commissioners in Lunacy.

The number of inmates left on 31st December, 1924, was 444 (244 males and 200 females) at the Mental Hospital and 110 (50 males and 60 females) in the Barkly Mental Branch Wards.

LEPER ASYLUM

At the Leper Asylum there were 38 patients at the beginning of the year (males 22 females 16). There were 2 admissions during the year (1 male and 1 female), 7 deaths and no discharges. The construction of the new Leper Asylum has been completed, and the transfer of the lepers was effected on the 1st February, 1924. Legislation relative to the compulsory segregation of lepers is under consideration.

POOR RELIEF

Exclusive of the pauper cases treated at the public hospitals and dispensaries, 617 paupers, as compared with 558 in 1923, received institutional relief during 1924 at the Barkly Asylum and at different religious institutions.

1,618 paupers received pecuniary out-door relief permanently or temporarily, during 1924, as against 1,546 in 1923.

JUDICIAL STATISTICS

There were 1,297 persons committed to prison during the year, i.e. 345 less than in the previous year. Of the total, 1,238 were males and 59 females.

The total number in custody on 31st December, 1924, was 327 as against 358 in the preceding year.

There were 2 deaths among prisoners during the year. 24 prisoners were subjected to corporal punishment. There was no execution. The number of juvenile offenders was 81 as against 58 in the previous year.

CRIMINAL STATISTICS

The cases reported to the Police numbered 19,558 as against 21,063 for 1923 in connection with which 11,145 persons were apprehended by the Police or summoned by the Magisterial Courts. 9 cases were sent for trial before the Supreme Court as against 17 in 1923.

GOVERNMENT FINANCE

REVENUE AND EXPENDITURE

The total revenue of the Colony for the financial year ended 30th June, 1924, amounted to Rs. 19,897,483, or Rs. 3,650,251 below the revenue for the preceding year, and Rs. 3,990,596 below the average revenue for the preceding five years.

The expenditure for the year amounted to Rs. 16,588,702, thus leaving a surplus over the year's transactions of Rs. 3,308,781 which, added to Rs. 8,678,408—the surplus on the 30th June, 1923,—brings the Surplus Balances on the 30th June, 1924, to Rs. 11,987,189.

Of the expenditure for 1923–24, Rs. 4,543,553 were spent on personal emoluments and Rs. 12,045,149 under other charges. The corresponding figures for 1922–23 were : personal emoluments Rs. 5,268,118 and other charges Rs. 16,763,058.

The decrease of Rs. 724,565 under personal emoluments and of Rs. 4,717,909 under other charges is mainly due to the accounts of the Railway Department being now shewn separately.

The following is a comparative statement of the Revenue and Expenditure for the last five years :—

Year	Revenue	Expenditure
1919–20	Rs. 18,605,596	Rs. 19,422,903
1920–21	40,168,210*	24,729,540
1921–22	25,599,994	26,347,658
1922–23	23,547,734	22,031,176†
1923–24	19,897,483	16,588,702

PUBLIC DEBT

At the close of the financial year the public debt of the Colony amounted to £ 1,632,390 as compared with £ 1,265,724 at 30th June, 1923. Against this liability there was an accumulated sinking fund of £ 701,429 as compared with £ 659,832 at 30th June, 1923.

---

* Includes Rs. 13,377,987 and Rs. 2,378,029 collected under Ordinances Nos. 36 and 37 of 1920, respectively (special export taxes on Sugar for general improvements, etc.)

† Exclusive of Rs. 13,784,640 transferred to the Mauritius Improvement and Development Fund.

CURRENCY AND BANKING

The currency of the Colony consists of :—

- (1) The following Mauritius bronze and silver coins which are legal tender up to Rs. 5 :—
  - (a) Bronze : 1 cent, 2 cents and 5 cents.
  - (b) Silver : 10 cents, 20 cents.
- (2) The silver Rupee of India with its silver sub-divisions.
- (3) Nickel coins : 4 annas of India.
- (4) The Mauritius Government notes of Rs. 50, Rs. 10, Rs. 5. and R. 1.
- (5) Indian currency notes of Rs. 50, Rs. 10 and Rs. 5.

The average value of currency notes in circulation during the year was Rs. 15,645,126 as compared with Rs. 19,175,588 in 1922–23.

The average amount of silver held amounted to Rs. 5,761,521 as compared with Rs. 9,296,338 the average for 1922–23.

The investments (not including Depreciation Fund), which stood at Rs. 9,879,250 on 1st July, 1923, remained the same during the year. The Depreciation Fund was increased from Rs. 861,370 to Rs. 970,085. The Revenue (Interest on investments less addition to Depreciation Fund) was Rs. 420,133 and this sum was credited to the General Revenue of the Colony.

The statement of Assets and Liabilities shows a surplus of Rs. 970,085. Valuing the investments at the market rate on 30th June 1924, the surplus would be increased to Rs. 1,031,543.

Government Savings Banks are established in the nine districts with a head office in Port Louis. The total number of depositors at 30th June 1924 was 36,500 as against 36,103 in the preceding year, with deposits amounting to Rs. 5,356,104 as against Rs. 5,590,934 in the preceding year. The Savings Banks are largely made use of by the Indians, of whom at the 30th June, 1924, there were 15,730 depositors with Rs. 2,687,010 to their credit, as against 15,150 depositors with Rs. 2,982,994 to their credit on 30th June, 1923.

Interest is paid at the rate of 3 per cent.

The Banks are the Mauritius Commercial Bank, the Mercantile Bank of India and the National Bank of South Africa.

TRADE, AGRICULTURE AND INDUSTRY

ANNUAL PROGRESS OF TRADE

The value of the trade for 1924, exclusive of Dependencies and omitting Bullion and Specie, was Rs. 128,698,181, showing a decrease of Rs. 17,979,315 on the preceding year.

The comparative values of imports and exports for 1913 and the last five years are as follows :—

Year	Imports	Exports	Total
	Rs.	Rs.	Rs.
1913	36,607,671	32,291,706	68,899,377
1920	86,371,153	127,497,305	213,868,458
1921	105,744,980	157,249,822	262,994,802
1922	77,039,447	91,106,703	168,146,150
1923	76,835,565	69,841,931	146,677,496
1924	76,415,648	52,282,533	128,698,181

The value of the re-exports was Rs. 1,580,413.

Rs. 4,514,591 worth of bullion and specie were imported during the year, and Rs. 177,150 were exported.

The trade value in 1924 was Rs. 64,607,869 below the average value for the five preceding years, viz: Rs. 193,306,050, and was about twice the trade value of 1913.

The fall in trade, as compared with 1923, was mainly due to the reduced value of the sugar exports.

IMPORTS

As in 1923, about two-thirds of the imports came from the United Kingdom and India, the former occupying the first place on the list of countries. France maintained its position in the third place with a further increase on the previous year's figures. The value of imports from Germany, in 1924, was about four times as great as in 1913.

Notable decreases were recorded in the imports from the Union of South Africa and Madagascar, while the value of the imports from Spain, Belgium, Holland and Ceylon increased by about 50%.

EXPORTS

Sugar.—The following table shows the sugar exports for the last six years:—

	1919	1920	1921	1922	1923	1924
Kilos ...	302,826,129	182,464,726	229,224,689	292,744,249	223,051,061	182,742,235
Rupees...	125,103,201	124,633,854	154,592,301	88,454,321	67,227,562	19,823,753

Other Domestic Exports.—Exports other than sugar are not of any considerable importance. Aloe fibre and copra head the list with Rs. 413,819 and Rs. 224,117 in 1924, as compared with Rs. 164,112 and Rs. 171,094 respectively in 1923.

The quantity and value of aloe fibre exported during each of the last six years are shown below:—

	1919	1920	1921	1922	1923	1924
Kilos ...	2,176,521	874,241	287,106	1,007,296	599,554	1,092,881
Rupees...	782,285	248,140	100,234	385,754	164,112	413,819

Other exports are rum, undressed skins, coconut oil, &c.

SHIPPING

The following statement shows the number of vessels which entered and left the harbour during the last three years:—

	Number of Vessels	
Year	Inwards	Outwards
1922	226	225
1923	207	207
1924	215	210

The total tonnage of shipping entered and cleared in 1924 was 968,209 tons: steamers 958,406 tons and sailing vessels 9,803 tons.

In the coastal trade with the Dependencies some 31 calls were made, with an aggregate of 13,334 tons.

Steamers of the following steamship lines called at Port Louis:—Union Castle Steamship Company, Limited; British India Steam Navigation Company, Limited; Messageries Maritimes; Clan Line; Ellerman-Harrison Line and the Compagnie Havraise Péninsulaire.

AGRICULTURE AND INDUSTRIES

The industries of the Island are entirely agricultural; there is no mineral wealth of any importance. The chief industry is the cultivation of the sugar cane covering about 171,000 acres or one-third of the total area of the Colony, which, with the exception of British India, is thus the largest sugar producer among the British possessions, the production for the last five years averaging about a quarter of a million tons.

There are 50 sugar factories ranging in productive capacity from 1,500 tons to 15,000 tons, but it is anticipated that the number will be reduced as a result of centralization.

At the end of 1923 the area cultivated by Indians was estimated to be 73,600 arpents (76,760 acres) or nearly 45% of the total cane cultivation, the figure having almost doubled since 1909.

Agricultural labour is almost exclusively Indian in origin and was derived from importations of indentured Indian labour until 1910, when indentured immigration from India was prohibited. Immigration was, however, resumed, subject to certain conditions and on a restricted scale, for a period of twelve months ending on 31st May, 1924.

This importation, unfortunately, gave disappointing results. Many of the imported labourers had returned to India by the end of the year, and it is not improbable that shortly all will be repatriated.

In December, an Official Delegate of the Government of India, Mr. Kunwar Maharaj Singh, C.I.E., visited Mauritius for the purpose of reporting on the labour situation in relation to immigration.

There were, on the 31st December 1924, 19,005 immigrants settled in the Colony, consisting of 13,452 males and 5,553 females, and including 1,261 new immigrants (841 males, and 420 females). The total number of labourers, including both immigrants and "creoles," serving under written or verbal contract on estates was 17,745 on 31st December 1924.

The Indian population on estates was estimated at 45,505 on 31st December 1924—*i.e.* 18,250 men, 12,195 women and 15,060 children.

The fall in sugar prices has led, since 1921, to a reduction of about 5,000 acres in the total area under cane cultivation. In order to reduce, as far as possible, the labour difficulty instrumental cultivation is being adopted on a large scale. Ploughs and tractors to the value of Rs. 186,235 were imported during the year, and the number of estates using these instruments is increasing.

The Sugar Planters Syndicate, which was formed in 1920 and was reconstituted under Ordinance No. 7 of 1921, disposes of the local sugars to private buyers on a co-operative basis.

SUBSIDIARY INDUSTRIES

The introduction of agricultural industries other than sugar cane, so as to reduce the economic dependence of the Colony on a single industry, continues to receive attention, and the fall in the price of sugar has aroused real interest in various minor cultivations.

ALOE FIBRE

Aloe fibre is produced mainly from the leaves of Furcrœya Gigantea (Mauritius hemp), a plant which grows wild all over the island. The area under aloe is estimated at about 20,000 acres.

The high prices obtained for aloe fibre at the commencement of 1922, viz: about Rs. 600 per ton, were not maintained for long and, by the middle of that year, had fallen to Rs. 350 per ton—i.e. a figure only slightly above the cost of production. In 1924 the sale price per ton was about Rs. 375.

COCONUTS

Coconut growing is confined to the extreme littoral of the Island. No great changes of importance were recorded during the year in connection with this Industry.

The copra production from the Lesser Dependencies amounted to about 805 tons.

TOBACCO

Efforts to develop the tobacco industry have been continued under the auspices of the Government during the year, and the system of permits for the cultivation of tobacco without payment of tax was continued. At the end of the year 1924, about 200 acres were under cultivation.

The Government Tobacco Factory has been fitted with new machinery with a view to improving the quality of the tobacco manufactured.

OTHER CROPS

Vanilla.—This industry showed no marked development, although the market for Vanilla firmed up considerably during the year.

Tea.—The tea industry is on the decline and the local produce is unable to compete with teas imported from India and Ceylon.

Food Crops.—The estimated area under food crops was practically the same as in the previous year—i.e. about 8,500 arpents. Importations of South African maize continue adversely to affect the local industry, which in these circumstances can hardly be expected to stabilize itself.

LIVE STOCK

The local stock breeding industry continues to suffer, mainly owing to the importation of cattle on a large scale from Madagascar at very low prices.

The Stock Farm of the Department of Agriculture has been maintained during the year but the sale of stock held in 1924 gave disappointing results.

New buildings have been erected at the Government Dairy at Curepipe and the Dairy has now been completed on modern lines. Pure milk is supplied to Victoria Hospital at Quatre Bornes, and to the Civil Hospital at Port Louis. The Dairy now contains 50 cows.

CO-OPERATIVE CREDIT SOCIETIES

The year proved a difficult one for the Societies.

On the 30th June, 1924, there were 32 Societies and the total membership amounted to 3,209, while the total working capital on the same date amounted to Rs. 341,911, or a decrease of Rs. 100,962 as compared with the year ended June 30th, 1923.

Other industries.—There are large engineering works in various parts of the Colony principally engaged in the readjustment and repair of sugar machinery. Apart from manufacturing industries concerned with the preparation of local produce there are some other minor industries in Mauritius, of which the principal are the following:—

Engineering works, Bakeries, Docks, (landing, shipping, etc.), Fisheries, Lime Burning, Distilleries, Electric Light and Power Supply, Salt, Leather Tanning, Ice making, Oil (ground nuts), Vinegar making; also biscuits, aerated water, furniture, charcoal, bricks, tiles, pottery, aloe ropes, vacoa bags and boot making.

Distilleries.—At present alcohol is produced mainly for consumption as Rum and the output was approximately 520,000 litres as against 500,000 litres in 1923 and 1,750,000 litres in 1922. The decrease in the output is due to the operation of new legislation which makes Rum dearer and harder to get. The raw material used is the molasses produced in the cane sugar industry.

No further progress was recorded in relation to the working of the Distillery and Etherification plant at St. Antoine Estate.

FORESTS

Public Departments were supplied during the year with 3,147 cords of firewood for which they paid Rs. 38,401.

The revenue derived from sales of timber, fuel and minor forest produce during the year was Rs. 116,998 as against Rs. 118,435 during 1923.

FISHERIES

The fishing industry is one of some importance but the catch is quite inadequate for the local market.

LEGISLATION

During the year 1924, 40 Ordinances were passed, of which the following are the most important or otherwise require special notice:—

(1) THE PASSPORTS ORDINANCE, 1924, (No. 1) which prohibits any person without a passport or some other document satisfactorily establishing his nationality and identity from entering the Colony without the permission of the Governor.

(2) THE WIRELESS TELEPHONY ORDINANCE, 1924, (No. 4) which regulates the use of wireless telephony. The ordinance insists on the grant of a licence as a condition precedent to the use, &c., of a wireless telephone and provides penalties which may include the confiscation of the apparatus improperly used. The actual machinery of the law is dealt with by regulations which should be read as an integral part of the Ordinance.

(3) THE CUSTOMS PREFERENTIAL TARIFF ORDINANCE, 1924, (No. 20) which provides for a preferential tariff in respect of certain

specified goods which are shown to the satisfaction of the Collector of Customs to have been produced or manufactured in the United Kingdom and consigned therefrom. The Governor is empowered to extend, by Proclamation, the preferential tariff to goods imported from such British Possessions as may grant reciprocity.

(4) THE LICENCES (AMENDMENT) ORDINANCE, 1924, (No. 28) which carries into effect the recommendations of a Committee appointed to advise as to the shortcomings of the law relative to the sale of liquor. The object of the Ordinance is to make liquor dearer and harder to get.

(5) THE OPIUM (CONSOLIDATED) ORDINANCE, 1924, (No. 30) which consolidates the previous Ordinance. The Ordinance gives further powers to the Governor in Executive Council to regulate the sale, possession and distribution of opium, other than raw or prepared opium the importation, exportation, manufacture, sale and possession of which is absolutely prohibited.

2.—THE MAINTENANCE ORDERS (FACILITIES FOR ENFORCEMENT) ORDINANCE, 1920, has been made reciprocal with the Colonies of Seychelles and Ceylon where similar legislation exists.

EDUCATION

At the close of the year there were 149 primary schools in the Colony: 57 Government and 92 denominational schools assisted by government grants, of which 65 were Roman Catholic, 19 Church of England, 2 Presbyterian, 4 Hindoo and 2 Mohammedan. The average attendance was 22,582 as compared with 22,538 in 1923. The attendance of Indian children was 17,214 (boys 14,743, girls 2,471), an increase of 816 as compared with the previous year.

The total number of girls educated in Primary Schools was 10,028 as against 9,733 in 1923.

During the year 278 candidates competed for the Boys' Scholarship Examination for free tuition at the Royal College. Of these 28 only passed. Six Scholarships and six exhibitions were awarded. There were 136 students for the four Girls' Scholarships, of whom 30 passed.

789 candidates (386 men and 403 women) entered for Teachers' Examinations during the year, 172 of whom (71 men and 101 women) passed. First Class certificates were granted to 2 male teachers.

The number of candidates was greater than in the previous year, but the results were very poor, especially as regards the Monitors' Examination at which only 143 candidates out of 637 succeeded in securing a pass.

SECONDARY EDUCATION

The number of Secondary Schools in the Colony was 9, as in 1923. The total number on roll was 751 boys and 662 girls, while the average attendance was 669 and 554 respectively, as compared with 708 boys and 618 girls on roll for the previous year, with average attendance of 657 and 581 respectively.

In the Secondary Schools, exclusive of the Royal College, the passes at the Cambridge Local Examinations held during the year were as follows :—

	Boys	Girls
Junior ...	9 ...	4
Senior ...	4 ...	7

The higher education of boys is conducted at the Royal College. The year opened with 450 pupils on the roll and, on 31st December, 1924, the number stood at 420 ; while the average attendance for the year was 397.

There are two scholarships offered annually in the highest form, which is examined by the Cambridge University Examination Syndicate, of the value of £1,000 each, tenable for four or five years, with £75 passage allowance to or from England. The holders may join any University in the British Empire or study at any scientific or technical institution in the United Kingdom.

Since 1st January 1920 these scholarship allowances have been temporarily increased by 30 per cent.

87 boys from the Royal College sat for the full School Certificate Cambridge Local Examination and 29 passed, of whom 8 qualified for admission to the English Scholarship Class while 12 sat for the supplementary certificate. Of the latter 8 passed, of whom 3 qualified for admission to the English Scholarship Class.

In June, 1924, 2 pupils and 1 Assistant Master took the Matriculation Examination. 1 pupil passed in the 1st Division and 1 Assistant Master in the 2nd Division. In July 1924, 3 Assistant Masters sat for the Intermediate Examination in Arts and Science. Of these 2 passed.

COLLEGE OF AGRICULTURE

During the year a new edition of the Prospectus was called for and the opportunity was taken to revise the existing syllabus to some extent and to make definite provision for students desiring to sit for the examination for registration as agricultural chemists, for registration as veterinary surgeons and for the examination of the City & Guilds of the London Institute.

Previously the scholastic year began in September but under the new arrangement it will now commence in January. The arrangement has the advantage that it synchronises with the commencement of the scholastic year of the Royal College and other secondary schools and in addition falls in the *entrecoupe* period, thus facilitating the arrangement of short courses. In consequence no new students were admitted during the year.

Preliminary and final examinations of the City and Guilds of the London Institute in Sugar Technology were held in May 1924. Nine candidates presented themselves of whom seven satisfied the examiners.

Twenty six part-time students were attached to the College during the period January to June making a total of thirty nine students on the College books, including the thirteen regular students.

In consequence of the decision arrived at in the previous year to extend one laureateship for an additional year no laureateship was awarded during 1924. A laureateship will be awarded in 1925.

Progress was continued on the College buildings and by the end of 1924 they were practically ready for occupation. All the necessary equipment and supplies were received and installed.

Funds for the maintenance of the College are provided by means of an export tax on sugar of three cents of a rupee per 100 kilos exported, levied under Ordinance 2 of 1922.

PUBLIC WORKS

The following are the principal works carried out in 1924 in addition to the usual maintenance and repairs :—

Completion of the Agricultural College, Reduit.
Experimental Dairy at Curepipe.
A new Market at Flacq.
Dining room Calebasses Infirmary.
Brisée Verdière Cemetery, including water supply.
Quarters for linemen and assistants at Rose Belle and Rose Hill.
New School at Clarens.

Extensive improvements have been made to Victoria, Moka and Mahebourg Hospitals.

Enlargements have been made to Curepipe Boys' School and to Souillac School.

The construction of cottages for the working class at Bell Village is being continued.

Pit and pail latrines have been constructed in Government offices and buildings.

WATER WORKS

Mare-aux-Vacoas.—The laying of a separate main for Moka is in hand. The Pumping Station of St. André has been completed and pipes have been laid to Triolet and Trou aux Biches villages.

The delivery pipe of La Cave Pumping Station has been replaced by one of larger diameter on a length of about one mile.

The new Pumping Station of Goodlands is in hand.

Pipes have been laid from Ruisseau Jamblon to Brisée Verdière and St. Julien villages.

The Eaux Bonnes water to Bambous village has been extended to Medine and La Mecque.

The laying of pipes to Camp Diable village and the improvements to the Grand Port Water Supply are in hand.

The scheme for the chlorination of the G. R. N. W. water for the supply of Port Louis is in progress.

DRAINAGE WORKS

The work on the main sewerage scheme in Port Louis has progressed steadily during the year. The remainder of the sea outfall, a length of 96 feet, has been completed early in the year, and since that time the night soil, deposited in the main sewer at the Tipping Chamber, Cassis, has been conveyed direct to sea and discharged at a point 810 feet from High Water Mark.

1,980 feet of pipes have been laid in Praslin Street and 3,720 feet at Model Village.

In order to facilitate the disposal of the night soil in the eastern part of Port Louis, a dumping septic tank 60′ × 17′ × 8′6″, with a rotary streaming filter 37′ in diameter, was constructed in Paul and Virginie Street, together with the necessary sheds for cleaning and disinfecting buckets.

IRRIGATION WORKS

The construction of La Nicolière and Midlands Irrigation works has been proceeding satisfactorily.

MEANS OF COMMUNICATION

RAILWAYS

The total length of the Mauritius Government Railway is 120 miles exclusive of the Bois Chéri Light Railway of about 24 miles in length. The gauge of the main line is 4 feet 8½ inches. The line between Petite Rivière and Beau Bassin Stations, and between Pailles and Central Stations, has been doubled. The deviation line between Vacoas and Curepipe Road has also been commenced.

The gross earnings during the year were Rs. 5,102,681 as against Rs. 4,395,778 for the previous year, or an increase of Rs. 706,903.

The receipts for passenger traffic showed an increase of Rs. 446,720 over the previous year's figures. As regards goods traffic although the tonnage conveyed was 494,708 tons as compared with 601,466 tons in 1922–23, there was an increase of Rs. 240,149 in the earnings.

The working expenses amounted to Rs. 4,165,287, as against Rs. 4,706,472 in 1922–23, or a decrease of Rs. 541,185.

The total revenue was		Rs. 5,744,402
The total expenditure		5,183,158
Surplus		Rs. 561,244
Less :—Interest on the Railway Debt	Rs. 332,500	
Sinking Fund ...	86,673	
Pensions to retired officials	64,123	483,296
Net surplus at 30th June, 1924 ...		Rs. 77,948

The amount paid under personal emoluments was Rs. 783,722.

BOIS CHÉRI LIGHT RAILWAY

There is a light railway of 2 feet 6 inches gauge running from the Savanne branch. The total paying traffic during the year amounted to 24,936 tons, as against 29,151 tons in the previous year.

The actual working expenses were Rs. 39,449 and the total earnings Rs. 24,761.

The excess of Expenditure over Revenue was Rs. 14,688.

ROADS AND BRIDGES

The Island is well served by road communications, there being altogether 700 miles of road open for traffic, out of which 550 miles are under the charge of the Public Works Department, the remainder being maintained by the District Boards and Townships.

In spite of heavy motor traffic, the roads have been kept in a very fair condition.

The tarring of roads is being extended and done as rapidly as possible with successful results.

The gradual reconstruction of timber bridges in ferro concrete is being continued.

Tombeau Bridge—5 spans and Maillard Bridge No. 2 have been reconstructed in ferro concrete.

The Suspension G. R. N. W. Bridge—span 154 has b replaced by an iron one for heavy traffic.

The roads of the Colony have been improved and the tarri of the Road from Port Louis to Curepipe is in hand.

Improvements have been made to the Municipal roads transferred to the Government.

POST AND TELEGRAPH SERVICES

The total Revenue from the Post Office in 1924 amounted to Rs. 488,224, or an excess of Rs. 74,737 over that of the previous year. The total expenditure amounted to Rs. 347,153 showing an increase of Rs. 51,677 as compared with 1923. The excess of revenue over expenditure was Rs. 141,071 as against Rs. 118,011 in 1923.

The Royal Naval Wireless Telegraph Station at Rose Belle was closed by the Admiralty on June 30, 1922, but has now been taken over by the Mauritius Government. The Station was re-opened on the 1st March, 1924.

TELEPHONES

Telephonic communication, constituted and owned by the Oriental Telephone & Electric Co. Ltd., continues to increase and there are seven public exchanges opened to the public with 3,378 circuit miles of wire (2,089 miles being underground and 1,289 miles aerial) giving service to 1,169 stations, 1,044 being direct exchange lines. The Company deal with approximately a quarter of a million calls a month.

MAURITIUS

ANNUAL GENERAL REPORT FOR 1925

SITUATION AND AREA

Mauritius lies off the coast of Africa, in the South Indian Ocean, some 500 miles East of Madagascar, between 57°18′ and 57°48′ E. long., and 19°50′ and 20°31′ S. lat. Its official time is four hours fast on Greenwich (Ordinance 6 of 1906). Its extreme length is 38 miles, its extreme breadth 29 miles; and its area covers 720 square miles = 460,800 acres. The density of population is very high, being about 550 persons per square mile for the whole Island.

The largest town is Port Louis, the chief port and administrative capital, which has a population of about 53,000. The towns of the interior are all of recent growth. Curepipe, the residential capital, which lies at an altitude of 1,800 feet, situated at the highest part of the central plateau, has about 20,000 inhabitants. The smaller towns of Vacoas, Phœnix, Quatre Bornes, Rose Hill and Beau Bassin are situated at lower levels on the same plateau. The principal towns and villages in country districts are Mahebourg, Rose Belle, Souillac, St. Pierre, Moka, Flacq, Pamplemousses, Poudre d'Or and Bambous.

The island is essentially of volcanic origin, although signs of an older formation are noticeable at some places (R. Thompson—1880). Its age is difficult to estimate owing to the misleading nature of the effects of cyclones and floods on its rocks. The deep river gorges, cut in hard basalt, point to considerable age, but all that can be said is that it is probably older than its immediate neighbours, Réunion and Rodrigues, and certainly more stable. (J. S. Gardiner).

The Dependencies comprise a large number of small islands the nearest of which is 230 miles, the most northerly being about 1,200 miles away, 6° S. lat. Rodrigues, the largest, with an area of 42 square miles, and an estimated population of 7,015 (3,394 males, 3,621 females), is 350 miles to the East of Mauritius, while lesser islands of some importance comprise Agalega, the Carcados Carajos group, and Diego Garcia, the largest of the Chagos Archipelago.

At the Census of May, 1921, the population of the Lesser Dependencies was ascertained to be 1,810—(1,038 males, 772 females)

HISTORY

Mauritius is said to have been first discovered by the Portuguese in the beginning of the sixteenth century—probably between 1507 and 1512, but not later than 1527, when the island is shown on an official map under the name of *Santa Apollonia*, borne in common with the other islands known later as the Mascarenes (Réunion and Rodrigues) after the great navigator Dom Pedro Mascarenhas.

The Portuguese named the island *Ilha da Cirnos* or *Swan Island*, from the big birds resembling swans found on shore.

There is no record of any permanent settlement by the Portuguese who, for nearly a century, only used the Island as a port of call for repairs and supplies.

The Island was still entirely uninhabited when, on the 18th September, 1598, a Dutch squadron of five vessels anchored in the South Eastern Port to which the Commander, Admiral Wybrandt Van Warwyk, gave his own name. He took possession of the Island on behalf of his Government and named it *Mauritius*, in honour of the Statholder, Prince Maurice de Nassau, but within fourteen days he set sail leaving nobody on shore.

In 1613 the English seaman Captain Castleton, of the *Pearl*, visited the Island, which he found unoccupied, but it was only in 1638 that a first attempt at colonisation was made. On the 6th May of that year Cornelisz Simonsy Gooyer, appointed Governor of Mauritius by the "Compagnie Néerlandaise des Indes", landed at Warwick-Haven or South Eastern Port. Fortifications, stores and dwelling houses were built at the place now called Old Grand Port, and thirteen families established themselves at the "13 Cantons" close by. These were followed by other settlers who established themselves in the neighbourhood, where Mahebourg now lies. Twenty years after, on the 16th July, 1658, the Island was abandoned, and was again reoccupied on the 26th July, 1664. During this second attempt at settlement, which extended over a somewhat longer period, the fortifications and houses erected originally and which had been destroyed by a hurricane in 1644 were rebuilt. At Flacq some efforts towards development and cultivation were made without much success whilst the district was only too successfully denuded of its ebony trees. A Royal Garden was created and new regions, such as Port North West, Black River, and perhaps Plaines Wilhems, were inhabited, but the settlement did not prosper, and, discouraged by the difficulties of the enterprise, the Dutch finally abandoned the Island in 1710. Their occupation was disastrous so far as natural resources were concerned as the colonists denuded the forests of their valuable timber and almost exterminated the interesting natural fauna.

On the 20th September, 1715, Guillaume Dufresne, commanding the French Vessel *Le Chasseur*, arrived at Port Nord Ouest, took possession of the Island in the name of Louis XV, King of France, and called it *Isle de France*. Settlement, however, was only effected six years later when, on the 23rd September, 1721, the Chevalier Jean Baptiste Garnier du Fougerai, commanding the *Triton* of St. Malo, resumed possession for the "Compagnie des Indes Orientales," after landing at Isle aux Tonneliers in Port Nord Ouest which he named Port Louis. He was accompanied by a few French families from the neighbouring island of Réunion, who had come to settle, and from that time Mauritius never ceased to be inhabited.

In 1735, Mahé de Labourdonnais succeeded M. Dumas as Governor. He was a man of rare capacity and it is not too much to say that by his own teaching and example he laid the foundation of the future prosperity of the Island. He left the Island in 1747 and his successors had but to follow the path opened out to them to reap profit and success.

Conditions, however, soon became difficult for the settlers owing to the ever-increasing exactions of the "Compagnie des Indes," and the French Government was forced to assume direct control of affairs in 1764.

Under the new Government the burden of administration was shared between the Governor and an Intendant. The first of these, Pierre Poivre, introduced spices, then so valuable, from the West Indies, and created in 1767 the now renowned Royal Botanical Gardens of Pamplemousses on the site where Labourdonnais had erected in 1736 the fine dwelling house of "Mon Plaisir," and planted fruit and ornamental trees introduced from India and Europe.

In 1790 Mauritius was to a great extent preserved from the commotions of the French Revolution owing to the unpopularity of the decree of the National Convention abolishing slavery on which local agriculture solely depended. The Jacobin leaders and the agents of the Directoire sent to proclaim emancipation were expelled, a Colonial Assembly was elected and nearly all links with the mother country were severed for some time.

A period of intense military activity under General Decaen during the earlier part of the reign of Napoleon followed, when the French Privateers using Mauritius as a point of departure for their activities against British trade gained for the Island its reputation still enshrined in its motto as "The Star and the Key of the Indian Ocean." The reputation it had acquired became at length a cause of peril. After several indecisive attempts against the island, the English, determined to root out this rival base, prepared for a vigorous attack in 1810 and, after a memorable fight, Mauritius was lost to the French and came under British rule on the 3rd December, 1810.

The cession of the Isle de France and its dependencies to Great Britain was confirmed by the Treaty of Paris, and the Island, under its former name *Mauritius*, has, since 1814, remained uninterruptedly a British possession.

CLIMATE

The climate is tropical but, owing to the high elevation of the central plateau, a large part of the island enjoys a temperate and even bracing climate. The average temperature of this highland region is about 60° Fah. (15.5°C) and the maximum about 80° Fah. (26.6°C). The low-lying coastal region has naturally a higher average temperature ranging from 90° Fah. (32°C) to 70° Fah. (21°C).

Mauritius lies in the track of cyclones, which are liable to occur during the months December to April. There has been no very severe cyclone since 1892.

The rainfall is irregular and varies according to the locality and elevation. In the central portion of the Island an average yearly rainfall of 175 inches is recorded, whereas regions where there is the lowest rainfall receive less than 40 inches. The rainfall of the coastal districts varies between 25 and 30 inches.

GENERAL OBSERVATIONS

The total value of the Trade of the Colony in 1925 amounted to Rs. 106,161.738 as compared with Rs. 128,698,181 in 1924. The Customs Revenue from Imports was Rs. 5,821,967 as against Rs. 8,003,463 in 1924; and the Revenue from Exports amounted to Rs. 1,984,085 as compared with Rs. 2,411,052 in the preceding year.

Weather conditions were generally dry during the growing season but improved markedly in July and August. As a result, although tonnage was frequently low, the sucrose content of the cane was, generally, highly satisfactory and the total output of sugar but slightly below normal.

A cyclone passed close eastward of the Island on the 12th of December. The damage done to the plantations was negligible in view of the fact that harvesting was almost completed. The Sugar production amounted to 241,220 metric tons as compared with 224,710 metric tons for the previous year.

The mean prices at which sugar was sold in 1924–25 were Rs. 12.30, but it is estimated that the mean sale price for the 1925–26 season will be about Rs. 9.34 per 50 kilos.

Sir Herbert James Read, K.C.M.G., C.B., whose appointment as Governor of Mauritius was notified in August, 1924, assumed the Administration of the Colony on the 19th of February, 1925, when Sir Edward Allan Grannum, Kt., C.M.G., who had been acting as Officer Administering the Government, resumed the duties of his office as Colonial Secretary.

VITAL STATISTICS AND PUBLIC HEALTH

The estimated population of the Island on the 31st December, 1925, was 393,708 or an increase of 5,965 on the previous year's figures and of 17,223 on the last Census figures (May 20, 1921).

The number of births and deaths during the year was 16,545 and 9,327 respectively.

The birth-rate in the general population was 45.2 and in the Indian population 41.5 per mille, as against 42.3 and 39.6 respectively for the previous year.

The death-rates per 1,000 in the two populations for 1925 were 23.8 and 24.2, as against 27.5 and 27.7 respectively for 1924.

The highest death-rate for 1925 is shown in Black River (32.4) and the lowest in Plaines Wilhems (19.4). The death-rate for the whole Colony (24.1 per mille) is the lowest since 1870 (22.6), and the rate (33.5) for Port Louis in 1880 has fallen to 26.1 in 1925. The number of deaths due to malaria and malarial cachexia (highest death-producing factors in Mauritius) was 1,631 as against 1,732 in 1924. The proportion to total deaths is 17.5%. Other diseases commonly fatal are pneumonia and broncho-pneumonia—785 in 1925 against 1,296 in 1924—and diseases of early infancy—1,090 in 1925 as against 1,075 in 1924.

There were 74 cases of plague during the year, of which 65 proved fatal; the figures for 1924 being 161 and 144 respectively. The largest number of cases was, as usual, in Port Louis (48). The percentage of deaths was 87.8.

There were 122 cases of Enteric Fever registered in the Island against 107 in the previous year.

The infantile mortality (deaths of children under one year) gives a ratio of 119.7 per thousand live-births against 129.6 in 1924. There were 1,439 still births registered during the year representing a rate of 87.0 per thousand live-births, as against 104.2 in 1924.

PUBLIC HOSPITALS AND DISPENSARIES

The following statement shows the number of cases treated in the public hospitals and at the dispensaries for the last five years :—

	1921	1922	1923	1924	1925	Average
Hospital admission	19,127	19,337	17,069	18,663	19,810	18,801
Dispensaries ...	60,671	85,638	53,225	52,641	54,296	61,294
Out-door cases ...	5,066	6,491	12,032	15,570	19,621	11,756
	84,864	111,466	82,326	86,874	93,727	91,851

The total number of cases is above that for 1924, and is also above the average of the five-year period 1921–25.

MENTAL HOSPITAL

The total number of persons certified insane on 31st December, 1925, was 700, or 14 more than in 1924. This figure represents a ratio of insane to total population of 17.77 to 10,000.

The admissions into the Mental Hospital numbered 220. They are classified into: first admission 100, second admission 13, third admission 2, readmission from probation 28, readmission from Barkly Asylum Mental Wards 59, from Civil Hospital 2, and 16 admitted on interim order but found not insane after examination by Commissioners in Lunacy.

The number of inmates left on 31st December, 1925, was 432 (259 males and 173 females) at the Mental Hospital and 155 (62 males and 93 females) in the Barkly Mental Branch Wards.

LEPER HOSPITAL

At the Leper Hospital there were 25 patients at the beginning of the year (13 males 12 females). There were 5 admissions during the year (4 males and 1 female), 2 deaths and no discharges.

POOR RELIEF

Exclusive of the pauper cases treated at the public hospitals and dispensaries, 905 paupers, as compared with 617 in 1924, received institutional relief during 1925 at the Barkly Asylum and at different religious institutions.

2,127 paupers received pecuniary out-door relief permanently or temporarily, during 1925, as against 1,618 in 1924.

JUDICIAL STATISTICS

There were 1,497 persons committed to prison during the year, i.e. 200 more than in the previous year. Of the total, 1,437 were males and 60 females.

The total number in custody on 31st December, 1925, was 321 as against 327 in the preceding year.

There were 3 deaths among prisoners during the year. 25 prisoners were subjected to corporal punishment. There was no execution. The number of juvenile offenders was 61 against 81 in the previous year.

CRIMINAL STATISTICS

The cases reported to the Police numbered 20,100 as against 19,558 for 1924 in connection with which 10,388 persons were apprehended by the Police or summoned by the Magisterial Courts. 11 cases were sent for trial before the Supreme Court as against 9 in 1924.

GOVERNMENT FINANCE

REVENUE AND EXPENDITURE

The total revenue of the Colony for the financial year ended 30th June, 1925, amounted to Rs. 19,672,843, or Rs. 224,640 below the revenue for the preceding year, and Rs. 5,554,306 below the average revenue for the preceding five years.

The Expenditure amounted to Rs. 17,653,716, inclusive of Rs. 297,847 spent from Surplus Balances on Irrigation Works. The net surplus on the year's transactions of Rs. 2,019,128 together with Rs. 451,508 refunded from Loan Account Advances, Irrigation Works, added to the surplus on 30th June, 1924, viz: Rs. 11,987,189, gave a surplus on 30th June, 1925, of Rs. 14,457,825.

Of the expenditure for 1924-25, Rs. 4,536,055 were spent on personal emoluments and Rs. 13,117,661 under other charges. The corresponding figures for 1923-24 were: personal emoluments Rs. 4,543,553 and other charges Rs. 12,045,149.

The following is a comparative statement of the Revenue and Expenditure for the last five years:—

Year	Revenue	Expenditure
1920-21	... Rs. 40,168,210*	... Rs. 24,729,540
1921-22	... 25,599,994	... 26,347,658
1922-23	... 23,547,734	... 22,031,176†
1923-24	... 19,897,483	... 16,588,702
1924-25	... 19,672,843	... 17,653,716

PUBLIC DEBT

At the close of the financial year the public debt of the Colony amounted to £ 1,699,057 as compared with £ 1,632,390 at 30th June, 1924. Against this liability there was an accumulated sinking fund of £ 738,012 as compared with £ 701,429 at 30th June, 1924.

CURRENCY AND BANKING

The currency of the Colony consists of:—

(1) The following Mauritius bronze and silver coins which are legal tender up to Rs. 5:—

  (a) Bronze: 1 cent, 2 cents and 5 cents.

  (b) Silver: 10 cents, 20 cents.

(2) The silver Rupee of India with its silver sub-divisions.

(3) Nickel coins: 4 annas of India.

(4) The Mauritius Government notes of Rs. 50, Rs. 10, Rs. 5 and R. 1.

---

* Includes Rs. 13,377,987 and Rs. 2,378,029 collected under Ordinances Nos. 36 and 37 of 1920, respectively (special export taxes on Sugar for general improvements, etc.)

† Exclusive of Rs. 13,784,640 transferred to the Mauritius Improvement and Development Fund.

(5) Indian currency notes of Rs. 50, Rs. 10 and Rs. 5.

The average value of currency notes in circulation during the year was Rs. 15,214,018 as compared with Rs. 15,645,126 in 1923–24.

The average amount of silver held amounted to Rs. 5,334,798 as compared with Rs. 5,761,521 the average for 1923–24.

The investments (not including Depreciation Fund), which stood at Rs. 9,879,250 on 1st July, 1924, remained the same during the year. The Depreciation Fund was increased from Rs. 970,085 to Rs. 1,087,572. The Revenue (Interest on investments less addition to Depreciation Fund) was Rs. 420,205 and this sum was credited to the General Revenue of the Colony.

The statement of Assets and Liabilities shows a surplus of Rs. 1,087,572. Valuing the investments at the market rate on 30th June 1925, the surplus would be increased to Rs. 1,388,200.

Government Savings Banks are established in the nine districts with a head office in Port Louis. The total number of depositors at 30th June 1925 was 36,498 as against 36,500 in the preceding year, with deposits amounting to Rs. 5,153,623 as against Rs. 5,356,104 in the preceding year. The Savings Banks are largely made use of by the Indians, of whom at the 30th June, 1925, there were 15,810 depositors with Rs. 2,406,252 to their credit, as against 15,730 depositors with Rs. 2,687,010 to their credit on 30th June, 1924.

Interest is paid at the rate of 3 per cent.

The private Banks are the Mauritius Commercial Bank, the Mercantile Bank of India and the National Bank of South Africa.

TRADE, AGRICULTURE AND INDUSTRY

ANNUAL PROGRESS OF TRADE

The value of the trade for 1925, exclusive of Dependencies and omitting Bullion and Specie, was Rs. 106,161,738, showing a decrease of Rs. 22,536,443 on the preceding year.

The comparative values of imports and exports for 1913 and the last five years are as follows :—

Year	Imports Rs.	Exports Rs.	Total Rs.
1913	36,607,671	32,291,706	68,899,377
1921	105,744,980	157,249,822	262,994,802
1922	77,039,447	91,106,703	168,146,150
1923	76,835,565	69,841,931	146,677,496
1924	76,415,648	52,282,533	128,698,181
1925	61,682,844	44,478,894	106,161,738

The value of the re-exports was Rs. 2,032,071.

Rs. 249,479 worth of bullion and specie were imported during the year, and Rs. 185,558 were exported.

The trade value in 1925 was Rs. 77,915,279 below the average value for the five preceding years, viz : Rs. 184,077,017, and was a little above 1.5 of the trade value of 1913.

IMPORTS

As in 1924, about two-thirds of the imports came from the United Kingdom and India, the latter occupying the first place on the list of countries. France maintained its position in the third place with a decrease on the previous year's figures. The value of imports from Australia, in 1925, showed a marked increase compared with 1924.

Notable decreases were recorded in the imports from the United Kingdom, France, Germany, the Union of South Africa and the United States of America.

EXPORTS

Sugar.—The following table shows the sugar exports for the last six years:—

	1920	1921	1922	1923	1924	1925
Kilos ...	182,464,726	229,224,689	292,744,249	223,051,061	182,742,235	192,303,540
Rupees ...	124,633,854	154,592,301	88,454,321	67,227,562	49,823,753	41,250,907

Other Domestic Exports.—Exports other than sugar are not of any considerable importance. Aloe fibre, copra and rum head the list with Rs. 557,072, Rs. 154,308 and Rs. 112,202 in 1925, as compared with Rs. 413,819, Rs. 224,117 and Rs. 26,681 respectively in 1924.

The quantity and value of aloe fibre exported during each of the last six years are shown below:—

	1920	1921	1922	1923	1924	1925
Kilos ...	874,241	287,106	1,007,296	599,554	1,092,881	1,896,445
Rupees ...	248,140	100,234	385,754	164,112	413,819	557,072

Other exports are undressed skins, coconut oil, vanilla, &c.

SHIPPING

The following statement shows the number of vessels which entered and left the harbour during the last three years:—

Year	Number of Vessels Inwards	Number of Vessels Outwards
1923	207	207
1924	215	210
1925	234	229

The total tonnage of shipping entered and cleared in 1925 was 1,252,172 tons: steamers 1,245,728 tons and sailing vessels 6,444 tons.

In the coastal trade with the Dependencies some 37 calls were made, with an aggregate of 16,671 tons.

Steamers of the following steamship lines called at Port Louis:—Union Castle Steamship Company, Limited; British India Steam Navigation Company, Limited; Messageries Maritimes; Clan Line; Ellerman-Harrison Line and the Compagnie Havraise Péninsulaire.

AGRICULTURE AND INDUSTRIES

The industries of the Island are entirely agricultural, the principal being the cultivation of the sugar cane which covers about 163,497 acres or one-third of the total area of the Colony.

There are 46 sugar factories as against 50 in 1924, ranging in productive capacity from 1,500 tons to 25,000 tons, and it is anticipated that the number will be further reduced as a result of centralization.

In 1925 the area cultivated by Indians was estimated to be 68,900 arpents (72,531 acres) or about 44.4% of the total cane cultivation.

Agricultural labour is almost exclusively Indian in origin and was derived from importations of indentured Indian labour until 1910, when indentured immigration from India was prohibited. Immigration was, however, resumed, subject to certain conditions and on a restricted scale, for a period of twelve months ending on 31st May, 1924. The importation has not since been renewed.

There were, on the 31st December 1925, 17,354 immigrants settled in the Colony, consisting of 12,433 males and 4,921 females, and including 253 new immigrants (195 males and 58 females). The total number of labourers serving under written or verbal contract on estates was 18,018 on 31st December 1925.

The Indian population on estates was estimated at 42,558 on 31st December 1925—*i.e.* 16,284 men, 11,511 women and 14,763 children.

The fall in sugar prices has led to a further reduction of about 4,000 acres in the total area under cane cultivation which, at the end of 1924, was about 167,165 acres. Strenuous efforts have been made on Estates to reduce the cost of production. New sugar machinery and tramway material to the value of Rs. 1,350,069 and Rs. 622,687 respectively were imported during the year. Ploughs and tractors are now used on a large scale, and, in view of the much cheapened cost of labour, it is hoped that the cost of production will, henceforth, be considerably reduced.

A Sugar Planters Syndicate was formed in 1920 and reconstituted under Ordinance No. 7 of 1921.

SUBSIDIARY INDUSTRIES

The depression in relation to the sugar industry has caused increased attention to be paid to the question of subsidiary industries and a Committee has been appointed by the Government to consider steps to be taken to facilitate development in that direction.

ALOE FIBRE

Aloe fibre is produced mainly from the leaves of Furcrœya Gigantea (Mauritius hemp), a plant which grows wild all over the island. The area under aloe is estimated at about 20,000 acres.

Quotations for aloe fibre fluctuated between Rs. 500 and Rs. 390 per ton.

COCONUTS

Coconut growing is confined to the extreme littoral of the Island. No great changes of importance were recorded during the year in connection with this Industry.

The copra production from the Lesser Dependencies average between 800 and 900 tons yearly.

TOBACCO

Efforts to develop the tobacco industry have been continued during the year, and the system of permits for the cultivation of tobacco without payment of tax still obtains.

At the end of 1925 there were approximately 250 acres under cultivation, representing an increase of 100% in two years. Experiments have been carried out for the production of bright leaf for cigarette purposes and the results are most promising.

There are now three Chinese, and one government, factories in the Island.

OTHER CROPS

Vanilla.—This industry showed no marked development, in spite of favourable market conditions.

Tea.—The tea industry shows no sign of progress, the local produce being unable to compete with foreign imported teas.

Food Crops.—In general food crops showed marked progress during the year. In 1924 maize was grown on about 2,000 acres, and manioc on 3,000. There was an increase under both heads in 1925.

Vegetables which occupied 3,000 acres in 1924 have increased by about 20%.

LIVE STOCK

The local stock breeding industry remained practically stagnant. Importation of cattle from Madagascar numbered 9,044 heads of a total value of Rs. 622,080.

Special interest, however, has been given to the rearing of small stock, notably goats, poultry and rabbits.

The Government Dairy at Curepipe continued to work satisfactorily, and interest in improved dairy conditions continued to be manifested.

Other industries.—The principal minor industries are the following:

Engineering works, Bakeries, Docks, (landing, shipping, etc.), Fisheries, Lime Burning, Distilleries, Electric Light and Power Supply, Salt, Leather Tanning, Ice making, Oil (ground nuts), Vinegar making; also biscuits, aerated water, furniture, charcoal, soap, bricks, tiles, pottery, aloe ropes, vacoa bags, boot making, etc.

Distilleries—At present alcohol is produced mainly for consumption as Rum and the output was approximately 638,000 litres as against about 530,000 litres in 1924. In 1925, 86,370 litres of rum were exported as against 38,294 in 1924.

CO-OPERATIVE CREDIT SOCIETIES

On the 30th June, 1925, there were 30 Societies and the total membership amounted to 2,994, while the total working capital on the same date was Rs. 311,663 or a decrease of about Rs. 25,000, as compared with year ended June 30th, 1924.

FORESTS

Public Departments were supplied during the year with 1,375 cords of firewood for which they paid Rs. 20,621.

The revenue derived from sales of timber, fuel and minor forest produce during the year was Rs. 92,226 as against Rs. 116,998 during 1924.

FISHERIES

In August, 1925, a Commission was appointed to enquire into, and report upon, the conditions of this industry and to suggest such measures as may appear necessary for placing it on a better basis, especially with a view to increasing and cheapening the supply of fish for public consumption. The matter is still receiving consideration.

LEGISLATION

During the year 1925, 47 Ordinances were passed, of which the following are the most important or otherwise require special mention :—

THE MERCHANT SHIPPING (WIRELESS TELEGRAPHY) Ordinance, 1925, (No. 2) which provides for the installation of wireless telegraphy on board British ships registered in Mauritius.

THE TOWN BOARDS PENSIONS ORDINANCE, 1925, (No. 8) providing for the grant of pensions and gratuities to officers or servants of Town Boards.

THE ANIMAL DISEASES (CONSOLIDATION) ORDINANCE, 1925, (No. 9) which regulates the importation of animals into the Colony with the view of protecting the Island from the introduction of animal diseases.

THE EMIGRATION ORDINANCE, 1925, (No. 27) which regulates the emigration of skilled labour from Mauritius with the view of preventing emigrants being left destitute in a foreign country and having to be repatriated at the expense of the Colony.

THE DECEASED PUBLIC OFFICERS SALARY ORDINANCE, 1925, (No. 30) which increases the amount of the gratuities payable on the death of a Public Officer.

THE PENSIONS (AMENDMENT) ORDINANCE, 1925, (No. 31) which provides for the grant of a gratuity with a reduced pension on retirement of a Public Officer.

THE SAVINGS BANK (AMENDMENT) ORDINANCE, 1925, (No. 40) which creates a branch of the Savings Bank at Rodrigues and extends to that dependency certain provisions of the Savings Bank Ordinance, 1898. This Ordinance also provides for the increase of deposits in the Savings Bank.

THE CUSTOMS ORDINANCE, 1925, (No. 46) which consolidates and amends the Customs law. This Ordinance embodies all the necessary legal machinery for the protection of the revenue and the administration of the Customs Department under modern trade conditions.

THE PUBLIC HEALTH ORDINANCE, 1925, (No. 47) which consolidates and brings up to date the law of Public Health (apart from Quarantine).

EDUCATION

At the close of the year there were 149 primary schools in the Colony: 57 Government and 92 denominational schools assisted by government grants, of which 65 were Roman Catholic, 19 Church of England, 2 Presbyterian, 4 Hindoo and 2 Mohammedan. The average attendance was 23,970 as compared with 22,582 in 1924. The attendance of Indian children was 18,174 (boys 15,533, girls 2,641), an increase of 960 on the previous year.

The total number of girls educated in Primary Schools was 10,206 as against 10,028 in 1924.

During the year 283 candidates competed for the Boys' Scholarship Examination for free tuition at the Royal College. Of these 43 passed. Six Scholarships and six Exhibitions were awarded. There were 155 students for the four Girls' Scholarships, of whom 20 passed.

838 candidates (480 men and 358 women) entered for Teachers' Examinations during the year, 28 of whom (12 men and 16 women) passed. First Class certificates were awarded to 2 female teachers.

The number of candidates was greater than in the previous year, but the results were very poor, especially as regards the Monitors' Examination at which only 26 candidates out of 649 succeeded in securing a pass.

SECONDARY EDUCATION

The number of Secondary Schools in the Colony was 9, as in 1924. The total number on roll was 776 boys and 698 girls, while the average attendance was 685 and 564 respectively, as compared with 751 boys and 662 girls on roll for the previous year, with average attendance of 669 and 554 respectively.

In the Secondary Schools, exclusive of the Royal College, the passes at the Cambridge Local Examinations held during the year were as follows :—

		Boys		Girls
Junior	...	5	...	2
Senior	...	6	...	6

The higher education of boys is conducted at the Royal College. The year opened with 420 pupils on the roll and, on 31st December, 1925, the number was 349; while the average attendance for the year was 368.

There are two scholarships offered annually in the highest form, which is examined by the Cambridge University Examination Syndicate, of the value of £ 1,000 each, tenable for four or five years, with £ 75 passage allowance to or from England. The holders may join any University in the British Empire or study at any scientific or technical institution in the United Kingdom.

Since 1st January 1920 these scholarship allowances have been temporarily increased by 30 per cent.

In January and June, 1925, 3 pupils passed the London University Matriculation Examination in the 1st Division and 1 in the 2nd Division, while 3 candidates passed the Intermediate Examination in Science.

COLLEGE OF AGRICULTURE

The College Buildings were completed and opened for work in January 1925.

During the year a course of lectures on Hygiene and Sanitation as applied to Estate conditions was delivered to first-year students. The course of training in Animal Husbandry was made to include practical work in relation to farm animals on the Government Farm, while a special course of instruction in Poultry Keeping was carried out.

In January, 1925, eleven new whole time students were admitted to the College. During the year six second-year and three third-year students followed the College courses; during the same period two part-time students were attached to the College for special instruction, so that in all twenty two students were on the College Books.

The examination of the City and Guilds of London Institute in Sugar Technology was held in April, 1925, when two candidates passed in the second Division. Examinations for the Registration of Agricultural Chemists were held in July; one candidate passed the Preliminary and three the final Examination.

One laureateship was awarded in 1925. The laureate is pursuing a course of study in relation to the Technology of Sugar Manufacture and Engineering at the Royal Technical College, Glasgow.

PUBLIC WORKS

The following are the principal works carried out in 1925 in addition to the usual maintenance and repairs:—

Sanitary Office at Mahebourg.
Forest Rangers Quarters at Nouvelle Découverte.
Large improvements to Victoria Hospital.
Enlargement of Bacteriological Laboratory.
Quarters for linemen at Rose Belle.
Quarters for cemetery keeper and labourers at Union Park.
Nouvelle France Police Station.
New Operating Room, Flacq Hospital.
New Ward, Long Mountain Hospital.

The construction of cottages for the working class at Bell Village was continued.

The construction of pit and pail latrines on Government offices and buildings has been proceeded with.

WATER WORKS

Mare aux Vacoas.—In addition to the maintenance works, the following lengths of new mains have been laid:—8,050 feet of 1″, 1300 of 1½″, 5,250 of 2″, 1,920 of 3″ and 1,440 of 4″. Eight public fountains were erected and 605 new supplies granted.

The separate main for the improvement of the Moka supply has been completed and the Camp Fouquereaux scheme has been started and is progressing satisfactorily.

Three additional filters are being put up at La Marie. The type adopted is the Slow Sand Filter similar to those existing at present. The filters will afford an additional filtering surface of 98,164 square feet.

Port Louis.—A large reservoir to contain one million gallons of water is in course of construction at Maupin and with the Monneron reservoir the town of Port Louis will have service reservoirs of a total capacity of over two million gallons. The filling in of the filters at the Chlorination Plant with stones and sand is progressing.

Important extensions and improvements have been made to the various District Board water supplies.

DRAINAGE WORKS

The work on the main Sewerage Scheme in Port Louis progressed speedily during the year.

The Maupin street section was linked to the d'Entrecasteaux section which has now been completed. A section from Armoury stream and d'Orleans section has also been completed, so that with the exception of two gaps at Gravel Lane and Armoury stream the whole gravitation main from Mère Barthelmy street to the sea has been completed.

The connections of Bell Village to the main sewer have been completed.

IRRIGATION WORKS.

Nicolière-Midlands scheme.—The construction works connected with this scheme have progressed steadily during the year.

The Nicolière reservoir is nearing completion. The distributory system has been studied on its main lines and excavation works are progressing.

On the Nicolière side a Feeder Channel from Midlands to Nicolière has been excavated on a length of 2,761 feet.

On the Midlands side, about 1½ miles of channel has been constructed.

La Ferme Scheme.—This scheme was put to a severe test this year, the rainfall and the river system feeding La Ferme having been below the normal.

To guard against shortages Rivière du Poste is being diverted into the Mare-aux-Vacoas and a reliable supply can be had therefrom. The price charged for water has been reduced, as from the 1st July, 1925, from one rupee per 8,000 cubic feet to one rupee per 12,000 cubic feet.

MEANS OF COMMUNICATION

RAILWAYS

The total length of the Mauritius Government Railway is 120 miles exclusive of the Bois Chéri Light Railway of about 24 miles in length. The gauge of the main line is 4 feet 8½ inches.

The gross earnings during the year were Rs. 4,930,244 as against Rs. 5,102,681 for the previous year, or a decrease of Rs. 172,437.

The receipts for passenger traffic showed a decrease of Rs. 320,199 over the previous year's figures. As regards goods traffic the tonnage conveyed was 550,040 tons as compared with 494,708 tons in 1923–24, giving an increase of Rs. 84,795 in the earnings.

The working expenses amounted to Rs. 4,251,916, as against Rs. 4,165,287 in 1923–24, or an increase of Rs. 86,629.

The total revenue was		Rs. 4,930,244
The total expenditure		4,251,916
Surplus		Rs. 678,328
Less :—Interest and Sinking Fund	Rs. 419,173	
Alterations to Stations	29,703	
Contribution to Pension Fund	81,461	
„ Renewals Fund	640,000	
		1,170,337
Loss on Working at 30th June, 1925 ...		Rs. 492,009

The amount paid under personal emoluments was Rs. 794,841 as against Rs. 783,722 in 1923–24.

BOIS CHERI LIGHT RAILWAY

There is a light railway of 2 feet 6 inches gauge running from the Savanne branch. The total paying traffic during the year amounted to 23,906 tons, as against 25,188 tons in the previous year.

The actual working expenses were Rs. 25,874 and the total earnings Rs. 30,024, thus leaving a balance in favour of earnings of Rs. 4,150.

ROADS AND BRIDGES

The Island is well served by Road communications, there being altogether seven hundred miles of road open for traffic, out of which 550 miles are under the charge of the Public Works Department, the remainder being maintained by the District Boards and Townships.

In spite of heavy motor traffic the roads have been kept in a very fair condition.

The tarring of roads is being extended as rapidly as possible with successful results and bad curves and hills are being improved.

The rolling and tarring of the road from Port Louis to Curepipe is progressing.

General improvements to the roads and bridges taken over from the Municipality of Port Louis have been continued.

The gradual reconstruction of timber bridges in ferro-concrete is being continued.

Rempart Bridge in Black River has been reconstructed in ferro-concrete.

POST AND TELEGRAPH SERVICES

The total Revenue from the Post Office in 1925 amounted to Rs. 419,887, or a decrease of Rs. 68,337 on that of the previous year. The total expenditure amounted to Rs. 495,419, showing an increase of Rs. 148,266 as compared with 1924. The total expenditure includes Rs.128,430 spent on the laying of underground cable, a non-annually recurrent work. The excess of expenditure over revenue was Rs. 75,532.

TELEPHONES

Telephonic communication, constituted and owned by the Oriental Telephone & Electric Co. Ltd., has not maintained the progress of recent years. There are five exchanges opened to the public with 3,326 circuit miles of wire (2,094 miles being underground and 1,232 miles aerial) giving service to 1,124 stations, 971 being direct exchange lines. The Company deals with approximately 215,000 calls per month.

MAURITIUS

ANNUAL GENERAL REPORT FOR 1926

SITUATION AND AREA

Mauritius lies off the coast of Africa, in the South Indian Ocean, some 500 miles East of Madagascar, between 57°18′ and 57°48′ E. long., and 19°50′ and 20°31′ S. lat. Its official time is four hours fast on Greenwich (Ordinance 6 of 1906). Its extreme length is 38 miles, its extreme breadth 29 miles; and its area covers 720 square miles=460,800 acres. The density of population is very high, being about 550 persons per square mile for the whole Island.

The largest town is Port Louis, the chief port and administrative capital, which has a population of about 43,000. The towns of the interior are all of recent growth. Curepipe, the residential capital, which lies at an altitude of 1,800 feet, situated on the highest part of the central plateau, has about 20,000 inhabitants. The smaller towns of Vacoas, Phœnix, Quatre Bornes, Rose Hill and Beau Bassin in Plaines Wilhems District are situated at lower levels on the same plateau. The principal towns and villages in the other country districts are Mahebourg, Rose Belle, Souillac, St. Pierre, Moka, Flacq, Pamplemousses, Poudre d'Or and Bambous.

The island is essentially of volcanic origin, although signs of an older formation are noticeable at some places (R. Thompson—1880). Its age is difficult to estimate owing to the misleading nature of the effects of cyclones and floods on its rocks. The deep river gorges, cut in hard basalt, point to considerable age, but all that can be said is that it is probably older than its immediate neighbours, Réunion and Rodrigues, and certainly more stable. (J. S. Gardiner).

The Dependencies comprise a large number of small islands the nearest of which is 230 miles, the most northerly being about 1,200 miles away, 6° S. lat. Rodrigues, the largest, with an area of 42 square miles, and an estimated population of 7,269 (3,516 males, 3,753 females), is 350 miles to the north-east of Mauritius, while lesser islands of some importance comprise Agalega, the Carcados Carajos group, and Diego Garcia, the largest of the Chagos Archipelago.

At the census of May, 1921, the population of the Lesser Dependencies was ascertained to be 1,810—(1,038 males, 772 females)

HISTORY

Mauritius is said to have been first discovered by the Portuguese in the beginning of the sixteenth century—probably between 1507 and 1512, but not later than 1527, when the island is shown on an official map under the name of *Santa Appollonia*, borne in common with the other islands known later as the Mascarenes (Réunion and Rodrigues) after the great navigator Dom Pedro Mascarenhas.

The Portuguese named the island *Ilha da Cirnos* or *Swan Island*, from the big birds resembling swans found on shore.

There is no record of any permanent settlement by the Portuguese who, for nearly a century, only used the Island as a port of call for repairs and supplies.

The Island was still entirely uninhabited when, on the 18th September, 1598, a Dutch squadron of five vessels anchored in the South Eastern Port to which the Commander, Admiral Wybrandt Van Warwyk, gave his own name. He took possession of the Island on behalf of his Government and named it *Mauritius*, in honour of the Statholder, Prince Maurice de Nassau, but within fourteen days he set sail leaving nobody on shore.

In 1613 the English seaman Captain Castleton, of the *Pearl*, visited the Island, which he found unoccupied, but it was only in 1638 that a first attempt at colonisation was made. On the 6th May of that year Cornelisz Simonsy Gooyer, appointed Governor of Mauritius by the " Compagnie Néerlandaise des Indes," landed at Warwick-Haven or South Eastern Port. Fortifications, stores and dwelling houses were built at the place now called Old Grand Port, and thirteen families established themselves at the " 13 Cantons " close by. These were followed by other settlers who established themselves in the neighbourhood, where Mahebourg now lies. Twenty years after, on the 16th July, 1658, the island was abandoned, and was again reoccupied on the 26th July, 1664. During this second attempt at settlement, which extended over a somewhat longer period, the fortifications and houses erected originally and which had been destroyed by a hurricane in 1664, were rebuilt. At Flacq some efforts towards development and cultivation were made without much success whilst the district was only too successfully denuded of its ebony trees. A Royal Garden was created and new regions, such as Port North West, Black River, and perhaps Plaines Wilhems, were inhabited, but the settlement did not prosper, and, discouraged by the difficulties of the enterprise, the Dutch finally abandoned the Island in 1710. Their occupation was disastrous so far as natural resources were concerned as the colonists denuded the forests of their valuable timber and almost exterminated the interesting natural fauna.

On the 20th September, 1715, Guillaume Dufresne, commanding the French Vessel *Le Chasseur*, arrived at Port Nord Ouest, took possession of the Island in the name of Louis XV, King of France, and called it *Ile de France*. Settlement, however, was only effected six years later when, on the 23rd September, 1721, the Chevalier Jean Baptiste Garnier du Fougerai, commanding the *Triton* of St. Malo, resumed possession for the " Compagnie des Indes Orientales," after landing at Ile aux Tonneliers in Port Nord Ouest which he named Port Louis. He was accompanied by a few French families from the neighbouring island of Réunion, who had come to settle, and from that time Mauritius never ceased to be inhabited.

In 1735, Mahé de Labourdonnais succeeded M. Dumas as Governor. He was a man of rare capacity and it is not too much to say that by his own teaching and example he laid the foundation of the future prosperity of the Island. He left the Island in 1747 and his successors had but to follow the path opened out to them to reap profit and success.

Conditions, however, soon became difficult for the settlers owing to the ever-increasing exactions of the " Compagnie des

Indes," and the French Government was forced to assume direct control of affairs in 1764.

Under the new Government the burden of administration was shared between the Governor and an Intendant. The first of these, Pierre Poivre, introduced spices, then so valuable, from the West Indies, and created in 1767 the now renowned Royal Botanical Gardens of Pamplemousses on the site where Labourdonnais had erected in 1736 the fine dwelling house of "Mon Plaisir," and planted fruit and ornamental trees introduced from India and Europe.

In 1790 Mauritius was to a great extent preserved from the commotions of the French Revolution owing to the unpopularity of the decree of the National Convention abolishing slavery on which local agriculture solely depended. The Jacobin leaders and the agents of the Directoire sent to proclaim emancipation were expelled, a Colonial Assembly was elected and nearly all links with the mother country were severed for some time.

A period of intense military activity under General Decaen during the earlier part of the reign of Napoleon followed, when the French Privateers using Mauritius as a point of departure for their activities against British trade gained for the Island its reputation still enshrined in its motto as "The Star and the Key of the Indian Ocean." The reputation it had acquired became at length a cause of peril. After several indecisive attempts against the island, the English, determined to root out this rival base, prepared for a vigorous attack in 1810 and, after a memorable fight, Mauritius was lost to the French and came under British rule on the 3rd December, 1810.

The cession of the Isle de France and its dependencies to Great Britain was confirmed by the Treaty of Paris, and the Island, under its former name *Mauritius*, has, since 1814, remained uninterruptedly a British possession.

CLIMATE

The climate is tropical but, owing to the high elevation of the central plateau, a large part of the island enjoys a temperate and even bracing climate. The average temperature of this highland region is about 60°Fah. (15.5°C) and the maximum about 80°Fah. (26.6°C). The low-lying coastal region has naturally a higher average temperature ranging from 90° Fah (32°C) to 70° Fah.(21°C.)

Mauritius lies in the track of cyclones, which are liable to occur during the months December to April. There has been no very severe cyclone since 1892.

The rainfall is irregular and varies according to the locality and elevation. In the central portion of the Island an average yearly rainfall of 175 inches is recorded, whereas regions where there is the lowest rainfall receive less than 40 inches. The rainfall of the coastal districts varies between 25 and 30 inches.

GENERAL OBSERVATIONS

The total value of the Trade of the Colony in 1926 amounted to Rs. 91,804,335 as compared with Rs. 106,161,738 in 1925. The Customs Revenue from Imports was Rs. 5,202,132 as against

Rs. 5,821,967 in 1925; and the Revenue from Exports amounted to Rs. 1,490,293 compared with Rs. 1,984,085 in the preceding year. The reduced revenue from Exports was due to the lower rate of duty on sugar of the 1926–27 crop and to the smaller quantity of sugar shipped in 1926.

All the principal items of Imports showed generally a decreased revenue in 1926, except wines in bottles, cotton piece goods and petroleum oil.

Weather conditions, during the year, were abnormal. Cyclonic activity was little in evidence during the summer months, resulting in a marked shortage of rain. On the other hand, a cyclone occurred late in April and although the wind was not very strong the damage done to the sugar plantations was considerable. As a result of the abnormally high temperatures with heavy rainfall during the winter season, the sucrose content of the cane was low and the total production of sugar fell considerably below expectation.

The sugar production amounted to 196,000 metric tons as against 241,220 metric tons for the previous year. The cyclone referred to and the abnormal weather during the grinding season were responsible for the shortage in the year's production.

The final average sale price of sugar of the 1925–26 crop was Rs. 8.90 per 50 kilos, and the mean sale price for the 1926–27 season is estimated at Rs. 10.05 per 50 kilos.

VITAL STATISTICS AND PUBLIC HEALTH

The estimated population of the Island on the 31st December, 1926, was 398,236 or an increase of 4,528 on the previous year's figures and of 21,751 on the last Census figures (May 20, 1921).

The number of births and deaths during the year was 15,520 and 9,958 respectively.

The birth-rate in the general population was 41.8 and in the Indian population 38.4 per mille as against 45.2 and 41.5 respectively for the previous year.

The death-rates per 1,000 in the two populations for 1926 were 25.0 and 25.4 as against 23.8 and 24.2 respectively for 1925.

The highest death-rate for 1926 is shown in Black River (33.2) and the lowest in Plaines Wilhems (18.4). The death-rate for the whole Colony was 26.4 per mille compared with 24.1 in 1925, and the rate for Port Louis was 28.0 as against 26.1 in the previous year. The number of deaths due to malaria and malarial cachexia (highest death-producing factors in Mauritius) was 1,842 as against 1,634 in 1925. The proportion to total deaths is 18.5%. Other diseases commonly fatal are pneumonia and broncho-pneumonia—850 in 1926 against 785 in 1925—and diseases of early infancy—964 in 1926 as against 1,090 in 1925.

There were 46 cases of plague during the year, of which 41 proved fatal; the figures for 1925 being 74 and 65 respectively. The largest number of cases was, as usual, in Port Louis (40). The percentage of deaths was 89.1.

There were 108 cases of Enteric Fever registered in the Island against 122 in the previous year.

The infantile mortality (deaths of children under one year) gives a ratio of 120.6 per thousand live-births against 119.7 in 1925. There were 1,315 still births registered during the year representing a rate of 8.47 per thousand live-births, against 87.0 in 1925.

PUBLIC HOSPITALS AND DISPENSARIES

The following statement shows the number of cases treated in the public hospitals and at the dispensaries for the last five years :—

	1922	1923	1924	1925	1926	Average
Hospital admissions	19,337	17,069	18,663	19,810	21,997	19,375
Hospital Out-door cases ...	6,491	12,032	15,570	19,621	20,153	14,773
Dispensaries ...	85,638	53,225	52,641	54,296	64,484	62,057
	111,466	82,326	86,874	93,727	106,634	96,205

The total number of cases is above that for 1925 and is also above the average of the five-year period 1922–26.

MENTAL HOSPITAL

The total number of persons certified insane on 31st December, 1926, was 719, or 19 more than in 1925. This figure represents a ratio of insane to total population of 18.05 to 10.000.

The admissions into the Mental Hospital numbered 254. They are classified into : first admission 104, second admission 14, third admission 3, readmission from probation 49, readmission from Barkly Branch Wards 57, readmission from leave 10, and out of 17 admitted on interim order 3 died and 14 were found not insane after examination by the Commissioners in Lunacy.

The number of inmates remaining in the Mental Hospital and in the Barkly Mental Branch Wards was 600 (332 males and 268 females) on the 31st December, 1926.

LEPER HOSPITAL

At the Leper Hospital there were 28 patients at the beginning of the year (14 males and 14 females). There were 20 admissions during the year (17 males and 3 females), and 5 deaths.

POOR RELIEF

Exclusive of the pauper cases treated in the public hospitals and dispensaries, 834 paupers, as compared with 905 in 1925, received institutional relief during 1926 in the various religious institutions.

3,388 paupers received pecuniary out-door relief permanently or temporarily during 1926, as against 2,127 in 1925.

JUDICIAL STATISTICS

There were 1,994 persons committed to prison during the year, i.e. 497 more than in the previous year. Of the total, 1,887 were males and 107 females.

The total number in custody on 31st December, 1926, was 353 as against 321 in the preceding year.

There were 6 deaths among prisoners during the year. 6 prisoners were subjected to corporal punishment. There was one execution. The number of juvenile offenders was 89 against 61 in the previous year.

CRIMINAL STATISTICS

The cases reported to the Police numbered 19,208 as against 20,100 for 1925 in connection with which 11,034 persons were apprehended by the Police or summoned by the Magisterial Courts. 14 cases were sent for trial before the Supreme Court as against 11 in 1925.

GOVERNMENT FINANCE

REVENUE AND EXPENDITURE

The total revenue of the Colony for the financial year ended 30th June, 1926, amounted to Rs. 15,894,763, or Rs. 3,778,080 below the revenue for the preceding year, and Rs. 9,640,393 below the average revenue for the preceding five years.

The Expenditure amounted to Rs. 16,117,988. The net Surplus of the Colony at 30th June, 1925, i.e. Rs. 14,457,825 together with the sum of Rs. 297,847 recovered from Loan account during the current year makes a total of Rs. 14,755,672 which, after deduction of the deficit of Rs. 223,224 on the year's transactions, is reduced to Rs. 14,532,448 at 30 June, 1926.

Of the expenditure for 1925–26, Rs. 4,715,862 were spent on personal emoluments and Rs. 11,402,126 on other charges. The corresponding figures for 1924–25 were: personal emoluments Rs. 4,536,055 and other charges Rs. 13,117,661.

The following is a comparative statement of the Revenue and Expenditure for the last five years:—

Years	Revenue	Expenditure
—	—	—
1921–22	... Rs. 25,599,994	... Rs. 26,347,658
1922–23	... 23,547,734	... 22,031,176†
1923–24	... 19,897,483	... 16,588,702
1924–25	... 19,672,843	... 17,653,716
1925–26	.. 15,894,763	... 16,117,988

PUBLIC DEBT

At the close of the financial year the public debt of the Colony amounted to £1,765,724 as compared with £1,699,057 at 30th June, 1925. Against this liability there was an accumulated sinking fund of £819,315 as compared with £738,012 at 30th June, 1925.

CURRENCY AND BANKING

The currency of the Colony consists of:—

(1) The following Mauritius bronze and silver coins which are legal tender up to Rs. 5:—

  (a) Bronze: 1 cent, 2 cents and 5 cents.

  (b) Silver: 10 cents, 20 cents.

(2) The silver Rupee of India with its silver sub-divisions.

(3) Nickel coins: 4 annas of India.

(4) The Mauritius Government notes of Rs. 50, Rs. 10, Rs. 5 and R. 1.

(5) Indian currency notes of Rs. 50, Rs. 10 and Rs. 5.

The average value of currency notes in circulation during the year was Rs. 15,460,500 as compared with Rs. 15,214,048 in 1924–25.

---

† Exclusive of Rs. 13,784,640 transferred to the Mauritius Improvement and Development Fund.

The average amount of silver held by the Commissioners of Currency amounted to Rs. 5,581,250 as compared with Rs.5,334,798, the average for 1924–25.

The investments (not including Depreciation Fund), which stood at Rs. 9,879,250 on 1st July, 1925, remained the same during the year. The Depreciation Fund was increased from Rs. 1,087,572 to Rs. 1,209,401. The Revenue (Interest on investments less addition to Depreciation Fund) was Rs. 400,530 and this sum was credited to the General Revenue of the Colony.

The statement of Assets and Liabilities shows a surplus of Rs. 1,209,401. Valuing the investments at the market rate on 30th June 1926, the surplus would be increased to Rs. 1,266,919.

Government Savings Banks are established in the nine districts with a head office in Port Louis. The total number of depositors at 30th June 1926 was 36,481 as against 36,498 in the preceding year, with deposits amounting to Rs. 5,026,698 as against Rs. 5,153,623 in the preceding year. The Savings Banks are largely made use of by the Indians, of whom at the 30th June, 1926, there were 15,450 depositors with Rs. 2,225,859 to their credit, as against 15,810 depositors with Rs. 2,406,252 to their credit on 30th June, 1925.

Interest is paid at the rate of 3 per cent a year.

The Banks are the Mauritius Commercial Bank, the Mercantile Bank of India (Ltd.) and Barclays Bank.

TRADE, AGRICULTURE AND INDUSTRY

TRADE

The value of the trade for 1926, exclusive of Dependencies and omitting Bullion and Specie, was Rs. 91,804,335, showing a decrease of Rs. 14,357,403 on the preceding year.

The comparative values of imports and exports for 1913 and the last five years are as follows :—

Year	Imports	Exports	Total
—	—	—	—
	Rs.	Rs.	Rs.
1913	36,607,671	32,291,706	68,899,377
1921	105,744,980	157,249,822	262,994,802
1922	77,039,447	91,106,703	168,146,150
1923	76,835,565	69,841,931	146,677,496
1924	76,415,648	52,282,533	128,698,181
1925	61,682,844	44,478,894	106,161,738
1926	50,596,137	41,208,198	91,804,335

The value of the re-exports was Rs. 1,841,096.

Rs. 137,490 worth of bullion and specie were imported during the year, and Rs. 5,944,500 were exported.

The trade value in 1926 was Rs. 70,731,338 below the average value for the five preceding years, viz.: Rs. 162,535,673, and was a little above 1.3 of the trade value of 1913.

IMPORTS

As in 1925, about two-thirds of the imports came from the United Kingdom and India, the imports from the latter country being nearly twice those from the United Kingdom. France maintained its position in the third place with a decrease on the previous year's figures. The value of imports from China, in 1926, was Rs. 1,121,191 as compared with Rs. 691,820 in 1925.

Notable decreases were recorded in the imports from the United Kingdom, France, Germany, Madagascar, Australia and Reunion.

EXPORTS

Sugar.—The following table shows the sugar exports for the last six years :—

	1921	1922	1923	1924	1925	1926
Kilos ...	229,224,689	292,744,249	223,051,061	182,742,235	192,303,540	181,215,772
Rupees...	154,592,301	88,454,321	67,227,562	49,823,753	11,250,907	37,991,240

Other Domestic Exports.—The principal of these were aloe fibre, copra and rum with Rs. 838,980, Rs. 284,960 and Rs.24,576 in 1926, as compared with R. 557,072, Rs. 154,308 and Rs. 112,202 respectively in 1925.

The quantity and value of aloe fibre exported during each of the last six years are shown below :—

	1921	1922	1923	1924	1925	1926
Kilos ...	287,106	1,007,296	599,554	1,092,881	1,896,445	2,577 372
Rupees...	100,234	385,754	164,112	413,819	557,072	838,980

SHIPPING

The following statement shows the number of vessels which entered and left the harbour during the last three years :—

	NUMBER OF VESSELS	
Year	Inwards	Outwards
1924	215	210
1925	234	229
1926	187	194

The total tonnage of shipping entered and cleared in 1926 was 1,049,675 tons (steamers 1,046,058 tons and sailing vessels 3,617 tons), of which 562,914 British.

In the coastal trade with the Dependencies some 46 calls were made, with an aggregate of 17,034 tons.

Steamers of the following steamship lines called at Port Louis :- Union Castle Steamship Company, Limited ; British India Steam Navigation Company, Limited ; Messageries Maritimes ; Clan Line ; Ellerman-Harrison Line and the Compagnie Havraise Péninsulaire.

AGRICULTURE AND INDUSTRIES

The industries of the Island are entirely agricultural, the principal being the cultivation of the sugar cane which covers about 162,102 acres or 43.6% of the total area of the Colony.

There are 44 sugar factories compared with 46 in 1925 and 53 in 1916, ranging in productive capacity from 1,500 tons to 25,000 tons, and it is anticipated that the number will be further reduced as a result of continued centralization.

In 1926 the area cultivated by Indians was estimated to be 65,956 arpents (68,800 acres) or about 43% of the total cane cultivation.

Agricultural labour is almost exclusively Indian in origin and was derived from importations of indentured Indian labour until 1910, when indentured immigration from India was prohibited. Immigration was, however, resumed, subject to certain conditions and on a restricted scale, for a period of twelve months ending on 31st May, 1924.

There were, on the 31st December 1926, 16,500 immigrants settled in the Colony, consisting of 11,850 males and 4,650 females, and including 173 new immigrants (138 males and 35 females). The total number of labourers serving under written or verbal contract on estates was 18,328 on 31st December 1926.

The Indian population on estates was estimated at 41,442 on 31st December 1926—*i.e.* 16,371 men, 11,128 women and 13,943 children.

The unfavourable market conditions in 1925 have led to a further reduction of about 1,400 acres in the total area under cane cultivation which, at the end of 1925, was about 163,497 acres.

Sugar machinery to the value of Rs. 1,143,500 was imported during the year. Ploughs and tractors are now used on a large scale, the value of the instruments imported during the year being Rs. 67,000.

The Sugar Planters Syndicate constituted under Ordinances Nos. 31 of 1920 and 7 of 1921 controlled more than 80% of the total production of the Colony. For the 1926-27 crop the export of sugar at 31st December, 1926, amounted to 82,361 tons of which 77,154 tons to the United Kingdom.

SUBSIDIARY INDUSTRIES

The depression in the sugar industry during the last two years has caused greater attention to be devoted to the development of subsidiary industries. So far the industries which have shown marked progress are alœ fibre, tobacco, and the production of industrial alcohol and vegetable oils.

ALŒ FIBRE

Alœ fibre is produced mainly from the leaves of Furcrœya Gigantea (Mauritius hemp), a plant which grows wild all over the island. The area under aloe is estimated at about 20,000 acres.

Quotations for alœ fibre fluctuated between Rs. 415 and Rs. 320 per ton compared with Rs. 500 and Rs. 390 in 1925.

The Mauritius Hemp Producers' Syndicate which was constituted under Ordinance No. 32 of 1925 has for its object the standardisation of the produce of the Mauritius Hemp Industry and the improvement of methods of packing and marketing.

COCONUTS

Coconut growing is confined to the extreme littoral of the Island. No changes of importance were recorded during the year in connection with this industry.

The copra production from the Lesser Dependencies averages between 900 and 800 tons yearly.

TOBACCO

Considerable development took place during the year in relation to tobacco cultivation.

To facilitate developments the government repealed Ordinance No. 19 of 1890 which imposed a land tax of Rs. 160 per acre payable in advance on land cultivated in tobacco.

At the end of 1926 there were approximately 800 acres under cultivation, representing an increase of more than 200% on the previous year.

Two new factories were opened during the year by local manufacturers and one by a foreign firm.

OTHER CROPS

Vanilla.—This industry showed no marked development during the year.

Tea.—The competition of foreign teas and the high cost of local production render the development of this industry problematical.

Food Crops.—In general food crops showed marked progress during the year. In 1925 maize was grown on about 2,600 acres, and manioc on 3,500. There was an increase under both heads in 1926.

Vegetable gardens continued to increase and the production of vegetables during the year was one of the largest on record.

LIVE STOCK

Some interest was shewn in the local stock breeding industry during the year. Importation of cattle from Madagascar numbered 5,555 heads of a total value of Rs. 375,207 as against 9,044 heads of a total value of Rs. 622,080 in 1925.

The Government Dairy at Curepipe continued to work satisfactorily.

Other industries.—The principal minor industries are the following:

Engineering works, Bakeries, Docks, (landing, shipping, etc.), Fisheries, Lime Burning, Distilleries, Electric Light and Power Supply, Salt, Leather tanning, Ice making, Oil (ground nuts), Vinegar making; also biscuits, aerated water, furniture, charcoal, soap, bricks, tiles, pottery, aloe ropes, vacoa bags, boot making, etc.

Distilleries.—Alcohol is produced mainly for consumption as Rum and the output was approximately 490,113 litres as against about 638,000 litres in 1925. In 1926, 74,686 litres of rum were exported as against 57,076 in 1925.

CO-OPERATIVE CREDIT SOCIETIES

On the 30th June, 1926, there were 30 Societies and the total membership amounted to 2,994, while the total working capital on the same date was Rs. 311,663 or a decrease of about Rs. 23,754, as compared with the year ended June 30th, 1925.

FORESTS

The revenue derived from sales of timber, fuel and other forest produce during the year 1925–26 was Rs. 77,968 as against Rs. 92,226 during 1924–25.

LEGISLATION

During the year 1926, 40 Ordinances were passed, of which the following deserve special mention:—

The Sugar Industry Loan Ordinance, 1926, (No. 15) which provides for the loan of Rs. 5,000,000 to the Sugar Industry of the Colony and for a special export duty on the sugars of the 1927-28 crop in order to repay the loan in capital and interest.

The Cinematograph (Amendment) Ordinance, 1926, (No. 19) which transfers the control of films to a Central Committee composed of the Inspector General of Police and two other members to be appointed annually by the Governor.

The Opium (Amendment) Ordinance, 1926, (No. 21) which gives effect to the Dangerous Drugs Convention Protocol and Final Act signed at Geneva on the 19th of February, 1925.

The Stamps (Consolidation) Ordinance, 1926 (No. 22) which consolidates all the stamp laws in force, with a few amendments.

The Midwives Ordinance, 1926,(No. 26) which secures the proper training of midwives in the Colony and regulates their practice.

The Railway (Amendment) Ordinance, 1926, (No. 31) which creates a Railway Board with executive powers and also authorises the Railway Department to establish transport services by road and combined services by road and rail for the conveyance of passengers and goods.

The Gun (Amendment) Ordinance, 1926, (No. 40) which increases the control exerciseable over the possession of firearms and ammunition.

EDUCATION

At the close of the year there were 151 primary schools in the Colony: 57 Government and 94 denominational schools assisted by government grants, of which 65 were Roman Catholic, 19 Church of England, 2 Presbyterian, 5 Hindoo and 3 Mohammedan. The average attendance was 24,671 as compared with 23,970 in 1925. The attendance of Indian children was 18,097 (boys 14,880, girls 3,217), a decrease of 77 on the previous year.

The total number of girls educated in Primary Schools was 10,349 as against 10,206 in 1925.

During the year 325 candidates competed for the Boys' Scholarship Examination for free tuition at the Royal College. Of these 32 passed. Six Scholarships and six Exhibitions were awarded. There were 174 students for the four Girls' Scholarships, of whom 12 passed.

1,064 candidates (606 men and 458 women) entered for the Teachers' Examinations during the year, 19 of whom (15 men and 4 women) passed. First Class Certificates were awarded to 3 male teachers.

The number of candidates was greater than in the previous year, but the results were very poor, especially as regards the Monitors' Examination at which only 14 candidates out of 852 succeeded in securing a pass.

The system whereby teachers were paid a monthly fixed salary which was supplemented at the end of the school year by a lump sum varying according to the examination results was abolished in the course of the year and a higher rate of pay substituted therefor.

The Men's and Women's Training Schools have now been combined under one Principal with one male and one female Assistant.

SECONDARY EDUCATION

The number of Secondary Schools in the Colony was 9, as in 1925. The total number on roll was 689 boys and 627 girls, while the average attendance was 577 and 539 respectively, as compared with 776 boys and 698 girls on roll for the previous year, with average attendance of 685 and 564 respectively.

In the Secondary Schools, exclusive of the Royal College, the passes at the Cambridge Local Examinations held during the year were as follows :—

	Boys		Girls
Junior	11	...	6
School Certificate ...	5	...	11

The higher education of boys is conducted at the Royal College. The year opened with 349 pupils on the roll and, on 31st December, 1926, the number was 315; while the average attendance for the year was 359.

Two scholarships are awarded annually in the highest form, which is examined by the Syndicate of Examiners of the Cambridge University. These scholarships are of the value of £1,000 with £75 passage allowance to or from England, and are tenable for four or five years. The holders may join any University in the British Empire or any scientific or technical institution in the United Kingdom.

Since 1st January 1920 these scholarship allowances have been temporarily increased by 30 per cent.

In January and July, 1926, a temporary Assistant Master and one pupil passed the London University Matriculation Examination in the 1st Division, and 2 candidates passed the Intermediate Examination in Science.

One Master obtained Second Class Honours at the B. Sc. General Examination.

COLLEGE OF AGRICULTURE

The only change made in the curriculum was the introduction of a course on the preparation of small lots of commercial tropical agricultural products other than sugar.

A course of lectures on Estate Hygiene was delivered to the students and to a number of Estate employés.

In January 1926 five new students were admitted to the College for the Diploma course while two other students joined for the same course at the end of the first term.

There were also six second-year and five third-year students on the books during the year. Seven students were also attached to the College during the year for post graduate work or special courses of instruction. There were thus 25 students on the College books between the months of January and June or three more than in the corresponding period of the previous year.

Five third-year students completed their course of training in June in which month the Final Examination for the Diploma was held. All the candidates succeeded in passing the examination.

The examination of the City and Guilds of the London Institute was held in April. One candidate passed the final examination of the Institute, and as he had already obtained the Diploma of the College, was awarded the Full Technological Certificate of the City and Guilds of London Institute.

The Laureate for the year 1926 is pursuing a course of study in relation to Plant Pests and Diseases at the Imperial College of Science and Technology in London.

PUBLIC WORKS

The following are the principal works carried out in 1926 in addition to the usual maintenance works:—

Flacq Police Station: conversion of the barrack room and coach house into quarters for N. C. O. and men, and large repairs to three constables quarters.

Pamplemousses Government School: large repairs.

Souillac District Court: extensive repairs and painting.

Petite Rivière: new school.

Police Headquarters: general improvements and construction of three new rooms.

Flat Island Quarantine Station; extensive repairs and improvements.

Civil Hospital: new isolation ward and dining room for female wards and general improvements.

Victoria Hospital: general improvements.

Mental Hospital; further improvements.

WATER WORKS

In addition to the maintenance works, the following lengths of new mains have been laid:—

6,050 feet of 1″, 6,800 feet of 1½″, 7,062 feet of 2″, 36,756 feet of 3″, 1,125 feet of 4″, 5,150 feet of 5″ and 90 feet of 6″ pipes. Nineteen public fountains were erected and 604 supplies granted. In the town of Curepipe 5,100 feet of additional pipes have been laid with 13 fire hydrants.

The duplicating of the power main from the Mare-aux-Vacoas to the Filter Beds Establishment is in good progress.

The Rivière du Poste Diversion Canal has been completed. This canal is 4,100 feet long from the river to the source of Rivulet Tatamaka which serves to carry the flow waters of Rivière du Poste to Mare-aux-Vacoas.

When the water works of the Municipality of Port Louis were handed over to Government in 1924, there was only one service reservoir at Monneron Hill, of about 500,000 gallons. During the year two new reservoirs were constructed and the old one was completely repaired. The total capacity of these reservoirs is about two million gallons.

The two filters at the Chlorination Plant are in good working order. The volume of water which the Municipal and Rectification Mains can deliver at the Chlorination Chamber is 1,700,000 and 2,100,000 gallons respectively.

DRAINAGE WORKS, PORT LOUIS

House service.—134 house service connections were completed during the year.

Construction.—3,043 feet of concrete pipe was laid and 17 manholes constructed. 1,116 feet of 18″ C.I. pipe was laid along the Syphon Line Section and 28 concrete pipes of 21″ were also laid to connect that line with the gravitation main at the junction of Edith Cavell and Brown Sequard Streets.

IRRIGATION WORKS.

The Nicolière Reservoir has been filled up and is being kept full, so that the fear of any abnormal absorption need not be entertained.

The concreting of the Feeder Channel from Midlands Reservoir has been continued on the Nicolière side.

On the Midlands side the Feeder Channel has been excavated on a length of about two and a half miles.

La Ferme Scheme.—No shortage of water has been experienced since the new source of supply from Mare-aux-Vacoas.

The price charged for water is one rupee per 16,000 cubic feet.

MEANS OF COMMUNICATION

RAILWAYS

The total length of the Mauritius Government Railways is 120 miles exclusive of the Bois Chéri Light Railway of about 24 miles in length. The gauge of the main line is 4 feet 8½ inches.

The gross earnings during the year were Rs. 4,048,616 as against Rs. 4,930,244 for the previous year, or a decrease of Rs. 881,628.

The receipts for passenger traffic showed a decrease of Rs. 701,293 over the previous year's figures. As regards goods traffic the tonnage conveyed was 542,296 as compared with 550,040 in 1924–25, giving a decrease of Rs. 131,070 in the earnings.

The working expenses amounted to Rs. 3,860,580, as against Rs. 4,251,916 in 1924–25, or a decrease of Rs. 391,336.

The amount paid under personal emoluments was Rs. 812,057 as against Rs. 794,841 in 1924–25.

BOIS CHERI LIGHT RAILWAY

This is a light railway of 2 feet 6 inches gauge running from the Savanne branch. The total paying traffic during the year amounted to 22,076 tons as against 23,906 tons in the previous year.

The actual working expenses were Rs. 25,006 and the earnings Rs. 32,750, thus leaving a balance in favour of earnings of Rs. 7,744.

ROADS AND BRIDGES

The island is well served by road communications, there being altogether more than seven hundred miles of road open for traffic, out of which 550 miles are under the charge of the Public Works Department, the remainder being maintained by the Local Boards and Townships.

The tarring of roads is being extended with successful results and bad curves and hills are being improved.

The rolling and tarring of the road from Port Louis to Curepipe has been completed.

General improvements to the roads and bridges taken over from the Municipality of Port Louis have been continued.

The gradual reconstruction of timber bridges in ferro-concrete is being continued.

Three timber bridges in Black River district have been replaced by ferro-concrete ones. A new bridge has been constructed in ferro-concrete to replace Tamarin "Chaussée."

POST AND TELEGRAPH SERVICES

The total Revenue from the Post Office in 1926 amounted to Rs. 347,799, or a decrease of Rs. 72,088 on that of the previous year. The total expenditure amounted to Rs. 370,230, showing a decrease of Rs. 125,189 as compared with 1925. The total expenditure includes Rs. 20,983 spent on the laying of underground cable, a non-annually recurrent work. The excess of expenditure over revenue was Rs. 22,431.

TELEPHONES

The Oriental Telephone and Electric Co. Ltd. has lines all over the principal places of the Island.

Situation and Area.

Mauritius lies off the coast of Africa, in the South Indian Ocean, some 500 miles east of Madagascar, between 57° 18′ and 57° 48′ E. longitude, and 19° 50′ and 20° 31′ S. latitude. Its official time is four hours fast on Greenwich (Ordinance 6 of 1906). Its extreme length is 38 miles, its extreme breadth 29 miles; and its area covers 720 square miles (460,800 acres). The density of population is very high, being about 550 persons per square mile for the whole island. The population at 31st December, 1927, was 401,693.

The largest town is Port Louis, the chief port and administrative capital, which has a population of about 43,000. The towns of the interior are all of recent growth. Curepipe, the residential capital, which lies at an altitude of 1,800 feet, situated on the highest part of the central plateau, has about 20,000 inhabitants. The smaller towns of Vacoas, Phoenix, Quatre Bornes, Rose Hill, and Beau Bassin in Plaines Wilhems District are situated at lower levels on the same plateau. The principal towns and villages in the other country districts are Mahebourg, Rose Belle, Souillac, St. Pierre, Moka, Flacq, Pamplemousses, Poudre d'Or, and Bambous.

---

* A sketch map of Mauritius will be found in the Report for 1926 (No. 1373).

The island is essentially of volcanic origin, although signs of an older formation are noticeable at some places (R. Thompson—1880). Its age is difficult to estimate owing to the misleading nature of the effects of cyclones and floods on its rocks. The deep river gorges, cut in hard basalt, point to considerable age, but all that can be said is that it is probably older than its immediate neighbours Reunion and Rodrigues, and certainly more stable (J. S. Gardiner).

The dependencies comprise a large number of small islands the nearest of which is 230 miles, the most northerly being about 1,200 miles away, 6° S. latitude. Rodrigues, the largest, with an area of 42 square miles, and an estimated population of 7,269, is 350 miles to the north-east of Mauritius, while lesser islands of some importance comprise Agalega, the Carcados Carajos group, and Diego Garcia, the largest of the Chagos Archipelago.

At the census of May, 1921, the population of the lesser dependencies was ascertained to be 1,810.

History.

The Mascarene Archipelago was probably known to Arab navigators at an early date. A Dutch map copied from Arab sources shews the islands now known as Mauritius, Rodrigues, and Reunion under the names of Dinarobin, Dinanora, and Margabin, and it is possible that certain islands marked on Idrisi's map (1153) are intended to indicate them also.

There can be little doubt too that the island was visited by the Malays who colonised Madagascar in the 15-16th century.

But Mauritius history really begins with its discovery by the Portuguese in the beginning of the sixteenth century—probably between 1507 and 1512, but not later than 1527, when the island is shown on an official map under the name of Santa Appollonia, borne in common with the other islands known later as the Mascarenes (Reunion and Rodrigues) after the great navigator Dom Pedro Mascarenhas.

The Portuguese named the island Ilha da Cirnos or Swan Island, from the big birds resembling swans found on shore.

There is no record of any permanent settlement by the Portuguese who, for nearly a century, only used the island as a port of call for repairs and supplies.

The island was still entirely uninhabited when, on the 18th September, 1598, a Dutch squadron of five vessels anchored in the South-Eastern Port to which the Commander, Admiral Wybrandt Van Warwyk, gave his own name. He took possession of the island on behalf of his Government and named it Mauritius, in honour of the Statholder, Prince Maurice de Nassau, but within fourteen days he set sail, leaving nobody on shore.

In 1613 the English seaman Captain Castleton, of the "Pearl," visited the island, which he found unoccupied, but it was only in 1638 that a first attempt at colonisation was made. On the 6th May of that year Cornelisz Simonsz Gooyer, appointed Governor of Mauritius by the "Compagnie Neerlandaise des Indes," landed at Warwick-Haven or South-Eastern Port. Fortifications, stores, and dwelling-houses were built at the place now called Old Grand Port, and thirteen families established themselves at the "13 Cantons" close by. These were followed by other settlers who established themselves in the neighbourhood, where Mahebourg now lies. Twenty years after, on the 16th July, 1658, the island was abandoned, and was again reoccupied on the 26th July, 1664. During this second attempt at settlement, which extended over a somewhat longer period, the fortifications and houses erected originally and which had been destroyed by a hurricane in 1664 were rebuilt. At Flacq some efforts towards development and cultivation were made without much success, whilst the district was only too successfully denuded of its ebony trees. A Royal Garden was created and new regions, such as Port North-West, Black River, and perhaps Plaines Wilhems, were inhabited, but the settlement did not prosper, and, discouraged by the difficulties of the enterprise, the Dutch finally abandoned the island in 1710. Their occupation was disastrous so far as natural resources were concerned, as the colonists denuded the forests of their valuable timber and almost exterminated the interesting natural fauna.

On the 20th September, 1715, Guillaume Dufresne, commanding the French vessel "Le Chasseur" arrived at Port Nord Ouest, took possession of the island in the name of Louis XV, King of France, and called it Ile de France. Settlement, however, was only effected six years later when, on the 23rd September, 1721, the Chevalier Jean Baptiste Garnier du Fouge-rai, commanding the *Triton* of St. Malo, resumed possession for the Compagnie des Indes Orientales after landing at Ile aux Tonneliers in Port Nord Ouest, which he named Port Louis. He was accompanied by a few French families from the neighbouring island of Reunion, who had come to settle, and from that time Mauritius never ceased to be inhabited.

In 1735, Mahé de Labourdonnais succeeded Mr. Dumas as Governor. He was a man of rare capacity and it is not too much to say that by his own teaching and example he laid the foundation of the future prosperity of the island. He left the island in 1747 and his successors had but to follow the path opened out to them to reap profit and success.

Conditions, however, soon became difficult for the settlers owing to the ever-increasing exactions of the "Compagnie des Indes," and the French Government was forced to assume direct control of affairs in 1764.

Under the new Government the burden of administration was shared between the Governor and an Intendant. The first of these, Pierre Poivre, introduced spices, then so valuable, from the East Indies, and created in 1767 the now renowned Royal Botanical Gardens of Pamplemousses on the site where Labourdonnais had erected in 1736 the fine dwelling-house of "Mon Plaisir," and planted fruit and ornamental trees introduced from India and Europe.

In 1790 Mauritius was to a great extent preserved from the commotions of the French Revolution owing to the unpopularity of the decree of the National Convention abolishing slavery, on which local agriculture solely depended. The Jacobean leaders and the agents of the Directoire sent to proclaim emancipation were expelled, a Colonial Assembly was elected, and nearly all links with the mother country were severed for some time.

A period of intense military activity under General Decaen during the earlier part of the reign of Napoleon followed, when the French privateers, using Mauritius as a point of departure for their activities against British trade, gained for the island its reputation, still enshrined in its motto as "The Star and the Key of the Indian Ocean." The reputation it had acquired became at length a cause of peril. After several indecisive attempts against the island, the English, determined to root out this rival base, prepared for a vigorous attack in 1810 and, after a memorable fight, Mauritius was lost to the French and came under British rule on the 3rd December, 1810.

The cession of the "Isle de France" and its dependencies to Great Britain was confirmed by the Treaty of Paris, and the island, under its former name Mauritius, has since 1814 remained uninterruptedly a British possession.

In 1835 the emancipation of slaves took place, but as this new class of free men refused occupation as labourers, the planters resorted to the introduction of indentured labour from India, which commenced in 1842 and continued practically without interruption until 1910.

In 1825 a Council of Government was established. It was modified in 1832 and reconstituted in 1884; it now consists of the Governor and 27 members, 8 being ex-officio, 9 nominated by the Governor, and 10 elected.

In 1864 the first line of railway was opened from Port Louis to Pamplemousses. Subsequently other lines were built, and the island is now served by a railway system of a total length of 119 miles, which renders access easy to most parts of the island.

In 1868, 1874, and 1892 the island was visited by very destructive cyclones. That of 1892 was one of the most violent ever recorded. It destroyed a considerable part of Port Louis (the capital), caused terrible damage throughout the island and involved a death roll of 1,232 people.

In 1854, 1856, and 1862, epidemics of cholera prevailed. In 1866 an epidemic of fever of great severity broke out, commonly regarded as malarial fever, although recent views appear to indicate that the high death roll then recorded (over 30,000 people) could not have been due to malaria alone. In any event, from about that time malaria, which was previously absent from the Colony, became endemic and has since rendered the lower parts of the island unhealthy. This does not, however, apply to the central tableland, where malaria is and has always been either absent or comparatively insignificant. The reduction of the incidence of malaria has been the subject of much investigation and sanitary effort on the part of the Government of recent years, and it is believed that these measures are having a pronounced effect on the general health of the community.

Between the years 1902 and 1909 the island suffered from a period of severe financial depression owing to the low market value of the staple product, sugar, which at that time prevailed. Matters were further aggravated in 1902 by an outbreak of surra which caused great loss of draught animals among the sugar plantations and necessitated the introduction of mechanical transport.

In 1909 a Royal Commission visited the island to inquire into the administration and finances of the Colony.

Mauritius was happily immune from direct action by the enemy during the Great War. A large number of recruits left for Europe for military service, and a Labour Battalion was recruited for service in Mesopotamia. During this period, the Imperial garrison was reduced to a skeleton, and the defence of the island was maintained by a locally-recruited Volunteer Force.

The great rise in the price of sugar which took place during and after the War brought prosperity to the Colony, and both Government finances and the general condition of the community were for a time far more prosperous than at any previous period of its history.

As a result, it has been possible to undertake great and material works for the improvement of the Colony, and a number of schemes of considerable magnitude have been inaugurated, including the amelioration of sanitary conditions, the improvement of the harbour, the extension and improvement of water supplies both for domestic and irrigational purposes, the improvement of the railways, and the extension of educational facilities.

During the last few years, however, the inflated prices caused by war conditions have disappeared and while, owing to the foresight of Sir Hesketh Bell, Governor from 1913 to 1924, a large sum of money was put aside for improvement and development, the revenues of the Colony, although much diminished, have to provide for the carrying on of many important works undertaken in times of greater material prosperity.

Languages.

The principal languages spoken in the Colony are English, French, Creole (a French patois), and Hindustani.

Currency.

The rupee currency (silver rupee of India) which was established by Proclamation No. 23 of 1876 is still in force in the Colony. The monetary units are enumerated under Section II, Finance.

Weights and Measures.

With regard to weights and measures, the metric system is in general use, but there are some special measures peculiar to Mauritius, the chief of which are :—

L'arpent.—The equivalent of 1.043 acres.

La gaulette.—A measure of length equal to 10 French feet. It is employed on the estates as a measure of work performed in the fields. The task given to a labourer corresponds to a certain number of *gaulettes*. The number of *gaulettes* of work per *arpent* varies according to the distance between the lines of cane holes.

Le tiercon is a measure of capacity for molasses : it varies from 190 to 192 litres.

La toise is a measure of length equal to 1.94904 metres (2 yards 4 inches English measure or 6 pieds French measure).

La toise carree (square *toise*) = 36 square feet French. This measure is used in job-contracts, masonry works, etc.

L'aune is a measure of length used in nearly all shops. It is equivalent to 1.191077 metres or about 1 yard and 11 inches.

The *aune* is generally counted as 1.20 metres.

The *corde* is employed for measuring stacked firewood. The wood is stacked in lengths of 2½ French feet and laid transversely, the stack measuring 4 French feet high, 8 French feet long, 80 cubic feet (French), 96.82 cubic feet (English) : 2.742 cubic metres.

La bouteille is a French measure for wine and is used locally for the sale of milk, vinegar, rum, etc. It is equivalent to 800 cubic centimetres (8/10 litres).

La chopine is one-half of a bottle.

La livre.—A local measure of weight = 500 grammes or ½ kilogramme (1.10 English lb. roughly).

Climate.

Situated just within the tropics and with no large land masses for many hundreds of miles in any direction, Mauritius enjoys a climate free from any violent extremes of weather except that tropical cyclones at times cause considerable damage to crops and more rarely to buildings. For the greater part of the year the so-called south-east trade winds blow gently over the island, tempering the tropical heat. These winds, carried over thousands of miles of warm sea before reaching Mauritius, are heavily laden with moisture which is easily condensed by the upward movement of the air over the hills, and the rainfall is sufficient from this cause alone to keep most vegetation green and abundant, especially in the higher parts of the island. On the other hand, this rain falls mainly in the form of showers of short duration: it interferes little with outdoor activities, and sunshine is plentiful. At times, and particularly in the summer months, December to March, the south-east trades fail and are replaced by the light variable winds of the "doldrums." The high humidity and nearly overhead sun then cause discomfort to Europeans, although the temperatures recorded are not high compared with those endured in Egypt or India. In the winter months the high humidity acts in a contrary manner and the nights, especially in the European residential districts between 1,300 and 2,000 feet, can feel unpleasantly cold with a temperature of about 50° F. Some of the residents who can afford to do so live inland on the hills in the summer months and by the sea in the winter months. Climatic statistics can be consulted in the many publications of the Royal Alfred Observatory, in the Mauritius Almanac, or in official Blue Books. Here it is sufficient to state that all temperatures measured at the Royal Alfred Observatory, 181 feet above sea-level, fall between 95° F. and 50° F. It will be noted that the upper limit is below the upper limit for London. The yearly rainfall varies from about 30 inches on parts of the coast to 150 inches on the high inland regions. Snow has never been seen on the hill-tops and hail is so rare as to be almost unknown. Thunderstorms are not very frequent and damage from lightning is uncommon. Fog is very rare except on the hill-tops.

Owing in part to the memory of the disastrous cyclone of 1892, in part to the entire absence of strong winds except during the approach of a cyclone, and the consequent flimsiness of the houses, and chiefly to the damage which may be caused to the principal crop of the island, the sugar-cane, cyclones occupy a place in the fears and conversation of the population out of all proportion to their importance. Cyclones have occurred in all months from October to May but mostly in the four months December to March. In general, about five per year can be expected to approach within 300 miles of the island and cause anxiety for two days each. Usually no damage is done until a cyclone approaches within 80 or 90 miles, and the number of cyclones within this distance is considerably less than one per year. A graphic description of the catastrophe of 1892 can be found in *Blackwoods Magazine* for September 1892, which has been largely quoted in other places ("The Sugar Industry of Mauritius," Walter; and "Mauritius Illustrated," Macmillan). The effects of cyclones are not altogether harmful; the heavy rains associated with such storms are beneficial and indeed necessary to the sugar crop.

I.—GENERAL.

In the early part of the year under review it was expected that the Colony would recover its economic prosperity after the period of depression which it had gone through during the two previous years. This expectation was not realised : the sugar-crop was much below the normal, while the prices obtained for this commodity left to the producers but little, if any, margin of profit.

As regards Revenue, a revision of the Customs Tariff has been effected, its main features being the exemption from import duty of certain additional articles of food, a moderate increase in the duties on certain articles of luxury, and the extension of the preference granted to imports from Great Britain; e.g., British cinema films are now imported free of duty, while the duty on British cars, lorries, etc., has been reduced from 12 to 5 per cent. It is also proposed to revise the scale of licences and to impose a tax on immovable property lying outside municipal and township limits.

His Excellency Sir Herbert Read, K.C.M.G., C.B., opened the second session of the Council of Government on the 3rd May, 1927, and, *inter alia*, made the following statements :—

> "In view of recent experiences, it seems clear that some means must be devised for placing the main industry of the Colony on a more stable basis. One step in this direction has been recently taken by the appointment of a joint Committee of representatives of the Government and of planters to consider in what way the Government and the planters could co-operate in the improvement of the organization of the sugar industry. It is proposed that these conferences should be held annually, and it is generally agreed that nothing but good can result from them. At the same time, it is essential that the country should not neglect the other line of progress, namely, the development of subsidiary industries. It has now been established that Mauritius can produce tobacco—some of it of high quality—for which there is a strong demand in the United Kingdom. Commercial consignments are now being shipped home, while the area under cultivation is 1,100 acres and is rapidly increasing. As for aloe fibre, the central factory at Port Louis of the Fibre Growers' Syndicate is approaching completion, and

it may be confidently expected that this industry will shortly enter on a new phase of development. Satisfactory progress is also being made in some of the other subsidiary industries which are at present of less importance.

" But, in order that the prosperity of the community as a whole may be further ensured, it is necessary to enlist, as far as possible, the co-operation of all, and I think, especially in view of the increasing demands which are being made for poor law relief, that the time has come to inaugurate a movement on the lines of the ' National Savings ' movement in the United Kingdom. This movement was begun as a War measure, and during the ten years of its life Savings Certificates with a cash value of over £600,000,000 have been sold to the public. When to this amount is added the sums held by the Post Office Savings Bank and other institutions for the encouragement of thrift, the total amount of savings in the hands of small investors is now more than £1,000,000,000. Conditions in Mauritius are no doubt dissimilar from those in the United Kingdom, but I see no reason why a scheme to suit our circumstances should not be evolved, and I propose to appoint a small Committee to deal with the matter.

" At the opening of the Session of May last year, I stated that there was an estimated deficit of Rs.1.700,000 on the working of the year 1925-26. I am glad to say that the actual deficit was only Rs.223,224. In the case of the Railway, I stated that there would probably be a small surplus for the same year. As a matter of fact, there has been a deficit of Rs.173,977, so that, taking the financial transactions of that year as a whole, there has been a total deficit of Rs.397,201. Having regard to the difficulties through which the Colony has been passing, I do not consider that this is an unsatisfactory result. The estimated deficit for 1926-27 is Rs.2,400,000, but, in view of what has just been stated with regard to the year 1925-26, we may reasonably hope that it will fall considerably short of this figure.

" Turning now to the Budget for the year 1927-28, the Estimated Revenue is Rs.15,149,246, and the Estimated Expenditure Rs.16,744,690, from which should be deducted Rs.1,635,700 to be charged to Surplus Balances, leaving an Estimated Surplus of Rs.40,256. The Surplus Balance of the Colony on the 30th June, 1926, amounted to Rs.14,532,447, and it is estimated that on the 30th June, 1927, it will amount to Rs.12,132,447. The unspent balance of the Improvement and Development Fund, which stood at Rs.12,860,355 on the 1st of July, 1926, is expected to amount to some Rs.9,874,400 on the 30th of June, 1927. The Railway Draft Estimates have not yet been submitted by the Board.

"As regards Revenue, proposals will be laid before Council for the revision of the Customs Tariff. The main features of the scheme are the exemption from import duty of certain additional articles of food with a view to benefiting the poorer classes, a moderate increase in the duties on certain articles of luxury, the extension of the preference granted to imports from Great Britain, and the abolition of the import duties on a considerable number of articles which only produce in the aggregate a very small amount of revenue. It is also proposed to revise the scale of licences with a view to distributing the burden of taxation more evenly among the different sections of the population.

"The Nicoliere Reservoir has been completed and a certain amount of water which it is hoped shortly to increase is being distributed to the planters in the district. As you know, however, the reservoir cannot be fully utilised until the feeder reservoir at Midlands and the connecting canal have been completed. The Director of Public Works has prepared a scheme by which it is hoped that the time originally assigned for the construction of the latter works will be considerably shortened.

"At the same time satisfactory progress is being made with the improvement of the supply of drinking water throughout the island. The main pipe-line from the great reservoir of Mare-aux-Vacoas is being duplicated, and the storage capacity at Port Louis is now four times as great as what it was two years ago. Much good work also has been done in the country districts, notably in the carrying out of the scheme for the districts of Riviere du Rompart and Pamplemousses. The cost of the scheme is estimated at Rs.912,000, and it is expected that it will be completed in two years.

"A malaria campaign has been inaugurated on the lines suggested by Mr. MacGregor in his well-known report; measures are being concerted for dealing with the problem of tuberculosis, and the activities of the child-welfare organization are being extended. The sewerage scheme for Port Louis has been accelerated, and progress is being made with the introduction of improved sanitary arrangements in the other principal townships.

"Reconstruction of the public roads proceeds apace, and the total length of tarred road is now approximately 47 miles. If the present rate of progress is maintained during the next three years, I venture to think that, at the end of the period, our road system will compare more than favourably with that of any other Colony in the Empire.

> " As regards the Harbour, it is estimated that Quay " D " and the contiguous Reclamation Area will be ready for use within twelve months, and that the rest of the Reclamation Area will be filled up within 20 months. Some 120,000 tons of spoil have already been removed from the Anchorage of the Harbour, so that a depth of 32 feet water at low tide is now available in four berths as well as in other areas. This, combined with the further dredging which will be undertaken when the Reclamation Area has been completed, will result in a great improvement of the facilities of the port."

The great social event of the year was the visit to the Colony of Their Royal Highnesses the Duke and Duchess of York, who left behind them a memory which for years to come will be treasured by all classes of the population.

Their Royal Highnesses arrived in the Colony aboard H.M.S. " Renown " on 1st June and left on the 3rd. During their visit Their Royal Highnesses attended a race meeting which had been arranged by the Mauritius Turf and Jockey Clubs to give as great a number of the population as possible the opportunity of seeing Their Royal Highnesses, who drove round the greater part of the course and were given a most enthusiastic reception by a vast assemblage estimated at 50,000 persons. On the evening of the 1st June a Reception of a thoroughly representative character was held by the Governor at Le Réduit, and on the following day the Duke took part in a *Chasse*, or deer-hunt, which is the national sport of the Colony. The *Chasse* took place on the property of Mr. George Antelme, the son of the Mr. Leopold Antelme who organized the *Chasse* when His Majesty King George V visited the Colony in 1901.

All classes of the population vied with each other in extending to Their Royal Highnesses a warm welcome and displayed that hospitality for which the island is justly famous.

His Excellency Sir Herbert Read, K.C.M.G., C.B., left the Colony on leave of absence on 3rd August, 1927, and until the end of the year the Government was administered by Sir Allan Grannum, C.M.G., Colonial Secretary.

II.—FINANCE.

The total revenue of the Colony for the financial year ended 30th June, 1927, amounted to Rs.14,682,806.77, being Rs.347,363.23 below the Estimates and Rs.1,211,956.60 below the revenue of the previous year.

The expenditure amounted to Rs.16,461,061.80, being Rs.271,420.80 above the Estimates and Rs.343,073.93 above the expenditure of the previous year.

Of the expenditure for 1926-27, Rs.4,911.973 were spent on Personal Emoluments and Rs.11,549.089 on Other Charges. The corresponding figures for 1925-26 were: Personal Emoluments Rs.4,715.862, Other Charges Rs.11,402.126.

The expenditure incurred during the year exceeded the revenue by Rs.1,778,255.03; the financial transactions of the Colony for the year 1926-27 showing therefore a deficit of Rs.1,778,255.03.

The following is a comparative statement of the revenue and expenditure for the last five years:—

Years.	*Revenue.* Rs.	*Expenditure.* Rs.
1922-23	23,314,734	21,685,665
1923-24	19,888,554	16,188,735
1924-25	19,672,843	17,355,868
1925-26	15,894,763	16,117,988
1926-27	14,682,806	16,461,061

Assets and Liabilities.

The totals of Assets and Liabilities at the end of the year were Rs.43,327,543.61 and Rs.31,185,683.95, respectively, or a net surplus of Rs.12,141,859.66 on 30th June, 1927

Public Debt.

No change took place during the year in the public debt of the Colony, which remained at £1,765,724. Against this liability there was an accumulated Sinking Fund of £887,181, as compared with £819,315 at 30th June, 1926.

The following is a statement of the public debt of the Colony:—

Currency and Banking.

The Currency of the Colony consists of :—

(1) The Mauritius bronze coins of 1 cent, 2 cents, and 5 cents.

(2) The Mauritius silver coins of 10 cents and 20 cents.

(3) The nickel coins of 4 annas of the Government of India.

(4) The silver rupees of India and their silver subdivisions of ¼ Rupee and ½ Rupee.

(5) The Mauritius Government notes of R.1, Rs.5, Rs.10, and Rs.50.

(6) The currency notes of the Government of India of all denominations.*

(1), (2), and (3) are legal tender up to Rs.5, and (4), (5), and (6) are legal tender to any amount.

The average value of currency notes in circulation during the year was Rs.14,185,000, as compared with Rs.15,460,500 in 1925-26.

The average amount of silver held by the Commissioners of Currency amounted to Rs.4,305,500, as compared with Rs.5,581,250 the average for 1925-26.

The investments (not including Depreciation Fund) which stood at Rs.9,879,250 on 1st July, 1926, remained the same during the year. The Depreciation Fund was increased from Rs.1,209,401 to Rs.1,335,806. The revenue (interest on investments, less addition to Depreciation Fund) was Rs.419,214, and this sum was credited to the General Revenue of the Colony.

The statement of assets and liabilities of the Commissioners of Currency shows a surplus of Rs.1,335,806. Valuing the investments at the market rate on 30th June, 1927, the surplus would be increased to Rs.1,387,685.

There was no change in the currency of the Colony during the year.

Government Savings Banks are established in the nine districts and in the dependency of Rodrigues, with a head office in Port Louis. The total number of depositors at 30th June, 1927, was 36,510, as against 36,481 in the preceding year, with deposits amounting to Rs.5,134,555 as against Rs.5,026,698 in the preceding year. The Savings Banks are largely made use of by the Indians, of whom at the 30th June, 1927, there were 15,431 depositors with Rs.2,287,355 to their credit, as against 15,450 depositors with Rs.2,225,859 to their credit on 30th June, 1926.

Interest is paid at the rate of 3 per cent. a year.

The Banks are the Mauritius Commercial Bank, the Mercantile Bank of India (Ltd.), and Barclays Bank (Dominion, Colonial and Overseas).

---

* *Local Money.*—Visitors to Mauritius are frequently nonplussed at the use of expressions by merchants and others, denoting money values which have no legal tender. The principal are as follows: "Cache," R. 0.02; "Marqué," (or sou marqué), R. 0.03; "Franc," R. 0.20; "Livre," R. 0.20. The dollar "Piastre," equivalent to Rs. 2, survives in auction sales.

The capital resources of these Banks are :—

Name of Bank.	*Paid-up Capital.*	*Rate % per annum of last dividend.*	*Amount of last half-yearly dividend.*	*Amount of Reserve.*
Mauritius Commercial Bank	Rs. 2,000,000	15%	7%	Rs. 1,840,000
Mercantile Bank of India Ltd.	£1,050,000	16%	£84,000	£1,385,000
Barclays Bank (Dominion, Colonial and Overseas).	£4,975,500	8%	—	£1,100,000

The following Ordinances relative to finance were passed during the year :—

(A) *The Paper Currency (Amendment) Ordinance* (*No.* 9). Enabling the investment of one-half the equivalent of notes in circulation in such securities as may be approved by the Secretary of State.

(B) *The General Loan and Inscribed Stock (Amendment) Ordinance*, 1927 (*No.* 42). Enabling the Governor with the approval of the Secretary of State to suspend further contributions to Sinking Funds, when the Trustees of the Fund are satisfied that no further contributions are necessary to redeem the loan when it becomes due.

III. PRODUCTION.

Agriculture and Industries.

The industries of the island are entirely agricultural. The principal crop is sugar. The estimated area under sugar-cane at the commencement of 1927 was 162,102 acres; estate cultivation occupies 99,600 acres, and plantations off estates 62,500 acres. Of the area cultivated under sugar-cane, Indian planters comprise 72,500 acres, i.e., 44.7 per cent. Forty-four sugar factories operated during the 1927 crop. One factory will probably close this year.

Market conditions for sugar have continued to be unfavourable and the industry is traversing a difficult period in consequence.

Weather conditions were on the whole favourable during the year, but the crop amounted only to 216,000 tons, thereby causing a very marked falling off between the preliminary estimate and the crop harvested. It is believed that the deficit is largely due to the prevalence of disease, principally Gummosis on the White Tanna cane, which at present constitutes 56 per cent. of the total area cultivated. In consequence, considerable attention is being devoted to securing new varieties of cane for cultivation.

Sugar machinery to the value of Rs.1,087,302 was imported during the year, and tramway material to the value of Rs.418,620. Tractors and ploughs to a value of Rs.70,535 were imported, and there are now 111 tractors in the Colony.

The Sugar Planters' Syndicate, constituted under Ordinances Nos. 31 of 1920 and 7 of 1921, controlled more than 80 per cent. of the sugar produced by the Colony.

As in previous years, the bulk of the production went to the United Kingdom. Up to the end of 1927 the total export approximated to 123,600 tons, of which 110,100 tons had been shipped to the United Kingdom.

A further centre of infection of the destructive beetle *Phytalus smithi* was recorded in Flacq during the year. Control measures are being adopted. It is estimated that approximately 41,000 acres are now infested with the pest, but, as the result of the control measures adopted, appreciable damage is only recorded on about 2,500 acres.

In view of the difficulties encountered by the sugar industry, a conference representing the interests of the industry was held during the year at the instance of the Governor, with the assistance of the Director of Agriculture. The conference discussed a large number of points of importance in connection with the sugar industry. One of the results of the conference has been the establishment of the Sugar Industry Reserve Fund, which is created by means of a special tax of 4 cents of a rupee per 100 kilos. of sugar exported, as provided for by the Sugar Industry Reserve Fund Ordinance 1927 (No. 24); the object of the Fund being :—

(1) To subsidize and encourage experimental installation of new machinery in sugar houses and in cane plantations;

(2) To finance an agency of the Chamber of Agriculture in England;

(3) To provide for the costs of visits of suitable persons of this Colony to other sugar-producing countries and of expert technologists from other countries to this Colony, and

(4) To defray any expenses in connection with any other object which the Committee may consider beneficial to the sugar industry of the Colony.

Research in relation to the sugar industry.—A considerable amount of research in connection with the sugar industry was carried out by the Department of Agriculture. The work done comprised investigations on soil problems, on the manuring and cultivating of canes, on the raising and trial of new cane varieties, and on the control of insect and fungoid disease of cane.

As the outcome of the sugar conference alluded to above a technical conference is being arranged to be held in 1928 with the object of discussing the results of the research work performed and their increased application in practice on estates.

Subsidiary Industries.—As a result of the depression of the sugar industry, continued attention has been devoted to the development of the subsidiary industries, and marked progress can be recorded. In principle it seems clear that only those industries are worthy of attention which show possibilities of development as an export trade, inasmuch as entire reliance on the local market leads to instability as the result of dependence of home consumption on the staple industry, i.e., sugar, and also owing to abrupt fluctuations in price as the result of limitation of demand.

Fibre Industry.—Mauritius hemp is produced from the leaves of *Fourcroya gigantea*, a plant which grows well all over the island. The estimated area under Mauritius hemp is 20,000 acres. Quotations for prime were low during the year, hardly rising above Rs.320 per ton. The export for 1927 was 1,905 tons. An important event was the commencement of the operations of the Hemp Syndicate. The object of the Association was co-operation among planters to secure better grading and packing of the fibre and ultimately, by co-operative marketing, to secure better market conditions. The Syndicate controls a baling and grading factory, the cost of the erection of which has been supplied by a grant in aid of Rs.115,000 from the Improvement and Development Fund. The Government is represented on the Board of the Syndicate by the Director of Agriculture. The building is equipped with up-to-date machinery, including electrically-operated cranes and hydraulic presses. The improvement in the manner in which the fibre is presented for market, as the result of the Syndicate's operation, had already enhanced the price by the end of the year. With but few exceptions all fibre producers in the Colony have now adhered to the Syndicate.

Sisal cultivation on a commercial scale has been resumed at Grand Bay Estate, and the Robay machine belonging to the property is being operated. Sisal is also cultivated on a small scale by the Anglo Ceylon Co. at Stanley.

Tobacco.—Considerable developments took place in relation to this crop. At the end of the year, 2,000 acres were estimated to be under cultivation and the production of the Colony amounted to 321 tons of cured leaf. Practically all of this was taken up for local consumption, and various brands of local cigarettes are now consumed on a large scale. Attention was devoted to the possibility of organizing an export trade, and a tobacco export grading warehouse was started under the supervision of the Department of Agriculture. Under Proclamation No. 15 of 1927, the export of tobacco is prohibited unless it is accompanied by a certificate to the effect that it has been graded by the Government grading warehouse.

The warehouse commenced operations at the beginning of December, previous trial shipments having indicated that remunerative prices for Mauritius tobacco are likely to be obtained in England.

A Tobacco Growers' Association was inaugurated during the year and co-operated with the Department of Agriculture and the Government in various measures for the protection of the industry, including the control of disease and seed supply.

Provision for the imposition of an excise duty on locally-grown tobacco was made by Ordinance No. 46 of 1927, which also provides for the survey of manufacturers and curers of tobacco, a new industry capable of profitable development. There are now six firms manufacturing tobacco in Port Louis, of which the chief is the British American Tobacco Company.

Pine-apple canning and Fruit preserving.—There appear to be possibilities of development in this direction. Pine-apples grow well in Mauritius and scope exists for the establishment of an export trade for the canning of pine-apples. A committee, under the chairmanship of the Director of Agriculture, studied the question during the year and an officer of the Department of Agriculture was sent to South Africa to report on the industry in that country. Subsequently, a scheme for the inauguration of the industry was drafted and it is hoped that the proposals will result in the establishment of an export trade on some scale.

Alcohol.—688,077 litres were produced during the year. The modern plants at Medine and Richelieu continued operation, and a number of motor-lorries are now run on power alcohol. The recommendations of the Alcohol Commission for the remodelling of the existing Liquor Laws are expected to improve greatly the position of the industry.

Oil crops.—The Innova Refinery continued to operate during the year, mainly handling copra from oil islands. Various plantation companies in these islands are now devoting attention to the improvement of their properties. The copra production from the lesser dependencies averages 900 tons yearly.

Tea.—The industry continued in a depressed condition. The duty on imported teas was reduced from 60 to 40 cents. per kilo during the year. In the absence of the possible development of an export trade, the future prospects of this industry are not bright.

Food-crops.—Maize was grown on about 3,500 acres. There has been an appreciable increase of the area cultivated under vegetables, which may be approximated to 4,000 acres.

Coffee.—Some interest was shown in the question of coffee cultivation. The possibilities of organizing an export trade in this staple appear to be worth exploring.

Vanilla.—Little progress is recorded, although conditions are favourable for production. The opinion has been expressed that existing legislation which imposes severe restrictions on cultivation of the crop is acting as a bar to progress.

Live stock.—Proposals for assisting the live stock industry by the grant of Rs.30,000, to be administered by a committee under the chairmanship of the Director of Agriculture, were approved during the year.

The Government Dairy continued to operate. A committee to enquire into the undertaking was appointed. It is hoped that, as a result of the findings of the committee, the value of this institution in providing a milk supply of high purity, for use in hospitals and for private persons, will receive greater appreciation.

Animal Diseases.—The campaign for the eradication of surra was continued. 13,488 animals were examined for the disease during the year and 72 cases were detected. There were one or two minor outbreaks of the disease in the latter months of the year.

Red water fever occurred on two properties. Both outbreaks were satisfactorily controlled. A campaign for the control of bovine tuberculosis has been inaugurated.

Agricultural Shows.—A very successful agricultural show was held at Pamplemousses Botanical Gardens in September, 1927.

Rodrigues.—The Agricultural Experiment Station was maintained; special interest attaches to experiments in the cultivation of long staple upland cotton conducted thereat, the results of which appear very promising. Attention is also being paid to the cultivation of tobacco, food crops, stock, and re-afforestation.

Co-operative Credit Societies.—Co-operative credit societies are administered under Ordinance No. 4 of 1913; they are based on the Indian model. Numerous difficulties have been encountered in their administration, nevertheless it seems clear that, if properly administered, such societies are capable of accomplishing much useful work in the Colony.

On the 30th June, 1927, there were 29 societies and the total membership amounted to 2,861; the total working capital on the same date was Rs.310,328, a reduction of Rs.1,335 as compared with the year ended 30th June, 1926.

The following is a comparative statement showing the amount of the annual exports of the principal commodities of the Colony during the last five years:—

Sugar.

	Tons.	*Value.* *Rs.*
1927	227,989	53,789,928
1926	181,215	37,991,240
1925	192,303	41,250,907
1924	182,742	49,823,753
1923	223,051	67,227,562

Aloe Fibre.

	Tons.	Value. Rs.
1927	1,905	665,936
1926	2,577	838,980
1925	1,896	557,072
1924	1,093	413,819
1923	599	164,112

Copra.

	Tons.	Value. Rs.
1927	1,396	334,297
1926	1,000	284,960
1925	868	154,308
1924	746	224,117
1923	718	117,094

Coconut Oil.

	Litres.	Value. Rs.
1927	61,330	34,597
1926	67,997	43,126
1925	75,786	48,321
1924	64,362	50,761
1923	22,276	16,897

Forestry.

The total area of woodlands under the control of the Forest Department at the end of 1927 was :—

	Arpents.
A. Crown Lands	69,827.69
B. Private Forests under State Control—	
(1) Mountain Reserves	8,728.56
(2) River Reserves, about	6,000.00
(3) *Curatelle* Lands	17.00
(4) Waste lands of Port Louis	156.50
Total	84,730.75

showing an increase of 339 *arpents* 60 of Crown lands over last year. These new lands were acquired under the Land Purchase Scheme at a cost of Rs.87,360.

The output of the Forest Department disposed of from Crown lands during the year in favour of the public and of the Government departments amounted to 24,617 cubic feet solid of timber, and 165,000 cubic feet stacked of firewood, which shows an increase of about 11,700 cubic feet solid on last year's production, but a decrease of 151,500 cubic feet stacked of firewood. The increase is due to utilization of eucalypts uprooted by cyclones.

In the formation of forest plantations on Crown lands a total expense of Rs.63,739.62 was incurred. About 350 *arpents* of new ground were re-stocked, chiefly with pines, eucalypts, and the ruling indigenous species, and 1,307 *arpents* of previous plantations were maintained at the same time. This shows a small increase of 85 *arpents* on last year's work, when Rs. 49,000 were spent on the creation of 265 *arpents* of new forest ground and the upkeep of 1,126 *arpents* of previous plantations.

The lumber trade of Mauritius is an important one, the average annual import of timber (boards, planks, scantlings, shingles, railway sleepers, and wooden manufactures) during the years 1922 to 1926 amounted to (a value of) about 2¼ millions rupees. The imports of last year amounted to 7,337 cubic metres of boards, planks, and scantlings, worth Rs.603,356.00, 1,723,525 teak shingles, worth Rs.102,926.00, and 32,692 railway sleepers, worth Rs.227,460.00. The only local timber exported is ebony, which is now very limited and only exists in some Crown forests. In 1927, by special authority, a consignment of 11 cubic metres, worth Rs.2,915, from mountain reserves (private forests under State control) was allowed to be exported.

Fisheries.

In 1926 Mr. James Hornell, F.L.S., F.R.A.I., late Director of Fisheries to the Government of Madras, was deputed by the Secretary of State to carry out a rapid survey of the Marine Resources of Mauritius and to submit recommendations for the improvement and development thereof.

Mr. Hornell arrived in the Colony in April and submitted his report in August, 1926. The report was laid before the Council of Government in November, 1926, and ultimately received the approval of the Secretary of State.

As an outcome of this report, a Permanent Advisory Committee was appointed in August, 1927, and the Committee is now studying the best practical means of putting into force the recommendations contained in the report.

The enforcement of the provisions of the Fisheries Ordinance is vested in the Receiver-General, and the whole is under the control of the Inland Revenue Branch of the Receiver-General's Department.

The fisheries industry now chiefly consists of lagoon fishing, sea fishing being much less resorted to than in pre-war days.

The outstanding features of the fishing industry (as reported upon by Mr. Hornell) are as follows :—

(*a*) The remarkable variety and natural abundance of good fish both in the lagoon area and in the open sea around the island.

(*b*) The undue concentration of fishing within the lagoon area, neutralizing in large measure the natural abundance of fish therein.

(*c*) The very great decrease from pre-war years in the amount of fishing done in the open sea.

(*d*) The lack of enterprise in the industry save in the exploitation of the lagoon area.

(*e*) The specially favourable conditions that prevail on the coast for marine fish-farming, coupled with the imperfect utilization of these opportunities.

(*f*) The absence of any important minor marine industries save lime-making from coral and the half-hearted fish-farming carried on in barachois.

Mr. Hornell has submitted a series of specific recommendations for the development and improvement of the fishing industry, including the creation of a Fisheries Department.

The Department proposed would attend to all matters relating to fisheries and would be under the guidance of a trained Superintendent, who should have qualified in Oceanography at the University of Liverpool and have made a stay of three months in India to study the organization and methods of the Madras Fisheries Department.

Water Power.

The numerous rivers and streams of Mauritius flow generally through deep ravines, their courses being broken by many waterfalls and rapids. The following extract from the list of waterfalls will give some indication of the available water power in the Colony. It is estimated that 10,000 horse-power is available, of which 1,200 horse-power is utilized at present, principally for electric light service.

WATERFALLS MEASURED DURING THE DRY SEASON OF THE YEAR 1912.

Name of River.	*Name or description of Waterfall.*	*Height of Waterfall in feet.*	*Volume in cubic feet per minute.*
G. River, S.E. ...	Deschiens	19	1,530
do. ...	Diamamoo	63	2,315
G. River N.W. ...	Le Reduit	135	450
Savanne River ...	Cascade Cecile	105	580
do ...	Below Terracine Dam ...	77	250
Tamarind River ...	Sept Cascades	960	420
R. des Galets ...	Near Plaine Champagne ...	130	60
do. ...	Luchon	400	134
R. du Cap	Chamarel	320	330
R. Moka	Cascade Pigeons	160	80

Manufactures.

An account of the principal manufactures of the Colony has been given above. It may here be mentioned, however, that a brickfield plant which had been started by Government on an experimental basis is now being worked by private enterprise. The bricks produced are of good quality and some villas built of this material are already in existence.

IV.—TRADE AND ECONOMICS.

The total value of the overseas trade of the Colony in 1927 amounted to Rs.111,662,220, the value of the imports of merchandise being Rs.55,185,633 and that of exports Rs.56,476,587.

1927 was the first year since 1922 in which the value of the exports has exceeded that of the imported goods.

The Customs revenue from imports amounted to Rs.5,270,732, a slight increase on the revenue for 1926, and the revenue from the exports was Rs.1,875,637, against Rs.1,490,293 in 1926, the increase being due to a larger sugar crop.

Trade.

The comparative values of imports and exports of merchandise for 1913 and for the past five years are as follows :—

		Imports. *Rs.*	*Exports.* *Rs.*	*Total.* *Rs.*
1913	...	36,607,671	32,291,706	68,899,377
1923	...	76,835,565	69,841,931	146,677,496
1924	...	76,415,648	52,282,533	128,698,181
1925	...	61,682,844	44,478,894	106,161,738
1926	...	50,596,137	41,208,198	91,804,335
1927	...	55,185,633	56,476,587	111,662,220

The value of re-exports was Rs.1,660,091. Bullion and specie, amounting to Rs.1,598,387, was imported during the year, and the exports under that heading amounted to Rs.2,567,000.

IMPORTS.

The distribution of the import trade showed an increase of about 20 per cent. in the value of the imports from the United Kingdom over that of 1926; trade with Australia, Germany, China, Italy, Sweden, Spain, and Belgium also showed an increase; decreases are recorded in the case of Madagascar, Reunion, and Canada.

The principal items of the imports which showed an increase in 1927 over the preceding year are rice and grain, manures and fertilizers, cotton and woollen piece goods, spirits, oils (edible), motor-cars, lorries, bicycles, and agricultural tractors, cement, iron and steel manufactures, silk goods, boots and shoes, and unmanufactured tobacco. The following are the principal items in which decreases are shown : coal, coke and manufactured fuel, manufactured tobacco and cigarettes, wines, paraffin, motor spirits and lubricating oils, and gunny bags.

The increase in the importation of unmanufactured tobacco and the decrease in the manufactured tobacco and cigarettes are due to the rapid progress made in the production and manufacture locally of tobacco and cigarettes.

The following statement gives the character and size of the trade in the principal articles imported in 1927 as compared with the preceding year :—

	1927.		*1926.*	
Rice	59,607	Tons	52,964	Tons
Other Grain	22,307	„	17,623	„
Manures and Fertilizers	19,564	„	10,814	„
Coal, Coke and Patent Fuel	21,025	„	41,017	„
Cement	9,001	„	5,565	„
Cotton Manufactures	10,644,866	Metres	8,300,821	Metres
Woollen „	129,001	„	87,914	„
Wines in Cask	2,709,433	Litres	3,471,198	Litres
„ in Bottle	96,121	„	141,536	„
Spirits	51,766	„	40,664	„

	1927.		*1926.*	
	No.	*Rs.*	*No.*	*Rs.*
Motor-cars	180	506,558	108	273,853
„ Lorries	5	88,541	66	166,561
Boots and Shoes	—	295,505	—	177,134
Haberdashery and Millinery...	—	900,933	—	890,345
Iron and Steel Manufactures	—	1,810,861	—	1,237,358
Silk Goods	—	489,548	—	242,138
Drugs	—	422,376	—	319,760
Wearing Apparel	—	671,230	—	556,184

EXPORTS.

Owing to a large crop the export of sugar in 1927 showed an increase over the 1926 figures and was the highest since 1922.

The figures for the past six years are as follows :—

	Kilos.	*Value.* *Rs.*
1922	292,744,249	88,454,321
1923	223,051,061	67,227,562
1924	182,742,235	49,823,753
1925	192,303,540	41,250,907
1926	181,215,772	37,991,240
1927	227,989,329	53,789,928

The principal domestic exports other than sugar were aloe fibre, valued at Rs.665,936; copra, Rs.334,297 ; coconut oil, Rs.35,247; and rum, Rs.20,055.

Re-exports amounted to Rs.1,660,091 and consisted chiefly of rice, gunny bags, wheat flour, lentils, and salted fish.

The following table shows the distribution of the imports, exports, and total trade with the United Kingdom, British Possessions, and foreign countries in 1913 and for the past five years :—

Imports.

Countries.	*1913.*	*1923.*	*1924.*	*1925.*	*1926.*	*1927.*
United Kingdom ...	33·2	30·6	31·9	27·4	22·2	23·6

	100·0	100·0	100·0	100·0	100·0	100·0

V.—COMMUNICATIONS.

Shipping.

The following shows the number and tonnage of vessels using the port (excluding the coasting trade) during the past three years.

	Inwards.		*Outwards.*	
	No.	*Tonnage*	*No.*	*Tonnage.*
1925	234	632,951	229	619,221
1926	187	508,555	194	541,120
1927	224	622,936	226	625,524

In the coastal trade with the dependencies there were 21 vessels inwards of 8,461 tons and 20 vessels outwards of 7,873 tons.

The principal lines of steamships represented by vessels calling at Port Louis were the Union-Castle Steamship Co. Ltd., the British India Steam Navigation Co., Ltd., the Messageries Maritimes, the Clan Line, the Ellerman Harrison Line, the Compagnie Havraise Peninsulaire, and the Mogul Line.

Railways.

The Mauritius Government Railway, exclusive of Bois Cheri Light Railway, is 120 miles in length. The gauge of the main line is 4 feet 8½ inches.

Earnings amounted to Rs.3,269,391, as against Rs.4,048,616 for the previous year, a decrease of Rs.779,225. Comparative figures are :—

	Previous year.	*This year.*	*Decrease.*
Coaching Revenue ...	Rs. 1,964,053	1,663,325	300,728
Goods Revenue	Rs. 1,813,930	1,293,970	519,960
Goods Tonnage	542,296	480,969	61,327

The working expenditure amounts to Rs.3,364,687. In view of the reduced revenue earned, every effort was made to reduce expenditure, with the result that there is a reduction of Rs.495,893 as compared with expenditure for the previous year. Comparative figures are :—

	Rs.
Working expenditure, previous year ...	3,860,580
Working expenditure, this year	3,364,687
Decrease	Rs. 495,893

This reduction is due to a large extent to the reorganization of the Railway Department, brought into force on 1st July, 1926, which provides for increased supervision and modern railway accounting.

The excess of working expenditure over earnings thus amounts to Rs.99,296. After making provision for pensions depreciation, etc., the total deficit for the year amounts to Rs.808,936.08.

Engine power has been considerably augmented by the purchase of three Garratt locomotives, which replace five engines taken out of commission. The Garratts were utilised for the haulage of this year's sugar-cane crop, which was transported with celerity and ease, thus demonstrating the utility of these large machines. Bois Cheri Light Railway revenue amounted to Rs.26,936, as against Rs.32,750 for the previous year. The fall in revenue, Rs.5,814, is explained by reduced rates brought into effect to combat road competition and as an inducement to planters to cultivate more extensively. Better results are expected next year.

A collection and delivery service was inaugurated on 6th December, 1926. The revenue for the period ended 30th June, 1927, amounts to Rs.10,276. This marks the opening of the railways campaign against the competition of road transport, which has seriously affected railway earnings.

Roads.

The island is well served by a system of water-bound macadam roads. They are divided into two classes : (a) main roads of a total length of about 441 miles, which are maintained from the general revenue of the Colony, and (b) branch roads of a total length of about 193 miles, which are maintained by the District

Boards from a contribution made from the general revenue of the Colony.

The roads are constructed of hard basalt stone which is abundant in all districts in the island, and have been able to sustain heavy traffic. But the ever-increasing traffic, both of motor-cars and heavy lorries, has rendered the improvement of the roads imperative. This is effected by tar-spraying, and the tar-sprayed roads have sustained very well the heavy traffic. Up to the end of the year under review 59½ miles of main roads have been improved and tar-sprayed.

Posts and Telegraphs, Telephones, etc.

Postal communication between Europe and Mauritius is maintained chiefly by the Messageries Maritimes packets, Mauritius being the terminus of the Ligne de l'Ocean Indien, whereon ten units ply, leaving Marseilles, in rotation, at 14 days' interval.

In order, however, that the course of transit may be shortened, an agreement has been concluded between the Messageries Maritimes Co. and the Colony, whereby, in return for a sum of £7,000. the packets, twenty-six times annually, steam from Tamatave direct to Mauritius, and proceed to Reunion after landing mails and passengers at Port Louis. They then return from Reunion to Port Louis to collect mails and passengers for the homeward voyages.

By this route, mails from Europe are expected to arrive in 32 or 33 days.

Castle Line steamers visit the island, on the average, once every five weeks, sometimes more often. They provide the principal means of communication with South Africa and with Europe via the Cape of Good Hope.

The Clan Line and the Compagnie Havraise Peninsulaire usually supply, at irregular times, further opportunities, also cargo steamers coming for the sugar trade.

Mails to and from Asia, Australia, etc., are conveyed by eight or 10 liners, yearly, of the British India Steam Navigation Co. and by some other vessels trading between the island and India or the Far East. In the absence of any of these ships, outward mails are sent via Zanzibar, by the Messageries Maritimes regular packets.

The total foreign correspondence passing in and out the General Post Office, Port Louis, in 1927 was, approximately, 571,253 ordinary letters and postcards; 226,520 newspapers, books, etc.; 17,554 commercial papers; 15,480 samples of merchandise; and registered articles to the number of 82,869, and 642 insured letters.

Postal parcels up to 21 lb. in weight are exchanged with Great Britain and up to 10 kilogrammes with France. With other countries, the exchange is limited to weights of 11 lb. and 5 kilogrammes.

Including C.O.D. (exchanged with Great Britain only), parcels handled in 1927 numbered 26,181, of the total value of Rs.917,430, or, in sterling, at the conventional rate of 1s. 4d. the Rupee, £61,162.

The above correspondence and parcels were conveyed by 26 Messageries Maritimes, 10 British India, 13 Castle Line, and 169 other vessels.

Two branch post offices in Port Louis and 61 country offices shared in the collection and distribution of these letter and parcel mails, but the latter offices to a comparatively small extent. Except those in the principal inhabited centres, and numbering about fifteen, the country post offices are almost exclusively engaged in local business, comprising inland correspondence, telegrams, and money-orders.

At any of these offices, however, a money order on London, Paris, South Africa, or India, etc., may be purchased or a British postal order cashed; and, save at four, a cablegram to any place served by a cable may be handed in as also may a radiotelegram to Reunion or Madagascar or to a ship at sea within a range of 600 miles. Telegraphic money-orders are obtainable on Great Britain and India at the General Post Office, Port Louis, and British postal orders at the General Post Office and the larger inland offices.

By arrangement between the local Government and the Eastern and South African Telegraph Co., whose premises and offices are in Port Louis, messages originating from or addressed to places other than Port Louis are transmitted over the Government land-telegraph lines. These messages are transmitted between the hours of 6 a.m. and 6 p.m. on ordinary weekdays and from 7 a.m. to noon on Sundays. The cable office is open on weekdays from 7 a.m. to 7 p.m. and on Sundays from 8 a.m. to noon.

The Company also maintains a station in Rodrigues, the principal dependency of Mauritius.

The wireless station, installed by the Royal Navy and now leased by Government, is at Rose Belle, 25 miles from Port Louis. It was opened to public traffic in March, 1924. Messages to and from the station are transmitted over the land telegraphs. 1,923 messages were received in 1927 and 1,028 forwarded. The hours of services at the station are :—

Greenwich Mean Time.		*Mauritius Time.*
4-6	... ...	8 a.m. to 10 a.m.
8-10	... ...	12 a.m. to 2 p.m.
12-16	... ...	4 p.m. to 8 p.m.
16-18	... ...	8 p.m. to 10 p.m.

The land telegraphs are worked by the Post Office but the 360 miles of line are maintained by the electric branch of the Railway Department.

The number of private messages put through in 1927 was 28,386 which, at the rate of 12 words for R. O.25, plus extra charges for delivery, fetched Rs.28,626.

There is a marked slackness in the use of telegrams, probably attributable to the extension of the telephone service (owned by a private company) to country districts.

The electric branch of the Railway Department also maintains the Government telephone, a small system at first set up to connect the Government offices in Port Louis. The Government telephone has now been linked, through its exchange at the Colonial Secretary's office, to the public system owned and worked by the Oriental Telephone Co. and spreading its network over Port Louis, Plaines Wilhems, and Moka, the three districts more important in regard to population and development.

Except savings bank transactions, the Post Office in Mauritius carries on every class of business within the ordinary scope of this section of the public service elsewhere. The revenue collected in 1927 was Rs.356,221, against which, expenditure amounting to Rs.305,282 (including salaries of staff) being set off, a clear profit of Rs.50,939 is left.

VI.—JUSTICE, POLICE, AND PRISONS.

Justice and Crime.

Justice is administered in Mauritius by the Supreme Court, sitting in Port Louis as a Court of Civil and Criminal Justice, and having the power of the King's Bench in England and of a Court of Equity; and in the nine Districts by the Magistrates' Courts, having likewise a limited civil, criminal, and stipendiary jurisdiction.

In 1927, the Supreme Court dealt with 334 civil matters out of 660 which were brought before it, as against 399 out of 711 in the previous year, distributed as follows :—

53 actions of Rs.1,000 and over.
45 appeals.
35 petitions in divorce cases.
155 motions.
31 Bankruptcy notices.
15 Bankruptcy petitions.

In 1927, 25 persons were brought before and tried by the same Court, sitting as a Criminal Court, out of whom 23 were convicted as follows :—

Attempt at Murder	1
Manslaughter	7
Rape	1
Other offences against the person	9
Malicious injury to property	5,

the percentage of acquittals being 8.

In the Magistrates' Courts 18,177 persons were brought before the District and Stipendiary Courts and before the Benches of Magistrates (three Magistrates having a wider criminal jurisdiction) and dealt with as follows :—

Acquitted or discharged by the District Magistrates	1,424
Convicted	16,560
Committed to the Assizes	34
Acquitted or discharged by the Stipendiary Magistrates	77
Convicted	82
	18,177

Police.

(a) *The higher standard of education required.*—During the year, difficulty has been experienced, as in years past, in obtaining men of a standard of education sufficiently advanced to keep pace with the changing conditions of all classes of the Colony, for, in Mauritius, as in practically every other part of the world, criminals have shown an increasing skill in carrying out their activities.

To counteract this, a Cadet Corps has been formed, composed of 20 young men of good education and standing selected from the general population, and, in the event of the Corps proving a success, it is intended to increase the number.

(b) *Communications.*—There are 56 police stations distributed throughout the Colony, 22 of which are connected with telephones. The importance of this has been many times proved.

(c) *Bandsmen.*—The Police Force possesses a fine band under a European bandmaster. The majority of the bandsmen were recruited in India, most of them being ex-military bandsmen. Constant demands by the general public are made for their services, which are greatly appreciated. Besides private performances, they occasionally play at the different hospitals and the asylum.

(d) *Commission of Enquiry.*—A Commission of Enquiry was appointed during the year at the request of certain Members of the Council of Government.

(e) *Dangerous Criminals.*—During the course of the year, a heavy task was laid on the Police in breaking up and bringing to justice a noted gang of criminals who were armed and had for long terrorised the population. Since the breaking of this gang, serious crimes have decreased to a great extent.

(f) *Institution of Photographic and Modus Operandi Bureau.*—A system of photographing dangerous criminals has been instituted, as well as a *Modus Operandi* Bureau. A careful record is kept and a card index used for ready reference.

(g) *Police Circular.*—A Police Circular is issued daily and distributed to all stations of the island. It contains all known offences or anything of interest from a police point of view which has occurred within the last 24 hours. Special attention of all ranks is called to this Circular, men are questioned on it occasionally and it has been remarked that these Circulars have a marked effect in keeping all ranks up to date and in keeping their police sense alive.

(h) *Opium, Gandia, and Cocaine smuggling.*—During the course of the year, a few cases of possession of opium and gandia were detected. The smuggling of opium is still common amongst the Chinese population and in spite of the heavy punishments inflicted there is little decrease of this offence.

The usual method of smuggling opium is by boats coming from China, India, Singapore, etc. It is not brought into ports but is passed on to plying boats out at sea and landed at different parts of the shore, which makes the detection difficult.

Gandia is imported from India and also cultivated in out-of-the-way places in different parts of the island.

No case of illicit possession of cocaine was detected during the year.

Prisons.

There are two prisons in the Colony, one in Port Louis and one at Beau Bassin. The Port Louis Prison is the receiving prison, where all persons are admitted and discharged.

All persons awaiting trial and under remand are located in this Prison. It contains 154 cells for males. There is also a special yard for females, containing 9 cells.

On admission, all long-sentence prisoners and those sentenced to hard labour are transferred to Beau Bassin Prison and those sentenced for non-payment of fines and simple imprisonment are kept in the Port Louis Prison.

The Central Prison, Beau Bassin, is situated at a distance of about 8 miles from Port Louis. It contains 756 cells for males only. In addition to this, there are the punishment cells, 8 in number, for the confinement of prisoners undergoing punishment for prison offences.

The long-sentence prisoners, after undergoing their solitary confinement, are taught various trades. The profit on the work done in 1927 by the different workshops was Rs.2,244.79.

There is a bakery with two large ovens, which supplies bread and biscuits to all Government institutions.

About 12 acres of land on the southern and western sides of the Prison are under cultivation as a kitchen garden. On the 18th November, 1922, a poultry farm was started.

Criminal statistics.—There were 1,793 persons committed to prison during the year, i.e., 201 less than in the previous year. Of the total, 1,698 were males and 95 females.

The total number in custody on 31st December, 1927, was 366, as against 353 in the preceding year. The number of juvenile offenders was 86, as against 89 in the previous year.

The Industrial School.—The new Industrial School of Beau Bassin was started in November, 1922. The buildings are spacious and can accommodate 250 boys. The grounds are extensive and suitable for outdoor recreation.

The boys are trained as carpenters, tinsmiths, masons, shoemakers, and gardeners, and receive moral and religious instruction and a primary education.

VII.—PUBLIC WORKS.

The following are the main works which have been started or on which progress has been continued during the year under review :—

Buildings.—Work was concentrated on the improvements to hospitals (Mental and Victoria Hospitals) and on the construction of three new primary schools.

Water Supplies.—Great improvements were made in the water supply of the island. In the past, a large number of villages derived their supplies from surface wells, by means of rope and buckets, or from open canals made in earth.

The water supply of the district of Plaines Wilhems from the Mare-aux-Vacoas has been further improved by the addition of 2 filter beds, the duplication of the 16-inch power main, and the extension of service pipes.

A new scheme for the water supply of the northern districts of Pamplemousses and Riviere du Rempart was started to serve a population of over 30,000 inhabitants. Twenty miles of pipes were laid, public fountains were erected, and private supplies granted.

The water supplies of the village of Pamplemousses and the district of Grand Port were improved by the enlargement of the mains and the extension of service pipes.

The district of Savanne, part of Moka, and the upper part of Flacq have also benefited from new water supply schemes.

Drainage Works, Port Louis.—The laying of sewers within the town of Port Louis was continued, along with house-service connections.

Irrigation Works.—Work continued on the dam at Midlands Reservoir, which will have a total capacity of 702 million cubic feet and will provide, when completed, for the irrigation of 12,000 acres in the northern districts.

At the same time, the construction of the main feeder channel and distributary channels was continued.

VIII.—PUBLIC HEALTH.

Vital Statistics.

The estimated population of the island on the 31st December, 1927, was 401,693, or an increase of 3,457 on the previous year's figures and of 25,208 on the last Census figures (20th May, 1921).

The numbers of births and deaths during the year were 13,748 and 10,015 respectively.

The birth-rate in the general population was 36.7 and in the Indian population 33.6 per *mille*, as against 41.8 and 38.4, respectively, for the previous year.

The death-rates per 1,000 in the two populations for 1927 were 23.6 and 25.8, as against 25.0 and 25.4, respectively, for 1926.

The highest death-rate for 1927 is shown in Pamplemousses (33.2) and the lowest in Plaines Wilhems (18.1). The death-rate for the whole Colony was 25.1 per *mille* as compared with 26.4 in 1926, and the rate for Port Louis was 27.7, as against 28.0 in the previous year.

Public Health.

Taking into account the composition of the population and its high density, the death-rate for the whole Colony is reasonably low. But the statistics of deaths in tropical countries do not generally bear any fixed ratio to the amount of sickness in the population, and it is the morbidity of the people more than their mortality that is of greatest importance to communities in normal times.

There are no adequate data for the assessment of morbidity rates in the Colony, but it is a commonplace observation that the majority of the dwellers in the rural districts are not getting the best out of life. Intestinal parasitism saps much of their strength. It is no exaggeration to state that 95 per cent. of the persons living in the rural districts harbour intestinal parasites of some description. The most dangerous of these is the hookworm. Measures for the relief and control of hookworm infection in the Colony were begun in 1922, when the International Health Board of the Rockefeller Foundation kindly consented to undertake a co-operative campaign with the Colonial Government. The co-operative period ended in 1925, since when the Colonial Government has continued the work. Progress, however, has necessarily been slow.

Malaria is the other great cause of sickness in the Colony. There is little doubt that its influence is enhanced by the debilitating effects of the hookworm infection, and by the generally low standard of living existing in rural areas. It is almost negligible as a cause of ill-health among the wealthier classes of the community, who reside in the districts of Moka or Plaines Wilhems.

During 1927 an investigation has been made into the extent of tuberculosis in Port Louis and it has been found that the disease is much more widespread than was previously supposed. Fortunately, the acute septicaemic type of the disease is not common, and it would appear that some form of natural immunity has been developed, similar to that now existing in Europe.

The diseases specially associated with the tropics are comparatively rare so far as present knowledge goes to show. The pathology of Mauritius is more characteristic of sub-tropical or temperate regions than of the tropics.

The following Ordinances relative to public health were passed during the year :—

(1) The Medical Practitioners Ordinance, 1927 (No. 14), and
(2) The Medicinal Tinctures and Drugs Ordinance, 1927 (No. 35).

The Medical Practitioners Ordinance, 1927 (*No.* 14) settles a long-standing controversy dating many years back. Its main object is to ensure that only those medical practitioners will be entitled to exercise the practice of medicine in Mauritius who are holders of (i) degrees or diplomas registrable in the United Kingdom ; (ii) state degrees of Doctor in Medicine of any of the Faculties of France.

The Medicinal Tinctures and Drugs Ordinance, 1927 (*No.* 35) provides for the control of alcohol manufactured in the Colony and issued for the local preparation of certain pharmaceutical products—a new industrial use of the local product.

IX.—EDUCATION.

Primary Education.

Primary education, though not compulsory, is provided free by Government and State-aided schools which are open to all children of the Colony.

At the close of the year, there were 151 primary schools, 57 Government and 94 denominational, assisted by Government grants. Of the latter, 65 were Roman Catholic, 19 Church of England, 2 Presbyterian, 5 Hindoo, and 3 Mohammedan. The average attendance was 23,183, as compared with 24,671 in 1926. The number of Indian children on the roll was 16,601 (boys 13,728, girls 2,873), a decrease of 1,496 on the previous year. The total number of girls educated in primary schools was 10,266, as against 10,349 in 1926.

Six junior scholarships and six junior exhibitions entitling the holders thereof to free tuition at the Royal College for a maximum period of eight years are awarded to boys of primary schools every year on the results of a competitive examination, the winners of a scholarship receiving money payments at the rate of Rs.120 a year in addition.

A Senior Bursary Class for primary school boys was established in 1926. The course of study in this class extends over a period of two years, at the expiration of which four scholarships and four exhibitions tenable at the Royal College for a maximum period of six years are also awarded every year on the results of a competitive examination. The first of these examinations was held in December, 1927, and there were 217 candidates, as against 113 who entered for the Junior Boys' Scholarship and Exhibition examination.

The number of scholarships awarded every year to primary school girls has now been increased from four to six, and the tenure of these scholarships has been extended from three to five years, thus allowing the winners to pursue their studies in a secondary school as far as the Cambridge School Certificate examination. 170 candidates sat for the Girls' Scholarship examination held in December, 1927, as against 174 in the previous year.

One of the most important problems is the recruitment of suitable teachers, and their proper training. The recent abolition of the examination result grant system and the revision of the salaries of primary school teachers have, as was expected, already attracted a few candidates of the right type; while the complete reorganisation of the Training School will, it is hoped, also help in the solution of this difficult question.

Technical instruction is provided in three principal centres, viz :—

(1) The Government Technical School in Port Louis, at which about 50 full-time boys, of an average age of 16 years, and about 200 boys from the primary schools in Port Louis, of an average age of 13 years, are taught mechanical drawing and receive manual instruction in woodwork;

(2) The Government Industrial School at Beau Bassin, at which about 150 boys from the primary schools in lower Plaines Wilhems are given manual instruction in woodwork; and

(3) The Government Trades School, at Bell Village, with about 75 full-time apprentices of an average age of 18 years, half of whom are carpenters and the rest masons, blacksmiths, or tinsmiths.

Woodwork classes on a more moderate scale are also held in three aided primary schools in the district of Plaines Wilhems, and the possibility of further developments in this direction has been engaging the attention of the Superintendent of Schools for some time.

Steps have been taken for the extension of garden work in the primary schools of the Colony, and the inclusion of Nature study in the syllabus of examination for Teachers' Certificates.

Elementary Agricultural Education.—A scheme for the establishment of a Farm School was given effect during the year. Provision was made for the extension of school gardens as well as for the further systematisation of instruction in Nature study for teachers in training, and for the training of elementary school teachers in agricultural science.

Secondary Education.

The number of secondary schools in the Colony was 10, as against nine in 1926. The total number on roll was 719 boys and 678 girls, while the average attendance was 635 and 518, respectively, as compared with 689 boys and 627 girls on roll for the previous year, with an average attendance of 577 and 539 respectively.

Three girls were, for the first time, presented by Loreto School, Curepipe, for the London Matriculation Examination held in January, 1927: one passed in the First and another in the Second Division.

The results of the Cambridge Local Examinations held in December, 1927, have not yet been received, but there is every reason to believe that the usual number of passes will be obtained.

The higher education of boys is conducted at the Royal College.

The staff consists of the Rector, the Senior Master, 11 Masters, with British University Degrees, and 11 Assistant Masters. The latter are encouraged to take the B.A. or B.Sc. examination of the London University.

The College has well-equipped chemical and physical laboratories.

Admission to the College is conditional upon passing an entrance examination or upon winning a primary schools' scholarship.

The year opened with 327 pupils on the roll, and on 31st December, 1927, the number was 349; while the average attendance for the year was 323.

Boys receive instruction in classical and scientific subjects, Latin being compulsory and Greek optional and alternative with more advanced Natural Science in the Entrance, Lower Middle, and Upper Middle Classes. Bifurcation takes place in the Cambridge Local School Certificate Class.

Two scholarships, one on the classical and one on the modern side, are awarded annually in the highest form, which is examined by the Syndicate of Examiners of the Cambridge University. These scholarships are of the value of £1,000 with a temporary increase of 30 per cent. and with first-class passage allowances to and from England, and are tenable for four or five years at any British University or any scientific or technical institution of the United Kingdom.

Agricultural Education.

Mauritius Agricultural College.—The curriculum and regulations for the award of scholarships and laureateships were revised during the year, and the appointment of an additional lecturer in Sugar Technology and Engineering was approved.

Nine new students were admitted in the first term of 1927 and there were six second-year and five third-year students on the books, while eight students were attached to the College for post-graduate work. There were thus 28 students last year in training at the College. Four third-year students obtained the diploma of the College.

Examinations of the City and Guilds of London Institute in Sugar Technology were held in April and for the registration of Agricultural Chemists in July.

The Laureateship of the College was awarded to Mr. R. Olivier for the study of Agricultural Chemistry.

X.—LANDS AND SURVEYS.

(Including Geological Survey.)

No geological survey of the island has ever been made.

The topographical survey of the island was made by the Army Survey Section in 1905 and a map of the island is published on a scale of one inch to the mile.

No important grants of land are now made by Government, the lands retained as Crown lands, of a total acreage of about 80,000 acres, being managed mostly as forest lands.

Of these, 13,621 acres are now given on lease to private parties.

XI.—LABOUR.

Labour, both agricultural and unskilled, is almost exclusively composed of Indians and their descendants, who constitute the majority of the population.

Natives of Africa and Madagascar were introduced as slaves during the French occupation, chiefly for agricultural purposes. Natives of India were also introduced as slaves from Bengal before 1758. On the 11th March, 1839, was published the Royal Order in Council of 7th September, 1838, by which slavery was abolished, and these labourers were liberated.

In 1769, Indians from the Malabar coast, coming mostly from Pondicherry, came to the island and offered themselves for hire as free labourers for a certain number of years, mostly as artificers and peons.

In 1815, forced labour in the shape of convicts was obtained from India, but this supply ceased in 1837. On the other hand, labourers from India were introduced, with the help of Government, by private individuals from 1835 until 1839, when the emigration of agricultural labourers was prohibited in India.

In 1842 the prohibition imposed upon exportation of Indians was removed by Indian Act No. XIV of 1839. Emigration was renewed and in 1844 immigration was carried on under the exclusive agency of the Government of Mauritius.

The several ordinances passed from that time to 1878 were consolidated in Ordinance No. 12 of 1878, which governed the conditions of indentured emigration from India. Such emigration was again prohibited in 1910.

The Government of India was approached by a committee in 1922 for the re-opening of emigration and on 1st June, 1923, a licence was obtained permitting the emigration of 1,500 labourers for a period of one year. Only 732 labourers with their dependants, numbering 1,395 immigrants in all, arrived during that year.

Their conditions of employment were governed by Ordinance No. 12 of 1922, which repealed all the previous labour ordinances and which, with some amendments, is still in force.

On application for an extension of the licence, a delegate of the Indian Government was sent here to investigate the effects of further immigration on the general conditions of labour at that time, and, consequent on his report, the application was not entertained. The number of Indian immigrants in the Colony on 31st December, 1927, was 15,895.

Labourers on estates, when under verbal or written contract binding for not more than one calendar month, receive in addition to their wages free housing, rations, and medical care; but the majority of them prefer to be employed by the day, in which case they reside in the adjoining villages.

The present economical condition of the island has entailed a marked reduction in the amount of wages paid for labour generally when compared with the wages paid during the years of prosperity 1919-22.

The number of artizans employed on estates and elsewhere has also been reduced, with the result that, although there are still openings for unskilled labour, the opportunities for skilled labour have decreased.

On the other hand, through the liberal education afforded to the labour class, artizans are springing up and are swelling the ranks of workers who have now to emigrate in search of work.

XII.—MISCELLANEOUS.

Apart from the Ordinances which have been specially mentioned under the relevant sections, the following may be quoted :—

"*The Carriage of Goods by Sea Ordinance*, 1927 (*No.* 28)," which reproduces the provisions of the Carriage of Goods by Sea

Act of 1924, thus applying to Mauritius and its Dependencies the unified rules agreed upon at the International Conference on Maritime Law held at Brussels in October, 1922, as amended in 1923 at Brussels and given effect to in the English Act.

"*The Pensions (Amendment) Ordinance*, 1927 (*No.* 40)," which amends the Pensions laws and provides mainly for the computation of pensions in months instead of in years. This Ordinance also allows, amongst other things, the inclusion for pension of non-pensionable service followed without break by service in a pensionable office and charges the Colony with its proportionate share of pension in respect of officers of the Colonial Audit Department transferred to or from the service of this Colony.

"*The Judicial Separation (Amendment) Ordinance* 1927, (*No.* 41)," which amends articles 108 and 311 of the Civil Code, so as to bring our law into line with that of France in the matter of the administrative and proprietary rights of a woman after she has obtained her judicial separation. She is given a domicile of her own and her rights to dispose of her property are unfettered.

The writer of this report arrived in the Colony on the 3rd November, 1927, and has to acknowledge the great assistance rendered by the various heads of departments in its compilation.

THE
EMPIRE'S AGRICULTURE

An historical event of importance in the development of the Empire's Agriculture took place towards the close of 1927. The foundations were, it is believed, then laid for the ultimate creation of a real and effective British agricultural commonwealth. The occasion was the Imperial Agricultural Research Conference held in Great Britain in October and November, 1927, which was attended by delegates of high standing from all countries in the Empire.

"The Report of the Imperial Agricultural Research Conference," just issued, contains a full account of the events leading up to the Conference, the recommendations (both in full and in summary form) there made and the views expressed by the highest authorities on agriculture in all quarters of the Empire. The recommendations deal with the following subjects:—The establishment of an Imperial chain of Agricultural Research Stations. The establishment of Imperial clearing houses of information. The recruitment, training and interchange of scientific workers in agriculture for the whole Empire. The action immediately necessary to secure co-operative work in such specialist subjects as Veterinary Science, Animal Nutrition and Genetics, Dairying, Soils and Fertilisers, Plant Breeding and Pathology, Fruit Growing, Entomology, Preservation and Transport, and Agricultural Economics.

The Report of 250 pages is issued at the specially low price of 1s. (with postage 1s. 5d.), in order that it may be within easy reach of all those affected.

SITUATION AND AREA.

Mauritius lies off the coast of Africa, in the South Indian Ocean, some 500 miles east of Madagascar, between 57° 18′ and 57° 48′ E. longitude and 19° 50′ and 20° 31′ S. latitude. Its official time is four hours fast on Greenwich (Ordinance 6 of 1906). Its extreme length is 38 miles, its extreme breadth 29 miles, and its area covers 720 square miles (460,800 acres). The density of population is very high, being about 550 persons per square mile for the whole island. The population at 31st December, 1928, was 404,802.

The largest town is Port Louis, the chief port and administrative capital, which has a population of about 43,000. The towns of the interior are all of recent growth. Curepipe, the residential capital, which lies at an altitude of 1,800 feet, situated on the highest part of the central plateau, has about 20,000 inhabitants. The smaller towns of Vacoas, Phoenix, Quatre Bornes, Rose Hill, and Beau Bassin in the Plaines Wilhems District are situated at lower levels on the same plateau. The principal towns and villages in the other country districts are Mahebourg, Rose Belle, Souillac, St. Pierre, Moka, Flacq, Pamplemousses, Poudre d'Or, and Bambous.

The island is essentially of volcanic origin, although signs of an older formation are noticeable at some places (R. Thompson—1880). Its age is difficult to estimate owing to the misleading nature of the effects of the cyclones and floods on its rocks. The deep river gorges, cut in hard basalt, point to considerable age, but all that can be said is that it is probably older than its immediate neighbours Reunion and Rodrigues, and certainly more stable (J. S. Gardiner).

The dependencies comprise a large number of small islands the nearest of which is 230 miles, the most northerly being about 1,200 miles away, 6° S. latitude. Rodrigues, the largest, with an area of 42 square miles, and an estimated population of 7,269, is 350 miles to the north-east of Mauritius, while lesser islands of some importance comprise Agalega, the Carcados Carajos group, and Diego Garcia, the largest of the Chagos Archipelago.

At the census of May, 1921, the population of the lesser dependencies was ascertained to be 1,810.

HISTORY.

The Mascarene Archipelago was probably known to Arab navigators at an early date. A Dutch map copied from Arab sources shows the islands now known as Mauritius, Rodrigues, and Reunion under the names of Dinarobin, Dinanora, and Margabin, and it is possible that certain islands marked on Idrisi's map (1153) are intended to indicate them also.

There can be little doubt too that the island was visited by the Malays who colonised Madagascar in the 15th–16th century.

But Mauritius history really begins with its discovery by the Portuguese in the beginning of the sixteenth century—probably between 1507 and 1512, but not later than 1527, when the island is shown on an official map under the name of Santa Appollonia, borne in common with the other islands known later as the Mascarenes (Reunion and Rodrigues) after the great navigator Dom Pedro Mascarenhas.

The Portuguese named the island Ilha da Cirnos, or Swan Island, from the big birds resembling swans found on shore.

There is no record of any permanent settlement by the Portuguese, who for nearly a century only used the island as a port of call for repairs and supplies.

The island was still entirely uninhabited when, on the 18th September, 1598, a Dutch squadron of five vessels anchored in the South Eastern Port to which the Commander, Admiral Wybrandt

Van Warwyk, gave his own name. He took possession of the island on behalf of his Government and named it Mauritius, in honour of the Statholder, Prince Maurice de Nassau, but within fourteen days he set sail, leaving nobody on shore.

In 1613 the English seaman Captain Castleton of the "Pearl" visited the island, which he found unoccupied, but it was only in 1638 that a first attempt at colonisation was made. On the 6th May of that year Cornelisz Simonsz Gooyer, appointed Governor of Mauritius by the "Compagnie Neerlandaise des Indes," landed at Warwick Haven or South Eastern Port. Fortifications, stores, and dwelling-houses were built at the place now called Old Grand Port, and thirteen families established themselves at the "13 Cantons" close by. These were followed by other settlers, who established themselves in the neighbourhood where Mahebourg now lies. Twenty years after, on the 16th July, 1658, the island was abandoned, and was again reoccupied on the 26th July, 1664. During this second attempt at settlement, which extended over a somewhat longer period, the fortifications and houses erected originally and which had been destroyed by a hurricane in 1664 were rebuilt. At Flacq some efforts towards development and cultivation were made without much success, whilst the district was only too successfully denuded of its ebony trees. A Royal Garden was created and new regions, such as Port North-West, Black River, and perhaps Plaines Wilhems, were inhabited, but the settlement did not prosper and, discouraged by the difficulties of the enterprise, the Dutch finally abandoned the island in 1710. Their occupation was disastrous so far as natural resources were concerned, as the colonists denuded the forests of their valuable timber and almost exterminated the interesting natural fauna.

On the 20th September, 1715, Guillaume Dufresne, commanding the French vessel "Le Chasseur" arrived at Port Nord Ouest, took possession of the island in the name of Louis XV, King of France, and called it Ile de France. Settlement, however, was only effected six years later when, on the 23rd September, 1721, the Chevalier Jean Baptiste Garnier du Fouge-rai, commanding the "Triton" of St. Malo, resumed possession for the Compagnie des Indes Orientales after landing at Ile aux Tonneliers in Port Nord Ouest, which he named Port Louis. He was accompanied by a few French families from the neighbouring island of Reunion, who had come to settle, and from that time Mauritius never ceased to be inhabited.

In 1735, Mahé de Labourdonnais succeeded Mr. Dumas as Governor. He was a man of rare capacity and it is not too much to say that by his own teaching and example he laid the foundation of the future prosperity of the island. He left the island in 1747 and his successors had but to follow the path opened out to them to reap profit and success.

Conditions, however, soon became difficult for the settlers owing to the ever-increasing exactions of the "Compagnie des Indes," and the French Government was forced to assume direct control of affairs in 1764.

Under the new Government the burden of administration was shared between the Governor and an Intendant. The first of these, Pierre Poivre, introduced spices, then so valuable, from the East Indies and created in 1767 the now renowned Royal Botanical Gardens of Pamplemousses on the site where Labourdonnais had erected in 1736 the fine dwelling-house of "Mon Plaisir," and planted fruit and ornamental trees introduced from India and Europe.

In 1790 Mauritius was to a great extent preserved from the commotions of the French Revolution owing to the unpopularity of the decree of the National Convention abolishing slavery, on which local agriculture solely depended. The Jacobin leaders and the agents of the Directoire sent to proclaim emancipation were expelled, a Colonial Assembly was elected, and nearly all links with the mother country were severed for some time.

A period of intense military activity under General Decaen during the earlier part of the reign of Napoleon followed, when the French privateers, using Mauritius as a point of departure for their activities against British trade, gained for the island its reputation still enshrined in its motto as "The Star and the Key of the Indian Ocean." The reputation it had acquired became at length a cause of peril. After several indecisive attempts against the island, the English, determined to root out this rival base, prepared for a vigorous attack in 1810 and, after a memorable fight, Mauritius was lost to the French and came under British rule on the 3rd December, 1810.

The cession of the "Ile de France" and its dependencies to Great Britain was confirmed by the Treaty of Paris, and the island, under its former name Mauritius, has since 1814 remained uninterruptedly a British possession.

In 1835 the emancipation of slaves took place, but as this new class of free men refused occupation as labourers the planters resorted to the introduction of indentured labour from India, which commenced in 1842 and continued practically without interruption until 1910.

In 1825 a Council of Government was established. It was modified in 1832 and reconstituted in 1884; it now consists of the Governor and 27 members, 8 being ex-officio, 9 nominated by the Governor, and 10 elected.

In 1864 the first line of railway was opened from Port Louis to Pamplemousses. Subsequently other lines were built, and the island is now served by a railway system of a total length of 119 miles, which renders access easy to most parts of the island.

In 1868, 1874, and 1892 the island was visited by very destructive cyclones. That of 1892 was one of the most violent ever recorded.

It destroyed a considerable part of Port Louis (the capital), caused terrible damage throughout the island, and involved a death-roll of 1,232 people.

In 1854, 1856, and 1862, epidemics of cholera prevailed. In 1866 an epidemic of fever of great severity broke out, commonly regarded as malarial fever, although recent views appear to indicate that the high death-roll then recorded (over 30,000 people) could not have been due to malaria alone. In any event, from about that time malaria, which was previously absent from the Colony, became endemic and has since rendered the lower parts of the island unhealthy. This does not, however, apply to the central tableland, where malaria is, and always has been, either absent or comparatively insignificant. The reduction of the incidence of malaria has been the subject of much investigation and sanitary effort on the part of the Government of recent years, and it is believed that these measures are having a pronounced effect on the general health of the community.

Between the years 1902 and 1909 the island suffered from a period of severe financial depression owing to the low market value of the staple product, sugar, which at that time prevailed. Matters were further aggravated in 1902 by an outbreak of surra which caused great loss of draught animals among the sugar plantations and necessitated the introduction of mechanical transport.

In 1909 a Royal Commission visited the island to inquire into the administration and finances of the Colony.

Mauritius was happily immune from direct action by the enemy during the Great War. A large number of recruits left for Europe for military service, and a Labour Battalion was recruited for service in Mesopotamia. During this period, the Imperial garrison was reduced to a skeleton, and the defence of the island was maintained by a locally-recruited Volunteer Force.

The great rise in the price of sugar which took place during and after the War brought prosperity to the Colony, and both Government finances and the general condition of the community were for a time far more prosperous than at any previous period of its history.

As a result, it has been possible to undertake great and material works for the improvement of the Colony, and a number of schemes of considerable magnitude have been inaugurated, including the amelioration of sanitary conditions, the improvement of the harbour, the extension and improvement of water supplies both for domestic and irrigational purposes, the improvement of the railways, and the extension of educational facilities.

During the last few years, however, the inflated prices caused by war conditions have disappeared and while, owing to the foresight of Sir Hesketh Bell, Governor from 1916 to 1924, a large sum of money was put aside for improvement and development, the revenues of the

Colony, although much diminished, have to provide for the carrying on of many important works undertaken in times of greater material prosperity.

LANGUAGES.

The official languages are English and French, and, though the former is widely understood, French is the principal language of social use. The lingua franca is Creole, commonly referred to as a French patois. Creole is a language of which the vast majority of the words are French or of French derivation, but it has close affinities in its formation to the Bantu and Malgache dialects. Hindustani (Urdu and Hindi) is largely spoken among the Indians, but other Indian languages have some currency.

CURRENCY.

The rupee currency (silver rupee of India) which was established by Proclamation No. 23 of 1876 is still in force in the Colony.

The currency of the Colony consists of :—

(1) The Mauritius bronze coins of 1 cent, 2 cents, and 5 cents.

(2) The Mauritius silver coins of 10 cents and 20 cents.

(3) The nickel coins of 4 annas of the Government of India.

(4) The silver rupee of India and its silver subdivisions of ¼ rupee and ½ rupee.

(5) The Mauritius Government notes of R. 1, Rs. 5, Rs. 10, and Rs. 50.

(6) The currency notes of the Government of India of all denominations.

(1), (2) and (3) are legal tender up to Rs. 5, and (4), (5) and (6) are legal tender to any amount.

Local Money.—Visitors to Mauritius are frequently nonplussed at the use of expressions, by merchants and others, denoting money values which have no legal tender. The principal are as follows : "Cache," R. 0.02 ; "Marqué" (or "sou marqué"), R. 0.03 ; "Franc," R. 0.20 ; "Livre," R. 0.20. The dollar "Piastre," equivalent to Rs. 2, survives in auction sales.

WEIGHTS AND MEASURES.

With regard to weights and measures, the metric system is in general use, but there are some special measures peculiar to Mauritius, the chief of which are :—

L'arpent.—The equivalent of 1,043 acres.

La Gaulette.—A measure of length equal to 10 French feet. It is employed on the estates as a measure of work performed in the fields. The task given to a labourer corresponds to a certain number of gaulettes. The number of gaulettes of work per arpent varies according to the distance between the lines of cane holes.

Le tierçon is a measure of capacity for molasses: it varies from 190 to 192 litres.

La toise is a measure of length equal to 1.94904 metres (2 yards 4 inches English measure or 6 pieds French measure).

La toise carrée (square toise)=36 square feet French. This measure is used in job-contracts, masonry works, etc.

L'aune is a measure of length used in nearly all shops. It is equivalent to 1.191077 metres or about 1 yard and 11 inches.

The aune is generally counted as 1.20 metres.

The *corde* is employed for measuring stacked firewood. The wood is stacked in lengths of 2½ French feet and laid transversely, the stack measuring 4 French feet high, 8 French feet long, 80 cubic feet (French), 96.82 cubic feet (English): 2.742 metres.

La bouteille is a French measure for wine and is used locally for the sale of milk, vinegar, rum, etc. It is equivalent to 800 cubic centimetres (8/10 litres).

La chopine is one-half of a bottle.

La livre.—A local measure of weight=500 grammes or ½ kilogramme (1.10 English lb. roughly).

CLIMATE.

Situated just within the tropics and with no large land masses for many hundreds of miles in any direction, Mauritius enjoys a climate free from any violent extremes of weather except that tropical cyclones at times cause considerable damage to crops and more rarely to buildings. For the greater part of the year the so-called south-east trade winds blow gently over the island, tempering the tropical heat. These winds, carried over thousands of miles of warm sea before reaching Mauritius, are heavily laden with moisture which is easily condensed by the upward movement of the air over the hills, and the rainfall is sufficient from this cause alone to keep most vegetation green and abundant, especially in the higher parts of the island. On the other hand this rain falls mainly in the form of showers of short duration and interferes little with outdoor activities, and sunshine is plentiful. At times, and particularly in the summer months December to March, the south-east trades fail and are replaced by the light variable winds of the doldrums. The high humidity and nearly overhead sun then cause discomfort to Europeans, although the temperatures recorded are not high compared with those endured in Egypt or India. In the winter months the high humidity acts in a contrary manner and the nights, especially in the European residential districts between 1,300 and 2,000 feet, can feel unpleasantly cold with a temperature of about 50° F. Some of the residents, who can afford to do so, live inland on the hills in the summer months and by the sea in the winter months. Climatic statistics can be consulted in the many publications of the Royal Alfred Observatory in the Mauritus Almanac or in official Blue Books. Here it is sufficient to state that all temperatures measured at the Royal Alfred Observatory, 181 feet above sea-level, fall between 95° F. and 50° F. It will be noted that the upper limit is below the upper limit for London. The yearly rainfall varies from about 30 inches on parts of the coast to 150 inches on the high inland regions. Snow has never been seen on the hill-tops and hail is so rare as to be almost unknown. Thunderstorms are not very frequent and damage from lightning is uncommon. Fog is very rare except on the hill-tops.

Owing in part to the memory of the disastrous cyclone of 1892, in part to the entire absence of strong winds, except during the approach of a cyclone, and the consequent flimsiness of the houses, and chiefly to the damage which may be caused to the principal crop of the island, the sugar-cane, cyclones occupy a place in the fears and conversation of the population out of all proportion to their importance. Cyclones have occurred in all months from October to May, but mostly in the four months December to March. In general, about five per year can be expected to approach within 300 miles of the island and cause anxiety for two days each. Usually no damage is done until a cyclone approaches within 80 or 90 miles, and the number of cyclones within this distance is considerably less than one per year. A graphic description of the catastrophe of 1892 can be found in *Blackwood's Magazine* for September 1892, which has been largely quoted in other places (*The Sugar Industry of Mauritius*, Walter, and *Mauritius Illustrated*, Macmillan). The effect of cyclones are not altogether harmful, the heavy rains associated with such storms are beneficial and indeed necessary to the sugar crop.

The Government maintains a First Order Meteorological and Magnetic Station in the Royal Alfred Observatory situated near Pamplemousses in the north-west of the island. Records of the meteorological and magnetic elements made at the Observatory are available since 1874. A subsidiary station was erected at Vacoas, on the central plateau of the island, in 1924 for the study of the upper air. In addition to maintaining its own records, the Observatory collects information regarding temperature and rainfall from other stations in the island kept by local authorities or private individuals.

The Observatory issues storm warnings to the island and by means of wireless telegraphy to ships in the neighbourhood. For this purpose, daily messages containing meteorological data are received from Rodrigues, Seychelles, Reunion, and Madagascar, also Masters of outgoing ships are requested to communicate by wireless as long as possible. During the cyclone season from November to May a signal is hoisted daily in the harbour, the object of which is to give captains of vessels about to put to sea information regarding the weather of the neighbourhood. The Observatory also acts as timekeeper to the Colony and a ball visible to the harbour and to a considerable part of the population is dropped at 1 p.m. by means of an electrical contact from the Observatory ; in addition, a message is flashed to all railway stations. Results of magnetical and meteorological observations are published in a monthly bulletin and despatched to kindred institutions in all parts of the world. Discussion of results or of research work are published in a special series of publications. During 1928 three papers of this type were prepared for publication but were not actually printed by the end of the year—*The Cyclone Season* 1927–28 *at Mauritius*, *The Disturbed and Quiet day variations of Magnetic Force at Mauritius* 1916–1926, both written by the Director, and *Pilot Balloon Observations at Mauritius July* 1927–*June* 1928 by N. R. McCurdy.

Outstanding features of the year 1928 were :—

(*a*) The excess of rainfall in the first five months of the year notably in May when twelve inches fell in three days at the Observatory and much larger amounts in other parts of the island. Some damage to property was caused in Port Louis by the consequent floods. During this period the island was apparently situated along an almost stationary line where the cooler air originating in the subtropical " high " to the south was undercutting the warm air near the Equator.

(*b*) The shortage of rainfall, with low temperature, from June to December. The temperature deficit was particularly noticeable in November when all but two days in the month had a mean temperature below the normal.

(*c*) The absence of high winds, in spite of unusually active cyclonic conditions in the neighbourhood, in February, March and April. The neighbouring islands of St. Brandon, Reunion and Madagascar suffered severe damage, but the highest hourly wind recorded at the Observatory during the year was only 11 metres per second (25 m.p.h.).

I.—GENERAL.

The period which has elapsed since the last annual report was prepared was one of great anxiety for the Colony of Mauritius and witnessed one of the most serious economic crises this island has been called upon to face. The staple industry of the Colony was seriously embarrassed by the heavy fall in the prices of sugar in the latter part of 1928, even though the crop of that year reached the exceptional figure of 253,000 tons. To meet this emergency the remainder of the special export duty imposed in 1920 was remitted, but it was still found necessary to afford further relief to the industry by a loan of Rs. 6,000,000 repayable by an export duty on sugar.

In the absence from the Colony on leave of His Excellency Sir Herbert Read, K.C.M.G., C.B., the third session of the Council of Government was opened on the 1st May, 1928, by the Officer Administering the Government, Sir Edward Allan Grannum, C.M.G., who made, *inter alia*, the following statements :—

> " In difficult times there is special need for scientific research to assist economies in production. The Research work in progress and the provision for its extension by means of the Sugar Industry Reserve Fund should prove an insurance for the future.
>
> " Concurrently, the necessity exists for the development of subsidiary industries and this question is receiving close attention. The danger of entire dependence on one staple product has so frequently been demonstrated that there is no need to emphasize the importance of this question. In the search for subsidiary industries due account must, however, be taken of their relationships to the staple industry, sugar, and the fact that the majority of the cultivated lands of the Colony are already under cultivation.
>
> " The position of the fibre industry has recently been greatly strengthened as the result of the organisation of the Mauritius Hemp Producers' Syndicate. The increased confidence engendered as the result of the improved system of grading and packing inaugurated by the Syndicate has already, I am told, led to a marked strengthening in demand for the fibres which should in due course be followed by an increase in production.
>
> " The development of the tobacco industry is also a feature of importance. Last year the total production of leaf was estimated to be 331 tons and there appear to be prospects of the local demand for tobacco being in large part met by colonial-grown leaf. Efforts are also being made to establish an export trade for our local tobacco.
>
> " It is hoped that shortly the project for the canning of pine-apples and the manufacture of fruit jam and jellies will successfully be launched. In this connection the question of assistance from the Improvement and Development Fund is under consideration.
>
> " The Revenue for the current year was estimated at Rs.15,162,246 and the Expenditure at Rs.16,867,887, inclusive of a sum of Rs.1,694,700 chargeable to Surplus Balances. Therefore the estimated excess of Expenditure over Revenue was Rs.1,705,641.
>
> " The Receiver-General's revised estimate of the Revenue is Rs.15,450,000 and the Expenditure Rs.16,200,000, an excess of Expenditure over Revenue of Rs.750,000 compared with the original estimate of Rs.1,705,641.
>
> " The Surplus Balances of the Colony on the 30th June, 1927, amounted to Rs.12,754,192, or Rs.621,745 in excess of the original estimate of Rs.12,132,447. The Estimate of the Surplus Balances on the 30th June, 1928, is Rs.12,004,192, or Rs.750,000 less than the balances at the 30th June, 1927, and Rs.955,641 more than the original estimate of Rs.11,048,551.
>
> " The Revenue for the year 1928–29 is estimated at Rs.15,553,730 and the normal Expenditure at Rs.15,354,707, an excess of Revenue over Expenditure of Rs.199,023. This excess deducted from the Expenditure of Rs.1,595,000 appearing in the Draft Estimates as a charge to Surplus Balances gives an excess of Expenditure over Revenue of Rs.1,395,977. Included in the Expenditure which it is proposed to charge to Surplus Balances is a sum of Rs.1,000,000 representing loss on exchange through appreciation in the value of the Rupee which has now been fixed at 1*s.* 6*d.* I would, however, point out that owing to this appreciation in the value of the Rupee the sterling equivalent

of the estimated Surplus Balances at 30th June, 1929, will be less by only £4,463 than the sterling equivalent of the estimated Balance at the 30th June, 1928.

"A Commission has been appointed to inquire into the possibility of increasing the efficiency and decreasing the cost of the Medical and Health Department. The reports of this Commission and of the Commission appointed to enquire into the Police Force have not yet been received.

"The malarial situation is being reviewed, and with the help of recently acquired knowledge steps are being taken to undertake an anti-malarial campaign based upon the general scheme indicated by Mr. M. E. MacGregor in his report on the *Anophelinae* of Mauritius. Progress in the preliminary survey work was temporarily arrested in the first quarter of last year by the discovery of indigenous cases of malaria in the Curepipe-Forest Side area, and steps were immediately taken for the control and eradication of the breeding places of the *Anophelinae* mosquitoes concerned. It would appear that the prompt action taken at that time prevented the extension of the disease to any great extent, for only thirteen indigenous cases have been notified in all since the first case was discovered. The preliminary surveys have since been resumed.

"The subject of tuberculosis in the Colony is exercising the attention of Government. A Committee has been appointed to study the problem. Lack of precise information has hampered the progress to some extent, but the Tuberculosis Officer has been collecting the data which will doubtless enable the Committee to formulate the general lines of an anti-tuberculosis campaign designed with due regard to the financial resources of the Colony. The hookworm campaign has been continued along the lines instituted by the representative of the International Health Board of the Rockefeller Foundation. Dr. D'Arifat, who is now in charge of the campaign, has been collecting valuable data upon the general sanitary and economic condition of the rural population with whom his work is largely concerned.

"The dredging of the Harbour proceeds satisfactorily. Five berths now provide 30 to 32 feet of water at low water and other important berthing areas and channels have been dredged, though not, as yet, to their full depth throughout.

"It is hoped that with the assistance of the new coal-handling equipment, for which provision has been made in the forthcoming Estimates, ships will be able to discharge their cargoes alongside the new quay early next year.

"Considerable improvements have been made to the drinking-water supply in the northern Districts of the island. Other improvements both as regards the quantity and quality of water have been made in the Savanne Grand Port, Flacq, and Moka Districts. Schemes for extending the drinking supplies in these Districts and also in the Black River District are under consideration.

"In regard to the Mare-aux-Vacoas works, main pipes have been provided to improve the supply of the Plaine Wilhems District and large improvements have been and are being made to the filter beds."

His Excellency Sir Herbert Read, K.C.M.G., C.B., returned from leave of absence on the 17th May, 1928, and resumed the administration of the Colony, which had been conducted during this absence by Sir Edward Allan Grannum, C.M.G., Colonial Secretary.

II.—FINANCE.

The total revenue of the Colony for the financial year ended 30th June, 1928, amounted to Rs. 15,308,918.13c., being Rs. 146,672.13c. above the Estimates and Rs. 626,111.36c. above the revenue of the previous year.

The expenditure amounted to Rs. 16,725,513.20c., being Rs. 142,373.80c. below the estimates and Rs. 264,451.40c. above the expenditure of the previous year.

Of the expenditure for 1927–28, Rs. 5,007,756.64c. were spent on Personal Emoluments and Rs. 11,717,756.56c. on Other Charges. The corresponding figures for 1926-27 were: Personal Emoluments Rs. 4,911,972.84c., Other Charges Rs. 11,549,088.96c.

The expenditure incurred during the year exceeded the revenue by Rs. 1,416,595.07c., the financial transactions of the Colony for the year 1927–28 showing therefore a deficit of Rs. 1,416,595.07c.

The following is a comparative statement of the revenue and expenditure for the last five years.

Years.		*Revenue.*	*Expenditure.*
		Rs.	Rs.
1923–24 ...	...	19,888,554	16,188,735
1924–25 ...	...	19,672,843	17,355,868
1925–26 ...	...	15,894,763	16,117,988
1926–27 ...	...	14,682,806	16,461,061
1927–28 ...	...	15,308,918	16,725,513

ASSETS AND LIABILITIES.

The totals of assets and liabilities at the end of the year were Rs. 43,281,260.41c. and Rs. 32,539,755.99c., respectively, or a net surplus of Rs. 10,741,504.42c. on 30th June, 1928.

PUBLIC DEBT.

The Public Debt of the Colony has, during the year, been increased from £1,765,724 2*s.* 8*d.* to £1,832,390 16*s.* 0*d.* due to the raising of the loan of Rs. 1,000,000, or £66,666 13*s.* 4*d.* at 1*s.* 4*d.* the rupee, for La Nicoliere Irrigation Works under Ordinance No. 15 of 1927.

Against this liability of £1,832,390 16*s.* 0*d.* there was an accumulated sinking fund of £967,723 5*s.* 10*d.*, as compared with £887,181 16*s.* 5*d.* at 30th June, 1927.

The following is a statement of the public debt of the Colony :—

Public Debt of Mauritius, 30th June, 1928.—Government Debentures and Inscribed Stock.

Debts.	*To whom Due.*	*Rate of Interest.*	*When incurred and for what cause.*	*State provisions for Payment of Interest or Sinking Fund and reference to Enactments by which it is made.*	*Amount of Original Debt.*	*Sinking Fund, Amount of Stock.*	*Market Value.*
					£ *s.* *d.*	£ *s.* *d.*	£ *s.* *d.*
Mauritius Railways and Mare-aux-Vacoas Water Supply.	Stock Holders.	4 per cent. per annum.	In 1888—To declare the terms and conditions applicable to loans authorised to be raised in England by the Government of Mauritius and to provide for the creation of Mauritius Inscribed Stock under the provisions of Ordinance No. 1 of 1887.	Under the provisions of the General Loan and Inscribed Stock Ordinance 1 of 1887—Sinking Fund of 1 per cent. per annum.	482,390 16 0	462,848 15 0	410,095 9 1
Hurricane Loan, 1892 (guaranteed by Imperial Government).	Stock Holders.	3 per cent. per annum.	In 1893—To meet the wants and necessities created by the Hurricane of the 29th April, 1892, and to provide funds for certain public works—Ordinances 4 and 12 of 1892.	Under the provisions of the General Loan and Inscribed Stock Ordinance 1 of 1887—Sinking Fund of 1 per cent. per annum and liable to be increased under Article 2 of Ordinance No. 12 of 1892.	600,000 0 0	492,214 8 11	412,275 19 10
Public Works Loan.	Stock Holders.	3½ per cent. per annum.	In 1904—To meet the cost of construction of Railways (Black River, Long Mountain, and Bois Cheri lines), and certain drainage and Water Works, as well as the cost of a Dredger—Ordinances 19 of 1903, 49 of 1903-4, and 31 of 1904. † Cash Balances.

The following statement gives details of the principal changes in taxation which came into force during the year :—

LICENCES.

Amendment to Schedule A of Ordinance No. 32 of 1915.

Old Legislation.			*New Legislation* (Ordinance No. 29 of 1927).	
Item.	Half-Yearly Rate.	Nature of Licence.	Half-Yearly Rate.	Nature of Licence.
31	Rs. 50	Merchant.	Rs. 50	Private Club or Society of outdoor Games only.
10	„ 100	Retailer Consolidated.	„ 150	Keeper of a Refreshment Room.
5	„ 100	Billiard Room Keeper.	„ 150	Private Club or Society.
8	„ 150	Keeper of a Restaurant.	„ 250	Keeper of a Railway Refreshment Room.
4	„ 200	Keeper of an Hotel.	„ 250	Wholesale Dealer not dealing in liquor.
1	„ 250	Keeper of a Bar.	„ 250	Retailer Consolidated.
5	„ 250	Wholesale Dealer.	„ 300	Wholesale Dealer dealing in liquor.
8	„ 250	Railway Refreshment Room Keeper.	„ 350+400	Keeper of Restaurant.
1	„ 350	Wholesale and Retail Consolidated.	„ 400	Keeper of an Hotel.
3	„ 500	Retailer of Liquor.	„ 400	Wholesale and Retail (Consolidated Licence).
			New Items.	
			Rs. 15	Seller of Wine locally manufactured.
			„ 50	Manufacturer of medicinal tinctures and drugs.

RUM ISSUED FOR LOCAL CONSUMPTION.

Amendment to Ordinance No. 36 of 1904.

Previous Duty.	*Present Duty* (Ordinance No. 31 of 1927).
Rs. 2·75 per litre at 19 degrees Cartier and an additional duty of 15 cents per litre for every degree above 19 plus an additional duty of 50 cents for every 25 litres or fraction thereof.	Rs. 2·75 per litre at 23 degrees Cartier and an additional duty of 12 cents per litre for every degree above 23 plus an additional duty of 40 cents for every 25 litres or fraction thereof.

DENATURATED SPIRITS.

Amendment to Ordinance No. 21 of 1903.

Previous Duty.	*Present Duty* (Ordinance No. 36 of 1927).
Rs. 5 per hectolitre at 36 degrees Cartier, plus an additional duty of 5 cents per hectolitre for every degree above 36 plus an attitional duty of 25 cents for every 100 litres of spirits or fraction thereof.	(i) 4 cents per litre of spirits or fraction thereof at any degree Cartier on Industrial Alcohol. (ii) 4 cents per litre of spirits at 36 degrees Cartier and an additional duty of 4 cents per hectolitre for every degree above 36 on DENATURATED spirits for lighting and heating purposes.

VINEGAR.

Amendment to the Laws on Vinegar.

Previous Duty.	*Present Duty* (Ordinance No. 34 of 1927).
Rs. 1·40 per hectolitre at 8 degrees Acetic acid and an additional duty of 18 cents per hectolitre for every degree above 8 degrees.	Rs. 1·70 per hectolitre at 8 degrees Acetic acid and an additional duty of 18 cents per hectolitre for every degree above 8 degrees.

MEDICINAL TINCTURES AND DRUGS.

New Legislation (Ordinance No. 35 of 1927)

An Excise duty of 10 cents per litre of alcohol at any degree used in the preparation of medicinal tinctures and drugs.

CURRENCY AND BANKING.

The average amount of currency notes in circulation during the year was Rs. 14,132,970 as compared with Rs. 14,185,000 in 1926–27.

The average amount of silver held by the Commissioners of Currency amounted to Rs. 4,253,750 as compared with Rs. 4,305,500 in 1926–27.

The investments (not including Depreciation Fund, which stood at Rs. 9,879,250 on 1st July, 1927) remained the same during the year. The Depreciation Fund was increased from Rs. 1,335,806 to Rs. 1,481,294.

The revenue (interest on investments, less addition to Depreciation Fund) was Rs. 423,282 and this sum was credited to the General Revenue of the Colony.

The statement of assets and liabilities of the Commissioners of Currency shows a surplus of Rs. 1,481,294. Valuing the investments at the market rate on 30th June, 1928, the surplus would be increased to Rs. 1,539,850.

Government Savings Banks are established in the nine Districts and in the dependency of Rodrigues, with a head office in Port Louis The total number of depositors on 30th June, 1928, was 36,591, as against 36,510 in the preceeding year, with deposits amounting to Rs. 5,099,990.65, as against Rs. 5,134,555 in the preceding year. The Savings Banks are largely made use of by the Indians, of whom at the 30th June, 1928, there were 16,323 depositors with Rs. 2,301,576.73 to their credit, as against 15,431 depositors with Rs. 2,287,355.04 to their credit on 30th June, 1927.

Interest is paid at the rate of 3 per cent. a year.

The Banks are the Mauritius Commercial Bank, the Mercantile Bank of India (Ltd.), and Barclays Bank.

III.—PRODUCTION.

AGRICULTURE AND INDUSTRIES.

The industries of the island are entirely agricultural.

Sugar.

The principal crop is sugar. The estimated area under sugar-cane at the commencement of 1928 was 157,731 acres ; estate cultivation then occupied 95,931 acres and plantations off estates 61,800 acres. Of the area cultivated under sugar-cane, Indian planters comprised 70,597 acres, or 44.7 per cent. of the total area under cane. Forty-three factories operated during 1928. Market conditions for sugar have been the most unfavourable since 1913 and the difficulties thereby created have necessitated the consideration by Government of financial help to planters in the way of a loan repayable by small annuities.

Weather conditions have been distinctly favourable during the year and the total production of sugar has exceeded 251 thousand metric tons.

Sugar machinery to the value of Rs. 730,849 was imported during the year, and tramway material to the value of Rs. 410,680. Tractors and ploughs to the value of Rs. 22,309 were imported. There were at the beginning of the year, 1,547 kilometres of tramway line on estates, with 226 locomotives and about 6,700 trucks. The number of farm tractors was 111.

The Sugar Planters' Syndicate, constituted under Ordinances Nos. 31 of 1920 and 7 of 1921, continued operations, controlling more than 80 per cent. of the sugar produced in the Colony. As in previous years, the bulk of the production went to the United Kingdom.

In view of the unsatisfactory market, the local sugar manufacturers found it more advantageous to turn out this year an unusually large proportion of raws, about one-quarter of the total production.

In relation to pests and diseases of canes, the incidence of *Phyialus* has caused some anxiety and further efforts are being made to cope with the situation.

Research in Relation to the Sugar Industry.—Work in this connection has been maintained, both in the field and in the laboratory, by the Department of Agriculture on the availability of potash in the soil, the mineral content of pastures, etc., while a systematical soil survey was undertaken, including the mechanical analysis of soils and the determination of their acidity. On the botanical side, research is in progress concerning Leaf Scald, Gumming disease, Top rot, etc. The Sugar Technologist was delegated to South Africa by the Sugar Industry Reserve Fund Committee for the study of the Suchar Process in sugar refining.

Subsidiary Industries.

Attention has continued to be devoted to industries subsidiary to sugar. Of these *Mauritius Hemp* stands in the first place. *Furcroea gigantea* grows wild or in a semi-cultivated state over 20,000 acres, while sisal covers about 300 acres. The formation of a Hemp Producers' Syndicate and the establishment of a grading and baling station have produced eminently salutary effects on the industry. The export for the year 1928 has been one of the largest on record, namely, 2,496 metric tons. Quotations have been very satisfactory, "prime" reaching Rs. 410 per ton and "good" or "very good" Rs. 340 and Rs. 380 respectively.

In relation to *tobacco*, conditions throughout the year have not been satisfactory. Owing to the failure of the winter crop and to unsatisfactory market conditions, the industry went through a period of regression, which has, however, terminated. The area under cultivation had shrunk to 200 acres but is now over 1,100 acres.

The Tobacco Excise Duty Ordinance, 1928, levying an Excise duty on all tobacco as defined in the Tobacco Ordinance 1927 and manufactured in the Colony, and providing for a drawback of duty on exportation of such tobacco, was passed during the year.

Pine-Apple Canning and Fruit Preserving.—No progress has been made under this head. A remodelling of the original scheme under which the industry was to be started is being contemplated and further assistance is expected from Government.

Alcohol.—About 825,000 litres have been produced during the year ; five distilleries are at present at work, of which the largest is the one annexed to Medine Factory, producing alcohol for human consumption, power spirit and ethers for pharmaceutical and other purposes.

Oil Crops.—The Innova Refinery continued operations during the year, handling mainly copra from oil islands dependencies of Mauritius. The copra production averages 900 tons annually.

Tea.—There has been some slight revival of this industry during the year and application for its assistance from the Development Fund has been received by Government.

Food Crops.—At the beginning of 1928 the area under maize was estimated at 2,000 acres and under manioc at 3,000 acres. Vegetables occupied about 3,500 acres and bananas, potatoes and sweet potatoes together about 1,100 acres.

Vanilla and Coffee.—There is nothing to report on these crops, which maintain a precarious existence.

Live Stock.—Importations of cattle for food from Madagascar numbered 7,173 of a total value of Rs. 459,211, and for other purposes 1,095 heads of a total value of Rs. 65,685. The Government Dairy continued operations on the same lines as heretofore.

Animal Diseases.—The campaign against surra has been continued on the same lines as heretofore : 9,575 animals were examined for the disease during the year and 79 cases detected ; 432 cows were tested for tuberculosis. No serious outbreak of other infectious disease was in evidence during the year.

Rodrigues.—The work at this station was maintained. The agricultural service there, which had been somewhat disorganised owing to various staff changes, has resumed a more promising aspect on the appointment of an active and energetic officer.

Co-operative Credit Societies.—Co-operative Credit Societies are administered under Ordinance No 4 of 1913. They are based on the Indian model. Numerous difficulties have been encountered in their administration, but it seems clear that if properly administered such societies are capable of accomplishing much useful work in the Colony.

On the 30th of June, 1928, there were 28 Societies and the total membership amounted to 2,492, while the total working capital on the same date was Rs. 292,520.

FORESTRY.

The total area of the woodlands under the control of the Forest Department at the end of 1928 was :—

A. Crown Lands	70,062.24	arpents.
B. Private lands under State Control :—		
(1) Mountain Reserve	8,728.56	,,
(2) River Reserves, about	6,000.00	,,
(3) Curatelle Lands	17.90	,,
(4) Waste Lands of Port Louis ...	211.34	,,
Total, about	85,020.00	,,

showing an increase of 234.64 arpents of Crown lands over last year. These new lands were acquired under the Land Purchase Scheme at a cost of Rs. 33,050.58. During the year, the Forest Department supplied the following produce from Crown lands to the public and to the Government departments :—

Timber : 12,340 c. ft. solid, compared with 24,617 c. ft. solid in 1927.

Fuel : 121,320 c. ft. solid stacked, compared with 165,000 c. ft. solid stacked in 1927.

During the financial year 1927–28 a total sum of Rs. 53,216.93 was spent on forest nurseries and plantations. New plantations of 356.599 arpents were formed, chiefly of eucalyptus, pine, and *Cryptomeria*.

Cleanings and other maintenance works were undertaken on 866.47 arpents. This compares with 1926–27 when Rs. 63,734.62 was spent, 350 arpents of new plantations formed, and maintenance works carried out on 1,307 arpents.

The timber requirements of Mauritius are of considerable importance and are supplied mainly by imports, which for the years 1922–27 averaged slightly over Rs. 2,000,000 per annum in value.

Imports for 1928 amounted to :—

		Rs.
Boards, planks, and scantlings.	3,941.00 c. metres valued at	237,518.00
Teak Shingles ...	2,043.044 c.metres valued at	124,828.00
Railway Sleepers ...	1,370.00 c. metres valued at	2,561.00
Timber of all sorts ...	3,897.00 c. metres valued at	300,329.00
		665,236.00

No local forest produce is reported to have been exported during 1928.

FISHERIES.

In 1926 Mr. James Hornell, F.L.S., F.R.A.I., late Director of Fisheries to the Government of Madras, was deputed by the Secretary of State to carry out a rapid survey of the Marine Resources of Mauritius and to submit recommendations for the improvement and development thereof.

Mr. Hornell arrived in the Colony in April and submitted his report in August, 1926. The report was laid before the Council of Government in November, 1926, and ultimately received the approval of the Secretary of State.

As an outcome of this report, a Permanent Advisory Committee was appointed in August, 1927, and the Committee is now studying the best practical means of putting into force the recommendations contained in the report.

The enforcement of the provisions of the Fisheries Ordinance is vested in the Receiver-General, and the whole is under the control of the Inland Revenue Branch of the Receiver-General's Department.

The fisheries industry now chiefly consists of lagoon-fishing, sea-fishing being much less resorted to than in pre-war days.

The outstanding features of the fishing industry (as reported upon by Mr. Hornell) are as follows :—

(*a*) The remarkable variety and natural abundance of good fish both in the lagoon area and in the open sea around.

(*b*) The undue concentration of fishing within the lagoon area, neutralising in large measure the natural abundance of fish therein.

(*c*) The very great decrease from pre-war years in the amount of fishing done in the open sea.

(*d*) The lack of enterprise in the industry save in the exploitation of the lagoon area.

(*e*) The specially favourable conditions that prevail on the coast for marine fish-farming, coupled with the imperfect utilization of these opportunities.

(*f*) The absence of any important minor marine industries save lime making from coral and the half-hearted fish-farming carried on in barachois.

Mr. Hornell has submitted a series of specific recommendations for the development and improvement of the fishing industry, including the creation of a Fisheries Department.

The Department proposed would attend to all matters relating to fisheries and would be under the guidance of a trained Superintendent, who should have qualified in Oceanography at the University of Liverpool and have made a stay of three months in India to study the organisation and methods of the Madras Fisheries Department.

WATER POWER.

The numerous rivers and streams of Mauritius flow generally through deep ravines, their courses being broken by many waterfalls and rapids. The following extract from the list of waterfalls will give some indication of the available water-power in the Colony. It is estimated that 10,000 horse-power is available, of which 1,200 horse-power is utilized at present, principally for electric light service.

Waterfalls Measured during the Dry Season of the Year 1912.

Name of River.	*Name or description of Waterfall.*	*Height of Waterfall in feet.*	*Volume in cubic feet per minute*
G. River, S.E.	Deschiens	19	1,530
do.	Diamamoo	63	2,315
G. River N.W.	Le Reduit	135	450
Savanne River	Cascade Cecile	105	580
do.	Below Terracine Dam	77	250
Tamarind River	Sept Cascades	960	420
R. des Galets	Near Plaine Champagne	130	60
do.	Luchon	400	134
R. du Cap	Chamarel	320	330
R. Moka	Cascade Pigeons	160	80

MANUFACTURES.

An account of the principal manufactures of the Colony has been given above. It may be here mentioned, however, that a brickfield plant which had been started by Government on an experimental basis is now being worked by private enterprise. The bricks produced are of good quality and some villas built of this material are already in existence.

IV.—TRADE AND ECONOMICS.

The total value of the overseas trade of the Colony in 1928 amounted to Rs. 96,809,220, the value of the imports of merchandise being Rs. 49,437,800 and that of exports Rs. 47,371,420. The figures for the preceding year were Rs. 111,662,220, Rs. 55,185,633, and Rs. 56,476,587, respectively.

The Customs Revenue from imports amounted to Rs. 4,513,588, a decrease of over Rs. 700,000 compared with 1927, and the revenue from the exports was Rs. 1,649,371, against Rs. 1,875,637 in 1927.

The following Ordinances relative to Customs which are of interest not purely local were passed during the year : —

(*a*) *The Customs Tariff* (*Amendment*) *Ordinance,* 1928, validating certain resolutions passed by the Council of Government and amending Schedule B of the Customs Consolidated Tariff Ordinance, 1928.

(*b*) *The Customs Preferential Tariff* (*Amendment*) *Ordinance,* 1928, establishing a new preferential tariff on goods produced in Great Britain and Ireland or in Canada, and consigned therefrom.

TRADE.

The comparative values of imports and exports of merchandise for 1913 and for the past five years are as follows :—

	Imports. Rs.	*Exports.* Rs.	*Total.* Rs.
1913	36,697,671	32,291,706	68,899,377
1924	76,415,648	52,282,533	128,698,181
1925	61,682,844	44,478,894	106,161,738
1926	50,596,137	41,208,198	91,804,335
1927	55,185,633	56,476,587	111,662,220
1928	49,437,800	47,371,420	96,809,220

The value of re-exports was Rs. 1,628,058 in 1928, compared with Rs. 1,660,091 in 1927. Bullion and specie amounting to Rs. 2,573,214 was imported during the year under review, compared with Rs. 1,598,387 in the preceding year, and the exports under that heading amounted to Rs. 1,476,000 and Rs. 2,567,000, respectively.

Imports.

The distribution of the import trade showed in 1928 a decrease of about 14 per cent. in the value of the imports from the United Kingdom compared with that of 1927 ; trade with Australia, Canada, Holland, Sweden, Switzerland, and Madagascar showed an increase but the trade with most countries shows a decrease, notably in the case of France, United States of America, Reunion, China, and Spain.

The principal items of the imports which showed an increase in 1928 over the preceding year are coal and coke, woollen piece goods, oils and fats unrefined, motor-lorries, paraffin and lubricating oils, tramway locomotives, earthenware and porcelain, and gunny bags. The following are the principal items in which decreases are shown :— cement, unmanufactured and manufactured tobacco and cigarettes, spirits and wines, cotton goods, motor spirits, manures and fertilizers, haberdashery and millinery, salt, iron and steel manufactures. The decreases in the importation of unmanufactured tobacco and of manufactured tobacco and cigarettes are due to the rapid progress made in the production of tobacco leaf and the manufacture locally of tobacco and cigarettes.

The following statement gives the character and size of the trade in the principal articles imported in 1928 as compared with the preceding year :—

	1927.		*1928.*	
Rice	59,607	Tons	63,831	Tons
Other Grain	22,307	,,	21,737	,,
Manures and Fertilizers	19,564	,,	13,261	,,
Coal, Coke and Patent Fuel ...	21,025	,,	70,469	,,
Cement	9,001	,,	3,702	,,
Cotton Manufactures	10,614,866	Metres	7,832,275	Metres
Woollen ,, ...	129,001	,,	141,500	,,
Wines in Cask	2,709,433	Litres	1,475,465	Litres
,, in Bottle	96,121	,,	133,035	,,
Spirits	51,766	,,	39,997	,,
Motor-cars (180)	506,558	Rs. (184)	412,363	Rs.
,, Lorries (5)	88,541	,, (104)	269,722	,,
Boots and Shoes	295,505	,,	371,357	,,
Haberdashery and Millinery ...	900,933	,,	604,419	,,
Iron and Steel Manufactures ...	1,810,861	,,	1,408,143	,,
Silk Goods	489,548	,,	539,238	,,
Drugs	422,376	,,	523,382	,,
Wearing Apparel	296,162	,,	321,335	,,

Exports.

Owing to a smaller crop, the export of sugar in 1928 showed a decrease over the 1927 figures. The figures for the past six years are as follows :—

	Kilos.	*Value.* Rs.
1923	223,051,061	67,227,562
1924	182,742,235	49,823,753
1925	192,303,540	41,250,907
1926	181,215,772	37,991,240
1927	227,989,329	53,789,928
1928	219,264,000	44,293,987

The principal domestic exports other than sugar were : aloe fibre, 2,496 tons valued at Rs. 843,446, compared with 1,905 tons valued at Rs. 665,936 in 1927 ; copra increased from Rs. 334,297 in 1927 to Rs. 411,560 in 1928 ; coconut oil and rum showed decreases from Rs. 35,247 and Rs. 20,055 in 1927 to Rs. 17,462 and Rs. 12,347 respectively in 1928.

Re-exports amounted to Rs. 1,628,058 and consisted chiefly of gunny bags, wheat flour, lentils, salted fish, and scrap metal.

DISTRIBUTION OF TRADE.

The following Tables show the distribution of the imports, exports, and total trade with the United Kingdom, British Possessions, and foreign countries in 1913 and for the past five years :—

Imports.

Countries.	*1913.*	*1924.*	*1925.*	*1926.*	*1927.*	*1928.*
United Kingdom ...	33·2	31·9	27·4	22·2	23·6	23·3
British Possessions ...	42·6	36·9	45·1	48·5	47·2	50·7
Foreign Countries ...	24·2	31·2	27·5	29·3	29·2	26·0
	100·0	100·0	100·0	100·0	100·0	100·0

V.—COMMUNICATIONS.

SHIPPING.

The following statement shows the number and tonnage of vessels using the port (excluding the coasting trade) during the past three years :—

	Inwards.		Outwards.	
	No.	*Tonnage.*	*No.*	*Tonnage.*
1926	187	508,555	194	541,120
1927	224	622,936	226	625,524
1928	236	650,369	235	647,446

In the coastal trade with the dependencies there were 21 vessels inwards of 5,682 tons and 21 vessels outwards of 5,791 tons.

The principal lines of steamships represented by vessels calling at Port Louis were The Union-Castle Steamship Co., Ltd., The British India Steam Navigation Co., Ltd., The Messageries Maritimes, The Clan Line, The Ellerman Harrison Line, The Compagnie Havraise Peninsulaire, and The Mogul Line.

RAILWAYS.

The Mauritius Government Railways, exclusive of Bois Cheri Light Railway, are 120 miles in length, with a gauge of 4 ft. 8½ inches.

The revenue for the year amounted to Rs. 3,217,670, as against Rs. 3,269,391 for the previous year, a decrease of Rs. 51,721, explained as follows :—

	Previous Year. *Rs.*	*This Year.* *Rs.*		*Difference.* *Rs.*
Passenger	1,663,325	1,459,143	–	204,182
Parcels	122,625	109,723	–	12,902
Goods	1,349,782	1,534,830	+	185,048
Miscellaneous	133,659	113,974	–	19,685
	Rs.3,269,391	Rs.3,217,670	–	Rs.51,721
Goods Tonnage ...	480,969	513,250	+	32,281

The fall in passenger revenue is due to loss of traffic caused by intensive competition of private road transport agencies. Passenger traffic loads are short on this small railway and, with the excellent roads provided, this traffic is leaving the railway for the road. There is little doubt that the railway passenger traffic will eventually be reduced to a nominal amount unless decisive steps are taken to co-ordinate the transport facilities of the Colony and give that measure of protection to the railways which will ensure the retention of railway revenues. The economic result on the Colony of road traffic competition against the railways and the resultant loss in revenue causes the Colony to pay for two forms of transport when one will suffice.

The increased goods revenue is due to the harvesting of a larger sugar crop which was transported with despatch to the satisfaction of all concerned.

Working costs show a net reduction on previous years' expenditure of Rs. 221,688, and is evidence that the campaign for economy is having good results. During the past two years working expenditure has been reduced Rs. 717,581 or 22.8 per cent. The railway service has been maintained and improved.

Comparative figures are :—

	Rs.
Net working Expenditure previous year	3,364,687
Net working Expenditure this year	3,142,999
Decrease	221,688

The excess of revenue over net working expenditure amounts to Rs. 74,671. After payment of pensions, interest, etc., and making provision for depreciation, there is a gross loss of Rs. 616,278 for the year.

A system of telephonic train control was instituted on the Midland Line during the year, with excellent results. Overtime expenditure of telegraph clerks has been considerably reduced and the service factor of rolling stock improved.

Bois Cheri Light Railway is 24 miles in length with a gauge of 2 ft. 6 inches, and connects with the Savanne branch of the main line. This line is run for goods traffic only, which principally consists of cane transport. Revenue shows a slight decrease on last year at Rs. 25,628. Expenditure amounts to Rs. 25,611 for the year.

The railway road collection and delivery service was handicapped by the loss by accident of one 5-ton lorry in February. The revenue for the year amounts to Rs. 13,055, as against Rs. 30,189 for the previous year. Expenditure has fallen considerably as the following figures show :—

	Rs.
1926–27	24,498
1927–28	9,063
Decrease	15,435

ROADS.

The island is well served by a system of roads which provide ready communication with all parts of the island. They are maintained from the General Revenue of the Colony and are classed under two categories, namely, the main roads, totalling about 441 miles, which are under the management of the Public Works and Surveys Department, and branch roads, totalling about 193 miles, which are under the management of District Boards.

The most important roads are surface treated with bitumen, their smooth surface and absence of dust making them especially agreeable for motor drives. The mileage of roads thus treated is now about 80 miles and is being yearly extended.

Most of the old bridges which were no longer adapted to modern road traffic have been reconstructed for heavy traffic, and the work of reconstruction is continued yearly.

POSTS, TELEGRAPHS, TELEPHONES, ETC.

26 Messageries Maritimes packets landed European and other mails in 1928, coming, under special agreement with the Colony, directly from Tamatave. The mails, owing to this arrangement, reached the Colony in 34.4 days on the average. The special agreement lapsed on 31st December. Mails from England were also conveyed, by the South African route, by 29 steamers, including 8 Castle Line vessels. The mails remained in transit, except on three

occasions, as long as 60, 65, and 69 days. Communication with India and the East and with other parts of the world was procured by 9 British India Steam Navigation Company's vessels and by other cargo steamers.

On the whole, 250 vessels conveyed mails to, and 247 conveyed mails from, Mauritius. The mails conveyed were both letter and parcel.

The parcel mails conveyed inwards are mainly from England and France ; and parcels from England in 1928 numbered 6,205, out of which 2,280 were C.O.D. On these C.O.D. parcels trade charges amounting to Rs. 92,224 were collected, against Rs. 74,856 on 1,713 parcels in 1927. There seems to be an indication of increase in this item of the British trade with the Colony.

The use of the land telegraphs appears to have been partly resumed during the year, a rise of 7,000 paid messages being noticed after several years' steady fall. This may be due to changes in the tariffs and regulations of the Oriental Telephone Company.

The electric branch of the Railway Department also maintains the Government telephone, a small system at first set up to connect the Government offices in Port Louis. The Government telephone has now been linked, through its exchange at the Colonial Secretary's Office, to the public system owned and worked by the Oriental Telephone Company, and is spreading its network over Port Louis, Plaines Wilhems, and Moka, the three districts more important in regard to population and development.

Outside communication by cable was maintained by the Eastern and South African Telegraph Co., and the Government wireless station provided communication with ships at sea. The wireless was also used by the public for communication with Reunion, but the service with Madagascar was abandoned, the Government of Madagascar desiring to prevent competition with the established cables. It would however be available in cases of emergency.

VI.—JUSTICE, POLICE AND PRISONS.

Justice and Crime.

Justice is administered in Mauritius by the Supreme Court sitting in Port Louis as a Court of Civil and Criminal Justice and having the power of the King's Bench in England and of a Court of Equity.

In the nine Districts, there are Magistrates' Courts having likewise a limited civil, criminal and stipendiary jurisdiction.

In 1928 the Supreme Court dealt with 382 civil matters out of 671 which were brought before it, as against 334 out of 660 in the previous year.

25 persons were brought before, and tried by, the same Court, sitting as a Criminal Court, out of whom 24 were convicted, the percentage of acquittals being 4.

In the Magistrates' Courts 15,388 persons were brought before the District and Stipendiary Courts and before the Bench of Magistrates (Courts composed of three Magistrates having a wider criminal jurisdiction), and were dealt with as follows :—

Acquitted or discharged by the district Magistrates.	1,315
Convicted	13,874
Committed to the Assizes	19
Acquitted or discharged by the Stipendiary Magistrates.	70
Convicted	110

POLICE.

Re-organisation.—The general re-organisation of the Police Force which commenced in October, 1926, has made slow but satisfactory progress, and efficiency has been improved in many directions.

Recruiting.—The class of recruit now coming forward for enlistment is rapidly improving and there is every reason to believe that the prejudice against the Force, which prevented young men of good standing from joining, is at last dying out.

Distribution.—The Force is divided into Staff, Criminal Investigation Department, Harbour Police, Mounted Police, District Police Motor Traffic Department, Training Depot, and Band.

The Staff comprises Headquarters and the Pay and Quartermaster's Branch.

The Criminal Investigation Department is subdivided into the following branches :—

Investigations, Finger Impressions, Habitual Criminals, *Modus Operandi*, Passports, Gun Permits, and Photography.

The Harbour Police comprises an Immigration Officer and sections of Water and Shore Police operating in the Harbour Area.

The District Police are distributed at 55 Stations in the nine Magisterial Districts, the Stations being of three classes and varying as regards establishment of personnel from 38 to 2.

The Motor Traffic Department is increasing in importance and numbers in proportion to the ever-increasing mass of cars on the roads, and Mauritius will in the near future be confronted with the necessity of having a force of Traffic Police as distinct from Crime Police.

The Police Band has become a popular local institution and gives an increasing number of public performances every year.

Training.—The Police Training Depot at Headquarters, to which is attached Line Barracks Police Station and the Armed Guard at Government House and Treasury, is now a complete and up-to-date school for policemen. In addition to the professional training given by the instructional staff, voluntary educational classes in English, French and general subjects are held at night by a Professor of the Royal College, whose enthusiasm is producing excellent results. In addition to the training of cadets and recruits the police Training Depot conducts periodical refresher courses for non-commissioned officers, promotion examinations, and quarterly mobilizations of the armed detachment.

Crime.—The percentage of undetected serious crime is below the normal average and the proportion of crimes to population is falling steadily.

Commission of Enquiry.—The Commission of Enquiry appointed in August, 1927, continued to sit throughout the year.

During the year, the Obscene Publications Ordinance, 1928, giving effect to the International Convention signed at Geneva on the 12th September, 1923, to which Mauritius had adhered, and completing the local laws for the suppression of the circulation of and traffic in obscene publications, was passed.

PRISONS.

The Department of Prisons is under control of the Superintendent (who is also Inspector-General of Police) and a staff of chief warders and assistant chief warders, usually appointed from the Home Prison Service.

The offices of the Department are in the Port Louis Prison, which dates from the eighteenth century, and serves as the receiving prison in which short-sentence prisoners, debtors, and misdemeanants in general are confined. There is accommodation for 154 male prisoners in single cells. The female prison contains 9 association cells which can accommodate 40 women prisoners.

Long-sentence prisoners are transferred to Beau Bassin Prison, a modern convict establishment opened in 1887 and standing in about 50 acres of Crown land 8 miles from Port Louis.

This institution provides accommodation for 756 male convicts in separate cells and contains a range of workshops where much valuable work is performed in reducing the cost of the establishment and in which prisoners are trained as bakers, tailors, boot, sail, and mattress makers, basket and mat makers, carpenters, tinsmiths, blacksmiths, and stone masons.

The bakery supplies bread to all Government institutions, the daily average output being 709½ lb., and the saving to the public effected by substituting prison-made bread for contract bread being about £1,827 per annum.

About 12 acres of land adjoining the prison is under constant cultivation for the production of the vegetables required as part of the prisoners' dietary, and a poultry farm, which was started in 1922, furnishes a regular supply of eggs and poultry to neighbouring Government institutions.

Many developments have taken place in the past two years as regards clearing of waste land, building of walls and roads, tree-planting, and food-production, and experiments in maize-growing are being conducted which give indications of success.

During the year, 1,879 persons were committed to prison (an increase of 86 on the figures for the previous year), 1,785 being males and 94 females.

The total number in custody on 31st December, 1928, was 424, as against 366 on 31st December, 1927.

Male juvenile offenders are detained after conviction at an institution known as the Industrial School, to which are also sent juvenile vagrants and certain other categories of youths under the age of 18 years.

The boys are kept under strict discipline, and taught various trades and agriculture in addition to the usual primary school instruction. The percentage of re-convictions is not high.

The school provides accommodation for 250 boys, but the number in detention at the end of the year was only 83.

Female juvenile offenders are accommodated in the Women's Prison at Port Louis.

The whole question of juvenile delinquency and its treatment is under consideration by a Committee appointed in 1927.

VII.—PUBLIC WORKS.

The most important public works in the Colony are the irrigation works, water works, sewage works of the town of Port Louis, buildings and anti-malarial works.

The irrigation works are carried out under a scheme prepared in 1914 and have been under execution since that date. Under this scheme the works were to provide for the construction of storage reservoirs to irrigate 5,000 acres of mostly uncultivated land in the district of Black River, and of 12,000 acres of land, partly under cane cultivation and partly uncultivated, in the northern districts of Pamplemousses and River du Rempart. The works in the district of Black River, including the construction of a storage reservoir at La Ferme of a capacity of 2,500 million gallons, have been completed and have brought 3,700 acres of barren land under cane cultivation since 1918.

The other works which are to provide for the irrigation of lands in the Northern Districts from two storage reservoirs at Nicoliere and Calebasses, containing together about 250 million gallons, and from one at Midlands, of a capacity of 4,400 million gallons, are in progress. The reservoir at Nicoliere has been completed and, although some land under cane cultivation is being irrigated from it, the full scheme will only be in operation when the reservoir at Midlands is completed.

Water Works.—These include the water supply of the towns of Plaines Wilhems and Moka, of a total population of 80,000, the water supply of the town of Port Louis, of a population of 43,000, and the water supply of towns and villages in the districts, of a total population of 140,000.

The water supply of the towns of Plaines Wilhems and Moka is derived from a storage reservoir at the Mare aux Vacoas at an altitude of 1,825 feet. The capacity of the reservoir is 1,167 million gallons: its catchment-ground is entirely protected by forest lands, and the whole of the water is passed through sand filters at the filtering plant at La Marie. The capacity of the reservoir has been increased during the year by 474 million gallons. This has been effected by increasing the height of the dam. Construction was also begun on four service reservoirs, of a total capacity of 3,850,000 gallons, to improve the distribution of water in the several towns.

The water supply of the town of Port Louis is derived from the Grand River north-west of, and at a distance of some 4 miles from, the town, at an elevation of 250 feet. This supply, which was under the control of the Municipality of the town, was put under the control of the Public Works and Surveys Department in 1922. The improvement of the quality of the water by chlorination has been under consideration for the past few years, and a scheme has now been approved for increasing the capacity of the filters and treating with chlorine 5 million gallons of water daily.

The water supply to the towns and villages in the Districts comprises 27 different supplies, each derived from a different spring or stream. These supplies are not filtered, but they are generally protected from pollution by forest reserves in the catchment-grounds of their sources. Several schemes are under consideration for extending the water supply to other towns and villages and for further protecting existing ones by purchase of lands in their catchment-grounds.

Sewerage of Port Louis.—A large portion of the town now has the water carriage system. The sewerage works were begun in 1900 but the scheme was revised in 1922 by Messrs. Mansergh and Sons, and the works are now being carried out on the lines of their report.

Anti-Malarial Works.—These have been in abeyance during the year under review owing to the study which is being made by the Medical and Health Department of the winter refuges of the fever-carrying mosquitoes.

Harbour.—During the year, the first phase of the Harbour Engineer's scheme for the improvement of Port Louis Harbour has been practically completed, viz., dredging of the Harbour berths and the channel, so as to provide a depth of 32 feet at low water, the reclamation of a site of about 10 acres the whole of which forms valuable water frontage, and the construction of one deep-water quay about 500 feet long. Several ships have already been unloaded at this quay with despatch and considerable economy in cost as compared with lighterage.

Granary.—A granary for unloading and containing 300,000 bags of grain has been under construction for the last two years and is making good progress. The building is of two storeys, the top floor being left open for receiving from electric elevators and sorting bag cargoes, the ground and first floors being used for stores. The granary was designed and is being built by the Harbour Engineer on the recommendations of the Medical and Health Department, special steps being taken to prevent the ingress and egress of rats as an anti-plague measure. The service of the granary when in commission should also afford valuable economies in the handling and distribution of grain.

VIII.—PUBLIC HEALTH.

VITAL STATISTICS.

The population of the island is divided into two groups: the general population, which includes Africans and Chinese, and the Indian population.

The estimated total population on the 31st December, 1928, was 404,802 (general population 123,777, Indian population 281,025), showing an increase of 3,109 on the previous year's figures and 28,317 on the last Census figures 20th May, 1921).

The number of births and deaths during the year was 15,206 and 11,342, respectively.

The birth-rate in the general population was 41.2 and in the Indian population 36.4 per mille, as against 36.7 and 33.6, respectively, for the previous year.

The death-rate per 1,000 in the two populations for 1928 were 27.0 and 28.8, as against 23.6 and 25.8, respectively, for 1927.

The highest death-rate for 1928 is shown in Pamplemousses (40.1) and the lowest in Plaines Wilhems (19.0).

The death-rate for the whole Colony was 28.2 per mille, compared with 25.1 in 1927, and the rate for Port Louis was 32.1, as against 27.7 in the previous year.

PUBLIC HEALTH.

The general position as described in the preceeding annual report has remained much the same in respect of statistics and the assessment of morbidity rates in the Colony. The form of the departmental annual report is being modified and it is hoped that ultimately more information may be available in respect of the occurrence of those parasitic diseases to which it has not so far been possible to give special attention, e.g., schistosomiasis, which is very prevalent in certain localities.

Work in connection with the relief and control of hookworm infection has continued. Field operations were carried out, mainly in Grand Port and Savanne districts. The special Malaria Service instituted since February, 1927, has been attending to the eradication of winter refuges of the insect carriers of the disease and a good deal of improvement work has been effected at Curepipe.

The water carriage system has been extended in Port Louis and 367 connections have been made during the year.

There has been no plague during the year. The usual attention has been devoted to prophylactic measures and the destruction of rats. No outbreak of other contagious or infectious diseases occurred during the year.

IX.—EDUCATION.

PRIMARY EDUCATION.

Primary education, though not compulsory, is provided free by Government and State-aided schools which are open to all children of the Colony.

At the close of the year, there were 150 primary schools—57 Government and 93 denominational schools assisted by Government grants. Of the latter, 64 were Roman Catholic, 19 Church of England, 2 Presbyterian, 5 Hindoo, and 3 Mohammedan. One of the Roman Catholic aided schools was removed from the list of State-aided schools on the recommendation of the Superintendent of Schools. The average attendance was 23,076, as compared with 23,183 in 1927. The number of Indian children on the roll was 16,452 (boys 13,454, girls 2,998) a decrease of 149 on the previous year. The total number of girls educated in primary schools was 10,318, as against 10,266 in 1927.

Six Junior Scholarships and six Junior Exhibitions, entitling the holders thereof to free tuition at the Royal College for a maximum period of 8 years, are awarded to primary school boys every year on the results of a competitive examination, the winners of a Scholarship receiving money payments at the rate of Rs. 120 a year in addition.

A Senior Bursary Class for primary school boys was established in 1926. The course of study in this Class extends over a period of two years, at the expiration of which four Scholarships and four

Exhibitions tenable at the Royal College for a maximum period of six years are also awarded every year on the results of a competitive examination. At the examination held in December, 1928, there were 83 candidates as against 112 who entered for the Junior Boys' Scholarship and Exhibition examination.

Six Scholarships tenable in an aided secondary school for five years are awarded every year to primary school girls on the results of a competitive examination, thus allowing the winners to pursue their studies as far as the Cambridge School Certificate examination. 151 candidates sat for the Girls' Scholarship examination held in December, 1928, as against 170 in the previous year.

The recent abolition of the examination result grants and the revision of the salaries of primary school teachers, as well as the complete reorganisation of the Training School, have helped considerably in the recruitment of suitable teachers for primary schools and their proper training.

Technical instruction is provided in three principal centres, viz :—

(1) The Government Technical School in Port Louis, at which about 50 full-time boys of an average age of 16 years and about 200 boys from the primary schools in Port Louis of an average age of 13 years are taught mechanical drawing and receive manual instruction in woodwork ;

(2) The Government Industrial School at Beau Bassin at which about 150 boys from the primary schools in Lower Plaines Wilhems are given manual instruction in woodwork and

(3) The Government Trades School, at Bell Village, with about 80 full-time apprentices of an average age of 18 years, half of whom are carpenters and the rest masons, blacksmiths, or tinsmiths.

Woodwork classes on a more moderate scale are also held in a few aided primary schools, and further developments in this direction are contemplated.

Satisfactory progress is being maintained in school garden work in the primary schools of the Colony, and Nature Study has now been included in the syllabus of examination for Teachers' Certificates.

SECONDARY EDUCATION.

One of the aided secondary schools was found unsuitable and had to be closed, thus reducing the number to 9, two of which are for boys only, while the others are girls' schools with a small percentage of boys in the preparatory and junior classes.

The passes at the Cambridge Local examinations held in December 1927 were as follows :—

Junior...	24 boys and 7 girls.
School Certificate ...	10 boys and 10 girls (one of the girls obtaining Honours).

The total number on roll was 689 boys and 664 girls, while the average attendance was 611 and 569, respectively, as compared with 719 boys and 678 girls on roll for the previous year, with an average attendance of 635 and 518, respectively.

The results of the Cambridge Local examinations held in December, 1928, have not yet been received, but there is every reason to believe that the progressive increase in the number of passes will be maintained.

The higher education of boys is conducted at the Royal College.

The staff consists of the Rector, the Senior Master, 10 Masters with British University Degrees, 1 Licencié-ès-Lettres of France, and 11 Assistant Masters. The latter are encouraged to take the B.A. or B.Sc. Examination of the University of London.

The College has well-equipped physical, chemical, and botanical laboratories.

Admission to the College is conditional upon passing an entrance examination or upon winning a primary schools' Scholarship or Exhibition.

The year opened with 374 pupils on roll, and on 31st December, 1928, the number was 363. The average attendance for the year was 339.

Boys receive instruction in classical and scientific subjects, Latin being compulsory and Greek optional and alternative with more advance natural Science in the Entrance, Lower Middle, and Upper Middle Classes. Bifurcation takes place in the Cambridge School Certificate Class.

Two Scholarships, one on the Classical and one on the Modern side, are awarded annually in the highest form, which is examined by the Syndicate of Examiners of the University of Cambridge. These Scholarships are of the value of £1,000 with a temporary increase of 30 per cent., and with first-class passage allowances to and from England, and are tenable for four years at any British University or other place of education in the United Kingdom.

AGRICULTURAL EDUCATION.

Work at the Mauritius Agricultural College has continued satisfactorily. Eight new students were admitted in the first term of 1928; there were 6 second-year and 6 third-year students together with 3 post-graduate part-time students. Six third-year students obtained the Diploma of the College. Examinations in sugar manufacture of the City and Guilds of London Institute were held in May and for the registration of local agricultural chemists in July.

Elementary Agricultural Education.—The Farm School was well attended during the year, the number of applicants being enormously in excess of the vacancies.

X.—LANDS AND SURVEYS.

The only published map of the island is the one-inch-to-the-mile map published by the Geographical Section, General Staff, War Office.

No important grants of land are now made, the Crown lands, of a total acreage of about 80,000 acres, being mostly managed as forest lands.

XI.—LABOUR.

The conditions of labour remain as stated in the 1927 report. The number of Indian immigrants in the Colony on 31st December, 1928, is estimated at 14,982.

The number of immigrants and their dependants who were repatriated in 1928 is 367.

The number of skilled workmen who emigrated to Portuguese East Africa during the year is 79.

XII.—MISCELLANEOUS.

During the year a Commission was appointed to make full and diligent inquiry into the administrative and financial conditions of the Mauritius Railways, and recommendations for increasing its revenue and reducing its expenditure by such means and in such manner, consistent with efficiency and safety, as will ensure its working on sound economic principles.

Commissions of Enquiry on the Police and Medical Departments, as well as the Liquor Commission, continued their sittings during the year.

The average cost of living rose from 155.1 to 169.1 during the first three quarters and dropped to 168.6 during the last quarter of the year. The mean for the year was 162.8.

The staple food, rice, decreased during the second quarter to 122, but thereafter oscillated between 128 and 131, the average figure for the year being 127. Other grains (lentils, beans, etc.) oscillated between 117 and 159. Flour rose from 124 to 176 in the last quarter, while milk and meat remained steady at 150 and 140, respectively. Articles for clothing remained high throughout the year, with a trend upward. Extremes in this respect were 180 during the first quarter and 213 during the third.

Upon the whole, the cost of living remained high during 1928 with no very definite tendency towards lowering.

W. H. INGRAMS,
Assistant Colonial Secretary.

9th August, 1929.

Report by the Hon. E. F. L. Wood, M.P., on his visit during the period December, 1921, to February, 1922 [Cmd. 1679].
3*s.* 0*d.* (3*s.* 2*d.*).

EAST AFRICA COMMISSION.
Report. [Cmd. 2387.] 3*s.* 6*d.* (3*s.* 9*d.*).

WEST AFRICA.
Report by the Hon. W. G. A. Ormsby Gore, M.P., on his visit during the year 1926. [Cmd. 2744.] 3*s.* 6*d.* (3*s.* 9*d.*).

IMPERIAL CONFERENCE, 1926.
Summary of Proceedings. [Cmd. 2768.] 1*s.* 0*d.* (1*s.* 1*d.*).
Appendices to the Summary of Proceedings. [Cmd. 2769.]
4*s.* 0*d.* (4*s.* 6*d.*).

AGRICULTURAL RESEARCH AND ADMINISTRATION IN THE NON-SELF-GOVERNING DEPENDENCIES.
Report of a Committee appointed by the Secretary of State for the Colonies. [Cmd. 2825.] 2*s.* 0*d.* (2*s.* 1½*d.*).

COLONIAL OFFICE CONFERENCE, 1927.
Summary of Proceedings. [Cmd. 2883.] 1*s.* 3*d.* (1*s.* 4*d.*).
Appendices to the Summary of Proceedings. [Cmd. 2884.]
4*s.* 6*d.* (4*s.* 9½*d.*).

COLONIAL AGRICULTURAL SERVICE.
Report of a Committee appointed by the Secretary of State for the Colonies. [Cmd. 3049.] 9*d.* (10*d.*).

EASTERN AND CENTRAL AFRICA.
Report of the Commission on Closer Union of the Dependencies.
[Cmd. 3234.] 6*s.* 0*d.* (6*s.* 5*d.*).

MALAYA, CEYLON, AND JAVA.
Report by the Rt. Hon. W. G. A. Ormsby Gore on his visit during the year 1928. [Cmd. 3235.] 4*s.* 6*d.* (4*s.* 9*d.*).

COLONIAL VETERINARY SERVICE.
Report of a Committee appointed by the Secretary of State for the Colonies. [Cmd. 3261.] 9*d.* (10*d.*).

PROGRESS AND DEVELOPMENT IN THE COLONIAL EMPIRE AND IN THE MACHINERY FOR DEALING WITH COLONIAL QUESTIONS FROM NOVEMBER, 1924, TO NOVEMBER, 1928 [Cmd. 3268.] 1*s.* 6*d.* (1*s.* 8*d.*).

HIS MAJESTY'S COLONIAL SERVICES.
Regulations. (October, 1928.) Colonial No. 37. 6*d.* (8*d.*).

All prices are net, and those in parentheses include postage.

Obtainable from the Sale Offices of

HIS MAJESTY'S STATIONERY OFFICE

At Addresses shown on the Front Cover, or through any Bookseller.

COLONIAL ANNUAL REPORTS.

H.M. Stationery Office publishes the Annual Reports on British Colonies and Protectorates. These Reports appear each year and they are supplied at the Subscription price of 40s. per annum. (This rate does not include Mandated Territories.) Individual Reports may also be purchased and standing orders placed for their annual supply.

SITUATION AND AREA.

Mauritius lies off the coast of Africa, in the South Indian Ocean, some 500 miles east of Madagascar, between 57° 18′ and 57° 48′ E. longitude and 19° 50′ and 20° 31′ S. latitude. Its official time is four hours fast on Greenwich (Ordinance 6 of 1906). Its extreme length is 38 miles, its extreme breadth 29 miles, and its area, including the small islets round the coast, covers 720 square miles (460,800 acres). The density of population is very high, being about 560 persons per square mile for the whole island. The population at 31st December, 1929, was estimated at 405,549.

The largest town is Port Louis, the chief port and administrative capital, which has a population of about 54,147, including the suburbs. The towns of the interior are all of recent growth. Curepipe, the residential capital, lies at an altitude of 1,800 feet, on the highest part of the central plateau. The smaller towns of Vacoas, Phoenix, Quatre Bornes, Rose Hill, and Beau Bassin, in the Plaines Wilhems District, are situated at lower levels on the same plateau. The principal towns and villages in the other country districts are Mahébourg, Rose Belle, Souillac, St. Pierre, Moka, Flacq, Pamplemousses, Poudre d'Or, and Bambous.

The island is essentially of volcanic origin, although signs of an older formation are noticeable at some places (R. Thompson—1880). Its age is difficult to estimate owing to the misleading nature of the effects of the cyclones and floods on its rocks. The deep river gorges, cut in hard basalt, point to considerable age, but all that can be said is that it is probably older than its immediate neighbours Reunion and Rodrigues and certainly more stable (J. S. Gardiner).

The dependencies comprise a large number of small islands the nearest of which is 230 miles, the most northerly being about 1,200 miles away, 6° S. latitude. Rodrigues, the largest, with an area of 42 square miles, and an estimated population of 7,993, is 350 miles to the north-east of Mauritius, while lesser islands of some importance comprise Agalega, the Carcados Carajos group, and Diego Garcia, the largest of the Chagos Archipelago.

At the census of May, 1921, the population of the lesser dependencies was ascertained to be 1,810.

HISTORY.

The Mascarene Archipelago was probably known to Arab navigators at an early date. A Dutch map copied from Arab sources shows the islands now known as Mauritius, Rodrigues, and Reunion under the names of Dinarobin, Dinarobna, and Margabin, and it is possible that certain islands marked on Idrisis' map (1151) are intended to indicate them also.

There can be little doubt too that the island was visited by the Malays who colonized Madagascar in the 15th–16th century.

But Mauritius history really begins with its discovery by the Portuguese in the beginning of the sixteenth century, probably between 1507 and 1512, but not later than 1527, when the island is shown on an official map under the name of Santa Appollonia, borne in common with the other islands known later as the Mascarenes (Reunion and Rodrigues) after the great navigator Don Pedro Mascarenhas.

The Portuguese named the island Ilha da Cirnos, or Swan Island, from the big birds resembling swans found on shore.

There is no record of any permanent settlement by the Portuguese, who for nearly a century only used the island as a port of call for repairs and supplies.

The island was still entirely uninhabited when, on the 18th September, 1598, a Dutch squadron of five vessels anchored in the South Eastern Port to which the Commander, Admiral Wybrandt Van Warwyk, gave his own name. He took possession of the island on behalf of his Government and named it Mauritius, in honour of the Statholder, Prince Maurice de Nassau, but within fourteen days he set sail, leaving nobody on shore.

In 1613 the English seaman Captain Castleton of the *Pearl* visited the island, which he found unoccupied, but it was only in 1638 that a first attempt at colonization was made. On the 6th May of that year Cornelisz Simonsz Gooyer, appointed Governor of Mauritius by the "Compagnie Neerlandaise des Indes," landed at Warwick Haven or South Eastern Port. Fortifications, stores, and dwelling-houses were built at the place now called Old Grand Port, and thirteen families established themselves at the "13 Cantons" close by. These were followed by other settlers, who established themselves in the neighbourhood where Mahébourg now lies. Twenty years after, on the 16th July, 1658, the island was abandoned. It was again reoccupied on the 26th July, 1664. During this second attempt at settlement, which extended over a somewhat longer period, the fortifications and houses erected originally, which had been destroyed by a hurricane in 1664, were rebuilt. At Flacq some efforts towards development and cultivation were made without much success, whilst the district was only too successfully denuded of its ebony trees. A Royal Garden was created and new regions, such as Port North-West, Black River, and perhaps Plaines Wilhems, were inhabited, but the settlement did not prosper and, discouraged by the difficulties of the enterprise, the Dutch finally abandoned the island in 1710. Their occupation was disastrous so far as natural resources were concerned, as the colonists denuded the forests of their valuable timber and almost exterminated the interesting natural fauna.

On the 20th September, 1715, Guillaume Dufresne, commanding the French vessel *Le Chasseur* arrived at Port Nord Ouest, took possession of the island in the name of Louis XV, King of France, and called it Ile de France. Settlement, however, was only effected six years later when, on the 23rd September, 1721, the Chevalier Jean Baptiste Garnier du Fougerai, commanding the *Triton* of St. Malo, resumed possession for the Compagnie des Indes Orientales after landing at Ile aux Tonneliers in Port Nord Ouest, which he named Port Louis. He was accompanied by a few French families from the neighbouring island of Reunion, who had come to settle, and from that time Mauritius never ceased to be inhabited.

In 1735, Mahe de Labourdonnais succeeded Mr. Dumas as Governor. He was a man of rare capacity and it is not too much to say that by his own teaching and example he laid the foundation of the future prosperity of the island. He left the island in 1747 and his successors had but to follow the path opened out to them to reap profit and success.

Conditions, however, soon became difficult for the settlers, owing to the ever-increasing exactions of the "Compagnie des Indes," and the French Government was forced to assume direct control of affairs in 1764.

Under the new Government the burden of administration was shared between the Governor and an Intendant. The first of these, Pierre Poivre, introduced spices, then so valuable, from the East Indies and created in 1767 the now renowned Royal Botanical Gardens of Pamplemousses on the site where Labourdonnais had erected in 1736 the fine dwelling-house of "Mon Plaisir" and planted fruit and ornamental trees introduced from India and Europe.

In 1790 Mauritius was to a great extent preserved from the commotions of the French revolution owing to the unpopularity of the decree of the National Convention abolishing slavery, on which local agriculture solely depended. The Jacobin leaders and the agents of the Directoire sent to proclaim emancipation were expelled, a Colonial Assembly was elected, and nearly all links with the Mother Country were severed for some time.

A period of intense military activity under General Decaen during the earlier part of the reign of Napoleon followed, when the French privateers, using Mauritius as a point of departure for their activities against British trade, gained for the island its reputation still enshrined in its motto as "The Star and the Key of the Indian Ocean." The reputation it had acquired became at length a cause of peril. After several indecisive attempts against the island, the English, determined to root out this rival base, prepared for a vigorous attack in 1810 and, after a memorable fight, Mauritius was lost to the French and came under British rule on the 3rd December, 1810.

The cession of the "Ile de France" and its dependencies to Great Britain was confirmed by the Treaty of Paris, and the island, under its former name Mauritius, has since 1814 remained uninterruptedly a British possession.

In 1835 the emancipation of slaves took place, but as this new class of free men refused occupation as labourers the planters resorted to the introduction of indentured labour from India, which commenced in 1842 and continued practically without interruption until 1910.

In 1825 a Council of Government was established. It was modified in 1832 and reconstituted in 1884; it now consists of the Governor and 27 members, 8 being *ex-officio*, 9 nominated by the Governor, and 10 elected.

In 1864 the first line of railway was opened from Port Louis to Pamplemousses. Subsequently other lines were built, and the island is now served by a railway system of a total length of 119 miles, which renders access easy to most parts of the island.

In 1868, 1874, and 1892 the island was visited by very destructive cyclones. That of 1892 was one of the most violent ever recorded. It destroyed a considerable part of Port Louis (the capital), caused terrible damage throughout the island, and involved a death-roll of 1,232 people.

In 1854, 1856, and 1862, epidemics of cholera prevailed. In 1866 an epidemic of fever of great severity broke out, commonly regarded as malarial fever, although recent views appear to indicate that the high death-roll then recorded (over 30,000 people) could not have been due to malaria alone. In any event, from about that time malaria which was previously absent from the Colony, became endemic and has since rendered the lower parts of the island unhealthy. This does not, however, apply to the central tableland, where malaria is, and always has been, either absent or comparatively insignificant. The reduction of the incidence of malaria has been the subject of much investigation and sanitary effort on the part of the Government of recent years, and it is believed that these measures are having a pronounced effect on the general health of the community.

Between the years 1902 and 1909 the island suffered from a period of severe financial depression owing to the low market value of the staple product, sugar, which at that time prevailed. Matters were further aggravated in 1902 by an outbreak of surra which caused great loss of draught animals among the sugar plantations and necessitated the introduction of mechanical transport.

In 1909 a Royal Commission visited the island to inquire into the administration and finances of the Colony.

Mauritius was happily immune from direct action by the enemy during the Great War. A certain number of volunteers left for Europe for military service and a Labour Battalion was recruited for service in Mesopotamia. During this period the Imperial garrison was reduced to a skeleton and the defence of the island was maintained by a locally-recruited Volunteer Force.

The great rise in the price of sugar which took place during and after the War brought prosperity to the Colony, and both Government finances and the general condition of the community were for a time far more prosperous than at any previous period of its history.

As a result, it has been possible to undertake great and material works for the improvement of the Colony. A number of schemes of considerable magnitude have been inaugurated, including the amelioration of sanitary conditions, the improvement of the harbour, the extension and improvement of water supplies both for domestic and irrigational purposes, the improvement of the railways, and the extension of educational facilities.

During the last few years, however, the inflated prices caused by war conditions have disappeared and while, owing to the foresight of Sir Hesketh Bell, Governor from 1916 to 1924, a large sum of money was put aside for improvement and development, the revenues of the Colony, although much diminished, have to provide for the carrying on of many important works undertaken in times of greater material prosperity.

LANGUAGES.

The official languages are English and French and though the former is widely understood, French is the principal language of social use. The lingua franca is Creole, commonly referred to as a French patois. Creole is a language of which the vast majority of the words are French or of French derivation, but it has close affinities in its formation to the Bantu and Malgache dialects. Hindustani (Urdu and Hindi) is largely spoken among the Indians, but other Indian languages have some currency.

CURRENCY.

The rupee currency (silver rupee of India) which was established by Proclamation No. 28 of 1876 is still in force in the Colony.

The currency of the Colony consists of :—

(1) The Mauritius bronze coins of 1 cent, 2 cents, and 5 cents.

(2) The Mauritius silver coins of 10 cents and 20 cents.

(3) The nickel coins of 4 annas of the Government of India.

(4) The silver rupee of India and its silver subdivisions of ¼ rupee and ½ rupee.

(5) The Mauritius Government notes of R. 1, Rs. 5, Rs. 10, and Rs. 50.

(6) The currency notes of the Government of India of all denominations.

(1), (2), and (3) are legal tender up to Rs. 5, and (4), (5), and (6) are legal tender to any amount.

Local Money Values.—Visitors to Mauritius are frequently nonplussed at the use of expressions, by merchants and others, denoting money values which have no legal tender. The principal are as follows: "Sou" R. 0.01; "Cache" R. 0.02; "Marqué" (or sou marqué) R. 0.03; "Franc" R. 0.20; "Livre" R. 0.20. The dollar, "Piastre," equivalent to Rs. 2 survives in auction sales.

WEIGHTS AND MEASURES.

With regard to weights and measures, the metric system is in general use, but there are some special measures peculiar to Mauritius, the chief of which are :—

L'arpent.—The equivalent of 1·043 acres.

La Gaulette.—A measure of length equal to 10 French feet. It is employed on the estates as a measure of work performed in the fields. The task given to a labourer corresponds to a certain number of *gaulettes.* The number of *gaulettes* of work per *arpent* varies according to the distance between the lines of cane holes.

Le tierçon is a measure of capacity for molasses; it varies from 190 to 192 litres.

La toise is a measure of length equal to 1.94904 metres (2 yards 4 inches English measure or 6 pieds French measure).

La toise carrée (square *toise*) 36 square feet French. This measure is used in job-contracts, masonry works, etc.

L'aune is a measure of length used in nearly all shops. It is equivalent to 1.191077 metres or about 1 yard and 11 inches.

The *aune* is generally counted as 1.20 metres.

The *corde* is employed for measuring stacked firewood. The wood is stacked in lengths of 2½ French feet and laid transversely, the stack measuring 4 French feet high, 8 French feet long, 80 cubic feet (French), 96.82 cubic feet (English): 2.742 cubic metres.

La bouteille is a French measure for wine and is used locally for the sale of milk, vinegar, rum, etc. It is equivalent to 800 cubic centimetres (8/10 litres).

La chopine is one-half of a bottle.

La livre—a local measure of weight—500 grammes or ½ kilogramme (1.10 English lb. roughly).

CLIMATE.

Situated just within the tropics and with no large land masses for many hundreds of miles in any direction, Mauritius enjoys a climate free from any violent extremes of weather except that tropical cyclones at times cause considerable damage to crops and more rarely to buildings. For the greater part of the year the so-called south-east trade winds blow gently over the island, tempering the tropical heat. These winds, carried over thousands of miles of warm sea before reaching Mauritius, are heavily laden with moisture which is easily condensed by the upward movement of the air over the hills, and the rainfall is sufficient from this cause alone to keep most vegetation green and abundant, especially in the higher parts of the island. On the other hand, this rain falls mainly in the form of showers of short duration and interferes little with outdoor activities, and sunshine is plentiful. At times, and particularly in the summer months December to March, the south-east trades fail and are replaced by the light variable winds of the doldrums. The high humidity and nearly overhead sun then cause discomfort to Europeans, although the temperatures recorded are not high compared with those endured in Egypt or India. In the winter months the high humidity acts in a contrary manner and the nights, especially in the residential districts between 1,300 and 1,800 feet, can feel unpleasantly cold with a temperature of about 50° F. Some of the residents, who can afford to do so, live inland on the hills in the summer months and by the sea in the winter months. Climatic statistics can be consulted in the many publications of the Royal Alfred Observatory, in the "Mauritius Almanac," or in the official Blue Books. Here it is sufficient to state that all temperatures measured at the

Royal Alfred Observatory, 181 feet above sea-level, lie between 95° F. and 50° F. It will be noted that the upper limit is below the upper limit for London. The yearly rainfall varies from about 30 inches on parts of the coast to 150 inches on the high inland regions. Snow has never been seen on the hill-tops, and hail is so rare as to be almost unknown. Thunderstorms are not very frequent and damage from lightning is uncommon. Fog is very rare except on the hill-tops.

Owing in part to the memory of the disastrous cyclone of 1892, in part to the entire absence of strong winds, except during cyclonic weather, and the consequent flimsiness of the houses, and chiefly to the damage which may be caused to the principal crop of the island, the sugar-cane, cyclones occupy a place in the fears and conversation of the population out of all proportion to their importance. Cyclones have occurred in all months from October to June, but mostly in the four months December to March. In general, about five per year can be expected to approach within 300 miles of the island and cause anxiety for two days each. Usually no damage is done until a cyclone approaches within 80 or 90 miles, and the number of cyclones within this distance is considerably less than one per year. A graphic description of the catastrophe of 1892 can be found in "Blackwood's Magazine" for September, 1892, which has been largely quoted in other places ("The Sugar Industry of Mauritius") (Walter), and "Mauritius Illustrated" (Macmillan). The effects of cyclones are not altogether harmful, the heavy rains associated with such storms are beneficial and indeed necessary to the sugar crop.

The Government maintains a First Order Meteorological and Magnetic Station in the Royal Alfred Observatory situated near Pamplemousses in the north-west of the island. Records of the meteorological and magnetic elements made at the Observatory are available since 1874. A subsidiary station was erected at Vacoas, on the central plateau of the island, in 1924 for the study of the upper air. In addition to maintaining its own records, the Observatory collects information regarding temperature and rainfall from other stations in the island kept by local authorities or private individuals.

The Observatory issues storm warnings to the island and, by means of wireless telegraphy, to ships in the neighbourhood. For this purpose, daily messages containing meteorological data are received from Rodrigues, Seychelles, Reunion, and Madagascar, also masters of outgoing ships are requested to communicate by wireless as long as possible. During the cyclone season from November to April a signal is hoisted daily in the harbour, the object of which is to give captains of vessels about to put to sea information regarding the weather of the neighbourhood. Until November, 1929, the Observatory acted as time-keeper to the Colony and a ball, visible to the harbour and the town of Port Louis and neighbourhood, was dropped at 1 p.m. by means of an electrical contact from the Observatory; in addition, a message was flashed to all railway stations. The advent of wireless telegraphy has made astronomical timekeeping no longer necessary in isolated regions, and in November the time ball work was transferred to the Port Department. Results of magnetical and meteorological observations are published in a monthly bulletin and despatched to kindred institutions in all parts of the world. Discussions of results or of research work are published in a special series of publications of which the following were issued during 1929:—"The Cyclone Season 1927–28 at Mauritius"; "The Disturbed and Quiet Day Variations of Magnetic Force at Mauritius, 1916–1926,' both written by the Director, and "Pilot Balloon Observations at Mauritius, July, 1927–June, 1928," by N. R. McCurdy.

Outstanding features of the weather of the year 1929 were:—

(*a*) The very heavy rainfalls in April and December. Both months provided "record" rainfall amounts at the Observatory since observations began there in 1871. In April certain stations on the island exceeded 40 inches, and in December, in the same district, amounts of over 60 inches were measured.

(*b*) Serious floods resulted from the December rains and considerable damage was done to roads, bridges, and other property, particularly on the two days—December 29th and 30th—when over 39 inches of rain fell at some stations.

(*c*) It is noteworthy that although at the Observatory only four months exceeded the rainfall normal, the total rain for the year has only been exceeded (and that only slightly) in three years, namely, 1873, 1877, and 1912.

I.—GENERAL.

The economic crisis which prevailed in 1928 was enhanced during the year under review by a further fall in the prices of sugar. As a result, most of the sugar concerns closed the year's operations with a loss notwithstanding the successful endeavours made to reduce the cost of production.

At the request of the Government, Sir FRANCIS WATTS, K.C.M.G., lately Imperial Commissioner of Agriculture for the West Indies and Principal of the Imperial College of Agriculture, Trinidad, was delegated by the Secretary of State for the Colonies to enquire into the conditions of the sugar industry in Mauritius and to advise as to its improvement. He arrived in the Colony in October and had not yet completed his task at the end of the year.*

Contrary to expectation, the market for prime grades of aloe fibre was low and some loss has been sustained by manufacturers who had made considerable efforts to increase the output of these grades.

---

* Sir Francis Watts' Report has since been published as Cmd. 3518.

Attention has continued to be given to the improvement of existing minor industries and to the establishment of new ones. Proposals for a tobacco central grading warehouse and for the manufacture of sugar bags, wrappers, etc., from aloe fibre were under consideration at the end of the year. Endeavours were being made in various localities to produce rice. A match manufacturer, utilizing pine logs from the Crown forests, started operations in November.

A disastrous flood which took place on the 29th December last did considerable damage to bridges, roads, and private property. The town of Port Louis suffered particularly; many shops, dwelling-houses, and buildings, including the Museum, in the area comprised between the Pouce and Creole Streams, were partially submerged. The town was deprived of its water supply by the complete wreckage of the intake works at the Grand River North-West.

Sir HERBERT JAMES READ, K.C.M.G., C.B., relinquished the Governorship of the Colony on the 9th December, 1929, and Sir EDWARD ALLAN GRANNUM, Kt., C.M.G., assumed the administration of the Government on the same date.

II.—FINANCE.

The total revenue of the Colony for the financial year ended 30th June, 1929, amounted to Rs. 13,322,248.40, being Rs. 2,198,981.60 below the Estimates and Rs. 1,986,669.73 below the revenue of the previous year.

The expenditure amounted to Rs. 16,930,182.03 being Rs. 28,744.03 above the Estimates and Rs. 204,668.83 above the expenditure of the previous year.

The expenditure incurred during the year exceeded the revenue by Rs. 3,607,933.63, which amount represents the deficit on the financial transactions of the Colony for 1928–29.

Of the expenditure for 1928–29, Rs. 5,117,611.80 were spent on "Personal Emoluments" and Rs. 11,812,570.23 on "Other Charges." The corresponding figures for 1927–28 were "Personal Emoluments" Rs. 5,007,756.64 and "Other Charges" Rs. 11,717,756.66.

The following is a comparative statement of the revenue and expenditure for the last five years:—

Year.		*Revenue.*	*Expenditure.*
		Rs.	Rs.
1924–25	...	19,672,843	17,355,868
1925–26	...	15,894,763	16,117,988
1926–27	...	14,682,806	16,461,061
1927–28	...	15,308,918	16,725,513
1928–29	...	13,322,248	16,930,182

ASSETS AND LIABILITIES.

The assets and liabilities at the end of the year amounted to Rs. 37,131,880.16 and Rs. 29,998,309.37 respectively showing a net surplus of Rs. 7,133,570.79 on the 30th June, 1929.

PUBLIC DEBT.

The Public Debt of the Colony, which on the 30th June, 1928, stood at £1,832,390 16*s*. 0*d*., amounted on 30th June, 1929, to £1,907,390 16*s*. 0*d*. The increase is not due to any fresh loan but to the rate of exchange having been fixed as from 1st July, 1928, at 1*s*. 6*d*. instead of 1*s*. 4*d*. the rupee.

Against this liability of £1,907,390 16*s*. 0*d*. there was an accumulated sinking fund of £1,032,543 13*s*. 2*d*., as compared with £967,723 5*s*. 10*d*. at 30th June, 1928.

The following is a statement of the Public Debt of the Colony :—

Public Debt of Mauritius, 30th June, 1929.—Government Debentures and Inscribed Stock.

Debt.	*To whom Due.*	*Rate of Interest.*	*When incurred and for what cause.*	*State provisions for Payment of Interest or Sinking Fund and reference to Enactments by which it is made.*	*Amount of Original Debt.*			*Sinking Fund. Amount of Stock.*			*Market Value.*

(*b*) Equivalent of Rs. 5,000,000 at 1*s.* 6*d.* the rupee.
* Cash Balances.

The following statement gives details of the principal change in taxation which came into force during the year, 1929 :—

Medicinal Tinctures and Drugs.

Previous Duty :—	*Present Duty* :—
Article 15 of Ordinance No. 35 of 1927. R.O. 10 cents per litre of alcohol at any degree Cartier for the preparation of medicinal tinctures or drugs.	Ordinance No. 7 of 1929. (i) R.O. 10 cents per litre of alcohol at any degree for the preparation of medicinal tinctures or drugs. (ii) Rs. 2.50 per litre of alcohol at 23 degrees Cartier with an additional duty of 10 cents per litre for every degree above 23 degrees for the preparation of any alcoolat.

CURRENCY AND BANKING.

The average amount of currency notes in circulation during the year was Rs. 14,770,750, as compared with Rs. 14,132,970 in 1927–28.

The average amount of silver held by the Commissioners of Currency amounted to Rs. 4,391,500, as compared with Rs. 4,253,750 in 1927–28.

The investments (not including Depreciation Fund), which stood at Rs. 9,879,250 on the 1st July, 1927, remained the same during the year. The Depreciation Fund was increased from Rs. 1,481,294 to Rs. 1,593,133.30.

The revenue (interest on investments, less addition to Depreciation Fund) was Rs. 397,635, and this sum was credited to the general revenue of the Colony.

The statement of assets and liabilities of the Commissioners of Currency shows a surplus of Rs. 1,593,133.30. Valuing the investments at the market rate on 30th June, 1929, the surplus would be decreased to Rs. 1,488,440.72.

Government Savings Banks are established in the nine districts of Mauritius and in the dependency of Rodrigues, with a head office in Port Louis.

The total number of depositors on 30th June, 1929, was 36,810, as against 36,591 in the preceding year, with deposits amounting to Rs. 5,253,897.92, as against Rs. 5,099,880.65 in the preceding year. The savings banks are largely made use of by Indians, of whom on the 30th June, 1929, there were 16,154 depositors with Rs. 2,194,561.91 to their credit, as against 16,323 and Rs. 2,301,576.73 respectively on 30th June, 1928.

Interest is paid at the rate of 3 per cent. a year.

The Banks are the Mauritius Commercial Bank, The Mercantile Bank of India Ltd., and Barclays Bank (Dominion, Colonial and Overseas).

III.—PRODUCTION.

AGRICULTURE AND INDUSTRIES.

Sugar.

The Colony's production of sugar, which is the principal crop, was 238,035 metric tons (234,276 English tons), distributed in grades as follows :—vesous 23.9 per cent. ; raw sugars 75.2 per cent. ; low sugars 0.9 per cent.

Owing to the altered condition of the sugar market, manufacturers have found it more advantageous to produce in 1929 a larger proportion of raws than heretofore. In 1928, for the same reasons, the production of raws reached 27.3 per cent. The total tonnage of cane ground approximated to 2,195,400, giving a mean extraction of sugar of 10.84 per cent. of cane.

The area under cane cultivation at the beginning of 1929 was 157,700 acres, a figure practically identical with that for the previous year. Estate plantations covered 83,760 acres, the rest being made up of small-holdings, more than half of which belong to Indians.

Owing to unfavourable market conditions, little change was brought during the year to the existing machinery on estates. Importations in this respect reached Rs. 752,000. A sum of Rs. 8,000 was contributed by the Sugar Industry Reserve Fund for the purchase of machinery for experimental purposes. The apparatuses ordered were installed at Mont Desert factory in a central locality where they can be inspected by all interested. The falling off in importations of tramway material was considerable : Rs. 156,000 in 1929 as compared with Rs. 411,000 in 1928.

In relation to irrigation problems, Mr. E. Lesur, an officer of the Department of Agriculture, was entrusted with a mission to Hawaii for the purpose of studying the methods employed in that country. The application of these methods in Mauritius has been started successfully.

With regard to insect pests of the sugar-cane, the outstanding factor continues to be the *Phytalus Smithi*. Over 250 million beetles were destroyed during the year and nearly 100 million larvæ captured. The total cost of the campaign against this pest exceeded Rs. 110,000. Experiments have been continued during the year in relation to the life history of the insect, its ecology, and natural enemies as auxiliary means of control.

The most important of the fungoid diseases of the sugar-cane continues to be Leaf Scald to which White Tanna, which occupies 50 per cent. of the cultivated area, is peculiarly susceptible. The extent of the disease is not, however, greater than in 1928. In this connection mention should be made of the valuable services rendered by Professor Ashby, Mycologist of the Imperial Bureau of Mycology. Professor Ashby arrived in Mauritius in October, 1929, to investigate matters in relation to fungoid diseases of the sugar-cane which appeared to take a menacing character.

From the economic point of view, the year under review was decidedly unfavourable. The average sale prices for sugar approximated to Rs. 7.50 per 50 kilos—a figure which is in many cases below the cost of production.

A Research Station has been annexed to the Department of Agriculture with the object of investigating problems connected with the sugar industry. It is financed partly by the Empire Marketing Board, partly by the College of Agriculture, and the Improvement and Development Fund. Its total annual cost is estimated at Rs. 50,000.

Five experimental stations have been established in various localities of the island with a view to determining the type of cane varieties, both imported and locally-produced, best suited for local conditions. Cuttings of new varieties are being distributed to estates and nursery fields established in co-operation with estates.

A special station for cane seedling work has been started at Pamplemousses Botanical Gardens and already six thousand varieties, produced last season, are under observation.

The Java cane P.O.J. 2878 was imported from Java and is undergoing a greenhouse period of trial.

Mr. L. Baissac, Sugar Technologist of the Department of Agriculture, also went on a mission to Java to enquire about the industrial methods practised in that Colony and their possible application in Mauritius.

Subsidiary Industries.

Fibre.—Quotations for aloe fibre (Mauritius Hemp) were on the downward trend during the year. As a result, production slackened perceptibly. The total exportation for 1929 was 2,476 tons, comprising stocks left over from last year's production.

Attention has been given to the possibility of providing a locally-made fibre sack, as a substitute for the imported jute sack, for packing sugar. Private capital has been subscribed in support of this new venture and a loan from the Improvement and Development Fund has been sanctioned.

Tobacco.—During the year under review, considerable progress was made in the industry and greater quantities of leaf grown locally were absorbed by the various factories. The quality of the leaf produced in some cases is in the opinion of experts as good as any which is produced elsewhere. The total acreage under this crop in 1929 was 2,680, as against 1,600 in 1928. The greater part of the crop, which is estimated at 450 tons, was purchased by local manufacturers. No export trade has, however, yet been established.

Mr. Corbett, Tobacco Officer, went on a mission to South Africa to study the running of tobacco warehouses, with a view to the introduction of the same methods into Mauritius.

Fruit Canning and Preserving.—The movement has recently received fresh impetus and is now offering fair prospects of success. By the end of 1929, over Rs. 100,000 had been subscribed by local capitalists towards the formation of a society with a capital of Rs. 150,000. It is under consideration that so soon as this figure is reached, further assistance, to the same amount, shall be given by the Improvement and Development Fund in the shape of a loan. Pineapple plantations on a scale commensurate with the production contemplated have been started and, in the manufacturing processes, expert advice will be available.

Oil Crops.—The trade in copra in 1929 has been practically the same as in the previous year. The total export approximated to 1,400 tons, valued at about Rs. 400,000 in round figures. The trade in coconut oil has decreased, the total export approximating to 15,000 litres as against 28,000 in the previous year.

Alcohol.—There are seven distilleries at present at work in the island, several of which have well-equipped installations, producing alcohol for human consumption and for industrial purposes. The rum production during the year was 896,490 litres, as against 825,208 in 1928.

Tea.—Efforts are being made to revive this industry and Government has been approached for financial assistance.

Food Crops.—There has been no change of importance during the year. At the beginning of 1929 the area under maize was estimated at 2,000 acres, that under manioc at 3,000 acres, potatoes and sweet potatoes covered about 700 acres, and vegetables and fruit trees 5,000 acres.

Live Stock.—Animal diseases were little in evidence during the year. Measures against surra were enforced on the same lines as heretofore and only 43 cases were detected. Vaccination of bovines against tuberculosis is meeting with increased appreciation on the part of breeders. Importation of cattle from Madagascar for food numbered 6,133 heads of a total value of Rs. 414,783, and for other purposes 937 heads of a total value of Rs. 59,871.

The following tabular statement shows the quantities and values of the annual exports of the principal local commodities during the past five years:—

Year.	*Sugar.*		*Hemp.*		*Copra.*		*Coconut Oil.*		*Rum.*	
	Kilos.	*Value.* Rs.	*Kilos.*	*Value.* Rs.	*Kilos.*	*Value.* Rs.	*Litres.*	*Value.* Rs.	*Litres.*	*Value.* Rs.
1925	192,303,540	41,250,907	1,896,445	557,072	868,335	154,308	75,786	48,321	86,370	112,202
1926	181,215,772	37,991,240	2,577,372	838,980	999,506	284,960	67,997	43,126	55,079	24,576
1927	227,989,329	53,789,928	1,904,731	665,930	1,395,521	334,297	61,330	34,597	59,589	20,055
1928	219,264,110	44,293,987	2,495,765	843,446	1,415,438	411,560	28,519	17,462	40,085	12,347
1929	277,836,342	49,407,725	2,459,306	828,481	1,390,750	280,843	14,325	6,800	70,913	34,247

In 1929 the export of the local commodities was distributed as follows :—

Sugar.	*Kilos.*	*Value.* Rs.
United Kingdom	254,970,238	45,390,608
Union of South Africa	101,622	11,025
Canada	22,262,217	3,921,065
Hong Kong	253,857	43,155
Seychelles	41,969	5,869
France	316	57
Madagascar	145,156	26,191
Ceylon	60,967	9,755
	277,836,342	Rs. 49,407,725
Hemp.		
United Kingdom	484,632	209,403
Holland	5,120	1,250
Belgium	617,519	188,814

Spain	133,180	33,512
United States of America ...	866,729	268,512
	2,459,306	Rs. 828,481
Copra or Poonac.		
United Kingdom	1,081,000	230,850
India	280,000	42,000
Madagascar	4,750	1,187
Norway	25,000	6,806
	1,390,750	Rs. 280,843
Coconut Oil.	*Litres.*	
Madagascar	5,625	2,758
Réunion	8,700	4,042
	14,325	Rs. 6,800
Rum.		
United Kingdom	37,000	8,365
Hong Kong	5,688	5,842
Seychelles	28,225	20,040
	70,913	Rs. 34,247

Co-operative Credit Societies.—On the 30th of June, 1929, there were 26 Societies with a total membership of 2,415. The total working capital on the same date was Rs. 295,561, or an increase of Rs. 3,041 on the previous year's figure.

FORESTRY.

The indigenous forest which covered the island before the arrival of the first settlers was gradually cleared, partly to obtain ebony and other valuable timbers but mainly to provide space for agriculture. Concessions made by the Crown and found unsuitable for the cultivation of sugar-cane were abandoned and purchased by Government with a view to the protection of water supplies and the formation of State forests. The State forests now total 50,773 arpents, consisting of scrub forests, plantations, and small areas of the primaeval forest bordered by regrowth of indigenous trees.

The "Pas Geometriques" consist of a narrow strip of land around the coast which is the inalienable property of the Crown.

Nearly the whole area of these "Pas Geometriques," 13,647 arpents in extent, is leased to neighbouring estate-owners and others, who are bound to plant and maintain filaos (*Casuarina equisetifolia*) or coconuts. These plantations beautify the coastline, yield supplies of excellent fuel, and afford shelter for cattle.

Other Crown lands are leased to the public or occupied by other Government Departments. Suitable areas are being purchased, after very careful selection, in pursuance of a re-afforestation scheme or for the protection of the sources of water-supplies. During 1929, 553 arpents were acquired at a cost of Rs. 105,983 (1 arpent = 1.04 acres). At the end of the year, the total area under the general supervision of the Forest Department was as follows:—

	Arpents.
A. Total area of Crown lands	70,616
B. District Board lands	1,074
C. Private lands—	
Mountain Reserves	8,748
River Reserves	6,000
Vacant lands	145
Total	86,583

The policy formulated during the year was:—

(*a*) The improvement of immature, and the systematic felling and regeneration of mature, plantations.

(*b*) The systematic clearing and plantation of the scrub areas.

(*c*) The cleaning and conservation of the comparatively small areas of valuable indigenous forest.

In the interests of economy and efficiency, the number of forest nurseries was reduced from 22 to 20 during the year and certain necessary permanent improvements were carried out in the most important ones. Special attention was paid to the production of larger numbers of plants of shade-bearing species for urgent underplanting work.

A total sum of Rs. 30,505 was spent on nursery and plantation work. New plantations, chiefly of pines, cryptomeria, and eucalyptus, were formed on 261 arpents with 312,200 plants. Tending work on 449 arpents absorbed 158,100 plants. (In 1928, 357 arpents were newly planted, and 866 arpents tended, at a cost of Rs. 53,217.)

The forest produce from the operations undertaken was of small volume and value. Fuel and small timber were obtained by clearing the site of the proposed Midlands Reservoir. Logs for the new Mauritius match factory were obtained from Chinese pine plantations about 45 years old. Plantations at lower elevations supplied poles and some squared timber, mainly of eucalyptus tereticornis. Fuel was also obtained from clearings in the plantations. The total volumes sold to the public and to Government Departments during the year were :—

Timber, 9,000 c.ft. solid (12,340 c.ft. in 1928).
Fuel, 113,833 c.ft. solid (121,320 c.ft. in 1928).

The revenue of the Department during the year was as follows :—

	Rs.
Sale of forest produce	53,554
Lease of Crown lands	57,258
Shooting and fishing leases...	23,384
Fines and damages in forest cases in Courts ...	4,077
Game licenses	7,860
Minor receipts	64
	Rs. 146,197

The operations of the Department were limited by the absence of working plans and by the lack of data as to the growing stock. During the year under review a start was made with a preliminary stock survey which will eventually be followed by an enumeration survey and the preparation of preliminary working plans. Intensification of working will then be possible, with corresponding increase in the annual volume and value of forest produce.

Most of the timber used in Mauritius is imported, mainly from India, Australia, Madagascar, and Singapore. The local test of a good timber is that it shall withstand the ravages of white ants. Home-grown timber will have a better reputation when it is more carefully seasoned.

Owing to the financial depression of the Colony, timber imports declined in value from Rs. 665,236 in 1928 to Rs. 497,379 in 1929, as follows :—

	Value. Rs.
Boards and planks, 86,415 c.ft.	164,944
Teak shingles, 1,025,500 pieces	60,467
Other shingles, 47,825 pieces	1,333
Railway sleepers, 14,125 pieces	84,446
Other timber, 101,606 c.ft.	186,189
Total, 241,250 c.ft. (approx.) ... ... Rs.	497,379

Practically all this timber can eventually be supplied from the State forests.

No timber was exported in 1929.

The interesting indigenous trees of Mauritius include *Imbricaria Maxima* (Natte), *Imbricaria Petiolaris* (Makak), *Canarium Colophania* (Colophane), *Sideroxylon Grandiflorum* (Tambalacoque), *Diospyros Melandia* (Ebony), and *Foetida Mauritiana* (Bois puant), all of which yield valuable timber but grow too slowly to be used in the formation of plantations. The scrub forests have been occupied mainly by exotics as *Psidium Cattleyanum* (Chinese Guava) and *Ligustrum Japonicum* (Privet), while these species, together with *Eugenia Jamrosa* and *Tetranthera Monopetala* (Yati), form the underwood of all but the densest forests. In the lower forests and waste lands the scrub consists of *Tetranthera Haurifolia* (Bois d'oiseaux), *Inga Dulcis* (Cassis de Manille), *Haematoxylon Campechianum* (Campeche), and *Leucaena Glauca* (Acacia). Many species have been successfully planted, the commonest being *Pinus Massoniana* (Chinese Pine), *Eucalyptus Tereticornis* and *Eucalyptus Robusta*, *Michelia Champaca*, *Albizzia Lebbek* (Bois noir), *Cryptomeria Japonica*, *Araucaria Cunninghamii* and *Casuarina Equisetifolia*. Others of interest include *Swietenia Mahogani*, *Credrela Toona*, *Eugenia Minii*, *Pinus Taeda*, and *Laurus Camphora* (?) (Camphor).

FISHERIES.

Owing to the financial position of the Colony, it has not been possible to give effect to all the recommendations of Mr. Hornell for the improvement and development of the marine resources of the Colony.

An Inspector of Fisheries has, however, been appointed and the Fisheries Committee, of whom the Receiver-General is the Chairman, is doing good work towards regulating lagoon fishing. At the close of the year, the question of the shark industry was under consideration by the Committee.

WATER POWER.

The numerous rivers and streams of Mauritius flow generally through deep ravines, their courses being broken by many waterfalls and rapids. The following extract from the list of waterfalls will give some indication of the available water-power in the Colony. It is estimated that 10,000 horse-power is available, of which 1,200 horse-power is utilized at present, principally for electric light service.

The following is a list and description of the waterfalls of the Colony measured during the dry season of 1912 :—

Name of River.	*Name or description of Waterfall.*	*Height of Waterfall in feet.*	*Volume in cubic feet per minute.*
G. River, S.E.	Deschiens	19	1,530
do.	Diamamoo	63	2,315
G. River, N.W. ...	Le Reduit	135	450
Savanne River	Cascade Cecile	105	580
do.	Below Terracine Dam ...	77	250
Tamarind River ...	Sept Cascades	960	420
R. des Galets	Near Plaine Champagne ...	130	60
do.	Luchon	400	134
R. du Cap	Chamarel	320	330
R. Moka	Cascade Pigeons	160	80

MANUFACTURES.

In addition to the principal manufactures, of which an account has been given above, bricks, salt and soap are being made on a small scale by private enterprise. In order to encourage the local manufacture of salt, the Customs duty on that article has been raised from Rs. 3 to Rs. 3.50 for importations from countries accorded a preferential tariff and to Rs. 5.50 for importations from other countries.

A match factory started operations at the end of the year.

IV.—TRADE AND ECONOMICS.

The total value of the overseas trade of the Colony in 1929 amounted to Rs. 98,878,100, the value of the imports of merchandise being Rs. 46,428,424 and that of exports Rs. 52,449,676. The figures for the preceding year were Rs. 96,809,220, Rs. 49,437,800, and Rs. 47,371,420, respectively.

The Customs revenue from imports amounted to Rs. 4,088,436, a decrease of over Rs. 400,000 compared with 1928, and the revenue from the exports was Rs. 895,551, against Rs. 1,649,371 in 1928.

The following Ordinance relative to Customs, which is of interest not purely local, was passed during the year :—

> The Customs Tariff (Consolidated) Ordinance, 1929, amending and consolidating the Customs Tariff of 1908 and its numerous amendments from 1908.

TRADE.

The comparative values of imports and exports of merchandise for 1913 and for the past five years are as follows :—

	Imports. Rs.	*Exports.* Rs.	*Total.* Rs.
1913	36,607,671	32,291,706	68,899,377
1925	61,682,844	44,478,894	106,161,738
1926	50,596,137	41,208,198	91,804,335
1927	55,185,633	56,476,587	111,662,220
1928	49,437,800	47,371,420	96,809,220
1929	46,428,424	52,449,676	98,878,100

The value of re-exports was Rs. 1,661,046 in 1929 as compared with Rs. 1,628,058 in 1928. Bullion and specie amounting to Rs. 10,096 were imported during the year under review, as compared with Rs. 2,573,214 in the preceding year, and the exports under that heading amounted to Rs. 1,388 and Rs. 1,476,000 respectively.

IMPORTS.

The distribution of the import trade showed in 1929 a decrease of about 4 per cent. in the value of the imports from the United Kingdom as compared with that of 1928 ; trade with Chile, China, Czechoslovakia, Egypt, Holland, Norway, and Sumatra showed an increase ; but the trade with most countries shows a decrease, notably in the case of France, Germany, Belgium, Portugal, Switzerland, and Madagascar.

The principal items of the imports which showed an increase in 1929 over the preceding year are beer and ale in cases, coffee, salt, chemical manures, spirits edible, gunny bags, petroleum lamp oil, petrol spirits, cement, unmanufactured tobacco, and cotton piece-goods. The following are the principal items in which decreases are shown : grain, wine in casks and in cases, coal, coke and manufactured fuel, woollen piece-goods, oils and fats unrefined, motor-cars, machinery and millwork, tobacco, cigars and cigarettes, lubricating oils, matches, earthenware and glasses, haberdashery and millinery, and tramway locomotives.

The decrease in the importation of cigarettes is due to the rapid progress made in the local manufacture of cigarettes.

The following statement gives the character and size of the trade in the principal articles imported in 1929 as compared with the preceding year :—

	1928.	1929.
Rice	63,831 tons	55,068 tons
Other grains	21,737 ,,	19,735 ,,
Manures and fertilizers	13,261 ,,	16,717 ,,
Coal, coke and patent fuel	70,469 ,,	50,251 ,,
Cement	3,702 ,,	6,840 ,,
Cotton manufacture	7,832,275 metres	10,919,746 metres
Woollen manufacture	141,500 ,,	97,613 ,,

	1928.	1929.
Wines in casks	1,475,465 litres	1,092,109 litres
Wines in bottles	133,035 ,,	100,576 ,,
Spirits	39,997 ,,	48,695 ,,
Motor-cars	412,363 Rs.	327,834 Rs.
Motor-lorries	269,722 ,,	294,873 ,,
Boots and shoes	371,357 ,,	307,808 ,,
Haberdashery and millinery	604,419 ,,	542,313 ,,
Iron and steel manufactures	1,408,143 ,,	880,948 ,,
Silk goods	539,238 ,,	257,202 ,,
Drugs	523,382 ,,	407,700 ,,
Wearing apparel	321,335 ,,	180,054 ,,

Exports.

The following table shows the sugar exports for the past six years :—

	Kilos.	*Value.* Rs.
1924	182,742,235	49,823,753
1925	192,303,540	41,250,907
1926	181,215,772	37,991,240
1927	227,989,329	53,789,928
1928	219,264,110	44,293,987
1929	277,836,342	49,407,725

The principal domestic exports other than sugar were aloe fibre 2,459 tons valued at Rs. 828,481, compared with 2,496 tons valued at Rs. 843,446 in 1928 ; copra decreased from Rs. 411,560 in 1928 to Rs. 280,843 in 1929. Coconut oil showed a decrease from Rs.17,462 in 1928 to Rs. 6,800 in 1929, while rum showed an increase from Rs. 12,347 in 1928 to Rs. 34,247 in 1929.

Re-exports amounted to Rs. 1,661,046 and consisted chiefly of gunny bags, wheat flour, salted fish, and scrap metal.

Distribution of Trade.

The following tables show the sources of the imports, the destination of the exports, and the total trade with the United Kingdom, British Possessions, and foreign countries in 1913 and in each of the past five years :—

Imports.

	1913	1925	1926	1927	1928	1929
United Kingdom	33·2	27·4	22·2	23·6	23·3	23·8
British Possessions	42·6	45·1	48·5	47·2	50·7	46·3
Foreign Countries	24·2	27·5	29·3	29·2	26·0	29·9
	100·0	100·0	100·0	100·0	100·0	100·0

Exports.

	1913	1925	1926	1927	1928	1929
United Kingdom	18·5	61·9	87·4	92·4	92·3	87·6
British Possessions	77·0	29·2	7·5	5·3	3·6	8·8
Foreign Countries	4·5	8·9	5·1	2·3	4·1	3·6
	100·0	100·0	100·0	100·0	100·0	100·0

Total Trade.

	1913	*1925*	*1926*	*1927*	*1928*	*1929*
United Kingdom	26·3	42·0	51·5	57·8	57·1	57·6
British Possessions	58·7	38·4	30·1	25·3	27·6	26·4
Foreign Countries	15·0	19·6	18·4	16·9	15·3	16·0
	100·0	100·0	100·0	100·0	100·0	100·0

V.—COMMUNICATIONS.

SHIPPING.

The following statement shows the number and tonnage of vessels using the port (excluding the coasting trade) during the past three years :—

	Inwards.		*Outwards.*	
	No.	*Tonnage.*	*No.*	*Tonnage.*
1927	224	622,936	226	625,524
1928	236	650,369	235	647,446
1929	194	542,314	198	552,596

In the coastal trade with the dependencies there were 19 vessels inwards, 6,639 tons, and 20 vessels outwards, 6,956 tons.

The principal lines of steamships represented by vessels calling at Port Louis were the Union-Castle Steamship Co. Ltd., the British India Steam Navigation Co. Ltd., the Messageries Maritimes, the Clan Line, the Ellerman Harrison Line, the Compagnie Havraise Peninsulaire, and the Mogul Line.

RAILWAYS.

The Mauritius Government Railways consist of the following Lines :—

	Miles.
Gauge 4′ 8½″ :—	
North Line	31
Midland Line...	35·30
Moka-Flacq Line	26·20
Black River Line	12·75
Savanne Line...	10·90
Montagne Longue Line	3·50
	119·65
Gauge 2′ 6″ :—	
Bois Cheri Light Railway	24·00
Total	143·65 miles

In the course of the year, the whole of the Black River Line and a section of the Moka-Flacq Line, 11 miles in length, were closed to passenger traffic, on the recommendation of the Railway Commission.

owing to the continued decline in passenger revenue and the consequent loss on the working of those lines.

Revenue figures for 1929 as compared with those for 1928 are as follows :—

	Revenue, 1928.	*Revenue*, 1929.	*Difference.*
	Rs.	Rs.	Rs.
Passengers ...	1,278,651	953,555	— 325,096
Parcels	113,755	106,283	— 7,472
Goods	1,549,944	1,336,557	— 213,387
Miscellaneous ...	111,398	79,664	— 31,734
Net Revenue ...	4,335	37,918	+ 33,583
Total ...	Rs. 3,058,083	Rs. 2,513,977	— Rs. 544,106

The total goods tonnage was 503,131 in 1928 and 415,096 in 1929, showing a decrease of 88 035.

The continued and increasing fall in passenger revenue from all lines is due to the competition set up by road passenger transport agencies. The low fares of motor-bus traffic, notwithstanding the reduction of the railway tariff and the regularity and punctuality of the railway service, have rendered successful competition impossible.

The continued fall in goods revenue is mainly due to the smaller sugar-cane crop harvested, road traffic competition, and the reduction of the tariff for the transport of sugar-canes.

The transport of the higher classes of goods and commodities is passing gradually into the hands of the motor traffic agencies, owing principally to their advantage of a door-to-door service.

The working expenditure for 1929 showed a satisfactory decrease on the previous year's figure, as shown under :—

	1928.	1929.	*Decrease.*
	Rs.	Rs.	Rs.
Working Expenditure ...	2,973,676	2,615,655	−358,021

The Bois Cheri Light Railway Line, which is 24 miles in length with a gauge of 2 ft. 6 inches, connects with the Savanne branch line. It is run for goods traffic only, principally sugar-cane. The working of this line left a loss of Rs. 4,292 during the year under review.

The comparative figures of revenue, expenditure, and tonnage of this line were as follows during 1928 and 1929 :—

	1928	1929	*Decrease.*
	Rs.	Rs.	Rs.
Expenditure	21,466	21,130	— 336
Revenue	21,766	17,484	— 4,282
Tonnage carried	19,955	17,193	— 2,762

The comparative revenue and expenditure figures of the railway road transport service for goods are given hereunder :—

	1928	1929	*Decrease.*
	Rs.	Rs.	Rs.
Expenditure	10,196	5,551	— 4,645
Revenue	12,958	5,306	— 7,652

The reduction, viz., Rs. 7,652, in the revenue of this service was due to the discontinuation of the transport of sugar by road lorries.

In order to maintain passenger communication over those sections of the island affected by the discontinuation of railway passenger traffic, a passenger bus service was introduced by contract with a local road transport company. The financial results for the year's working are given hereunder :—

Section.	*Date of Inauguration.*	*Mileage.*	*Revenue.* Rs.	*Expenditure.* Rs.	*Loss.* Rs.
Black River ...	July, 1929	29,368	7,201.89	17,493.20	–10,291.31
Moka Flacq ...	May, 1929	21,924	7,205.49	23,494.40	–16,288.91

These services were maintained as feeders to the railway and also to ensure through connection by all trains for the convenience of the travelling public. They assisted towards the retention of the railway passenger clientele which otherwise would have resorted to other means of transport by road.

The December floods caused considerable damage to the Railway. One bridge and one culvert were destroyed, two miles of track were washed away, and the underground traffic control cable on the Midland Line was also damaged.

ROADS.

The Colony is well served by a system of 441 miles of first-class roads, termed "Main Roads," and 215 miles of second-class ones, called "Branch Roads."

The main roads are water-bound macadam. Approximately 130 miles are surface-coated with bitumen.

POSTS, TELEGRAPHS, AND TELEPHONES.

Twenty-six vessels of the Messageries Maritimes Company conveyed European and other mails in 1929. The average time taken for conveyance of mails by these steamers was 38.7 days.

Mails from England were also conveyed via the South African route by 37 steamers, including 9 Union-Castle vessels. The average time taken by this route was 36.5 days. Mails from India and the East were conveyed by 10 steamers of the British India Steam Navigation Company Limited, and other cargo boats.

On the whole, 202 vessels conveyed mails to and 202 vessels took mails from Mauritius.

The number of foreign inward parcel mails amounted to 24,825, of a value of Rs. 1,087,635 as under :—

Origin.	*No. of Parcels.*	*Value.* Rs.
England	4,060	193,132
England C.O.D.	2,508	101,990
India	1,622	39,906
France	13,192	572,729
Other Countries	4,043	179,878

The number of outward parcels amounted to 3,840, of a value of Rs. 199,605.

Postage, money orders, and parcels showed a decrease in revenue as compared with 1928, due to a reduced crop, low prices obtained for sugars, and bad trade.

The length of telegraph lines opened for traffic is 381 miles.

The number of telegrams over the land-lines of the Colony showed a decrease of 650 as compared with that of 1928.

Foreign telegraphic communication is maintained by the Eastern and South African Telegraph Company and by the Rose Belle Wireless Station which was opened for public traffic on the 1st of March, 1924. The range of the Station is limited and it is only able to communicate with ships at sea and with Reunion Island. Daily weather reports are received from Madagascar, Reunion, and Rodrigues, and during the cyclonic season the station renders invaluable assistance to ships at sea by indicating the danger zones of passing cyclones. It maintains a 24 hours' service.

The telephone system in the Colony is divided into two groups—one, serving the main Government establishments, is owned and maintained by the Government, and the other, serving the general public, is owned and maintained by the Oriental Telephone Company. The number of subscribers' instruments connected to the Government group is about 25 per cent. of those connected to the Oriental Telephone Company's.

The two groups are interconnected by junction lines, thus enabling, with a few exceptions, intercommunication to be effected between any subscriber of one with any subscriber of the other.

Apart from a few isolated subscribers, the whole of the telephone system is concentrated within the chief industrial and residential zone bounded on the one side by the capital of the Colony, Port Louis, and on the other by the residential town of Curepipe, a distance of about fifteen miles.

The area outside this zone is served chiefly by the Government telegraph system, the lines of which more or less follow the coast-line and thereby encircle the island, with a branch across the central plateau forming, as it were, a diameter thereto.

Most of the local lines are overhead, underground cables being used for interconnecting exchanges.

The quality of speech transmission compares very favourably with that in other damp tropical climates.

The number of subscribers' lines connected to the public telephone system at the end of the year 1929 was 695.

VI.—JUSTICE, POLICE, AND PRISONS.

JUSTICE.

Justice is administered in Mauritius by the Supreme Court, sitting in Port Louis as a Court of Civil and Criminal Justice and having the power of the King's Bench in England and of a Court of Equity.

In the nine Districts are Magistrates' Courts having likewise a limited civil, criminal, and stipendiary jurisdiction.

In 1929 the Supreme Court dealt with 414 civil matters out of 549 which were brought before it, as against 334 out of 660 in the previous year.

Twenty persons were brought before and tried by the same Court, sitting as a criminal court, out of whom 19 were convicted.

14,107 persons were brought before the Magistrates' Courts (District and Stipendiary) and before the Bench of Magistrates (Courts composed of three Magistrates having a wider criminal Jurisdiction).

POLICE.

Organization.—The Force is of a semi-military character, with a proportion of the establishment fully trained to bear arms.

Further progress has been made in placing the Force on a satisfactory footing as regards modern methods for the prevention and detection of crime, and the work of reorganization which began in 1926 is practically completed.

Recruiting.—Owing to a reduction of the establishment, there was very little wastage of personnel during the year, and recruiting was confined to the enlistment of sixteen men from local sources.

Distribution.—The Force is divided into Staff, Criminal Investigation Department, Motor Traffic Branch, Training Depot, Harbour Police, District Police, Railway Police, Rodrigues Police, Mounted Police, and Band.

The Staff comprises Headquarters and the Pay and Quartermasters' Branch located at Line Barracks, Port Louis.

The Criminal Investigation Department is subdivided into branches dealing with investigations, habitual criminals, finger impressions, *modus operandi* of criminals, passports, photography, draughtsmanship, and gun permits.

The Motor Traffic Branch continues to expand proportionately with the increase of motor-cars, and has made steady progress towards a higher standard of efficiency.

The Training Depot contains all the requirements of a modern school for police recruits, and comprises a police station and the armed guards at Government House and the Treasury.

The Harbour Police controls the area comprising the Customs Department, Post Office, docks, wharves, quays and granary, and includes in its personnel of water and shore police an Immigration and Passport Officer.

The District Police are distributed throughout the Colony in the nine Magisterial Districts. There are 52 stations of three categories varying as regards numbers of personnel from 38 to 1.

The Railway Police is recruited from trained men of the general Force, but is under the control of the General Manager of Railways.

The Rodrigues Police is similarly staffed and is controlled by the Magistrate of that Dependency.

The Band is a highly efficient organization recruited originally from India but now from local men, trained when boys, by the European Bandmaster.

Crime.—The number of offences dealt with by the police during 1929 is less than that recorded in the previous year and below the average for the past ten years.

The percentage of undetected serious crime is below the normal average, and the proportion of crimes to population is falling steadily.

The Commission of Enquiry appointed in 1927 was still sitting at the end of the year under review.

PRISONS.

Organization.—The Prisons Department is directed by the Superintendent of Prisons, who is also Inspector-General of Police, with a staff of European chief warders and assistant chief warders and locally-enlisted subordinate officers.

Distribution.—The staff and prisoners are divided between the Port Louis and Beau Bassin prisons, of which the former has accommodation for 154 males and 40 females and the latter for 756 males.

Port Louis Prison contains the offices of the Department and serves as the receiving and local prison in which short-sentence prisoners, debtors, and misdemeanants are confined.

Beau Bassin Prison is a modern convict establishment eight miles from Port Louis, to which all long-sentence prisoners are transferred.

Labour.—At Port Louis the prisoners are principally employed on cleaning various Government buildings and grounds, cartage of stores, and, in the Female Prison, on laundry work and repairs to prison clothing. There is also a carpenter's shop where much useful work is performed for Government.

At Beau Bassin Prison there is a range of workshops comprising a bakery and shops for tailors, boot, sail and mattress makers, basket, brush and mat makers, carpenters, tinsmiths, blacksmiths, and stone masons. First-class work is turned out at a very considerable saving to public funds. In addition to convicts employed in the shops, a large number are employed on agricultural work in the adjoining gardens which provide all the necessary vegetables, etc., for the Department.

The Prison grounds and gardens are considered to be a model of their kind and are much admired by official and other visitors.

Population.—During the year, 1,873 persons were committed to prison (a decrease of 6 on the figures for the previous year), 1,796 being males and 77 females.

The total number in custody on 31st December, 1929, was 476, against 424 on 31st December, 1928.

Juvenile Offenders.—Male juvenile offenders are detained after conviction at an Industrial School directed by the Superintendent of Prisons, to which are also sent juvenile warrants and certain other categories under the age of 16 years. They may be kept at the school until they attain the age of 18.

The inmates are principally employed on agricultural work in the garden of the institution, and instruction in useful trades is given in addition to the usual primary education.

The school provides accommodation for 200 boys, but the number detained at the end of the year was only 66, as compared with 83 at the close of the previous year.

The future of the institution was still under consideration by a Committee.

Female juvenile offenders are accommodated in the Women's Prison at Port Louis.

VII.—PUBLIC WORKS.

The most important public works in the Colony are the irrigation works, water works, sewage works of the town of Port Louis, buildings, and anti-malarial works.

Irrigation Works.—Government storage irrigation works were started in 1914 according to the plans and designs prepared by Mr. G. M. Harriott, C.S.I., C.I.E., M.I.C.E., Chief Engineer of the Public Works Department, Central Provinces, India, and Consulting Engineer for Irrigation to the Government of Mauritius.

The La Ferme scheme for the irrigation of the south-west of the island, between Grand River North-West and River Dragon, has been completed, and the Nicoliere-Calebasses scheme for the irrigation of 12 to 15,000 acres in the north, between the rivers du Rempart and Tombeau, has been started. These two schemes cover almost all the fertile lands of the Colony, which, being situated below the 60-inch rainfall contour, cannot be efficiently cultivated without irrigation water.

The La Ferme scheme, which consists of a low-level reservoir of 2,500 million gallons, has brought about 3,700 acres of barren land under sugar-cane plantation since 1918.

The Nicoliere-Calebasses scheme consists of a high-level storage reservoir at Midlands of 4,400 million gallons capacity, which is designed to replenish two level reservoirs of about 250 million gallons capacity at Nicoliere and Calebasses.

The Midlands reservoir is under construction. The Nicoliere reservoir has been completed and, although some land under cane cultivation is being irrigated from it, the full scheme will only be in operation when the Midlands reservoir is completed.

The final position and design of the Calebasses reservoir is still under consideration.

Water Works.—These consist of :—

(*a*) The Mare-aux-Vacoas water supply which supplies Plaines Wilhems and part of Moka, Black River, and Port Louis Districts.

(*b*) The Port Louis water supply for the town of Port Louis.

(*c*) The District water supplies for the Districts of Pamplemousses, Riviere du Rempart, Flacq, Grand Port, Savanne, Black River, and the remaining parts of Moka.

The Mare-aux-Vacoas Water Supply, which is the most important one of the Colony, is derived from a storage reservoir, the "Mare-aux-Vacoas," situated at an altitude of 1,825 feet. Its capacity, which was of 1,167 million gallons, has been increased to 1,641 million gallons by raising the height of the dam ; its catchment area is entirely protected by forest lands and the whole of the water is passed through sand filters at the filtering plant at La Marie. One of the four service reservoirs, of the total capacity of 3,850,000 gallons, constructed with a view to improving the supply, has been completed.

The Port Louis Water Supply is derived from the Grand River North-West at a distance of about four miles from the town and at a level of 250 feet. This supply was under the control of the Municipality of the town until 1922, when it was transferred to the Public Works and Surveys Department.

The improvement of the quality of the water by chlorination has been under consideration for the past few years, and it is expected that the process will be started early next year.

The capacity of the whole plant and filters has been increased in order to deal with 5 million gallons of water daily to meet the Port Louis requirements.

District Water Supplies.—The water supplies of the towns and villages in the districts comprise 27 different schemes, each derived from a different spring or stream. These supplies are not filtered but are generally protected from pollution by forest reserves in the catchment grounds of their sources.

Several schemes are under consideration for the improvement and extension of these water supplies and for the protection of their catchment areas.

Sewerage of Port Louis.—The sewerage works were begun in 1900. In 1922 the scheme was revised by Messrs. Mansergh & Sons, and the works are now being carried out on the lines of their report. A large portion of the town of Port Louis has now the water-carriage system. The works are in full progress.

Anti-Malarial Works.—These have been in abeyance during the year under review owing to the study which is being made by the Medical and Health Department of the winter refuges of the fever-carrying mosquitoes.

Harbour.—The extensive dredging and reclamation works which were undertaken to increase the deep-water accommodation of Port Louis harbour have been completed. A new quay, 500 feet long, providing 32 feet of water alongside, with direct inland road and rail access, has been constructed on part of the reclaimed area. 52,000 tons of cargo have been discharged from 21 ships at the quay, at a considerable advantage to ships as regards convenience and despatch and at a reduced cost to the importer.

Granary.—Good progress has been made with the construction of the Granary.

VIII.—PUBLIC HEALTH.

VITAL STATISTICS.

For statistical purposes the population of the island is divided into two groups, the Indian population and the general population. The term "general population" includes all persons who are not Indian.

The estimated total population on 31st December, 1929, was 405,549 (Indian population 280,998, general population 124,551), showing an increase of 747 on the previous year's figures and of 29,064 on the figures at the census taken on 20th May, 1921.

The numbers of births and deaths during the year were 13,771 and 12,413 respectively.

The birth-rate in the Indian population was 32.5 per mille, and in the general 34.5 per mille. The rates for 1928 were 36.4 and 41.2 respectively per mille.

The death-rate per 1,000 of the population was as follows in the two groups: Indian 31.7, general 28.4, as compared with 28.8 and 27.0 respectively for the previous year.

The highest death-rate is furnished by the Black River District, 44.0; the lowest, by Plaines Wilhems District, 22.2.

The death-rate for the whole Colony was 30.7 per mille as compared with 28.2 in 1928. The death-rate for Port Louis was 35.0, as compared with 32.1 for 1928.

PUBLIC HEALTH.

The Public Health Department is beginning to find a formidable opponent entering the lists in the form of under-nourishment. Increasing numbers of persons are being seen at the dispensaries whose real illness is not any communicable disease but the much more insidious condition of defective nutrition. This is the inevitable consequence of the serious economic depression prevalent in the Colony. The rising death-rate is largely attributable to this, and there is no sign of the increase slackening. The tendency is towards a further rise.

Work for the relief and control of hookworm infection has continued. Field operations have been in progress, mainly in Grand Port, Savanne, and Plaines Wilhems.

Fortunately, plague has not reappeared. The usual preventive measures have been carried out and the rat repression campaign proceeds continuously.

An outbreak of mild influenza occurred during March and May. Smallpox has not occurred in the Colony during the year and no outbreak of other infectious disease was recorded.

Malaria has been on the increase, although the activities of the Malaria Service have succeeded in keeping it in check to some extent in Plaines Wilhems. The disastrous floods which occurred in the last days of December, especially in the district of Flacq, will probably be followed by an increase of this disease.

On 29th December a large flood at the Grand River North West wrecked the intake of the Municipal water supply to the town. The town was thereby suddenly deprived of its water-supply, excepting for a comparatively small quantity of Mare-aux-Vacoas water and of the supply from the Bathurst canal. Arrangements were immediately made to bring in an emergency supply to the town.

IX.—EDUCATION.

PRIMARY EDUCATION.

Primary education, though not compulsory, is provided free by Government and State-aided schools which are open to all children of the Colony.

At the close of the year there were 148 primary schools. 56 Government and 92 denominational, assisted by Government grants. Of the latter, 63 were Roman Catholic, 19 Church of England, 2 Presbyterian, 5 Hindoo, and 3 Mohammedan. The average attendance was 22,854, as compared with 23,076 in 1928. The number of Indian children on the roll was 17,547 (boys 13,918, girls 3,629), showing an increase of 1,095 on the previous year. The total number of girls educated in primary schools was 10,870, as against 10,318 in 1928.

Six junior scholarships and six junior exhibitions, entitling the holders thereof to free tuition at the Royal College for a period of about seven years, are awarded to primary school boys every year on the results of a competitive examination, the winners of a scholarship receiving money payments at the rate of Rs. 120 a year in addition. 195 candidates sat for the Junior Boys' Scholarship and

Exhibition Examination held in December, 1929, as against 112 in the previous year.

A Senior Bursary Class for primary school boys was established in 1926. The course of study in this class extends over a period of two years, at the expiration of which four scholarships and four exhibitions tenable at the Royal College for a period of about five years are also awarded every year on the results of a competitive examination. At the examination held in December, 1929, there were 60 candidates as against 83 in the previous year.

Six scholarships tenable in an aided secondary school for five years are awarded every year to primary school girls on the results of a competitive examination, thus allowing the winners to pursue their studies as far as the Cambridge School Certificate examination. 166 candidates sat for the Girls' Scholarship Examination held in December, 1929, as against 151 in the previous year.

The difficulties recently experienced in the recruitment of suitable teachers for primary schools are gradually disappearing.

Technical instruction is provided in three principal centres, viz. :—

(1) The Government Technical School in Port Louis, at which about 50 full-time boys of an average age of 16 years and about 200 boys from the primary schools in Port Louis of an average age of 13 years are taught mechanical drawing and receive manual instruction in woodwork ;

(2) The Government Industrial School at Beau Bassin, at which about 150 boys from the primary schools in Lower Plaines Wilhems are given manual instruction in woodwork ; and

(3) The Government Trades School, at Bell Village, with about 80 full-time apprentices of an average age of 18 years, half of whom are carpenters and the rest masons, blacksmiths, or tinsmiths.

Woodwork classes on a more moderate scale are also held in some aided primary schools, in which satisfactory progress is being maintained.

The number of school gardens in the primary schools of the Colony is on the increase, and nature study now forms part of the syllabus of examination for teachers' certificates.

SECONDARY EDUCATION.

The number of aided secondary schools remained at nine, two of which are for boys only, while the others are girls' schools with a small percentage of boys in the preparatory and junior classes.

The total number on the roll was 1,364, 685 boys and 679 girls, while the average attendance was 606 and 608 respectively, as compared with 689 boys and 664 girls on the roll for previous year, with an average attendance of 611 and 569 respectively.

The passes at the Cambridge Local Examination held in December, 1928, were as follows :—

		Aided Secondary Schools.		*Other Schools.*	
		Boys.	*Girls.*	*Boys.*	*Girls.*
School Certificate	...	13	9	13	3
Junior do.	...	8	2	23	2

The detailed results of the Cambridge Local Examinations held in December, 1929, have not yet been received.

The following table shows the results of the London Chamber of Commerce local examination held in 1929.

A revised system of elementary and primary education, including, *inter alia*, an extension of the technical instruction now given to primary school children, the creation of commercial classes and a further reorganisation of the Government Training School, was prepared at the beginning of the year 1929 by Mr. W. H. Ingrams, Assistant Colonial Secretary and member of the Schools Committee, Mauritius, and formerly a member of the Advisory Council of Education at Zanzibar. The scheme was still under consideration at the end of the year.

Regulations were made by the Governor in Executive Council providing, *inter alia*, (i) for reductions in the rates of salaries paid to probationers and monitors in primary schools, and (ii) for the payment of the whole, or of a portion only, of the grants hitherto paid to the Managers of aided primary schools according to the classification of such schools ; but, on reconsideration, the operation of that part of the regulations referred to at (ii) above was suspended, having been found to be *ultra vires*.

The higher education of boys is conducted at the Royal College and at the Port Louis School.

The staff of the Royal College consists of the Rector, the Senior Master, 11 Masters with British University Degrees, and 11 Assistant

---

* Read " Book-Keeping and Accountancy " in the case of Senior Candidates.

† Two candidates passed with distinction.

‡ With distinction.

Masters: that of the School consists of the Headmaster, 2 Masters, and 8 Assistant Masters. Assistant Masters are encouraged to take the B.A. or B.Sc. examination of the London University.

The College has well-equipped chemical and physical laboratories.

Admission to the College is conditional upon passing an entrance examination or upon winning a primary schools' scholarship. The pupils are drawn from all classes and races in the Colony, including boys of European, Chinese, Indian, and mixed parentage, ranging in age from 10 to 20 years.

The year opened with 365 pupils on the roll, and on 31st December, 1929, the number was 347; the average attendance for the year was 299 at the Royal College. The School opened in 1929 with a fair number of pupils, which steadily increased during the year, and the number on the roll on 31st December, 1929, was 196, while the average attendance for the year was 185.

Boys receive instruction in classical and scientific subjects, Latin being compulsory and Greek optional and alternative with more advanced natural science in the Entrance, Lower, and Upper Middle Classes. Bifurcation takes place in the Cambridge School Certificate Class.

Two scholarships, one on the classical and one on the modern side, are awarded annually in the highest class, which is examined by the Syndicate of Examiners of the Cambridge University. These scholarships are of the value of £1,000 with a temporary increase of 30 per cent. and with first-class passage allowance to and from England, and are tenable for four or five years at any British University or any scientific or technical institution of the United Kingdom.

The Laureates and those boys whose parents are well-to-do sometimes go to Europe to take up a profession, but they usually return to Mauritius in due course and occupy positions of importance. Of the others, a fair number obtain employment in the Government; some, after a course of studies at the College of Agriculture, go to sugar estates, a few join the newly-constituted Police Cadet Corps and will no doubt in time make good sub-inspectors; some join commercial firms, but a large number cannot obtain suitable employment.

The ambition of many parents of the artisan class and even of the labouring class seems to be to send their sons to the Royal College that they may obtain the Cambridge School Certificate and join the Civil Service. Many more boys are being educated than can be reasonably expected to obtain suitable employment in Mauritius. A few young men secured employment under the Government of Kenya.

AGRICULTURAL EDUCATION.

A change was brought to the curriculum of the Agricultural College whereby the duration of the studies has been reduced to two years. At the same time, the level of the entrance examination has been raised so that, upon the whole, the standard attained by students who complete the course, remains practically unchanged.

Fourteen students followed the regular courses in 1929, while four post-graduate students carried out special work at the College.

The examination in sugar manufacture of the City and Guilds of the London Institute was held, as in previous years, under the auspices of the College of Agriculture. Two students obtained the final certificate.

The students who obtained the College diploma have so far found ready employment on estates in Mauritius. A few have secured employment abroad. The advantages accruing to the sugar industry by the introduction of specially trained men on estates is already perceptible and will increase with time.

Elementary Agricultural Education.—Work at the Farm School attached to the Department of Agriculture was carried out on the same lines as heretofore. Fifteen students were in attendance. Two second-year students obtained agricultural cadetships and four obtained forestry cadetships.

X.—LANDS AND SURVEYS.

The only published map of the island is the one-inch-to-the-mile map published by the Geographical Section, General Staff, War Office.

No important grants of land are now made. The Crown lands, of a total extent of about 80,000 acres, are mostly managed as forest lands.

The value of land in Mauritius varies from Rs. 20 to Rs. 3,000 per acre except in townships where the value may reach Rs. 20,000. Agricultural lands are worth from Rs. 300 to Rs. 3,000 per acre.

XI.—LABOUR.

The labour force of this Colony, both agricultural and unskilled, is almost entirely composed of Indian immigrants and of their descendants. The introduction of indentured labour from India was discontinued in 1924.

The number of Indian immigrants in Mauritius was estimated at 14,180 on the 31st of December, 1929. During the course of that year the number of immigrants and their dependents repatriated was 172.

Owing to the closing down of several sugar factories through centralization and to the prevalent economic depression, the openings for skilled workmen, especially mechanics, are insufficient. Fortunately for this class of artizans, employment on the sugar estates in Portuguese East Africa was found for a number of men, and 92 emigrated in 1929 under contracts of service for one or two years

XII.—MISCELLANEOUS.

LEGISLATION.

During the year 1929, twenty-eight Ordinances were passed of which the following deserve special mention :—

No. 1.—*The Sugar Export Duty (Refund) Ordinance*, 1929, suspends the payment, on the sugars of the 1928–29 crop, of the export duty of 50 cents. per 100 kilogrammes leviable under Article 13 of the Sugar Industry Loan Ordinance 1926, and it further provides for the refund of the duty which had been paid on the sugars of such crop prior to the commencement of the Ordinance.

No. 5.—*The Naturalization (Deprivation) Ordinance*, 1929, authorizes the revocation of certificates of naturalization issued under Ordinances Nos. 26 of 1871 and 21 of 1872, and provides for the loss of naturalization in regard to the wife and children of any person whose certificate is so revoked.

No. 6.—*The Sugar Industry Loan Ordinance*, 1929, authorizes the Governor to borrow £200,000 from the Crown Agents and a further sum of Rs. 3,300,000 by the issue of Treasury Bills in the Colony for the purpose of making loans to sugar factory owners and sugar-cane planters in order to assist the sugar industry of the Colony.

No. 9.—*The Mauritius Sugar Syndicate Ordinance*, 1929, incorporates a syndicate which is the medium through which sales of sugar belonging to its members are made.

No. 13.—*The Sugar Industry Loan* (*No.* 2) *Ordinance*, 1929, authorizes the Crown Agents, acting on behalf of the Colony, to raise a loan of £200,000 in London and repeals the provision of the Sugar Industry Loan Ordinance 1929 (No. 6), under which the amount was authorized to be borrowed from the Crown Agents.

No. 14.—*The Sugar Industry Loan* (*No.* 3) *Ordinance*, 1929, authorizes the raising of a loan of Rs. 3,300,000 in the Colony, refundable in thirty years, to provide funds for the repayment of the Treasury Bills issued under the provisions of the Sugar Industry Loan Ordinance, 1929 (No. 6).

No. 15.—*The Sugar Special Export Duty (Consolidated) Ordinance*, 1929, amends and consolidates the special export duties leviable on sugar under Ordinances No. 15 of 1926 and 13 and 14 of 1929. The Ordinance, together with Ordinances Nos. 1, 6, 13, and 14, are a series of special legislation passed during the year to assist the sugar industry of the Colony.

No. 24.—*The Customs Tariff (Consolidated) Ordinance*, 1929, amends and consolidates the Customs Tariff of 1908 and its numerous amendments from 1908 onwards.

No. 27.—*The Maintenance Orders (Facilities for Enforcement) Ordinance*, 1929, facilitates the procedure for the enforcement within reciprocating British possessions or territories under His Majesty's protection of maintenance orders made by Courts in Mauritius. The effect of the new provisions is mainly to dispense with the necessity of transmitting copies of orders through the Secretary of State.

Commission of Enquiry.

In March a Commission was appointed to enquire into the system of Government poor relief and the working of the law and procedure in force and to make recommendations with a view to ensuring an adequate distribution of available funds to the needy and destitute and assisting them, whenever possible, by employment of other methods. This Commission, as well as those on the Police, Medical, and Railway Departments, had not completed their labours at the close of the year.

Cost of Living.

Upon the whole, the cost of living during 1929 was perceptibly less than during the previous year.

The index for rice, the staple food, showed but small fluctuations: it was 127 for the first quarter and 120 for the last. The cost of other grain (lentils, beans, etc.) was fairly high during the first two quarters, the average index being 145, but it dropped to 129 during the third quarter and rose to 133 during the last. Flour, which had dropped to 115 during the first quarter, rose to 125 during the last quarter. Oils and fats decreased steadily; 148 during the first quarter and 127 during the last. Milk and meat remained steady at the same figures as last year, viz., 125 and 160 respectively.

Articles of clothing were at 201 during the first quarter and 175 during the last.

In the mean, the cost of living for 1929 was indexed 152.4, as compared with 162.8 in 1928.

R. VIADER,
Acting Assistant Colonial Secretary.

30th June, 1930.

SITUATION AND AREA.

The island of Mauritius lies off the east coast of Africa in the South Indian Ocean some 500 miles to the east of Madagascar, between 57° 18′ and 57° 48′ of East Longitude and 19° 50′ and 20° 31′ of South Latitude. Its official time has been fixed by law as four hours in advance on Greenwich. The greatest length of the island is 38 miles and its greatest breadth 29 miles. Its area, together with that of the small islets lying round its coast, is 720 square miles. The population was reckoned at 404,458 on the 31st December, 1930,* so that the island is very thickly peopled, there being about 562 souls to the square mile.

The city of Port Louis, which is the chief port and the seat of Government, has a population of about 54,000 which includes its outlying parts. The towns of the inland parts are all modern. Curepipe, the chief residential centre in the higher levels, lies 1,800 feet above the level of the sea on the highest part of the central tableland which rises from the plains of the coast; the smaller towns of Vacoas, Phoenix, Quatre Bornes, Rose Hill, and Beau Bassin are all in the Plaines Wilhems district and at lower levels on the same tableland. The chief towns and villages in the other districts of the country are Mahébourg, Rose Belle, Souillac, Saint Pierre, Moka, Flacq, Pamplemousses, Poudre d'Or, and Bambous.

---

* Though the census of 1931 gives the number as 393,503.

The island is mainly volcanic although signs of an older formation are to be seen at some places (R. Thompson—1880). It is hard to define its age as the effects of cyclones and floods on its rocks lead one astray. The deep river gorges, cut in hard basalt, speak of great age, but all that can be said is that it seems older than its neighbours Réunion and Rodrigues and that it is certainly more stable (J. S. Gardiner).

The dependencies of Mauritius consist of a large number of small islets of which the nearest is 230 miles away, and the most distant about 1,200 miles away in 6° South Latitude. The largest, Rodrigues, an island of 42 square miles with a population of 8,256, lies 350 miles to the north-east of Mauritius, while lesser islands worthy of note are Agalega, the Carcados Carajos group, and Diego Garcia, which is the largest of the Chagos Archipelago. The population of the lesser dependencies numbered 1,810 in May, 1921.

HISTORY.

A note on the history of Mauritius will be found in the Report for 1929—Colonial Reports, No. 1503.

LANGUAGES.

The official language of Mauritius is English, though French may also be spoken in the Council of Government. English is widely understood but French is the chief tongue of social use. The speech of the people is Creole, which is often called a French patois. Creole is a dialect of which the greatest part of the words is French or derived from French, but it is closely akin in its formation to the Bantu languages, and it includes a certain number of words of Malagasy and Bantu origin. Hindustani (Urdu and Hindi) and Tamil are largely spoken among the Indians but some other of the tongues of the Peninsula also have currency. The Chinese mostly speak the Canton dialect.

CURRENCY.

The money of Mauritius is expressed in rupees and cents of a rupee. There are local bronze coins of one cent, two cents, and five cents, and local silver coins of ten cents and twenty cents. The higher values are represented by silver rupees of India, Indian half-rupee and quarter-rupee pieces; there are also current Indian nickel coins of four annas which pass in Mauritius for twenty-five cents.

The Commissioners of Currency issue notes on behalf of the Government with values of one rupee, five rupees, ten rupees, and fifty rupees, respectively. In addition the notes of the Government of India of all values are current. The Mauritius bronze and silver coins and the Indian nickel four-anna pieces are legal tender up to five rupees, and the Mauritius and Indian notes up to any amount.

Merchants and others in Mauritius use special local terms for some money values, e.g., a " sou " is one cent, a " cache " (or " casse " in Creole) is two cents, a " franc " twenty cents, and a " livre " twenty cents. The dollar, " piastre," which is two rupees, still lives in sales by auction. A fifty-cent piece is often referred to as a shilling, and a twenty-five-cent piece as sixpence.

WEIGHTS AND MEASURES.

The metric system is in general use but there are a number of English, French, and local measures also used, and as some of them will appear in this report, it may be of use, as well as of interest, to mention them here.

Of French measures of length the *ligne française* is equal to 2·2558 millimetres or 0·0888 of an English inch. The French inch contains twelve *lignes* and the French foot twelve French inches. The French foot is equal to 1·0657653 English feet, and is used by masons, carpenters, surveyors, and others.

The *lieue* is nearly equivalent to two and a-half English miles.

The *gaulette* is a measure of length equal to ten French feet. It is used on the estates as a measure of the work performed in the fields : a labourer is given a number of *gaulettes* as his task.

Forty thousand square French feet make one *arpent* which is equal to 1·0430263 acres ; almost all land in Mauritius is measured by the *arpent*. The number of *gaulettes* in each *arpent* varies according to the distance between the lines of cane holes.

Other local measures of length and area are the *toise*, equal to two yards four inches or six French feet and the *toise carrée* (square *toise*), which is equal to thirty-six square French feet. This measure is used in masonry and similar jobs.

The *aune* is a measure of length used in most shops and is equal to about one yard and eleven inches.

English measures of length are generally used by Government, and road distances are measured in English miles. Places often derive their names from their distance from Port Louis or other important centres ; thus there are places called *dix-huitième mille*, *seizième mille* and so on. The kilometre is rarely used.

Of the local measures of capacity there is the *barrique* (equal to fifty gallons), which is used in sugar mills for measuring the amount of juice drawn from the cane.

The *tierçon* is a measure of capacity for molasses which varies from one hundred and ninety to one hundred and ninety-two litres.

The *velte* is a measure for oil, especially coconut oil, and is equal to 7·4505 litres.

The *bouteille* of eight hundred cubic centimetres is used in selling milk, vinegar, rum, and other like liquids. The half bouteille is called *chopine*.

The weekly ration of rice of the labourer given on estates is called *gamelle* ; it is equivalent to 5·250 kilogrammes.

The *livre* is equal to five hundred grammes or 1·10 English pounds.

The *corde* is employed for measuring stacks of firewood. The wood is stacked in lengths of two and a-half feet and laid crosswise until the stack measures four French feet high and eight French feet long and contains eighty cubic French feet or 96·82 English cubic feet.

Besides local and French measures of capacity, English measures are also in use and, when speaking of agricultural and other products, it may be well to say that four bales of aloe fibre go to the metric ton, that a bag of sugar, unless otherwise specified, weighs eighty kilos, and that a " pocket " of sugar is generally thirty-nine and a-half kilos.

CLIMATE.

A note on the climate of Mauritius will be found in the Report for 1929—Colonial Reports, No. 1503.

I.—GENERAL.

The outlook of the sugar industry became gloomier and gloomier as the year wore to its close. By way of temporary relief a loan of £1 for each ton of sugar produced was granted to the planters in August, and this had a good moral effect. The Mauritian planter has had in the past to face bad times, perhaps not so bad as those through which he is at present passing, but bad enough, and he has always shown courage in adversity. This, with the aid of confirmed optimism, has hitherto carried him over his troubles, and though in the present crisis there has been as yet little sign of a brighter day, the year closed with the feeling that with the promise of a good crop the industry might tide over its difficulties. Since the end of the year the elements have allied themselves against the Colony and we have had the cyclone—but this belongs to the tale of the year 1931.

Government finances, too, have been and are in a bad way. With an excess of expenditure over revenue the surplus balances have dwindled slowly away despite measures of economy and it has at times been difficult to make both ends meet.

The last session of the Council of Government was opened by Sir Allan Grannum, administering the Government after the departure of Sir H. Read, on the 27th May. In the course of his speech on this occasion he said :—

> " In October last, Sir Francis Watts arrived in the Colony to enquire into the conditions of the sugar industry. It will be seen from his report that with the authority which attaches to his name Sir Francis Watts makes the definite statement that the present cost of the production of sugar exceeds the market price.
>
> " The sugar industry is the mainstay of the Colony and upon its fortunes largely depend the prosperity and well-being of the people of Mauritius. Although further and renewed endeavours have been made to decrease the cost of production, yet the future prospects of our staple industry remain a matter of grave anxiety.
>
> " I have lived in this Colony now for twenty-one years and can bear witness to the courage and ability of the Mauritian planter. I am convinced that notwithstanding the present grim outlook he will continue to give proof of his energy and resourcefulness endeavouring cheerfully to look forward to the time when it may be possible to find a solution of his present difficulties.''

Sir Allan also referred to the health conditions of the Colony in the following words :—

> " The abnormal climatic conditions experienced in the second half of December and early in this year have, unfortunately, led to a general recrudescence of the (malaria) disease in the coastal areas of the Colony. Measures have been taken to increase the quantity of quinine distributed in the affected region and to facilitate its distribution. In this respect the co-operation of the Elected Members of the Council of Government and of the Municipality of Port Louis has been most valuable.
>
> " The disastrous flood which took place in Port Louis on the 29th December last deprived the town of its normal supply of water by completely wrecking the intake works at the Grand River North-West. Steps were immediately taken to establish a temporary supply, but during the interval needed for the performance of the necessary works, conditions were such as to lead to an outbreak of gastro-intestinal disease (in the affected population). Fortunately the epidemic was milder than was expected and though its duration was somewhat prolonged, the total number of cases and deaths was not high."

Reference will be made in fuller detail to the health of the population later on in this report, but it may be said that the state of affairs that confronted the local Government during the year was a serious one. Lack of money and the consequent wherewithal to buy the necessities of life told hard on the poorer folk of the labouring classes and the artisans have been even worse off.

A great deal of the spread of disease was accentuated by the reduced buying-power of the poorer classes, and despite the charitable measures of relief taken by Government and private bodies and persons there has been a heavy death-roll. Two factors have, however, somewhat improved matters.

The first, an event of economic importance, was the removal of the embargo on the export of silver on the 1st of August which was accompanied by an arrangement by which Government sells drafts on India. Before that date the export of silver coin had been forbidden, in order to prevent the reduction of the reserves held by the Commissioners of Currency against their note issue below the legal minimum. Though this result was achieved, the measure had resulted in a depreciation of the currency, consequent on the compulsory domicile of the rupee in the Colony.

The results of its release have been good, for the price of sterling and the cost of remittances to India have come down, and with freer money the prices of many necessities of life have fallen.

In addition, the price of rice has fallen in India so that although there has been less money food has been considerably cheaper.

The other factor which has improved the condition of the working classes really belongs to the year 1931, but lest it be thought that the poorer folk are in as bad a plight as they were in December last it may be well to say here that the cyclone, an ill enough wind in most ways, has blown at any rate plenty of work to the artisan class and a good deal to the labourers.

H.M.S. *Effingham*, flying the flag of Rear-Admiral E. J. A. Fullerton, C.B., D.S.O., paid its annual welcome visit from 2nd to 14th July, and entertained and was entertained in customary hospitable fashion.

News was received in March that Mr. W. E. F. Jackson, C.M.G., Colonial Secretary of the Gold Coast, had been appointed to succeed Sir Herbert Read as Governor, and His Excellency accompanied by Mrs. Jackson arrived in the Colony on the 30th of August.

The Council of Government came to an end of its five-year spell of life on the 22nd December, when it was dissolved.

II.—FINANCE.

Revenue and Expenditure.

The revenue of the Colony for the financial year ending on the 30th June, 1930, was Rs. 14,483,467·89 which was Rs. 480,845·11 less than that estimated and Rs. 1,161,219·49 more than the revenue of the year before.

The expenditure was Rs. 15,575,001·17 which was Rs. 883,335·17 above that estimated and Rs. 1,355,180·86 below the expenditure of the year before. Of this expenditure Rs. 5,056,573·79 were spent on Personal Emoluments and Rs. 10,518,427·38 on Other Charges. Like figures for the year 1928 to 1929 were Personal Emoluments Rs. 5,117,611·80 and Other Charges Rs. 11,812,570·23. It will be seen that the expenditure of the year was Rs. 1,091,533·28 more than the revenue, and the resources of the Colony have therefore had to bear a loss of this amount.

The revenue and expenditure for the past five years have been as follows :—

Year.		*Revenue.* Rs.	*Expenditure.* Rs.
1925–26	...	15,894,763	16,117,988
1926–27	...	14,682,806	16,461,061
1927–28	...	15,308,918	16,725,513
1928–29	...	13,322,248	16,930,182
1929–30	...	14,483,467	15,575,001

The Colonial Government pays a military contribution of 5½ per cent. of its total revenue as a contribution to the cost of the garrison maintained in the Colony by His Majesty's Government in the United Kingdom. The amount of the contribution for the year ended 30th of June, 1930, was Rs. 729,928·78.

Assets and Liabilities.

The assets and liabilities at the end of the year were Rs. 31,367,278·43 and Rs. 24,729,147·83 respectively, which shows a surplus of Rs. 6,638,130·60 on the 30th June, 1930.

Public Debt.

On the 30th June, 1929, the public debt of the Colony was £1,907,390 16*s.* 0*d.* This figure was later revised at £2,484,890 16*s.* 0*d.*, and by the 30th of June, 1930, had reached £2,796,994 7*s.* 7*d.* This latter increase was brought about by the raising of two loans : in the first place the 5 per cent. Sugar Industry Loan of 1929 for sums of £204,603 11*s.* 7*d.* and £255,000 which were borrowed under the authority of the Ordinances Nos. 13 and 14 of 1929, and in the second place by the raising of a 5 per cent. Loan for irrigation purposes of £100,000 under Ordinance No. 35 of 1928. To account for the exact increase there must be taken from the sum of these loans £247,500 worth of 5 per cent. Treasury Bills issued under Ordinance No. 6 of 1929, which were repaid.

There is to be set off against the total debt an accumulated Sinking Fund which was £1,032,543 13*s.* 2*d.* on the 30th June, 1929, and had been brought to £1,144,934 3*s.* 8*d.* at the 30th June, 1930.

Two Government Notifications affecting the revenue of the Colony were passed during the financial year 1929–30, to wit, No. 205 of the 5th October, 1929, which provides for a half-yearly licence of Rs. 25 for dealers in tobacco leaf whether cured or not, and No. 234 of the 30th November of the same year which provides for a half-yearly licence of Rs. 100 for manufacturers of matches.

Currency and Banking.

The average value of currency notes in circulation during the year was Rs. 14,747,250 or rather less than the average of Rs. 14,770,750 for the previous year. Against these notes the Commissioners of Currency held silver coins to the average value of Rs. 4,862,000 as compared with Rs. 4,839,000 in 1928–29. Their investments on the 1st July, 1927, were Rs. 9,879,250 (which does not include Depreciation Fund) and the figure remained unchanged during the year under review. The Depreciation Fund was increased from Rs. 1,593,133 to Rs. 1,790,189. From their investments the Currency Commissioners gained interest which, after allowing for the increase to the Depreciation Fund, enabled Rs. 422,563·25 to be credited to the general revenue of the Colony.

The statement of Assets and Liabilities of the Commissioners of Currency shows a balance in their favour of Rs. 1,790,189, but if the investments are valued at the market rate of the 30th June, 1930, this surplus will be decreased to Rs. 1,595,496·38.

The Head Office of the Government Savings Bank is in Port Louis, and there are nine banks in the Districts of the Colony and one in the dependency of Rodrigues.

On the 30th June, 1930, 37,168 persons had money deposited in the Bank which amounted to Rs. 5,393,790·70 compared with 36,810 holding Rs. 5,253,897·92 in the year before.

The increase in the amount of money in the Savings Bank is due largely to a number of new large deposits. Other contributory causes were firstly the low prices obtained for sugar which discouraged depositors from expending funds on their plantations, and, secondly, that no withdrawals were made from the Bank for investment in local industries, which showed a marked slackness.

Much use of the Savings Banks is made by the Indians and of the number of depositors given above there were 16,601 of this race who had Rs. 2,313,378·71 to their credit, compared with 16,154 holding Rs. 2,194,561·91 in the year before.

Interest is paid on the accounts in the Savings Banks at the rate of 3 per cent. a year.

The Banks with establishments in the Colony are The Mauritius Commercial Bank, The Mercantile Bank of India, Limited, and Barclays Bank (Dominion, Colonial, and Overseas).

III.—PRODUCTION.

Agriculture and Industries.

AGRICULTURAL CONDITIONS IN 1930.

The kind of weather that prevailed during the growing and harvesting seasons is shown in the table below. It will be seen that in almost every month the temperature was below normal and that for the first eight months of the year the rainfall was less than the average. Speaking generally, therefore, the weather was unfavourable and the amount of sugar produced considerably under the average. The harm caused to the 1930 crop by the erosion and leaching of the soil after the extraordinary rainfall of December, 1929, was considerable. Such losses are very much more serious than is generally realized.

STATION—DEPARTMENT OF AGRICULTURE, REDUIT.

THE SUGAR INDUSTRY.

220·96 thousand tons of sugar were produced as compared with an average crop of 228·65 thousand for the past five years. Field returns were especially low in the north of the island, where the drought was most severe: the crop in that part was nearly 25 per cent. less than the previous year. This reduction in the north was most marked on the lands of small Indian planters where no irrigation water was to be had. In many of these cases an acre yielded no more than five or six tons.

The extraction of sugar per cent. of cane in 1930 was 10·92 per cent. which is the highest on record.

The following figures compiled from factory returns give the production for each district of the island during the last six years :—

District.	1930.	1929.	1928.	1927.	1926.	1925.
Pamplemousses and Rivière du Rempart.	43·00	54·68	59·55	52·72	44·15	51·86

Grand Port ...	46·53	47·18	50·42	41·22	31·70	45·06
Total	220·96	238·03	253·43	218·00	192·59	241·22

Grades of sugar produced.—On account of the changed nature of the market, local manufacturers are producing an increasingly large proportion of so-called raw sugars of 98½° polarization. The following table illustrates the great change which has taken place in the industry during the past five years owing to the alteration in the tariffs of the United Kingdom which penalize sugars of over 99° polarization.

---

* Gauge overflowed.

Year.	Per cent. Vesou.	Per cent. Raws.
1921	95·98	—
1922	97·20	—
1923	97·61	—
1924	98·34	—
1925	98·21	—
1926	98·10	—
1927	98·63	—
1928	71·80	27·30
1929	23·90	75·20
1930	16·80	82·50

Area under cultivation.—As a result of the first agricultural census taken in Mauritius during 1930 in connexion with the World's Agricultural Census it was found that the total area in the island devoted to the cultivation of the sugar-cane was 137,182 acres. Of this area, estates with factories cultivated 48,525 acres; estates without factories 38,833, and small planters on or off estates 49,824 acres. Of this latter 42,576 acres were planted by Indians. Indian cultivation on estates adds another 10,164 acres, which brings the total Indian cultivation up to 52,740 acres or 38·5 per cent. of the total cane area of the Colony. The Indian cane lands produced about 28 per cent. of the total crop or 566,000 tons of cane.

These figures show an apparent decrease of about 19,000 acres in the total area under cane and of 16,000 acres in the area cultivated by Indians. It should be said, however, that this decrease is not entirely real, as in the past the figure for area under cane apart from estates was roughly reckoned from the amount of cane received by factories from small planters.

Disposal of the sugar crop.—As in former years, the greater part of the sugar went to the United Kingdom. The Mauritius Sugar Syndicate worked on the same lines as heretofore, controlling about 80 per cent. of the sugar production of the Colony.

The average net price of sugar in 1929 was Rs. 7·50 for 50 kilos which was low, but in the year 1930 it fell to Rs. 6·08 which is the lowest known, at any rate since 1881.

Conditions affecting the sugar industry in 1930.—Owing to the state of the sugar market the whole industry of the Colony has become very shaky. The late Sir Francis Watts, whose mission has been referred to above, recommended in his report* that "the Imperial Government should be invited to make grants-in-aid to the Colony calculated to make good the losses which have been incurred after all reasonable efforts have been made by those engaged in the industry." It was further suggested by Sir Francis Watts that the grant to be made in any one year should be equal to the loss calculated to have been borne in the previous year and that such assistance should be continued for a period of not less than five years. It was reckoned at the time when the report was written (December, 1929) that when sugar was selling at below Rs. 8·98 per cwt. f.o.b. Mauritius, that the industry was being conducted at a loss.

---

* Report on the Mauritius Sugar Industry: Cmd. 3518. Pub. 1930.

The recommendations made in this report were not carried out, but a certain measure of relief was given locally by a reduction in the export duties levied on sugar from 75 cents to 9 cents per 100 kilos and by a loan-in-aid from the Mauritius Improvement and Development Fund of £1 per ton of sugar *produced* in the year, which is to be repaid in a period of thirty years. The special export duty which is to be levied for the recovery of this 1930 loan has not yet been imposed.

These measures of relief were carried out by three Ordinances. The first of these, No. 22 of 1930, intituled The Sugar Special Export Duty (Amendment) Ordinance, 1930, relieved the sugar of the 1930–31 crop from the export duty levied under Ordinance No. 15 of 1929. Provision is also made for the refund of any such export duty collected on the sugars of 1930–31 crop before the date on which the Ordinance came into effect.

The second, No. 23, intituled The Customs Tariff (Amendment) Ordinance, 1930, practically removes all export duty on sugar. There is, however, an export duty of 2 cents per 100 kilos which is kept; the proceeds are intended to pay for the destruction of *Phytalus Smithi*, which does much harm to the sugar-cane.

Lastly, Ordinance No. 24 of 1929, intituled The Sugar Industry Loan Ordinance, 1930, provides for the distribution of the loan to sugar manufacturers from the Improvement and Development Fund.

Mechanical cultivation.—Tractors and ploughs to the value of Rs. 27,231 (c.i.f.) were brought into the colony. The number of farm tractors used on estates in 1930 was 101. Material to the value of Rs. 232,139 was brought for use on the light tramways on which canes and sugar are carried on estates.

Insect pests of sugar-cane.—In spite of all the measures, mechanical and biological, which are taken against the chief pest of the island, *Phytalus Smithi*, this redoubtable insect still multiplies exceedingly and its increase is greater than that of the creatures that prey upon it. It continues too to cause great concern as it spreads to parts hitherto untouched by its ravages. There were slain of these insects in the year 265 millions, 13 millions more than in the previous year, while the war against them cost the Government more than Rs. 112,400.

Much harm has been done during the year by the capture and sale by untrained persons of its natural enemy, *Tiphia parallela*. It is reckoned that at least a million of these insects were captured and sold in this way during the year, and the deaths due to unskilled methods of capture were excessive. A law is being made to check this evil.

At the suggestion of the late Sir Francis Watts, a memorandum describing the problem of the *Phytalus* in Mauritius was written by the Department of Agriculture and sent to Dr. Myers of the Imperial Institute of Entomology for his views.

Cane Diseases.—Leaf Scald and Gumming Disease were still the gravest diseases of the cane in the island. The position was made worse by the fact that much of the land is planted with the Big Tanna variety of cane which is proving very sensitive to Leaf Scald. The only real way of dealing with this matter is to produce seedlings which will resist disease and to achieve this is the chief concern of the Sugar-cane Research Station at the present time. Surveys are made of the canes as they arrive at the factories so that the percentage of diseased canes can be found out. It appeared that the incidence of the two diseases taken together was 16·8 per cent. in 1930.

As the result of Mr. Ashby's report on the cane disease in Mauritius, Mr. Shepherd, the Botanist and Mycologist, left for Australia in October in order to study the work done to control disease in New South Wales by Mr. D. S. North of the Colonial Sugar Refining Company and by the staff of the Bureau of the Sugar Experiment Stations, Queensland. Mr. Shepherd will visit Java on his way back and will be able to study the methods of controlling disease there.

Irrigation.—The Irrigation Officer carried out a number of experiments to show the cheaper way of irrigating canes in short rows used in Hawaii.

As has happened before, La Ferme Reservoir dried and ceased to give water during the dry season at the close of the year which caused a great set-back to irrigated canes in the Black River area.

LESSER AGRICULTURAL INDUSTRIES.

Mauritius Hemp Industry.—There were 1,464 tons of a value of Rs. 347,000 of this fibre (*Fourcroya* sp.) exported during the year, as compared with 2,500 tons worth Rs. 900,000 in 1929. The drop has been brought about chiefly by the fall in prices from Rs. 386 per ton f.o.b. in January to Rs. 276 in December. As a result many factories have been closed for a time and some hundreds of people are out of work.

Mr. F. Lincoln, of the Mauritius Hemp Producers' Syndicate, went to Europe to study the uses of Mauritius hemp, as Sir F. Watts had stated that the matter was not well understood in the island.

The fibre is for the most part used in Belgium to make ropes, binder-twine, etc. It is not sold in such a finished condition as Java Cantala, so that prices suffer. With the aim of improving matters an officer of the Agricultural Department, now in Java, is studying the Java industry.

Plans have been made to set up a factory to make bags from the low-grade Fourcroya fibre. Sugar-bags to the value of Rs. 1,900,000 were imported from India in 1929 and we need about 3,000,000 a year.

Tobacco industry.—Greater interest was shown in this crop during the year, there being 3,057 acres registered as against 2,680 and 1,600 in 1929 and 1928 respectively. The crop was reckoned at 525,000 kilos, of which 426,951 kilos were bought by local manufacturers, as against 450,000 kilos and 408,394 kilos in 1929 and 1928 respectively. The amount of local leaf used was 261,852 kilos as against 270,792 in 1929, and the total amount of manufactured tobacco produced was 235,885 kilos as against 251,050 kilos in 1929. Imports of tobacco showed further decreases in all types with the exception of cigars and cigarettes which showed an increase of 4,735 kilos. Revenue from tobacco showed an increase of Rs.159,945 the highest figure recorded since 1927. Imports of leaf from Rodrigues were lower than in the year before by 5,902 kilos.

A good deal of experimental work was done during the year.

The Tobacco Production and Marketing Ordinance No. 38 of 1930 puts the control of the production and sale of leaf tobacco in the Colony in the hands of a Government Tobacco Board. It provides for the registration by the Board of all land on which tobacco is planted, for the keeping of books by growers of and dealers in tobacco, and for the setting up and management of a Government Tobacco Warehouse to deal with all leaf-tobacco grown in the Colony, and to dispose of such leaf-tobacco in such manner as the Board may find of greatest profit.

Fruit Canning and Preserving.—The factory of the new Mauritius Pineapple and Canning Company had not been finished by the end of the year. It is expected that the factory will be able to turn out 10,000 cans of pines each day of eight hours' work.

There were 260 acres planted with pineapples at the end of the year.

Oil Crops.—There were 700 acres of coconuts and 100 acres of ground-nuts planted in the island. The Innova Refinery handled 400 tons of copra and 58 tons of ground-nuts and made 30 tons of soap.

There was little profit from the coconut oil and copra in the Oil Island Dependencies as the prices were so low. Much of the stock is still unsold.

The export of copra amounted to 1,734 tons and that of coconut oil to 14,450 litres.

Food Crops.—Owing to the low price of sugar there has been little money among the people and an effort has been made to encourage small Indian planters to grow food and especially rice. This movement has been helped by the building by a private person of a rice-mill in Port Louis which can deal with two tons of paddy a day. In 1929, the area under hill rice was approximately 30 acres. In December, 1930, it was reckoned that nearly 300 acres of hill rice had been planted from seed supplied by the Department of Agriculture. While it is felt that Mauritius will never be able to supply a tithe of the 50,000 tons of rice needed each year in the island, the state of affairs makes it needful that the small planters should try to feed themselves until such time as the sugar industry improves.

Not only are the people of the island unused to growing their own food but also the greater part of them, the Indians, do not care for any other staple food than rice. Such crops as maize, yams, manioc, and sweet potatoes, which grow here very much better than rice, are not greatly liked and are eaten but little.

Seed of divers kinds of dhall is being imported by the Agricultural Department for trial as this crop is not grown. The average import of dhall for the past five years amounted to 3,683 tons of an average value of Rs. 748,400.

The acreage of food crops in 1930 was reckoned as follows: vegetables 3,300, manioc 1,600, maize 1,300, rice 300, potatoes 220, sweet potatoes 160 and ground-nuts 100. These figures are very low when it is remembered that the people number about 400,000 and that most of them are agriculturists.

Alcohol.—According to excise figures, the number of litres of alcohol distilled in 1929–30 (July to June) was 908,241 as compared with an average of 707,519 litres for the past five years.

Tea.—The Colonial Development Fund bore the cost of a visit to Mauritius by Commander Goolden, of the Anglo-Ceylon and General Estates Company Limited, to advise on the tea industry and report on the development of tea cultivation in the island.

His report has not yet been published.

There are three tea gardens in the Colony; their total production in 1930 was 19,000 kilos. Imports of tea from abroad amounted to 177,274 kilos valued at Rs. 319,510 c.i.f.

LIVE STOCK.

Cattle.—The number of bullocks imported from Madagascar for food was 4,843, worth Rs. 301,500. The average figure for the previous five years was 7,238, the fall in 1930 being due to the little money held by the people. These animals are sold to butchers at prices averaging from Rs. 80 to Rs. 100 each. Locally-bred bullocks which are of larger size are worth more. 246 bullocks for slaughter were also imported from Rodrigues.

The total number of oxen in the island in 1930 was 31,869 as compared with 44,339 in the year 1929. This decrease is mostly due to the smaller number of draft oxen used on estates. The general condition of animals during the year was good. In order to improve the cattle industry, the Government undertook to pay half the cost of pure-bred animals imported for breeding purposes provided that previous approval of importation was obtained. A sum of Rs. 1,035 was paid for this purpose during the year.

Equines.—The total number of horses, mules, and asses in the island is only 1,460 as compared with 2,400 in 1921.

Sheep, Pigs, and Goats.—The numbers of these animals in the Colony in 1930 were 1,230, 1,926, and 4,791 respectively compared with 1,501, 3,586, and 6,226 in 1921. A number of them were imported from Rodrigues.

Government Dairy.—During the year, the Government Dairy at Curepipe sold 89,000 litres of milk at the price of twenty-five cents for a litre.

RESEARCH.

Sugar-cane Research Station.—This Station, opened on the 15th of January, 1930, has been formed to deal with the more pressing problems connected with the genetics, physiology, and bio-chemistry of the sugar-cane in Mauritius. The most urgent problem in hand is the search for new varieties of cane to replace the Big Tanna, which is now failing after the period of thirty years in which it has held the first place in the island.

Half of the expenditure of this Station up to £2,000 each year for a period of five years is being met by a grant from the Empire Marketing Board.

CO-OPERATIVE CREDIT SOCIETIES.

The number of Societies in 1930 was twenty-nine with a total membership of 2,420, the total share capital originally contributed being 83,875 rupees.

Forestry.

It has been said above that the native forests, which covered the island before the coming of the first settlers, were stripped of their ebony and other valuable timbers, but later on they were almost completely cleared to make room for the planting of crops. Lands granted by the Crown for this purpose, which were not found suitable for the planting of sugar, were abandoned and bought by Government to protect water supplies by the replanting of forest.

There are now 56,241 arpents of State forests, consisting in scrub areas, plantations, and small blocks of the old forest, bordered by native trees which have again grown up.

The " Pas Géométriques " consists of a narrow strip of land around the coast, which is the property of the Crown and may not be estranged. Nearly the whole area of about 13,500 arpents is leased to neighbouring estate owners and others, who are bound to plant and maintain filaos (*Casuarina equisetifolia*) or coconuts. These groves beautify the coastline, yield much good fuel and give shelter to the herds.

Of the other Crown Land, 3,180 arpents are leased to the public, and 4,675 arpents are in use by Government Departments. Suitable areas are still bought after careful consideration. During 1930, 1,274 arpents were bought at a cost of Rs. 16,007. At the end of the year the land under the care of the Forest Department was 92,650 arpents, of which 76,083 arpents were Crown Land, 1,074 arpents District Board Land, and the rest including 8,748 arpents of Private Land Mountain Reserves, about 6,000 arpents River Reserves, and 145 arpents Vacant Lands.

The general policy of the Department is to improve the immature plantations and to fell and regenerate the mature plantations on a plan laid down to clear and plant the scrub areas according to plan and to clean and care for the small areas of forests which, though much reduced, still contain wood of great price.

The Department aims to set up fewer but larger nurseries, and those thought most suitable are being enlarged and made better.

During 1930, 586,480 plants were issued or sold, and the stock at the end of the year in twelve nurseries was 1,246,980, of which more than 50 per cent. were cryptomeria and other shade-bearing species.

During the year it was decided to concentrate on smaller areas, and to plant closely, rather than to set up patchy and open plantations on a larger scale. The harm done to nursery stocks by the great flood of December, 1929, seriously reduced the planting material. Rs. 25,308 were spent on nursery and plantation work. 127·44 arpents of new plantations were set up with 205,658 plants, mainly pines and cryptomeria. 263·84 arpents were tended, and increased by 161,488 plants. (In 1929, 261 arpents were newly planted, and 449 arpents tended, at a total cost of Rs. 30,505.)

Work done towards making use of forest produce was on a small scale and largely of an experimental and educational nature. A small stock was stored for seasoning, and the rest was mainly used to repair departmental buildings. The question of treating pine and eucalyptus so that they may resist the attacks of insects, was studied. 10,049 cubic feet of round timber was sold to the Mauritius match factory. Fuel was got from the felling area, and from land cleared for planting. The amounts supplied to the public and to Government Departments during 1930 were 21,260 cubic feet solid of timber as compared with 9,000 cubic feet in 1929, and 193,333 cubic feet solid of fuel as compared with 113,833 cubic feet in 1929.

The Forest Department earned during the year :—from the sale of forest produce, Rs. 68,728 ; from the lease of Crown lands, Rs. 60,360 ; from shooting and fishing leases, Rs. 17,771 ; from fines and damages in forest cases in Court Rs. 3,401 ; and from game licences, Rs. 7,950 ; a total of Rs. 158,210.

Sales of forest produce diminished on account of the extensive cutting of poles and fuel on private lands. The price of fuel was very low and the Forest Department sold good fuel for Rs. 5 a cord stacked beside the main roads.

Most of the timber used in Mauritius is imported from Singapore, India, Australia, and Madagascar, and consists mainly of Australian mahogany, teak, " Singapore " (mainly toon of medium quality), and locally known Madagascar timbers. Imports were classified as follows :—

	1930. *Rs.*	*1929.* *Rs.*
Boards and Scantlings, 104,959 c. ft. ...	164,339	164,944
Shingles, 861,000 pieces	53,254	61,800
Railway Sleepers, 14,000 pieces	134,400	84,446
Other timber, 80,803 c. ft.	207,861	186,189
Total 245,550 c. ft. approx.	559,854	497,379

The State forests could eventually supply most, if not all, of the needs of Mauritius.

No timber was exported in 1930.

The trees grown in Mauritius which are not native to the isle are of a number of kinds and of great interest. While the valuable native timbers grow too slowly to be of economic value, it appears likely that Mahogany (*Swietenia mahagoni*), Cigarbox cedar (*Cedrela odorata*), Toon (*Cedrela toona*), *Cassia florida*, *Tecoma sp.*, *Cryptomeria japonica*, *Juniperus bedfordiana*, and *Pinus taeda* can all be grown on a large scale on a rotation of 50 years. *Eugenia minii* yields a useful timber : *Cassia florida* and *Tecoma* are woods much sought after for the making of furniture. *Pinus caribaea* does very well in the nursery and may replace *Pinus taeda* as a plantation tree. So many trees thrive in Mauritius that the prospects of making forestry pay are good.

Fisheries.

Mauritius is happy in possessing in its coast line a variety of different " bottoms " which provide all that is requisite and necessary to form an ideal feeding ground for numerous species of fish with different habits. Of fish that are good for eating, the " grey mullet " is especially abundant and the fish locally known under the names of " Baroi," " Dame Beri," " Capitaine," with others belonging to the same genus (*lethrini*) and " Cordonnier " (*tenthis*), are also plentiful. There is therefore a constant supply of fresh fish, and the whole catch is daily eaten by the people so that no salting or drying is resorted to.

From St. Brandon Islands there comes a fair quantity of frozen fish which also finds a ready sale ; for salt fish the Colony relies on her dependencies and on South Africa.

There are possibilities in the way of an industry for the exploitation of shark products and the Government has under consideration the grant of a concession to this end. There is certainly plenty of raw material, as sharks are numerous all round the coast.

There are about a dozen Chinamen who collect the " bêche-de-mer " or " trepang " locally known as " bambara."

Several well-kept " barachois " along the coast yield a good return to their owners but others through neglect are being gradually silted up with mud. A " barachois " is a creek, estuary, or mouth of a river in which the sea flows and reflows, enclosed towards the sea by a weir or dam, so as to form a fish-pond.

The Fishery Branch of the Receiver-General's Department came into being on the 1st December, 1929, with a staff of one inspector and fourteen guards.

During August and September of 1930 experiments in trawling were carried out by the Raphaël Fishing Company with their new trawler *Fume*, but unhappily the trawls got fouled on the rough coral bottoms round the coast and the experiments had to be discontinued.

In November, the Fishery Amendment Ordinance No. 33 of 1930 was passed. It gives effect to certain of the recommendations contained in Chapter V of Mr. Hornell's report on the fishery resources of the Colony. By its provisions the use of the " small net " and of the " shrimp net " (that is to say, nets having meshes of less than three to five centimetres from knot to knot) and seining within the lagoons between the hours of 6 p.m. and 6 a.m. are forbidden. It also amends the main Fisheries Ordinance No. 9 of 1918 in order to protect the owners and lessees of barachois, and powers are given to Fishery, Police, or Inland Revenue Inspectors to issue search warrants in any case where there is reason to suspect that unlicensed nets or other unlawful fishing implements or gear are concealed in any house or place.

During the year two reserves were declared at the Bay of Grand Black River and the Bay of Souillac. An oyster and mussel bed was set up at Grand Sable by a private individual.

On the coast of Mauritius the catches by large net were fairly normal and the price of fish at the Central Market varied from 35 to 20 cents for choice fish. Basket, net, and line fishermen have, however, commonly complained that they cannot make a good living owing to the ravages of sharks.

Water Power.

The many rivers and streams of Mauritius flow generally through deep ravines and their courses are often broken by waterfalls and rapids. It is reckoned that there is 10,000 horse-power available from these falls, of which 1,200 is used at present, chiefly to provide electric light.

The following is a list and description of some of the waterfalls of the Colony measured during the dry season of 1912 :—

Name of river.	*Name or description of waterfall.*	*Height of waterfall in feet.*	*Volume in cubic feet per minute.*
G. River S.E. ...	Deschiens	19	1,530
ditto	Diamamoo	63	2,315
G. River N.W. ...	Le Reduit	135	450
Savanne River ...	Cascade Cécile	105	580
ditto ...	Below Terracine Dam ...	77	250
Tamarind River ...	Sept Cascades	960	420
R. des Galets	Near Plaine Champagne ...	130	60
ditto	Luchon	400	134
R. du Cap	Chamarel	320	330
R. Moka	Cascade Pigeons	160	80

During the year 1930 the first step was taken to set up an extra high tension transmission line from the General Electric Supply Company's water power station at Tamarin Falls to the Plaine Lauzun Railway Workshops. When it is finished, power will be supplied from it to the railway workshops, the granary, the Port Louis pumping station, and the pumping station proposed to be built at Fanfaron, the Government printing office and all other Government establishments. A sub-station is being built at Plaine Lauzun to transform the 22,000 volts to 6,600 volts for re-transmission to Port Louis, and a transformation to 400/230 volts will also be made to supply the railway shops.

The change to electric power drive on a fairly large scale in a Colony in which, if one excepts a few small motors, electricity has only been used for lighting purposes, has made it necessary to consider the training of artisans in the work of the upkeep of such plants. To this end a class was started in January, 1930, to train apprentices and others engaged in other branches of the Railway department who show a readiness for this kind of work. The results have far exceeded even what was hoped and there are now a number of trained men able to carry out not only ordinary maintenance works but major repairs.

Manufactures.

Besides the chief manufactures described above, bricks, tiles, salt, soap, and matches are made by private enterprise. The latest addition to this list is that of matches ; the local match factory employs about 150 persons, and the manufacture was in its earlier stages supervised by an expert from Japan. The matches made are of a very fair quality, but there was no increase in the amount manufactured in 1930 over that of the year 1929.

IV.—TRADE AND ECONOMICS.

The value of the foreign trade of the Colony in 1930 was Rs. 66,407,144, of which the imports were worth Rs. 39,806,180 and the exports Rs. 26,600,964. The figures for the year before were Rs. 98,878,100, Rs. 46,428,424, and Rs. 52,449,676 respectively.

The customs revenue from imports amounted to Rs. 4,136,008, more than Rs. 45,000 over that of 1929 and the revenue from the exports was Rs. 220,584 compared with Rs. 895,551 in 1929. The fall was due to the lower rate of duty on sugar and to the less amount of sugar exported in 1930.

Trade.

The values of the imports and exports of merchandise for 1913 and for the past five years are as follows :—

	Imports. Rs.	*Exports.* Rs.	*Total.* Rs.
1913	36,607,671	32,291,706	68,899,377
1926	50,596,137	41,208,198	91,804,335
1927	55,185,633	56,476,587	111,662,220
1928	49,437,800	47,371,420	96,809,220
1929	46,428,424	52,449,676	98,878,100
1930	39,806,180	26,600,964	66,407,144

The value of re-exports was Rs. 941,670 in 1930 compared with Rs. 1,661,046 in 1929. Bullion and specie amounting to Rs. 1,165 were imported during the year, compared with Rs. 10,096 in the year before, and the exports of treasure amounted to Rs. 4,500 and Rs. 1,388 respectively in the two years.

Imports.

The import trade showed in 1930 a decrease of about 6 per cent. in the value of the imports from the United Kingdom, compared with that of 1929 ; trade with China, Union of South Africa, Canada, Italy, Germany, and Belgium showed an increase ; but the trade with most countries shows a drop, notably in the cases of India, United States of America, France, Australia, Chili, Madagascar, and Holland.

The principal articles of the imports which showed an increase in 1930 over the preceding year were iron manufactures, cement, rubber manufactures, provisions (preserved), vehicles, woollen manufactures, coal, machinery and millwork, soap, and silk.

The principal articles showing a decrease were spirits potable, gunny bags, apparel, petroleum lamp oil, petrol spirits, textile manufactures, spices, implements of all sorts, chemical manures, edible oils, coffee, confectionery, haberdashery and millinery, and hardware.

The following statement gives the nature and size of the trade in the principal articles imported in 1930 and the year before :—

	1930.	1929.
Rice	51,912 tons	55,068 tons
Other grain	16,863 ,,	19,735 ,,
Manures and fertilizers ...	16,653 ,,	18,397 ,,
Coal, coke, and patent fuel ...	54,668 ,,	50,251 ,,
Cement	10,132 ,,	6,840 ,,
Cotton manufacture	7,627,913 metres	10,919,746 metres
Woollen manufacture	99,604 ,,	97,613 ,,
Wines in casks	671,582 litres	1,092,109 litres
Wines in bottles	90,322 ,,	100,576 ,,
Spirits	30,994 ,,	48,695 ,,
Motor cars	No. 209 454,277 Rs.	No. 129 327,834 Rs.
Motor lorries and parts	No. 82 203,871 ,,	No. 104. 294,873 ,,
Boots and shoes	245,927 ,,	307,808 ,,
Haberdashery and millinery ...	375,512 ,,	542,313 ,,
Iron and steel manufactures ...	1,288,996 ,,	880,948 ,,
Silk goods	429,117 ,,	257,202 ,,
Drugs	350,918 ,,	407,700 ,,
Wearing apparel	207,189 ,,	180,054 ,,

Exports.

The following table shows the sugar exports for the past six years :—

	Kilos.	*Value.* Rs.
1925	192,303,540	41,250,907
1926	181,215,772	37,991,240
1927	227,989,329	53,789,928
1928	219,264,000	44,293,987
1929	277,836,000	49,407,725
1930	185,539,000	24,846,253

The principal domestic exports other than sugar were 2,469 tons of aloe fibre valued at Rs. 347,889 compared with 2,359 tons valued at Rs. 828,481 in 1929, Rs. 280,370 worth of copra against Rs. 280,843 in 1929, Rs. 9,131 worth of coconut oil compared with Rs. 6,800 in 1929, and Rs. 14,499 worth of rum compared with Rs. 34,247 in 1929.

Re-exports amounted to Rs. 941,670 and consisted chiefly of gunny bags, wheat flour, salted fish, and scrap metal.

Distribution of Trade.

The following tables show whence the imports came, whither the exports went, and the total trade with the United Kingdom, British possessions, and foreign countries in 1913 and for the past five years :—

Countries.	*Imports.*					
	1913.	1926.	1927.	1928.	1929.	1930.
United Kingdom	33·2	22·2	23·6	23·3	23·8	25·1
British Possessions ...	42·6	48·5	47·2	50·7	46·3	44·5
Foreign Countries ...	24·2	29·3	29·2	26·0	29·9	30·4

V.—COMMUNICATIONS.

Shipping.

The following statement shows the number and tonnage of ships using the port, apart from the coasting trade, during the past three years :—

	Inwards.		*Outwards.*	
	No.	*Tonnage.*	*No.*	*Tonnage.*
1928	236	650,369	235	647,446
1929	194	542,314	198	552,596
1930	179	496,245	180	500,944

In the coastal trade with the Dependencies there were 19 ships inwards of 6,244 tons and 17 outwards of 5,779 tons.

The chief lines of steamships whose vessels called at Port Louis were The Union Castle Steamship Company, Limited, the British India Steam Navigation Company, Limited, The Messageries Maritimes, The Clan Line, The Ellerman Harrison Line, The Compagnie Havraise Peninsulaire, and The Mogul Line.

Railways.

The Mauritius Government Railways are 143·65 miles long. The lines can be seen in the map at the end of this report. They are the North Line of 31 miles, the Midland Line of 35·30 miles, the Moka-Flacq Line of 26·20 miles, the Black River Line of 12·75 miles, the Savanne Line of 10·90 miles, and the Montagne Longue Line of 3·50 miles. All these lines are of 4 ft. 8½ in. gauge and there is also the Bois Cheri Light Railway of 24·00 miles which is of 2 ft. 6 in. gauge.

The whole of the Black River Line and a part of the Moka-Flacq Line, 11 miles in length, were closed to passenger traffic in 1929.

Passengers in the areas served by these lines were carried by means of a Road Bus Service, kept up under contract by a local road transport company.

The revenue for 1929 and 1930 was as follows :—

	Revenue, 1929.	*Revenue*, 1930.	*Difference.*
	Rs.	Rs.	Rs.
Passengers	953,555	664,988	288,567
Parcels	106,283	85,640	20,643
Goods	1,336,557	1,200,621	135,936
Miscellaneous... ...	79,664	54,321	25,343
Net Revenue ...	37,918	29,611	8,307
Total	2,513,977	2,035,181	478,796
Goods Tonnage ...	415,096	377,750	37,346

The further waning of the revenue is caused by the forsaking of the rail for the road. Passenger fares were reduced in January, 1930, to try to stem the loss of passengers. Some success attended this measure at its start but it was not lasting, and the railway, up to now, has been unable to win back its lost supporters in numbers enough to make up for the lessened fares.

The further fall in goods revenue is mainly due to a fall of 18,000 tons in the carrying of sugar and sugar-canes, and to a fall of 20,000 tons in the carrying of general goods.

Working expenditure has shown a decrease over the working of the year before, and is mainly due to measures of careful saving practised to try to make up for the serious fall in revenue and the general financial state of the railway. Comparative figures are as follows :—

	1929.	1930.	*Difference.*
	Rs.	Rs.	Rs.
Working Expenditure	2,615,655	2,313,070	– 302,585
Excess of Working Expenditure over Revenue			277,889

The Bois Cheri Light Railway works with the Savanne Line and is mainly used for carrying canes.

Revenue, expenditure, and tonnage figures are given hereunder :—

	1929. Rs.	1930. Rs.	*Difference.* Rs.
Expenditure	21,130	19,364	– 1,766
Revenue	17,484	14,474	– 3,010
Tonnage carried ...	17,193	17,564	+ 371

Although these figures show an increase of 371 tons, the revenue is less on account of a lowering in the tariff for the carrying of canes which was brought into force at the beginning of the 1930-31 crop.

The Railway Goods Road Transport Service has been mainly used for carrying Government merchandise from the customs wharves to the different departmental depots.

Comparative figures for the service are as follows :—

	1929. Rs.	1930. Rs.	*Difference.* Rs.
Expenditure	5,551	4,469	– 1,082
Revenue	5,306	6,093	+ 787

The passenger bus services were started in 1929, when passenger traffic on the Black River and Moka-Flacq lines was stopped as it was thought necessary to keep up a passenger service. The present contract with the bus company comes to an end in July, 1932.

The figures for this service are as follows :—

Section.	*Mileage.*	*Revenue.* Rs.	*Expenditure.* Rs.	*Loss.* Rs.
Black River ...	52,771	12,388	42,217	29,829
Moka-Flacq ...	34,909	11,278	27,927	16,649
	87,680	23,666	70,144	46,478

Roads.

The Colony is well served with 479·9 miles of first-class roads called "Main Roads" and 215 miles of second-class ones, called "Branch Roads."

The Main Roads are water-bound macadam.

The surface of nearly 130 miles is coated with bitumen.

Posts and Telegraphs.

We receive some of our mails from Europe through Marseilles and the Suez Canal and some by the Cape of Good Hope. The former mails via Marseilles are brought by the ships of the Messageries Maritimes Company which come every fortnight. Twenty-seven of these ships brought mails from Europe in 1930, and the average time each took was 38·5 days. The latter are carried by the Royal Mail Steamers to Durban and are there put on board of any steamer sailing for the Mauritius. Forty-three such ships brought us mails, and the mails were an average of 39·3 days coming from Europe. Altogether the tale of the ships carrying mails to the Mauritius was two hundred and one and that of the ships carrying them away was one hundred and eighty-nine.

The total number of articles, other than parcels, which passed through the Post Office in 1930 was 3,516,251.

The number of parcels received from abroad was 25,463 of a value of Rs. 1,110,483. There came from the United Kingdom 4,335 parcels worth Rs. 193,665 and 2,097 for cash on delivery worth Rs. 87,599. From India there came 814 worth Rs. 25,430, from France 13,689 worth Rs. 599,296, and from other countries 4,528 of a value of Rs. 204,493.

The number of parcels sent away amounted to 4,152 or a value of Rs. 168,989.

Money Orders for £15,952 were issued on the United Kingdom and Europe, for Rs. 450,238 on India, and for Rs. 26,831 on Ceylon.

The length of telegraph lines open for traffic is 381 miles and the number of messages dealt with during the year was 102,588.

Telegraphic communication with the world outside is kept up mainly by the Eastern and South African Telegraph Company, but there is also the Rose Belle Wireless Station which keeps a twenty-four hour service and works mainly with ships at sea and with Reunion. During the four months that cable communication with Reunion and Madagascar was broken, all messages to and from Europe were forwarded by the Wireless Station.

The public telephone system belongs to the Oriental Telephone Company.

There were 702 subscribers at the end of the year which was seven more than the year before but 22 per cent. less than at the end of the year 1927.

The Government owns a Departmental telephone system, the total length of which is 150 miles. It is joined up with the Company's system.

VI.—JUSTICE, POLICE, AND PRISONS.

Justice is administered in Mauritius by the Supreme Court which sits in the capital as a Court of Civil and Criminal Justice. It has the powers of the Court of King's Bench in England and of a Court of Equity.

In the nine districts, there are Magistrates' Courts which have a limited civil, criminal, and stipendiary jurisdiction.

In 1930, the Supreme Court dealt with 334 civil matters out of 483 which were brought before it, as against 414 out of 549 in the year before.

In 1930, nineteen persons were brought before this Court and tried on criminal charges and of them seventeen were convicted.

12,857 persons were tried in the Magistrates' Courts and by Benches of Magistrates, of whom 1,168 were acquitted or discharged by the District Magistrates, 11,549 were convicted, and 24 committed to the assizes. 44 were acquitted or discharged by the Stipendiary Magistrates and 72 were convicted.

The Magistrates have also held 170 Judicial Enquiries under the provisions of Ordinance 23 of 1888 as amended by Ordinance No. 25 of 1926.

Police.

Organization.—The Mauritius Police Force has its headquarters at Line Barracks in the city of Port Louis.

The Force is chiefly employed on the normal duties of a civil police force, but some of its members are instructed in the use of arms and mobilized periodically for training.

The officers of the Force are provided by appointment or transfer from other Police Forces or by promotion of local men from the ranks. The rank and file are recruited locally, and include natives of Mauritius, Rodrigues, India, and Seychelles.

Distribution.—The Force is divided into staff, Clerical Branch, Criminal Investigation Branch, Motor Traffic Branch, Training Depot, Harbour Police, District Police, Railway Police, Rodrigues Police, Mounted Police, and Band.

The District Police are distributed throughout the nine districts in fifty-two stations of three categories varying as regards numbers of personnel from one to thirty-five.

The Railway Police are under the control of the General Manager of Railways and its members are found from trained men of the general force.

The Rodrigues Police is staffed in like fashion and is controlled by the Magistrate of that dependency.

The Band is composed of local men and boys, with some musicians enlisted in India, who have been trained to a high standard of efficiency by a European bandmaster.

Crime.—The number of offences dealt with by the police in 1930 is slightly more than that of the previous year in minor offences and less than the average for the past ten years.

The percentage of undetected serious crimes is below the normal average and better than last year's figure.

The proportion of the crimes to the number of the people is lower than the figures for the past ten years.

Prisons.

Organization.—The Inspector-General of Police is also Superintendent of Prisons. He has a staff of European Chief Warders and Assistant Chief Warders, and the lower ranks of officers are enlisted locally.

Establishments.—There are two prisons in the Colony, the Port Louis Central Prison and the Beau Bassin Convict Prison. The Barkly Industrial School, a house of correction for young offenders, is also in his charge.

Port Louis Prison contains the offices of the Department, quarters for two chief warders, the female prison with accommodation for forty prisoners and two wardresses, and the male prison with separate cells for 154 prisoners.

Beau Bassin Prison contains separate cells for 756 male prisoners, and near by the Prison are Government quarters for the Superintendent and two chief warders.

Barkly Industrial School is the place of detention for young male offenders and has room for 200 boys. There are Government quarters for the officer in charge and six instructors or guards in the grounds.

Labour.—Short sentence prisoners are kept at Port Louis Prison. The men work chiefly at cleaning Government buildings and grounds, at carting supplies and stores, and at carpentry for various Government Departments. The women prisoners do laundry work and sew uniforms.

Beau Bassin Prison has workshops where prisoners are trained as tailors, boot and mattress makers, mat, blind, and brush makers, carpenters and cabinet makers, blacksmiths, and tinsmiths. There is also a bakery where bread is baked for all the Government hospitals, etc., and there are quarries where prisoners are taught the trade of stone-mason by an expert trade warder.

Large numbers of convicts are also employed outside the prison at agricultural work, repairing roads, building walls, and keeping the prison grounds and buildings in good order.

Population.—During the year 2,105 persons were sent to prison (an increase of 232 on the previous year); 2,000 of them were males and the remainder women. It is worthy of note that 86 of these were imprisoned for offences in connexion with illicit distillation.

The total number in custody on 31st December, 1930, was 529, against 476 on 31st December, 1929.

Juvenile Offenders.—The aim of the Barkly Industrial School is to teach the inmates agriculture or a useful trade. They are given the usual Primary School education and religious instruction and are kept under strict discipline while at work and friendly supervision while at play or rest.

The results as regards reformation and backsliding into crime compare favourably with those of similar institutions of the Borstal type elsewhere.

There are at present 62 boys at the School compared with 66 the previous year and 83 in 1928.

Female juvenile offenders are seldom committed to prison as room can usually be found for them at a convent but such cases as occur are dealt with at the Female Prison, Port Louis.

VII.—PUBLIC WORKS.

The chief public works in the Colony are the irrigation works, water works, sewage works of the town of Port Louis, buildings, and anti-malarial works.

Irrigation Works.—Government storage irrigation works were begun in 1914 according to plans made by Mr. C. M. Harriott, C.S.I., C.I.E., M.I.C.E., Chief Engineer, Public Works Department, Central Provinces, India, and Consulting Engineer for Irrigation to the Government of Mauritius. Since then the plans have suffered modification.

The La Ferme scheme for the irrigation of the south-west of the island, between Grand River North West and River Dragon, has been finished, and the Nicolière scheme, to irrigate land in the north, has been started. These two schemes cover a great deal of the fertile lands of the colony which are below the level which enjoys 60 inches of rain and cannot be properly cultivated without irrigation water.

The La Ferme scheme is a low-level reservoir of 2,500 million gallons and has brought about 3,700 acres of poor land under sugar-cane plantation since 1918.

The plans for the Nicolière scheme include a high-level storage reservoir at Midlands, of 4,400 million gallons capacity meant to fill a low-level reservoir at Nicolière of a capacity of about 250 million gallons.

The Midlands reservoir is being built. The Nicolière reservoir has been finished and although some land under cane cultivation is being irrigated from it, the full scheme will only be working when the Midlands reservoir is completed. Owing to financial conditions the plans have been curtailed.

Water Works.—The chief is the Mare-aux-Vacoas water supply which gives water to Plaines Wilhems and parts of Moka, Black River, and Port Louis Districts. Then there are the Port Louis water supply for the town of Port Louis and the District water supplies for the Districts of Pamplemousses, Rivière du Rempart, Flacq, Grand Port, Savanne, and the other parts of Moka and Black River.

The Mare-aux-Vacoas water supply is obtained from a storage reservoir, the Mare-aux-Vacoas, 1,825 feet above the level of the sea. It was built to hold 1,167 million gallons which has been increased to 1,641 million gallons by raising the height of the dam; its catchment ground is entirely protected by forest lands and the whole of the water is passed through sand filters at the filtering plant at La Marie. Two additional service reservoirs have been built.

The old four-inch main from Petite Rivière to Port Louis which had been replaced by an emergency line of eight-inch and twelve-inch pipes to supply Port Louis after the flood of December, 1929, has now been replaced by a permanent eight-inch and seven-inch main, and the supply of Mare-aux-Vacoas water to Port Louis thereby increased from about 150,000 gallons to about 900,000 gallons in every twenty-four hours. To make this possible an additional storage reservoir had also to be built at Petite Rivière.

The Port Louis water supply is obtained from the Grand River North West at a distance of about four miles from the town and at a level of 250 feet. This supply was under the charge of the Municipality of the town until 1922 when it was handed over to the Public Works and Surveys Department.

The dam in the river was burst by the flood of December, 1929, and much of the pipe leading from it was also swept away.

After these things Port Louis was given water partly from the Mare-aux-Vacoas and partly from the Pailles Canal which was turned aside for this purpose. Later on, water was pumped from Grand River North West to give Port Louis its full supply, until such time as the works could be restored.

The water to Port Louis is now being chlorinated and this has proved satisfactory.

The water supply to the villages and hamlets in the Districts comes from twenty-seven different springs or streams. These supplies are not filtered, but they are generally guarded by reserves of forest in the land wherein they have their sources.

Several of these water supplies which had suffered harm from the flood have been set right.

Sewerage of Port Louis.—The sewerage works were begun in 1900; in 1922 the scheme was revised by Messrs. Mansergh and Sons, and the works are now being carried out on the lines of their report.

A large portion of the town of Port Louis now has the water carriage system. The works are in full progress.

No anti-malarial works of importance were carried out during the year under review.

Granary.—The Granary was practically finished by the end of the year, but could not be operated as the works for supply of electric power had not been completed.

VIII.—PUBLIC HEALTH.

The estimated total population on 31st December, 1930, was 404,458* (General population 125,315 and Indian population 279,143) which shows a decrease of 1,091 on the previous year's figures and an increase of 27,973 on the census figures of the 20th of May, 1921.

The births during the year numbered 12,793, and the deaths 14,341. The birth-rate in the General population was 37·3 and in the Indian 29·2 in a thousand, as against 37·5 and 32·5 respectively for the year before. The death-rates per thousand in the two groups of the people for 1930 were 34·8 and 35·6 as against 28·4 and 31·7 respectively for 1929.

The highest death-rate for 1930 is shown in Pamplemousses (48·3) and the lowest in Plaines Wilhems (25·6).

The death-rate for the whole Colony was 35·4 per thousand compared with 30·7 in 1929, and the rate for Port Louis was 43·3 as against 35·0 in the previous year.

It will be seen from these figures that the prophecy made last year of a rise in the death-rate has been fulfilled. In addition to widespread poverty, the general floods of 1929 caused malaria to increase and multiply and also caused an increase in ailments of the respiratory tract.

The town of Port Louis, suddenly shorn of its normal water supply in the manner described above, suffered from an outbreak of typhoid fever which caused 179 notified cases and 45 deaths from 7th February to 15th April. In the restoration of the supply, arrangements were made to chlorinate the filtered water and, for the rest of the year, chlorinated water was supplied.

Whooping-cough swept through the country districts during the last three months of the year and caused a large number of deaths among children. The disease is one not generally thought of as fatal and its results on this occasion may be taken as giving an unfavourable indication of the general condition of the people. It is not notifiable and accurate figures of the cases cannot be given, but reports from Government Medical Officers showed that it caused many deaths.

The effects of the ravages of the hookworm are being made worse by the increased stress of poverty under which the casual worker in the fields is labouring. Many more cases of lack of blood due to hookworm are being met, and there are many more severe cases of this kind seen than a few years ago. The Director of the Medical Department is of the opinion that malaria, hookworm disease, and poor feeding are the chief causes of the greater number of deaths now taking place.

---

* The 1931 census figure is 393,503.

There has been no plague, cholera, smallpox, yellow fever, or typhus fever in the Colony during the year.

IX.—EDUCATION.

Primary education is not compulsory, but it is given free by Government and State-aided schools which are open to all children of the Colony.

At the close of the year there were 147 primary schools : fifty-six of them were Government, and ninety-one schools assisted by Government grants. Of the latter sixty-two were Roman Catholic, nineteen Church of England, two Presbyterian, five Hindoo, and three Mohammedan. The average attendance was 22,394 as compared with 22,854 in 1929. The number of Indian children on the roll was 16,988, of whom 13,700 were boys and 3,288 girls. The number of girls taught in primary schools was 11,504 as against 10,870 in 1929.

Six junior scholarships and six exhibitions which give the holders free teaching at the Royal College for a period of about seven years are awarded to primary school boys every year on the results of a competitive examination. The winners of a scholarship receive money payments at the rate of Rs. 120 a year as well.

Two hundred and fifty-five candidates sat for the Junior Boys' Scholarship and Exhibition Examination held in December, 1930, compared with one hundred and ninety-five in the year before.

A Senior Bursary Class for primary school boys was set up in 1926. The course of study in this class lasts two years, at the end of which four scholarships and four exhibitions which may be held at the Royal College for a period of about five years are also given on the results of a competitive examination each year. At the examination held in December, 1930, there were 124 candidates as against 60 in the year before.

Six scholarships to be held in an aided secondary school for five years are given each year to primary school girls on the results of a competitive examination. This allows the winners to follow their studies as far as the Cambridge School Certificate examination. One hundred and sixty candidates sat for the Girls' Scholarship examination held in December, 1930, compared with one hundred and sixty-six in the year before.

Technical instruction is provided in three principal centres. The first of these is the Government Technical School in Port Louis, at which about fifty full-time boys of an average of 16 years, and about two hundred boys from the primary schools in Port Louis of an average age of 13 years are taught mechanical drawing, and are given manual instruction in woodwork; secondly, the Government Industrial School at Beau Bassin, where about one hundred and fifty boys from the primary schools in Lower Plaines Wilhems are given manual instruction in woodwork; and thirdly, the Government Trades School, at Bell Village, where there are about eighty full-time apprentices of an average age of 18 years. Some half of them are carpenters and the rest are masons, blacksmiths, or tinsmiths. Woodwork classes on a more modest scale are also held in a few aided primary schools and make satisfactory progress.

There are now twenty-eight school gardens in the primary schools which are regularly inspected by officers of the Agricultural Department who give advice on their proper cultivation. Nature study now forms one of the subjects of examination for Teachers' Certificates.

In addition to the College of Agriculture, training in agriculture is also given at the Farm School where there were fifteen students during the year, nine of whom were in the first year and six in the second year. The course, which is elementary, covers a period of two years after which time the best boys usually find openings in the Agricultural Department or on estates. The standard of education of many of the candidates who apply for admission to this school is distressingly low and the Director of Agriculture reports that the average candidate shows little knowledge of or interest in the chief industry of his country.

Secondary Education.

There are nine aided secondary schools, two of which are for boys only and the others for girls, with a small number of boys in the preparatory and junior classes.

The total number on the roll was 715 boys and 720 girls, while the average attendance was 586 and 588 respectively, as compared with 685 boys and 679 girls on the roll for the previous year, with an average attendance of 606 and 608 respectively.

Six boys and twelve girls belonging to these schools and fifty-six boys and four girls from outside obtained passes in the School Certificate Examination held by the University of Cambridge, and three boys in the Secondary Schools and sixteen boys and two girls outside obtained passes in the Junior Cambridge Examination.

The higher education of boys is chiefly carried out at the Royal College.

The staff at Curepipe, where is the College proper, consists of the Rector, the Senior Master, eleven Masters with British University Degrees, and eleven Assistant Masters; at Port Louis, there is the Royal College School with a Headmaster, two Masters, and eight Assistant Masters. The College has well fitted chemical and physical laboratories.

To gain entrance to the College it is necessary to pass an entrance examination or to win a Primary Schools' Scholarship or Exhibition. The boys are drawn from all classes and races in the Colony, and they range in age from ten to twenty years.

The year opened with three hundred and forty-eight pupils on the roll of the Royal College, and, on 31st December, the number was three hundred and thirty ; the average attendance for the year was two hundred and ninety-four. At the Port Louis School the number of pupils on the roll was one hundred and ninety-seven at the beginning of the year and, on 31st December, 1930, the number was one hundred and seventy-eight ; the average attendance for the year was one hundred and eighty-one.

Boys are taught classical and scientific subjects, Latin being compulsory and Greek optional and alternative with more advanced natural science in the Entrance Lower and Upper Middle Classes. The boys are divided into classical and modern sides in the Cambridge School Certificate Class.

Two scholarships, one on the classical side and one on the modern, are given annually in the highest class, which is examined by the Syndicate of Examiners of the Cambridge University. These scholarships are of the value of £1,000 (with a temporary increase of 30 per cent.) and with first-class passage allowance to and from England. They may be held for four or five years at any British University, or any Scientific or Technical Institution of the United Kingdom.

The Laureates and those boys whose parents are well-to-do, sometimes go to Europe to take up a profession, but they usually return to Mauritius afterwards. Of the others, a fair number obtain employment in the Government ; some, after a course of studies at the College of Agriculture go to sugar estates, some join commercial firms, but a large number cannot obtain suitable employment.

The ambition of many parents of the artisan class and even of the labouring class seems to be to send their sons to the Royal College that they may obtain the Cambridge School Certificate and join the Civil Service. In this way many more boys are being educated to this level than can be reasonably expected to obtain suitable employment in Mauritius.

The games at the College are organized by the Sports Club. Rugby and Association football are played, together with hockey, and the boys reach a very good standard. In athletics, the records achieved compare very favourably with those of English schools. An annual boxing tournament is held and cross-country running is becoming more and more popular.

Higher agricultural education is carried out at the College of Agriculture. The training of chemists for work in sugar factories was started by the late Mr. P. Boname, Director of the former "Station Agronomique." When the Department of Agriculture replaced the old "Station Agronomique" the course of training given was extended and a small School of Agriculture formed. This School gave special attention to the teaching of sugar technology.

The present College of Agriculture was founded in 1923. The courses of instruction given were greatly extended in order to give scientific training not only to sugar chemists but also to field and factory employees. A laureateship of Rs. 16,000 was given to the best graduate each year, to allow of specialization in Europe for a further two or three years. In 1929 the College courses were reorganized and the period of studies reduced from three to two years, while at the same time the standard of the Entrance Examination was raised. The regular award of the laureateship has now been discontinued.

Since the College of Agriculture opened in 1923, twenty-six students have qualified for the Diploma, of whom twenty-four are now occupying various posts and the other remaining two unemployed. This problem of unemployment is one that will have to be closely watched and the number of graduates limited as far as possible to the needs of the Colony as the prospects of employment elsewhere are small.

X.—LANDS AND SURVEYS.

The only published map of the island is the one-inch-to-the-mile map issued by the Geographical Section of the General Staff at the War Office.

No important grants of land are now made and the Crown lands which amount to about 79,355 acres are mostly managed as forest lands.

During the year, only four small sales of land, of the total extent of three acres forty-two were made.

The amount of land leased is as follows :—

	Acres.
Bare lands	3,165·15
Pas Géométriques...	6,735
Docks and patent slips	26·06
Islets adjacent to the coast	3,018·58
Barachois	677·89

The terms " Pas Géométriques " and " Barachois " are explained in Chapter III under Forestry and Fisheries respectively.

The value of land in Mauritius varies from Rs. 20 to Rs. 3,000 an acre except in townships where it may reach Rs. 20,000. Agricultural lands are worth from Rs. 300 to Rs. 3,000 an acre.

XI.—LABOUR.

During the French occupation the labour supply of the island consisted almost entirely of slaves brought from East Africa and Madagascar with a few from the Guinea Coast and from the French establishments in India.

Slavery continued during the early years of the British occupation but was abolished in 1835, after which the freed slaves soon gave up their agricultural work.

From 1842 Indian labour was introduced under the sole agency of the Government of Mauritius, until 1910 when the Indian Government forbade the departure of indentured labour from Indian ports. In 1923, however, that Government gave permission for 1,500 labourers to be recruited, but only 732, together with their dependants, or 1,395 in all, arrived in that and the succeeding year. It is estimated that on the 31st December, 1930, there were 13,613 Indian immigrants remaining in the Colony.

Labour on the estates is mainly composed of the descendants of the Indian immigrants. It is reckoned that there are between 70,000 and 72,000 of them, but it will not be possible to know the exact number until the figures of the 1931 census are ready ; the 1921 census showed that there were 69,034.

Labourers are employed by the month or by the day. The hire of the labourer who works by the day is 50 to 75 cents for a day's work during the season between the crops and 75 cents to Rs. 1·25 in harvest time. Women receive from 30 to 45 cents a day, and boys, locally called " chokras," 25 to 30 cents per day. The estates engage fewer labourers for a monthly hire each year, but those who are engaged for this period receive, in addition to free housing and medical care, wages in cash and rations in kind according to the following averages:—a man has Rs. 10·50 each month in cash and a weekly ration consisting of 23½ pounds of rice and 2 pounds of dhall ; he also receives each month 1½ pounds of oil and 1½ pounds of salt. A woman gets Rs. 5·50 per month in cash, 12 pounds of rice and 6 pounds of dhall per week and she receives monthly one pound of oil and one pound of salt. The monthly hire of a " chokra " is Rs. 3 in cash and 9½ pounds of rice and 2½ pounds of dhall per week. His monthly issue of oil and salt is three-fourths of a pound in each case.

The wages, rations, and other privileges received by a man is reckoned as being worth about Rs. 25 a month.

The fall in the price of sugar has brought about a great reduction in the wages which used to be paid for labour generally, but this is compensated by the decrease in the cost of the chief articles of food and clothing.

Of recent years the artisan class has increased considerably, but on the other hand as a result of centralization a number of engineering shops and sugar factories have closed down with the result that there are not sufficient openings available for skilled men. Employment on sugar estates in Portuguese Africa has been found for a number of men and thirty-eight emigrated in 1929 under contract of service for one or two years.

XII.—MISCELLANEOUS.

It remains in this chapter to chronicle such Ordinances as have not been mentioned above. There were in all 40 Ordinances passed during the year, of which the following are of sufficient importance to notice here :—

No. 5.—The Census Ordinance, 1930, permitted of a numbering of the people to be made in the Colony and its dependencies during the year 1931 on a day fixed by Proclamation.

No. 7.—The Registration of United Kingdom Designs Ordinance, 1930, provides for the registration in the Colony of designs which have been registered in the United Kingdom, provided that application for registration is made within three years from the date of registration of the design in the United Kingdom. The rights given in the Colony continue only over the period of those granted in the United Kingdom.

No. 18.—The Registration of United Kingdom Trade Marks Ordinance, 1930, confers similar rights in respect of the registration in the Colony of trade marks registered in the United Kingdom.

No. 21.—The Succession and Registration Duties Amendment Ordinance, 1930, amends the law relating to succession and registration duties. A new scale of duties is enacted which provides for a system of taxation based on the French Law of the 26th August, 1926. New provisions are also made to check disguised " donations *inter vivos*."

No. 28.—The Veterinary Surgeons Amendment Ordinance, 1930, amends the main Ordinance of 1923 in order to permit any person who is a fellow or member of the Royal College of Veterinary Surgeons or who possesses a veterinary qualification recognized by the Governor in Executive Council, to practise veterinary medicine in the Colony.

Cost of Living.

The steady fall in the selling price of the more important foodstuffs has been an outstanding feature during the year. Rice, which is the staple food of the Colony, has fallen from 126 to 103 on 1914 as base. Dhall fell from 121 to 67 and other grains such as lentils and beans from 121 to 95. Flour dropped from 183 to 97. Olive and pistachio oil did not show much pronounced drop. They were 92 during the first quarter and 80 during the last. Lard increased from 168 to 220. Milk and meat showed some fluctuations but without a definite tendency towards a drop.

Articles of clothing are reported by the statistician to have increased from 161 during the first quarter to 194 during the last, but in the mean for the year the index for the cost of living was 150·3 or rather less than the figure for 1929 which was 152·4.

W. H. INGRAMS,
Assistant Colonial Secretary.

CHAPTER I.

GEOGRAPHY, INCLUDING CLIMATE, AND HISTORY.

The island of Mauritius is of volcanic origin. The dependencies comprise a large number of small islands between 230 and 1,200 miles away. The largest, Rodrigues, which lies 350 miles to the north-east of Mauritius, had a population of 8,202 in April, 1931, whilst that of the lesser islands was 1,457.

Mauritius is situated just within the tropics and enjoys a climate free from extremes of weather except that tropical cyclones at times cause considerable damage to crops, but rarely to buildings. For a great part of the year south-east trade winds, heavily laden with moisture, blow gently over the island tempering the tropical heat. The rain falls mostly in showers. Particularly in the summer months, December-March, the south-east winds are replaced by the light variable winds of the doldrums, which cause discomfort to Europeans, although the temperatures are not high, whereas in the winter months in the residential districts at altitudes of 1,300 to 1,800 feet the temperature may fall to 50° F. The yearly rainfall varies from 30 inches on parts of the coast to 150 inches in the upland regions.

The Mascarene Archipelago was probably known to Arab navigators at an early date and was no doubt visited later by the Malays who colonized Madagascar in the 15th and 16th centuries.

The Portuguese rediscovered it in 1507. They only used the island as a port of call for repairs and supplies, and let loose pigs, goats, deer, and monkeys. It seems probable that rats were introduced in this period as they were a serious pest to the succeeding Dutch colonists.

The Dutch took possession from 1598 and were employed chiefly in exploiting the ebony. They attempted to cultivate sugar-cane, but were frustrated by rats. Although they denuded the forests of ebony they later added to the economic resources of the island by introducing useful trees, plants, and cattle. Negroes were imported for labour, and, as escape into the forests was easy, bands of runaway slaves called Maroons were formed. The combination of the rats and this dangerous population of mixed, but mostly African, origin uncontrolled by any tribal or political system proved too much for the Dutch who abandoned the island in 1710.

The French annexed it in 1715, and by 1722 the population, apart from Maroons, amounted to 160 persons, soldiers, colonists, and slaves. Mahé de la Bourdonnais was chosen to develop the Colony and arrived in 1735. In order to make the island self-supporting, he introduced manioc and maize from Brazil and promoted the extension of agriculture by introducing products from all parts of the tropical world. He especially encouraged the cultivation of sugar. He substituted animal draught for carriage by slaves, and to ensure an adequate supply of labour he brought slaves from Africa. From an encampment of straw huts he built up Port Louis into a town of public buildings, private houses, stores, shops, and barracks. La Bourdonnais laid the foundations of modern Mauritius.

In 1755 large herds of cattle were brought in from Madagascar. Pierre Poivre, Intendant in 1767, established the cultivation of cloves and nutmegs.

In 1810, when Mauritius became British, the population had grown from 160 to about 80,000, of whom 65,000 were slaves. Sugar was then, as now, the principal product, and, when in 1825 the duty of ten shillings a hundredweight, levied on Mauritian sugar entering England to protect the West Indian sugar, was remitted, cane plantations immediately developed to a large extent, fresh land was put under cultivation, roads were opened, and steam power was applied to mills. From 18,000,000 pounds the output of sugar rose to 41,000,000 pounds in 1827, and increased annually afterwards.

On the abolition of slavery, 68,613 slaves were freed, and the colonists received £2,112,632 in compensation.

In 1842 Indian immigration at the rate of 6,000 a year was approved, and this resulted in an entire change of the balance of the population.

After a terrible outbreak of malaria in 1866 the wealthier inhabitants of Port Louis moved to higher parts of the island. As a result the country towns expanded considerably and the roads were improved and extended. The railway, begun in 1859, became very popular. One of the most striking features of the progress made has been the social and economic development of the Indians who to-day own and cultivate more than two-fifths of the whole area under sugar-cane. At the end of 1930 nearly half the investors in the Government Savings Bank were Indians, and out of a total of nearly Rs. 5,500,000 deposited there, over Rs. 2,300,000 belonged to Indians. Besides becoming gardeners and taxi-drivers, many Indians have taken to raising cows, goats, fruits, and vegetables, and the supply of these essential foodstuffs is almost entirely in the hands of Indians. The section of the population they have displaced centres more and more in the towns, forming the clerk and artisan class.

From 1902 to 1909 the island suffered from severe financial depression owing to the low price of sugar. Matters were aggravated in 1902 by an outbreak of surra which caused great havoc among the draught animals, and necessitated the introduction of mechanical transport.

A Royal Commission was appointed in 1909 to investigate the resources and administration of the island and reported in 1910.

About 1911 the destructive beetle *Phytalus Smithii* was discovered in the sugar-canes and at the present about four hundred millions of the insects are destroyed every year.

The great rise in the price of sugar which took place during and after the War brought prosperity, and both the Government and the general community were for a time far more prosperous than ever before.

As a result, a number of important schemes were inaugurated, including the amelioration of sanitary conditions, the improvement of the harbour, the extension and improvement of water-supplies both for domestic purposes and for irrigation, the improvement of the railways, and the extension of education.

Unfortunately, however, from 1921 onwards the price of sugar fell, and the greatly lessened revenues of the Colony had to provide for the carrying on of many works undertaken in better times. In 1929 the state of the sugar industry was so bad that Sir Francis Watts was appointed, at the Colony's request, to visit the island, and to report on the economic situation. The Home Government was, however, unable to approve of his recommendation that a subsidy should be given to sugar beyond the preference granted on sugar imported into the United Kingdom, though a loan was made to the planters from local funds. Despite this loan, however, and an earlier loan granted in 1929, the condition of the sugar industry at the end of 1930 was extremely serious.

CHAPTER II.

GOVERNMENT.

The Government of Mauritius is vested in a Governor, with an Executive Council of four ex-officio members, and a Council of Government.

The Council of Government was first established in 1825. It consisted of the Governor and four officials.

The next year, the Constitution was amended, and a Council, including unofficial members, was introduced. This Constitution provided for a Council of Government composed of certain officers of the Crown and of an equal number of other persons to be taken from the chief landed population and principal merchants of the Colony; seven officials and seven unofficials were accordingly appointed.

In October, 1885, the Constitution was given its present form. The Council of Government is now composed of the Governor, eight ex-officio members, nine members nominated by the Governor, and ten members elected by the population: of the latter, two represent the town of Port Louis, the capital of the island, and the remaining eight the rural districts. At least one-third of the nominated members must be persons not holding any public office. Debates in the Council may be either in English or French.

The number of registered electors on 31st December, 1931, was 10,497. Every male person is entitled to be registered as a voter, who is qualified as follows :—

(1) Has attained the age of 21 years;

(2) Is under no legal incapacity, and is in possession of his civil rights;

(3) Is a British subject by birth or naturalization;

(4) Has resided in the Colony for three years at least previous to the date of registration, and possesses one of the following qualifications :—

(*a*) Is the owner of an immovable property of the annual value of Rs. 300;

(*b*) Is paying rent at the rate of at least Rs. 25 a month:

(*c*) Is the owner of movable property within the Colony of the value of at least Rs. 3,000;

(*d*) Is the husband of a wife, or the eldest son of a widow, possessing any one of the above qualifications;

(*e*) Is in receipt of a yearly salary of at least Rs. 600, or of a monthly salary of at least Rs. 50; and

(*f*) Is paying licence duty to the amount of at least Rs. 200 a year.

The ordinary duration of the sessions of the Council of Government is eight months, from May to December, and meetings are held on alternate Tuesdays or oftener when necessary. The life of a Council is five years.

The town of Port Louis is administered by a Municipality, an institution which dates as far back as 1790. It was then called "Municipalité du Canton de Port Louis" and was instituted, as were other local Municipalities by the "Assemblée Coloniale." These institutions are mentioned in the law of the constitution of the Ile de France promulgated by the "Assemblée Coloniale," on 21st April, 1791. Sixteen prominent men of the town acted as Councillors of the "Municipalité du Canton de Port Louis" and were denominated the "Conseil des Notables." The "Conseil des Notables" was dissolved in 1792. It was reconstituted at the end of the 18th century under the denomination of the "Conseil des Communes" and was abolished on 10th February, 1820.

The present Municipal Corporation dates from 1820, the first elections taking place at the Masonic Lodge "La Triple Esperance" from 21st to 23rd February. On 24th August, 1925, the Municipal Corporation celebrated the 75th anniversary of its foundation.

The administration of the other principal townships of the Colony, viz., Curepipe, Beau Bassin and Rose Hill, and Quatre Bornes is vested in Boards of Commissioners appointed annually by the Governor. These Boards are empowered to take measures within the prescribed limit of the township for the making, maintenance, etc., of roads, sewers, bridges, canals, and other works of public utility; for the prevention of fires; and for the proper paving and lighting of the town etc., provided that no such arrangements contravene the existing sanitary rules and regulations made by the sanitary authorities.

In addition to the Township Boards, District Boards are appointed annually for each district. These Boards are empowered to pass regulations for the making, maintenance, and improvement of branch roads and footpaths, and for the levying of taxes.

CHAPTER III.

POPULATION.

The population is divided for statistical purposes into the general population, i.e., Europeans and descendants of Europeans and people of African and mixed origin; the Indian population, i.e., Indian immigrants and their descendants; and the Chinese population, i.e., Chinese immigrants and their descendants. The Indian population is much the largest section.

The estimated total population of the island on 31st December, 1931, was 391,044 distributed as under, which shows a decrease of 2,279 on the figures of the census held on 26th April, 1931, viz.:—

General population	116,502
Indian population	265,796
Chinese population	8,746

The geographical distribution of the population is shown in the following table:—

Districts.	Census Population, 26th April, 1931.					Population on the 31st December, 1931.			
	Area in square miles.	General population.	Indian population.	Chinese population.	Total.	General population.	Indian population.	Chinese population.	Total.
Port Louis...	16	25,556	24,603	4,276	54,435	25,749	24.398	4,143	54,290
Pamplemousses	69	6,432	30,000	415	36,847	6,390	29,482	427	36,299
Riviere du Rempart ...	57½	5,208	25,274	310	30,792	5,240	24,958	320	30,518
Flacq	115	9,844	42,202	594	52,640	9,848	41,536	598	51,982
Grand Port	101	11,868	36,135	616	48,619	11,878	35,498	631	48,007
Savanne	93½	6,279	24,456	366	31,101	6,263	24,080	378	30,721
Plaines Wilhems	78	40,282	53,392	1,669	95,343	40,845	43,490	1,557	95,892
Moka	89	5,077	23,761	445	29,283	5,106	23,704	455	29,265
Black River	101	5,205	8,826	232	14,263	5,183	8,650	237	14,070
Total	720	115,751	268,649	8,923	393,323	116,502	265,796	8,746	391,044

The births during the year numbered 11,941 and the deaths 15,467. The birth-rate in the general population was 37.6, in the Indian population 27.1, and in the Chinese population 21.9 in a thousand. The death-rates per thousand in the three groups of the people for 1931 were 34.9, 41.7, and 18.0 respectively.

The highest death-rate for 1931 is shown in Black River, 47.2, and the lowest in Plaines Wilhems, 25.8, in a thousand.

The death-rate for the whole Colony was 39.1 and that for Port Louis 38.6 in a thousand.

The marriages during the year numbered 1,236 as compared with 1,277 in 1930. The marriage-rate of the population in 1931 was 3.1 in a thousand.

The number of deaths of infants under one year was 2,425 as against 2,527 in 1930; the deaths of infants representing 15.7 per cent. of the total number of deaths for the year. The infantile mortality rate was 203 per 1,000 births.

The arrivals in the Colony amounted to 3,662 in 1931 including discharged seamen, and the departures from the Colony numbered 4,452 including engaged seamen as compared with 3,918 and 3,461 respectively in 1930.

Note.—The birth and death-rates for 1931 cannot be compared with those of 1930 in the 1930 Report, as the rates for that year were calculated on a population over-estimated by about 10,000 with respect to the census population.

CHAPTER IV.

HEALTH.

The medical and sanitary organization of the Colony is embodied in the Medical and Health Department. The Department administers three central hospitals, five district hospitals, a mental hospital, and a hospital for the care of lepers. The Department employs 27 whole-time Government Medical Officers of various grades with the necessary subordinate staff.

Each district of the Colony, with the exception of Black River which is near the large Civil Hospital, Port Louis and the Victoria Hospital, Quatre Bornes, is provided with a hospital for the care and treatment of the sick poor of the district. The District Medical Officer is a whole-time Government official in charge of the hospital and he is also the Poor Law Officer of the district. Supplementing the hospital, there is in each district a variable number of dispensaries in charge of resident dispensers which are visited at regular times by the Government Medical Officer for the purpose of holding consultations for those of the poorer classes who attend. The Government Medical Officer is also the public vaccinator of the district.

Hookworm disease, which is assuming great importance in the Colony on account of its seriously debilitating effects on agricultural labour, is treated by a special branch which was originally built up by the International Health Board of the Rockefeller Foundation during their three-year period of co-operation with the Government of Mauritius in devising measures for the relief and control of hookworm infection. The Hookworm Branch treats some 30,000 patients annually, by systematic work district by district.

General sanitation is regulated by a code of elaborate sanitary enactments operated through a staff of Medical Officers trained in sanitation assisted by the appropriate subordinate officers.

No material change was made in the organization during the year. The death-rate (39.1 in a thousand) has again increased. This has been partly due to the carry-over from 1930, when conditions were bad, following the extensive flooding which took place. But in addition to this carry-over the cyclone of March was followed by a very unhealthy state of affairs. Owing to the long duration of the storm extensive floods occurred and places which would have escaped serious inundation in a cyclone of short duration were flooded on this occasion. A widespread outbreak of malaria was the result. In addition, malaria, and lung and intestinal diseases increased.

Steps were immediately taken to reinforce the officers in charge of medical relief in the districts. A number of private practitioners were engaged temporarily and provisionally for some months.

It is fortunate that the water-supplies were not damaged by this storm. The Port Louis chlorinators stayed at their posts and carried on the process without interruption.

The only satisfactory feature of the cyclone was the persistence of fine weather after the storm had passed. This enabled wrecked huts and houses to be rebuilt and general repairs effected. Ultimately the fine weather became detrimental as it prevented the damaged cane from making the recovery it might otherwise have made.

CHAPTER V.

HOUSING.

The housing of the wage-earning population of the Colony may be considered in three categories: (*a*) housing on estates, (*b*) housing in rural areas not estates, (*c*) housing in towns.

Estate labourers are adequately housed as a rule. They are accommodated in lines, or rows of huts constructed either of stone or of wattle and daub, with roofs of thatch or corrugated galvanized iron. Thatch is the more common. Adequate provision is made for the ventilation and lighting of these quarters, but ventilation and lighting appear generally to be disliked by the occupants. At night, every accessible crevice is carefully closed, though the presence of ridge ventilation in many cases assures reasonable change of air in spite of the efforts of the occupants to exclude fresh air from their sleeping apartments. When the dwelling is thatched the problem of assuring adequate ventilation is difficult.

The lines must be kept clear of weeds, and all houses are required to have a clear space of at least ten feet round them.

Each camp has adequate latrine accommodation, and a supply of wholesome water is laid on, though in many cases the labourers prefer to use the polluted water of streams or nearby irrigation channels for their domestic purposes.

As a general rule, the lines are not lit at night. This is scarcely necessary as the occupants retire shortly after sunset.

The housing in rural areas not estates is fairly satisfactory. It is in the labouring class of the population that one can very often see racial difference in the choice of building materials. The negro will build an untidy-looking shack of old timber, scrap pieces of wood, petrol cases, and petrol tins hammered out flat, whereas the Indian will construct a very neat hut of wattle and clay or cowdung, on a stone plinth, furnished with a small verandah, and roofed with a compact thatch. The amenities of life are few. There is seldom water laid on to the premises. Unless the occupier has dug a well, he generally has to carry his water from the nearest standpipe which may be some five hundred yards away.

In the towns conditions are, as a rule, unsatisfactory. The chief features about the town housing are overcrowding and overbuilding; overcrowding is caused by poverty and overbuilding arises as a necessary consequence of overcrowding. Many, if not most, families of the labouring classes live in one room. Fortunately, children are seldom confined to the house on account of inclement weather and they can pass most of their time in the open air. Rickets is very uncommon in consequence, as are other consequences of overcrowding in places where the climatic conditions are more severe either on account of excessive cold or excessive light and heat.

CHAPTER VI.

PRODUCTION.

Agricultural Conditions in 1931.

General.—An extraordinarily violent cyclone visited the island on 5th March, and continued, unabated, for three days; the damage to crops and buildings was considerable. The Imperial Government has now guaranteed a loan of £750,000 to the Colony repayable in 40 years. Of this amount a sum of £500,000 has been earmarked to sugar growers and the balance to the Government for public purposes.

Irrespective of the cyclone, the year was, from a meteorological point of view, a favourable one. Rainfall and temperature figures as recorded at the Department of Agriculture, Reduit, are given in the following table :

Month and Year.	*Air Temperature. °C.*	*Departure from normal. °C.*	*Rainfall. m/m.*	*Departure from normal. Per cent.*
1930.				
November	21·5	— 0·1	66·5	+ 26
December	23·3	0·0	162·8	+ 19
1931.				
January	24·4	+ 0·4	450·6	+ 70
February	24·3	+ 0·1	528·4	+ 91
March	24·1	+ 0·5	1,155·0(cyclone)	+250
April	23·3	+ 0·7	148·3	+ 34
May	20·8	+ 0·2	83·8	— 16
June	20·5	+ 1·9	60·1	— 32
July	19·0	+ 1·0	35·2	— 50
August	18·5	+ 0·6	42·0	— 21
September	19·5	+ 0·8	35·0	— 25
October	20·4	+ 0·6	20·8	— 59
November	22·2	+ 0·5	160·5	+ 214
December	23·7	+ 0·4	46·0	— 66

The damage done by the cyclone was heaviest in the central and southern localities of the island, and the average reduction in the sugar crop on this account was estimated at a minimum of 30 per cent. for the whole island.

The Sugar Industry.

Sugar Production.—The actual production of sugar for 1931 was 164,000 metric tons, distributed according to the various districts and compared with previous years as follows :—

Sugar Production in Thousand Metric Tons.

Districts.	*1931.*	*1930.*	*1929.*	*1928.*	*1927.*
Pamplemousses and Riviere du Rempart.	41·81	43·00	54·68	59·55	52·72
Flacq...	27·91	37·81	38·91	41·17	33·21
Moka	20·83	32·10	35·97	34·76	30·88
Plaines Wilhems ...	11·64	14·62	15·66	16·40	15·06
Black River ...	6·29	9·81	9·22	9·72	9·03
Savanne	27·01	37·09	36·41	41·41	35·88
Grand Port ...	28·52	46·53	47·18	50·42	41·22
Total	164·01	220·96	238·03	253·43	218·00

Factory Work.—The extraction of sugar per cent. of weight of cane harvested was, in 1931, 10.61 as compared with 10.92 in 1930.

The proportion of raw sugars was 85 per cent. of the total output ; granulated whites (vesous) were 14 per cent. while low sugars were about 1 per cent.

Area under Cane.—Of the total cane harvested, 47 per cent. belonged to estates with mills, and the balance to estates without mills and to small planters. This balance is made up as follows :—Estates without mills, mostly non-Indian, in the proportion of about 23 per cent., and small planters, mostly Indian, in the proportion of 30 per cent.

At the end of 1931 the total area under sugar-cane approximated to 134,915 acres distributed as follows :—

	Acres.
Estates with mills	55,569
Estates without mills	39,416
Independent planting	39,930
Total ...	134,915

The proportion of cane lands cultivated by Indians entering into the above figures is as follows :—

	Acres.
Estates (with or without mills)	10,000
Small planters	52,826
Total ...	62,826

The majority of sugar estates are staffed by Europeans or persons of European descent. Staff employees on all estates number about a 1,000. Many of the day labourers employed in agriculture are themselves owners of small plots of land cultivated in canes ; the number of these men is about 13,000 and the average holding per head about 1½ acres.

The method whereby cane lands have passed, and are still passing, into the hands of the Indian peasants, is locally termed " morcellement " or parcelling-out system. A large estate subdivides a portion of its domain into a number of small holdings which are occupied by the Indian peasants; they cultivate their plots under the estate's control and often with the estate's financial help ; but they are bound to sell their cane to the estate factory. After a certain term of years the plot of land is paid for and the occupier becomes the legal owner. This method has been extensively practised in Mauritius and has produced a considerable increase in the cultivated area of the Colony.

Disposal of the sugar.—As in previous years, the bulk of Mauritius sugar went to the United Kingdom ; the local consumption amounts to about 8,000 tons annually. The sugar market in 1931 was the lowest on record for the past 50 years, the average net price obtained per 50 kilos of sugar being only Rs. 5.90.

Economic condition of the Industry.—As a result of the strained economic conditions very considerable reduction in expenditure on estates has been effected. In consequence the cost of production has been brought down to a low figure as compared with figures of former years.

Labour.—Expenditure on labour is one of the principal items which has undergone restriction. The total population of Mauritius according to the 1931 census was 393,238. Agricultural labourers number 72,000 of whom 14,730 are females. Of the male workers 53,154 belong to the Indian population, and of the female 14,229. Conditions of employment are reviewed in Chapter VIII.

Sugar machinery.—There were, in 1931, 42 sugar factories in operation. During the year, sugar machinery to the value of Rs. 399,124 was imported and tractor parts and ploughs to the value of Rs. 864. Mechanical cultivation is practised but not extensively owing, mainly, to the nature of the soil. In 1931 there were 90 farm tractors in use on estates.

Sugar-cane Research Station.—The Sugar-cane Research Station of the Department of Agriculture founded in 1930, was actively employed during 1931 in attacking the more pressing problems connected with the genetics and biochemistry of the sugar-cane in Mauritius, the most urgent problem in hand being the search for a new cane variety to replace the Big Tanna which is now failing after a period of 30 years' supremacy in the island.

Pests and diseases of the cane.—The major pest of the sugar-cane continues to be the beetle *Phytalus Smithii Arrow*. This insect now occurs over approximately 58,000 acres. The number of beetles captured during the 1930-31 season approximated to 324½ million or an increase of 59 million over the previous year's record. Expenditure incurred in awards for beetles captured was Rs. 66,252. It is intended to prosecute the campaign against this pest on more extensive lines in the near future, but a change in organization is in contemplation by which the work will be undertaken almost entirely by the planters under general supervision of the Department of Agriculture, the cost being borne by a special cess.

Minor Agricultural Industries.

Mauritius hemp.—This crop, which covers in all about 20,000 acres mostly in a wild state, suffered considerably from the cyclone. Furthermore, the market deteriorated to such a degree that only 455 tons were exported as against 1,464 in 1930, and 2,500 in 1929. During the year a spinning factory, for the manufacture of sugar bags from Mauritius hemp, commenced operations and it is hoped that this new venture will improve markedly the condition of the local fibre industry.

Tobacco.—Owing to the unsettled conditions in this industy, and in part to the cyclone, the area grown under this crop shrank to about 1,800 acres as against 3,600 last year.

A central grading warehouse, to act as intermediary between the grower and the manufacturer, has now been organized. By this means it is hoped to establish confidence in the grower and eventually to build up an export trade in well-graded leaf.

Tea.—The total production was 18,000 kilos as against 19,000 last year. Through the agency of the Empire Marketing Board and with their assistance, the Colony was visited in 1930 by an experienced representative of the tea industry in Ceylon who reported favourably on the suitability of conditions in certain parts of Mauritius for the growing of tea.

Coconuts.—This crop was seriously damaged by the cyclone. Most of the copra and the coconut oil exported from Mauritius is the produce of the " Oil Islands " (dependencies of Mauritius such as Agalega, St. Brandon, Diego Garcia, Peros Banhos, &c.). The total export of copra in 1931 was 2,069 tons, and of coconut oil 3,471 litres, as against 1,734 tons and 14,450 litres respectively in 1930.

Food crops.—The staple food of the Colony is rice, of which about 60,000 tons are imported annually, mostly from India.

Efforts are continually being made to encourage the production of a greater amount of food crops locally. In past years these efforts have been generally nullified by the incentive to cultivate the more remunerative sugar-cane, but with the falling prices for sugar, the Indian peasant has returned, to a certain extent, to food crops.

Hill rice occupies approximately 150 acres, and a rice mill was opened in Port Louis. Maize occupies about 1,300 acres and manioc 1,600 acres; vegetables 3,500 acres; potatoes, sweet potatoes, and ground nuts together cover about 500 acres; orchards, about 1,300 acres; bananas about 600 acres, and various other crops about 800 acres.

Fruit canning and preserving.—The factory of the Mauritius Pineapple Company was at work during the year but was handicapped in its operations by the lack of adequate supplies of raw material. The area under pineapple was estimated at 150 acres.

The " Granravien " canning factory extended its activities during the year producing a number of canned goods and preserves some of which have met with a considerable measure of appreciation abroad.

Alcohol.—Alcohol distilled from molasses amounted in 1930-31 to 618,172 litres as against 908,241 litres in 1929-30. The quantity issued for human consumption amounted to 522,181 litres, while

178,460 litres were issued for industrial purposes. 21,085 litres of rum were exported as against 30,857 in 1930. There were seven distilleries at work during the year.

Live Stock and Animal Produce.—The number of bullocks imported for slaughter, mostly from Madagascar, during the year was 4,574 valued at Rs. 299,651 c.i.f., as against 4,843 valued at Rs. 301,500 c.i.f. in 1930. Cattle on estates number 12,001, sheep 1,073, pigs 2,077, and goats 4,449.

About 20 tons of butter are produced locally each year as well as approximately 10 million litres of milk. Pen manure can be disposed of readily.

Other Manufacturing Industries.

There were in 1931 forty engineering establishments, employing in all about 400 persons. Bakeries numbered 65, employing about 300 persons. There were 34 lime kilns, using coral as raw material and giving employment to about 100 persons, and three salt-making establishments absorbing approximately 100 persons.

There are four docks (landing, &c.) supplying work for about 800 persons, and one match factory occupying 150 persons. Cigarette factories number nine. There are four hydro-electrical plants, for light and power, giving employment to about 400 people.

In addition, a number of less important industries are in existence, e.g., aerated water works, ice making, vinegar making, leather tanning, boot making, cabinet making, &c., but none of them have, as yet, succeeded in finding an export trade for their produce.

Fisheries.

The year 1931 will be remembered as a very bad one for the fisheries of Mauritius. The effects of the cyclone on the coast were disastrous—owing not so much to the millions of young or adult fish that were killed and thrown up on the shore as to the destruction of feeding grounds. Most of the lagoons were swept clean of all trace of certain seaweeds that are known to be the chief food of such fish as licornes, cordonniers, &c. Added to this the torrential rains caused such floods that in certain parts of the coast the lagoons became lakes of fresh water. This resulted in the death of millions of shell fish and crabs. Especially to be deplored is the wholesale destruction of a species of " puina " locally known as " hache d'arme." This shellfish is relished by the finest local fish, the " Gueule pavée," and was much used by basket-trap and line fishermen as bait. In the bay of Mahebourg there used to be vast stretches of sandy bottom closely packed with " hache d'armes " and now those same stretches of sand are still packed, but with dead, empty shells—millions of them.

After the cyclone the Government opened all the reserves to net fishing, but this order was recalled a fortnight later, as the object of the measure, i.e., to provide cheap fish for the stricken population was not obtained, all the profit going to middlemen, fishmongers, &c., and the fish continuing to be sold at a high figure.

Since about the end of September, matters have improved somewhat owing to large shoals of fish visiting our lagoons. But marketing conditions have now changed. Through the general financial depression of the Colony the buying power of the public has decreased to a large extent. The Central Market in Port Louis has been packed with fish for some time, but the prices have been such that the fishermen, middlemen, etc., have profited little.

CHAPTER VII.

COMMERCE.

The total value of the *foreign trade* (in merchandise) of the Colony in 1931 was Rs. 55,893,958.

Comparative figures for imports and exports for the last five years and 1913 are shown below :—

	Imports. *Rs. (1,000).*	*Exports.* *Rs. (1,000).*	*Total Trade.* *Rs. (1,000).*
1913	**36,607**	**32,292**	**68,899**
1927	**55,185**	**56,613**	**111,798**
1928	**49,438**	**47,371**	**96,809**
1929	**46,428**	**52,450**	**98,878**
1930	**39,806**	**26,601**	**66,407**
1931	**32,064**	**23,830**	**55,894**

Owing to the low price of sugar, the Colony is again faced with a heavy adverse trade balance. This however has not been so great as in 1930 owing to the curtailment in the amount of goods imported and to a reduction in their value.

The above figures for exports include re-exports, which amounted to Rs. 947,723 in 1931, compared with Rs. 941,670 in 1930 and Rs. 1,661,046 in 1929.

Bullion and Specie (not included in the foregoing figures) were imported or exported to the following amounts in the last three years :—

	Imports. *Bullion and Specie.* *Rupees.*	*Exports.* *Bullion and Specie.* *Rupees.*
1929	10,096	**1,388**
1930	1,165	4,500
1931	802	**1,933,546**

Imports of Merchandise.

The total value of the imports in 1931 amounted to Rs. 32,064,074, compared with Rs. 39,806,180 in 1930, and Rs. 46,428,424 in 1929.

	Quantity.			*Value. Rs. (1,000).*		
	1929.	*1930.*	*1931.*	*1929.*	*1930.*	*1931*

Iron and Steel	—	—	—	881	1,289	956
Silk goods	—	—	—	257	429	548
Drugs	—	—	—	408	351	420
Wearing apparel (except shoes.)	—	—	—	418	405	385
Rubber goods (including tyres.)	—	—	—	392	413	363
Machinery	—	—	—	1,090	1,116	905

The financial position of the Colony is reflected in the above figures. Imports of rice and flour have not decreased in quantity, but this can be attributed to the marked fall in prices that occurred during the year.

On the other hand, the importation of manures and fertilizers fell by 33 per cent. and petroleum products by a similar amount. Luxury imports such as wines and spirits decreased by over 50 per cent. The only increase among non-essential imports occurred in the case of silk manufactures, and this was due to importations from Japan and China of extraordinarily cheap goods.

Exports of Merchandise.

The total value of the exports in 1931 amounted to Rs. 23,829,884 compared with Rs. 26,600,964 in 1930, and Rs. 52,449,676 in 1929.

The following table shows the sugar exports for the last three years and in 1913 :—

	Metric tons.	*Value in Rupees.*
1913	187,772	30,700,697
1929	277,836	49,407,725
1930	185,539	24,846,253
1931	178,808	22,229,991

The principal other exports, for the last three years, were as follows :—

	Quantity.			*Value (Rupees 1,000).*		
	1929.	*1930.*	*1931.*	*1929.*	*1930.*	*1931.*
Aloe fibre (m. Tons) (Mauritius Hemp).	2,459	1,469	455	828	348	92
Copra or Poonac (m. Tons).	1,391	1,734	2,559	281	280	395

Distribution of Trade.

The percentage of trade distribution for the last three years and in 1913 was as follows :—

Imports.

	1913.	*1929.*	*1930.*	*1931.*
United Kingdom	33·2	23·8	25·1	23·5
Other parts of the British Empire ...	42·6	46·3	44·5	46·9
Foreign Countries	24·2	29·9	30·4	29·6
	100·0	100·0	100·0	100·0

Exports.

	1913.	*1929.*	*1930.*	*1931.*
United Kingdom	18·5	87·6	71·5	77·6
Other parts of the British Empire ...	77·0	8·8	24·7	18·8
Foreign Countries	4·5	3·6	3·8	3·6
	100·0	100·0	100·0	100·0

Total Trade.

	1913.	*1929.*	*1930.*	*1931.*
United Kingdom	26·3	57·6	43·9	47·6
Other parts of the British Empire ...	58·7	26·4	36·6	34·3
Foreign Countries	15·0	16·0	19·5	18·1
	100·0	100·0	100·0	100·0

The principal countries from or to which the commodities come or go are indicated below :—

Imports.

Value in Rupees (1,000).

	1913.	*1929.*	*1930.*	*1931.*
United Kingdom	12,149	11,091	10,450	7,504
India	13,422	17,576	13,938	11,576
Australia	608	1,867	1,120	1,330
Union of South Africa	1,163	1,104	1,372	1,030
China	145	645	1,018	1,219
France	3,444	3,825	3,069	2,213
United States of America	863	3,319	1,819	1,369

Exports.

Value in Rupees (1,000).

	1913.	*1929.*	*1930.*	*1931.*
United Kingdom	5,955	45,965	19,023	20,002
Canada	—	3,921	6,109	2,724
India	21,032	83	46	19

Course of Prices.

Mean prices (c.i.f. or f.o.b.) of the principal articles imported or exported are shown below, for the last two years :—

Imports (c.i.f.).

	1930.	1931.
	c.	*c.*
Rice, per kilo	17	12
Dhall per kilo	18	13
Flour per kilo	16	11½
	Rs.	*Rs.*
Bullocks per head (for food)	63	66
	c.	*c.*
Fertilizers (chemical) per kilo	17	13
Petrol spirits—per litre	21	16
Cotton piece-goods (ordinary) per metre	31	24
Soap, common, per kilo	47	40

Exports (f.o.b.).

	1930.	1931.
	c.	*c.*
Sugar, per kilo	13¼	12½
Aloe fibre, per kilo	24	20

Changes in the Direction of Trade.

Imports.—Japan is displacing the United Kingdom as the principal exporter of "cottons" to Mauritius. Generally, trade with the Far East gained ground throughout the year.

Exports.—The great bulk of the sugar exports which, in pre-war years went to India, now goes to the United Kingdom.

Development of Empire Trade.

From time to time the Preferential Tariff of the Colony in favour of United Kingdom and Canadian goods is extended. Much larger quantities of tyres and tubes, silk, indigo, and motor cars are now imported from the Empire as a consequence of preference.

CHAPTER VIII.

WAGES AND COST OF LIVING.

Wages and salaries have been reduced in 1931 owing to the difficulties created in all local industries by the low selling price of sugar. Male agricultural labourers under monthly contract receive, on the average, Rs. 10 per month in cash together with rations, free lodging, and medical attendance, equivalent in all, at the rates current in 1931, to Rs. 22 per month. Male day labourers receive Rs. 0.70 to Rs. 0.75 per day, but during harvest time they can make double that amount. Female labourers, whether working by month or by day, receive about half the wages of male workers.

The remuneration for piece-work in agriculture paid in 1931 was as follows:—

	Per acre. *Rs.*
Cleaning land	40-50
Digging cane holes	8-18
Manuring	15-16
Weeding	5- 7
Cutting cane (20 tons per acre)	10-12

Industrial day workers, artisans, etc., are paid on the average Rs. 1.50 to Rs. 2.00 per day. Those employed by the month (fitters, mechanics, carpenters, joiners, masons, smiths, etc.), receive Rs. 40 to Rs. 80 according to circumstances.

The number of persons employed in agriculture, whether by month or by day, was 72,027 (1931 census figures), in various manufacturing industries 15,085 and in building 2,438.

As regards domestic service, wages vary from Rs. 30 to Rs. 40 per month for a butler or a cook. Chauffeurs get Rs. 30 to Rs. 50 per month, maids and "chokras" Rs. 10 to Rs. 20 per month. The number of persons engaged in domestic service was 14,913 (1931 census).

The number of hours worked without overtime is, for labourers in Government employment, generally 48 hours per week; for agricultural labourers 40 to 48 according to tasks; for industrial workers generally 48.

Salaries paid in 1931 for senior officers are given in the following table :—

	Rs. Per annum.
Managers of sugar estates	10,000 to 15,000
Senior Government officials	
Government, banks, and commercial clerks (higher grade)	5,000 to 9,000
Clerks and employees on sugar estates	2,000 to 4,000
Junior clerks and employees	1,000 to 2,000

During the year, the cost of living continued on the downward trend until August, after which a rise was in evidence.

Rice, the staple food of the population, decreased to index 77 (the index for 1914 was 100) in the third quarter of the year but ascended to 86 in the last. Dhall was at 86 in the third quarter and at 92 in the last. Lentils and beans decreased from 95 and 90 respectively in the first quarter to 82 and 80 in the last. Flour, which had dropped to 61 in the third quarter, rose to 72 in the last. Oils rose from 72 in the first quarter to 110 in the last; lard decreased from 148 in the first quarter to 66 in the last. Tea and coffee, upon the whole, decreased, while salt beef and salt pork remained, on the average, about the same level.

Articles of clothing which, during the first three quarters had been stationary at about 154, rose to 174 during the last quarter.

The total cost of living for 1931 was indexed as follows :—

1st quarter	134.7
2nd quarter	127.0
3rd quarter	127.0
4th quarter	131.0

The mean for the year was 130.0 as compared with 150.3 in 1930.

The above figures refer especially to the labouring classes. The index numbers for the cost of living for the upper classes have not fallen to the same extent.

The purchasing power of labourers' wages, expressed in terms of rice (the staple food of the people), is set out in the following table, which portrays also this particular state of affairs since 1927 :—

Year.	*Average daily wage of a male labourer.*	*Average price of the cheaper rice. per lb.*	*Purchasing power of the wages expressed in lb. of rice.*
	Rs.	Rs.	lb.
1927 ...	1·25	0·13	9½
1928 ...	1·25	0·10	12½
1929 ...	1·00	0·10	10
1930 ...	0·80	0·09	9
1931 ...	0·75	0·08	9

CHAPTER IX.

EDUCATION AND WELFARE INSTITUTIONS.

Primary.—Primary education is not compulsory, but it is given free through Government and State-aided schools which are open to all children of the Colony. There are 128 primary schools altogether with a staff of 975 teachers, and the number of pupils on roll in 1931 was 36,691. State-aided schools are under the control of Managers, and the Government contribution includes the salaries of the teachers together with recurrent grants to meet part of the expenditure on maintenance of school buildings and furniture.

Children of not less than 5 years of age are admitted in a preparatory class and undergo a training before being promoted to the lowest form.

The curriculum of studies includes the teaching of English, French and arithmetic. In the higher classes elementary history and geography are taught and girls study needlework. Regular instruction is also given in physical drill, nature study, hygiene, and elementary principles of agriculture. Examinations, conducted by a staff of Inspectors, are held annually.

Fourteen apprenticeships are awarded annually to primary school pupils to encourage the study of needlework and handicrafts. Twenty-six Scholarships and Exhibitions tenable at the secondary schools managed by Government are awarded every year through competitive examinations to the best pupils attending primary schools.

Technical instruction was provided in three principal centres which have recently been closed on grounds of economy, and on the recommendation of the Financial Commission referred to in Chapter XVI. It is still provided on a moderate scale in a few aided primary schools.

There are now thirty gardens attached to the primary schools, and cultivated by the pupils themselves. These are regularly inspected by officers of the Agricultural Department who give advice as to proper cultivation.

Secondary.—There are two categories of secondary schools, viz. : (i) secondary aided schools, which are managed privately but are under Government control, and (ii) the Royal College and the Royal College School which are managed by Government.

(i) Aided secondary schools.—Government grants to secondary aided schools are assessed with reference to attendance and efficiency, as tested by inspection and examination, and not, as in the case of primary aided schools, with reference to maintenance and salary charges.

These schools provide not only for elementary education such as is given in primary schools but also for higher education leading up to the Cambridge School Certificate and the London Matriculation.

The curriculum of studies includes the teaching of English, French, mathematics, needlework (for girls), hygiene, history, and geography. In addition to these, drawing and music are taught on a more moderate scale.

These schools are visited periodically by the Chief Inspector of Schools, who examines the lower forms. The middle and higher forms are examined partly by local examiners and partly through examinations conducted by the Syndicate of the University of Cambridge.

Working hours in both primary and secondary schools extend, as a general rule, from 10 a.m. to 3 p.m., no provision being made for evening classes.

(ii) The Royal College.—The Royal College, Curepipe, is a Government school for the higher education of boys up to the age of 20; affiliated to it is the Royal College School at Port Louis, where boys under the age of 18 are educated on the same lines. The staff of the Royal College consists of Rector, Senior Master, eleven Masters with degrees in Honours at British Universities, and eleven Assistant Masters locally appointed; and at the Royal College School, of Headmaster, two Masters, and eight Assistant Masters. Assistant Masters are encouraged to take the B.A. and B.Sc. Examinations of London University. The College has well-equipped chemical and physical laboratories; but almost as many pupils follow classical as scientific studies.

Admission to the College is conditional upon passing an entrance examination or winning either one of the twenty Annual Primary Schools Scholarships and Exhibitions, or a Secondary Schools Scholarship or Exhibition (one of each is awarded annually). The boys are drawn from all classes and races in the Colony, and range in age from ten to twenty years.

About ten College Scholarships and Exhibitions are awarded annually to College pupils and also a Classical and a Modern Scholarship of the present value of £1,300 (with first-class passage to and from England) tenable for four or five years at a British University or any other approved place of education in the United Kingdom.

Besides the winners of these scholarships, a few boys whose parents can afford it go to England or France to study a profession, usually Medicine or Law, and almost always return to Mauritius to practice. Of the remaining pupils the majority on leaving the College find employment in the island.

The boys receive a training in classical and scientific subjects; specialization begins at the entrance class; and the division into modern and classical sides becomes complete in the Senior Cambridge Class.

In addition to the standard secondary education there are additional classes in drawing, shorthand, and book-keeping and extension classes where candidates for Pharmaceutical Diplomas and other public science examinations are helped in their studies.

The number of pupils on the roll of the Royal College in January, 1931, was 356, and of the School, 167. The average attendance at the College was 305 and at the School, 150.

Encouragement is given to athletics, rugby and association football, hockey, boxing, and physical training and gymnastics, in which, although by no means all the boys join, the standard of proficiency is high.

Welfare Institutions.

There are five Roman Catholic infirmaries for men and women and two orphanages for children under the management of Sisters of Mercy, also an orphanage for boys and one for girls under the control and management of the Church of England, and one " home " for men and women under the management of the Church of Scotland. These institutions receive from the Government a maintenance fee for each pauper maintained therein.

Outdoor assistance to paupers is granted by the Poor Law Department.

Several private religious societies for the distribution of assistance in food and medical care are also in existence. The " Société Française d'Assistance " assist chiefly destitute French people.

The Child Welfare Committee and the " Oeuvre de la Goutte de lait," two philanthropic institutions, deal especially with expectant or nursing mothers and their babies.

The Workmen's Compensation Ordinance provides for the grant of a compensation by the employer to workmen who may be injured in the course of their work.

Recreation, Music, Art, and Drama.

Association football is the most popular form of sport, and there is a stadium at Curepipe, a second at Cassis, on the outskirts of Port Louis, and a third at Rose Hill. Golf, tennis, cricket, hockey, and Rugby football are played mostly by the better classes. The Mauritius Turf Club and the Mauritius Jockey Club hold race meetings from June to September at Champ de Mars, Port Louis, and Mangalkhan; and regattas are held by the yacht clubs at Mahebourg and Tombeau Bay. " La Chasse," or the shooting of driven deer can be said to be the national sport of Mauritius. The season is from June to the beginning of September.

There are several flourishing companies of Girl Guides and Brownies; the latter are known locally as Blue Birds. The Boy Scouts have not been so successful as the Girl Guides, but efforts are being made to encourage the movement.

There is not much encouragement for any of the arts. Music is fostered by the Parish Churches, whose amateur singers will frequently give concerts. Besides Church organists the Christian Brothers are almost alone in providing musical training.

The Municipality of Port Louis has instituted a drawing class, practically the only encouragement to local talent. The Institute has a collection of pictures presented by Mr. Rochecouste, but there is no other art gallery.

As for drama, there are occasional performances given by amateurs, but no permanent society has been formed. In better times the Municipality of Port Louis subsidizes a theatrical company from France which plays in the theatre at Port Louis. The Chinese have their own theatre in the town to which companies come from China when conditions are more prosperous.

There exists a " Royal Society of Arts and Sciences " which was founded in 1829 under the title of " Société d'Histoire Naturelle " and was granted a Royal Charter in 1846. It interests itself in most branches of science and arts especially those relating to questions of agriculture and the national history of the Colony. The Society was incorporated with the Mauritius Institute in 1906 and its library is being transferred to the Institute library.

CHAPTER X.

COMMUNICATIONS AND TRANSPORT.

Roads.

The Colony is well served with 494 miles of first-class roads called " main roads " and 188 miles of second-class roads, called " branch roads " which are maintained by the Public Works Department. This gives on the average about one mile of road per square mile of area. All roads are metalled and the surface of 137 miles of main roads has been coated with bitumen.

Heavy motor vehicles, with axle loads of not more than eight tons, are allowed on practically all the main roads. The freight cost of road motor transport in 1931 was Rs. 0.44 per ton mile for short distances not exceeding five miles. The passenger rate for motor omnibuses is about Rs. 0.02 per mile with a minimum charge of Rs. 0.05.

There were in use on the road in 1931 :—

1,578 private motor cars,
384 lorries,
289 motor taxis,
142 motor cycles,
141 motor omnibuses.

Railways.

The Mauritius Government Railways, which are of the British standard 4′8½″ gauge, are 116.65 miles long (see map at the end of this Report). The North Line is 31 miles long, the Midland Line 35.30 miles long, the Moka-Flacq Line 23.20 miles long, the Black River Line 12.75 miles long, the Savanne Branch 10.90 miles long, and the Montagne Longue Line 3.50 miles long. The subsidiary Bois Cheri 2′6″ gauge Light Railway is 15 miles long and acts as a feeder to the Savanne Branch in the transport of canes.

The whole of the Black River Line and a part of the Moka-Flacq Line, 8 miles in length, were closed to passenger traffic in 1929. In order to accommodate the public and test the experiment of feeding the Railway, passengers, in the areas served by these lines, were temporarily provided with a Road Bus Service, by contract with a local road transport company. This service was not a financial success and was terminated on 15th December, 1931. The revenues for the years 1929-30 and 1930-31 were as follows :—

	Revenue 1929–30. Rs.	*Revenue 1930–31.* Rs.	*Difference.* Rs.
Passengers	781,749	606,668	— 175,081
Parcels	98,084	73,393	— 24,691
General Goods ...	1,313,577	1,143,729	— 169,848
Miscellaneous... ...	70,389	60.987	— 9,402
Net Revenue ...	80,600	119,354	+ 38,754
Total	2,344,399	2,004,131	— 340,268
Goods Tonnage ...	409,830	354,611	— 55,219

Road competition continues to depreciate the passenger traffic, and any reduction in the sugar crop inevitably reduces the traffic receipts. Further, the general financial depression prevailing throughout the Colony has adversely affected the Railway revenue. Passenger fares were reduced in January 1930, in the hope of arresting the then very rapid fall of passenger receipts; some initial success attended this measure but an increase in the bus traffic and reduction of the road fares charged were beyond the resources of the Railway. Heavy cuts in Railway expenditure are in progress and a Bill for the regulation of all transport in the Colony is under consideration.

Comparative figures of working expenditure for the years 1929-30 and 1930-31 are given below :—

	1929–30. Rs.	*1930–31.* Rs.	*Difference.* Rs.
Working expenditure	2,666,799	2,442,547	— 224.252
Net revenue expenditure	148,366	344,700	+ 196,334
Total	2,815,165	2,787,247	— 27,918

The excess of expenditure over revenue was Rs. 783,116.

Omnibuses.

The excellent system of roads connecting the various parts of the Colony has greatly facilitated the development of travelling by motorbuses, which now bring the remotest places of the island within easy and speedy access of Port Louis, and afford a cheap means of travelling. Rs. 0.15 is charged for the journey from Port Louis to Rose Hill (about 7 miles) and Rs. 0.25 from Port Louis to Curepipe (about 14 miles). At the end of 1931, there were in existence 141 motorbuses, and those on the road to and out of Port Louis carried an average of 3,500 persons a day.

Tramways.

Since the surra outbreak in 1901 which decimated the cattle of the island, a system of mechanical transport by tramways has been established on most sugar estates for the transport of canes from fields to factories and of sugar from factories to Railway stations, in addition to motor lorries. There are some 900 miles of tram line on estates and 7,150 wagons driven by 215 locomotives.

Posts and Telegraphs.

Mails from Europe are received by the Messageries Maritimes Company via Marseilles and the Suez Canal, and also by the Royal Mail Steamers to Cape Town and Durban and there transhipped to any steamer sailing for Mauritius. Mails can also be sent by air-route as far as Kisumu to catch the steamer at Mombasa.

The Messageries Maritimes Steamers call regularly every fortnight. Twenty-six of these vessels brought mails from Europe in 1931, and the average time taken was 39.6 days. Mails from India and the Far East for Mauritius are also transhipped on the Messageries Maritimes at Aden and Mombasa.

Twenty-eight ships carried European mails via Union of South Africa; the average time taken was 42.5 days.

Altogether the tale of the ships carrying mails to Mauritius was 209, and that of the ships carrying them away was 192.

The Dependencies of Mauritius consisting of Rodrigues and three groups of islands, viz. : (1) Diego Garcia and Peros Banhos, (2) Agalega, and (3) the six islands, also have a regular mail service from Mauritius. A steamer with mails leaves every two months for Rodrigues. Sailing vessels leave regularly every three months for the three groups of Oil Islands.

The total number of articles, other than parcels, which passed through the Post Office in 1931 was 3,339,882.

The number of parcels received from abroad was 22,155 of a value of Rs. 931,949. There came from the United Kingdom 4,456 ordinary parcels worth Rs. 164,511, and 1,942 cash-on-delivery parcels worth Rs. 84,135; from India 729 parcels worth Rs. 18,219, from France 10,391 parcels worth Rs. 478,319, and from other countries 4,637 parcels worth Rs. 186,765.

The number of parcels despatched abroad amounted to 3,132 for a value of Rs. 55,252.

Money Orders for £3,380 were issued on the United Kingdom and Europe, and Orders for Rs. 94,847 on India.

The length of telegraph lines open for traffic is 381 miles and the number of messages dealt with during the year was 89,345.

Telegraphic communication with the world outside is kept up by the Eastern and South African Telegraph Company, but there is also the Rose Belle Wireless Station which maintains a twenty-four hour service, and works mainly with ships at sea and with Reunion Island.

The station was built in 1915 by the British Admiralty for communicating with ships at sea, and also for communicating with the various Naval Wireless Stations in the Indian Ocean, but since June, 1923, it has been under the control of the Mauritius Government.

During the cyclone season, from November to April, a daily weather report is broadcasted to all ships and stations in the vicinity.

The normal transmitting range of the station is 500 miles by day and 1,000 miles by night; these ranges are, however, considerably exceeded during the non-cyclonic season.

The receiving range of the station is world wide, and is limited only by atmospheric storms which are at their worst during the cyclonic season.

Messages are accepted at any Post Office in the Colony for transmission to any ship within transmission range of the station.

The public telephone system belongs to the Oriental Telephone Company. There were 700 subscribers at the end of the year, two less than the year before.

The Government owns a Departmental telephone system, the total length of which is 150 miles. It is joined up with the Company's system.

Shipping.

The following statement shows the arrivals and tonnage of ships at Port Louis, apart from the coasting vessels, during the past three years:

	Number.	*Tonnage.*
1929	194	542,314
1930	179	496,245
1931	187	537,760

There were 18 arrivals of sailing vessels from the Dependencies.

The only regular lines of passenger steamers that call at Mauritius are the Messageries Maritimes Line (to and from Marseilles) and the Royal Packet Navigation Company of Batavia which inaugurated a monthly service between Java and South Africa via Mauritius during the year. Vessels of the Clan Line call about once a month and there are occasional arrivals of Union-Castle Line and British India Line cargo boats.

CHAPTER XI.

BANKING, CURRENCY, AND WEIGHTS AND MEASURES.

Banking.

There are in the Colony three private banks, viz. :—

(*a*) The Mauritius Commercial Bank,
(*b*) The Mercantile Bank of India, and
(*c*) The Barclays Bank (Dominion, Colonial and Overseas).

The Mauritius Commercial Bank was established in 1838. The paid up capital of the Bank is Rs. 2,000,000 made up of 10,000 shares of Rs. 200 each. The total amount of deposits on 31st December, 1931, was Rs. 6,979,337.

The Mercantile Bank of India, Limited, took over the business of the Bank of Mauritius, Limited, on 3rd May, 1916. The total paid up capital is £1,050,000. The deposits made locally on 31st December, 1931, amounted to Rs. 2,642,490.

Barclays Bank (Dominion, Colonial, and Overseas) has a paid up capital of £4,975,500. The total deposits of the local Bank on 31st December, 1931, amounted to Rs. 2,630,804. This Bank, which is affiliated with Barclays Bank, Limited, was founded in 1925 and represents the amalgamation of the Anglo-Egyptian Bank, Limited, the Colonial Bank (incorporated by Royal Charter in 1836), and the National Bank of South Africa, Limited. A branch of the last named Bank was established in Mauritius in December, 1919. In February, 1926, its business was taken over by Barclays Bank (Dominion, Colonial, and Overseas) following the amalgamation already mentioned. This Bank conducts a Savings Bank department and also pays interest on fixed deposits as well as conducting a short-term deposit business.

Offices of the Government Savings Bank are established in the nine districts with a Head Office in Port Louis. The total number of depositors at 30th June, 1931, was 37,419 as against 37,168 in the preceding year with deposits amounting to Rs. 5,264,304.04 as against Rs. 5,393,790.70. The Saving Bank is largely made use of by the Indians, of whom on 30th June, 1931, there were 15,787 depositors with Rs. 2,022,042.60 to their credit as against 16,601 depositors with Rs. 2,313,378.71 to their credit on 30th June, 1930. Interest is paid at the rate of 3 per cent. per annum.

There are no agricultural and co-operative banks in the Colony but 28 Co-operative Credit Societies were in operation in the island on 31st December, 1931, with a total membership of 2,307, the total share capital originally contributed being Rs. 77,483.

Currency.

The currency of the island is based on the Indian Rupee. Apart from Indian silver coins the principal currency in circulation is provided by a Government issue of notes. The average value of currency notes in circulation during the year was Rs. 7,489,290 as compared with an average of Rs. 14,747,250 for the previous year. Against these notes the Commissioners of Currency held silver coins to the average value of Rs. 3,267,900, as compared with Rs. 4,862,000 in 1929-30:

Their investments on 1st July, 1929, amounted to Rs. 9,879,250 (which does not include Depreciation Fund). The figure remained unchanged during the year under review. The Depreciation Fund was increased from Rs. 1,700,189 to Rs. 1,791,334.64. From their investments the Currency Commissioners received interest which, after allowing for the increase in the Depreciation Fund, enabled Rs. 427,470.88 to be credited to the general revenue of the Colony.

The statement of assets and liabilities of the Commissioners of Currency shows a balance in their favour of Rs. 1,791,334.64 but if the investments are valued at the market rate of 30th June, 1931, the surplus will be decreased to Rs. 1,686,642.05.

Weights and Measures.

The metric system is in general use, but there are a number of English, French, and local measures also used, and as some of them will appear in this Report, it may be of use as well as of interest to mention them here.

Of French measures of length the *ligne française* is equal to 2.2558 millimetres or 0.0888 of an English inch. The French inch contains 12 *lignes* and the French foot twelve French inches. The French foot is equal to 1.0657653 English feet and is used by masons, carpenters, surveyors, and others.

The *lieue* is nearly equivalent to two and a-half English miles.

The *gaulette* is a measure of length equal to ten French feet. It is used on the estates as a measure of the work performed in the fields; a labourer is given a number of *gaulettes* as his task.

Forty thousand square French feet make one *arpent* which is equal to 1.0430263 acres; almost all land in Mauritius is measured by the *arpent*.

Other local measures of length and area are the *toise*, equal to two yards four inches or six French feet, and the *toise caree* (square *toise*) which is equal to thirty-six square French feet. This measure is used in masonry and similar jobs.

The *aune* is a measure of length used in most shops and is equal to about one yard and eleven inches.

English measures of length are generally used by Government, and road distances are measured in English miles. Places often derive their names from their distance from Port Louis or other important centres; thus there are places called "*Dixhuitieme Mille*," "*Seizieme Mille*" and so on. The kilometre is rarely used.

Of the local measures of capacity there is the *barrique* (equal to fifty gallons) which is used in sugar mills for measuring the amount of juice drawn from the cane.

The *tierçon* is a measure of capacity for molasses which varies from one hundred and ninety to one hundred and ninety-two litres.

The *velte* is a measure for oil, especially coconut oil, and is equal to 7.4505 litres.

The *bouteille* of eight hundred cubic centimetres is used in selling milk, vinegar, rum, and other like liquids. The half-bouteille is called *chopine*.

The weekly ration of rice of the labourer given on estates is called *gamelle*: it is equivalent to 5.250 kilogrammes.

The *livre* is equal to five hundred grammes or 1.10 English pounds.

The *corde* is employed for measuring stacks of firewood. The wood is stacked in lengths of two and a-half feet and laid crosswise until the stack measures four French feet high and eight French feet long and contains eighty cubic French feet or 96.82 English cubic feet.

Besides local and French measures of capacity, English measures are also in use and, when speaking of agricultural and other products, it may be well to say that four bales of aloe fibre go to the metric ton, that a bag of sugar, unless otherwise specified, weighs 80 kilograms and that a "pocket" of sugar is generally 39½ kilos

CHAPTER XII.

PUBLIC WORKS.

Administration.—The Public Works Department is under the control of the Director of Public Works and Surveys with two executive officers—the Deputy Director, and the Assistant Director.

The Department is composed of the following branches: building, drainage, roads and bridges, survey, water-supply, and irrigation.

The Mare aux Vacoas reservoir from which water is supplied to the district of Plaines Wilhems, part of Moka, Black River, and

Port Louis, is under the control of the Public Works Department. The water-supply of the remainder of the island is under the charge of District Boards.

Each branch has a staff of Inspectors, Overseers, &c., under the control of the Head of the branch.

Buildings.—The only construction work of any importance carried out during the year has been an Out-patient Department for the Civil Hospital, Port Louis, a building measuring 100 feet by 40 feet.

Much damage to the Government buildings was caused by the cyclone of March, 1931, and this necessitated a good deal of repair work.

Sewerage Works of Port Louis.—The sewerage works were begun in 1900. In 1922 the scheme was revised by Messrs. Mansergh and Sons and the works have been carried out on the lines of their report. The construction works being now practically completed, present activities are concentrated on house service connexions, and a large portion of the town of Port Louis now has the water carriage system.

Bridges.—As a result of the cyclone of March, 1931, and floods which accompanied it, several bridges were carried away. Two of these of 75 feet span were reconstructed during the year, the bridges having been ordered from the Crown Agents for the Colonies in accordance with their standard designs.

Old timber bridges are being gradually replaced by ferro-concrete structures, and one more bridge (three spans of 20 feet) has been added to the list of reconstructions during the year.

Water Works.—The water-supply of the town of Port Louis is obtained from the Grand River North West at a distance of about four miles from the town and at a level of 250 feet. This supply was under the charge of the Municipality of the town until 1922 when it was handed over to the Public Works and Surveys Department.

The dam in the river was burst by the flood of December, 1929, and much of the pipe line leading from it was also swept away. Water was pumped from Grand River North West to give Port Louis its normal supply during the dry season, while during the wet season the supply was obtained by gravitation from Moka River through the Pailles Canal.

The works of restoration of the dam and pipe line were begun in September, 1931, and will reach completion by the end of February, 1932.

The water is passed through sand filters and chlorinated.

The capacity of the mains leading to the filters is 5,000,000 gallons a day. The water is distributed to the town from two covered service reservoirs of a total capacity of 2,000,000 gallons.

The water-supply of the towns of Plaines Wilhems and of parts of Moka and Black River districts is obtained from a storage reservoir called the Mare aux Vacoas at an altitude of 1,825 feet. The capacity of the reservoir is now, after the raising of the dam, 1,641 million gallons.

The catchment ground is entirely protected by forest lands.

The whole of this water-supply is filtered through sand filters at "La Marie," about two miles below the reservoir whence the supply to the town of Curepipe is pumped by hydraulic power, the supply to the other towns being by gravity. The water is distributed from six covered service reservoirs situated in the various zones of supply, their aggregate capacity being 5,500,000 gallons.

The population served by this supply is approximately 90,000 and the average daily consumption 3,500,000 gallons.

The Mare aux Vacoas water-supply has been extended to the town of Port Louis. At present it is confined mostly to Government establishments, ships in harbour, and certain selected establishments, but the increase of the supply will be limited to 900,000 gallons per day. In this connexion a covered service reservoir at Petite Riviere of 750,000 gallons was completed during the year and put into operation.

The water-supply to the villages and hamlets in the other districts comes from twenty-seven different springs or streams. These supplies are not filtered but they are generally protected in their catchment areas by reserves of forest. The population depending on these various supplies is about 200,000 and belongs mostly to the poorer classes. A large proportion of the daily consumption is distributed by means of public fountains.

Irrigation Works.—Government storage irrigation works were begun in 1914 according to plans made by Mr. C. M. Harriott, C.S.I., C.I.E., M.I.C.E., Chief Engineer, Public Works Department, Central Provinces, India, and Consulting Engineer for Irrigation Works to the Government of Mauritius.

The La Ferme scheme for the irrigation of the south-west of the island, between Grand River North West and River Dragon, has been finished, and the Nicolière scheme, to irrigate land in the north, has been started. These two schemes cover a great deal of the fertile lands of the Colony which are below the level which enjoys 60 inches of rain and cannot be cultivated to the best advantage without irrigation water.

The La Ferme scheme is dependent on a low-level reservoir of 2,500 million gallons which was completed in 1918 and now irrigates 3,700 acres of land under sugar-cane plantation.

The plans for the Nicolière scheme include a high-level storage reservoir at 1,300 feet altitude at Midlands of 4,400 million gallons capacity meant to fill a low-level reservoir at Nicolière of a capacity of about 250 million gallons.

The Nicolière reservoir has been finished but although some land under cane cultivation is being irrigated from it, the full scheme will only be working when the Midlands reservoir is completed. Owing to financial conditions the plans were first curtailed and the works afterwards suspended as a result of the visit of the Financial Commission, but the feeder channel which measures 16¾ miles from Midlands to Nicolière was completed by the end of the year.

CHAPTER XIII.

JUSTICE AND POLICE.

Justice.

Justice is administered in Mauritius by the Supreme Court which sits in the capital (Port Louis). It is presided over by the Chief Judge and there are two Puisne Judges. It has jurisdiction in civil and criminal matters and also as a Court of Admiralty : it also decides Appeals from the Supreme Court of Seychelles and the inferior Courts of Mauritius.

In the nine districts, there are Magistrates' Courts which have a limited civil and criminal jurisdiction; the total number of Courts being eleven, two each for Port Louis and Plaines Wilhems, and one for each of the other districts.

In 1931, the Supreme Court dealt with 317 civil matters out of 401 which were brought before it, as against 334 out of 483 in the year before. Nineteen persons were brought before this Court on criminal charges and seventeen were convicted.

10,986 persons were tried in the Magistrates' Courts and by Benches of Magistrates. 841 were acquitted or discharged by the District Magistrates, 9,919 were convicted, and 23 committed to the Assizes. 30 were acquitted or discharged by the Stipendiary Magistrates and 173 were convicted. The number of persons fined was 7,628, and 869 were admitted to prison for non-payment of fines.

The Magistrates also held 222 Judicial Enquiries under the provisions of Ordinance 23 of 1888 as amended by Ordinance 25 of 1926.

Police.

Organization.—The Mauritius Police Force is mainly a civil force but all ranks are instructed to bear arms on enlistment and special detachments are given periodical training in platoon and Lewis Gun formations.

The officers of the Force are provided by appointment, transfer from other Police Forces, or by promotion from the ranks, and the rank and file are recruited locally and include natives of Mauritius, Rodrigues, India, and Seychelles.

Distribution.—The Force is divided into Headquarters Staff, Clerical Branch, Criminal Investigation Branch, Motor Traffic Branch, Training Depot, Harbour Police, District Police, Railway Police, Rodrigues Police, and Band.

The District Police are distributed throughout the nine Magisterial districts in fifty-five units or stations, varying as regards numbers of personnel, from one to thirty-five.

The Rodrigues and Railway Police are drawn from trained members of the general Police Force and are under the control of the Magistrate of Rodrigues and the General Manager of Railways respectively.

The Band is now maintained as a separate unit under Police control, with an establishment corresponding to the usual Military Band formation, and, with the exception of a European Bandmaster and some army-trained musicians from India, is made up of locally trained men and boys.

Crime.—The number of offences of every description reported to the Police during the year 1931, was 18,194, which shows a decrease on the figure for 1930—which was 18,932—and a decrease on the average figure for the past five years—which is 18,868.

A comparison with the figures for 1930 shows:—

(*a*) An increase in offences against the person—7,452 in 1931 and 7,267 in 1930;

(*b*) A decrease in offences against property—3,021 in 1931 and 3,716 in 1930.

In the above cases 8,016 persons were prosecuted; 7,197 convicted; 430 otherwise disposed of; and 389 were pending trial at the end of the year.

Corresponding figures for the previous year were:—persons prosecuted 8,428; persons convicted 7,557; otherwise disposed of 525; pending trial 346.

All the above figures are the lowest on record and are very remarkable in view of the financial crisis through which the Colony is passing and the consequent unemployment, poverty, and unrest.

The efficiency of the Police Force has been fully maintained as regards the detection of crime, the percentage of undetected serious offences being much below the average, while the proportion of offences to population is also the lowest on record.

Prisons.

Organization.—The Prison Department consists of a Superintendent of Prisons (who is also Inspector-General of Police) with a staff of four European Chief Warders and Assistant Chief Warders, and 108 locally recruited subordinate officers.

Establishments.—There are two prisons in the Colony, Port Louis Central Prison and Beau Bassin Convict Prison, and an Industrial School for male juvenile offenders.

Port Louis Prison contains the offices of the Department, quarters for two Chief Warders, the female prison with accommodation for forty prisoners and two Wardresses, and the male prison with separate cells for 154 prisoners. All prisoners are received here for classification and disposal.

Beau Bassin Prison contains separate cells for 756 male prisoners, and quarters for the Superintendent and two Chief Warders are in the surrounding grounds.

Barkly Industrial School provides accommodation for 200 boys and there are quarters for the officer in charge and six subordinate officers in the grounds of the institution. Male juvenile offenders are sent here direct by the Police without passing through the Central Prison.

Classification.—Prisoners are classified as (*a*) penal servitude, (*b*) hard labour, (*c*) first-class misdemeanants, (*d*) second-class misdemeanants, and (*e*) juveniles and first offenders, and, so far as accommodation permits, the various classes are kept separate.

Classes (*a*) and (*b*) serve their sentences at Beau Bassin and the remainder at Port Louis.

Labour.—At Port Louis Prison the principal forms of labour for male prisoners are carpentry, stone-breaking, wood-cutting, carting prison supplies and stores, and cleaning Government buildings and grounds.

Women prisoners are employed on laundry work, and making and repairing uniforms and bedding.

Beau Bassin Prison contains the main workshops where long-sentence prisoners are trained as tailors, boot and mattress makers, mat, blind and brushmakers, carpenters and cabinet makers, blacksmiths, tinsmiths, and stonemasons.

There is also a bakery where bread is made for all Government hospitals, etc., and large gardens where all kinds of vegetables, etc., are cultivated and prisoners are taught the rudiments of agricultural methods.

Population.—The number of prisoners of all categories (i.e., sentenced and waiting trial) admitted during the year was 3,775, and the daily average population was 623.70.

The number of sentenced prisoners received from the Courts was 2,337 (2,223 men and 114 women) of whom 1,334 had received sentences of one month or less.

On 31st December, 1931, there were 677 persons in custody, of whom 654 were convicted, 640 being males and 14 females.

The above figures, which do not include the inmates of the Industrial School, are much in excess of the average figures for the past nine years, and corresponding figures for 1930 were as follows:—

Total committals	3,582
Total sentenced	2,105
In custody on 31st December, 1930	529

This increase is undoubtedly due to the difficult economic conditions now existing and a resulting inability to pay fines; as already stated 869 persons were admitted to prison for non-payment of fines.

Health.—Each establishment is visited daily by a Government Medical Officer and all sick prisoners are accommodated in well-organized prison hospitals.

Owing to an outbreak of dysentery at Beau Bassin Prison, which was responsible for 14 deaths, the number of prisoners who died in 1931 was 33 as compared with 22 for 1930. Apart from this epidemic the health of the prisoners was good.

Juvenile Offenders.—Any boy below the age of 16 years who is sentenced to imprisonment serves his sentence at Barkly Industrial School where the minimum period of detention is 12 months, or any boy may be detained until he attains the age of 18 years.

The school's principal aim is to teach the inmates agriculture or a useful trade, and for this purpose a staff of instructors is employed who teach gardening, carpentry, or tinsmith work according to the boys' history and capacity.

Teachers from the Schools Department give all boys the normal primary school education, and religious instruction is attended to by visiting Priests.

The discipline is strict as regards drill, punctuality, cleanliness, etc., but there is very little suggestion of penal methods in the rules of the institution as parents visit the boys frequently and week-end leave is often earned and granted.

The health of the boys has, as usual, been excellent, and their general conduct is remarkably good.

For the past few years the number of inmates has decreased steadily and at the end of 1931 the school population was 56, compared with 96 in 1925, when the original Reformatory and Industrial School were amalgamated. This reduction in numbers appears to be due principally to there being less juvenile vagrants in the streets than formerly, and no admissions of paupers, orphans, or " rescue " cases, as was formerly the practice.

The question of after-care presents some difficulty as it is not easy to obtain employment for the boys on discharge, but in the absence of unofficial voluntary workers to this end, the responsibility is accepted by the officers of the school with satisfactory results.

The percentage of reconvictions is slowly decreasing each year and compares favourably with similar figures for institutions of the Borstal type elsewhere.

Female juvenile offenders are usually accommodated in a Convent at Port Louis but there were no such fresh cases during the year.

Payment of fines by instalments.—Ordinance No. 29 of 1892 gives the power to any Court to direct that a fine or other pecuniary penalty or costs be paid by instalments, and execution of the judgment is accordingly stayed.

Ordinance No. 28 of 1896 limits the power given to Courts by Ordinance No. 29 of 1892 and lays down that the time to be fixed for payment by instalments shall in no case exceed six months (for sums above Rs.50) and shall be less than six months, according to the scale given in the Ordinance, for sums up to Rs. 50.

Ordinance 29 of 1892 enacts that the Court may, when granting time for payment of fine, etc., request that security be furnished.

If default be made in the payment of any instalment, execution may issue for the recovery of the instalments remaining due as if no order had been made for payment by instalments, and if security has been furnished the recognizance is estreated as laid down in article 136 of Ordinance No. 23 of 1888.

It might be added that Ordinance No. 72 of 1898 enacts that instead of forthwith issuing a warrant for the imprisonment of a person who fails to pay the fine imposed on or the costs decreed against him, a Magistrate may issue a warrant of execution against the goods and chattels of such person. If the execution against the goods and chattels proves fruitless the Magistrate can then issue a warrant for imprisonment in default of payment of fines and costs.

The Probation of Offenders Ordinance, No. 38 of 1898, as extended by Ordinance No. 39 of 1902, provides for the conditional or unconditional release of a first offender at the discretion of the Court before which he appears, when the trifling nature of the offence or the good character or the youth of the offender make leniency advisable.

In the course of 1931, 131 offenders were so released.

CHAPTER XIV.

LEGISLATION.

A list of the Ordinances passed and the subsidiary legislation issued during the year under review, as well as an indication of the changes introduced, are given in Appendices I, II, and III, to this Report. Of the Ordinances passed in 1931, the following which are important and of interest not purely local may be mentioned specifically :—

> *Employment of Children.*—No. 2 prohibits absolutely the employment in factories of children under the age of thirteen, and provides for the punishment by fine not only of a person so employing a child, but also of a parent or guardian directly or by neglect responsible for allowing a child to be so employed.
>
> *Hurricane Loan.*—Nos. 10 and 16 provide for the raising of a loan of £750,000 guaranteed by the British Treasury and for the distribution in the Colony to meet the wants and necessities created by the hurricane of March, 1931, and No. 34 permits Treasury Bills to be issued in anticipation of the issue of the loan.

Workmen's Compensation.—No. 13 introduces in the Colony the principle of employers' liability for accidents in the course of workmen's employment. The Ordinance is based on English and South African statutes. The Mauritius Ordinance received the unreserved approval of the Secretary of State, and was circulated to other Colonies as a draft model.

Customs Tariff.—No. 23 raises the import duty on tobacco by Rs. 2.00 per kilo, on motor spirit by Rs. 2.00 per hectolitre, and on all other dutiable goods imported into the Colony by 10 per cent. The increase, however, does not apply to such articles as form the staple food of the population of the Colony.

Pensions.—No. 24 does away with the abatement of pensions on re-employment of pensioners in Government service, and provides also for the payment in full of all pensions under abatement at the date of coming into force of the Ordinance.

Arbitration Clauses.—No. 26 gives effect in this Colony to the protocol on Arbitration Clauses signed at Geneva on 24th September, 1923, and No. 27 to the Convention on the Execution of Foreign Awards on Arbitration as contemplated in the Convention signed at Geneva on 26th September, 1927.

Factory legislation and compensation for accidents are provided by Ordinances Nos. 2 and 13 of 1931 referred to above, while Poor Law Ordinance No. 17 of 1902 as amended by Ordinance No. 39 of 1913 provides for the relief of indigents or destitutes.

CHAPTER XV.

FINANCE.

Revenue and Expenditure.

The revenue of the Colony for the financial year ended 30th June, 1931, amounted to Rs. 11,552,210.08, being Rs. 3,291,586.92 below the Estimates of 1930-31 and Rs. 2,931,257.81 below the revenue of the previous year.

The expenditure for the same period amounted to Rs. 16,092,073.89, being Rs. 862,613.89 above the Estimates for 1930-31 and Rs. 517,072.72 above the expenditure of the previous year. The expenditure included a sum of Rs. 971,630.20 for writing off depreciation on securities, an item for which allowance had not been made in previous years' accounts. Apart from this sum, the current expenditure of the year was Rs. 454,557.48 *below* that of 1929-30.

The expenditure incurred during the financial year exceeded the revenue by Rs. 4,539,863.81, which amount represents the deficit on the financial transactions of the Colony for 1930-31.

Of the expenditure for 1930-31 Rs. 5,032,366.84 were spent on "Personal Emoluments", and Rs. 11,059,707.05 on "Other Charges". The corresponding figures for 1929-30 were

Rs. 5,056,573.79 for "Personal Emoluments" and Rs. 10,518,427.38 for "Other Charges".

The following is a comparative statement of the revenue and expenditure for the last five years:—

Year.	*Revenue.* *Rs.*	*Expenditure.* *Rs.*
1926-27	14,682,806	16,461,061
1927-28	15,308,918	16,725,513
1928-29	13,322,248	16,930,182
1929-30	14,483,467	15,575,001
1930-31	11,552,210	16,092,073

The Colonial Government pays a military contribution of 5½ per cent. of its revenue (total revenue exclusive of land sales, irrigation, Mare aux Vacoas and other waterworks, revenue, contribution towards loan 1922 charges, and special export duty on sugar) as a contribution to the cost of the garrison maintained in the Colony by His Majesty's Government in the United Kingdom. The amount of the contribution for the year ended 30th June, 1931, was Rs. 723,305.78.

Public Debt.

The public debt of the Colony, which on 30th June, 1930, stood at £2,796,994 7s. 7d., remained at that same figure on 30th June, 1931.

Against this liability of £2,796,994 7s. 7d. there was an accumulated sinking fund of £1,258,662 19s. 9d., as compared with £1,144,934 3s. 8d. on 30th June, 1930.

Assets and Liabilities.

The assets and liabilities at the end of the year amounted to Rs. 26,070,381.37 and Rs. 23,972,114.58 respectively, showing a net surplus of Rs. 2,098,266.79 on 30th June, 1931.

STATEMENT OF ASSETS AND LIABILITIES AS AT 30TH JUNE, 1931.

	Rs.		Rs.
Deposits	21,800,154.52	**Cash ... ...**	1,348,509.95
Colonial Military Lands Fund	50,384.95	**Investments ... ...**	11,238,150.21
Government of India ...	203,371.62	**Advances ... ...**	9,548,652.64
Family remittances ...	5,431.32	**Advances pending raising of loans ... ...**	1,343,249.28
Loan Funds unexpended ...	1,912,772.17	**Unallocated stores ...**	459,365.53
Surplus of assets over liabilities	2,098,266.79	**Balance due by the Railway Department in respect of stores unallocated taken over on 1st July, 1926 ... ...**	2,020,001.00
		Value of land and buildings given up by the War Department ...	50,384.95
		Government of Seychelles	8,270.34
		Remittances	53,797.47
	26,070,381.37		26,070,381.37

The main heads of taxation, with their yield, for the current year, as compared with the preceding year, are the following :—

		Year 1930-31. *Rs.*	*Year* 1929-30. *Rs.*
Customs	Import duties ...	3,822,385.11	4,112,684.81
	Export duties ...	54,503.71*	1,551,221.14
Excise duty on rum issued for home consumption ...		1,445,812.94	2,020,212.27
Licence duty		1,097,327.57	1,180,281.65
Tobacco Excise		429,959.86	369,297.53
Taxes on vehicles and animals		365,969.55	405,584.32
House tax		193,675.56	495,604.12

* Special export duty on sugar remitted.

DESCRIPTION OF THE MAIN HEADS OF TAXATION AND THE YIELD OF EACH.

Customs.

Import duty.

1913.	*1929.*	*1930.*	*1931.*
Rs. 3,506,622	Rs. 4,088,436	Rs. 4,136,008	Rs. 3,762,014

Export duty.

1913.	*1929.*	*1930.*	*1931.*
Rs. 570,948	Rs. 895,551	Rs. 220,584	Rs.41,802

Customs Tariff (summarized).

The following shows the rates of duty of the principal imports and exports, as on 31st December, 1931.

Imports.

*Rice	63c per 100 kilos.	Wines in casks up to 14°.	Rs. 20·00 per hectol.
*Dholl ...	Rs. 1·14 " " "	Wines in cases (still) up to 14°.	30c per litre.
*Flour	94c " " "	Spirits (proof) ...	Rs. 6·25 per litre.
Fertilizers ...	10c " " "	*Tobacco, manufactured.	Rs. 11·50 kilo.
Coal	7c " " "	* " cigarettes	Rs. 13·00 "
Petroleum oil	Rs. 4·80 per hectol.	Iron and steel (galvanized).	Rs. 1·50 per 100 kilos.
*Petroleum spirits	Rs. 14·00 " "	Iron and steel (not galvanized)	Rs. 1·00 per 100 kilos.
Soap, common	Rs. 1·75 per 100 kilos.	Most manufactured articles.	12 per cent. a.v. (on an average).

* *Note.*—The above rates are increased by 10 per cent. except on articles marked.

Exports.

Sugar ...	2c per 100 kilos.	Aloe fibre. ...	R. 1·00 per 1,000 kilos.

Principal preferential rates on imports.

	Preferential.	*General.*
Motor Cars, Buses and Tubes ...	5 per cent. a.v.	33⅓ per cent. a.v.
Silk	12 ,, ,, ,,	20 ,, ,, ,,
Indigo	Rs. 1 per kilo.	Rs. 2.50 kilo.
Cement	20c per 100 kilos.	Rs. 0·60 per 100 kilos.
Cinema Films	Free	2½c per metre.
Machinery, industrial	Rs.1.32 per 1,000 kilo.	5 per cent. a.v.

Excise and Stamp Duties.

The duty on rum for home consumption is Rs. 2.75 per litre of 23 degrees Cartier and an additional duty of 12 cents per litre for every degree above 23 degrees Cartier.

The duty on rum to be denatured for heating or lighting purposes is four cents per litre at 36 degrees Cartier and an additional duty of four cents per hectolitre or fraction thereof for every degree above 36 degrees Cartier.

The duty on rum to be denatured for industrial purposes is four cents per litre or fraction thereof at any degree Cartier.

The duty on alcohol for the preparation of medicinal tinctures or drugs is 10 cents per litre at any degree, but the duty on alcohol delivered for the preparation of "Alcoolats" in accordance with the formulae of the *British Pharmacopoeia* or the *French Codex* or of any other tincture or drug to be notified in Gazette is Rs. 2.50 per litre at 23 degrees Cartier, with an additional duty of 10 cents per litre of every degree above 23 degrees.

The duty on vinegar is Rs. 1.70 per hectolitre on vinegar not exceeding 8 degrees of strength and an additional duty of 18 cents per degree and per hectolitre on all vinegar above 8 degrees.

According to the excise figures the number of litres of alcohol distilled in 1930-31 (July to June) was 618,172, as compared with an average of 761,626 litres for the past five years.

Three Government notifications affecting the revenue of the Colony were passed during the financial year 1930-31, viz. :—

No. 144 of 13th September, 1930, which provides for a yearly licence of R. 1—for hawkers or sellers of matches locally manufactured :

No. 149 of 27th September, 1930, which provides for a half-yearly licence of Rs. 5—for sellers of leather locally prepared : and

No. 179 of 25th October, 1930, which provides for a half-yearly licence of Rs. 200—for manufacturers of tobacco.

The Stamp Laws were amended and consolidated by the passing on 23rd November, 1926, of Ordinance 22 of 1926. This Ordinance was put into force on 23rd July, 1927, by Proclamation No. 32 of 1927.

Stamp duties are of three kinds :—

A duty in proportion to the size of the paper used ;
A fixed duty ; and
An *ad valorem* duty.

House Tax.

Rates.—(1) A flat-rate of one rupee per annum on every habitable room of any building assessed at Rs. 500, or less; the rate not to exceed Rs. 3; and

(2) 1 per cent. per annum on any building assessed over Rs. 500.

Yield.—The house tax is estimated to yield Rs. 365,488.85 for the year 1931.

Method of Assessment.—Any building liable to the house tax is assessed according to its full and fair value.

In assessing the full and fair value, the valuer takes into consideration the actual or possible rent a tenant may be reasonably expected to pay for such building. This applies only to buildings whose basic value is above Rs. 500 and on which the annual tax is 1 per cent. on the value.

Method of collection.—For the purpose of collecting the house tax when the assessment arrived at is final for the year, notices for payment are served upon owners of buildings and the tax is paid to the Cashier of the district in which it is levied.

CHAPTER XVI.

MISCELLANEOUS.

The general elections of Members of the Legislative Council took place early in 1931. Five of the ten previous Members were returned. The Nominated Unofficial Members were renominated for a further term with the exception of the junior Member whose seat was vacated to allow of the appointment of a representative of the Hindu community, no Hindu having obtained a seat in the elections.

Before the new Council had met, however, the island was visited by one of the worst cyclones since the hurricane of 1892, and one of the Members' first duties was to vote funds for the relief of sufferers.

The cyclone of 5th-8th March is by far the most important event of the year under review; the casualties were happily small, but the damage to property and plantations was considerable; in some places the effects were devastating and the reduction in the output of sugar amounted to over 75,000 tons, i.e., more than one-third of the crop anticipated before the hurricane; the damage done was estimated at over Rs. 9,000,000.

For the immediate relief of the sufferers a sum of Rs. 20,000 was placed at the disposal of a "Relief Committee" by the Government; this was soon increased by £5,000 granted by the Imperial Government, 250,000 francs from the neighbouring French Colony of Madagascar, and about Rs. 25,000 raised by private subscriptions.

The cyclone destroyed many hopes of those interested in the sugar industry: prices were already very low and such a reduction in the output was disastrous.

The aloe fibre industry also suffered heavily: the aloe leaves were so damaged by the bad weather that the factories had to close for the major part of the year.

The Home Government consented to guarantee the issue of a loan of £750,000 to be raised in England, £500,000 of which was to be allocated for loans to planters and house owners secured by first mortgage on their property; the amount advanced in each case to be only in respect of damage caused by the hurricane. The balance of the loan was to be allocated for the repair of Government property and for public works. The loan was guaranteed on condition that an investigation should be made by a Financial Commission to be appointed by the Home Government with a view to devising measures to bring about a balanced budget at the earliest possible date. The legislation required both in England and locally was passed during the year, and the first payments were effected before the beginning of 1932.

The Financial Commissioners appointed by the Secretary of State for the Colonies were Sir Ivo Elliott, Bart., late of the Indian Civil Service, and Mr. N. G. Loughnane, C.B., of the Home Civil Service. The Commissioners left England on 9th July and landed in Mauritius on 23rd August. After a two months' stay during which they visited all the Government Departments, and the more important public institutions, and some private enterprises, the Commissioners left Mauritius on the 26th October reaching London on the 30th November. Their report had not been published at the close of 1931.

Early in the year His Excellency Sir W. Jackson inaugurated the new pineapple canning factory. This new enterprise will, it is hoped, prove to be a success and help to establish another subsidiary industry in Mauritius. The funds were partly supplied from the Improvement and Development Fund.

Another interesting event of the year was the visit of the German cruiser *Emden*. This cruiser, which was touring round the world, spent a week (18th-25th August) in Port Louis Harbour, and is the first German man-of-war to come to Mauritius since the war.

The island was also visited by H.M.S. *Effingham* and by the French sloop *Antares*. The latter called at Mauritius on her way to Madagascar from the Kerguelen Islands.

The *Effingham* flying the flag of Admiral Sir G. Fullerton stayed at Mauritius from 18th to 26th July when she left for Rodrigues with the Governor, the Officer Commanding the Troops, the Director, Medical and Health Department, and the Acting Director of Agriculture, returning on 3rd August.

W. H. INGRAMS,
Assistant Colonial Secretary.

30th June, 1932.

APPENDIX 1.

A TABLE OF THE TITLES OF THE ORDINANCES PASSED BY THE COUNCIL OF GOVERNMENT OF MAURITIUS DURING THE YEAR 1931.

No.	*Titles.*
1.	To provide for the publication of a supplementary volume to the revised edition of the legislative enactments of the Colony.
2.	To prohibit the employment of children in factories.
3.	To amend the Military Contribution Ordinance, 1897.
4.	To amend the Merchant Shipping (Extension) Ordinance, 1910.
5.	To alter the titles of Forest Officers and to make consequential amendments to the laws and regulations affected thereby.
6.	To amend the Laws relating to Distilleries.
7.	To amend the Licences (Consolidating) Ordinance, 1915.
8.	To amend the Succession Duties (Amendment) Ordinance, 1914.
9.	For applying a further sum not exceeding Rs. 702,804.45 to the service of the year 1929-30.
10.	To make provisions for loans not exceeding a total of £500,000 to planters and others to meet the wants and necessities created by the hurricane of the 5th to 8th March, 1931.
11.	To amend the Harbour Dues Ordinance, 1921.
12.	To authorize the Receiver of Registration Dues to refund to the Board of Commissioners for the town of Curepipe portions of the registration dues and all transcription duties levied on certain deeds of transfer already registered and transcribed.
13.	To provide for the payment of compensation to workmen for injuries suffered in the course of their employment.
14.	To make provision for the public service for the financial year 1931-32.
15.	To amend the Cinematograph Ordinance, 1912.
16.	To provide for the raising of a loan for certain purposes.
17.	To amend the Customs Tariff (Consolidated) Ordinance, 1929.
18.	To amend the Mauritius Hurricane (Loan Appropriation) Ordinance, 1931.
19.	To validate a resolution passed by the Council of Government increasing the excise duty on tobacco.
20.	To make better provisions for the management of markets and slaughter houses in the town of Beau Bassin and Rose Hill.
21.	To make better provisions for the management of markets and slaughter houses in the town of Quatre Bornes.
22.	To amend the Curepipe (Markets and Slaughter Houses) Ordinance, 1913.
23.	To validate a resolution passed by the Council of Government increasing the Customs import duties on certain goods and to amend the Customs Tariff (Consolidated) Ordinance, 1929.
24.	To amend the Pension Laws.
25.	To remove doubts as to the validity and the date of the publication of certain Ordinances.
26.	To give effect to a Protocol on Arbitration Clauses signed on behalf of His Majesty at a meeting of the Assembly of the League of Nations held on the twenty-fourth day of September, nineteen hundred and twenty-three.
27.	To give effect to a certain Convention on the execution of Arbitral Awards.
28.	To amend the Licences (Consolidating) Ordinance, 1915.
29.	To amend the Fisheries Ordinance, 1918.
30.	To make special provision in regard to the pension of Mrs. E. Berthelot, Nurse, Medical and Health Department.
31.	To make provision for the Mauritius Government Railways for the financial year 1931-2.

No. *Titles.*

32. To amend the Mauritius Jockey Club Incorporation Ordinance, 1930.
33. To amend the Mauritius Hurricane (Appropriation) Ordinance, 1931, as amended by the Mauritius Hurricane Loan (Appropriation) (Amendment) Ordinance, 1931.
34. To provide for the issue of Treasury Bills for certain purposes.
35. To empower the Board of Commissioners for the town of Curepipe to raise a loan of Rs. 100,000.
36. To provide for the protection of beneficial insects and to regulate their capture, removal, possession, sale, and distribution.
37. To amend the Municipality Ordinance, 1903.
38. To provide for the dissolution of the Society "Œuvre de Nazareth de l'Ile Maurice" and for the transfer of all property, rights, and liabilities of the said Society to the "Société de Saint Vincent de Paul."
39. To amend Ordinance No. 31 of 1890 (Church of Scotland Ordinance).
40. To make better provision for the recovery of rent at Bell Village and for the eviction of tenants for non-payment thereof.
41. To amend Ordinances No. 23 of 1887 and 32 of 1909 (Bankruptcy).
42. To regulate the issue of accepted accounts.
43. To amend the Mare-aux-Vacoas Works (Amendment) Ordinance, 1930.
44. To constitute the Seventh-Day Adventist Church in Mauritius and its Dependencies into a body corporate and to make provision for the ownership, vesting and management of any property it may now possess or may hereafter acquire in Mauritius and its Dependencies.
45. To amend the Interest Ordinance, 1882.
46. To amend the Tobacco Production and Marketing Ordinance, 1930.
47. To amend the law regarding the Paper Currency.
48. To amend the Stamps (Consolidation) Ordinance, 1926.

APPENDIX II.

APPENDIX III.

SUBSIDIARY LEGISLATION PASSED IN 1931.

A.—Proclamations, 1931.

No.

1. To grant a Charter of Incorporation to the "Soonee Muslim Jamaate" Society.
2. To grant a Charter of Incorporation to the "L'Aide Fraternelle" Society.
3. To fix the rate of exchange for the purpose of levying *ad valorem* Customs duty on imported goods.
4. To remit stamp duties and registration fees chargeable on instruments executed by or on behalf of "The Pont Praslin Co-operative Credit Society."
5. To grant a Charter of Incorporation to the "Shivopasak Sabha" Society.
6. To grant a Charter of Incorporation to the "Tamil Shanda Couna Nanda Shabay" Society.
7. To proclaim certain areas in the Colony to be infected or suspected to be infected with a plant disease.
8. To appoint a date for taking the census of 1931.
9. To authorize the General Electric Supply Company of Mauritius, Limited, to supply electricity within a certain area.
10. To authorize Mr. V. E. Desvaux to continue to supply electricity within the area defined in Proclamation No. 1 of 1910.
11. To declare all lands planted with tobacco to be infected or suspected of being infected with a plant disease (black shank disease).
12. To open the Council of Government.
13. To fix the rate of exchange for purposes of Customs duty.
14. To proclaim Monday 25th May, 1931, to be a Bank and Office Holiday.
15. To repeal article 2 (*c*) of Proclamation No. 11 of 1931.
16. To put into force The Distilleries (Amendment) Ordinance, 1931.
17. To authorize the "Marathies Prem Wardhak Mandali" Society to accept a donation.
18. To put into force the Mauritius Loan (Appropriation) Ordinance, 1931.
19. To proclaim the rate of the special export duty on the sugars of the 1931-32 crop.
20. To authorize the Brothers of Christian Schools Society to accept a donation.
21. To proclaim Latour Branch Road.
22. To authorize the Electric Generating Power (Mauritius) Company, Limited, to supply electricity within certain areas.
23. To put into force the Workmen's Compensation Ordinance, 1931.
24. To fix the rate of exchange for the purpose of levying Customs duty.
25. To put into force the Bankruptcy (Amendment) Ordinance, 1931.
26. To authorize Mr. Pierre Mauvis to supply electricity within a certain area (Pamplemousses), and part of Port Louis.

B.—Government Notifications, 1931.

Advertisements;—exhibition of, outside the limits of the Municipality and of the Townships in the rural districts.

Advertisements;—within the limits of the town of Curepipe.

Advertisements;—within the limits of Beau Bassin and Rose Hill.

Agricultural Chemists;—Registration and syllabus of examination.

Ball valve bottles as containers of aerated waters;—Extension of the time limit within which the use thereof is authorized.

Dangerous substances;—Storage of.

Distilleries Ordinance, 1904, as subsequently amended;—Regulations made thereunder.

Education Code, 1917.—*Regulations made Thereunder.*
  History of Mauritius added to the syllabus of studies for Teachers' Examinations.
  Royal College;—Award of scholarship and exhibitions.
  Staffing of primary schools.
Electric Lighting and Power Ordinance, 1902, as subsequently amended;—Regulations made thereunder.
Fisheries Ordinance, 1918;—Regulations made thereunder.
Hurricane Loan (Appropriation) Ordinance, 1931;—Regulations made thereunder.
Levying of fees for the posting up in streets of bills, advertisements, etc., in the Township of Curepipe, Quatre Bornes, Beau Bassin, and Rose Hill.
Licence to butcher (Rodrigues).
Licence to manufacturer of salt (Rodrigues).
Licence to seller and hawker of firewood (Rodrigues).
Liquor Ordinance, 1922, Regulations made thereunder.
Markets and Slaughter Houses fees, Curepipe.
Mental hospital;—Diet scale.
Motor Vehicles Ordinance, 1921;—Regulations made thereunder.
Pension Law No. 31 of 1881 as subsequently amended;—Addition of certain Colonies to Schedule D thereof.

Postal Regulations.
  Air mail service.
  Cash on delivery Parcel Post Service between France and Mauritius.

CHAPTER I.

GEOGRAPHY, INCLUDING CLIMATE, AND HISTORY.

The island of Mauritius is of volcanic origin. It is situated in the South Indian Ocean at about 1,400 miles from the east coast of Africa and lies between 19° 50′ and 20° 35′ S. latitude and between 57° 18′ and 57° 48′ E. longitude. The greatest length from north to south is nearly 39 miles and the widest breadth from east to west is 29 miles. The area of the island is about 716 square miles exclusive of that of several small islets round the coast which measure about 4 square miles.

The Dependencies comprise a large number of small islands between 230 and 1,200 miles away. The largest, Rodrigues, which lies 350 miles to the north-east of Mauritius had a population estimated at 8,691 on 31st December, 1932. The estimated population of the lesser Dependencies on that date was 1,246.

Mauritius is situated just within the tropics and enjoys a climate free from extremes of weather except that tropical cyclones at times cause considerable damage to crops, but rarely to buildings. For a great part of the year south-east trade winds, heavily laden with moisture, blow gently over the island tempering the tropical heat. The rain falls mostly in showers. Particularly in the summer months, December-March, the south-east winds are replaced by the light variable winds of the doldrums, which cause discomfort to Europeans, although the temperatures are not high, whereas in the winter months in the residential districts at altitudes of 1,300 to 1,800 feet the temperature may fall to 50° F. The yearly rainfall varies from 30 inches on parts of the coast to 150 inches in the upland regions.

The Mascarene Archipelago was probably known to Arab navigators at an early date and was no doubt visited later by the Malays who colonized Madagascar in the 15th and 16th centuries.

The Portuguese rediscovered it in 1507. They only used Mauritius as a port of call for repairs and supplies, and let loose pigs, goats, deer, and monkeys. It seems probable that rats were introduced in this period as they were a serious pest to the succeeding Dutch colonists.

The Dutch took possession from 1598 and were employed chiefly in exploiting the ebony. They attempted to cultivate sugar cane, but were frustrated by rats. Athough they denuded the forests of ebony they later added to the economic resources of the island by introducing useful trees, plants, and cattle. Negroes were imported for labour, and, as escape into the forests was easy, bands of runaway slaves called Maroons were formed. The combination of the rats and this dangerous population of mixed, but mostly African, origin uncontrolled by any tribal or political system proved too much for the Dutch who abandoned the island in 1710.

The French annexed it in 1715, and by 1722 the population, apart from Maroons, amounted to 160 persons, soldiers, colonists, and slaves. Mahé de la Bourdonnais was chosen to develop the Colony and arrived in 1735. In order to make the island self-supporting, he introduced manioc and maize from Brazil and promoted the extension of agriculture by introducing products from all parts of the tropical world. He especially encouraged the cultivation of sugar. He substituted animal draught for carriage by slaves, and to ensure an adequate supply of labour he brought slaves from Africa. From an encampment of straw huts he built up Port Louis into a town of public buildings, private houses, stores, shops, and barracks. La Bourdonnais laid the foundations of modern Mauritius.

In 1755 large herds of cattle were brought in from Madagascar. Pierre Poivre, Intendant in 1767, established the cultivation of cloves and nutmegs.

In 1810, when Mauritius became British, the population had grown from 160 to about 80,000, of whom 65,000 were slaves. Sugar was then, as now, the principal product, and, when in 1825 the duty of ten shillings a hundredweight, levied on Mauritian sugar entering England (in order to protect the West Indian sugar), was remitted, cane plantations immediately developed to a large extent, fresh land was put under cultivation, roads were opened, and steam power was applied to mills. From 18,000,000 pounds the output of sugar rose to 41,000,000 pounds in 1827, and increased annually afterwards.

On the abolition of slavery, 68,613 slaves were freed, and the colonists received £2,112,632 in compensation.

In 1842 Indian immigration at the rate of 6,000 a year was approved, and this resulted in an entire change of the balance of the population.

After a terrible outbreak of malaria in 1866 the wealthier inhabitants of Port Louis moved to higher parts of the island. As a result the country towns expanded considerably and the roads were improved and extended. The railway, begun in 1859, became very popular. One of the most striking features of the progress made has been the social and economic development of the Indians who to-day own and cultivate more than two-fifths of the whole area under sugar cane. Nearly half the investors in the Government Savings Bank are Indians, and out of a total of over Rs. 5,100,000 deposited there on the 30th June, 1932, more than Rs. 2,100,000 belonged to Indians. Besides becoming gardeners and taxi-drivers, many Indians have taken to raising cows, goats, fruits, and vegetables, and the supply of these essential foodstuffs is almost entirely in the hands of Indians. The section of the population they have displaced centres more and more in the towns, forming the clerk and artisan class.

From 1902 to 1909 the island suffered from severe financial depression owing to the low price of sugar. Matters were aggravated in 1902 by an outbreak of surra which caused great havoc among the draught animals, and necessitated the introduction of mechanical transport.

A Royal Commission was appointed in 1909 to investigate the resources and administration of the island and reported in 1910.

About 1911 the destructive beetle *Phytalus Smithii* was discovered in the sugar canes and about four hundred millions of these insects are now destroyed every year.

The great rise in the price of sugar which took place during and after the War brought prosperity, and both the Government and the general community were for a time far more prosperous than ever before.

As a result a number of important schemes were inaugurated, including the amelioration of sanitary conditions, the improvement of the harbour, the extension and improvement of water-supplies both for domestic purposes and for irrigation, the improvement of the railways, and the extension of education.

Unfortunately, however, from 1921 onwards the price of sugar fell, and the greatly lessened revenues of the Colony had to provide for the maintenance of many works undertaken in better times. In 1929 the state of the sugar industry was so bad that Sir Francis Watts was appointed, at the Colony's request, to visit the island, and to report on the economic situation. The Home Government was, however, unable to approve his recommendations that a subsidy should be given to sugar to supplement the preference granted on sugar imported into the United Kingdom, though a loan was made to the planters from local funds. Despite this loan, however, and an earlier loan granted in 1929, the condition of the sugar industry at the end of 1930 was extremely serious.

The situation became worse in 1931 owing to a cyclone which caused considerable damage to property and reduced the year's output of sugar by about 33 per cent. The Imperial Government guaranteed a loan of £750,000 for planters, house-owners, and repairs to Government property, on condition that a Financial Commission should visit Mauritius with a view to devising measures to bring about a balanced budget. The Commission's report* was published at the beginning of 1932 and immediate steps were taken to carry out measures of retrenchment and economy. As a result a balanced budget for the year 1932-33 was prepared.

CHAPTER II.

GOVERNMENT.

The Government of Mauritius is vested in a Governor, with an Executive Council of four *ex officio* members, and a Council of Government.

The Council of Government was first established in 1825. It consisted of the Governor and four officials.

The next year the Constitution was amended and a Council, including unofficial members, was introduced. This Constitution provided for a Council of Government composed of certain officers of the Crown and of an equal number of other persons to be taken from the chief landed population and principal merchants of the Colony; seven officials and seven unofficials were accordingly appointed.

---

* Cmd. 4034.

The Constitution was again amended in October, 1885. The Council of Government, under the revised Constitution, is composed of the Governor, eight *ex officio* members, nine members nominated by the Governor and ten members elected by the population: of the latter, two represent the town of Port Louis, the capital of the island, and the remaining eight the rural districts. At least one-third of the nominated members must be persons not holding any public office. Debates in the Council may be either in English or French.

The number of registered electors on 31st December, 1932, was 10,485. Every male person who is qualified as follows is entitled to be registered as a voter:

(1) has attained the age of 21 years;

(2) is under no legal incapacity, and is in possession of his civil rights;

(3) is a British subject by birth or naturalization;

(4) has resided in the Colony for three years at least previous to the date of registration, and possesses one of the following qualifications:—

(*a*) is the owner of an immoveable property of the annual value of Rs.300.

(*b*) is paying rent at the rate of at least Rs.25 a month;

(*c*) is the owner of moveable property within the Colony of the value of at least Rs.3,000;

(*d*) is the husband of a wife, or the eldest son of a widow possessing any one of the above qualifications;

(*e*) is in receipt of a yearly salary of at least Rs.600 or of a monthly salary of at least Rs.50; and

(*f*) is paying licence duty to the amount of at least Rs.200 a year.

The ordinary duration of the sessions of the Council of Government is eight months, from May to December, and meetings are held on alternate Tuesdays or oftener when necessary. The life of a Council is five years.

The town of Port Louis is administered by a Municipality, an institution which dates as far back as 1790. It was then called "Municipalité du Canton de Port Louis" and was instituted, as were other local Municipalities by the "Assemblée Coloniale". These institutions are mentioned in the law of the constitution of the Ile de France promulgated by the "Assemblée Coloniale", on 21st April, 1791. Sixteen prominent men of the town acted as Councillors of the "Municipalité du Canton de Port Louis" and were denominated the "Conseil des Notables". The "Conseil des Notables " was dissolved in 1792. It was reconstituted at the end of the 18th century under the denomination of the " Conseil des Communes " and was abolished on 10th February, 1820.

The present Municipal Corporation dates from 1850, the first elections taking place at the Masonic Lodge " La Triple Esperance " from 21st to 23rd February in that year. On 24th August, 1925, the Municipal Corporation celebrated the 75th anniversary of its foundation.

The administration of the other principal townships of the Colony, viz., Curepipe, Beau Bassin and Rose Hill, and Quatre Bornes is vested in Boards of Commissioners appointed annually by the Governor. These Boards are empowered to take measures within the prescribed limit of the township for the making, maintenance, etc., of roads, sewers, bridges, canals, and other works of public utility, for the prevention of fires, and for the proper paving and lighting of the town, etc., provided that no such arrangements contravene the existing sanitary rules and regulations made by the sanitary authorities.

In addition to the Township Boards, District Boards are appointed annually for each district. These Boards are empowered to pass regulations for the making, maintenance, and improvement of branch roads and footpaths, and for the levying of taxes.

CHAPTER III.

POPULATION.

The population is divided for statistical purposes into (1) the general population, i.e., Europeans and descendants of Europeans and people of African, Chinese, and mixed origin; and (2) the Indian population, i.e., Indian immigrants and their descendants. The Indian population forms much the largest section.

The estimated total population of the island on 31st December, 1932, was 388,400 distributed as under :—

	Males.	*Females.*	*Total.*
General population ...	61,799	64,193	125,972
Indian population ...	135,718	126,710	262,428

There was a slight increase of 724 among the general population and a decrease of 3,368 among the Indian population giving a net decrease of 2,644 compared with the figures of 1931.

The geographical distribution of the population is shown in the following table :—

DISTRICTS.	AREA IN SQUARE MILES.	CENSUS POPULATION, 26TH APRIL, 1931.			POPULATION ON THE 31ST DECEMBER, 1932.		
		General population.	*Indian population.*	*Total.*	*General population.*	*Indian population.*	*Total.*
Port Louis...	16	29,832	24,603	54,435	30,095	24,048	54,143
Pamplemousses	69	6,847	30,000	36,847	6,719	28,866	35,585
Riviere du Rempart ...	57½	5,518	25,274	30,792	5,595	24,763	30,358
Flacq	115	10,438	42,202	52,640	10,469	40,861	51,330
Grand Port	101	12,484	36,135	48,619	12,482	34,915	47,397
Savanne	93½	6,645	24,456	31,101	6,622	23,548	30,170
Plaines Wilhems	78	41,951	53,392	95,343	43,055	53,598	96,653
Moka	89	5,522	23,761	29,283	5,605	23,547	29,152
Black River	101	5,437	8,826	14,263	5,330	8,282	13,612
TOTAL	720	124,674	268,649	393,323	125,972	262,428	388,400

The births during the year numbered 10,266 and the deaths 12,848, against 11,941 and 15,467 in 1931.

The birth-rate in the general population was 32.1 per 1,000 against 36.9 in 1931 and in the Indian population 23.5 against 27.1 in 1931.

The death-rates per thousand in the two populations were 29.0 and 34.6 respectively in 1932 against 33.3 and 41.8 in 1931.

The highest death-rate for 1932 is shown in Black River, 51.0, and the lowest in Plaines Wilhems, 24.7, in a thousand.

The death-rate for the whole Colony was 32.8 and for Port Louis 33.6 in a thousand compared with 39.1 and 38.6 in 1931.

The marriages during the year numbered 1,271 as compared with 1,236 in 1931. The marriage-rate of the population was 3.3 in 1932 against 3.1 in 1931.

The number of deaths of infants under one year was 1,632 as against 2,425 in 1931; the deaths of infants represent 12.6 per cent. of the total number of deaths for the year. The infantile mortality-rate was 159 per thousand births against 203 per thousand in 1931.

The arrivals in the Colony amounted to 3,186 including discharged seamen, and the departures from the Colony numbered 3,248 including engaged seamen as compared with 3,662 and 4,452 respectively in 1931.

CHAPTER IV.

HEALTH.

The present constitution of the Medical and Health Department dates back to 1895 when under Ordinance No. 32 of 1894-95 the powers vested in the General Board of Health were transferred to the Director, Medical and Health Department.

Under the general control of a Director and Deputy-Director the medical and sanitary administration of the eight rural districts is entrusted to Government Medical Officers who supervise the work of the subordinate staff. In Port Louis a Medical Officer of Health is responsible for the sanitation of the town and is also Port Health Officer.

Each district of the Colony, with the exception of Black River, is provided with a hospital and also with a variable number of dispensaries in charge of resident dispensers.

These dispensaries are visited at least twice a week by the Government Medical Officer who is also Poor Law Officer and Public Vaccinator.

The hospitals of the Colony are divided into two groups:—

(i) General hospitals; namely, Civil, Victoria, and Moka, totalling 684 beds, which are fully equipped for X-ray and major operative work; and

(ii) District hospitals where only medical and midwifery cases are admitted and where minor surgery is carried out to a certain extent.

Patients who apply to the latter hospitals and require special treatment, surgical or otherwise, are conveyed to the nearest general hospital by motor ambulances.

There are also a Mental Hospital and a Leper Hospital administered by the Department.

From the sanitary point of view, the two chief problems are hookworm disease and malaria.

Hookworm disease was no doubt introduced into the Colony by Indian immigrants.

It is difficult to assign a date to its first appearance, but it was microscopically diagnosed in 1895.

More insidious than malaria in its general manifestations, ankylostomiasis did not, at first, attract public attention, and it is feared that even now the leading classes do not quite realise its social and economical importance—yet, reviewing the disease in *Health Problems of the Empire*, the late Sir Andrew Balfour writes :—

> " Ankylostomiasis is perhaps the Imperial disease *par excellence*, for even Malaria does not, day in and day out, produce such heavy economic loss."

The fight against the disease is entrusted to a special branch of the Medical and Health Department, and progress realized during recent years is most encouraging.

The history of malaria dates back to 1865—prior to that year it is almost certain that, despite the numerous imported cases, the Anopheles did not exist in the Colony and there was no endemic malaria.

Early in 1865 a few cases were recorded near Port Louis in the marshy locality lying at the mouth of Grand River North West. At the end of the same year an epidemic broke out in Black River on Wolmar Estate and all the coastal districts were very rapidly swept by the disease.

Efforts to control malaria have not, so far, been very successful, and this is attributable chiefly to unsystematic work. The time will come, it is hoped, when the population will realize that the financial resources of the Colony do not permit of a simultaneous attack on all the anopheline strongholds. Some districts must continue to suffer while others are being attended to and the fight must be carried out from the hinterland to the sea.

An attempt of this nature was made a few years ago, but owing to financial stringency very little progress has been achieved since 1930.

During the year under review no material change was made in the organization of the Department and, on the whole, conditions have been more favourable than in 1931. As an indication the death-rate dropped from 41.8 to 33.3 per thousand inhabitants.

In October, sporadic cases of bacillary dysentery occurred in every district. The water supply was not at fault and the spread of the disease is probably due to contamination of foodstuff by flies.

CHAPTER V.

HOUSING.

The housing of the wage-earning population of the Colony may be considered in three categories: (*a*) housing on estates, (*b*) housing in rural areas not estates, and (*c*) housing in towns.

Estate labourers are, for the most part, adequately housed. They are accommodated in lines, or rows of huts constructed either of stone or of wattle and daub, with roofs more commonly of thatch, but frequently of corrugated iron. Adequate provision is made for the ventilation and lighting of these quarters, but ventilation and lighting appear generally to be disliked by the occupants. At night, every accessible crevice is carefully closed, though the presence of ridge ventilation in many cases assures reasonable change of air in spite of the efforts of the occupants to exclude fresh air from their sleeping apartments. When the dwelling is thatched the problem of assuring adequate ventilation is difficult.

The lines must be kept clear of weeds, and all houses are required to have a clear space of at least ten feet round them.

Each camp has adequate latrine accommodation and a supply of wholesome water is laid on, though in many cases the labourers prefer to use the polluted water of streams or nearby irrigation channels for their domestic purposes.

As a general rule, the lines are not lit at night. This is scarcely necessary as the occupants retire shortly after sunset.

The housing in rural areas not estates is fairly satisfactory. It is in the labouring class of the population that one can very often see racial difference in the choice of building materials. The negro will build an untidy-looking shack of old timber, scrap pieces of wood, petrol cases, and petrol tins hammered out flat, whereas the Indian will construct a very neat hut of wattle and clay or cow-dung, on a stone plinth, furnished with a small verandah, and roofed with a compact thatch. The amenities of life are few. There is seldom water laid on to the premises. Unless the occupier has dug a well, he generally has to carry his water from the nearest standpipe which may be some five hundred yards away.

In the towns conditions are, as a rule, unsatisfactory. The chief features about the town housing are overcrowding and overbuilding; overcrowding is caused by poverty and overbuilding arises as a necessary consequence of overcrowding. Many, if not most, families of the labouring classes live in one room. Fortunately, children are seldom confined to the house on account of inclement weather, and they can pass most of their time in the open air. Rickets is very uncommon in consequence, as are other consequences of overcrowding in places where the climatic conditions are more severe either on account of excessive cold or excessive light and heat.

CHAPTER VI.

PRODUCTION.

Meteorological Conditions and Sugar Production.

Except for the occurrence of a cyclone of moderate violence on 10th April, weather conditions were highly favourable from an agricultural point of view. Temperature was generally above average, whilst the amount and distribution of rainfall was exceptionally good.

The cyclone which occurred on Sunday, 10th April, was fortunately of short duration, but wind velocities exceeding 50 miles per hour were experienced at the Central Experimental Station. The centre of the disturbance passed over the island and the consequent shift of the wind through 180° intensified the effects on the already tall canes. Fortunately this cyclone, unlike the 1931 visitation, was followed by showers which were well distributed all over the island.

The sugar production, calculated on the moisture and temperature conditions which obtained during the growing season, irrespective of the cyclones, approximated to 262 thousand metric tons. The final compilation of production for 1932 gave a total of 247.22 thousand metric tons, so that the reduction due to the cyclone approximates to 15 thousand metric tons, or about 6 per cent.

The following table gives the summarized results of the meteorological observations taken at the Central Experimental Station :—

Month and Year.	*Air Temperature. °C.*	*Departure from normal. °C.*	*Rainfall. m/m.*	*Departure from normal. Per cent.*
1931.				
November	22·2	+ 0·5	160·5	+ 214
December	23·7	+ 0·4	46·0	— 66
1932.				
January	24·3	+ 0·2	210·7	— 20
February	23·9	— 0·4	396·6	+ 44
March	24·3	+ 0·6	339·4	+ 9
April	22·5	— 0·1	265·5	+ 140
May	19·9	— 0·6	110·3	+ 11

November	21·9	+ 0·2	27·1	— 50
December	22·8	— 0·5	31·3	— 62

The Sugar Industry.

The sugar production, in 1932, in the various districts of the islands, compared with the preceding six years, is shown in the following table.

Unit=One thousand metric tons.

Districts.	*1932.*	*1931.*	*1930.*	*1929.*	*1928.*	*1927.*	*1926*
Pamplemousses and Riviere du Rempart.	62·73	41·81	43·00	54·68	59·55	52·72	44·15
Flacq...	35·97	27·91	37·81	38·91	41·17	33·21	26·02
Moka	34·12	20·83	32·10	35·97	34·76	30·88	31·27
Plaines Wilhems and Black River ...	26·11	17·93	24·43	24·88	26·12	24·09	24·32
Savanne	41·63	27·01	37·09	36·41	41·41	35·88	35·13
Grand Port ...	46·66	28·52	46·53	47·18	50·42	41·22	31·70
Total	247·22	164·01	220·96	238·03	253·43	218·00	192.59

The extraction of sugar per cent. of cane approximated to 11.09. Figures for the last decade are as follows:—

Year.	*Extraction of sugar per cent. of cane.*	*Year.*	*Extraction of sugar per cent. of cane.*
1923 ...	... 10·51	1928 ...	... 10·76
1924 ...	... 10·28	1929 ...	... 10·54
1925 ...	... 10·56	1930 ...	... 10·92
1926 ...	... 9·94	1931 ...	... 10·61
1927 ...	... 10·53	1932 ...	... 11·09

Grades of sugar.—The proportion of raws (98½° polarization) is markedly higher than last year, being 87.5 per cent. as against 83 per cent. in 1931. The change which has taken place in this respect during the past ten years is illustrated in the following table.

Years	*Percentage of:—*		
	Vesous.	*Raws.*	*Lows.*
1923	97·61	...	2·80
1924	98·34	...	1·66
1925	98·21	...	1·79
1926	98·10	...	1·90
1927	98·63	...	1·37
1928	71·80	27·30	0·90
1929	23·90	75·20	0·90
1930	16·80	82·50	0·70
1931	16·20	83·10	0·70
1932	12·10	87·50	0·40

Area under sugar cane.—At the beginning of 1932, the area under cane cultivation was estimated at 134,915 acres. Estates with mill cultivated 50,735 acres and estates without mill 34,540 acres. The total estate cultivation was then 63 per cent. of the total area under cane. The balance was made up of lands cultivated by small planters, mostly Indian. It is expected that the total area under cane has been somewhat increased during the year, but no reliable figures are available as yet.

Disposal of the 1931 *sugar crop.*—As in preceding years, the bulk of the Mauritius sugar production went to the United Kingdom. The total exported at the end of the export year 1931-32 was 153,259 tons, distributed as follows :—

	Tons (metric).
United Kingdom	137,533
Dominion of Canada	15,495
Other places	231
Total	153,259

The exportation of the 1932-33 production was as follows at the end of December, 1932 :—

	Tons (metric).
United Kingdom	127,556
Other places	125
Total	127,681

Sugar Market.—The deterioration of the sugar market continued during the earlier months of the year and, had it not been for the assistance of Imperial Preference, plus a slight improvement in market prices, the sugar industry of Mauritius would have been in very serious straits.

The local Sugar Syndicate continued its operations in 1932 on much the same lines as heretofore, controlling more than 80 per cent. of the entire sugar production of the island.

It is anticipated that the net price for the 1932 crop to planters, from the Syndicate, will be between Rs. 6.15 and Rs. 6.20 per 50 kilos. This figure does not include commission and/or brokerage. However, the average cost of production will be well below the price received and the consequent favourable money balance will improve to some extent the precarious position in which the industry has, for the last few years, been placed. On a number of estates curtailment of expenses had passed the economic limit; some improvement in factories and field may now, with confidence, be expected.

Fertilizers.—During the year 12,726,702 kilos were imported at a value of Rs. 1,325,439 as against 11,876,472 kilos in 1931 at a value of Rs. 1,515,208.

Labour conditions.—A reduction of wages took place in 1932 which corresponded with a general decrease in the cost of living as foodstuffs, rice in particular, experienced a marked drop in price.

The concentration of population (one-fourth of total) in the central and healthier district of Plaines Wilhems, renders often precarious the labour supply on estates unfavourably situated in the low-lying districts of the island.

Sugar machinery.—Machinery to the value of Rs.277,656 was imported during the year as compared with Rs.399,124 in the preceding year. No tractors or ploughs were imported. Tramway material for use on sugar estates, to the value of Rs.110,289, was imported as compared with Rs.79,234 in 1931.

Sugar Cane Research Station.—This organization received its full complement of officers by the appointment and arrival of Dr. Evans, Physiological Botanist. Material progress has been accomplished.

Insect pests.—The beetle known as Phytalus (*Phytalus Smithii, Arrow*) continues to predominate. The collecting season of 1931-32 yielded a return of 356,376,727 beetles, which was 32 millions more than the preceding season. The season 1932-33 had, at the end of 1932, produced a total of 191,585,765 beetles, showing a diminution on the previous season's results at the same date of some 65 millions insects. Weather conditions during the collecting season, however, had up till the end of the year been unusually dry, a factor which has in other years had an arresting effect on the emergence of adults. It is not wise, therefore, to raise at present any false hopes that this season may result in a total capture lower than that of 1931-32.

The cessation of the campaign of larvae destruction during 1931 caused an abnormal corresponding increase of adults during the 1931-32 season of emergence. An intimate study of the further possibilities of the biological control of this beetle is about to be made. A fresh parasite has already been introduced from Madagascar which gives promise. Last, but by no means least, there is the work of the Sugar Cane Research Station which, in part, is being directed towards the production of a cane which, in addition to its other desirable properties, will possess a rooting system too deeply and strongly developed for serious damage by Phytalus larvae.

Minor Agricultural Industries.

Tobacco.—With the opening of the Government Tobacco Warehouse in February this industry was placed on an entirely different footing. Growers can now be assured of obtaining a regular price for their products and manufacturers will in future be sure of their immediate supplies. It is only natural, perhaps, that the small planters were a little apprehensive at first of the activities of the warehouse but confidence is now fully restored. The production of good quality leaf is rapidly progressing.

There can be no doubt that this local minor industry exhibits promise of a successful future.

Livestock and animal produce.—Less cattle were imported for beef during 1932 than 1931. This is due to reduced purchasing powers and to the development of the local cattle industry.

Cattle on estates numbered 13,260 in 1932 as against 12,004 in 1931. Sheep were 1,584 as against 1,073 in 1931. Pigs and goats numbered 1,713 and 4,493 respectively as compared with 2,077 and 4,449 in 1931.

Rum, industrial alcohol, and Cernite.—During the year 578,209 litres of alcohol were distilled for human consumption as against 618,172 in 1931. The export of rum amounted to 5,308 litres valued at Rs.1,489 as against 21,086 litres valued at Rs.6,623 during 1931.

In 1918 a patent was granted to Messrs. Edouard Langlois and Philippe d'Oisy Fayd'herbe to protect a fuel mixture composed of ether 30 per cent., alcohol 60 per cent., and kerosene 10 per cent. The mixture was manufactured by the "Cernite and Alcohol Company, Limited," and was sold under the trade mark of Cernite, for internal combustion engines. After a short while, the manufacture was given up, owing to the high proportion of impurities in the alcohol and ether produced in the company's distillery, but since then, considerable progress has been made in the manufacture of both alcohol and ether through the erection of modern plants in St. Antoine distillery. For the six months ending December, 1932, the production of Cernite reached 162,200 litres and that of industrial alcohol 124,340.

Rice industry.—Owing to the extremely low price of rice the cultivation of this food plant has decreased and only 125 arpents were under rice cultivation during the year. The small planter finds that he can obtain more remunerative results from growing other food crops.

Pineapple industry.—After a period of hesitation there are now positive signs that the public is really taking an active interest in this industry. A Pineapple Committee, composed of representative planters with the Director of Agriculture as Chairman, has been appointed in order to co-ordinate interested effort. Many orders for plants of Smooth Cayenne have been received by the Department and arrangements have been made for the rapid propagation and distribution of this variety. There are now twenty-five acres under Smooth Cayenne and it is intended to plant forty acres in the early months of 1933. The increase in the acreage of this desirable type of pine for canning represents a very real progress.

A regular supply of fruits was delivered at the Canning Factory, Port Louis, during the fruiting season from December to January. The output was on an average about 200 cases daily of a net weight of 4,000 kilos.

It has now been decided to adopt only one trade mark "The Dodo". The latest reports, on canned Mauritius pineapples, received from London were encouraging; the prices paid compared favourably with those of the best Hawaiian products. The question of grading and upkeep of quality is receiving close attention.

Vanilla.—No progress has been made during the year. It is estimated that there are ten acres under cultivation in different parts of the island besides many abandoned plantations, which have now reverted to forests but where the vanilla vines are growing vigorously.

At the request of planters, the import duty on vanillin has been raised from Rs. 40 to Rs. 110 per kilo; on unprepared vanilla from Rs. 5 to Rs. 15 and for prepared vanilla from Rs. 10 to Rs. 25.

Honey industry.—It is interesting to notice the rapid progress made with bee-keeping within the past few years. The honey obtained by the " Rucher du Nord " and its suppliers for the past three years is as follows :—

	lb.
1929-30	1,260
1930-31	2,250
1931-32	7,700

It is estimated that about 6,000 lb. will cover local consumption but there is no doubt that this quantity could easily be increased by advertising and propaganda. Favourable reports have been received on samples of Mauritius honey sent to the British Industries Fair.

The duty on foreign honey, which was formerly 12 per cent. *ad valorem*, has now been altered to 44 cents per kilo (General Tariff) and 22 cents per kilo (Preferential Tariff).

In order to encourage bee-keepers, the Agricultural Department has distributed free seeds of the best nectar-producing plants.

Aloe fibre industry.—This industry remained in a stagnant condition during the year on account of the low prices of aloe fibre. Grade prime was sold between Rs. 200 and Rs. 210 per ton, and the other grades at about Rs. 15 less per ton according to quality, leaving only a very small margin of profit to fibre factory owners. The small number of offers from buyers and the low prices accounted for the output remaining at practically the same level as last year.

Mauritius aloe fibres were permitted free entry into England, foreign fibre having to pay a 10 per cent. duty *ad valorem*, but unfortunately up to now British firms are not utilizing to any increased extent the local fibre. It is hoped that a favourable report will soon be received from the Admiralty and the Imperial Institute concerning trials made with aloe fibre. Samples were also sent to the British Industries Fair.

The inauguration of the factory belonging to the Mauritius Spinning and Weaving Company, Limited, took place on the 19th of March; the results obtained up to now are encouraging, and it is hoped that this new industry will make considerable progress in the near future.

The factory turns out excellent bags woven from the aloe fibre which are utilized for the exportation of sugar and favourable reports have been received concerning their utilization in this respect. It is probable that they will be found to give useful service in other respects.

A rough but strong cloth is also turned out; twine of a good quality is produced.

The production of fibre during the year was as follows :—

380 tons delivered to the Fibre Syndicate;

282 tons delivered to the Spinning and Weaving Factory.

Tea industry.—Considerable improvements have been made in the cultivation and propagation of tea in this island as the results of the visit and recommendations made by Commander Goolden in 1930. The plantations are now properly cultivated and improved methods of tea manufacture have also been effected.

In order to assist the local tea industry, the import duty on foreign tea was raised during the year from 40 to 60 cents per kilo. This help has been appreciated by tea planters and has encouraged them to extend their plantations. Plants of a superior quality have been raised by the Agricultural Department and sold to Bois Cheri and Curepipe Tea Estates.

Tea seeds have been received from the Ceylon Department of Agriculture. The germination was good and the seedlings are now growing well.

Forty acres of new plantations were made at Bois Cheri Estate during the year.

The total outputs from the three factories are as follows :—

	Kilos.
Bois Cheri Estate	6,000
Curepipe (Corson) Estate	10,000
Nouvelle France Estate	200

Coconut industry.—The majority of coconut palms in different parts of the island have now recovered from the effects of the 1931 cyclone and are bearing a good crop of nuts. The damage done by the coconut scale insect (*Aspidiotus destructor*) is not so bad as in former years, as it is in many places controlled by its parasites.

Small plantations of Pemba coconuts have been established at Barkly and Pamplemousses Experimental Stations. The trial plantation of this variety at " Cannoniers Point " was not a success. Another consignment of nuts has been ordered from Zanzibar. These will be raised in the Nurseries, and afterwards the plants will be sold to the public.

The export of copra during the year was 1,746 tons of a value of Rs. 287,516. In 1931, 2,559 tons worth Rs. 395,445 were exported. The export of coconut oil during 1932 amounted to 5,480 kilos of a value of Rs. 2,176. In 1931 it amounted to 3,707 kilos valued at Rs. 1,723.

Other Manufacturing Industries.

Owing to the depressed condition of the sugar market and the consequent reduction in the monetary value of the exported sugar, efforts have been made to render the Colony more self-supporting as regards a number of minor products which were as a rule imported. This has resulted in somewhat more activity in the domain of secondary manufacturing industries. The number of small engineering establishments had reached 50 during the year, employing about 500 people. Bakeries numbered 73 as against 65 last year; lime kilns 37 as compared with 34 last year.

There are, further, three salt-making establishments giving employment to about 100 persons, four docks, four hydro-electrical plants (for light and power), and one match factory. Altogether, about 1,000 persons are employed in the above. The manufacture of cigarettes is also progressing. In addition, a number of smaller industries are fairly prosperous:—cabinet makers, aerated water works, ice making, vinegar making and boot making.

None of these export their produce but help to diminish the amount of imports and contribute, in a small way, towards improving the trade balance of the Colony.

Fisheries.

In accordance with the general scheme of economy the Fishery Branch of the Receiver-General's Department was abolished on 1st March, 1932, and the whole of the duties in connexion with the control of fishing devolved upon the police.

Fishery control stations have been established at Port Louis, Black River, Mahebourg, Trou d'Eau Douce, and Poudre D'Or, and a staff of ten boatmen under the supervision of five sub-officers are employed entirely on the control of fishing. An officer at Headquarters, who has considerable practical experience, visits the Control Stations at frequent intervals to assist and advise the personnel in the performance of their duties and discuss the question of adequate control with local residents. This officer is also dealing with the question of the compilation of fishery statistics as advised by Mr. Hornell in his 1926 report.

The Advisory Committee, formed in 1927, has met on frequent occasions during the year and has been principally concerned with questions of the control of net fishing, extension of reserves, and improved supervision. Recommendations have been submitted to Government in connexion with these matters and action is being taken to give effect to the various proposals.

Some progress has been made in the direction of the establishment of a shark products industry in the Colony and it is hoped that developments will take place in the near future.

Fish of excellent quality has been plentiful and cheap at all the fish landing stations and markets throughout the year and systematic efforts are being made to supervise the industry in such a manner as to (1) improve the lot of the professional fishermen, (2) restrict unnecessary net-fishing, (3) encourage line-fishing, and (4) ensure regular supplies of good and cheap fish in all the markets, etc.

Amateur fishermen of the Colony are now represented by the "Mauritius Anglers and Big Game Fishing Association" and the views of the Society as to control, legislation, etc., have been submitted to the Fisheries Advisory Committee and are receiving consideration.

CHAPTER VII.

COMMERCE.

The total value of the *foreign trade* (in merchandise) of the Colony in 1932 was Rs. 54,676,976.

Comparative figures for imports and exports for the last five years and 1913 are shown below :—

	Imports. *Rs. (1,000).*	*Exports.* *Rs. (1,000).*	*Total Trade.* *Rs. (1,000).*
1913	36,607	32,292	68,899
1928	49,438	47,371	96,809
1929	46,428	52,450	98,878
1930	39,806	26,601	66,407
1931	32,064	23,830	55,894
1932	27,014	27,663	54,677

Owing to severe restrictions in imports and to the increased preference granted on sugar exported to the United Kingdom, the Colony is not, this year, faced with an adverse trade balance.

It will be seen, however, that the total trade both as regards imports and exports is much below the pre-war level.

The above figures for exports include re-exports, which amounted to Rs. 652,982 in 1932, compared with Rs. 947,723 in 1931 and Rs. 941,670 in 1930.

Bullion and Specie (not included in the foregoing figures) were imported or exported to the following amounts in the last three years :—

	Imports. *Bullion and Specie.* Rs.	*Exports.* *Bullion and Specie.* Rs.
1930	1,165	4,500
1931	802	1,933,546
1932	—	1,042,352

Imports of Merchandise.

The total value of the imports of merchandise in 1932 amounted to Rs. 27,014,125, compared with Rs. 32,064,074 in 1931 and Rs. 39,806,180 in 1930.

Principal Imports.	*Quantity.*			*Value.* *Rs. (1,000).*		
	1930.	*1931.*	*1932.*	*1930.*	*1931.*	*1932.*
Rice (m. tons)	51,912	63,419	57,100	8,960	7,772	6,700
Other grain and flour (m. tons).	16,952	19,455	16,702	2,727	2,256	1,941
Provisions and Spices ...	—	—	—	540	463	414
Manures and Fertilizers (m. tons).	16,653	12,836	14,381	2,549	1,667	1,385
Coal, coke, and manufactured fuel (m. tons).	54,668	45,883	27,236	1,343	934	594
Petroleum products (refined) (hectol.).	88,054	98,125	83,916	1,787	1,625	1,614
Soap, common (m. tons) ...	1,744	1,665	1,348	833	673	598
Cement (m. tons)	10,132	3,313	5,162	494	149	208
Cotton manufactures, piece-goods (1,000 met.).	7,628	8,339	8,689	2,329	1,853	1,743
Woollen manufactures, piece-goods (1,000 met.).	100	64	91	263	151	194
Wines in casks (hectol.) ...	6,716	4,407	3,547	324	207	163
Wines in cases (lit.) ...	97,766	48,305	30,474	147	79	75
Spirits (lit.)	30,994	19,025	18,488	128	87	73
Tobacco, all sorts (m. tons)	69	48	43	379	288	199
Motor cars, complete—(number).	209	115	90	454	234	228
Motor lorries, complete—(number).	82	59	21	173	116	50
Boots and shoes (not rubber) (pairs).	93,134	124,624	83,446	246	212	128
Haberdashery and Millinery.	—	—	—	376	268	101
Iron and Steel	—	—	—	1,289	956	517
Silk goods	—	—	—	429	548	503
Drugs	—	—	—	351	420	291
Wearing apparel (except shoes).	—	—	—	405	385	339
Rubber goods (including tyres).	—	—	—	413	363	276
Machinery	—	—	—	1,116	905	554

The above figures reflect the economic situation of the Colony. There have been decreases in the principal imports generally both in quantity and value.

Exports of Merchandise.

The total value of the exports of merchandise amounted to Rs. 27,662,851 compared with Rs. 23,829,884 in 1931 and Rs. 26,600,964 in 1930.

The following table shows the sugar exports for the last three years and in 1913 :—

	Metric tons.	*Value in Rupees.*
1913	187,772	30,700,697
1930	185,539	24,846,253
1931	178,808	22,229,991
1932	197,885	26,385,536

The sugar industry has for many years been the sole resource of the Colony and the phenomenally low prices obtained of late are the cause of the present economic situation. But for the preference granted by the United Kingdom, the position would be desperate.

Efforts have been made with some success to develop secondary industries. Imported tobacco is rapidly yielding place to a local grown variety and a match industry is making some progress. Bags for sugar are being made from local hemp with considerable success and a pineapple canning industry appears likely to assume importance in the course of time.

The principal exports apart from sugar for the last three years were as follows :—

	Quantity.			*Value Rupees (1,000).*		
	1930.	*1931.*	*1932.*	*1930.*	*1931.*	*1932.*
Aloe fibre (m. tons)	1,469	455	417	348	92	81
Copra or Poonac (m. tons).	1,734	2,559	1,747	280	395	288

Distribution of Trade.

The percentage of trade distribution for the last three years and in 1913 was as follows :—

Imports.

	1913.	*1930.*	*1931.*	*1932.*
United Kingdom	33·2	25·1	23·5	24·1
Other parts of the British Empire ...	42·6	44·5	46·9	46·8
Foreign Countries	24·2	30·4	29·6	29·1
	100·0	100·0	100·0	100·0

Exports.

United Kingdom	18·5	71·5	77·6	97·1
Other parts of the British Empire ...	77·0	24·7	18·8	·4
Foreign Countries	4·5	3·8	3·6	2·5
	100·0	100·0	100·0	100·0

Total Trade.

	1913.	*1930.*	*1931.*	*1932.*
United Kingdom	26·3	43·9	47·6	61·0
Other parts of the British Empire ...	58·7	36·6	34·3	23·4
Foreign Countries	15·0	19·5	18·1	15·6
	100·0	100·0	100·0	100·0

The principal countries from or to which the commodities come or go are indicated below :—

Imports.

Value in Rupees (1,000).

	1913.	*1930.*	*1931.*	*1932.*
United Kingdom	12,149	10,450	7,504	6,457
India	13,422	13,938	11,576	9,971

Course of Prices.

Mean prices (c.i.f. or f.o.b.) of the principal articles imported or exported are shown below for the last three years :—

Imports (c.i.f.).

	1930.	*1931.*	*1932.*
	cents.	cents.	cents.
Rice, per kilo	17	12	12
Dholl, per kilo	18	13	13
Flour, per kilo...	16	11½	11½
	Rs.	Rs.	Rs.
Bullocks, per head (for food)...	63	66	60
	cents.	cents.	cents.
Fertilizers, (Chemical) per kilo	17	13	10
Petrol spirits, per litre	21	16	20
Cotton piece-goods, ordinary, per metre ...	31	22	20
Soap, common, per kilo	47	40	44

Exports (f.o.b.).

Sugar, per kilo	13¼	12⅓	13⅓
Aloe fibre, per kilo	24	20	19⅓

Changes in the Direction of Trade.

Imports.—In spite of a preference ranging from 13 per cent. upwards in favour of goods from the United Kingdom, Japan has maintained the place which it acquired in 1931 as the largest exporter to this Colony of cotton piece-goods. In the case of silk and artificial silk, where the margin of preference is now 38·5 per cent., the imports from Japan have still further increased at the expense of the United Kingdom. Mass production with a depreciated currency have so lowered the price of Japanese goods that the preference granted to British goods is largely ineffectual.

Exports.—In pre-war years the great bulk of the sugar exports went to India. Now the United Kingdom is the sole buyer except for an occasional purchase by Canada.

Development of Empire Trade.

Much has been done this year to extend preference to the United Kingdom.

A Preferential Tariff on United Kingdom goods was introduced in the Colony on 30th September, 1924, and was subsequently extended to Canada.

To-day preferential margins ranging in many cases to 50 per cent. and in a few cases to 70, 85, and 100 per cent. of the duty is allowed on United Kingdom and Canadian goods. The law provides that the concession may also be extended to such other parts of the Empire as may grant preference to products of Mauritius.

A feature of the Colony's new tariff is the grant of protective duties to various local products.

CHAPTER VIII.

WAGES AND COST OF LIVING.

Owing to the pronounced fall in price of foodstuffs during the year, it was possible still further to reduce wages to meet the necessity created by the falling prices of sugar.

The salary of labourers under monthly contract remained at Rs. 10, with rations, free lodging, etc., but, owing to the reduction in the price of foodstuffs, the monetary equivalent of rations, etc., is now about Rs. 8 as compared with Rs. 12 last year.

Male day-labourers received on the average Rs. 0.45 per day, but during crop time a larger amount was paid. Female labourers generally received half the wages of male workers.

As a result of the reduced scale of wages the number of females employed in agriculture is markedly increasing. Thus in 1921 the number of female agricultural workers was 9,678; in 1931 it was 15,105 (Census figures) and, to all appearances, the number has been still further increased in 1932.

Remuneration for piece-work in agriculture was, on the average, as follows :—

	Per acre. *Rs.*
Cleaning land	30
Digging cane holes	18
Manuring	10
Weeding	7
Cutting canes (20 tons per acre)	13

As regards industrial workers, artisans, etc., a pronounced fall in wages has also taken place. Day workers get Rs. 1.00 to Rs. 1.50, while those employed by the month (especially workers in metal) receive only Rs. 35 to Rs. 70 according to circumstances.

The wages of domestic servants have been reduced in a degree commensurate with the employers' reduction in revenue. Butlers or cooks get Rs. 20 to Rs. 30 on the average; chauffeurs Rs. 30 to Rs. 40; maids or boys Rs. 10 to Rs. 15.

Owing to the concentration of population (one-fourth of the total) in the healthier central districts of the island, labour is there more abundant and tends to be attracted towards domestic service, which is generally lighter than agricultural duties. Loss of efficiency owing to the prevalence of malaria and ankylostomiasis is now an exceedingly serious matter.

Salaries paid in 1932 have all been reduced, either permanently or temporarily. The following scale indicates, in a general way, the present ruling rates :—

	Per annum *Rs.*
Managers on sugar estates and Senior Government officials	8,000 to 13,000
Government, Bank and Commercial clerks (higher grade)...	4,000 to 7,000
Clerks and employees on sugar estates	1,500 to 3,000
Junior clerks and employees	720 to 1,500

The index numbers of the cost of living remained practically stationary during the first two quarters of 1932. During the third quarter a sharp drop occurred followed by a rise in the last, without, however, reaching the level of the first quarter.

Rice, the staple food of the population, reached its lowest value, 71 (as compared with 100 in 1914), during the last quarter; other grains followed generally the same trend. Flour oscillated between 67 and 75 during the first three quarters and rose to 84 during the last. Tea and coffee remained practically stationary at about 85, while oils and fats exhibited a general downward tendency. Articles of clothing remained stationary at 165 until the third quarter of the year, when a pronounced fall was in evidence.

The index for the total cost of living in 1932 was as follows (100 being the index for 1914) :—

1st quarter	126.9
2nd quarter	126.7
3rd quarter	110.6
4th quarter	123.0

The mean for the year was 121.8 as compared with 130.0 in 1931.

CHAPTER IX.

EDUCATION AND WELFARE INSTITUTIONS.

Primary.—Primary education is not compulsory, but it is given free through Government and State-aided schools which are open to all children of the Colony. The following table shows the number of primary schools, the number of pupils on roll, and the staff of teachers during the year 1932 :—

Schools.	*No. of Institutions.*	*No. of Teachers.*	*No. of Pupils on roll.*	*No. of Pupils in average attendance.*
Government	50	345	13,577	9,252
Aided	77	614	22,859	15,328
Total	127	959	36,436	24,580

State-aided schools are under the control of a Manager, and the Government contribution includes the salaries of the teachers together with recurrent grants to meet part of the expenditure on maintenance of school buildings and furniture.

Pupils must be at least 5 years old and must have been successfully vaccinated in order to be allowed admission to a primary school; when they are under five they undergo a preliminary training before being promoted to the lowest form.

The curriculum of studies includes the teaching of English, French, and arithmetic. In the higher classes elementary history and geography are taught and girls study needlework. Regular instruction is also given in physical drill, nature study, hygiene, and elementary principles of agriculture.

There are six primary school standards or classes, viz. :—

Standard I with pupils from 5 to 6 years of age.
Standard II with pupils from 6 to 7 years of age.
Standard III with pupils from 7 to 8 years of age.
Standard IV with pupils from 8 to 10 years of age.
Standard V with pupils from 9 to 11 years of age.
Standard VI with pupils from 10 to 12 years of age.

Examinations which were formerly held for all the classes are now limited to Standards V and VI. The new system allows educational officers to devote more time to inspection work proper with the result that teaching methods are gradually improving.

Fourteen apprenticeships are awarded annually to primary school pupils to encourage the study of needlework and handicrafts. Twenty-six scholarships and exhibitions tenable at the secondary schools are awarded every year, through competitive examinations, to the best pupils attending primary schools.

There are 30 gardens attached to the primary schools and they are cultivated by the pupils of Standards II to VI. These gardens are regularly inspected by officers of the Agricultural Department who give advice as to proper cultivation.

Secondary.—There are two categories of secondary schools, viz :—(1) Secondary aided schools, which are managed privately but are under Government control, and (2) the Royal College and the Royal College School which are managed by Government.

(1) *Aided Secondary Schools.*—Government grants to secondary aided schools are assessed with reference to attendance and efficiency, as tested by inspection and examination, and not, as in the case of primary aided schools, with reference to maintenance and salary charges.

The following table shows the number of institutions, the number of pupils on roll and in average attendance, and the staff of teachers during the year 1932 :—

Schools.	*No. of Institutions.*	*No. of Teachers.*	*No. of Pupils on roll.*	*No. of Pupils in average attendance.*
Aided	9	117	1,588	1,335

These schools provide not only for elementary education such as is given in primary schools, but also for higher education leading up to the Cambridge School Certificate and the London Matriculation.

The curriculum of studies includes the teaching of English, French, mathematics, needlework (for girls), hygiene, history, and geography. In addition to these, drawing and music are taught on a more moderate scale.

These schools are visited periodically by the Superintendent of Schools, who examines the lower forms. The middle and higher forms are examined partly by local examiners and partly through examinations conducted by the Syndicate of the University of Cambridge.

Working hours in both primary and secondary schools, extend, as a general rule, from 10 a.m. to 3 p.m., no provision being made for evening classes.

(2) *Royal College.*—The Royal College, Curepipe, is a Government school for the higher education of boys up to the age of 20. Affiliated to it is the Royal College School at Port Louis, where boys under the age of 18 are educated on the same lines. The staff of the Royal College consists of the Rector, 12 Masters with degrees in Honours at British Universities, and 11 Assistant Masters locally appointed ; and at the Royal College School of the

Headmaster, 2 Masters, and 8 Assistant Masters. Assistant Masters are encouraged to take the B.A. and B.Sc. Examinations of London University. The College has well-equipped chemical and physical laboratories; almost as many pupils follow classical as scientific studies.

Admission to the College is conditional upon passing an entrance examination or winning either one of the twenty Annual Primary Schools Scholarships and Exhibitions or one of the two Secondary Schools Scholarships awarded annually. The boys are drawn from all classes and races in the Colony, and range in age from ten to twenty years.

About ten College Scholarships and Exhibitions are awarded annually to College pupils and also a Classical and a Modern Scholarship of the present value of £1,300 (with 1st class passage to and from England), tenable for four or five years at a British University or any other approved place of education in the United Kingdom.

Besides the winners of these scholarships, a few boys, whose parents can afford it, go to England or France to study a profession, usually Medicine or Law, and almost always return to Mauritius to practise. Of the remaining pupils the majority on leaving the College find employment in the island.

The boys receive a training in classical and scientific subjects. Specialization begins at the entrance class and the division into modern and classical side becomes complete in the upper middle class.

In addition to the standard secondary education there are extension classes where candidates for Pharmaceutical Diplomas and other public science examinations are helped in their studies.

The number of pupils on the roll of the Royal College in January, 1932, was 325, and of the School 92. The average attendance at the College was 255 and at the School 85.

Encouragement is given to athletics, rugby and association football, hockey, boxing and physical training, and gymnastics, in which, although by no means all the boys join, the standard of proficiency is high. As the pupils are all day-boys it is difficult to obtain much support for other social activities, but a school magazine is published termly, and a musical society is being formed.

Welfare Institutions.

There are five Roman Catholic infirmaries for men and women, and two orphanages for children under the management of Sisters of Mercy; also an orphanage for boys and one for girls under the control and management of the Church of England, and one "home" for men and women under the management of the Church of Scotland. These institutions receive from the Government a maintenance fee for each pauper maintained therein.

Under Ordinance 44 of 1932, which came into force on the 24th December, 1932, a " Home " styled " The Austin Wilson's Home " is established at Quatre Bornes for the aged, destitute, and infirm. The funds for the formation of this " Home " are being generously contributed by Mr. A. J. Wilson in memory of his son, the late Austin Wilson.

A Mahommedan Orphanage was also started in Port Louis this year for the maintenance and education of orphans of the Mahommedan creed.

Funds for running the institution are obtained from voluntary subscriptions among the Mahommedans.

Outdoor assistance to paupers is granted by the Poor Law Department partly in cash and partly in food provisions.

Several private religious societies for the distribution of assistance in food and medical care are also in existence. The Société Française d'Assistance assist chiefly destitute French people.

The Child Welfare Committee and the Oeuvre Pasteur de la Goutte de lait, two philanthropic institutions, deal especially with expectant and nursing mothers and their babies.

The Workmen's Compensation Ordinance provides for the grant of a compensation by the employer to workmen who are injured in the course of their work.

Recreation, Music, Art and Drama.

Association football is the most popular form of sport, and there is a stadium at Curepipe, a second at Cassis, on the outskirts of Port Louis, and a third at Rose Hill. Golf, tennis, cricket, hockey, and rugby football are played, mostly by the wealthier classes. The Mauritius Turf Club and the Mauritius Jockey Club hold race meetings from June to September at the Champ de Mars in Port Louis, and at Mangalkhan, in the district of Plaines Wilhems; and regattas are held by the yacht clubs of Mahebourg and Tombeau Bay. " La Chasse " or the shooting of driven deer can be said to be the national sport of Mauritius. The season is from June to the beginning of September.

There are several flourishing companies of Girl Guides and Brownies; the latter are known locally as Blue Birds. The Boy Scouts have not been so successful as the Girl Guides, but efforts are being made to encourage the movement.

There is not much encouragement for any of the arts. Music is fostered by the parish churches, whose amateur singers frequently give concerts. Apart from church organists the Christian Brothers are almost alone in providing musical training.

The Municipality of Port Louis has instituted a drawing class, practically the only encouragement to local talent. The Institute has a collection of pictures presented by Mr. Rochecouste, but there is no other art gallery.

Occasional dramatic performances are given by amateurs, but no permanent society has been formed. In better times the Municipality of Port Louis subsidizes a theatrical company from France, which plays in the theatre at Port Louis. The Chinese have their own theatre in the town, to which companies come from China when conditions are more prosperous.

There exists a Royal Society of Arts and Sciences which was founded in 1829 under the title of Société d'Histoire Naturelle and was granted a Royal Charter in 1846. It interests itself in most branches of science and arts especially those relating to questions of agriculture and the national history of the Colony. The Society was incorporated with the Mauritius Institute in 1906 and its library is being transferred to the Institute library.

CHAPTER X.

COMMUNICATIONS AND TRANSPORT.

Roads and Road Transport.

During the past ten years Mauritius, in common with other outlying Colonies, has seen a gradual development of road transport on modern lines, with a marked tendency for passengers and light merchandize to leave the railways for the excellent local roads.

Comparative figures of motor vehicles on the road are as follows :—

	1922.	*1932.*	
Private motor cars	1,685*	1,462	1,716
Motor cabs	—	254	
Motor lorries	141	358	
Motor cycles	202	143	
Motor omnibuses...	—	125	
Total	2,028	2,342	

Towards the end of 1932 a Transport Control Board was constituted and was given extensive powers to co-ordinate road and rail transport, to make regulations, and to control generally all public conveyances.

The Board is composed of the Colonial Secretary (Chairman), the Inspector-General of Police (Deputy Chairman), the Director of Public Works Department, and four Unofficial Members.

The Colony is well served with 494 miles of first-class roads called " main roads " and 188 miles of second-class roads, called " branch roads " which are maintained by the Public Works Department. This gives on the average about one mile of road per square mile of area. All roads are metalled and the surface of 137 miles of main roads has been coated with bitumen.

---

* Estimated figure.

Heavy motor vehicles averaging from three to six tons in maximum gross weight are allowed on practically all the main roads. At the end of 1932 these vehicles carried out of Port Louis a daily average of 269 tons and into that city an average of 137 tons.

The freight cost of this form of transport varies in accordance with the distance covered, from R.0.15 to R.0.44 per ton-mile.

An excellent bus service has gradually been built up and now, under the control of the Transport Control Board, is working on fixed routes throughout the Colony.

At the end of 1932 there were 125 buses on the roads, and these vehicles carried in and out of Port Louis a daily average of 4,407 persons.

The fares are very reasonable, being approximately R.0.02 per mile, with a minimum charge of R.0.05.

All classes of motor vehicles are subject to a tax or Rs.5 per horse-power except motor cycles which pay at the rate of Rs.4 per horse-power, while lorries pay an additional tax of Rs.40 per ton on maximum gross weight.

All vehicles plying for hire pay a yearly licence fee varying from Rs.50 in the case of a " five-seater " taxi-cab to Rs.500 in the case of an omnibus carrying over 22 passengers.

The total contribution to Government by way of licence fee and tax from the various classes of public conveyances can be seen from the following:

	Per annum. *Rs.*
Taxi-cab of 20 h.p. at Rs.5 per h.p.	100
Licence for 5 seats	50
Total	150
Public lorry of 25 h.p. at Rs.5	125
4 tons maximum gross weight at Rs.40 per ton	160
Licence	200
Total	485
Omnibuses of 25 h.p. at Rs.5	125
Licence for 22 passengers	400
Total	525

The Traffic Control Board Ordinance of 1932 provided for the compulsory insurance of all public conveyances against passenger and third-party risks.

Railways.

The Mauritius Government Railways, not including 18 miles of 75 cm, gauge track, known as the Bois Cheri Light Railway, are of the British standard 4 feet 8½ inch gauge and comprise 108 miles of main line, 30 miles of station lay-outs and Government sidings, as well as 17 miles of other sidings maintained by the Railway Department for planters and sugar estates. The Railway is exceptional on account of its comparatively short length and very heavy gradients, much of it being 1 in 26.

The most important section, the Midland Line, 36 miles long, rises half-way along its length to 1,800 feet above the terminals at Port Louis, the capital, on the north-west and Mahebourg, the old port, on the south-east coasts of the island. A branch from Rose Belle on the Midland Line, 870 feet above sea-level, to the little creek and town of Souillac is 11 miles long. The North Line from Port Louis to Grand River South East, 31 miles long, is fairly level. The Moka Branch, from Rose Hill, on the Midland Line, 950 feet above sea-level, to Montagne Blanche, is 15 miles long and rises on this length to 1,500 feet. The Black River Branch, from Richelieu on the Midland Line to Tamarin, is 12½ miles long, and the Montagne Longue Branch, from Terre Rouge and the North Line to Montagne Longue, is 3½ miles long. There are no heavy gradients on either of these lines.

During 1932 drastic cuts in personnel and expenditure generally were made in an endeavour to make the expenditure and revenue balance. The successful results of the economies referred to will not be available till the publication of the figures for 1932-33. But the necessity for these measures is plainly seen from the following table.

The excess of expenditure over revenue for 1931-32 was Rs.1,748,468, as shown below :—

	Revenue 1929–30.	*Revenue 1930–31.*	*Revenue 1931–32.*	*Increase or Decrease of 1931–32 over 1930–31.*
	Rs.	Rs.	Rs.	Rs.
Passengers	**781,749**	**606,668**	**434,325**	**— 172,343**
Parcels	**98,084**	**73,393**	**63,466**	**— 9,927**
General Goods ...	**1,313,577**	**1,143,729**	**817,077**	**— 326,652**
Miscellaneous... ...	**70,389**	**60,987**	**70,875**	**+ 9,888**
Net Revenue	**80,600**	**119,354**	**187,938**	**+ 68,584**
Total	**2,344,399**	**2,004,131**	**1,573,681**	**— 430,450**
Goods Tonnage ...	**409,830**	**354,611**	**254,139**	**— 100,472**

	1929–30. Expenditure.	*1930–31. Expenditure.*	*1931–32. Expenditure.*	*Increase or Decrease of 1931–32 over 1930–31.*
	Rs.	Rs.	Rs.	Rs.
Working expenditure ...	2,666,799	2,442,547	2,111,677	− 330,870
Net revenue expenditure	148,366	344,700	1,210,472*	+ 865,772
Total	2,815,165	2,787,247	3,322,149	+ 534,902

* Due to capital adjustments, to writing-off value of obsolete stores and to gratuities and allowances under recent dismissals of personel.

	Rs.	Rs.
Working expenditure		1,851,677
Renewals contribution		260,000
Net revenue expenditure ...	642,785	
Capital adjustments	567,687	1,210,472
		3,322,149
Less revenue		1,573,681
Deficit		Rs.1,748,468

At one time it was feared that owing to the road bus services passenger traffic on the Railway would have to be closed down altogether, but large reductions in fares have stemmed the tide and indeed secured an increase of passenger revenue. By still further fare concessions, it is hoped that an appreciable improvement will be effected in 1933. A readjustment of goods rates has given good results in spite of adverse trade conditions, and the excellent sugar crop of 1932 has greatly helped to improve the position.

Tramways.

Little change has taken place in the network of tramway lines which, since 1901, has been established on most sugar estates.

In 1932, there were on estates about 1,700 kilometres of rail, 214 locomotives, and 6,900 trucks. Farm tractors, which in certain cases are utilized for hauling, numbered 93 in 1932.

Posts and Telegraphs.

Mauritius is provided with a good service, there being 52 post and telegraph offices, 4 offices doing only postal work, 1 parcels office, which is also a parcels exchange office, and the General Post Office, also a postal exchange office.

Outlying offices and localities far from railway stations are served by postmen on bicycles. Mails to and from the Black River district are conveyed by a motor car contractor.

Mails from Europe and America are received by the Messageries Maritimes steamers via Marseilles and the Suez Canal, which also take mails at Aden from India and the Far East, and East African mails at Mombasa. Air mails from England via Nairobi are also taken on at Mombasa.

European and American mails are also sent by Royal Mail steamers to Cape Town and transhipped to any steamer sailing to Mauritius. Air mails are also sent from Europe via Johannesburg.

Twenty-five vessels of the Messageries Maritimes brought mails from Europe in 1932, the average time taken being 37.9 days.

Forty-five steamers conveyed European mails via the Union of South Africa, the average time taken being 36.5 days. The longest time was 51 days and the shortest 26 days.

Outgoing mails take less time to Europe, as they are sent by the Messageries Maritimes mail steamers or by any ship leaving for the Union of South Africa, where they are transhipped to the Royal Mail packets.

Air mails are sent either via Mombasa or Johannesburg.

Vessels of the Dutch K.P.M. Line call at Port Louis regularly twice every month, and an arrangement has been entered into with the Company to call at Rodrigues Island once every two months. These steamers are very regular and they take mails to Mombasa and Durban. The service has given great satisfaction.

The total number of articles, other than parcels, which passed through the Post Office in 1932 was 3,206,399.

The number of parcels received from abroad was 17,163 for a value of Rs. 816,065. These included :—from the United Kingdom, 3,946 ordinary parcels value Rs. 165,378 and 1,815 cash-on-delivery parcels worth Rs. 76,572; from India, 740 parcels worth Rs. 18,940; from France, 7,028 parcels worth Rs. 361,542 and 161 cash-on-delivery parcels worth Rs. 7,826; and from other countries, 3,473 parcels worth Rs. 185,807.

The number of parcels for abroad was 3,583 for a value of Rs. 184,588.

Money orders for £3,718 were issued, of which £3,340 were drawn on England. Orders for Rs. 112,241 were drawn on rupee-currency countries, of which Rs. 101,962 were on India.

Telegraphic communication with the world outside is maintained by the Eastern and South African Telegraph Company, and there is also the Rose Belle Wireless Station which maintains a twenty-four hour service, and works mainly with ships at sea and with Reunion Island.

The wireless station was built by the Admiralty in 1915 for communicating with ships at sea and with the various wireless bases in the Indian Ocean. The station was taken over by the Mauritius Government in June, 1923.

During the cyclone season from 1st November to 15th May, a detailed weather report including observations made at Seychelles, Rodrigues, and Reunion is transmitted to all ships and stations within range at 0830 Greenwich Mean Time daily.

When a cyclone is in the vicinity, the Government tug *Maurice* stationed in the harbour at Port Louis is manned, and the island weather reports are transmitted by wireless telegraphy from the tug to all vessels in port, for the guidance of their masters. The *Maurice* also acts as a stand by in the event of accident to the main wireless station.

The normal transmitting range of the station is 500 miles by day and 1,000 by night, on main power. For economic reasons a small continuous wave transmitter has been constructed and put into use. It has a day range of 300 miles and a night range of 650 miles, and is used chiefly for ships leaving or entering the port and for transmitting messages to Reunion. Ships bound for Mauritius and within range are also communicated with by this low-power set.

The receiving range of the station is world-wide on all frequencies in general use and the range is only limited by atmospherical conditions.

Messages are accepted at any post office in the Colony for transmission to any ship within transmission range of the station.

The public telephone system belongs to the Oriental Telephone Company. The Government owns a departmental telephone system, the total lengh of which is 150 miles. It is joined up with the Company's system.

Harbour.

Port Louis, the capital of the Colony, possesses the only navigable harbour for ocean-going ships, which is picturesquely situated on the north-west coast. A wide break in the ring of coral reefs surrounding the island, caused by the meeting of several rivers and streams, the Latanier, La Paix, Le Pouce, and Creole, gives access to the harbour, which has been dredged so as to provide deep-water accommodation for ten ships lying at berths in the channel and drawing from 24 to 31 feet of water. The harbour is flanked on the north by Fort George, a military post, and on the south by Fort William, which is abandoned. The mountains of the range behind Port Louis, including the Pouce, 2,661 feet, and Pieter Both, 2,690 feet, are guiding beacons to ships by day. The lighthouses on Flat Island, the Colony's quarantine station six miles north of Mauritius and Caves Point, five miles south of Port Louis on the cliff's edge, and the gas buoy to the north of the outer harbour entrance, direct ships approaching Port Louis by night. A tide gauge has been in operation for three years. The maximum rise of tide at ordinary springs is three feet, which diminishes to two or three inches at ordinary neaps. Dredging of the berths and channel by the Government plant is continuously in progress.

The Government of Mauritius is the Harbour Authority. The Government has from time to time sold or let to two lighterage companies various areas of land bordering the harbour. These two companies, the New Mauritius Dock Company and the Albion Dock Company, each own about 45 lighters with the necessary tugs, and undertake all the storage and lightering of sugar. The British India Steam Navigation Company also own 30 lighters and two tugs. This company mainly handles grain from the East, the rest of the general cargo being shared fairly evenly between the British India Company and the other two lighterage companies.

The Government, three years ago, built a deep-water quay, 500 feet long, with 32 feet of water alongside, and, though able to deal with 100,000 tons of cargo per annum, actually only discharges 40,000 to 50,000 tons, chiefly petroleum products, Government coal, and other details.

A Government granary, capable of storing 300,000 bags of rice, was completed two years ago, as a protection against the spread of plague in the Colony, but, for various reasons, it has not yet been put into full commission. An Ordinance to provide for the working of the granary is now before the Council of Government.

Shipping.

There are two regular lines of passenger steamers connecting Mauritius with the United Kingdom.

There is a fortnightly service between Marseilles and Mauritius maintained by the Messageries Maritimes Company; the average journey takes about six weeks and involves a stay of five or six days at Reunion either on the outward or inward journey.

Vessels of the K.P.M. (Dutch) Line leave Mauritius once a month for Durban and Cape Ports and once a month for Mombasa via Beira. A vessel also leaves Durban once a month direct for Mauritius. The K.P.M. Line has a working arrangement with the Union-Castle Line of steamers, and the voyage to England via the K.P.M. and Union-Castle Lines averages about 32 days.

Occasional vessels of the British India Steam Navigation Company take passengers to Colombo and the journey to England by this means takes from 28 to 35 days.

Cheap passages to the United Kingdom can occasionally be secured during the sugar shipping season, October to March, on cargo steamers. The voyage averages about 40 days.

It is interesting, but regrettable, to note that passenger facilities between Mauritius and the United Kingdom were far better twenty years ago than they are to-day. The vessels of the Messageries Maritimes Company used to perform the voyage in 31 to 35 days, and the Union-Castle Company and the British India Company used to make regular monthly calls. Passenger fares have also increased, in so far as voyages via South Africa are concerned, by over 100 per cent.

The number of vessels and total tonnage entering and leaving the port during the past three years were as follows :—

Inwards.

		1930.		*1931.*		*1932.*

CHAPTER XI.

BANKING, CURRENCY, AND WEIGHTS AND MEASURES.

Banking.

There are in the Colony three private banks, viz. :—

(*a*) The Mauritius Commercial Bank;
(*b*) The Mercantile Bank of India; and
(*c*) Barclays Bank (Dominion, Colonial, and Overseas).

The Mauritius Commercial Bank was established in 1838. The paid-up capital of the Bank is Rs. 2,000,000, made up of 10,000 shares of Rs. 200 each. The total amount of deposits on 31st December, 1932, was Rs. 7,800,805.92.

The Mercantile Bank of India, Limited, took over the business of the Bank of Mauritius, Limited, on 3rd May, 1916. The total paid-up capital is £1.050,000. The deposits made locally on 31st December, 1932, amounted to Rs. 2,642,000.

Barclays Bank (Dominion, Colonial, and Overseas) has a paid-up capital of £4,975,500. The total deposits of the local Bank on 31st December, 1932, amounted to Rs. 2,636,081. This Bank, which is affiliated with Barclays Bank, Limited, was founded in 1925 and represents the amalgamation of the Anglo-Egyptian Bank, Limited, the Colonial Bank (incorporated by Royal Charter in 1836), and the National Bank of South Africa, Limited. A branch of the last-named Bank was established in Mauritius in December, 1919. In February, 1926, its business was taken over by Barclays

Bank (Dominion, Colonial, and Overseas) following the amalgamation already mentioned. This Bank conducts a savings bank department and also pays interest on fixed deposits as well as conducting a short-term deposit business.

Offices of the Government Savings Bank are established in the nine districts with a Head Office in Port Louis. The total number of depositors at 30th June, 1932, was 37,645 as against 37,419 in the preceding year, with deposits amounting to Rs. 5,114,747.68 as against Rs. 5,264,304.04. The Savings Bank is largely made use of by the Indians, of whom, on 30th June, 1932, there were 15,923 depositors with Rs. 2,104,180.09 to their credit, as against 15,787 depositors with Rs. 2,022,042.60 to their credit on 30th June, 1931. Interest is paid at the rate of 3 per cent. per annum. The formation of a Post Office Savings Bank is under consideration.

Currency.

The currency of the island is based on the Indian rupee. Apart from Indian silver coins the principal currency in circulation is provided by a Government issue of notes. The average value of currency notes in circulation during the year was Rs. 7,287,300 as compared with an average of Rs. 7,489,290 for the previous year. Against these notes the Commissioners of Currency held silver coins to the average value of Rs. 2,974,922 as compared with Rs. 3,267,900 in 1931-32.

Their investments on 1st July, 1931, amounted to Rs. 9,879,218.09 (which does not include Depreciation Fund). The investments remained unchanged during the year under review. The Depreciation Fund was increased from Rs. 1,791,334.64 to Rs. 1,902,148.75. From their investments the Currency Commissioners received interest which, after allowing for the increase in the Depreciation Fund, enabled Rs. 407,889.96 to be credited to the general revenue of the Colony.

The assets of the Commissioners of Currency, which include Depreciation Fund, exceed their liabilities by Rs. 1,797,456.17, calculating the value of investments at mean market rate on 30th June, 1932.

The liabilities include a sum estimated at Rs. 1,000,000 in respect of notes destroyed in circulation by fire, floods, etc.; therefore it is considered that the surplus of the Commissioners of Currency may be estimated to be increased by this amount.

Weights and Measures.

The metric system is in general use, but there are a number of English, French, and local measures also used, and as some of them will appear in this Report, it may be of use as well as of interest to mention them here.

Of French measures of length the *ligne française* is equal to 2·2558 millimetres or 0·0888 of an English inch. The French inch contains 12 *lignes* and the French foot twelve French inches. The French foot is equal to 1·0657653 English feet and is used by masons, carpenters, surveyors, and others.

The *lieue* is nearly equivalent to two and a-half English miles.

The *gaulette* is a measure of length equal to ten French feet. It is used on the estates as a measure of the work performed in the fields; a labourer is given a number of *gaulettes* as his task.

Forty thousand square French feet make one *arpent* which is equal to 1·0430263 acres; almost all land in Mauritius is measured by the *arpent*.

Other local measures of length and area are the *toise*, equal to two yards four inches or six French feet, and the *toise caree* (square *toise*) which is equal to thirty-six square French feet. This measure is used in masonry and similar work.

The *aune* is a measure of length used in most shops and is equal to about one yard and eleven inches.

English measures of length are generally used by Government, and road distances are measured in English miles. Places often derive their names from their distance from Port Louis or other important centres; thus there are places called "*Dixhuitième Mille*", "*Seizième Mille*" and so on. The kilometre is rarely used.

Of the local measures of capacity there is the *barrique* (equal to fifty gallons) which is used in sugar mills for measuring the amount of juice drawn from the cane.

The *tierçon* is a measure of capacity for molasses which varies from one hundred and ninety to one hundred and ninety-two litres.

The *velte* is a measure for oil, especially coconut oil, and is equal to 7·4505 litres.

The *bouteille* of eight hundred cubic centimetres is used in selling milk, vinegar, rum, and other like liquids. The half-bouteille is called *chopine*.

The weekly ration of rice of the labourer given on estates is called *gamelle*; it is equivalent to 5·250 kilogrammes.

The *livre* is equal to five hundred grammes or 1·10 English pounds.

The *corde* is employed for measuring stacks of firewood. The wood is stacked in lengths of two and a-half feet and laid crosswise until the stack measures four French feet high and eight French feet long and contains eighty cubic French feet or 96·82 English cubic feet.

Besides local and French measures of capacity, English measures are also in use and, when speaking of agricultural and other products, it may be well to say that four bales of aloe fibre go to the metric ton, that a bag of sugar, unless otherwise specified, weighs 80 kilograms, and that a "pocket" of sugar is generally 39½ kilos.

CHAPTER XII.

PUBLIC WORKS.

The Public Works Department is responsible for all Government buildings, the sewerage of Port Louis, roads and bridges, the survey of Crown Land, water-supplies, and state irrigation.

Buildings.—Some of these, such as a time-ball tower in the Port Office, are of historical interest, dating from the time of the French Governor Mahè de Labourdonnais in 1740.

Government House in Port Louis was then in project and was built between 1740 and 1767. Apart from the addition of a second storey, it now stands exactly as it was originally constructed. It contains the Governor's offices, in which are to be found the table on which the capitulation of the island was signed in 1810, a throne room, a council room, the council offices, a library, and quarters for the Governor and officials.

The former and present Residences of the Governors at " Mon Plaisir ", Pamplemousses, and " Le Reduit ", Moka, also date back to the French occupation.

The value of the Government buildings is approximately 15 million rupees.

There are in the island one mental and nine general hospitals, the oldest being the Grand River North West Hospital, built in 1769 for the seamen. It is now used as a quarantine station for plague.

Severe cyclones, which happily are not frequent, are responsible for a good deal of damage to water-works, roads, and buildings.

Sewerage Works of Port Louis.—The sewerage works were begun in 1900. In 1922 the scheme was revised by Messrs. Mansergh and Sons and the works have been carried out on the lines of their report. The construction works being now practically completed, present activities are concentrated on house service connexions, and a large portion of the town of Port Louis now has the water carriage system.

Bridges.—There exist 335 bridges on main and branch roads, the longest span being of 150 feet.

The old timber bridges are being gradually replaced by ferro-concrete structures, and there are 69 to be replaced.

Water-Works.—The water-supply of the town of Port Louis is obtained from the Grand River North West at a distance of about four miles from the town and at a level of 250 feet. This supply was under the charge of the Municipality of the town until 1922, when it was handed over to the Public Works and Surveys Department.

The dam in the river was burst by the flood of December, 1929, and much of the pipe-line leading from it was also swept away. Water was pumped from Grand River North West to give Port Louis its normal supply during the dry season, while during the wet season the supply was obtained by gravitation from Moka River through the Pailles Canal.

The works of restoration of the dam and pipe-line were begun in September, 1931, and were completed by the end of February, 1932.

The water is passed through sand filters and chlorinated.

The capacity of the mains leading to the filters is 5,000,000 gallons a day. The water is distributed to the town from two covered service reservoirs of a total capacity of 2,000,000 gallons.

The water-supply of the towns of Plaines Wilhems and of parts of Moka and Black River districts is obtained from a storage reservoir called the Mare aux Vacoas, at an altitude of 1,825 feet. The capacity of the reservoir is now, after the raising of the dam, 1,641 million gallons.

The catchment ground is entirely protected by forest lands.

The whole of this water-supply is filtered through sand filters at " La Marie ", about two miles below the reservoir, whence the supply to the town of Curepipe is pumped by hydraulic power, the supply to the other towns being by gravity. The water is distributed from six covered service reservoirs situated in the various zones of supply, their aggregate capacity being 5,500,000 gallons.

The population served by this supply is approximately 90,000 and the average daily consumption 3,500,000 gallons.

The Mare aux Vacaos water-supply has been extended to the town of Port Louis. At present it is confined mostly to Government establishments, ships in harbour, and certain selected establishments, but the increase of the supply will be limited to 900,000 gallons per day. In this connexion a covered service reservoir at Petite Revière of 750,000 gallons was completed and put into operation in 1931.

The water-supply to the villages and hamlets in the other districts comes from twenty-seven different springs or streams. These supplies are not filtered, but they are generally protected in their catchment areas by reserves of forest.

The population depending on these various supplies is about 200,000, and belongs mostly to the poorer classes. A large proportion of the daily consumption is distributed by means of public fountains.

Irrigation Works.—Government storage irrigation works were begun in 1914 according to plans made by Mr. C. M. Harriott, C.S.I., C.I.E., M.I.C.E., Chief Engineer, Public Works Department, Central Provinces, India, and Consulting Engineer for Irrigation Works to the Government of Mauritius.

The La Ferme scheme for the irrigation of the south-west of the island, between Grand River North West and River Dragon, has been finished, and the Nicolière scheme to irrigate land in the north, has been started. These two schemes cover a great deal of the fertile lands of the Colony which are below the level which enjoys 60 inches of rain and cannot be cultivated to the best advantage without irrigation water.

The La Ferme scheme is dependent on a low-level reservoir of 2,500 million gallons, which was completed in 1918 and now irrigates 3,700 acres of land under sugar cane plantation.

The plans for the Nicolière scheme include a high-level storage reservoir at 1,300 feet altitude at Midlands, of 4,400 million gallons capacity, intended to fill a low-level reservoir at Nicolière of a capacity of about 250 million gallons.

The Nicolière reservoir has been finished, but, although some land under cane cultivation is being irrigated from it, the full scheme will only be working when the Midlands reservoir is completed. Owing to financial conditions the plans were first curtailed and the works afterwards suspended as a result of the visit of the Financial Commission, but the feeder channel, which measures 16¾ miles from Midlands to Nicolière was completed by the end of 1931, with a reduced section.

CHAPTER XIII.

JUSTICE, POLICE AND PRISONS.

Justice.

The Supreme Court sits in the capital (Port Louis), and is presided over by one Chief Judge and two Puisne Judges. It has jurisdiction in civil and criminal matters and also as a Court of Admiralty; it also decides appeals from the Supreme Court of Seychelles and the inferior Courts of Mauritius.

There is a Bankruptcy Division presided over by one of the Judges or by the Master and Registrar sitting as Judge in Bankruptcy.

In 1932, the Supreme Court dealt with 282 civil matters out of 335 which were brought before it, as against 317 out of 401 in the year before.

In 1932, sixteen persons were brought before this Court and tried on criminal charges, and of these eleven were convicted.

Criminal cases are tried by a Judge and a jury. Divorce causes, bankruptcy matters and civil actions in which the sum involved is less than Rs. 3,000 are heard by one Judge. Civil actions in respect of claims over Rs. 3,000 are heard by two Judges. Where, however, the magnitude of the interests at stake or the importance of the questions of fact or law involved make it desirable, a case is heard by three Judges.

Magistracies.—There is a Magistrate's Court in each of the nine districts, the Courts in Port Louis and in Plaines Wilhems sitting each in two divisions. A Magistrate has jurisdiction in nearly all civil matters involving not more than Rs. 1,000, and in all criminal matters, with power to inflict not more than one year's imprisonment and Rs. 1,000 fine.

A Bench of three Magistrates may be instituted by law for the trial of certain offences, and also at the request of the Procureur-General for nearly all offences, with jurisdiction extending to three years' penal servitude or imprisonment and fine, possibly of Rs. 3,000.

An appeal lies of right to the Supreme Court within the limits stated above, both in fact and law, the several modes of reviewing the decisions being the same as in English law.

There is no system similar to the French Assistance Judiciaire, but facilities are given to very poor litigants, both before the Supreme Court and the inferior Courts, to obtain leave to sue *in forma pauperis*. In Supreme Court cases, Counsel are always ready to accept a pauper brief at the request of the Chief Judge, while in Assize cases, Counsel are always appointed without fee, for undefended prisoners.

The dependencies are visited periodically by one of two Magistrates supernumerary to the District Magistrates, whose services are also available in Mauritius.

The Rodrigues is administered by a Magistrate who has the same jurisdiction in Rodrigues as a District Magistrate in Mauritius, and whose duties are to a considerable extent administrative.

During the year 1932 the Magistrates tried 7,211 civil cases and held 142 coroners' inquests, 26 preliminary inquiries into crime and serious misdemeanours, and 12,486 ordinary criminal cases and petty offences.

Police.

Organization.—The Mauritius Police Force is organized and trained on the usual lines adopted in Civil, as distinct from Military, Police Forces, but all recruits are instructed in squad drill with arms whilst in the Training Depot and special units of the Force undergo periodical training in platoon and Lewis Gun formations, anti-riot drill, and ceremonial.

The purely military side of the training is supervised by officers and other ranks who have served in the Army, there being six Gazetted officers and 46 other ranks still in the Force who were on active service during the War of 1914-18.

The majority of the Gazetted and Warrant Officers are provided by promotion from the ranks, but vacancies are also filled when necessary by Colonial Office appointment or transfer from other Police Forces. The rank and file are recruited locally, the great majority being natives of Mauritius with a few representatives of India, Rodrigues, and Seychelles.

Distribution.—The establishment of 20 officers and 598 other ranks is divided into Headquarters Staff, Clerical Branch, Criminal Investigation Branch, Motor Traffic Branch, Training Depot, Harbour Police, District Police, Railway Police, Rodrigues Police, and Band.

The Headquarters of the Force, with the special Branches and Depot, are established in the historic line barracks at Port Louis which have been gradually improved and adapted to meet modern requirements.

The District Police are distributed in the towns and principal villages in fifty-five units varying in strength from one to thirty-eight, and the Harbour Police control an area of Port Louis including the Customs House, Post Office, Docks, Wharves, and Harbour.

The Rodrigues and Railway Police are under the control of the Resident Magistrate of Rodrigues and the General-Manager of Railways, respectively, and are staffed by the transfer of trained members of the general force.

The Band has the establishment of the normal military band and the personnel comprises a European bandmaster with bandsmen from India and Mauritius.

Crime.—The number of offences of every description reported to the Police during the year 1932 was 20,245, which shows an increase on the figure for 1931, which was 18,194, and an increase on the average figure for the previous six years, which is 18,900. This increase is entirely due to the Police Department having taken over the duties of the former Inland Revenue Branch of the Receiver-General's Department during the first half of the year, and is made up of 2,982 cases of contravention of the Revenue, Fishery, and Weights and Measures Laws.

The normal figure for crimes, misdemeanours and minor offences was therefore 17,263, which is the lowest figure on record.

As regards the more serious offences a comparison with the figures for 1931 shows :—

(*a*) An increase in offences against the person—7,748 in 1932 and 7,452 in 1931.

(*b*) An increase in offences against property—3,441 in 1932 and 3,228 in 1931.

The number of persons prosecuted in all cases was 9,376, of whom 8,663 were convicted, 545 otherwise disposed of, and 168 were pending trial at the end of the year.

Corresponding figures for the previous year were :—persons prosecuted, 8,016 ; persons convicted, 7,197 ; otherwise disposed of, 430 ; pending trial, 389.

Prisons.

Organization.—The Prison Department has a European staff of five senior officers and 108 locally-recruited warders.

Establishments.—The penal institutions are Port Louis Central Prison, Beau Bassin Convict Prison, and Barkly Industrial School for male juvenile offenders.

Port Louis Prison provides separate cell accommodation for 154 male prisoners and association cells for 40 women. It also contains the offices of the Department and quarters for two senior Officers and two Wardresses. All prisoners waiting trial are housed here in convenient proximity to the Supreme and Magistrates Courts, and special arrangements are in force, under the supervision of the Medical Director, for treating convicted prisoners on admission for prevalent diseases before transfer to the Convict Prison at Beau Bassin. This prison also serves as the centre for classification of convicted prisoners and for treatment of special and difficult cases.

Beau Bassin Prison is a modern type convict prison containing single cell accommodation for 756 male prisoners. Detached bungalow-type quarters for the Superintendent and two Chief Warders are located in the surrounding Prison grounds.

Barkly Industrial School consists of a large range of buildings and quarters formerly used as a hospital and now providing accommodation for 200 boys and seven School officers. Boys falling into the hands of the Police are sent to the School direct without being detained in Police cells or the Central Prison and remain there while waiting disposal by a Magistrate.

Classification.—Convicted prisoners are at present classified as (*a*) penal servitude, (*b*) hard labour, (*c*) misdemeanants, and (*d*) juveniles and first offenders and, so far as the existing accommodation permits, the various classes are separated and wear distinctive clothing. The creation of a " star " or " special " class is now in the second year of the experimental stage and will be reported upon at the end of 1933.

Classes (*a*) and (*b*) serve their sentences at Beau Bassin Prison, while (*c*) and (*d*) with old, infirm, and special type prisoners are kept at Port Louis.

Labour.—The normal labour for male prisoners at Port Louis is carpentry, stone-breaking, cutting firewood, carting stores, and cleaning Government buildings and grounds.

Women prisoners are employed on laundry work and sewing clothing and bedding.

At Beau Bassin Prison prisoners with long sentences are taught a trade, while those serving shorter sentences are principally employed on agricultural work in the Prison gardens.

The trades taught in the Prison workshops comprise tailoring, boot, sail, and mattress making; carpentry and cabinet making; blind, mat, and basket making; tinsmith work and blacksmithing. Instruction in baking is given in the Prison bakery which produces about 1,400 pounds a bread daily and numerous prisoners are trained as stonemasons in the quarries and neighbouring grounds.

Population.—The total admissions during the year numbered 3,653, and the daily average population was 662.10.

The number of convicted prisoners received from the Courts was 2,282 (2,138 men and 144 women), of whom 1,455 had been awarded sentences of one month or less, and 959 were admitted for non-payment of fines.

On 31st December, 1932, there were 503 persons in custody, of whom 488 were convicted, 475 being males and 13 females.

The corresponding figures for 1931 were :—

Total committals	3,775
Total sentenced	2,337
In custody on 31st December, 1931	677
Admissions for non-payment of fines	869

Health.—The reports of the Medical Officers attached to the Prisons show that apart from recurring cases of a serious type of dysentery the health of the prisoners was good. There were 22 deaths during the year compared with 33 in 1931.

Juvenile Offenders.—The number of boys in the Barkly Industrial School on 31st December, 1932, was 47, compared with 56 in 1931, 62 in 1930, 68 in 1929, and 83 in 1928. This persistent decrease is principally due to the disinclination of Magistrates to send offenders to the School except in serious cases and partially to the increased demand for juvenile labour.

The number of boys brought to the School during the year was 51, of whom 10 had been sentenced to detention before admission. Of the remaining 41 only 22 were subsequently sent to the School for detention, the remainder being whipped or cautioned and discharged.

There were thus 32 boys admitted for various periods of detention, of whom 23 had been convicted for breaches of the Penal Code, and 9 for juvenile vagrancy.

In addition to the above 51 boys no less than 135 others appeared before the Magistrates on various charges, the total juvenile delinquents and their disposal being as follows :

Sentenced to detention at Industrial School ...	32
Sentenced to whipping	75
Sentenced to pay a fine	3
Discharged or cautioned	76
	186

Discharges from the School during the year numbered 40, of whom 39 had completed their period of detention and one was released on pardon.

The programme of instruction has remained unaltered, every boy receiving the usual primary school education during a portion of the day and being employed on agricultural work, carpentry, or tinsmith work for the remaining time.

The health of the boys is excellent and their physical development during their residence at the School is remarkable.

The problem of securing employment for these boys on discharge from the School has always been difficult and the question of how to provide some sort of after-care for them still remains unanswered.

There are, however, signs of something of the sort being attempted owing to the initiative of the local branch of Toc H and if the scheme matures a serious gap in the local penal system will have been filled.

CHAPTER XIV.

LEGISLATION.

A list of the Ordinances passed during the year under review, is given in Appendix I to this Report.

Of the Ordinances passed, the following, which are important and of interest not purely local, may be mentioned specifically :—

Customs Tariff.—Ordinance No. 28 enacts a consolidated Customs Tariff involving increased duty on many articles and establishing throughout a large measure of preferential duties in favour of British and Canadian goods—with a clause enabling the Governor by Proclamation to extend the preferential rates to any other Dominion or Colony granting reciprocity. The measure of preference on many articles is much over, and in no case less than, a 10 per cent. difference between the general and preferential rates.

Immigration of Destitutes and Repatriation of Distressed Seamen.—Ordinance No. 6 imposes restrictions, by way of security to be furnished or refusal to land, on destitute or criminal immigrants or immigrants once already repatriated at the cost of the Colony.

Ordinance No. 35 imposes on the masters, owners, or consignees of all ships, other than those registered in Mauritius, the obligation of giving security for the cost of relief, maintenance, and repatriation of seamen engaged locally, in the event of these seamen being discharged or left behind in distress in a foreign part.

Income Tax.—Ordinance No. 21 provides for the imposition of income tax at the rate of 5 per cent. on the first Rs. 6,000 of income and 10 per cent. on any income above that amount. The Ordinance is based on the Colonial Office model drafted in 1922. The year of assessment was to have begun on 1st

July, 1932, for the preceding year of chargeable income, but authority has been received to postpone the tax for one year, so that the year of assessment will begin on 1st July, 1933, in respect of the chargeable income received from 1st July, 1932, to 30th June, 1933.

Road Transport.—Ordinance No. 8 establishes a Transport Control Board with an unofficial majority of members to regulate and co-ordinate motor vehicular traffic (goods and passengers) on roads—charges and rates distribution of transport over roads and areas, and general control; insurance against passenger and third-party risks is compulsory. The Ordinance is based on the legislation in South Africa and the recent English Statutes.

Widows' and Orphans' Pensions.—Ordinance No. 23 hands over the existing fund to the general revenue of the Colony and is preparatory to legislation converting the fund into a Government scheme.

General.—Other Ordinances were passed providing for :—licence duty increases (No. 25); a passenger tax on embarking and on landing, on a graduated scale (No. 33); a tax of 1 per cent. on remittances abroad and on drafts, etc., sent for collection (No. 29); levies on Government officials' salaries (Nos. 4, 20, and 32); an excise duty on locally-manufactured fruit wines (No. 38); and tobacco production and marketing amendment (No. 27).

Forty-five Ordinances were passed.

The outstanding features of this year's Ordinances and subsidiary legislation are :—

(1) Fiscal measures to increase revenue and the re-distribution of the Receiver-General's, now the Treasurer's Department, as a consequence of a policy of retrenchment.

(2) The institution of a centralized control of Road Transport to regulate traffic and forces, prevent overlapping, and ensure greater protection by compulsory insurance against third-party risks.

(3) The introduction of income tax.

(4) The imposition of a levy on salaries of Government servants.

CHAPTER XV.

FINANCE.

Revenue and Expenditure.

The revenue of the Colony for the financial year ended 30th June, 1932, amounted to Rs. 12,160,278.81, being Rs. 1,539,283.19

below the Estimates of 1931-32 and Rs. 608,686.26 above the revenue of the previous year.

The expenditure for the same period amounted to Rs. 17,704,574.70, being Rs. 3,019,572.70 above the Estimates for 1931-32 and Rs. 1,612,500.81 above the expenditure of the previous year. The expenditure included a sum of Rs. 3,292,320.57 for writing off the excess of expenditure over revenue of the Railway Department for the period 1st July, 1926, to 30th June, 1932.

The expenditure incurred during the financial year 1931-32 exceeded the revenue by Rs. 5,544,295.89 which amount represents the deficit on the financial transactions of the Colony for the year.

Of the expenditure for 1931-32 Rs. 4,922,576.84 was spent on "Personal Emoluments" and Rs. 12,781,997.86 on "Other Charges". The corresponding figures for 1930-31 were Rs. 5,032,366.84 for "Personal Emoluments", and Rs. 11,059,707.05 for "Other Charges".

The following is a comparative statement of the revenue and expenditure for the last five years :—

Year.	*Revenue.*	*Expenditure.*
	Rs.	Rs.
1927-28	15,308,918	16,725,513
1928-29	13,322,248	16,930,182
1929-30	14,483,467	15,575,001
1930-31	11,552,210	16,092,073
1931-32	12,160,278	17,704,574

The Colonial Government pays a military contribution of 5½ per cent. of its revenue (total revenue exclusive of land sales, irrigation, Mare-aux-Vacoas and other waterworks, revenue, contribution towards loan 1922 charges, and special export duty on sugar) as a contribution to the cost of the garrison maintained in the Colony by His Majesty's Government in the United Kingdom. The amount of the contribution for the year ended 30th June, 1932, was Rs. 562,985.79. As from 1st July, 1932, the annual contribution was reduced to Rs. 200,000.

Public Debt.

The public debt of the Colony, which on 30th June, 1931, stood at £2,796,994 7s. 7d., was £3,396,994 7s. 7d. on 30th June, 1932.

Against this liability of £3,396,994 7s. 7d. there was an accumulated sinking fund of £1,410,077 15s. 7d. as compared with £1,258,235 13s. 9d. on 30th June, 1931.

Assets and Liabilities.

The assets and liabilities at the end of the year amounted to Rs. 17,859,813.87 and Rs. 21,305,842.97, showing a deficit of Rs. 3,446,029.10 on 30th June, 1932.

STATEMENT OF ASSETS AND LIABILITIES AS AT 30TH JUNE, 1932.

Liabilities.	Rs.	*Assets.*	Rs.
Deposits	16,869,771.79	Cash	1,850,713.60
Colonial Military Lands Fund	50,384.95	Investments	7,823,002.54
Government of India ...	11,664.71	Improvement and Development Fund	2,311,813.07
Joint Colonial Fund—Advances by	586,666.67	Value of lands and buildings given up by War Department	50,384.95
Family remittances ...	5,366.54	Government of Seychelles	11,156.33
Loan Funds unexpended ...	3,781,988.31	Advances	5,590,036.06
		Unallocated Stores—Public Works	201,727.31
		Remittances	20,980.01
		Surplus of liabilities over assets	3,446,029.10
	Rs. 21,305,842.97		Rs.21,305,842.97

Description of the Main Heads of Taxation and their Yield.

The main heads of taxation, with their yield, for the current year, as compared with the preceding year, are the following :—

		Year 1931-32.	*Year* 1930-31.
		Rs.	Rs.
Customs	Import duties	3,656,522.10	3,822,385.11
	Export duties	402,672.23(*)	54,503.71
Excise duty on rum issued for home consumption.		1,496,012.71	1,445,812.94
Licence duty		1,049,144.05	1,097,327.57
Tobacco excise		1,009,998.74	429,959.86
Taxes on vehicles and animals.		348,828.47	365,969.55
House tax		279,448.01	193,675.56

By the end of 1932 it was possible to state that there was every indication that revenue would exceed expenditure in the financial year 1932-33.

---

* Includes special export duty on sugar.

Customs.

Import Duty.

1913.	*1930.*	*1931.*	*1932.*
Rs. 3,506,622	Rs. 4,136,008	Rs. 3,762,014	Rs. 3,935,135

Export Duty.

1913.	*1930.*	*1931.*	*1932.*
Rs. 570,948	Rs. 220,584*	Rs. 41,802*	Rs.752,832

* Amounts collected as extra duty and not considered as revenue are not included.

Customs Tariff (summarized).

The following shows the rates of duty of the principal imports and exports on the 31st December, 1932 :—

Imports.

Rice	63c per 100 kilos.	Wines in casks up to 14°.	Rs. 22 per hectolitre.
Dholl	Rs. 1·14 per 100 kilos.	Wines in cases up to 14° (still).	33c per litre.
Flour	94c per 100 kilos.	Spirits (proof) ...	Rs. 6·87 per litre.
Fertilizers ...	11c to Rs. 1·10 per 100 kilos.	Tobacco, manufactured.	Rs. 15·00 per kilo.
Coal	8c per 100 kilos.	„ cigarettes	Rs. 16·50 per kilo.
Petroleum oil ...	Rs. 5·28 per hectolitre.	Vegetable oil, other than olive.	Rs. 5·50 to Rs. 7·70 per 100 kilos.
Petroleum spirits	Rs. 14·00 per hectolitre.	Most manufactured articles.	5·5 to 55 per cent. *ad valorem.*
Soap, common ...	Rs. 1·93 per 100 kilos.		

Exports.

*Sugar ...	2c per 100 kilos.	Aloe fibre ...	R. 1·00 per 100 kilos.

* *Note.*—Not including other duties levied, on export of these articles, for specific purposes.

Principal preferential rates on imports.

	Preferential.	*General.*
Motor vehicles of all kinds (including tyres and tubes).	5·5 per cent. *ad valorem*	36⅔ per cent. *ad valorem*
Silk manufactures (including art silk).	16·5 „ „ „ „	55 „ „ „ „
Indigo	R. 1·10 per kilo.	Rs. 2·75 per kilo.
Cement	·22 per 100 kilos.	·82 per 100 kilos
Cinema films ...	Free	·04 per metre.
Machinery, industrial	R.1·45 per 100 kilos.	5·5 per cent. *ad valorem.*
Cotton manufactures	13 per cent. *ad valorem.*	26 per cent. *ad valorem.*
	and also specific rates in certain cases.	
Hardware	11 per cent. *ad valorem.*	22 per cent. *ad valorem.*

Excise and Stamp Duties.

The duty on rum for home consumption is Rs. 2.75 per litre of 23 degrees Cartier and an additional duty of 12 cents per litre for every degree above 23 degrees Cartier.

The duty on rum to be denatured for heating or lighting purposes is four cents per litre at 36 degrees Cartier and an additional duty of four cents per hectolitre or fraction thereof for every degree above 36 degrees Cartier.

The duty on rum to be denatured for industrial purposes is four cents per litre or fraction thereof at any degree Cartier.

The duty on alcohol for the preparation of medicinal tinctures or drugs is 10 cents per litre at any degree, but the duty on alcohol delivered for the preparation of " Alcoolats " in accordance with the formulae of the *British Pharmacopoeia* or the *French Codex* or of any other tincture or drug to be notified in *Gazette* is Rs. 2.50 per litre at 23 degrees Cartier, with an additional duty of 10 cents per litre for every degree above 23 degrees.

The duty on vinegar is Rs. 1.70 per hectolitre on vinegar not exceeding 8 degrees of strength and an additional duty of 18 cents per degree and per hectolitre on all vinegar above 8 degrees.

According to the excise figures the number of litres of alcohol distilled in 1931-32 (July to June) was 743,440 litres as compared with an average of 787,237 litres for the past five years.

Since 7th June, 1932, an excise duty has been imposed on wine and other liquor (excepting rum and compounded rum) manufactured in the Colony which contain more than four degrees of alcohol according to Gay Lussac's alcholometer, as follows :—

(i) on all such liquor not exceeding 14 degrees by Gay Lussac's alcoholometer, a duty of 15 cents per litre ;

(ii) on all such liquor exceeding 14 degrees, a duty at the same rate and on the same scale as the Customs duty on wine payable under the Customs Tariff Ordinance.

An excise duty of Rs. 4 per kilo is charged on leaf tobacco used for the manufacture of tobacco for local consumption.

Prior to 1st July, 1932, the same duty was charged on the manufactured tobacco produced.

According to the official figure the quantity of tobacco manufactured in the year 1932 was 307,968.120 kilos as compared with 256,191.900 kilos in 1931.

Under Ordinance No. 26 of 1932 the stamp duty on receipts and cheques was increased to ten cents.

Two Government Notifications affecting the revenue of the Colony were passed, during the financial year 1931-32, viz. :—

No. 21 of 2nd February, 1932, which provides for 3 half-yearly licences of Rs. 30, Rs. 25, and Rs. 15, respectively, for dealers in tobacco in Class 1, Class 2, and Class 3, as defined by Article 11 of Ordinance No. 38 of 1930, as amended by Article 6 of Ordinance No. 46 of 1931.

No. 117 of 21st May, 1932, which provides for a yearly licence of R. 1 for hawkers or sellers of wax locally prepared.

The Stamps (Consolidation) Ordinance, 1926, was amended by Ordinance No. 48 of 1931 by the addition of a proviso to Article 14 of Ordinance No. 22 of 1926 as under :—

> Provided that for policies of insurance or indemnity, or other instruments by whatever name the same shall be called whereby any employer enters into a contract with an insurer in respect of any liability under the Workmen's Compensation Ordinance, 1931, there shall be paid on the issuing of such policies stamp duty as follows :
>
> R. 1 for every Rs. 100 or part of Rs. 100 premium, with a minimum of R. 1 for premiums under Rs. 100.

House Tax.

Rates.—(1) A flat rate of R. 1 per annum on every habitable room of any building assessed at Rs. 500 or less, the rate not to exceed Rs. 3, and

(2) 1 per cent. per annum on any building assessed over Rs. 500.

Yield.—The amount collected during the financial year 1931-32 was Rs. 279,448.

Method of Assessment.—Any building liable to the house tax is assessed according to its full and fair value.

In assessing the full and fair value, the valuer takes into consideration the actual or possible rent a tenant may be reasonably expected to pay for such building. This applies only to buildings whose basic value is above Rs. 500 and on which the annual tax is 1 per cent. on the value.

Method of collection.—For the purpose of collecting the house tax when the assessment arrived at is final for the year, notices for payment are served upon owners of buildings and the tax is paid to the Cashier of the district in which it is levied.

The tax at the flat rate ceased on 31st December, 1932, houses assessed at Rs. 500 or less being in future exempted from house tax.

Income Tax.

The decision to impose an income tax in Mauritius represented a departure from the fiscal policy which had hitherto been followed. As early as 1909 a Financial Commission suggested that an income tax of 2 per cent. be levied, but it was not till twenty-three years later that an Ordinance was passed in 1932 making income tax effective from 1st July, 1932.

The Ordinance is simple in form and levies a tax on the income of any person accruing in, derived from, or received in the Colony, the basis of assessment being the income of the preceding year. It also taxes by deduction at the source any mortgage or debenture interest paid to a person not resident in the Colony.

Deduction of tax at the source is adopted in the case of dividends paid by companies registered in the Colony, but only so far as the dividends are paid out of profits on which tax has been or will be paid. In only one other case does it apply, and that is in relation to the payment of mortgage and debenture interest to a person not resident in the Colony. In these cases the non-resident actually possesses a stake in the Colony, and by a simple process of classification it is obvious that the principle of taxation by " origin " must include such sources.

Apart from the question of deduction of tax and the general basis of charge, the structure differs from the United Kingdom system in certain important respects :—

(1) The assessment of rents is based on actual income and includes premiums.

(2) Profits from employments include payments in kind and the value of any quarters, board, or residence.

Important differences in the appeal procedure and method of collection are also noticeable :—

(1) There is no local appellate body. When agreement is not reached with the Commissioner the case goes to the Supreme Court, whether on a point of law or fact.

(2) Assessment and collection proceed throughout the year of assessment and a 10 per cent. penalty is incurred if duty is not paid within 30 days after service of a notice of assessment which is automatically a demand note.

The provisions with regard to the assessment of non-residents, including cases of foreign control, proceed on the identical lines followed in the United Kingdom. It is interesting to observe that a non-resident who is a British subject is entitled to all the usual personal allowances which in the United Kingdom are granted only to a person resident there. This is to be expected where the " origin " theory mainly applies.

The taxation of life insurance companies is reduced to the simplest measures by reference to their investment income and management expenses. In the case of all insurance companies the assessment also depends upon the ratio of premiums received in the Colony to those received outside the Colony.

The taxation of shipping is not on an arbitrary basis. In the case of shipowners within the British Empire the profits depend on the total profits of the owner wherever arising. In other cases it is a matter for negotiation.

The chargeable income of any year is the aggregate amount of income from all sources and thus includes automatic provision for losses. This allowance is extended in the case of losses in any trade, business, profession, or vacation by a system of " carry forward " for five years with the interesting limitation that the " carry forward " shall not operate in any one year to grant relief in excess of one-half of the tax which would otherwise have been chargeable. This restriction is vital to the finances of a colony such as Mauritius, which possesses one staple industry which is entirely at the mercy of the elements.

A personal allowance is granted of Rs. 2,000 with an additional allowance of Rs. 1,000 in the case of a married man. There are also allowances of Rs. 300 for each child and Rs. 200 for each dependent relative of the husband. Allowance is also made for life assurance premium and for certain contributions to pension funds.

When all allowances have been granted the first Rs. 6,000 bears tax at 5 cents in the rupee and thereafter at 10 cents in the rupee. There is no supertax but certain allowances are withheld when the chargeable income, before granting those allowances, exceeds Rs. 30,000.

Finally, there is one extremely interesting provision. That part of the tax attributable to the income of a married woman can be recovered from her although the assessment is made on the husband in one sum. There is no provision for separate assessment.

CHAPTER XVI.

MISCELLANEOUS.

One of the most important events of the year was the decision of His Majesty's Government, which was announced early in 1932, to increase the sugar preference, during a period of 5 years by 1 shilling per cwt., on all Colonial sugars consigned from a Colony to the United Kingdom and by a special additional preference of 1 shilling per cwt., on a prescribed quota, which in the case of Mauritius was fixed at 95,400 tons for the 1932 crop. With a total sugar production of 247,000 tons the assistance which was thus extended to the Colony by the Imperial Government amounted to over £340,000 for the year and was received with gratitude by the inhabitants of the Colony during a period of acute financial depression.

Another decision for which the people of Mauritius are greatly indebted to His Majesty's Government in the United Kingdom was the announcement made later in the year that the agreement of the Treasury and War Office had been secured to the reduction to £15,000 of the military contribution payable by the Colony during the financial years 1932-33 and 1933-34. This represents an annual saving to the Colony of about Rs. 450,000 for two years and has greatly assisted the recovery of financial equilibrium.

The Report of the Financial Commissioners* appointed by the Secretary of State in 1931 to visit Mauritius with a view to devising measures to bring about a balanced budget was received early in 1932. The principal measures recommended by the Commissioners and adopted by Government, after certain modifications or adjustments, included the extensive reorganization of certain Departments and retrenchments of staff calculated to bring about substantial economies in public expenditure. Legislative measures were also enacted with the object of increasing Government revenues.

---

* Cmd. 4034.

Retrenchment measures have operated on fairly extensive lines in the Railway, Public Works, and Forests Departments, while it was also found advisable to abolish the Inland Revenue Branch of the Receiver-General's Department and to transfer the duties hitherto performed by that Branch to the Police and Customs Departments. The Office of Receiver-General was also abolished and the title of the Head of the Department altered to that of Treasurer.

The principal legislative measures passed with a view to bringing about increased revenue include an Ordinance to impose a temporary levy on a graduated scale on the salaries of public servants; and also Ordinances, the effects of which are detailed in the chapter on Legislation, to provide for a consolidated Customs Tariff involving increased duties on many articles, the imposition of an income tax, increased licence duties, a tax on passengers entering or leaving the Colony, a tax of 1 per cent. on remittances abroad or on drafts sent for collection, and an excise duty on locally manufactured wines.

The decision to impose an income tax was arrived at after prolonged discussions arising out of the Financial Commissioners' original recommendation for the imposition of an occupiers' tax. Public opinion in the Colony was not in favour of an occupiers' tax and, after consultation with the Secretary of State, the conclusion was reached that an income tax was the most suitable form of direct taxation applicable to the Colony.

The services of a specialist officer from the Inland Revenue Department of the Home Civil Service were secured to inaugurate the income tax organization in Mauritius. The officer arrived in the Colony in October, 1932. The year of assessment will begin on the 1st of July, 1933, in respect of the chargeable income received from the 1st July, 1932, to the 30th June, 1933.

On 19th March His Excellency Sir W. E. Jackson inaugurated the Mauritius Hemp Spinning and Weaving Factory at Quatre Bornes. The funds required for the purchase of the plant and the erection of the factory were partly supplied by Government in the form of an advance of Rs. 150,000 made to the company. The factory has started operations and a new subsidiary industry is thus established in Mauritius.

The island was visited in June by H.M.S. *Enterprise*. The stay of the *Enterprise* at Mauritius, from 15th to 27th June, was characterized by interesting seaplane demonstrations over the District of Port Louis and various other parts of the island.

In July the Unofficial Members of the Council of Government moved the adoption of a resolution to the effect that a delegation be sent to England to discuss with the Secretary of State for the Colonies certain questions concerning the constitution of Legislative and Executive Councils, the administrative and fiscal policy and the sanitary improvement of the Colony. Four delegates chosen by the Unofficial Members left the Colony after the consent of the Secretary of State had been sought and obtained. The Mohammedan community decided later to send a delegate at their own expense to lay before the Secretary of State a memorandum bearing on the interests of their community in the Colony. The result of the conversations had not been made public at the close of 1932.

His Excellency Sir W. E. Jackson left the Colony on leave on 24th August and arrived in England in time to introduce the members of the Delegation to the Secretary of State for the Colonies.

A collision between two railway trains occurred on 12th September, which caused the death of four railway employees and considerable damage to rolling stock. A goods train with twenty-three loaded wagons got out of control shortly after leaving Rose Hill Station on the Midland Line and met a light engine which was moving up the line between Richelieu and Pailles Stations. The total loss to the Railway, including compensation for injuries and loss of life, is estimated at Rs. 81,500.

APPENDIX I.

ORDINANCES PASSED BY THE COUNCIL OF GOVERNMENT OF MAURITIUS DURING THE YEAR 1932.

No. *Titles.*

1. To amend the Fisheries Ordinance, 1918.
2. To authorize the transfer of the functions and duties of the Receiver-General and officers of his Department or acting under his authority, direction, and control.
3. To declare the office of carpenter in the Department of Electricity to be pensionable in so far as Mr. H. Rahiman's service therein is concerned.
4. To authorize a levy on the emoluments of public officers and other persons in receipt of salary from public funds.
5. To amend the Licences (Consolidating) Ordinance, 1915.
6. To amend the Destitute and Criminal Immigrants Regulation Ordinance, 1907.
7. To amend the Workmen's Compensation Ordinance, 1931.
8. To make provision for the control of road transport and the establishment of a Transport Control Board.
9. To amend the Road Traffic Ordinance, 1922.
10. To regulate the payment of charges for the publication of notices and advertisements in the *Gazette*.
11. For applying a further sum not exceeding Rs.1,450,734.32 to the service of the year 1930-31.

No. *Titles.*

12. To make provision for the Public Service for the financial year 1932-33.
13. To make provision for the Mauritius Government Railways for the financial year 1932-33.
14. To amend the Appropriation Ordinance, 1929-30.
15. To amend the Appropriation (1930-31) Ordinance, 1930.
16. To amend the Appropriation (1931-32) Ordinance, 1931.
17. To provide for the establishment and working of a Planters' Syndicate.
18. To alter the title of Receiver-General into that of Treasurer.
19. To amend the House Tax Ordinance, 1928.
20. To provide that officers deprived of certain specific allowances shall be exempt in whole or in part from the levy on their emoluments.
21. To impose a tax upon incomes and to regulate the collection thereof.
22. To empower the Mauritius Sugar Syndicate to receive and to distribute the proceeds of a special preference granted to colonial sugars amongst the sugar planters of the Colony not forming part of the Syndicate.
23. To amend the Widows' and Orphans' Pension Fund Ordinance, 1928.
24. To amend the Public Health Ordinance, 1925.
25. To amend the Licences (Consolidating) Ordinance, 1915.
26. To amend the Stamps (Consolidation) Ordinance, 1926.
27. To amend the Tobacco Production and Marketing Ordinance, 1930.
28. To validate certain resolutions of the Council of Government and to amend and consolidate the Customs Tariff and the Ordinances relating thereto.
29. To impose a tax on remittances abroad and to regulate the collection thereof.
30. To amend the Transport Control Board Ordinance, 1932.
31. To amend the law on securities to be furnished by auctioneers.
32. To provide that an officer or class of officers may be exempted from the levy on their emoluments.
33. To impose a tax on passengers.
34. To provide for the transfer of Rodrigues prisoners to the Mauritius Prison.
35. To provide for the cost of relieving and repatriating distressed seamen.
36. To amend the Public Health Ordinance, 1925.
37. To amend the Lunacy Ordinance, 1906.
38. To validate a resolution of the Council of Government imposing an excise duty on country liquor.
39. To authorize the Society incorporated as "The Mauritius Cricket Club" to be styled "The Rose Hill Club".
40. To amend the Income Tax Ordinance, 1932, so as to empower the Income Tax Commissioner to obtain information from the Receiver of Registration Dues for the purposes of the income tax.
41. To amend Ordinance No. 30 of 1881 (Pensions).
42. To amend the Pensions (Amendment) Ordinance, 1925, for the purpose of extending the time limit fixed for the exercise of the option in that Ordinance provided.
43. To exempt certain foreign plaintiffs in commercial cases from the liability to furnish security for costs.
44. For instituting "The Austin Wilson's Home", for constituting the said Home into a body corporate and for making provision for the management thereof.
45. To amend the Customs Ordinance, 1925.

I.—GEOGRAPHY, INCLUDING CLIMATE, AND HISTORY.

The island of Mauritius is of volcanic origin. It is situated in the South Indian Ocean at about 1,400 miles from the east coast of Africa and lies between 19° 50′ and 20° 35′ S. latitude and between 57° 18′ and 57° 48′ E. longitude. The greatest length from north to south is nearly 39 miles and the widest breadth from east to west is 29 miles. The area of the island is about 716 square miles exclusive of that of several small islets round the coast which measure about 4 square miles.

The Dependencies comprise a large number of small islands between 230 and 1,200 miles away. The largest, Rodrigues, which lies 350 miles to the north-east of Mauritius had a population estimated at 8,950 on 31st December, 1933. The estimated population of the lesser Dependencies on that date was 1,360.

Mauritius is situated just within the tropics and enjoys a climate free from extremes of weather except that tropical cyclones at times cause considerable damage to crops, but rarely to buildings. For a great part of the year south-east trade winds, heavily laden with moisture, blow gently over the island tempering the tropical heat. The rain falls mostly in showers. Particularly in the summer months, December-March, the south-east winds are replaced by the light variable winds of the doldrums, which cause discomfort to Europeans, although the temperatures are not high, whereas in the winter months in the residential districts at altitudes of 1,300 to 1,800 feet the temperature may fall to 50° F. The yearly rainfall varies from 30 inches on parts of the coast to 150 inches in the upland regions.

The Mascarene Archipelago was probably known to Arab navigators at an early date and was no doubt visited later by the Malays who colonized Madagascar in the 15th and 16th centuries.

The Portuguese rediscovered it in 1507. They only used Mauritius as a port of call for repairs and supplies, and let loose pigs, goats, deer, and monkeys. It seems probable that rats were introduced in this period as they were a serious pest to the succeeding Dutch colonists.

The Dutch took possession from 1598 and were employed chiefly in exploiting the ebony. They attempted to cultivate sugar cane, but were frustrated by rats. Although they denuded the forests of ebony they later added to the economic resources of the island by introducing useful trees, plants, and cattle. Negroes were imported for labour, and, as escape into the forests was easy, bands of runaway slaves called Maroons were formed. The combination of the rats and this dangerous population of mixed, but mostly African, origin uncontrolled by any tribal or political system proved too much for the Dutch who abandoned the island in 1710.

The French annexed it in 1715, and by 1722 the population, apart from Maroons, amounted to 160 persons, soldiers, colonists, and slaves. Mahé de la Bourdonnais was chosen to develop the Colony and arrived in 1735. In order to make the island self-supporting, he introduced manioc and maize from Brazil and promoted the extension of agriculture by introducing products from all parts of the tropical world. He especially encouraged the cultivation of sugar. He substituted animal draught for carriage by slaves, and to ensure an adequate supply of labour he brought slaves from Africa. From an encampment of straw huts he built up Port Louis into a town of public buildings, private houses, stores, shops, and barracks. Labourdonnais laid the foundations of modern Mauritius.

In 1755 large herds of cattle were brought in from Madagascar. Pierre Poivre, Intendant in 1767, established the cultivation of cloves and nutmegs.

In 1810, when Mauritius became British, the population had grown from 160 to about 80,000, of whom 65,000 were slaves. Sugar was then, as now, the principal product, and, when in 1825 the duty of ten shillings a hundredweight, levied on Mauritius sugar entering England (in order to protect the West Indian sugar), was remitted, cane plantations immediately developed to a large extent, fresh land was put under cultivation, roads were opened, and steam power was applied to mills. From 18,000,000 pounds the output of sugar rose to 41,000,000 pounds in 1827, and increased annually afterwards.

On the abolition of slavery, 68,613 slaves were freed, and the colonists received £2,112,632 in compensation.

In 1842 Indian immigration at the rate of 6,000 a year was approved, and this resulted in an entire change of the balance of the population.

After a terrible outbreak of malaria in 1866 the wealthier inhabitants of Port Louis moved to higher parts of the island. As a result the country towns expanded considerably and the roads were improved and extended. The railway, begun in 1859, became very popular. One of the most striking features of the progress made has been the social and economic development of the Indians who to-day own and cultivate more than two-fifths of the whole area under sugar cane. Besides becoming gardeners and taxi-drivers, many Indians have taken to raising cows, goats, fruits, and vegetables, and the supply of these essential foodstuffs is almost entirely in the hands of Indians. The section of the population they have displaced centres more and more in the towns, forming the clerk and artisan class.

From 1902 to 1909 the island suffered from severe financial depression owing to the low price of sugar. Matters were aggravated in 1902 by an outbreak of surra which caused great havoc among the draught animals, and necessitated the introduction of mechanical transport.

A Royal Commission was appointed in 1909 to investigate the resources and administration of the island and reported in 1910.

About 1911 the destructive beetle *Phytalus Smithii* was discovered in the sugar canes and about four hundred millions of these insects are now destroyed every year.

The great rise in the price of sugar which took place during and after the War brought prosperity, and both the Government and the general community were for a time far more prosperous than ever before.

As a result a number of important schemes were inaugurated, including the amelioration of sanitary conditions, the improvement of the harbour, the extension and improvement of water-supplies both for domestic purposes and for irrigation, the improvement of the railways, and the extension of education.

Unfortunately, however, from 1921 onwards the price of sugar fell, and the greatly lessened revenues of the Colony had to provide for the maintenance of many works undertaken in better times. In 1929 the state of the sugar industry was so bad that Sir Francis Watts was appointed, at the Colony's request, to visit the island, and to report on the economic situation. The Home Government was, however, unable to approve his recommendations that a subsidy should be given to sugar to supplement the preference granted on sugar imported into the United Kingdom, though a loan was made to the planters from local funds. Despite this loan, however, and an earlier loan granted in 1929, the condition of the sugar industry at the end of 1930 was extremely serious.

The situation became worse in 1931 owing to a cyclone which caused considerable damage to property and reduced the year's output of sugar by about 33 per cent. The Imperial Government guaranteed a loan of £750,000 for planters, house-owners, and repairs to Government property, on condition that a Financial Commission should visit Mauritius with a view to devising measures to bring about a balanced budget. The Commission's report was published at the beginning of 1932 and immediate steps were taken to carry out measures of retrenchment and economy. As a result it has been possible to balance the budgets for the years 1932-33 and 1933-34.

II.—GOVERNMENT.

The Government of Mauritius is vested in a Governor with an Executive Council and a Council of Government. The Council of Government was first established in 1825. It consisted of the Governor and four officials. The next year the Constitution was amended and a Council, including unofficial members, was introduced. This Constitution provided for a Council of Government composed of certain officers of the Crown and of an equal number of other persons to be taken from the chief landed population and principal merchants of the Colony; seven officials and seven unofficials were accordingly appointed.

The Constitution was again amended in October, 1885. The Council of Government, under the revised Constitution, was composed of the Governor, eight *ex officio* members, nine members nominated by the Governor and ten members elected by the population : of the latter, two represent the town of Port Louis, the capital of the island, and the remaining eight the rural districts. At least one-third of the nominated members were to be persons not holding any public office.

The Constitution was further amended in July, 1933, by fixing at two-thirds the proportion of the nominated members of the Council who are to be unofficials and, although no provision to that effect is made in the Letters Patent, the nominated unofficial members have been allowed a free vote on all occasions. The new Letters Patent, however, provide that the Governor shall have power to enact legislation considered by him to be essential in the interests of good government. Debates in the Council may be either in English or French.

The Constitution of the Executive Council which was hitherto composed of the Governor and four *ex officio* members was amended at the same time and the former practice of appointing two unofficial members to the Council was revived.

The number of registered electors on 31st December, 1933, was 10,425. Every male person who is qualified as follows is entitled to be registered as a voter :—

(1) has attained the age of 21 years ;

(2) is under no legal incapacity, and is in possession of his civil rights ;

(3) is a British subject by birth or naturalization ;

(4) has resided in the Colony for three years at least previous to the date of registration, and possesses one of the following qualifications :—

(*a*) is the owner of an immoveable property of the annual value of Rs.300 ;

(*b*) is paying rent at the rate of at least Rs.25 a month ;

(*c*) is the owner of moveable property within the Colony of the value of at least Rs.3,000 ;

(*d*) is the husband of a wife, or the eldest son of a widow possessing any one of the above qualifications ;

(*e*) is in receipt of a yearly salary of at least Rs.600 or of a monthly salary of at least Rs.50 ; and

(*f*) is paying licence duty to the amount of at least Rs.200 a year.

The ordinary duration of the sessions of the Council of Government is eight months, from May to December, and meetings are held on alternate Tuesdays or oftener when necessary. The life of a Council is five years.

The town of Port Louis is administered by a Municipality, an institution which dates as far back as 1790. It was then called " Municipalité du Canton de Port Louis " and was instituted, as were other local Municipalities by the " Assemblée Coloniale ". These institutions are mentioned in the law of the constitution of the Ile de France promulgated by the " Assemblée Coloniale ", on

21st April, 1791. Sixteen prominent men of the town acted as Councillors of the " Municipalité du Canton de Port Louis " and were denominated the " Conseil des Notables ". The " Conseil des Notables " was dissolved in 1792. It was reconstituted at the end of the 18th century under the denomination of the " Conseil des Communes " and was abolished on 10th February, 1820.

The present Municipal Corporation dates from 1850, the first elections taking place at the Masonic Lodge " La Triple Esperance " from 21st to 23rd February in that year. On 24th August, 1925, the Municipal Corporation celebrated the 75th anniversary of its foundation.

The administration of the other principal townships of the Colony, viz., Curepipe, Beau Bassin and Rose Hill, and Quatre Bornes is vested in Boards of Commissioners appointed annually by the Governor. These Boards are empowered, subject to regulations made by the sanitary authorities to take measures within the prescribed limits of the townships for the making, maintenance, etc., of roads, sewers, bridges, canals, and other works of public utility, for the prevention of fires, and for the proper paving and lighting of the town, etc.

In addition to the Township Boards, District Boards are appointed annually for each district. These Boards are empowered to pass regulations for the making, maintenance, and improvement of branch roads and footpaths, and for the levying of taxes.

III.—POPULATION.

The population is divided for statistical purposes into

(1) the General Population, i.e., Europeans and descendants of Europeans and people of African, Chinese and mixed origin; and

(2) the Indian Population, i.e., Indian immigrants and their descendants.

The estimated population of the Island, exclusive of its dependencies, on 31st December, 1933, was 390,697 distributed as under :—

	Males.	*Females.*	*Total.*
General Population ...	62,195	64,931	127,126
Indian Population ...	136,162	127,409	263,571

The estimated population of Rodrigues on the 31st December, 1933, was 8,950 and that of the minor Dependencies 1,360.

The total estimated population of Mauritius and its Dependencies was 401,007 showing an increase of 2,670 compared with the figure of 1932.

The geographical distribution of the population of the Colony exclusive of its Dependencies is shown in the following table :—

DISTRICTS.	AREA IN SQUARE MILES.	CENSUS POPULATION, 26TH APRIL, 1931.			POPULATION ON 31ST DECEMBER, 1933.		
		General population.	*Indian population.*	*Total.*	*General population.*	*Indian population.*	*Total.*

Savanne	94½	6,645	24,456	31,101	6,660	23,479	30,139
Plaines Wilhems	78½	41,866	53,392	95,258	43,611	54,502	98,113
Moka	89	5,522	23,761	29,283	5,652	23,645	29,297
Black River	100	5,437	8,826	14,263	5,300	8,179	13,479
TOTAL	720	124,589	268,649	393,238	127,126	263,571	390,697

The year was marked by a striking change in the vital statistics. In the previous year the number of deaths had actually exceeded the number of births but in 1933 the figures returned to normal proportion. The reasons for the high death-rate and low birth-rate of the previous two years are obscure, but it is believed to have been due to depressed economic conditions aggravated by a severe cyclone in 1931.

The births during the year numbered 13,479 and the deaths 10,615 as against 10,266 and 12,848 respectively in 1932. The birth-rate in the general population was 36·3 per 1,000 against 32·1 in 1932 and in the Indian population 33·9 against 23·5 in 1932.

The death-rates per thousand in the two populations were 24·6 and 28·6 respectively in 1933 against 29·0 and 34·6 in 1932. The highest death-rate for 1932 is shown in Black River 33·5 and the lowest in Plaines Wilhems 21·6 in a thousand. The death-rate for the whole Colony was 27·3 and for Port Louis 28·1 in a thousand compared with 32·8 and 33·6 in 1932. The number of deaths of children under five years of age was 2,769 or 26·1 per cent. of the whole number of deaths. The proportion was 22·9 in 1932.

The marriages during the year numbered 1,521 as compared with 1,271 in 1932. The marriage-rate or number of persons married to every thousand of the entire population was 7·9 against 6·6 in 1932.

The total excess of departures over arrivals was 567 in 1933.

IV.—HEALTH.

The present constitution of the Medical and Health Department dates back to 1895 when under Ordinance No. 32 of 1894-95 the powers vested in the General Board of Health were transferred to the Director, Medical and Health Department.

The Headquarters staff of the Department consist of the Director, the Deputy Director and the Clerical and Accounting staffs of the Correspondence, Financial and Storekeeping branches.

The administrative unit of Government is the District which is the political unit as well. Every District with the exception of Black River is provided with a hospital for the reception and treatment of the sick poor. Patients from the Black River District are treated in the Victoria Hospital, Quatre Bornes, or the Civil Hospital, Port Louis. The medical and sanitary administration of each of the rural Districts is entrusted to a Government Medical Officer who is in charge of the District Hospital and Dispensaries and who is also the Health Officer for the District. To assist him, he has a number of subordinate officers; dispensers and sanitary officers and the staff necessary for the care of the patients in the hospital. In addition to his medical and sanitary duties he has also statutory duties of a medical or sanitary nature which he carries out on behalf of the Police and Poor Law Departments.

The District dispensaries are visited at regular intervals at least twice weekly by the Government Medical Officer.

The hospitals of the Colony are divided into two groups :—

(i) General hospitals; namely, Civil, Victoria, and Moka, totalling 684 beds, which are fully equipped for X-ray and major operative work; and

(ii) District hospitals where only medical and midwifery cases are admitted and where minor surgery is carried out to a certain extent.

Patients who apply to the latter hospitals and require special treatment, surgical or other, are conveyed to the nearest general hospital by motor ambulances.

There are also a mental hospital and a leper hospital administered by the Department.

From the sanitary point of view, the two chief problems are hookworm disease and malaria. It is difficult to assign a date to the first appearance of hookworm disease, but it was microscopically diagnosed in 1895. More insidious than malaria in its general manifestations, ankylostomiasis did not, at first, attract public attention, and it is feared that even now the leading classes do not quite realize its social and economical importance—yet, reviewing the disease in Health Problems of the Empire, the late Sir Andrew Balfour writes :—

> " Ankylostomiasis is perhaps the Imperial disease *par excellence*, for even Malaria does not, day in and day out, produce such heavy economic loss ".

The fight against the disease is entrusted to a special branch of the Medical and Health Department, and progress realized during recent years is most encouraging.

The history of malaria dates back to 1865; before that year it is almost certain that, despite the numerous imported cases, Anopheline mosquitoes did not exist in the Colony and there was no endemic malaria. Early in 1865 a few cases were recorded near Port Louis in the marshy area lying at the mouth of Grand River North West. At the end of the same year an epidemic broke out in Black River on Wolmar Estate and all the coastal districts were very rapidly invaded by the disease. The subsequent history of the disease is one of steady penetration from the coastal belt to the elevated regions in the interior of the Colony, where, however, thanks to the cool dry season, the disease has never become so firmly established as it has done in the lower parts of the Island. It is still possible to describe certain residential parts of the Island as being practically malaria-free, though constant vigilance is required to avert the threat of endemicity. A campaign, based on the most recently available knowledge on the disease, has been formulated and it is hoped that the maximum benefit will thereby accrue from the expenditure incurred.

V.—HOUSING.

The housing of the wage-earning population of the Colony may be considered in three categories : (*a*) housing on estates, (*b*) housing in rural areas not estates, and (*c*) housing in towns.

Estate labourers are, for the most part, adequately housed. They are accommodated in lines, or rows of huts constructed either of stone or of wattle and daub, with roofs more commonly of thatch, but frequently of corrugated iron. Adequate provision is made for the ventilation and lighting of these quarters, but ventilation and lighting appear generally to be disliked by the occupants. At night, every accessible crevice is carefully closed, though the presence of ridge ventilation in many cases assures reasonable change of air in spite of the efforts of the occupants to exclude fresh air from their sleeping apartments. When the dwelling is thatched the problem of assuring adequate ventilation is difficult.

The lines must be kept clear of weeds, and all houses are required to have a clear space of at least ten feet round them. Each camp has adequate latrine accommodation and a supply of wholesome water is laid on, though in many cases the labourers prefer to use the polluted water of streams or nearby irrigation channels for their domestic purposes.

As a general rule, the lines are not lit at night. Lighting is scarcely necessary as the occupants retire shortly after sunset.

As a result of the favourable balance of the last sugar crop the tendency during the year has been to improve the housing conditions of labourers residing on estates.

The housing in rural areas other than estates is fairly satisfactory. It is in the labouring class of the population that one can very often see racial difference in the choice of building materials. The negro will build an untidy-looking shack of old timber, scrap pieces of wood, petrol cases, and petrol tins hammered out flat, whereas the Indian will construct a very neat hut of wattle and clay or cowdung, on a stone plinth, furnished with a small verandah, and roofed with a compact thatch. The amenities of life are few. There is seldom water laid on to the premises. Unless the occupier has dug a well, he generally has to carry his water from the nearest standpipe which may be some five hundred yards away.

In the towns conditions are, as a rule, unsatisfactory. The chief features about the town housing are overcrowding and overbuilding; overcrowding is caused by poverty and overbuilding arises as a necessary consequence of overcrowding. Too many families of the labouring classes live in one room. Fortunately, children are seldom confined to the house on account of inclement weather, and they can pass most of their time in the open air. Rickets is very uncommon in consequence, as are other consequences of overcrowding in places where the climatic conditions are more severe either on account of excessive cold or excessive light and heat.

VI.—PRODUCTION.

Meteorological Conditions and Sugar Production.

Weather conditions were, upon the whole, very favourable during the year. No cyclone occurred and, in consequence, the total of rainfall showed, during the summer months, a pronounced deficit on the average; however, the distribution was excellent. It must be remembered that, owing to the immense quantities of rain often brought down by distant cyclones, the average figure for the rainfall during the summer months in Mauritius is high and, in general, in excess of agricultural needs.

Temperature was high during the growing months and low during the ripening season, thereby favouring both tonnage of cane and sucrose content.

The Sugar Industry.

The production of sugar in 1933 was the second best on record, totalling 261 thousand tons (metric) as against a maximum of 277 thousand tons produced in 1914. The following table exhibits the comparative production of the past seven years:—

Unit=One thousand metric tons.

Districts.	*1933.*	*1932.*	*1931.*	*1930.*	*1929.*	*1928.*	*1927*
Pamplemousses and Riviere du Rempart.	57·77	62·73	41·81	43·00	54·68	59·55	52·72
Flacq...	41·37	35·97	27·91	37·81	38·91	41·17	33·21
Moka	40·08	34·12	20·83	32·10	35·97	34·76	30·88
Plaines Wilhems ...	18·22	17.05	11·64	14.62	15·66	16·40	15·06
Black River... ...	8·88	9·06	6·29	9·81	9·22	9·72	9·03
Grand Port ...	50·66	46·66	27·01	37·09	36·41	41·41	35·88
Savanne	44·48	41·63	28·52	46·53	47·18	50·42	41·22
Total	261.46	247·22	164·01	220·96	238·03	253·43	218·00

The extraction of sugar per cent. of cane was exceptionally high this year: one factory realized 12·05 per cent., while 12 factories exceeded 11·50 per cent. The average was 11·25. The next best average values were 11·01 in 1932 and 10·92 in 1930.

Grades of Sugar.—Raws provided 87·70 per cent. of the total sugar produced; Vesous (plantation white) 11·80 per cent. and low sugars 0·50 per cent. The following table illustrates the change in this respect brought about by the introduction of the new English Tariff in 1928.

GRADES OF SUGAR, 1924-1933.

Years.	*Vesous.*	*Raws.*	*Lows.*
1924	98·34	—	1·66
1925	98·21	—	1·79
1926	98·10	—	1·90
1927	98·63	—	1·37
1928	71·80	27·30	0·90
1929	23·90	75·20	0·90
1930	16·80	82·50	0·70
1931	16·20	83·10	0·70
1932	12·10	87·50	0·40
1933	11·80	87·70	0·50

Area under sugar cane.—At the beginning of 1933, the area under cane was estimated at 133,867 acres. At the end of the year, the estimate was 138,116 acres. Estates with factories cultivated 59,227 acres, estates without factories 38,459 acres, giving a total estate cultivation of 97,686 acres or an increase of 3,449 on the corresponding figure for last year. Increase in the total area under cane for 1933 approximated to 4,249 acres.

Disposal of the 1932 *sugar crop.*—The total quantity of sugar exported at the end of the 1932-33 export year (31st July, 1933), was 237,724 metric tons, distributed as follows :—

	Tons (metric).
Great Britain	236,837
Hong Kong	610
Other places	277
Total	237,724

The exportation for the 1933-34 year was as follows at the end of December, 1933 :—

	Tons (metric).
Great Britain	125,454
India	2
Hong Kong	102
Other places	140
Total	125,698

Sugar market.—The market for sugar continued dull throughout the year. The average net price realized at the end of the year approximated to Rs.6·16 per 50 kilos, exclusive of the special Colonial preference of 1s. per cwt., representing a slight falling off on last year's figure. The local Sugar Syndicate which represents nearly all growers, continued its operations, controlling the sales of more than 80 per cent. of the total sugar production of the Island.

Labour conditions.—No further reduction in wages took place during the year. The labour supply was fairly satisfactory during the year and little difficulty was experienced in reaping one of the heaviest cane harvests on record.

Sugar machinery.—Machinery, to the value of Rs.594,719, was imported during the year, as against Rs.277,656 last year. Tractor parts to the value of Rs.1,518, and ploughs to the value of Rs.1,969, were imported. Tramway material, for use on estates, to the value of Rs.287,371 was imported during the year, as against Rs.110,289 last year.

Varieties of canes.—A census of cane varieties cultivated on estates was taken during the year. The percentage distribution of the principal varieties is given in the following table :—

	Percentage distribution.
Tannas (mostly white)	53
M.55	5
M.131	5
D.K.74	6
R.P.6	2
R.P.8	4
D.109	4
D.130	2
252	1
B.H.10/12	7
M.2716	1
P.O.J.213	2
55/1182	1
Rich Fund	1
Other varieties	6
	100

Thus while Tanna continues to be the leading cane, B.H.10/12 is promising to become an important rival. Other varieties such as M.2716, M.2316, M.522, are full of promise. Further trials are being continued by the Sugarcane Research Station.

Fertilizers.—During the year, 20,405,353 kilos were imported, to the value of Rs.2,328,299 as compared with 12,726,702 kilos last year valued at Rs.1,325,439.

Insect pests and cane diseases.—No material change has taken place in the status of *Phytalus smithii, Arrow.* The captures during the 1932-33 season were appreciably less than usual. There is no doubt that, in some parts of the Island, this pest is on the move—

leaving previously infested areas and invading fresh ones. Biological control is now under study and a special entomologist was appointed for these investigations.

The annual survey of sugar cane diseases was carried out in the field and some varieties moderately susceptible to gumming were discovered. A somewhat severe outbreak of "Fourth" disease was discovered in a certain part of the Island during May.

Minor Agricultural Industries.

Tobacco.—This industry flourished exceedingly during the year. Excellent weather conditions, combined with a sure market, rendered the cultivation of this crop a most attractive proposition. The total area under tobacco was 2,081 acres representing an increase of 781 acres on last year's figure. The control of the production and sale of leaf tobacco in the Colony is vested in a Government Tobacco Board composed of three official members, two tobacco growers and one member of the commercial community. A Government tobacco warehouse has been established for the purpose of handling and grading all leaf tobacco produced in the Colony and for the sale of such leaf tobacco. The warehouse is under the control of the Government Tobacco Board.

Fibre.—Stagnation in this industry continued. The export for the year amounted to 422 tons valued at Rs.87,802. Quotations for prime, very good, and good grades rose by Rs.15 per ton during the year but the market, upon the whole, remained very dull.

Pineapple.—The export during the year amounted to 5,282 cases of pineapple preserves. It is estimated that there are now 50 acres under the Smooth Cayenne pineapple.

Tea.—The improvements have been well maintained. Prices for local tea remained at a satisfactory level during the year.

Coconut.—The export of copra during the year amounted to 1,203 tons valued at Rs.201,393 as compared with 1,746 tons valued at Rs.287,516 in 1932. The export of coconut oil during the year was 4,385 litres valued at Rs.1,992 as against 5,480 litres valued at Rs.2,176 last year.

Alcohol.—The total quantity of alcohol distilled for human consumption amounted to 553,287 litres as compared with 378,209 last year. The quantity of alcohol distilled for industrial purposes was 480,554 litres. 36,489 litres of rum valued at Rs.7,792 were exported in 1933 as against 5,308 litres valued at Rs.1,489 in 1932.

Livestock.—Stock raising continues to be of interest to a number of people. In 1933 bovines on estates increased by 977 head and, in 1932, by 1,256. The Government Dairy showed satisfactory progress but towards the end of the year surra made its appearance and limited the milk output to some extent.

Surra gave some trouble during the year and a herd of deer (*Cervus hippelaphus, Cuv.*) were infected; it is believed that this is the first record of such an event in Mauritius.

Other Manufacturing Industries.

Activity was well maintained in the various branches of minor manufacturing industries. Engineering establishments, numbering 48, gave employment to about 500 people. Bakeries numbered 65 in 1933; lime kilns, 31; cabinet making establishments, 101. In all, about 1,000 artisans were employed in the above.

As regards larger establishments, four docks (landing, etc.) gave employment to about 500 people; there were eight cigarette factories employing about 100 people; four hydro-electrical plants (for light and power) employing about 300 people; four salt-making establishments, employing about 100 people and one match factory employing about 100 people.

In addition to the above, there is a number of less important but fairly prosperous industries such as aerated water works, ice making, vinegar making, pottery, leather tanning, boot and shoe making, and the manufacture of biscuits, pickles and preserved fruit, etc. No export of the products of these industries has yet been found possible: but in some cases, e.g., cigarettes, the home-made product has almost entirely superseded the imported one thereby transferring to the credit side of the Colony's trade a sum of more than a million rupees annually.

Fisheries.

The island of Mauritius is protected by a barrier coral reef round the major portion of the coast line; on the south coast, however, reefs are non-existent for approximately nine miles. The vast area of lagoons offer excellent shelter and exceptional breeding places for fish of every variety. The methods employed for industrial fishing in the lagoons are netting, lining and basket-net trapping. The " Large Net ", the dimensions of which are fixed by law, is the one generally used and each net is worked by 8 to 15 men in 3 to 7 boats. The catch from this source provides about half of the local consumption. Line fishing in lagoons is practised generally by the poorer fishermen not in possession of sea-going boats. The basket-net trap is a contrivance made of bamboo or metal wire and is of two types: (i) flat-topped and angular, and (ii) cylindrical; each type having two inlets. Shell-fish, dried octopus liver, green algae, etc, are placed inside the traps as bait and large quantities of fish are attracted.

High sea fishing has greatly developed amongst amateur fishermen who generally use motor boats. Surface fishing by trawling is the most popular, and large " tunnies ", " becunes " (*Cybrium* Sp.), sword fish, and other large species of oceanic fish are frequently caught. The hot months, that is from October to January, are the best season for this type of fishing. During the cool season, deep sea fishing is common, and the best known species of fish are caught. Deep sea fishing is also carried on by professional fishermen, and good types of sailing pinnaces are available. The supply of fish has been abundant during the year, and the average price of first class fish was half a rupee per kilogramme, whilst other grades were sold for as little as 15 cents per kilogramme. The fishing population of the island is estimated to be 1,336, of whom 384 are net fishermen, while 1,433 boats form the fishing fleet of the Colony.

The Police Department is responsible for the enforcement of the Fishery Laws. Seven Fishery Police Stations are established round the coast and a staff of 4 Sub-Officers and 13 Constables is employed for the control of fishing. The Police Fishery Section is supplied with two motor-boats and seven sailing "pirogues" for the performance of its duties.

A permanent Advisory Committee, formed in 1927, met frequently during the year and their recommendations on such questions as the introduction of a prohibited period for net fishing, extension of reserves, etc., have been adopted.

VII.—COMMERCE.

The total external trade of the Colony in merchandise for the year 1933 amounted to Rs.61,211,980, of which figure, Rs.29,035,237 represents imports and Rs.32,176,743 exports. After a succession of adverse trade balances, the year 1932 showed a slight excess of exports over imports. This favourable trade balance increased in 1933, during which year both exports and imports increased in volume. The total trade figures in rupees are given below for some of the previous years :—

	Imports.	*Exports.*
	Rs.	Rs.
1932	26,992,760	27,662,851
1931	32,064,074	23,829,884
1926	50,596,137	41,208,198
1921	105,744,980	157,249,822

The foregoing figures do not include bullion and specie which were imported or exported as follows :—

	Imports.	*Exports.*
	Rs.	Rs.
1933	—	213,030
1932	—	1,042,352
1931	802	1,933,546
1926	137,490	5,944,500
1921	21,371,270	650,000

Imports of Merchandise.

One interesting feature of the imports in 1933 is the large reduction (due to fall in prices) in the amount spent on articles of food and drink in contrast to the larger sums than in previous years which were expended by the sugar industry on fertilizers, machinery, tramway materials, etc., to compensate for reduced importations of the last few years. This is illustrated by the following table :—

	Value in Rupees—c.i.f.		
Imports.	*1933.*	*1932.*	*1931.*
Food and drink... ...	10,199,269	12,069,997	14,026,945
Chemical fertilizers ...	2,328,299	1,325,439	1,515,208
Sugar machinery ...	594,719	277,656	399,124
Tramway materials ...	287,371	110,289	79,234

The signs of returning prosperity which appeared in 1932 were clearer in 1933. Apart from the increasing popularity of motor traffic, the fact that importations of motor-cars and spare parts increased from Rs.300,000 to nearly Rs.600,000 is a clear indication that the days of rigid economy in importing are numbered.

Export of Merchandise.

Mauritius relies entirely on her sugar exports. In 1933 these represented 98·6 per cent. of the domestic exports and the situation has been practically the same for many years. The dangers inherent in the situation are obvious and attempts have from time to time been made to foster other industries. The small remaining percentage of exports is chiefly composed of copra and aloe fibre. The pineapple canning industry is still in its infancy and cannot yet be called a vigorous infant. Attempts to find a foreign market for Mauritius tobacco have not yet proved successful but this industry appears capable of considerable expansion.

Distribution of Trade.

IMPORTS.

The Colony's importations of essential foodstuffs (rice and other grain) are almost exclusively from India, with the exception of wheat flour which comes mainly from Australia. Apart from these the principal importations are textiles, fertilizers, etc. The main source of manufactured articles is the United Kingdom whence imports have increased with rapid strides in the course of the year. The Preferential Tariff is making its effect felt and there has been considerable propaganda—centering in an Empire Shopping Week—in favour of goods of Empire origin. In spite of this, however, the level of prices ruling in the Far East is so low, that it cannot be said that a successful reply has been made to Japanese competition.

The following table shows some of the above-mentioned imports together with the main countries whence they came during the last two years :—

	Quantity in Kilos.		*Value in Rupees.*	
	1933.	*1932.*	*1933.*	*1932.*
Rice :—				
From India	50,560,246	56,986,224	4,901,212	6,680,671
,, all countries ...	50,721,508	57,100,271	4,923,642	6,699,800
Cotton goods of all sorts (except apparel, haberdashery and umbrellas) :–				
From United Kingdom	—	—	1,124,572	898,945
,, Japan	—	—	864,066	876,886
,, all countries ...	—	—	2,161,601	1,988,470
Silk goods of all sorts :—				
From United Kingdom	—	—	61,987	64,609
,, Japan	—	—	556,924	385,452
,, all countries ...	—	—	670,822	503,237
Chemical Fertilizers :—				
From United Kingdom	14,004,126	8,326,408	1,304,885	674,124
,, all countries ...	20,405,353	12,726,702	2,328,299	1,325,439

The development of motor traffic of recent years is mainly responsible for other imports of importance :—refined oils, vehicles, rubber goods, etc. Of these, petroleum products come chiefly from the United States and the Dutch East Indies, but motor-cars and tyres are imported almost exclusively from the United Kingdom and Canada, as is apparent from the following table :—

Imports.	*Value in Rupees (c.i.f.).*	
	1933.	1932.
Refined products of petroleum :—		
From U.S. America ...	613,501	1,232,403
From Dutch East Indies	618,039	387,188
From all countries ...	1,296,156	1,630,955
Motor-cars and parts thereof :—		
From United Kingdom ...	412,107	182,185
From Canada	133,439	76,142
From all countries ...	589,864	301,449
Rubber tyres and tubes :—		
From United Kingdom ...	152,859	161,035
From all countries ...	197,119	191,816

EXPORTS.

These now go almost entirely to the United Kingdom, owing to the preference on Empire sugar. Of a total value of Rs.30,811,638 of sugar exported from Mauritius in 1933, Rs.30,701,819 went to the United Kingdom.

IMPORTS BY COUNTRIES.

As regards value of imports the United Kingdom now ranks first and India next in the list of countries exporting goods to Mauritius. This is illustrated by the following table :—

	Value in Rupees (c.i.f.).		
Imports from :—	*1933.*	*1932.*	*1931.*
United Kingdom	9,421,478	6,455,759	7,504,119
India	8,414,824	9,961,711	11,577,406
Japan	1,792,705	1,459,329	1,124,070
Australia and New Zealand	1,171,065	1,265,728	1,330,344
France	1,430,497	1,493,237	2,212,821
Total all countries ...	29,035,237	26,992,760	32,064,074

It is noteworthy that whereas Japan is steadily progressing, the French imports continue to diminish. The decline in the value of imports from India and Australia is due to fall in prices of foodstuffs rather than to actual reduction in bulk of imports.

Course of Prices.

Generally speaking, prices are now on a downward trend. The mean price of rice, which is by far the principal article of imports and the staple food of the population was quoted 17 cents per kilo C.I.F., in 1930. It is now under 10 cents per kilo.

The problem of cheap Japanese goods due to the debasement of the yen from a value of 2s. to one of 1s. 2d. is exercising the attention of the entire British market. So far as Mauritius is concerned Japanese imports do not compete with any local industry and any potential loss of revenue due to falling prices of goods chargeable on an *ad valorem* basis has been met by the substitution of an alternative specific duty.

VIII.—WAGES AND COST OF LIVING.

No material change in wages took place during the year. The salary of labourers under monthly contract remained at Rs.10, with rations, free lodging, free medical attendance, etc., in all equivalent to about Rs.18 per month. Male day-labourers received, generally, R.0·45 per daily task, although, during crop time, higher rates often prevailed. Females, as a rule, received half the wages of male workers. The supply of female labour has increased appreciably during recent years. In 1921, census figures indicated a proportion of male to female workers of 84 to 16, in 1931, the corresponding figures were 73 to 27 and, apparently, the increase in the proportion of female workers has continued during the past two years.

Remuneration for piece work remained, on the average, as follows :—

	Per acre.
	Rs.
Clearing land	30-35
Digging cane holes	18
Manuring	10
Weeding	7
Cutting canes (20 tons per acre)	13

No great change took place in the wages of artisans, etc. Workers by day received R.1 to Rs.1·50 during the year, while those employed by the month received Rs.35-70 according to circumstances.

The supply of domestic servants was, generally speaking, abundant. Butlers, cooks, gardeners and other servants received Rs.10 to Rs.30 per month, while chauffeurs were paid Rs.30 to 40 per month. Owing to more favourable climatic conditions, the concentration of population in the central districts of the Island is very pronounced and labour more abundant there than elsewhere.

In 1933 salaries remained generally on the same level as during the previous years. The following table indicates, in a general way, the ruling rates :—

	Per annum.
	Rs.
Managers on sugar estates and Senior Government Officials	8,000-13,000
Government, Bank and Commercial Clerks (higher grade)	4,000- 7,000
Clerks and Employees on sugar estates	1,500- 3,000
Junior Clerks and Employees	720- 1,500

The index number of the cost of living decreased generally during the year. Rice, the staple food of the population, reached its lowest index, 61, during the second quarter, but, afterwards, rose steadily to 65, in the last. Other grains and flour showed a slight trend downwards throughout the year. Tea and coffee remained generally stationary at about 83, while oils and fats decreased from 86 to 80. Articles of clothing oscillated between 150 in the second quarter to 90 in the last. The index for the total cost of living in 1933 was as follows (100 being the index for 1914) :—

First quarter	108·7
Second quarter	114·8
Third quarter	113·8
Fourth quarter	112·4

The mean for the year was 112·4 as compared with 121·8 in 1932.

As regards the labouring class, the following table indicates the purchasing power of wages, in terms of rice since 1927 :—

Year.	*Average daily wages of male labourer.*	*Average price of fair quality rice per lb.*	*Purchasing power of wages expressed in lb. of rice.*
	Rs.	Rs.	Rs.
1927	1·25	0·13	9½
1928	1·25	0·10	12½
1929	1·00	0·10	10
1930	0·80	0·09	9
1931	0·75	0·08	9
1932	0·45	0·05½	8
1933	0·45	0·06	7½

As many items such as housing, lighting, tuition of children, etc., have either not been reduced at all or but slightly so, and are much above pre-War levels, the index figure must not, however, be taken as indicating the cost of living for the European.

IX.—EDUCATION AND WELFARE INSTITUTIONS.

Primary.—Primary education is not compulsory, but it is given free through Government and State-aided schools which are open to all children of the Colony. The following table shows the number of primary schools, the number of pupils on roll, and the staff of teachers during the year 1933 :—

Schools.	*No. of Institutions.*	*No. of Teachers.*	*No. of Pupils on roll.*	*No. of Pupils in average attendance.*
Government	51	362	14,867	10,259
Aided	75	641	23,900	16,340
Total	126	1,003	38,767	26,599

State-aided schools are under the control of a Manager, and the Government contribution includes the salaries of the teachers together with recurrent grants to meet part of the expenditure on maintenance of school buildings and furniture.

Pupils must be at least five years old and must have been successfully vaccinated in order to be allowed admission to a primary school; when they are under five they undergo a preliminary training before being promoted to the lowest form. The curriculum of studies includes the teaching of English, French and arithmetic. In the higher classes elementary history and geography are taught and girls study needlework. Regular instruction is also given in physical drill, nature study, hygiene, and the elementary principles of agriculture. There are six primary school standards or classes, viz. :—

Standard	I	with pupils from	5 to 6	years of age.
Standard	II	with pupils from	6 to 7	years of age.
Standard	III	with pupils from	7 to 8	years of age.
Standard	IV	with pupils from	8 to 10	years of age.
Standard	V	with pupils from	9 to 11	years of age.
Standard	VI	with pupils from	10 to 12	years of age.

Fourteen apprenticeships are awarded annually to primary school pupils to encourage the study of needlework and handicrafts. Twenty-six scholarships and exhibitions tenable at the secondary schools are awarded every year, through competitive examinations, to the best pupils attending primary schools. There are 30 gardens attached to the primary schools and they are cultivated by the pupils of Standards III to VI. These gardens are regularly inspected by officers of the Agricultural Department who give advice as to proper cultivation.

Secondary.—There are two categories of secondary schools, viz. :—(1) Secondary aided schools, which are managed privately but are under Government control, and (2) the Royal College and the Royal College School which are managed by Government.

(1) *Aided Secondary School.*—Government grants to secondary aided schools are assessed with reference to attendance and efficiency, as tested by inspection and examination, and not, as is the case of primary aided schools, with reference to maintenance and salary charges.

The following table shows the number of institutions, the number of pupils on roll and in average attendance, and the staff of teachers during the year 1933 :—

Schools.	*No. of Institutions.*	*No. of Teachers.*	*No. of Pupils on roll.*	*No. of Pupils in average attendance.*
Aided	9	115	1,573	1,378

These schools provide not only for elementary education such as is given in primary schools, but also for higher education leading up to the Cambridge School Certificate and the London Matriculation. The curriculum of studies includes the teaching of English, French, mathematics, needlework (for girls), hygiene, history, and geography. In addition to these, drawing and music are taught on a more moderate scale. These schools are visited periodically by the Superintendent of Schools, who examines the lower forms. The middle and higher forms are examined partly by local examiners and partly through examinations conducted by the Syndicate of the University of Cambridge.

Working hours in both primary and secondary schools, extend, as a general rule, from 10 a.m. to 3 p.m. no provision being made for evening classes.

(2) *Royal College.*—The Royal College, Curepipe, is a Government school for the higher education of boys up to the age of 20. Affiliated to it is the Royal College School at Port Louis, where boys are educated on the same lines up to the Cambridge School Certificate Standard. The Staff of the Royal College consists of the Rector, 12 Masters with degrees in Honours at British Universities, and 11 Assistant Masters locally appointed; and at the Royal College School of the Headmaster, one Master and eight Assistant Masters. Assistant Masters are encouraged to take the B.A. and B.Sc. examinations of London University. The College has well-equipped libraries and chemical and physical laboratories; almost as many pupils follow classical as scientific studies. The subjects taught are English, French, mathematics, Latin, Greek, chemistry, physics, botany, geography and history. Physical training is compulsory. Admission to the College and School is conditional upon passing an entrance examination or winning one of the twenty Annual Primary Schools Scholarships and Exhibitions or one of the two Secondary Schools Scholarships awarded annually. The boys are drawn from all classes and races in the Colony, and range in age from ten to twenty years. The fees are from Rs.96 to Rs.192 per annum, and pupils are allowed to travel on the Government railways at reduced rates. About twelve College Scholarships and Exhibitions are awarded annually to College and School pupils, besides one Scholarship and one Exhibition open to other secondary schools as well, and also a Classical and a Modern Scholarship of the present value of £1,300 each (with first class passage to and from England) tenable for four or five years at a British University or any other approved place of education in the United Kingdom. Besides the winners of these scholarships, a few boys, whose parents can afford it, go to England or France to study for a profession, usually Medicine or Law, and almost always return to Mauritius to practise. Of the remaining pupils the majority on leaving the College find employment in the Island.

The boys receive a training in classical and scientific subjects. Specialization begins at the entrance class and the division into modern and classical sides becomes complete in the upper middle class. At the School pupils may undergo commercial training in place of classics or science.

In addition to the secondary education there are Saturday extension classes where candidates for Pharmaceutical Diplomas and other public science examinations are helped in their studies.

The number of pupils on the roll of the Royal College in January, 1932, was 325, and of the School 92. The average attendance at the College was 255 and at the School 85. (The number of College pupils on the roll in May, 1933, after the publication of the School Certificate results was 289.) Sixty-nine pupils sat in December, 1932, for the Cambridge School Certificate, of whom 49 obtained certificates. In May, 1933, the number of pupils who had passed this examination and proceeded to the highest class of the College was 51.

Encouragement is given to athletics, rugby and association football, hockey, boxing and physical training, and gymnastics, in which, although by no means all the boys join, the standard of proficiency is high. As the pupils are all day-boys it is difficult to obtain much support for other social activities, but a school magazine is published thrice yearly.

Welfare Institutions.

There are five Roman Catholic infirmaries for men and women, and two orphanages for children under the management of Sisters of Mercy; also an orphanage for boys and one for girls under the control and management of the Church of England, and one " home " for men and women under the management of the Church of Scotland. These institutions receive from the Government a maintenance fee for each pauper maintained therein.

Under Ordinance 44 of 1932, which came into force on the 24th December, 1932, a " Home " styled " The Austin Wilson Home " will be established at Quatre Bornes for the aged, destitute, and infirm. The funds for the formation of this " Home " are being generously contributed by Mr. A. J. Wilson in memory of his son, the late Austin Wilson.

A Mahommedan Orphanage was also established in Port Louis in 1932 for the maintenance and education of orphans of the Mahommedan creed. Funds for running the institution are obtained from voluntary subscriptions among the Mahommedans.

Outdoor assistance to paupers is granted by the Poor Law Department partly in cash and partly in food provisions. Several private religious societies for the distribution of assistance in food and medical care are also in existence. The Société Francaise d'Assistance assist chiefly destitute French people.

The Child Welfare Committee and the Oeuvre Pasteur de la Goutte de lait, two philanthropic institutions, deal especially with expectant and nursing mothers and their babies.

The Workmen's Compensation Ordinance provides for the grant of compensation by the employer to workmen who are injured in the course of their work.

Recreation, Music, Art and Drama.

Association football is the most popular form of sport, and there is a stadium at Curepipe and a second one at Rose Hill. Golf, tennis, cricket, hockey and rugby football are played mostly by the wealthier classes. The Mauritius Turf Club and the Mauritius Jockey Club hold race meetings from June to September at the Champ de Mars in Port Louis, and at Mangalkhan, in the district of Plaines Wilhems; and regattas are held by the yacht clubs of Mahebourg and Tombeau Bay. " La Chasse " or the shooting of driven deer can be said to be the national sport of Mauritius. The season is from June to the beginning of September.

There are several flourishing companies of Girl Guides and Brownies; the latter are known locally as Blue Birds. The Boy Scouts have not been so successful as the Girl Guides, but efforts are being made to encourage the movement.

There is not much encouragement for any of the arts. Music is fostered principally by the parish churches whose amateur singers frequently give concerts. The Christian Brothers also provide musical training and apart from the Police Band, which consists of a bandmaster and 30 bandsmen, a band styled the " Alliance Musicale " and comprising 25 units has recently been established.

The Municipality of Port Louis has instituted a drawing class, practically the only encouragement to local talent. The Institute has a collection of pictures presented by Mr. Rochecouste, but there is no other art gallery.

Occasional dramatic performances are given by amateurs, but no permanent society has been formed. In better times the Municipality of Port Louis subsidizes a theatrical company from France, which plays in the theatre at Port Louis. The Chinese have their own theatre in the town, to which companies come from China when conditions are prosperous.

There exists a Royal Society of Arts and Sciences which was founded in 1829 under the title of Société d'Histoire Naturelle and was granted a Royal Charter in 1846. It interests itself in most branches of science and arts especially those relating to questions of agriculture and the national history of the Colony. The Society was incorporated with the Mauritius Institute in 1906 and its library is being transferred to the Institute library.

X.—COMMUNICATIONS AND TRANSPORT.

Roads and Road Transport.

The Colony is well served with some 700 miles of public roads, most of which are suitable for motor traffic. All roads are metalled and 140 miles of the main roads have been covered with bitumen.

The number of motor vehicles in actual use on the roads at the end of 1933 was as follows :—

Private motor cars	1,471
Motor cycles	183
Motor lorries	322
Motor cabs	267
Motor omnibuses...	126
Total ...	2,369

A certain number of vehicles imported into the Colony for use on the sugar estates are exempted from taxation and do not appear on the records of road traffic.

Of the above vehicles, only about a quarter are of British manufacture ; during the past few years, however, the demand for vehicles of English make has very much increased. This has been due to some extent to a preferential customs tariff, but the improved condition of the roads with the consequent introduction of the light car has also been a contributory factor. In addition to this there has been a growing demand on the part of the public for all types of English machines, and in the year under review, of the 251 new vehicles registered, 182 were of English manufacture.

The modern bus, of which there are 126 in use, is built locally on an imported chassis. It is of the single deck type, with a seating capacity varying from 15 to 26. The specifications as to size and general construction of all public service passenger-carrying motor vehicles are fixed by the Police, but once a vehicle has been passed as fit for service by that Department, the routes over which it may work and the fares that may be charged are subject to the direction of the Transport Control Board. Since the inauguration of this Board at the end of 1932, all public service vehicles have been insured against passenger and third party risks. The buses provide an excellent service in outlying Districts not reached by the railways, and also supply a convenient and quick means of passenger transport in certain areas already provided with railroad facilities. The fares vary from 2 to 5 cents a mile. Considerable quantities of freight are carried over the roads by motor-lorries varying in carrying capacity from one to six tons. From checks made in July, it was found that an average of 180 tons of goods were carried out of, and 68 tons into, Port Louis daily by this means.

Practically all motor vehicles in the Colony use petrol as fuel but some of the bigger lorries have been fitted with charcoal generators and work on suction gas. Some attempt has also been made to market a mixture of alcohol, distilled locally from sugar, with petrol or ether, as a motor fuel, and although these mixtures are undoubtedly cheaper than imported petrol, there is at present no general demand for them. None of the latest type of vehicles fitted with Diesel engines has as yet arrived in the Colony.

The annual tax on all motor vehicles except motor-cycles is calculated at the rate of Rs.5 per unit of horse-power. The tax for motor-cycles is Rs.4 per horse-power. Lorries pay an additional tax of Rs.40 per ton on gross weight. Licence duty on vehicles for hire is paid according to seating capacity in the case of cabs and buses and carrying capacity in the case of goods vehicles.

Railways.

The Mauritius Government Railways, not including 18 miles of 75 cm. gauge track, known as the Bois Cheri Light Railway, are of the British standard 4 feet 8½ inch gauge and comprise 110¾ miles of main line, 30 miles of station lay-outs and Government sidings, as well as 17 miles of other sidings maintained by the Railway Department for planters and sugar estates. The railway is exceptional on account of its comparatively short length and very heavy gradients, much of it being 1 in 26. The most important section, the Midland Line, 35½ miles long, rises to 1,800 feet above the terminals at Port Louis, the capital, on the north-west and Mahebourg, the old port, on the south-east coasts of the island. A branch from Rose Belle on the Midland Line, 870 feet above sea-level, to the little creek and town of Souillac is 11 miles long. The North Line from Port Louis to Grand River South East, 33½ miles long, is fairly level. The Moka Branch, from Rose Hill, on the Midland Line, 950 feet above sea-level, to Montagne Blanche, is 14¾ miles long and rises on this length to 1,500 feet. The Black River Branch, from Richelieu on the Midland Line to Tamarin, is 12½ miles long, and the Montagne Longue Branch, from Terre Rouge on the North Line to Montagne Longue, is 3½ miles long. There are no heavy gradients on either of these lines.

The drastic cuts in personnel made in 1931-32 have been fully justified and the results anticipated have been attained as the following table for 1932-33 denotes. It has not therefore been found necessary to carry out a second scheme of retrenchment as originally intended. The excess of expenditure over revenue for 1932-33, excluding capital charges, was Rs.1,230 as shown below :—

	Revenue 1930-31.	*Revenue 1931-32.*	*Revenue 1932-33.*	*Increase or Decrease of 1932-33 over 1931-32.*
	Rs.	Rs.	Rs.	Rs.
Passengers	**606,668**	**434,325**	**419,181**	**— 15,144**
Parcels	**73,393**	**63,466**	**62,163**	**— 1,303**
General Goods ...	**1,143,729**	**817,077**	**1,174.046**	**+ 356,969**
Miscellaneous	**60,987**	**70.875**	**57,412**	**— 13,463**
Net Revenue	**119,354**	**187,938**	**63,554**	**— 124,384**
Total	**2,004,131**	**1,573,681**	**1,776,356**	**+ 202,675**
Goods Tonnage ...	**354,611**	**254,139**	**362,642**	**+ 108,503**

	Expenditure 1930–31.	*Expenditure 1931–32.*	*Expenditure 1932–33.*	*Increase or Decrease of 1932–33 over 1931–32.*
	Rs.	Rs.	Rs.	Rs.
Working expenditure including renewals.	2,626,145	1,945,113	1,516,631	– 428,482
Net revenue expenditure	129,194	642,785	260,955	– 381,830
Total	2,755,339	2,587,898	1,777,586	– 810,312
Capital Expenditure ...	3,162	20,226	304	– 19,922
	2,758,501	2,608,124	1,777,890	830,234

Further reductions in passenger fares have been made this year. The railway fares are now therefore down to the level of those charged by the bus companies, with the result that the railway passenger traffic has very considerably increased. The revenue figures, however, this year, do not fully reflect the increase of passenger traffic, but the monthly figures clearly show that bottom has been reached and that revenue from this source is steadily increasing.

As regards goods revenue, which represents the largest item of the railway revenue, the increase is chiefly due to the heavy sugar crop harvested, which estimated at 230,000 tons, actually amounted to 247,000 tons. General goods revenue (other than sugar and cane) which has suffered, equally with passenger revenue, by competition of the road services, was increased this year by the inauguration of a " door-to-door " rail and road service, specially arranged to cope with the Chinese merchants' shop traffic.

The working of the railway, and incidentally its financial results, were marred by a serious accident on the 12th September, 1932. A heavy sugar train ran away down a steep gradient on the Midland Line and collided with a light engine. Four men were killed and two injured. The estimated cash cost of the accident is Rs. 35,000, excluding the loss of stock, a large proportion of which will not require replacement. The loss including replacement of stock would amount to about Rs.80,000.

Tramways.

No marked change was in evidence in the net-work of tramway lines established, since 1901, on sugar estates. In 1933, there were about 1,700 kilometres of rail, 216 locomotives and 7,100 trucks. Farm tractors, occasionally utilized for hauling, numbered 100 in 1933.

Posts and Telegraphs.

The usual post office facilities in regard to correspondence, parcels, and remittances are available in Mauritius. The island is served by 57 offices and postal agencies, 53 of which are also telegraph offices where inland telegrams, cablegrams and radiograms are accepted for despatch and are received for delivery. In Port Louis, the capital, the offices are three in number, including the General Post Office which, for the sake of convenience, is equipped in two separate sections: the Letter Mail Office and the Parcels Office. The other offices are in rural townships and in villages. Practically every fairly populated centre is served and with the exception of a few agencies in outlying localities, all the offices are at railway stations. There is also a post office in the Island of Rodrigues, the largest Dependency.

Oversea mails are received and despatched regularly four times a month, twice by the French Messageries Maritimes steamers via Suez, and twice in transit through South Africa, by the Dutch K.P.M. steamers. Inward and outward mails are also carried at irregular intervals by cargo steamers. The outward mails include correspondence for onward transmission by air, either from Johannesburg or Nairobi. The average time required by this partial air-mail to reach Europe varies between 18 and 28 days as against the all through steamer service, between 27 and 38 days.

Though opportunities for direct communication occasionally occur, mails to and from India, Ceylon, the Far East, Australia and New Zealand, are usually sent and received via Aden, and those to and from Seychelles via Mombasa, by the Messageries Maritimes steamers, fortnightly. The parcel service includes C.O.D. exchanges with the United Kingdom and France.

English parcel mails are not usually despatched through South Africa and are therefore less frequent than letter-mails. The regular route is across France and from Marseilles by the Messageries Maritimes steamers, and the irregular, direct by the Cape route by a Clan line, or other steamer. Remittances are made by both money orders and postal orders.

Telephone communication is available in Port Louis and between Port Louis and the more important rural districts. The service is owned and maintained by the Oriental Telephone Company. The Government offices are linked together by a Government owned telephone system, which itself is connected with the Oriental Telephone Company's lines. Telegraphic communication is provided by cable and is maintained by the Eastern and South African Telegraphic Company, whose local station is in Port Louis. Cablegrams from and to the rural districts, are transmitted over the Government land telegraphs. The Company maintains a station also at Port Mathurin, in Rodrigues. All classes of traffic are accepted.

There is a wireless station at Rose Belle which maintains a twenty-four hour service, and works mainly with ships at sea and with Reunion Island. The wireless station was built by the Admiralty in 1915 for communication with ships at sea and with the various naval bases in the Indian Ocean, and was taken over by the Mauritius Government in June, 1923.

During the cyclonic season from 1st November to 15th May, a detailed weather report including obsevations made at Seychelles, Rodrigues and Reunion is transmitted to all ships and stations within range at 0845 G.M.T. daily. When a cyclone is in the vicinity, the Government tug *Maurice*, stationed in the harbour at Port Louis, is manned and inland weather reports are transmitted by wireless telegraphy from the tug to all vessels in port, for the guidance of their masters. The wireless apparatus in the *Maurice* also acts as a stand-by in the event of accident to the aerial system at the main wireless telegraphy station at Rose Belle. The present transmitting range of the station is 500 miles by day and 1,000 miles by night. It is hoped, however, soon to instal an up-to-date transmitter, thereby considerably increasing the transmitting range of the station. For economic reasons a small continuous wave transmitter is installed. It has day range of 300 miles and a night range of 650 miles and is chiefly used for ships leaving or entering port and for communication with Reunion. Ships bound for Mauritius and within range are also communicated with by this low power set. The receiving range of the station is world-wide on all frequencies in general use and the range is only limited by atmospherical conditions to signal level.

Harbour.

Port Louis, the capital of the Colony, possesses the only navigable harbour for ocean-going ships, which is picturesquely situated on the north-west coast. A wide break in the ring of coral reefs surrounding the island, caused by the meeting of several rivers and streams, the Latanier, La Paix, Le Pouce, and Creole, gives access to the harbour, which has been dredged so as to provide deep-water accommodation for ten ships lying at berths in the channel and drawing from 24 to 31 feet of water. The harbour is flanked on the north by Fort George, a military post, and on the south by Fort William, which is abandoned. The mountains of the range behind Port Louis, including the Pouce, 2,661 feet, and Pieter Both, 2,690 feet, are guiding beacons to ships by day. The lighthouses on Flat Island, the Colony's quarantine station six miles north of Mauritius, and Caves Point, five miles south of Port Louis on the cliff's edge, and the gas buoy to the north of the outer harbour entrance, direct ships approaching Port Louis by night. A tide gauge has been in operation for four years. The maximum rise of tide at ordinary springs is three feet, which diminishes to two or three inches at ordinary neaps.

Dredging of the berths and channel by the Government plant is continuously in progress.

The Government of Mauritius is the Harbour Authority. The Government has from time to time sold or let to two lighterage companies various areas of land bordering the harbour. These two companies, the New Mauritius Dock Company and the Albion Dock Company, each own about 45 lighters with the necessary tugs, and undertake all the storage and lighterage of sugar. The British India Steam Navigation Company also own 30 lighters and two tugs. This Company mainly handles grain from the East, the rest of the general cargo being shared fairly evenly between the British India Company and the other two lighterage companies.

Four years ago the Government built a deep-water quay, 500 feet long, with 32 feet of water alongside, which is able to deal with 100,000 tons of cargo per annum. Actually only 40,000 to 50,000 tons, chiefly petroleum products, Government coal, etc., are discharged annually at the quay.

A Government granary, capable of storing 300,000 bags of rice, was completed three years ago, as a protection against the spread of plague in the Colony and is now working satisfactorily.

Shipping.

There are two regular lines of passenger steamers connecting Mauritius with the United Kingdom. There is a fortnightly service between Marseilles and Mauritius maintained by the Messageries Maritimes Company; the average journey takes about six weeks and involves a stay of five or six days at Reunion either on the outward or inward journey.

Vessels of the K.P.M. (Dutch) Line leave Mauritius once a month for Durban and Cape ports and once a month for Mombasa via Beira. A vessel also leaves Durban once a month direct for Mauritius. The K.P.M. Line has a working arrangement with the Union Castle Line of steamers, and the voyage to England via the K.P.M. and Union Castle Lines averages about 32 days. Occasional vessels of the British India Steam Navigation Company take passengers to Colombo and the journey to England by this means takes from 28 to 35 days. Cheap passages to the United Kingdom can occasionally be secured during the sugar shipping season, October to March, on cargo steamers. The voyage averages 40 days.

It is interesting, but regrettable, to note that passenger facilities between Mauritius and the United Kingdom were far better twenty years ago than they arc to-day. The vessels of the Messageries Maritimes Company used to perform the voyage in 31 to 35 days, and the Union Castle Company and the British India Company used to make regular monthly calls. Passenger fares have also increased in so far as voyages via South Africa are concerned, by over 100 per cent.

The number of vessels and total tonnage entering and leaving the port during the past three years were as follows :—

INWARDS.

		1931.		*1932.*		*1933.*

XI.—BANKING, CURRENCY, AND WEIGHTS AND MEASURES.

Banking.

There are three private banks in the Colony, viz.—

(*a*) The Mauritius Commercial Bank,
(*b*) The Mercantile Bank of India, and
(*c*) Barclays Bank (Dominion, Colonial and Overseas).

The Mauritius Commercial Bank was established in 1838, and has paid up capital of Rs.2,000,000 made up of 10,000 shares of Rs.200 each. The total amount of deposits on 31st December, 1933, was Rs.7,913,460·19. The Mercantile Bank of India, Limited, took over the business of the Bank of Mauritius, Limited, on 3rd May, 1916. The total paid up capital is £1,050,000. The deposits made locally on 31st December, 1933, amounted to Rs.2,630,900·59. Barclays Bank (Dominion, Colonial, and Overseas) has a paid up capital of £4,975,500. The total deposits of the local Bank on 31st December, 1933, amounted to Rs.2,161,409. This Bank, which is affiliated with Barclays Bank, Limited, was founded in 1925 and represents the amalgamation of the Anglo Egyptian Bank, Limited, the Colonial Bank (incorporated by Royal Charter in 1836), and the National Bank of South Africa Limited. A branch of the last named bank was established in Mauritius in December, 1919. In February, 1926, its business was taken over by Barclays Bank (Dominion, Colonial, and Overseas) following the amalgamation already mentioned. This bank conducts a savings bank department and also pays interest on fixed deposits as well as conducting a short-term deposit business.

Offices of the Government Savings Bank are established in the nine districts with a head office in Port Louis. The total number of depositors at 30th June, 1933, was 38,093 as against 37,645 in the preceding year, with deposits amounting to Rs.5,279,006·44 as against Rs.5,114,747·68. Interest is paid at the rate of 3 per cent. per annum.

Currency.

The currency of the island is based on the Indian rupee. Apart from Indian silver coins the principal currency in circulation is provided by a Government issue of notes. Important changes, *details of which are given in Chapter XVI, are being introduced* in the monetary system of the Colony. The average value of currency notes in circulation during the year was Rs.7,854,365 as compared with an average of Rs.7,287,300 for the previous year. Against these notes the Commissioners of Currency held silver coins to the average value of Rs.1,844,750 as compared with Rs.2,974,922 in 1932-33. Their investments on 1st July, 1932, amounted to Rs.9,879,218·09 (which does not include Depreciation Fund). Of the investments Rs.3,483,888·06 were sold leaving a balance of Rs.6,395,330·03 on the 30th June, 1933. The Depreciation Fund which amounted to Rs.1,902,148·75 on the 1st July, 1932, remained unchanged during the year under review. From their investments the Currency Commissioners received interest amounting to Rs.540,330·52 which was credited to the general revenue of the Colony. The assets of the Commissioners of Currency which include Depreciation Fund exceed their liabilities by Rs.1,902,148·75 calculating the value of investments at mean market rate on 30th June, 1933. The liabilities include a sum estimated at Rs.1,000,000 in respect of notes destroyed in circulation by fire, floods, etc. It is considered that the surplus of the Commissioners of Currency may be estimated to be increased by this amount.

Weights and Measures.

The Metric system is in general use and the following are special French and local measures still in use :—

Measures of length and area:—

1 ligne Francaise = 2·258 millimetres or 0·088 inch.
12 lignes = 1 French inch.
12 French inches = 1 French foot.
1 French foot = 1·06 English feet.
1 lieue = 2½ English miles (approx.).
1 gaulette = 10 French feet.
1 arpent = 40,000 square French feet or 1·04 acres.
1 toise = 6 French feet or 2 yards 4 inches.
1 aune = 1 yard 11 inches.

Measures of capacity:—

1 barrique = 50 gallons (cane juice, etc.).
1 tiercon = 190 to 192 litres (molasses).
1 velte = 7·45 litres (coconut oil).
1 bouteille = 800 cubic centimetres (liquid).
1 chopine = ½ bouteille.
1 corde = 80 cubic French feet or 96·82 English cubic feet (firewood).

Measures of weight:—

1 gamelle = 5·250 kilogrammes.
1 livre = 500 grammes or 1·10 English pounds.

XII.—PUBLIC WORKS.

The Public Works Department is responsible for all Government buildings, the sewerage of Port Louis, roads and bridges, the survey of Crown Land, water-supplies, and state irrigation.

Buildings.—Some of these, such as a time-ball tower in the Port Office, are of historical interest, dating from the time of the French Governor Mahé de Labourdonnais in 1740. Government House in Port Louis was then in project and was built between 1740 and 1767. Apart from the addition of a second storey, it now stands exactly as it was originally constructed. It contains the Governor's offices, in which are to be found the table on which the capitulation of the island was signed in 1810, a throne room, a council room, the council offices, a library, and quarters for the Governor and officials. The former and present Residences of the Governors at "Mon Plaisir," Pamplemousses, and "Le Reduit," Moka, also date back to the French occupation. The value of the Government buildings is approximately 15 million rupees.

There are in the island one mental and nine general hospitals. An old hospital, the Grand River North West Hospital, built in 1769 for seamen is now being used as a quarantine station for plague.

Severe cyclones, which happily are not frequent, are responsible for a good deal of damage to water-works, roads, and buildings.

Sewerage Works of Port Louis.—The sewerage works were begun in 1900. In 1922 the scheme was revised by Messrs. Mansergh and Sons and the works have been carried out on the lines of their report. The construction works being now practically completed, present activities are concentrated on house service connexions, and a large portion of the town of Port Louis now has the water carriage system.

Bridges.—There exist 335 bridges on main and branch roads, the longest span being of 150 feet. The old timber bridges are being gradually replaced by ferro-concrete structures, and there are 66 to be replaced.

Water-Works.—The water supply of the town of Port Louis is obtained from the Grand River North West at a distance of about four miles from the town and at a level of 250 feet. This supply was under the charge of the Municipality of the town until 1922, when it was handed over to the Public Works and Surveys Department. The dam in the river was burst by the flood of December, 1929, and much of the pipe-line leading from it was also swept away. The works of restoration of the dam and pipeline were begun in September, 1931, and were completed by the end of February, 1932. The water is passed through sand filters and chlorinated. The capacity of the mains leading to the filters is 5,000,000 gallons a day. The water is distributed to the town from two covered service reservoirs of a total capacity of 2,000,000 gallons.

The water-supply of the towns of Plaines Wilhems and of parts of Moka and Black River districts is obtained from a storage reservoir called the Mare aux Vacoas, at an altitude of 1,825 feet. The capacity of the reservoir is now, after the raising of the dam, 1,641 million gallons. The catchment ground is entirely protected by forest lands. The whole of this water-supply is filtered through sand filters at " La Marie," about two miles below the reservoir, whence the supply to the town of Curepipe is pumped by hydraulic power, the supply to the other towns being by gravity. The water is distributed from six covered service reservoirs situated in the various zones of supply, their aggregate capacity being 5,500,000 gallons. The population served by this supply is approximately 90,000 and the average daily consumption 3,500,000 gallons. The Mare aux Vacoas water supply has been extended to the town of Port Louis. The supply is limited to 900,000 gallons per day. In this connexion a covered service reservoir at Petite Riviere of 750,000 gallons was completed and put into operation in 1931. The water-supply to the villages and hamlets in the other districts comes from twenty-seven different springs or streams. These supplies are not filtered but they are generally protected in their catchment areas by reserves of forest. The population depending on these various supplies is about 200,000, and is comprised mostly of the poorer classes. A large proportion of the daily consumption is distributed by means of public fountains.

Irrigation Works.—Government storage irrigation works were begun in 1914 according to plans made by Mr. C. M. Harriott, C.S.I., C.I.E., M.I.C.E., Chief Engineer, Public Works Department, Central Provinces, India, and Consulting Engineer for Irrigation Works to the Government of Mauritius. The La Ferme scheme for the irrigation of the south-west of the island, between Grand River North West and River Dragon, has been finished, and the Nicoliere scheme to irrigate land in the north, has been started. These two schemes cover a great deal of the fertile lands of the Colony which are below the level which enjoys 60 inches of rain and cannot be cultivated to the best advantage without irrigation water. The La Ferme scheme is dependent on a low-level reservoir of 2,500 million gallons, which was completed in 1918 and now irrigates 3,700 acres of land under sugar cane plantation. The plans for the Nicoliere scheme include a high-level storage reservoir at 1,300 feet altitude at Midlands, of 4,400 million gallons capacity, intended to fill a low-level reservoir at Nicoliere of a capacity of about 250 million gallons.

The Nicoliere reservoir has been finished, but, although some land under cane cultivation is being irrigated from it, the full scheme will only be working when the Midlands reservoir is completed. Owing to financial conditions the plans were first curtailed and the works afterwards suspended as a result of the visit of the Financial Commission, but the feeder channel, which measures 16¾ miles from Midlands to Nicoliere was completed by the end of 1931, with a reduced section.

XIII.—JUSTICE, POLICE AND PRISONS.

Justice.

The Supreme Court sits in the capital (Port Louis) and is presided over by one Chief Judge and two Puisne Judges. It has jurisdiction in Civil and Criminal matters and also as a Court of Admiralty; it also decides appeals from the Supreme Court of Seychelles and the Inferior Courts of Mauritius. There is a Bankruptcy Division presided over by one of the Judges or by the Master and Registrar sitting as Judge in Bankruptcy. In 1933 the Supreme Court dealt with 240 civil matters out of 309 which were brought before it, as against 282 out of 335 in the year before. In 1933 twenty persons were brought before this

Court and tried on criminal charges, all of them being convicted. Criminal cases are tried by a Judge and a Jury. Divorce causes, bankruptcy matters, and civil actions in which the sum involved is less than Rs.3,000 are heard by one Judge. Civil actions in respect of claims over Rs.3,000 are heard by two Judges. Where, however, the magnitude of the interests at stake or the importance of the questions of fact or law involved make it desirable, a case is heard by three Judges.

Magistrates.—There is a Magistrate's Court in each of the nine districts, the Courts in Port Louis and in Plaines Wilhems each sitting in two divisions. A Magistrate has jurisdiction in nearly all civil matters involving not more than Rs.1,000 and in all criminal matters with power to inflict not more than one year's imprisonment and Rs.1,000 fine. A Bench of three Magistrates may be instituted by law for the trial of certain offences and also at the request of the Procureur General for nearly all offences, with jurisdiction extending to three years' penal servitude or imprisonment and fine possibly of Rs.3,000. An appeal lies of right to the Supreme Court within the limits stated above, both in fact and law, the several modes of reviewing the decisions being the same as in English Law. There is no system similar to the French Assistance Judiciaire but facilities are given to very poor litigants both before the Supreme and the Inferior Courts to obtain leave to sue *in forma pauperis.* In Supreme Court cases, counsel are ever ready to accept a pauper brief at the request of the Chief Judge while in Assize cases, counsel is always appointed without fee, for undefended prisoners. The Dependencies are visited periodically by one of two Magistrates supernumerary to the District Magistrates, whose services are also available in Mauritius.

The Dependency of Rodrigues is administered by a Magistrate who has the same jurisdiction in Rodrigues as a District Magistrate in Mauritius and whose duties are to a considerable extent administrative.

The Magistrates tried 9,135 civil cases and held :—

150 coroners' inquests;
19 preliminary inquiries into crimes and serious misdemeanours
11,811 ordinary criminal cases and petty offences.

Police.

Organization.—The Mauritius Police Force is organized on a purely civil basis, but all recruits are instructed in squad drill with arms and elementary musketry whilst passing through the Training Depot. A special Armed Detachment of one officer and 46 other ranks is maintained in a state of military efficiency and undergoes periodical training in platoon, ceremonial and anti-riot drill. Certain members of the specialist branches of the Force are trained in the use of the Lewis Gun and are formed into special Lewis Gun Sections for use in any emergency. The military side of Police training is supervised by officers and other ranks who have previously served in the army. At the present time there are eight Gazetted officers and 44 other ranks serving in the Mauritius Police Force, who were on active service during the War of 1914-18. Gazetted officers are mainly provided by promotion from the ranks, but direct Colonial Office appointment in these ranks are also made when necessary. The rank and file are now entirely recruited locally and there is no shortage of suitable applicants for the Police.

Distribution.—The establishment of 20 officers and 595 other ranks is divided into Headquarters Staff, Clerical Branch, Criminal Investigation Branch, Motor Traffic Branch, Revenue Branch, Training Depot, Harbour Police, District Police, Railway Police, Rodrigues Police and Band. The Headquarters of the Force, with the special Branches and Depot, are established in the Line Barracks at Port Louis which have been gradually improved and adapted to meet modern requirements. The general duty police of the Force are distributed in Magisterial Districts as follows :—

District.	*Number of Stations.*	*Number of Personnel.*
Port Louis	8	207
Plaines Wilhems ...	5	87
Black River	4	14
Curepipe	3	50
Grand Port	6	44
Savanne	5	23
Pamplemousses ...	6	31
Riviere du Rempart ...	5	21
Moka	5	34
Flacq	5	35

The Harbour Police also control an area of Port Louis including the Custom House, Post Office, Docks, Wharves and Harbour. For their duties afloat they are provided with a motor launch. The Rodrigues and Railway Police, whose numbers are provided from the trained establishment of the General Police, are under the independent control of the Resident Magistrate of Rodrigues and the General Manager of Railways respectively. The Band consists of one European Bandmaster holding the rank of Inspector and 30 bandsmen mostly recruited in Mauritius with a few ex-military bandsmen from India.

Revenue Control.—Reference has been made in previous reports to the transfer of functions of the Inland Revenue Branch to the Police Department. In this connexion it is interesting to note that the inland revenue collected in direct taxes and licences has increased from Rs.1,419,467.01 in 1932 to Rs.1,465,951.60 in 1933. This has been achieved without any increase of personnel in the Police Department.

Crime.—The total number of offences of all kinds reported to the Police during the year 1933 was 23,502, but taking into account approximately 4,000 cases of contravention of the Licence, Fishery, Weights and Measures, Forest Laws, etc., the former figure is reduced to approximately 19,500 in so far as crimes, misdemeanours and minor offences are concerned. Of these 19,500 offences, 8,492 are classified as offences against the person and show an increase on the corresponding figure for the previous year which was 7,748, and 3,275 are classified as offences against property, which figure shows a decrease on that for 1932, which was 3,441. The number of persons prosecuted in connexion with these 23,502 offences was 11,647, of whom 10,264 were convicted, 658 otherwise disposed of and 625 were awaiting trial at the end of the year. In 1932, 9,376 persons were prosecuted, 8,663 were convicted, 545 otherwise disposed of, and 168 were awaiting trial at the end of the year.

Prisons.

Organization.—The Prison Department of Mauritius, in common with that of many other Crown Colonies where strict economy in the cost of administration is essential, is placed under the charge of the Inspector General of Police who is responsible for the control of Penal Institutions as Superintendent of Prisons. This arrangement has been in force since 1912 and, although liable to criticism in theory, has worked extremely well in practice, and the prisons of the Colony are generally considered to be well-managed and properly controlled. Four senior officers, in addition to the Superintendent, are drawn from British Army, Police, or Prison Services and the remaining staff of 108 are recruited from local sources.

Establishments.—The penal institutions are Port Louis Central Prison, Beau Bassin Convict Prison, and Barkly Industrial School for male juvenile offenders. Port Louis Prison provides separate cell accommodation for 154 male prisoners and association cells for 40 women. It also contains the offices of the Department and quarters for two senior officers and two wardresses. All prisoners awaiting trial are housed in this prison in convenient proximity to the Supreme and Magistrates Courts, and special arrangements are in force, under the supervision of the Medical Director, for treating convicted prisoners on admission for prevalent diseases before transfer to the Convict Prison at Beau Bassin. This prison also serves as the centre for classification of convicted prisoners and for treatment of special and difficult cases.

Beau Bassin Prison is a modern type convict prison containing single cell accommodation for 756 male prisoners. Detached bungalow-type quarters for the Superintendent and two Chief Warders are located in the surrounding Prison grounds.

Barkly Industrial School consists of a large range of buildings and quarters formerly used as a hospital and now providing accommodation for 200 boys and 7 School Officers. Boys falling into the hands of the Police are sent to the School direct without being detained in Police cells or the Central Prison, and remain there while awaiting disposal by a Magistrate.

Classification.—Convicted prisoners are at present classified as (*a*) penal servitude, (*b*) hard labour, (*c*) misdemeanants, and (*d*) juvenile and first offenders and, so far as the existing accommodation permits, the various classes are separated and wear distinctive clothing. The experiment in the creation of a " Special " class to correspond to the " Star " class of English prisons is still incomplete but has given encouraging results and it is anticipated that the new classification will be officially authorized in 1934. Classes (*a*) and (*b*) serve their sentences at Beau Bassin Prison, while (*c*) and (*d*) with old, infirm, and special type prisoners are kept at Port Louis.

Labour.—The principle governing the employment of all prisoners is that they shall be put to such remunerative work as lies within their physical capacity and past experience, and that all long-sentence prisoners who are not tradesmen before conviction shall be taught a trade during their period of imprisonment. The normal labour for male prisoners at Port Louis is carpentry, stone-breaking, cutting firewood, carting stores, and cleaning Government buildings and grounds. Women prisoners are employed on laundry work and sewing clothing and bedding. At Beau Bassin prison prisoners with long sentences are taught a trade, while those serving shorter sentences are principally employed on agricultural work in the prison gardens. The trades taught in the prison workshops comprise tailoring, boot, sail, and mattress making; carpentry and cabinet making; blind, mat, and basket making; tinsmith work and blacksmithing. Instruction in baking is given in the prison bakery which produces about 1,400 pounds of bread daily and numerous prisoners are trained as stonemasons in the quarries and neighbouring grounds.

Population.—The number of persons admitted to Port Louis Prison during the year was 3,210, which is 443 less than in the previous year, and 565 less than in 1931. Of these 3,210 persons 1,799 were convicted and, of these, 1,145 were sentenced to imprisonment for one month or less. The convicted prisoners comprised 1,718 men and 81 women. The daily average population was 500·44 compared with 662·10 in 1932, and the number of persons in prison on 31st December, 1933, was 381 compared with 503 in 1932 and 677 in 1931. Of the 381 persons in prison 364 were serving sentences and comprised 356 men and 8 women. This reduction is entirely due to improvement in economic conditions resulting in more employment and increased capacity to pay fines. 822 persons, of whom 13 were women, served sentences of imprisonment in lieu of paying fines.

Health.—The Medical Officers in charge of the prison hospitals report that the health of the prisoners was excellent. Deaths in hospital during the year totalled 7 compared with 22 in 1932 and 33 in 1931.

Juvenile Offenders.—The number of boys in the Barkly Industrial School at the end of the year was 46 compared with 47 in 1932 and 102 in 1926. 33 boys were admitted during the year and 35 were discharged. All the boys receive the normal lower standard primary school education during a portion of the day and spend the remainder of their working hours at agricultural work or manual training. Their health has been, as usual, excellent, thanks to the care and attention of the medical staff who free them from every sort of internal and external parasite after admission and enable them to be discharged in the great majority of cases in good physical condition. A Committee to deal with the all-important question of employment on discharge and the after care of these boys has been appointed as a result of the initiative of the local branch of Toc H and is doing excellent work.

XIV.—LEGISLATION.

A list of the Ordinances passed during the year under review is given in Appendix I to this Report. Of the Ordinances passed, the following which are important and of interest not purely local may be mentioned specifically :—

> *Free Emigration.*—No. 12 removes restrictions (other than under the Passport or Police Laws) on the emigration from Mauritius and its Dependencies of natives or of residents. Power to make regulations is reserved under the Ordinance to the Governor in Executive Council, so that adequate provision be made to ensure the protection of prospective or actual emigrants.
>
> *Consolidation of Post Office and Telegraph Laws.*—No. 13 brings up to date the Post Office and Telegraph Laws of the Colony.
>
> *Identification of Illicit Rum.*—No. 18 aims at combating traffic in rum which is prepared in contravention of the Distillery and Revenue Laws, by enacting that all rum containing more than a given proportion of *furfuraldehyde* shall be considered illicit rum. The principle thus adopted is based on the fact that *furfuraldehyde* is altogether absent (or practically so) from the produce of all the licensed distilleries of the Colony, the method employed ensuring its elimination from the distillate.
>
> *Preferential Tariff of Customs Duties.*—No. 27 extends to all parts of the British Empire the Preferential Tariff of Customs duties, in accordance with the principles adopted by the Ottawa Conference. Certain items of the Schedule of tariffs are at the same time revised, as a consequence, to compensate short returns on the Customs estimates.

Passports.—No. 33 provides that a passport shall henceforth be necessary for leaving as well as for entering the Colony.

Merchant Shipping.—No. 35 applies to ships registered in the Colony the "direct system" of giving helm orders, in accordance with the International Convention for Safety of Life at Sea.

General.—Other Ordinances were passed providing for:—The suppression of houses of ill-repute (No. 5); long term contracts (5 years) under the Labour Laws (No. 6); the opening of a Government granary for the storage of grain directly on its importation, so as to render anti-plague measures more effective (No. 17); the levying of an export duty on silver in bullion or coin (No. 20); the continuing in effect of legislation concerning a levy on the salaries of civil servants (No. 24); the levying of an increased export duty on sugar, to secure more funds to be applied to the destruction of the pest the *Phytalus Smithii* (No. 38).

XV.—FINANCE.

Revenue and Expenditure.

The revenue of the Colony for the year ended the 30th June, 1933, reached the abnormal figure of Rs.30,200,418·30. The revenue normally becoming due and collected during the year was Rs.14,503,504 and the increase in the amount shown for the year was due to special adjustments comprising, *inter alia*, the following transfers to Revenue:—

	Rs.
Widows' and Orphans' Fund	5,032,347·84
Government Scholarship Fund	539,769·17
Improvement and Development Fund ...	6,317,717·98
Mauritius Loan, 1922	1,362,678·99
Unexpended balance Sugar Industry Loan, 1929	7,315·90
	Rs.13,259,829·88

The Revenue was Rs.15,822,585·30 above the Estimates and Rs.18,040,139·49 above that of the previous year.

The Expenditure for the same period amounted to Rs.13,810,589·27 being Rs.957,587·73 below the Estimates for 1932-33 and Rs.3,893,985·43 below the expenditure of the previous year.

The revenue during the financial year 1932-33 exceeded the expenditure by Rs.16,389,829·03 and the surplus balance on 30th June, 1933, amounted to Rs.12,943,799·93. Of the expenditure for 1932-33 Rs.4,741,399·51 was spent on "Personal Emoluments" and Rs.9,069,189·76 on "Other Charges". The corresponding figures for 1931-32 were Rs.4,922,576·84 for "Personal Emoluments" and Rs.12,781,997·86 for "Other Charges". The following is a comparative statement of the revenue and expenditure for the last five years:

Year.	*Revenue.* Rs.	*Expenditure.* Rs.
1928-29	13,322,248	16,930,182
1929-30	14,483,467	15,575,001
1930-31	11,552,210	16,092,073
1931-32	12,160,278	17,704,574
1932-33	30,200,418	13,810,589

The Colonial Government pays a military contribution of 5½ per cent. of its revenue (total revenue exclusive of land sales, irrigation, Mare aux Vacoas and other water works revenue, contribution towards loan 1922 charges, and special export duty on sugar) towards the cost of the garrison maintained in the Colony by His Majesty's Government in the United Kingdom. The annual contribution was reduced to £15,000 for the two years 1932-33 and 1933-34, the amount paid for the year ended 30th June, 1933, was Rs.205,125.

Public Debt.

The public debt of the Colony on 30th June, 1933, was £3,396,994 7s. 7d. Against this liability of £3,396,994 7s. 7d., there was an accumulated sinking fund of £1,652,076 7s. 8d. as compared with £1,410,077 15s. 7d. on 30th June, 1932.

Assets and Liabilities.

The assets and liabilities at the end of the year amounted to Rs.23,125,361·34 and Rs.10,181,561·41 showing a surplus of Rs.12,943,799·93.

STATEMENT OF ASSETS AND LIABILITIES AS AT 30TH JUNE, 1933.

House Tax	279,448·01	403,293·43

Customs Duties.

The revenue from Customs duties for the year 1933 was Rs.4,777,368 for imports and Rs.863,472 for exports (excluding amount levied on export for specific purposes).

The figures for the previous years were :—

	Import duty.	*Export duty.*
	Rs.	Rs.
1932	3,935,135	752,832
1931	3,762,014	41,802

Customs Tariff (Summarized).

The following shows the rates of duty of the principal imports and exports on the 31st December, 1933 :—

Imports.

Rice	**63c per 100 kilos.**
Dholl	**Rs. 1·14 per 100 kilos.**
Flour	**Rs. 0.94c per 100 kilos.**
Fertilizers ...	**11c to Rs. 1·10 per 100 kilos.**
Coal	**8c per 100 kilos.**
Petroleum oil ...	**Rs. 5·28 per hectolitre.**
Petroleum spirits	**Rs. 14·00 per hectolitre.**
Soap, common ...	**Rs. 1·93 per 100 kilos.**
Wines in casks up to 14°.	**Rs. 22 per hectolitre.**
Wines in cases up to 14° (still).	**33c per litre.**
Spirits (proof) ...	**Rs. 6·87 per litre.**
Tobacco, manufactured.	**Rs. 15·00 per kilo.**
Tobacco, cigarettes.	**Rs. 16·50 per kilo.**
Vegetable oil, other than olive.	**Rs. 5·50 to Rs. 9·00 per 100 kilos.**
Most manufactured articles.	**5·5 to 55 per cent.** ***ad valorem.***

---

[*] Includes special export duty on sugar.

Exports.

Sugar ...	45c per 100 kilos.	Aloe fibre ...	Rs. 4·- per 100 kilos.

Principal preferential rates on imports.

	Preferential.	*General.*
Motor vehicles of all kinds (including tyres and tubes).	5·5 per cent. *ad valorem*	36⅔ per cent. *ad valorem*
Silk manufactures (including art silk).	16·5 „ „ „ „ or R.0·55 per kilo	55 „ „ „ „ or R.1·75 per kilo
	whichever is the higher	
Indigo	R.1·10 per kilo.	Rs.2·75 per kilo.
Cement	R.0·30 per 100 kilos.	R.1·00 per 100 kilos.
Cinema films ...	Free	R.0·04 per metre.
Machinery, industrial	R.1·45 per 100 kilos.	5·5 per cent. *ad valorem.*
Cotton manufactures	13 per cent. *ad valorem.*	26 per cent. *ad valorem.*
	and also specific rates in certain cases.	
Hardware	11 per cent. *ad valorem.*	22 per cent. *ad valorem.*

Excise and Stamp Duties.

The duty on rum for home consumption is Rs.2·75 per litre of 23 degrees Cartier and an additional duty of 12 cents per litre for every degree above 23 degrees Cartier. The duty on spirits to be denaturated for heating and lighting purposes is R.0·04 cents per litre at 36 degrees Cartier and an additional duty of 4 cents per hectolitre or fraction thereof for every degree above 36 degrees Cartier. The duty on spirits to be denaturated for use as motor fuel is 4 cents per litre or fraction thereof at any degree Cartier. The duty on alcohol for the preparation of medicinal tinctures and drugs is 10 cents per litre at any degree, but the duty on alcohol delivered for the preparation of " Alcoolats " in accordance with the formulae laid down in the British Pharmacopoeia or the French Codex or of any other medicinal tincture and drug as notified in the Gazette is Rs.2·50 per litre at 23 degrees Cartier with an additional duty of 10 cents per litre for every degree above 23. The duty on vinegar is R.1·70 per hectolitre on vinegar not exceeding 8 degrees of strength and an additional duty of 18 cents per degree and per hectolitre on all vinegar above 8 degrees.

According to the excise figures the number of litres of spirits distilled in 1932-33 (July to June) was 1,105,373 litres as compared with an average of 798,370 litres for the past five years. The duty on wine and other liquor (excepting rum and compounded rum) manufactured in the Colony which contain more than 4 degrees of alcohol according to Gay Lussac's alcoholometer is as follows :—

---

* NOTE—The duty on Sugar is only for special purposes as under :—

R.0·02 per cent. kilos for destruction of *Phytalus Smithii;*
0·03 „ „ „ „ College of Agriculture;
0·04 „ „ „ „ Sugar Industry Reserve Fund;
0·36 „ „ „ „ in refund of loans.

The duty on Aloe fibre includes Rs.3 per 1,000 kilos in refund of loan to the Hemp Industry.

(i) on all such liquor not exceeding 14 degrees by Gay Lussac's alcoholometer a duty of 15 cents per litre ;

(ii) on all such liquor exceeding 14 a duty at the same rate and on the same scale as the customs duty on wines payable under the Customs Tariff Ordinance.

An excise duty of Rs.4 per kilo is charged on leaf tobacco used for the manufacture of tobacco for local consumption. According to the official figures the quantity of tobacco manufactured in the year 1933 was 321,931 kilos 100 grms. as compared with 307,968 kilos 120 grms. in 1932. The excise duty collected on tobacco during the last two financial years is given below :—

	Year 1932-33. Rs.	*Year* 1931-32. Rs.
Tobacco	1,335,332·45	1,009,998·74

The figures for the calendar years are :—

	Year 1933. Rs.	*Year* 1932. Rs.
Tobacco excise ...	1,182,074·35	1,286,971·90

House Tax.

Rates.—1 per cent. per annum on any building assessed over Rs.500.

Yield.—The amount collected during the financial year 1932-33 was Rs.403,293·43.

Method of Assessment.—Any building liable to the house tax is assessed according to its full and fair value. In assessing the full and fair value, the valuer takes into consideration the actual or possible rent a tenant may be reasonably expected to pay for such building. This applies only to buildings whose basis value is above Rs.500 and on which the annual tax is 1 per cent. on the value.

Method of Collection.—For the purpose of collecting the House Tax when the assessment arrived at is final for the year, notices for payment are served upon owners of buildings and the tax is paid to the Cashier of the District in which it is levied or to the Chief Cashier, Treasury.

Income Tax.

The Income Tax whch was imposed as from the 1st of July, 1932, was subsequently postponed to a later year, and was still in abeyance at the end of the year.

XVI.—MISCELLANEOUS.

The Colony continued during the year to enjoy the benefit of the special sugar preference of 1s. per cwt. and the additional preference of 1s. per cwt. on a prescribed quota which were granted by

His Majesty's Government in 1932 for a period of five years on all Colonial sugars consigned to the United Kingdom. The above grants are exclusive of the General Imperial Preference on all sugars amounting to nearly 3s. 9d. per cwt. With a total sugar production of 261,000 tons and a quota which was fixed at 104,000 tons in the case of Mauritius, the assistance extended to the Colony by the Imperial Government amounted to about £1,343,750 in respect of the 1933-34 crop.

The decision of His Majesty's Government to reduce the Military Contribution payable by the Colony to £15,000 during the two financial years 1932-33 and 1933-34 with a view to assisting in the recovery of financial equilibrium resulted in a saving of over Rs.500,000 in respect of the financial year 1933-34 and greatly facilitated the preparation of a balanced budget.

Four delegates chosen by the unofficial members of the Council of Government in 1932 to proceed to England and discuss with the Secretary of State for the Colonies certain questions concerning the constitution of the Legislative and Executive Councils, the administrative and fiscal policy, and the sanitary improvement of the Colony, returned to Mauritius during the year 1933 The negotiations resulted in certain changes in the constitution of the Government which are detailed in Chapter II of this Report. It was also decided to effect radical changes in the monetary system of the Colony comprising (*a*) the calling in of the Currency Notes in circulation and the issue of new Currency Notes, and (*b*) the abandonment of the Indian rupee as the basis for the coinage of the Colony and its replacement by a rupee, and its sub-divisions, of the Government of Mauritius. Legislation to give effect to the changes in the Currency Notes has already been enacted and it is estimated that the transactions will result in a net profit of about Rs.3,500,000 to the Government. Legislation to provide for the changes in coinage is in course of preparation.

The question of the control of the *Phytalus Smithii* pest also received consideration during the stay of the delegation in England and early in 1933, Mr. W. F. Jepson, a specialized entomologist of the Parasite Laboratory, Farnham Royal, was selected as *Phytalus* Investigation Officer, for research work in connexion with the biological control of the pest in Mauritius. Mr. Jepson arrived in the Colony in October, 1933.

His Excellency the Governor, Sir W. E. F. Jackson, who was on leave of absence in England during the visit of the delegation, returned to the Colony on the 29th April, 1933.

The Ordinance which was passed in 1932 to provide for the imposition of an income-tax had not been enforced by the end of the year and, in view of certain representations from a Committee of taxpayers and, later, from the elected and unofficial members of the Council of Government, it has been decided to abandon the tax and to provide additional revenue by alternative direct taxation in the form of a graduated personal or poll tax on all persons (including companies) possessing incomes in excess of Rs.5,000 per annum. Legislation is being prepared for the imposition of this tax.

The Island was visited in May, 1933, by H.M.S. *Hawkins* flying the flag of Vice-Admiral M. E. Dunbar-Nasmith, V.C., C.B., Commander-in-Chief of the East Indies Station, and in July, 1933, by the French War Vessel *Bougainville*.

In September, 1933, communication by air was established between Reunion and Mauritius by the arrival in the Colony of two aviators from Reunion.

APPENDIX I.

Thirty-nine Ordinances were passed by the Council of Government and assented to by the Governor during the year 1933, as follows:—

No. *Title.*

1. To make provision for the disposal of Rodrigues leaf tobacco imported before a certain date and for the levying of excise duty on such leaf tobacco.
2. To correct a clerical error in the Appropriation (1932-33) Ordinance, 1932, and thereby to provide for the amount truly intended to be appropriated to a certain item in the Schedule thereof.
3. To fix a time limit for the granting of loans under the Mauritius Hurricane Loan (Appropriation) Ordinance, 1931, and the Hurricane Loan Ordinance, 1931.
4. To authorise the transfer to the general revenue of an unexpended balance of the Funds raised for the purposes of the Sugar Industry Loan Fund Ordinance, 1929.
5. To make provision for the suppression of disorderly houses.
6. To amend the Labour Law in regard to the duration of Contracts of Service.
7. For applying a further sum not exceeding Rs.3,858,459.50 to the service of the year 1931-32.
8. To amend the House Tax Ordinance, 1928.
9. To regulate the application of fines.
10. To empower the Board of Commissioners of the Town of Beau Bassin and Rose Hill to raise a loan of Rs.200,000 for certain purposes.
11. To amend the Municipality Pensions Ordinance, 1929, for the purpose of extending the time limit fixed for the exercise of the option in that Ordinance provided.
12. To allow the emigration of natives of or residents in Mauritius.
13. To amend and codify the Laws of the Post Office and Telegraphs.
14. To amend Ordinance No. 14 of 1895 and to repeal the Ordinance amending the same.

15. To repeal Ordinance No. 12 of 1837 and to remove doubts on the validity of appointments of officers of the Ministère Public.
16. To amend the Licences (Consolidating) Ordinance, 1915.
17. To provide for the fumigation, disinfection and landing of certain grain and the storing thereof in a granary.
18. To provide for the identification of rum illicitly manufactured and punish the possession thereof.
19. To amend the Income Tax Ordinance, 1932.
20. To provide for the levying of an export duty on silver.
21. Further to amend the Licences (Consolidating) Ordinance, 1915.
22. To authorise the exhumation of the remains of the late Right Reverend James Romanus Bilsborrow from St. Pierre Cemetery, in the District of Moka, and their reinterment within the precincts of St. Louis Cathedral in the Town of Port Louis.
23. To validate and continue in effect a Resolution of the Council of Government relating to the collection of excise duty on Leaf Tobacco.
24. To declare and extend the time during which certain Levy on Salaries Ordinances shall have effect.
25. To make provision for the Public Service for the financial year 1933-34.
26. To make provision for the Mauritius Government Railways for the financial year 1933-34.
27. To amend the Customs Tariff Consolidation Ordinance, 1932.
28. To amend the Hurricane Loan Ordinances 1931, so as to provide a lower rate of interest on loans made under the said Ordinances.
29. To correct clerical errors in certain Ordinances.
30. For applying a further sum not exceeding Rs.86,728 to the service of the Mauritius Government Railways for the year 1931-32.
31. For constituting the Association called "The Mauritius Motor Transport Association" into a body corporate and to provide for the establishment and working thereof.
32. To continue the Stamps (Consolidation) (Amendment) Ordinance, 1932.
33. To amend the Passports Ordinance, 1924.
34. To amend the Registration of United Kingdom Designs Ordinance, 1930.
35. To provide for a new method of giving helm orders on British ships registered in the Colony.
36. To amend the Savings Bank Ordinance, 1898.
37. To amend the Licences (Amendment) (No. 2) Ordinance, 1932.
38. To provide an increased duty on sugar exported from this Colony.
39. For applying a further sum not exceeding Rs.356,090.31 to the service of the year 1932-33.

I.—GEOGRAPHY, INCLUDING CLIMATE, AND HISTORY.

The island of Mauritius is of volcanic origin. It is situated in the South Indian Ocean at about 1,400 miles from the east coast of Africa and lies between 19° 50′ and 20° 35′ S. latitude and between 57° 18′ and 57° 48′ E. longitude. The greatest length from north to south is nearly 39 miles and the widest breadth from east to west is 29 miles. The area of the island is about 716 square miles, exclusive of that of several small islets round the coast which measure about 4 square miles.

The Dependencies comprise a large number of small islands between 230 and 1,200 miles away. The largest, Rodrigues, which lies 350 miles to the north-east of Mauritius, had a population estimated at 9,111 on 31st December, 1934. The estimated population of the lesser Dependencies on that date was 1,346.

Mauritius is situated just within the tropics and enjoys a climate free from extremes of weather except that tropical cyclones at times cause considerable damage to crops, but rarely to buildings. For a great part of the year south-east trade winds, heavily laden with moisture, blow gently over the island, tempering the tropical heat. The rain falls mostly in showers. Particularly in the summer months, December-March, the south-east winds are replaced by the light variable winds of the doldrums, which cause discomfort to Europeans, although the temperatures are not high, whereas in the winter months in the residential districts at altitudes of 1,300 to 1,800 feet the temperature may fall to 50° F. The yearly rainfall varies from 30 inches on parts of the coast to 150 inches in the upland regions.

The Mascarene Archipelago was probably known to Arab navigators at an early date and was no doubt visited later by the Malays who colonized Madagascar in the 15th and 16th centuries.

The Portuguese rediscovered it in 1507. They only used Mauritius as a port of call for repairs and supplies, and let loose pigs, goats, deer, and monkeys. It seems probable that rats were introduced in this period as they were a serious pest to the succeeding Dutch colonists.

The Dutch took possession from 1598 and were employed chiefly in exploiting the ebony. They attempted to cultivate sugar-cane, but were frustrated by rats. Although they denuded the forests of ebony they later added to the economic resources of the island by introducing useful trees, plants, and cattle. Negroes were imported for labour, and, as escape into the forests was easy, bands of runaway slaves called Maroons were formed. The combination of the rats and this dangerous population of mixed, but mostly African, origin uncontrolled by any tribal or political system proved too much for the Dutch who abandoned the island in 1710.

The French annexed it in 1715, and by 1722 the population, apart from Maroons, amounted to 160 persons, soldiers, colonists, and slaves. Mahé de Labourdonnais was chosen to develop the Colony and arrived in 1735. In order to make the island self-supporting, he introduced manioc and maize from Brazil and promoted the extension of agriculture by introducing products from all parts of the tropical world. He especially encouraged the cultivation of sugar. He substituted animal draught for carriage by slaves, and to ensure an adequate supply of labour he brought slaves from Africa. From an encampment of straw huts he built up Port Louis into a town of public buildings, private houses, stores, shops and barracks. Labourdonnais laid the foundations of modern Mauritius.

In 1755, large herds of cattle were brought in from Madagascar. Pierre Poivre, Intendant in 1767, established the cultivation of cloves and nutmegs.

In 1810, when Mauritius became British, the population had grown from 160 to about 80,000, of whom 65,000 were slaves. Sugar was then, as now, the principal product, and, when in 1825 the duty of ten shillings a hundredweight, levied on Mauritius sugar entering England (in order to protect the West Indian sugar), was remitted, cane plantations immediately developed to a large extent, fresh land was put under cultivation, roads were opened, and steam power was applied to mills. From 18,000,000 pounds the output of sugar rose to 41,000,000 pounds in 1827, and increased annually afterwards.

On the abolition of slavery, 68,613 slaves were freed, and the colonists received £2,112,632 in compensation.

In 1842, Indian immigration at the rate of 6,000 a year was approved, and this resulted in an entire change of the balance of the population.

After a terrible outbreak of malaria in 1866 the wealthier inhabitants of Port Louis moved to higher parts of the island. As a result the country towns expanded considerably and the roads were improved and extended. The railway, begun in 1859, became very popular. One of the most striking features of the progress made has been the social and economic development of the Indians who to-day own and cultivate more than two-fifths of the whole area under sugar-cane. Besides becoming gardeners and taxi-drivers, many Indians have taken to raising cows, goats, fruits and vegetables, and the supply of these essential foodstuffs is almost entirely in the hands of Indians. The section of the population they have displaced centres more and more in the towns, forming the clerk and artisan class.

From 1902 to 1909 the island suffered from severe financial depression owing to the low price of sugar. Matters were aggravated in 1902 by an outbreak of surra which caused great havoc among the draught animals, and necessitated the introduction of mechanical transport.

A Royal Commission was appointed in 1909 to investigate the resources and administration of the island and reported in 1910.

About 1911 the destructive beetle *Phytalus smithi* was discovered in the sugar canes and more than 300 millions of these insects are now destroyed every year.

The great rise in the price of sugar which took place during and after the War brought prosperity, and both the Government and the general community were for a time far more prosperous than ever before.

As a result a number of important schemes were inaugurated, including the amelioration of sanitary conditions, the improvement of the harbour, the extension and improvement of water-supplies both for domestic purposes and for irrigation, the improvement of the railways, and the extension of education.

Unfortunately, however, from 1921 onwards the price of sugar fell, and the greatly lessened revenues of the Colony had to provide for the maintenance of many works undertaken in better times. In 1929 the state of the sugar industry was so bad that Sir Francis Watts was appointed, at the Colony's request, to visit the island, and to report on the economic situation. The Home Government was, however, unable to approve his recommendation that a subsidy should be given to sugar to supplement the preference granted on sugar imported into the United Kingdom, though a loan was made to the planters from local funds. Despite this loan, however, and an earlier loan granted in 1929, the condition of the sugar industry at the end of 1930 was extremely serious.

The situation became worse in 1931 owing to a cyclone which caused considerable damage to property and reduced the year's output of sugar by about 33 per cent. The Imperial Government guaranteed a loan of £750,000 for planters, house owners, and repairs to Government property, on condition that a Financial Commission should visit Mauritius with a view to devising measures to bring about a balanced budget. The Commission's report was published at the beginning of 1932 and immediate steps were taken to carry out measures of retrenchment and economy. As a result it has been possible to balance the budgets for subsequent years.

The year 1934 has been a very disappointing one from the economic point of view. Owing to a severe drought which prevailed during the latter part of the year 1933 and the beginning of 1934, the sugar crop was reduced by over 20 per cent. below its normal figure, and this reduction combined with the very low price realized for sugar caused a serious deficit in the main source of income of the Colony and resulted in an important reduction of the money available for financing the next crop.

II.—GOVERNMENT.

The Government of Mauritius is vested in a Governor with an Executive Council and a Council of Government. The Council of Government was first established in 1825. It consisted of the Governor and four officials. The next year the Constitution was amended and a Council, including unofficial members, was introduced. This Constitution provided for a Council of Government composed of certain officers of the Crown and of an equal number of other persons to be taken from the chief landed population and principal merchants of the Colony; seven officials and seven unofficials were accordingly appointed.

The Constitution was again amended in October, 1885. The Council of Government, under the revised Constitution, was composed of the Governor, eight *ex officio* members, nine members nominated by the Governor and ten members elected by the population: of the latter, two represent the town of Port Louis, the capital of the island, and the remaining eight represent the rural districts. At least one-third of the nominated members were to be persons not holding any public office.

The Constitution was further amended in July, 1933, by fixing at two-thirds the proportion of the nominated members of the Council who are to be unofficials and, although no provision to that effect is made in the Letters Patent, the nominated unofficial members have been allowed a free vote on all occasions. The new Letters Patent, however, provide that the Governor shall have power to enact legislation considered by him to be essential in the interests of good government. Debates in the Council may be either in English or French.

The Constitution of the Executive Council which was hitherto composed of the Governor and four *ex officio* members was amended at the same time, and the former practice of appointing two unofficial members to the Council was revived.

The number of registered electors on 31st December, 1934, was 9,984. Every male person who is qualified as follows is entitled to be registered as a voter :—

(1) has attained the age of 21 years;

(2) is under no legal incapacity, and is in possesion of his civil rights;

(3) is a British subject by birth or naturalization;

(4) has resided in the Colony for three years at least previous to the date of registration, and possesses one of the following qualifications :—

(*a*) is the owner of an immoveable property of the annual value of Rs.300;

(*b*) is paying rent at the rate of at least Rs.25 a month;

(*c*) is the owner of moveable property within the Colony of the value of at least Rs.3,000;

(*d*) is the husband of a wife, or the eldest son of a widow, possessing any one of the above qualifications;

(*e*) is in receipt of a yearly salary of at least Rs.600 or of a monthly salary of at least Rs.50; and

(*f*) is paying licence duty to the amount of at least Rs.200 a year.

The ordinary duration of the sessions of the Council of Government is eight months, from May to December, and meetings are held on alternate Tuesdays or oftener when necessary. The life of a Council is five years.

The town of Port Louis is administered by a Municipality, an institution which dates as far back as 1790. It was then called " Municipalité du Canton de Port Louis " and was instituted, as were other local Municipalities by the " Assemblée Coloniale." These institutions are mentioned in the law of the constitution of the Ile de France promulgated by the " Assemblée Coloniale ", on

21st April, 1791. Sixteen prominent men of the town acted as Councillors of the " Municipalité du Canton de Port Louis " and were denominated the " Conseil des Notables ". The " Conseil des Notables " was dissolved in 1792. It was reconstituted at the end of the 18th century under the denomination of the " Conseil des Communes " and was abolished on 10th February, 1820.

The present Municipal Corporation dates from 1850, the first elections taking place at the Masonic Lodge " La Triple Esperance " from 21st to 23rd February in that year. On 24th August, 1925, the Municipal Corporation celebrated the 75th anniversary of its foundation.

The administration of the other principal townships of the Colony, viz., Curepipe, Beau Bassin and Rose Hill, and Quatre Bornes is vested in Boards of Commissioners appointed annually by the Governor. These Boards are empowered to take measures within the prescribed limits of the townships for the making, maintenance, etc., of roads, sewers, bridges, canals, and other works of public utility, for the prevention of fires, and for the proper paving and lighting of the town, etc.

In addition to the Township Boards, District Boards are appointed annually for each district. These Boards are empowered to pass regulations for the making, maintenance, and improvement of branch roads and footpaths, and for the levying of taxes in the extra urban areas.

III.—POPULATION.

The population is divided for statistical purposes into

(1) the General Population, i.e., Europeans and descendants of Europeans, and people of African, Chinese and mixed origin, and

(2) the Indian Population, i.e., Indian immigrants and their descendants.

The estimated population of the Island, exclusive of the Dependencies, on 31st December, 1934, was 393,733, distributed as under :—

	Males.	*Females.*	*Total.*
General Population ...	62,682	65,622	128,304
Indian Population ...	137,027	128,402	265,429

The estimated population of Rodrigues on 31st December, 1934, was 9,111, and that of the minor Dependencies, 1,346.

The total estimated population of Mauritius and its Dependencies was 404,190, showing an increase of 3,183 compared with the figure of 1933.

The geographical distribution of the population of the Colony exclusive of the Dependencies is shown in the following table :—

Districts.	*Area in Square Miles.*	*Census Population, 26th April, 1931.*			*Population on 31st December, 1934.*		
		General population.	*Indian population.*	*Total.*	*General population.*	*Indian population.*	*Total.*
Port Louis...	16½	29,832	24,603	54,435	30,645	24,231	54,876
Pamplemousses	69	6,847	30,000	36,847	6,618	28,794	35,412
Riviere du Rempart ...	57	5,518	25,274	30,792	5,706	25,634	31,340
Flacq	115	10,438	42,202	52,640	10,626	40,941	51,567
Grand Port	100½	12,484	36,135	48,619	12,663	35,041	47,704
Savanne	94½	6,645	24,456	31,101	6,687	23,530	30,217
Plaines Wilhems	78½	41,866	53,392	95,258	44,275	55,344	99,619
Moka	89	5,522	23,761	29,283	5,718	23,804	29,522
Black River	100	5,437	8,826	14,263	5,366	8,110	13,476
TOTAL	720	124,589	268,649	393,238	128,304	265,429	393,733

The return to normal proportion of the birth and death rates noticed in the year 1933 was maintained during the year 1934. The figures for births and deaths for the last three years were :—

BIRTHS.

	Number of births.			*Rate per 1,000 of population.*		
	1932.	*1933.*	*1934.*	*1932.*	*1933.*	*1934.*
General Population ...	4,022	4,570	4,609	32·1	36·3	36·1
Indian Population ...	6,244	8,909	8,907	23·5	33·9	33·7
Whole Population ...	10,266	13,479	13,516	26·2	34·7	34·5

STILL-BIRTHS.

	Number of still-births.			*Rate per 100 live births.*		
	1932.	*1933.*	*1934.*	*1932.*	*1933.*	*1934.*
General Population ...	271	267	282	67·3	58·4	61·2
Indian Population ...	724	978	1,025	112·7	109·7	115·1
Whole Population ...	995	1,245	1,307	96·9	92·3	96·7

DEATHS.

	Number of deaths.			*Rate per 1,000 of population.*		
	1932.	*1933.*	*1934.*	*1932.*	*1933.*	*1934.*
General Population ...	3,636	3,102	2,987	29·0	24·6	23·3
Indian Population ...	9,212	7,513	7,082	34·6	28·6	26·8
Whole Population ...	12,848	10,615	10,069	32·8	27·3	25·7

The death-rates for Port Louis were 33·6, 28·1 and 25·9 respectively for the years 1932, 1933 and 1934. The highest death-rate for 1934 is shown in the District of Savanne—30·6 per thousand: and the lowest in Plaines Wilhems—21·2 per thousand.

The number of deaths of infants under one year was 1,754 against 1,773 in 1933. The infantile mortality rate was 129·7 per thousand live births registered during the year, as compared with 131·5 in 1933.

The marriages during the year numbered 1,767 as compared with 1,521 in 1933. The marriage rate or number of persons married to every thousand of the entire population was 9·0 against 7·9 in 1933.

The excess of departures over arrivals was 411.

IV.—HEALTH.

The present constitution of the Medical and Health Department dates back to 1895 when under Ordinance No. 32 of 1894-95 the powers vested in the General Board of Health were transferred to the Director, Medical and Health Department.

The Headquarters staff of the Department consists of the Director, the Deputy Director and the Clerical and Accounting staffs of the Correspondence, Financial and Storekeeping branches.

The administrative unit of Government is the District which is the political unit as well. Every District with the exception of Black River is provided with a hospital for the reception and treatment of the sick poor. Patients from the Black River District are treated in the Victoria Hospital, Quatre Bornes, or the Civil Hospital, Port Louis. The medical and sanitary administration of each of the rural Districts is entrusted to a Government Medical Officer who is in charge of the District hospital and dispensaries and who is also the Health Officer for the District. To assist him, he has a number of subordinate officers; dispensers and sanitary officers and the staff necessary for the care of the patients in the hospital. In addition to his medical and sanitary duties he has also statutory duties of a medical or sanitary nature which he carries out on behalf of the Police and Poor Law Departments. The District dispensaries are visited at regular intervals by the Government Medical Officer.

The hospitals of the Colony are divided into two groups :—

(i) General hospitals, namely, Civil, Victoria and Moka, totalling 684 beds, which are fully equipped for X-ray and major operative work ; and

(ii) District hospitals where only medical and midwifery cases are admitted and where minor surgery is carried out to a certain extent.

Patients who apply to the latter hospitals and require special treatment, surgical or other, are conveyed to the nearest general hospital by motor ambulance. A mental hospital and a leper hospital are also administered by the Department.

From the sanitary point of view the two chief problems are hookworm disease and malaria. Of the two, hookworm disease though less spectacular, is the more dangerous and insidious. Invasion of the body by hookworms does not at first produce actual disease, and if the infection is not a heavy one, the patient may scarcely be conscious of being ill at all. But he is more susceptible to fatigue, he cannot put in an adequate day's work, and he feels vaguely out of sorts. Such a patient is really more dangerous than one who suffers from the disease in clinically recognizable form, because the lightly infected patient can move about and spread his infection whereas the patient who is definitely ill remains at home and limits the area of infection. Formerly it was thought that hookworm disease in the Colony was being maintained by the practice of using human dejecta as fertilizer in the cane fields. This was stopped some ten years ago and it is now probable that the situation has changed from that of a large scale public health problem to a domestic one. Though most habitations in the Colony have latrines the population have still to realize the importance of using them rather than a secluded piece of open ground. It is the habit of regularly resorting to the same place for defecation which is now producing the extensive infection still seen at the rural dispensaries.

Malaria has been endemic in the Colony since its introduction in 1865. For the first few years after its introduction the disease spread steadily all over the Island, and there was no district in the Colony which escaped the invasion. As time went on, and the efforts of Government began to be effective, the territorial distribution of the disease changed. At the present day its distribution is largely determined by altitude. The disease is endemic in the coastal lowlands. Above the 600 feet level the disease is generally seasonal, endemicity being restricted to a relatively small number of places. The efforts of the Medical and Health Department are at present directed to the maintenance of the salubrity of the central plateau by anti-mosquito measures of different kinds, and to diminishing the severity of the attacks of the disease in the coastal lowlands by making as widely available as possible the specific remedies for the disease.

In spite of the disastrous effect of the drought on the sugar crop, the health of the population generally during 1934 has been good. It is fortunate that with the fall in the price of sugar, a fall has taken place in the cost of the Colony's staple foodstuff, rice, so that acute destitution has been avoided. This factor, and the absence of epidemic disease, has resulted in the general state of the people's health being much better than the actual financial condition of the Colony would lead one to suppose.

V.—HOUSING.

The housing of the wage-earning population of the Colony may be considered in three categories: (*a*) housing on estates, (*b*) housing in rural areas not estates, and (*c*) housing in towns.

Estate labourers are, for the most part, adequately housed. They are accommodated in lines, or rows of huts, constructed either of stone or of wattle and daub, with roofs more commonly of thatch, but frequently of corrugated iron. Adequate provision is made for the ventilation and lighting of these quarters, but ventilation and lighting appear generally to be disliked by the occupants. At night, every accessible crevice is carefully closed, though the presence of ridge ventilation in many cases assures reasonable change of air in spite of the efforts of the occupants to exclude fresh air from their sleeping apartments. When the dwelling is thatched the problem of assuring adequate ventilation is difficult. The lines must be kept clear of weeds, and all houses are required to have a clear space of at least ten feet round them. Each camp has adequate latrine accommodation and a supply of wholesome water is laid on, though in many cases the labourers prefer to use the polluted water of streams or nearby irrigation channels for their domestic purposes. As a general rule, the lines are not lit at night. Lighting is scarcely necessary as the occupants retire shortly after sunset.

The housing in rural areas other than estates is fairly satisfactory. It is in the labouring class of the population that one can very often see racial difference in the choice of building materials. The negro will build an untidy-looking shack of old timber, scrap pieces of wood, petrol cases, and petrol tins hammered out flat, whereas the Indian will construct a very neat hut of wattle and clay or cow dung, on a stone plinth, furnished with a small verandah, and roofed with a compact thatch. The amenities of life are few. There is seldom water laid on to the premises. Unless the occupier has dug a well, he generally has to carry his water from the nearest standpipe which may be some hundreds of yards away.

In the towns conditions are, as a rule, unsatisfactory. The chief features about the town housing are overcrowding and overbuilding; overcrowding is caused by poverty and overbuilding arises as a necessary consequence of overcrowding. Too many families of the labouring classes live in one room. Fortunately, children are seldom confined to the house on account of inclement weather, and they can pass most of their time in the open air. As a result, rickets is very uncommon, as are other consequences of overcrowding in places where the climatic conditions are more severe either on account of excessive cold or excessive light and heat.

VI.—PRODUCTION.

Meteorological Conditions and Sugar Production.

The year 1934 was by no means a favourable one for the sugar industry of Mauritius as far as atmospheric conditions were concerned. Temperature was in defect throughout the growing season and drought conditions prevailed from November, 1933, to the end of April, 1934. On 28th and 29th January, a moderate cyclone passed fairly close to the Island: no serious damage was done, but practically all the rainfall received in January was associated with the passage of that disturbance. Such marked deficiencies on the part of vital factors at a critical period in the growth of the cane resulted in a disappointing crop.

The Sugar Industry.

The discomfiture of a short crop was further accentuated by market conditions which deteriorated during the year. The average net price for the 1933 crop was Rs.6.061 per 50 kilos, including the extra Colonial preference. For 1934, the average net price realized at the end of the year approximated to Rs.6 per 50 kilos.

The total production for 1934 was only 178·86 thousand tons as against 261·46 for the preceding year. The shortage was especially pronounced in the northern districts where the deficit was the largest since 1902. The following table exhibits the comparative production for the past seven years:—

Unit=One thousand metric tons.

Districts.	*1934.*	*1933.*	*1932.*	*1931.*	*1930.*	*1929.*	*1928.*
Pamplemousses and Riviere du Rempart.	30·13	57·77	62·73	41·81	43·00	54·68	59·55
Flacq...	30·87	41·37	35·97	27·91	37·81	38·91	41·17
Moka	29·30	40·08	34·12	20·83	32·10	35·97	34·76
Plaines Wilhems ...	11·54	18·22	17.05	11·64	14.62	15·66	16·40
Black River... ...	5·99	8·88	9·06	6·29	9·81	9·22	9·72
Grand Port ...	38·37	50·66	46·66	27·01	37·09	36·41	41·41
Savanne	32·66	44·48	41·63	28·52	46·53	47·18	50·42
Total	178·86	261.46	247·22	164·01	220·96	238·03	253·43

Grades of sugar.—The proportion of raws was 78·76 per cent. of the total production, vesous (plantation white) were 20·56 per cent., while low sugars approximated to 0·68 per cent. The change brought about by the introduction of the new English tariff in 1928 is well illustrated in the following table:—

GRADES OF SUGAR, 1925-1934.

Year.	*Vesous.* *Per cent.*	*Raws.* *Per cent.*	*Lows.* *Per cent.*
1925	98·21	—	1·79
1926	98·10	—	1·90
1927	98·63	—	1·37
1928	71·80	27·30	0·90
1929	23·90	75·20	0·90
1930	16·80	82·50	0·70
1931	16·20	83·10	0·70
1932	12·10	87·50	0·40
1933	11·80	87·70	0·50
1934	20·56	78·76	0·68

Area under sugar-cane.—At the beginning of 1934 the area under cane was estimated at 138,116 acres or an increase of 4,249 acres on the corresponding figure for 1933.

Estates with factory cultivated 59,227 acres; estates without factory, 38,459 acres; giving a total estate cultivation of 97,686 acres, or 3,449 above the corresponding figure for last year. The balance was made up by peasant planters, mostly Indian.

Disposal of the 1933-34 *sugars.*—The total quantity of sugar exported at the end of the 1933-34 export year (31st July, 1934) was 250,829 metric tons distributed as follows:—

	Tons (metric).
Great Britain	250,134
India	2
Hong Kong	457
Other places	236
	250,829

The exportation for 1934-35 up to 31st December, 1934, was as follows :—

	Tons (metric).
Great Britain	53,498
Canada	6,401
Hong Kong	681
Other places	148
	60,728

The local consumption of sugar for 1933-34 was 10,381 metric tons, as against 9,111 for 1932-33.

Labour conditions.—Some labour difficulties were experienced in certain districts in connexion with the harvesting of the crop. During the year, Government appointed a committee to gauge the extent of unemployment in Mauritius. The committee found that there was no real unemployment in so far as unskilled able-bodied labourers were concerned; on the other hand, skilled artisans were often without work and measures were recommended to remedy the situation.

Sugar machinery.—Machinery to the value of Rs.297,700 was imported during the year as against Rs.594,719 last year; tractor parts valued at Rs.972, and ploughs valued at Rs.61 were imported, as against Rs.1,518 and Rs.1,969 respectively last year. In 1934, tramway material to the value of Rs.280,557 was imported, as against Rs.287,371 in 1933.

Fertilizers.—The importation of fertilizers totalled 14,970,515 kilos valued at Rs.1,807,097, as compared with 20,405,353 kilos valued at Rs.2,328,299 last year.

Insect pests and cane diseases.—The premier cane pest of the Island—*Phytalus smithi, Arrow*—appears to be steadily diminishing in a number of areas. On the other hand, it has increased in some districts. Mr. W. F. Jepson, B.Sc., A.R.C.S., who is employed by the Sugar Industry Reserve Fund to make a special study of the insect, completed a year's useful work. In pursuance of his policy of introducing further parasites to deal with *Phytalus*, Mr. Jepson has been requested by the Sugar Industry Reserve Fund to visit Java, the Malay States, the Philippines, and possibly some other countries. Several further promising parasites have been introduced from Madagascar.

Minor Agricultural Industries.

Tobacco.—There has been inordinate activity of mosaic disease on tobacco in certain parts of the Island where serious loss has been caused.

Some temporary difficulties in relation to the sale of leaf to local manufacturers were experienced during the year.

In 1934, the acreage under tobacco approximated to 982 acres, as against 2,081 in 1933. The leaf purchased by the warehouse in 1934 amounted to 468,881 kilos, as compared with 514,014 kilos in 1933. This gives an average yield per acre of 470 kilos as against 247 last year. The monetary value of purchases by the warehouse was Rs.541,403 in 1934 and Rs.681,604 in 1933.

Export is receiving full attention. Some seven tons of superior flue-cured leaf were sent to test the London market. A small shipment of air-cured leaf was forwarded likewise.

Aloe fibre.—Market conditions were slightly better during the year and, as a result, exportation was perceptibly higher than during the two previous years. The total exported in 1934 was 670 metric tons, as against 422 in 1930 and 417 in 1932.

Owing to the slump in the jute bag market, the Mauritius Spinning and Weaving Company found themselves in difficulties as regards the marketing of the local fibre bag; in consequence, a provisional closing down of the factory took place in December.

Pineapple industry.—No progress is in evidence in relation to this industry. There has been no extension in the area under Smooth Cayenne and consequently the canning factory has not been in a position to work on full load. The manufacture during the year totalled 2,443 cases of pineapple preserves of a value of Rs.16,550, as against 5,281 cases of a value of Rs.31,022 for the previous year.

Tea.—This industry shows some progress and it is on a better footing now than since its creation.

A general tariff of 90 cents per kilo was imposed on foreign tea on the 10th of October last; the preferential tariff of 60 cents per kilo on British Empire grown tea was not altered.

Coconut.—The export of copra during the year amounted to 1,565 metric tons of a value of Rs.161,687, as against 1,203 tons valued at Rs.201,393 last year. The export of coconut oil during the year was 15,324 litres valued at Rs.3,653, as compared with 4,385 litres last year, valued at Rs.1,992.

Alcohol.—The total quantity of alcohol distilled for human consumption amounted to 510,232 litres, as compared with 553,287 last year. The quantity distilled for industrial purposes was 441,620 litres as against 480,554 last year. There has been a decrease in the consumption of Cernite owing to the fall in price of petrol. The exportation of rum during the year was 35,325 litres valued at Rs.10,177, as against 36,489 litres in 1933, valued at Rs.7,792.

Veterinary and livestock.—The improvement in cattle raising was well maintained during the year. The total horned cattle on estates at the beginning of the year was 14,247 head, as compared with 13,260 the previous year.

Importation of cattle from Madagascar during the year numbered 4,544 head for food and 223 head for other purposes.

Other Manufacturing Industries.

As is usually the case when the price of sugar is low, attention is more actively given to minor manufactures. Engineering workshops, numbering 46, gave employment to about 500 people. During the year there were 71 bakeries in operation, employing about 300 people. There were 37 limekilns and 122 cabinet-making establishments, employing in all about 800 artisans.

The larger establishments comprise four docks (landing, etc.), employing about 500 people; eight cigarette factories with 100 people at work; four hydro-electrical plants (for light and power) employing about 300 people; four salt-making establishments employing 100 people, and one match factory employing about 100 people.

In addition to the above, there are several fairly prosperous minor industries making commodities such as aerated waters, ice, vinegar, biscuits, pickles and preserved fruits, and manufacturing pottery, leather, boots and shoes.

All the produce of these local industries is locally utilized and helps, to a certain extent, in equilibrating the Colony's trade balance.

Fisheries.

The marine resources of Mauritius are fully described and discussed in a report by Mr. James Hornell, F.L.S., F.R.A.I., formerly Director of Fisheries in Madras, which was published in 1926 and has formed the basis for all modern methods of fisheries control and development during the past eight years. The recommendations of Mr. Hornell have been put into effect by legislative measures submitted to Government by a Fisheries Advisory Committee consisting of ten members, of whom five are elected members of Council, the most important development of the year 1934 being the introduction of a prohibited season for fishing with nets. This experiment is being watched with the closest interest by the Committee, and there is abundant evidence up to the present that its introduction has been entirely justified, the quantity and quality of fish in the markets having shown a steady improvement since netting was suspended.

Most of the smaller types of fish sent to market are caught in bamboo or wire " basket-traps " placed in the lagoons, and the larger varieties are taken by line fishing in the open sea outside the reefs. Both these methods of fishing are gradually developing as a result of the cessation of net fishing, and the catches are steadily improving on all the fishing grounds.

The Fisheries Committee is taking an active interest in the expansion of the fishing industry, the welfare of the working fisherman, the introduction of modern methods of fishing and drying fish, and the question of the establishment of a shark-product industry.

Large fish of the following species are to be found in the usually calm water surrounding the Island and are commonly taken by trolling with modern tackle comprising rod, reel and harness, and also with powerful hand lines known locally as " chicottes " :—

Local Name.	*General Name.*	*Scientific Name.*
Thon.	Tunny, Tuna.	*Thunnus, Thynnus.*
Becune.	—	*Cybrium Commersonii.*
Empereur Eventail.	Sailfish.	*Histiophorus Indicus.*
Empereur.	Marlin Swordfish.	*Tetrapturus mitsukurri.*
Carangue.	Horse Mackerel.	*Caranx ferdom.*
Tazare.	Barracuda.	*Sphyraena barracuda.*
Dorade.	Dolphin.	*Coryphoena hippurus.*
Vacoa.	—	*Aprion Virescens.*

The enforcement of the fishery laws is in the hands of a specially organized police unit of eighteen men in the form of eight fishery control sections distributed round the Coast at the principal fishing centres. They are equipped with one motor launch, two boats fitted with outboard motors and ten sailing boats, and perform constant patrols in the reserves.

VII.—COMMERCE.

The year 1934 was one of trade depression for the Colony.

The total value of exports of domestic produce was about Rs.25,000,000, whereas the imports were roughly Rs.29,600,000. The re-exports being about a million rupees, the total trade thus resulted in an adverse balance of about three and a-half million rupees.

This situation was brought about by :—

(*a*) Low prices obtained by sugar, almost the sole produce of the Colony ;

(*b*) a prolonged drought which cut down the crop.

It does not appear on the other hand that there were any very exaggerated expenses on articles of imports, twelve million rupees being for food and drink, out of which over seven million rupees were for rice and flour. Moreover restrictions were clearly made on textiles (probably as a result of quotas), on machinery and fertilizers and even on petrol, though not to the same extent as in 1932, another year of similar depression.

The total values of imports and exports for the last four years were :—

	Imports.	*Exports.*
	Rs.	Rs.
1931	32,064,074	23,829,884
1932	26,992,760	27,662,851
1933	29,035,237	32,176,743
1934	29,680,346	26,136,140

Imports of Merchandise.

The Colony relies for its existence on imports of all classes of goods (except sugar) from other countries. All the essential food-stuffs (rice, flour, dholl, etc.), all articles of transport (motor-cars, coals, petrol), all kinds of metal-ware and textiles, and manures are imported.

The following table indicates some of the principal imports, with the figures for the last two years :—

		Quantity.		*Value in Rupees (c.i.f.).*	
		1933.	*1934.*	*1933.*	*1934.*
Rice	kilos	50,721,508	59,872,476	4,923,642	5,916,026
Flour	„	9,461,259	14,796,214	975,613	1,340,935
Coals	„	39,028,260	35,546,079	518,858	469,362
Timber	—	—	—	266,860	446,045
Apparel	—	—	—	533,260	632,542
Gunny bags ...	number	3,244,006	3,800,400	976,132	1,116,914
Cotton, grey or white.	metres	2,966,360	3,016,894	524,158	575,432
„ coloured	„	6,075,976	4,068,131	1,293,171	1,049,457
Silk		—	—	670,822	396,108

Sulphate of Ammonia.	„	13,465,494	7,396,528	1,252,099	732,290
Soap	„	1,746,960	1,625,744	730,612	649,941

Exports of Merchandise.

The life of Mauritius depends on one industry (sugar) with practically a single outlet (the United Kingdom).

In 1934, 185,606 tons of sugar were exported, valued at Rs.24,510,185, compared with 226,651 tons valued at Rs.30,811,638 in 1933. The share of the United Kingdom in these exports was 178,177 tons valued at Rs.23,514,119, compared with 225,888 tons valued at Rs.30,701,819 in the previous year. The residue went mainly to Canada and Hong-Kong.

Small quantities of aloe fibre, copra, rum, coconut oil, etc., are also exported each year.

The re-exports consist mainly of lentils, gunny bags, salted fish, old metals, etc.

The total value of domestic exports (other than sugar) in 1934 was Rs.518,625 and of re-exports Rs.1,107,330.

Bullion and Specie.

The figures previously quoted do not include the trade in bullion and specie.

In 1934, the Indian silver currency was replaced in Mauritius by a new local currency.

Mainly as a result of this, Rs.2,182,000 and Rs.2,419,834 bullion and specie were imported and exported respectively in 1934.

Distribution of Imports.

The sources of the essential food-stuffs are India for grain and Australia for flour.

The manufactured articles come mainly from the United Kingdom.

On a total value of Rs.12,010,600 for food, drink and tobacco imported in 1934, Rs.7,487,941 came from India and Rs.1,571,406 from Australia.

On a total of Rs.15,231,749 for manufactured articles imported in 1934, Rs.7,199,536 came from the United Kingdom. The difference is mainly represented by Rs.2,412,124 from India (gunny bags, etc.): Rs.1,396,446 from the United States and the Dutch East Indies (petrol, etc.); and Rs.1,320,354 from Japan.

The imports of manufactured articles from Japan in 1933 were Rs.1,736,362. The decline is an effect of quotas for cottons and artificial silks.

The values of imports from the six principal countries for the last four years were :—

	1931. Rs.	*1932.* Rs.	*1933.* Rs.	*1934.* Rs.
United Kingdom ...	7,504,119	6,455,759	9,421,478	8,607,391
India	11,578,208	9,961,711	8,414,824	10,125,043
France	2,212,821	1,493,237	1,430,497	1,317,978
United States of America	1,369,193	1,706,612	1,060,471	1,183,337
Japan	1,124,070	1,459,329	1,792,705	1,353,913
Australia	1,330,344	1,265,728	1,171,065	1,743,371

Course of Prices of Imports.

The declared *c.i.f.* price of rice was somewhat higher in 1934 than in 1933, but it did not much exceed 10 cents per kilo on an average. Wheat flour was cheaper, being under 10 cents per kilo. Petrol was sufficiently cheap (cheaper than in 1933) and most essential food-stuffs (other than rice) and textiles were generally at moderate prices.

Speaking generally, the prices of imports did not fall sufficiently to enable the Colony, with its increased purchasing power, to achieve a favourable trade balance.

Development of Empire Trade.

On the 30th of September, 1924, a small preferential tariff in favour of the United Kingdom was introduced. Since that time, this tariff has been gradually enlarged, and it now embodies two-thirds in value of the goods imported from the United Kingdom. Moreover, from the 11th of July, 1933, the same protection has been extended to all parts of the Empire.

The difference between the duty collected on preferential imports from the United Kingdom and the would-be collections at the general tariff rates is about Rs.800,000 yearly.

VIII.—WAGES AND COST OF LIVING.

Wages and salaries remained practically on the same level as last year. Labourers under monthly contract received in cash Rs.10 per month, with rations, free lodging, free medical attendance, etc., in all equivalent to about Rs.18 per month. Male day labourers received generally Rs.0.45 per daily task, although during the harvesting season higher rates were often paid. As a rule, females received half the wages of males.

Remuneration for piece-work was, on the average, as follows :—

	Per acre. *Rs.*
Clearing land	30 - 35
Digging cane holes	18
Manuring	10
Weeding	7
Cutting canes (20 tons/acre)	13

The wages of artisans remained upon the whole the same as last year. Day workers received R.1 to Rs.1.50, while those employed by the month received Rs.35 to Rs.70 according to circumstances.

The supply of domestic servants was, generally speaking, abundant. Butlers, cooks, gardeners and other servants received Rs.10 to Rs.30 per month, while chauffeurs were paid Rs.30 to Rs.40 per month. Owing to healthier conditions and better opportunities for work, the concentration of population in the central districts of the Island is very pronounced, and labour is more abundant there than elsewhere.

Salaries remained in 1934 on the same level as during the previous year. The following table indicates, in a general way, the ruling rates :—

	Per annum. *Rs.*
Managers of sugar estates and senior Government officials	8,000-13,000
Government, bank, and commercial clerks (higher grade)	4,000- 7,000
Clerks and employés on sugar estates ...	1,500- 3,000
Junior clerks and employés	720- 1,500

During the year, a graduated poll tax on all incomes in excess of Rs.5,000 per annum was imposed.

The index numbers of the cost of living which had been trending downwards rose considerably during the last quarter of the year. Rice, the staple food of the population, oscillated about 66 as compared with 100 in 1914), while other grains remained about 80. Flour, after a brief period of rise, fell to 53 during the last quarter. Tea rose from 115 to 128, while coffee fell from 85 to 70. Articles of clothing remained, upon the whole, markedly above pre-war level: at the beginning and the end of the year they were, on the average, indexed at 142 and 187 respectively. The quarterly index for the total cost of living (28 items) in 1934 was as follows (100 being the index for 1914):—

First quarter	110·9
Second quarter	105·7
Third quarter	105·4
Fourth quarter	129·4

The mean for the year was 112·8 as compared with 112·4 in 1933.

As regards the labouring class, the following table indicates the purchasing power of wages, in terms of rice, since 1927:—

Year.	*Average daily wages of male labourer.*	*Average price of fair quality rice per lb.*	*Purchasing power of wages expressed in lb. of rice.*
	Rs.	Rs.	lb.
1927	1·25	0·13	9½
1928	1·25	0·10	12½
1929	1·60	0·10	10
1930	0·80	0·09	9
1931	0·75	0·08	9
1932	0·45	0·05½	8
1933	0·45	0·06	7½
1934	0·45	0·06	7½

The official index numbers do not include a number of items such as housing, lighting, tuition of children, etc., which have been either not reduced at all or but slightly so, and are still markedly above pre-war level: in consequence, the cost of living for Europeans and people living in European style is, in fact, higher than the official index would lead one to suppose.

IX.—EDUCATION AND WELFARE INSTITUTIONS.

Primary.—Primary education is not compulsory, but it is given free through Government and State-aided schools which are open to all children of the Colony. The following table shows the number of primary schools, the number of pupils on roll, and the staff of teachers during the year 1934:—

Schools.	*No. of Institutions.*	*No. of Teachers.*	*No. of Pupils on roll.*	*No. of Pupils in average attendance.*
Government	50	389	15,550	10,505
Aided	76	605	24,672	17,532
Total	126	994	40,222	28,037

State-aided schools are under the control of a Manager, and the Government contribution includes the salaries of the teachers together with recurrent grants to meet part of the expenditure on maintenance of school buildings and furniture.

Pupils must be at least five years old and must have been successfully vaccinated in order to be allowed admission to a primary school; when they are under five they undergo a preliminary training before being promoted to the lowest form.

The curriculum of studies includes the teaching of English, French and arithmetic. In the higher classes elementary history and geography are taught and girls study needlework. Regular instruction is also given in physical drill, nature study, hygiene and elementary principles of agriculture.

There are six primary school standards or classes, viz. :—

Standard I with pupils from 5 to 6 years of age.
Standard II with pupils from 6 to 7 years of age.
Standard III with pupils from 7 to 8 years of age.
Standard IV with pupils from 8 to 10 years of age.
Standard V with pupils from 9 to 11 years of age.
Standard VI with pupils from 10 to 12 years of age.

Examinations which were formerly held for all the classes are now limited to Standards V and VI. The new system allows educational officers to devote more time to inspection work proper with the result that teaching methods are gradually improving.

Fourteen apprenticeships are awarded annually to primary school pupils to encourage the study of needlework and handicrafts. Twenty-six scholarships and exhibitions tenable at the secondary schools are awarded every year, through competitive examinations, to the best pupils attending primary schools.

There are thirty gardens attached to the primary schools and they are cultivated by the pupils of Standards III to VI. These gardens are regularly inspected by the officers of the Agricultural Department who give advice as to proper cultivation.

Secondary.—There are two categories of secondary schools, viz :—(1) Secondary aided schools, which are managed privately but are under Government control, and (2) the Royal College and the Royal College School which are managed by Government.

(1) *Aided Secondary Schools.*—Government grants to secondary aided schools are assessed with reference to attendance and efficiency, as tested by inspection and examination, and not, as in the case of primary aided schools, with reference to maintenance and salary charges.

The following table shows the number of institutions, the number of pupils on roll and in average attendance, and the staff of teachers during the year 1934 :—

Schools.	*No. of Institutions.*	*No. of Teachers.*	*No. of Pupils on roll.*	*No. of Pupils in average attendance.*
Aided	9	120	1,581	1,402

These schools provide not only for elementary education such as is given in primary schools, but also for higher education leading up to the Cambridge School Certificate and the London Matriculation.

The curriculum of studies includes the teaching of English, French, mathematics, needlework (for girls), hygiene, history, and geography. In addition to these, drawing and music are taught on a more moderate scale.

These schools are visited periodically by the Superintendent of Schools, who examines the lower forms. The middle and higher forms are examined partly by local examiners and partly through examinations conducted by the Syndicate of the University of Cambridge.

Working hours in both primary and secondary schools extend, as a general rule, from 10 a.m. to 3 p.m., no provision being made for evening classes.

(2) *Royal College.*—The Royal College is a Government School for the higher education of boys up to the age of 20. It comprises two schools under the management of the Rector, the Royal College proper in Curepipe and the Royal College School in Port Louis, where pupils who live in or near the capital are educated on the same lines as in Curepipe up to School Certificate standard. At the Royal College the teaching staff consists of the Rector, twelve Masters with degrees in Honours at British Universities, eleven Assistant Masters appointed locally, and a Physical Training and Gymnastic Instructor: and at the Royal College School, of the Headmaster, one Master and eight Assistant Masters. Assistant Masters are encouraged to take the B.A. and B.Sc. examinations of London University. The College has well-equipped libraries and chemical and physical laboratories; almost as many pupils follow classical as scientific studies. The subjects taught are English, French, mathematics, Latin, Greek, chemistry, physics, botany, biology, geography and history; and classes are held during school hours in physical training and gymnastics. Admission to the College and School is conditional upon passing an entrance examination or winning one of the twenty Annual Primary Schools Scholarships and Exhibitions (or one of the two Secondary Schools Scholarships awarded annually). The boys are drawn from all classes and races in the Colony, and range in age from ten to twenty years. The fees are from Rs.96 to Rs.192 per annum, and pupils may travel at quarter rate on the Government railways. About twelve College Scholarships and Exhibitions are awarded annually to College and School pupils, besides one Scholarship and one Exhibition open to other secondary schools as well, and also a Classical and a Modern Scholarship of the present value of £1,300 each (with first-class passage to and from England) tenable for four or five years at a British University or any other approved place of education in the United Kingdom. Besides the winners of these Scholarships, a few boys whose parents can afford it go to

England or France to study for a profession, usually Medicine or Law, and almost always return to Mauritius to practise. Of the remaining pupils the majority on leaving the College find employment in the Island.

The boys receive a training in classical and scientific subjects. Specialization begins at the entrance class, and the division into modern and classical sides becomes complete in the upper middle class. At the School pupils may undergo commercial training in place of classics or science.

Classes are held between 9.30 a.m. and 3.30 p.m. on five days weekly. In addition to the ordinary classes there are Saturday extension classes where candidates for Pharmaceutical Diplomas and other public science examinations are helped in their studies. The number of pupils on the roll of the Royal College in January, 1933, was 302, and of the School, 102. The average attendance at the College was 286 and at the School 96. (The number of College pupils on the roll in May, 1934, after the publication of the School Certificate results, was 305.) One hundred and three pupils sat in December, 1933, for the Cambridge School Certificate, of whom 55 obtained certificates. In May, 1934, the number of pupils who had passed this examination and proceeded to the highest class of the college was 53.

Encouragement is given to athletics, rugby and association football, hockey, boxing and physical training, and gymnastics, in which, although by no means all the boys join, the standard of proficiency is high. As the pupils are all day-boys it is difficult to obtain much support for other social activities, but a school magazine is published thrice yearly.

Welfare Institutions.

There are six Roman Catholic infirmaries for men and women, and two orphanages for children under the management of Sisters of Mercy; also an orphanage for boys and one for girls under the control and management of the Church of England, and one "home" for men and women under the management of the Church of Scotland. These institutions receive from the Government a maintenance fee for each pauper maintained therein.

Under Ordinance No. 44 of 1932 as subsequently amended by Ordinance No. 21 of 1934, a "home" styled The Austin Wilson Home has been instituted and incorporated to provide accommodation and subsistence for aged gentlefolk. The funds for the establishment of this "home" have been generously contributed by Mr. A. J. Wilson in memory of his son, the late Austin Wilson.

A Mohammedan Orphanage was also established in Port Louis in 1932 for the maintenance and education of orphans of the Mohammedan creed. Funds for running the institution are obtained from voluntary subscriptions among the Mohammedans.

Outdoor assistance to paupers is granted by the Poor Law Department partly in cash and partly in food provisions. Several private religious societies for the distribution of assistance in food and medical care are also in existence. The Société Française d'Assistance assist chiefly destitute French people.

The Child Welfare Committee and the Oeuvre Pasteur de la Goutte de lait, two philanthropic institutions, deal especially with expectant and nursing mothers and their babies.

The Workmen's Compensation Ordinance provides for the grant of compensation by the employer to workmen who are injured in the course of their work.

Recreation, Music, Art and Drama.

Association football is the most popular form of sport. Golf, tennis, cricket, hockey and rugby football are played mostly by the wealthier classes. The Mauritius Turf Club and the Mauritius Jockey Club hold race meetings from June to September at the Champ de Mars in Port Louis and at Floreal in the district of Plaines Wilhems; and regattas are held by the yacht clubs of Mahebourg and Tombeau Bay. " La Chasse " or the shooting of driven deer can be said to be the national sport of Mauritius. The season is from June to the beginning of September.

There are several flourishing companies of Girl Guides and Brownies; the latter are known locally as Blue Birds. The Boy Scouts have not been so successful as the Girl Guides, but efforts are being made to encourage the movement.

There is not much encouragement for any of the arts. Music is fostered principally by the parish churches whose amateur singers frequently give concerts. The Christian Brothers also provide musical training, and apart from the Police Band, which consists of a bandmaster and 30 bandsmen, a band styled the " Alliance Musicale " and comprising about 25 units was established in 1933.

The Municipality of Port Louis has instituted a drawing class, practically the only encouragement to local talent. The Institute has a collection of pictures presented by Mr. Rochecouste but there is no other art gallery.

Occasional dramatic performances are given by amateurs, but no permanent society has been formed. In better times the Municipality of Port Louis subsidizes a theatrical company from France, which plays in the theatre at Port Louis. The Chinese have their own theatre in the town, to which companies come from China when conditions are prosperous.

There exists a Royal Society of Arts and Sciences which was founded in 1829 under the title of Société d'Histoire Naturelle and was granted a Royal Charter in 1846. It interests itself in most branches of science and arts, especially those relating to questions of agriculture and the natural history of the Colony. The Society was incorporated with the Mauritius Institute in 1906 and its library will be transferred to the Institute.

X.—COMMUNICATION AND TRANSPORT.

Roads and Road Transport.

The Colony is well served with 500 miles of main roads maintained by Government and 188 miles of branch roads maintained by the District Boards. All roads are metalled, and 160 miles of the main roads have been covered with bitumen.

The number of motor vehicles in actual use at the end of 1934 was as follows:—

Private motor cars	1,546
Motor cycles	193
Motor lorries...	311
Motor cabs	304
Motor omnibuses	117
	2,471

On account of the hilly nature of the country, the travelling public has in the past shown a preference for American cars of high horse-power, but during the last two or three years the number of cars of English manufacture registered has increased very considerably, and during the year under review 221 motor vehicles of English make were imported, including three 3-wheel runabouts and five Diesel lorries, the latter being the first of this type of vehicle to appear in the Colony. The total number of all makes imported during 1934 amounted to 320.

A fleet of 120 buses owned by small proprietors ply for hire throughout the Colony. These vehicles are built locally on the lines of the single decker buses approved by the Minister of Transport in England, and provide a comfortable and convenient form of transport to members of the public not living near railway stations. These vehicles carry a daily average of 3,700 passengers in and out of Port Louis at a cost varying from 2 to 5 cents per passenger mile. All bus routes and the number of buses allotted to each route are controlled by the Transport Control Board, but so far no attempt has been made to regulate the fares nor to introduce time-tables.

The number of motor vehicles registered has not increased to any considerable extent during the past ten years, but from sales of fuel there appears to have been a very considerable increase in the mileage covered by them, and in the year under review the 2,471 motor vehicles are estimated to have covered nearly 25,000,000 miles.

Petrol is usually sold by retail in cases containing 8 gallons of spirit, and is the principal fuel in use. During the year its price fell from Rs.12.60 to Rs.10.00 per case, or an equivalent of about 2s. 4½d. to 1s. 10½d. per gallon. In addition to a few Diesel lorries imported during the year which burn oil fuel, there are also a small number of vehicles fitted with charcoal generators and working on suction gas. Industrial alcohol, a produce distilled from sugar-cane mixed with ether, is also used as motor spirit in some commercial vehicles, but although the mixture is about 30 per cent. cheaper than petrol, on account of its lower efficiency it has not yet found any appreciable market, and its use is confined chiefly to a few heavy vehicles working on level ground.

The annual tax payable in respect of motor vehicles is Rs.4 per horse-power in respect of motor cycles and Rs.5 per horse-power in respect of other classes of vehicles. Lorries pay an additional tax of Rs.40 per ton of gross weight and motor buses a licence duty varying from Rs.200 to Rs.500 per annum in accordance with their seating capacity. Motor lorries plying for hire pay a further licence of Rs.200 per annum. Motor cabs pay a licence duty of Rs.30.

Certificates of competency to drive are issued by the Police Department. Applicants who have not previously held driving licences have to undergo a test. The cost of the first issue of a certificate of competency and driving licence for one year is Rs.7 and for every subsequent renewal Rs.5 is charged. Cars of visitors are accepted in the Colony at any time, and are subject to a tax at the rate of Rs.5 a month.

Railways.

The Mauritius Government Railways, not including 13⅓ miles of 75 cm. gauge track, known as the Bois Cheri Light Railway, are of the British standard 4 feet 8½ inches gauge and comprise 110¾ miles of main line, 30 miles of station lay-outs and Government sidings, as well as 16 miles of other sidings maintained by the Railway Department for planters and sugar estates. The Railway is exceptional on account of its comparatively short length and very heavy gradients, much of it being 1 in 26. The most important section, the midland line, 35½ miles long, rises to 1,800 feet above the terminals, which are at Port Louis, the capital, on the north-west and Mahebourg, the old port, on the south-east coasts of the Island. A branch from Rose Belle on the midland line, 870 feet above sea-level, to the little creek and town of Souillac is 11 miles long. The north line from Port Louis to Grand River South-East, 33½ miles long, is fairly level. The Moka branch, from Rose Hill on the midland line, 950 feet above sea-level, to Montagne Blanche, is 14¾ miles long and rises on this length to 1,500 feet. The Black River branch, from Richelieu on the midland line to Tamarin, is 12½ miles long, and the Montagne Longue branch, from Terre Rouge on the north line to Montagne Longue, is 3½ miles long. There are no heavy gradients on either of these lines.

An excess of expenditure over revenue of Rs.40,544 was forecast for the financial year beginning on the 1st July, 1933, and ending on the 30th June, 1934. In actual fact the year closed with an excess of revenue over expenditure of Rs.139,832 as shown below. In view of the urgent necessity for economy renewal expenditure amounted to Rs.22,103 only, although it is estimated that depreciation on a conservative basis amounts to Rs.300,000 per annum :—

The passenger revenue, which in the year 1932-33 was the lowest ever recorded since Railway statistics have been kept, has shown a definite increase during the year 1933-34. This satisfactory result is chiefly due to the extended application of special cheap concession fares put into force between the more heavily populated areas and Port Louis. Passengers have increased in the year under review by 871,826 (36 per cent.), i.e., to 3,287,714 journeys, the number of journeys in 1932-33 being 2,415,888. This increased travelling has involved some increased services. Passenger train miles have in consequence risen to 345,291 from 299,298 miles in 1932-33, i.e., by 15·37 per cent., with a corresponding increase in operating expenditure (which also covers a considerable additional goods traffic not anticipated) of 5·2 per cent. It is significant to note that bus traffic shows a decrease this year from 2,972,195 passengers in 1933 to 2,700,048 passengers in 1934.

The goods traffic, which represents the largest item of the Railway revenue, showed an increase over the previous year of Rs.81,683. The increase is chiefly due to the heavy sugar crop harvested in July-December, 1933, which, although estimated at 230,000 tons, actually amounted to 261,460 thousand tons. There is an increase in the general goods revenue (other than sugar and cane) again this year, and a considerable tonnage has been won back from the road transport carriers to the railway chiefly by means of the door-to-door rail and road service commenced last year.

Tramways.

In relation to the tramway lines established on sugar estates since 1901, no important change took place during the year. The total extent of line approximated to 1,740 kilometres. There were 224 locomotives and about 7,500 trucks. Farm tractors in operation on estates were reduced from 100 in 1933 to 81 this year, possibly owing to the cheaper human labour available.

Posts and Telegraphs.

Inland communication by posts and telegraphs is satisfactory. There are 52 post and telegraph offices, four offices doing only postal work, one parcels office at Port Louis which is also a parcels exchange office, and the General Post Office; there is also a postal exchange office. Outlying offices anl localities far from railway stations are served by postmen on bicycles. Mails for the Black River District are conveyed by a motor-car contractor.

Mails from America, Europe, North Africa, Asia via Aden, and East Africa are received by the Messageries Maritimes Steamers regularly every 14 days. European and American mails are also received from South Africa, conveyed by vessels of the Dutch K.P.M. Company, which call regularly once a month, and also by occasional steamers from Durban. The average time taken for European mails via Marseilles during the year 1934 was 34·19 days, as compared with 34·2 days via the Union of South Africa.

Advantage is taken of three routes for the Air Mail Service, viz.: (1) via Tananarive, connecting with the Imperial Airways at Broken Hill; time taken in transit for letters to England, 13 to 14 days; (2) via Johannesburg by the Imperial Airways, from 15 to 26 days; (3) via Nairobi by the Imperial Airways, 26 to 28 days.

The postal parcels service shows a marked improvement. The "cash on delivery" service with Great Britain has increased considerably this last year. There is also a "cash on delivery" service with France.

The telephone service is performed by the Oriental Telephone Company, which serves the towns and districts. The Government offices are linked together by a Government owned telephone system, which is connected with the Oriental Telephone Company's lines.

Telegraphic communication is provided by cable and is maintained by the Eastern and South African Telegraphic Company, whose local station is in Port Louis. Cablegrams from and to the rural districts are transmitted over the Government land telegraphs. The Company maintains a station also at Port Mathurin, in Rodrigues. All classes of traffic are accepted. There is a wireless station at Rose Belle which maintains a twenty-four hour service, and works mainly with ships at sea and with Reunion Island. The wireless station was built by the Admiralty in 1915 for communication with ships at sea and with the various naval bases in the Indian Ocean, and was taken over by the Mauritius Government in June, 1923.

During the cyclonic season from 1st November to 15th May, a detailed weather report including observations made at Seychelles, Rodrigues, Madagascar and Reunion is broadcast daily to all stations and ships within range. When a cyclone is in the vicinity, the Government tug *Maurice*, stationed in the harbour at Port Louis, is manned and inland weather reports are transmitted by wireless telegraphy from the tug to all vessels in port, for the guidance of their masters. The wireless apparatus in the *Maurice* also acts as a stand-by in the event of accident to the aerial system at the main wireless telegraphy station at Rose Belle.

Harbour.

Port Louis, the capital of the Colony, possesses the only navigable harbour for ocean-going ships, which is picturesquely situated on the north-west coast. A wide break in the ring of coral reefs surrounding the Island, caused by the meeting of several rivers and streams, the Latanier, La Paix, Le Pouce, and Creole, gives access to the harbour, which has been dredged so as to provide deep-water accommodation for ten ships lying at berths in the channel and drawing from 24 to 31 feet of water. The harbour is flanked on the north by Fort George, a military post, and on the south by Fort William, which is abandoned. The mountains of the range behind Port Louis, including the Pouce, 2,661 feet, and Pietor Both, 2,690 feet, are guiding beacons to ships by day. The lighthouses of Flat Island, the Colony's quarantine station six miles north of Mauritius, and Caves Point, five miles south of Port Louis on the cliff's edge, and the gas buoy to the north of the outer harbour entrance, direct ships approaching Port Louis by night. A tide gauge has been in operation for four years. The maximum rise of tide at ordinary springs is three feet, which diminishes to two or three inches at ordinary neaps. Dredging of the berths and channel by the Government plant is continuously in progress.

The Government of Mauritius is the Harbour Authority. The Government has from time to time sold or let to two lighterage companies various areas of land bordering the harbour. These two companies, the New Mauritius Dock Company and the Albion Dock Company, each own about 45 lighters with the necessary tugs, and undertake all the storage and lighterage of sugar. The British India Steam Navigation Company also own 30 lighters and two tugs. This Company mainly handles grain from the East, the rest of the general cargo being shared fairly evenly between the British India Company and the other two lighterage companies.

Five years ago the Government built a deep-water quay, 500 feet long, with 32 feet of water alongside, which is able to deal with 100,000 tons of cargo per annum. Actually only 40,000 to 50,000 tons, chiefly petroleum products, Government coal, etc. are discharged annually at the quay.

A Government granary, capable of storing 300,000 bags of rice, was completed four years ago as a protection against the spread of plague in the Colony, and is now working satisfactorily.

Shipping.

There are two regular lines of passenger steamers connecting Mauritius with the United Kingdom. There is a fortnightly service between Marseilles and Mauritius maintained by the Messageries Maritimes Company; the average journey takes about six weeks and involves a stay of five or six days at Reunion either on the outward or inward journey.

Vessels of the K.P.M. (Dutch) Line leave Mauritius once a month for Durban and Cape ports and once a month for Mombasa via Beira. A vessel also leaves Durban once a month direct for Mauritius. The K.P.M. Line has a working arrangement with the Union Castle Line of steamers and the voyage to England via the K.P.M. and Union Castle Lines averages about 32 days. Occasional vessels of the British India Steam Navigation Company take passengers to Colombo, and the journey to England by this means takes from 28 to 35 days. Cheap passages to the United Kingdom can occasionally be secured during the sugar shipping season, October to March, on cargo steamers. The voyage averages 40 days.

It is interesting, but regrettable, to note that passenger facilities between Mauritius and the United Kingdom were far better twenty years ago than they are to-day. The vessels of the Messageries Maritimes Company used to perform the voyage in 31 to 33 days, against an average of 36 days at present, and the Union Castle Company and the British India Company used to make regular monthly calls. Passenger fares have also increased, in so far as voyages via South Africa are concerned, by over 100 per cent.

The number of vessels and total tonnage entering and leaving Port Louis during the past three years were as follows :—

XI.—BANKING, CURRENCY, AND WEIGHTS AND MEASURES.

Banking.

There are three private banks in the Colony, viz. :—

(*a*) The Mauritius Commercial Bank ;

(*b*) The Mercantile Bank of India, and

(*c*) Barclays Bank (Dominion, Colonial and Overseas).

The Mauritius Commercial Bank was established in 1838, and has a paid up capital of Rs.2,000,000 made up of 10,000 shares of Rs.200 each. The total amount of deposits on 31st December, 1934, was Rs.6,612,718·52. The Mercantile Bank of India, Limited, took over the business of the Bank of Mauritius, Limited, on 3rd May, 1916. The total paid up capital is £1,050,000. The deposits made locally on 31st December, 1934, amounted to Rs.3,628,000. Barclays Bank (Dominion, Colonial and Overseas) has a paid up capital of £4,975,500. The total deposits of the local bank on 31st December, 1934, amounted to Rs.3,229,897. This bank, which is affiliated with Barclays Bank, Limited, was founded in 1925 and represents the amalgamation of the Anglo-Egyptian Bank, Limited, the Colonial Bank (incorporated by Royal Charter in 1836) and the National Bank of South Africa Limited. A branch of the last named bank was established in Mauritius in December, 1919. In February, 1926, its business was taken over by Barclays Bank (Dominion, Colonial and Overseas) following the amalgamation already mentioned.

Offices of the Government Savings Bank are established in the nine districts, with a head office in Port Louis. The total number of depositors at 30th June, 1934, was 38,322, as against 38,093 in the preceding year, with deposits amounting to Rs.5,401,710·09 as against Rs.5,379,006·44. Interest is paid at the rate of 3 per cent. per annum.

Currency.

In March, 1934, an Ordinance was enacted "to make provision with respect to the currency notes of the Colony and to place the issue of such Currency Notes upon a permanent basis". By this Ordinance the Currency Commissioners are required to issue, on demand, currency notes in exchange for sterling lodged with the Crown Agents in London, and to pay, on demand, sterling in London in exchange for currency notes lodged with them. The rate at which these exchanges are to be made is fixed at one rupee for one shilling and sixpence sterling, and the minimum transaction is £5,000 or its equivalent.

The Currency Commissioners are entitled to charge commission not exceeding one and three-quarters per centum in addition to the cost of any telegrams sent in connexion with any transfer.

The effect has been to substitute for the Indian rupee a new paper rupee based on sterling and to limit official exchange fluctuations to a maximum spread of three and a-half per centum.

At the time the Ordinance was introduced the rate was Rs.13.70 for £1 by telegraphic transfer, or approximately one rupee for one shilling and fivepence-halfpenny sterling. With a view to avoiding any sudden fluctuation in the actual rate of exchange, the commission which the Currency Commissioners were authorized to charge when selling sterling was fixed, in the first instance, at the maximum of one and three-quarters per cent., making the effective official exchange rate Rs.13.57 for £1 in respect of amounts of £5,000 or over. The rate charged by the Currency Commissioners when buying sterling has been fixed at one-quarter per cent.

The value of the currency is maintained by a Note Security Fund held by the Crown Agents and invested in Government securities (other than those of the Colony). Profits arising from the currency transactions and income from the investments of the Note Security Fund must be applied in the first instance to maintaining the Security Fund at a value equal to the face value of currency notes in circulation. If the value of the Note Security Fund reaches one hundred and ten per cent. of the face value of notes in circulation, all profits then accrue to the revenue of the Colony.

Subsidiary silver coinage was introduced under an Ordinance passed in September, 1934. The coins are not normally redeemable but the seigniorage on the issue is similarly invested.

The value of currency notes in circulation on 31st December, 1934, was Rs.7,922,045 and that of Mauritius silver coins on the same date Rs.1,130,000.

Weights and Measures.

The Metric System is in general use; the following special French and local measures are, however, still to be found:—

Measures of length and area:—

1 ligne Française = 2·258 millimetres or 0·088 inch.
12 lignes = 1 French inch.
12 French inches = 1 French foot.
1 French foot = 1·06 English feet.
1 lieue = 2½ English miles (approx.).
1 gaulette = 10 French feet.
1 arpent = 40,000 square French feet or 1·04 acres.
1 toise = 6 French feet or 2 yards 4 inches.
1 aune or ell = 1 yard 11 inches.

Measures of capacity:—

1 barrique = 50 gallons (cane juice, etc.).
1 tiercon = 190 to 192 litres (molasses).
1 velte = 7·45 litres (coconut oil).
1 bouteille = 800 cubic centimetres (liquid).
1 chopine = ½ bouteille.
1 corde = 80 French cubic feet or 96·82 English cubic feet (firewood).

Measures of weight:—

1 gamelle = 5·250 kilogrammes.
1 livre = 500 grammes or 1·10 English pounds.

XII.—PUBLIC WORKS.

The Public Works Department is responsible for all Government buildings, the sewerage of Port Louis, roads and bridges, the survey of Crown Land, water-supplies, and state irrigation.

Buildings.—Some of these, such as a time-ball tower in the Port Office, are of historical interest, dating from the time of the French Governor, Mahé de Labourdonnais, in 1740. Government House in Port Louis was then in project and was built between 1740 and 1767. Apart from the addition of a second storey, it now stands exactly as it was originally constructed. It contains the Governor's offices, in which are to be found the table on which the capitulation of the Island was signed in 1810, a throne room, a council room, the council offices, a library, and quarters for the Governor and officials. The former and present residences of the Governors at " Mon Plaisir ", Pamplemousses, and " Le Reduit ", Moka, also date back to the French occupation. The value of the Government buildings is approximately 15 million rupees.

There are in the Island one mental and nine general hospitals. And old hospital, the Grand River North West Hospital, built in 1769 for seamen, is used when necessary as a quarantine station for plague.

Severe cyclones, which happily are not frequent, are responsible for a good deal of damage to water-works, roads, and buildings.

Sewerage works of Port Louis.—The sewerage works were begun in 1900. In 1922, the scheme was revised by Messrs. Mansergh and Sons and the works have been carried out on the lines of their report. The construction works being now practically completed, present activities are concentrated on house service connexions, and a large portion of the town of Port Louis now has the water carriage system.

Bridges.—There exist 335 bridges on main and branch roads, the longest having spans of 150 feet. The old timber bridges are being gradually replaced by ferro-concrete structures. Fifty-nine remain to be reconstructed.

Water works.—The water supply of the town of Port Louis is obtained from the Grand River North West at a distance of about four miles from the town at a level of 250 feet. This supply was handed over by the Municipality to the Public Works Department in 1922. The water is passed through sand filters and chlorinated. The capacity of the mains leading to the filters is 5 million gallons a day. The water is distributed to the town from two covered service reservoirs of a total capacity of 2 million gallons.

The water-supply of the towns of Plaines Wilhems and of parts of Moka and Black River districts is obtained from a storage reservoir called the Mare aux Vacoas, at an altitude of 1,825 feet. The capacity of the reservoir is now, after the raising of the dam, 1,641 million gallons. The catchment ground is entirely protected by forest lands. The whole of this water-supply is filtered through sand filters at " La Marie ", about two miles below the reservoir, whence the supply to the town of Curepipe is pumped by hydraulic power, the supply to the other towns being by gravity. The water is distributed from six covered service reservoirs situated in the various zones of supply, their aggregate capacity being 5½ million gallons. The population served by this supply is approximately 90,000 and the average daily consumption 3½ million gallons. The Mare aux Vacoas water supply has been extended to the town of Port Louis. The supply is limited to 900,000 gallons per day. In this connexion a covered service reservoir at Petite Rivière of 750,000 gallons was completed and put into operation in 1931.

At the beginning of 1934 a Committee was appointed to report on the quality of the water of the Mare aux Vacoas supply, and on measures that could be adopted to improve the quality. The report was received in June, 1934, and it concluded as follows:—

> "The purification of the Mare aux Vacoas waters by means of existing slow sand filtration is inefficacious and defective and does not constitute an adequate safeguard in the event, however unlikely, of harmful contamination of the raw water."

The main recommendations of the Committee were to the effect that (i) the raw water should be taken from the lake as near as possible from the surface (ii) the water should be aerated before the filters and (iii) the water be chlorinated after filtration.

The water supply to the villages and hamlets in the other districts comes from twenty-seven different springs or streams. These supplies are not filtered but they are generally protected in their catchment areas by reserves of forest. The population depending on these various supplies is about 200,000, and is comprised mostly of the poorer classes. A large proportion of the daily consumption is distributed by means of public fountains.

Irrigation works.—Government storage irrigation works were begun in 1914 according to plans made by Mr. C. M. Harriott, C.S.I., C.I.E., M.I.C.E., Chief Engineer, Public Works Department, Central Provinces, India, and Consulting Engineer for Irrigation Works to the Government of Mauritius. The La Ferme scheme for the irrigation of the south-west of the island, between Grand River North West and River Dragon, has been finished, and the Nicolière scheme to irrigate land in the north, was started in 1918. These two schemes cover 18,700 acres in the area below the level which enjoys 60 inches of rain and cannot be cultivated to the best advantage without irrigation water. The La Ferme scheme is dependent on a low-level reservoir of 2,500 million gallons, which was completed in 1918 and now irrigates 3,700 acres of land under sugar-cane plantation. The plans for the Nicolière scheme include a high-level storage reservoir at 1,300 feet altitude at Midlands, of 4,400 million gallons capacity, intended to fill a low-level reservoir at Nicolière of a capacity of about 250 million gallons.

Owing to financial conditions the plans were first curtailed and the works afterwards suspended. The Feeder Channel which measures 16¾ miles from Midlands to Nicolière and which had been completed by the end of 1931 with a reduced section has now been built up to its full section and concreted. The area covered by the existing curtailed plan is only 11,000 as compared with 15,000 acres in the original plan.

XIII.—JUSTICE, POLICE AND PRISONS.

Justice.

Following immediately upon the capitulation of the island in the year 1810, a Proclamation issued in the name of His Majesty King George III guaranteed to its inhabitants the preservation of their existing laws and customs. Apart from certain local enactments the laws then in force were those embodied in the Code Napoleon and the French Codes of Commerce and Civil Procedure. These continue to constitute the main body of law applicable in the Colony, as modified, amended or added to by subsequent legislation.

The Supreme Court of Mauritius (which superseded the former "Cour d'Appel") was constituted in the year 1850, and invested with "all the powers, authority and jurisdiction possessed and exercised by the Court of Queen's Bench". It is also a Court of Equity, and exercises jurisdiction in Admiralty, Bankruptcy and Matrimonial Causes.

The Supreme Court sits in the capital (Port Louis), and consists of a Chief Judge and two or more Puisne Judges. Matrimonial Causes and Civil actions where the amount involved does not exceed the value of Rs.3,000 are heard before a single judge; where the amount exceeds this figure, before two judges; or when some point of law of exceptional difficulty arises the case is heard either by two judges or by the Full Bench. Where the sum involved is of the amount of Rs.10,000 or upwards an appeal lies of right from the decisions of the Supreme Court to the Judicial Committee of the Privy Council, and in other cases by leave of the Supreme Court.

The Bankruptcy Division of the Court is usually presided over by the Master and Registrar sitting as Judge in Bankruptcy, from whose decisions an appeal lies (subject to certain limitations) to the judges of the Civil Division.

Criminal Assizes are held four times a year, and are presided over by a single judge who is empowered to reserve any question of law arising at the trial or as to which he subsequently entertains any doubt as to the correctness of his original decision, for argument before the Full Bench. Criminal cases are conducted before a jury of nine male persons, and a majority verdict of not less than seven is sufficient (even in capital cases) to support a conviction.

The Supreme Court of Mauritius entertains appeals not only from the inferior tribunals of the Colony, both in civil and criminal matters, but also from the decisions of the Supreme Court of Seychelles.

Since the year 1847 English has been the official language of the Court.

Magistracies.—There is a Magistrate's Court in each of the nine districts, the Courts in Port Louis and in Plaines Wilhems each sitting in two divisions. A magistrate has jurisdiction in nearly all civil matters involving not more than Rs.1,000 and in all criminal matters with power to inflict not more than one year's imprisonment and Rs.1,000 fine. A Bench of three magistrates may be instituted by law for the trial of certain offences and also at the request of the Procureur General for nearly all offences, with jurisdiction extending to three years' penal servitude or imprisonment and fine possibly of Rs.3,000. An appeal lies of right to the Supreme Court within the limits stated above, both in fact and law, the several modes of reviewing the decisions being the same as in English Law. There is no system similar to the French Assistance Judiciaire but facilities are given to very poor litigants both before the Supreme and the Inferior Courts to obtain leave to sue *in forma pauperis*. In Supreme Court cases, counsel are ever ready to accept a pauper brief at the request of the Chief Judge, while in Assize cases counsel is always appointed without fee, for undefended prisoners. The Dependencies are visited periodically by one of two magistrates supernumerary to the District Magistrates, whose services are also available in Mauritius.

The Dependency of Rodrigues is administered by a magistrate who has the same jurisdiction in Rodrigues as a District Magistrate in Mauritius and whose duties are to a considerable extent administrative.

The magistrates heard 10,187 civil cases and 12,516 ordinary criminal cases and petty offences, and held :—

126 coroners' inquests ;

21 preliminary inquiries into crimes and serious misdemeanours.

Police.

Organization.—The Mauritius Police Force is organized mainly on the lines of a " Civil " as distinct from a " Military " Police Force although all recruits receive a certain amount of instructon in the use of the rifle, and an Armed Detachment of 1 Officer and 46 Other Ranks is maintained at Headquarters in case of emergency. Two Lewis Gun Sections are also given an annual course of training and those members of the Force who are fully trained in musketry fire a complete course each year.

Training in military subjects is controlled by officers and other ranks who have previously served in the Army, there being 8 Gazetted Officers and 44 other ranks in the Mauritius Police who were on active service during the war of 1914-18.

The majority of the officers of the Force have been promoted from the ranks, but direct appointments and transfers from other Colonies are made when necessary.

Recruits are obtained entirely from local sources and there is at present an ample supply of excellent candidates.

Distribution.—The establishment of 20 Officers and 595 other ranks is divided into Headquarters Staff, Clerical Branch, Criminal Investigation Branch, Revenue and Motor Vehicle Control Branch, Training Depot, Harbour Police, District Police, Railway Police, Rodrigues Police and Band.

The District Police are distributed in Magisterial Districts as follows :—

District.	*Number of Stations.*	*Number of Personnel.*
Port Louis	8	219
Plaines Wilhems	5	79
Black River	4	14
Curepipe	5	47
Grand Port	6	44
Savanne	5	23
Pamplemousses	6	31
Riviere du Rempart	5	20
Moka	5	34
Flacq	5	35

The Rodrigues and Railway Police are detailed from the trained establishment of the General Police and are under the independent control of the Resident Magistrate of Rodrigues and the General Manager of Railways respectively.

The Band is under the control of an European Bandmaster holding the rank of Inspector and has an establishment of 30 other ranks.

Crime.—The total number of offences of all kinds reported to the Police during the year 1934 was 24,281, which shows an increase on the figure for 1933 which was 23,502, and an increase on the average of 20.647 for the past three years.

It should be noted that this marked increase is entirely due to the continuous improvement in the Police control of various revenue-producing duties and is not in any way caused by an increase of crime. This is made clear by the following explanatory statement as regards offences against persons and property during 1933 and 1934 :—

A.—There has been a decrease in offences against the person : 8,065 in 1934 as against 8,492 in 1933 ;

B.—There has also been a decrease in offences against property : 3,060 in 1934 as against 3,275 in 1933.

The number of persons prosecuted in connexion with these 24,281 offences was 11,471, of whom 10,519 were convicted, 600 otherwise disposed of, and 352 were still awaiting trial at the end of the year. Corresponding figures for the previous year were :— 11,647 persons prosecuted, of whom 10,364 were convicted, 658 otherwise disposed of, and 625 awaiting trial at the end of the year.

Prisons.

Organization.—The Prison Department of Mauritius is placed under the charge of the Inspector-General of Police who is responsible for the control of penal institutions as Superintendent of Prisons. Four senior Officers, in addition to the Superintendent, are drawn from British Army, Police or Prison Services and the remaining staff of 108 is recruited from local sources.

Establishments.—The penal institutions are Port Louis Central Prison and Beau Bassin Prison. Port Louis Prison provides separate cell accommodation for 154 male prisoners and association cells for 40 women. It also contains the offices of the Department and quarters for two senior Officers and two Wardresses. This prison serves as the centre for classification of convicted prisoners and for treatment of special and difficult cases. All juvenile adults and selected first offenders serve their sentences in this institution and all waiting-trial prisoners are housed here in separate accommodation in convenient proximity to the Courts. Every convicted prisoner undergoes examination and treatment for prevalent diseases while detained in this prison and before transfer to Beau Bassin.

Beau Bassin Prison is a comparatively modern type convict prison providing single cell accommodation for 756 male prisoners. Bungalow type quarters for the Superintendent and two chief Officers are located in the surrounding grounds.

Classification.—Convicted prisoners are classified as (*a*) Penal servitude, (*b*) Hard labour, (*c*) Misdemeanants, (*d*) First offenders, (*e*) Juvenile adults and (*f*) Special.

Classes (*a*) and (*b*) serve their sentences at Beau Bassin Prison and the remainder at Port Louis where, so far as existing accommodation permits, they are kept apart and receive modified treatment.

Labour.—The principle governing the employment of all prisoners is that they shall be put to such remunerative work as lies within their physical capacity and past experience, and that all long-sentence prisoners who are not tradesmen before conviction shall be taught a trade during their period of imprisonment. The normal labour for male prisoners at Port Louis is carpentry, stone-breaking, cutting fire-wood, carting stores and cleaning Government buildings and grounds. Women prisoners are employed on laundry work and sewing clothing and bedding. At Beau Bassin Prison prisoners with long sentences are taught a trade, while those serving shorter sentences are principally employed on agricultural work in the prison gardens. The trades taught in the prison workshops comprise tailoring, boot, sail, and mattress making; tin-smith work and black-smithing; carpentry and cabinet making; blind, mat, and basket making. Instruction in baking is given in the prison bakery which produces about 1,400 lb. of bread daily and numerous prisoners are trained as stone masons in the quarries and neighbouring grounds.

Population.—The number of persons admitted to Port Louis Prison during the year was 2,939, which is 271 less than in the previous year and 714 less than in 1932. Of these 2,939 persons 1,899 were convicted, and of these 1,233 were sentenced to imprisonment for one month or less. The convicted prisoners comprise

1,839 men and 60 women. The daily average population was 458·05 compared with 500·44 in 1933, and the number of persons in prison on 31st December, 1934, was 424, compared with 381 in 1933 and 503 in 1932. Of the 424 persons in prison 396 were serving sentences and comprised 387 men and 9 women. The number of persons who served sentences of imprisonment in lieu of paying fines was 916, including 7 women.

Health.—The Prison Medical Officer reports that the health of the prisoners has been satisfactory and the sanitary conditions good. Deaths in hospital during the year numbered five, compared with seven in 1933, twenty-two in 1932 and thirty-three in 1931. There were two cases of suicide by hanging.

Industrial School.—The Barkly Industrial School for male juvenile offenders, which was until 1st July, 1934, administered as a unit of the Prisons Department, has been entirely removed from Prison control and is now a separate institution under the supervision of the Inspector-General of Police.

The number of boys in the School at the end of the year was 54, compared with 46 in 1933 and 47 in 1932. There were 28 admissions and 20 discharges during the year.

The ordinary primary school education of the inmates is undertaken by officers of the Schools Department, while the manual instruction in agriculture and certain trades is given by Instructors and Assistant Instructors borne on the establishment of the Industrial School.

The health of the boys is uniformly excellent and their physical reformation is remarkable.

The After-care Committee, which was appointed in 1932 to look after the question of the employment of the boys on discharge, has done excellent work and has recently developed into a Visiting Committee with wide powers of inspection and advice which are being employed with great advantage to the School and its inmates.

XIV.—LEGISLATION.

A list of the more important Ordinances passed during the year under review is given in Appendix I to this Report.

Certain Ordinances of rather domestic concern were passed dealing with speed of motor vehicles, road traffic, net-fishing, and penalizing the possession of raw sugar for purposes other than exportation, authorizing a special marriage and a burial, reducing the duration of labour contracts and the age for dispensing with parents' consent to the marriage of their sons, preventing the employment of females at night in factories, consolidating education laws, and regulating probation of offences.

Others attempt to work for economic organization and progress; the more important being :—(i) the imposition of a so-called " poll tax " graduated according to the income of individuals and companies with increasing fixed amounts for the several steps in the ladder of incomes between Rs.5,000 and Rs.70,000, the tax being the same for all incomes beyond Rs.70,000 (Ordinance No. 32); (ii) two Ordinances establishing a new paper and silver currency (Nos. 13 and 39 respectively), the new notes being no longer compulsorily payable in silver, the coins being special to Mauritius but of the same silver standard composition as the Indian Rupees, which are not redeemable in new coins and will soon cease to be legal tender; (iii) a comprehensive radio-communication Ordinance (No. 36) facilitating the use of wireless apparatus and regulating all cognate matters in a line with recent international arrangements; (iv) the creation of a Mauritius Local Defence Force on the lines of the English Territorial Forces legislation and regulations (No. 19).

Social progress is also achieved, in accordance with international ideals, in the matters following :—

Employment of Women, Young Persons, and Children—(No. 37), an Ordinance making operative in this Colony the International Labour Conventions regulating :—(1) The admission of children to industrial employment; (2) The night work of young persons in industry; (3) The night work of women in industry; (4) The admission of children to employment at sea.

Minimum Wages—(No. 41), another Ordinance applying to Mauritius the International Labour Convention concerning the creation of machinery for the fixing of minimum wages, whenever necessary, in respect of any trade or occupation.

Dangerous Drugs—(No. 5), an Ordinance regulating the importation and sale of opium and other drugs.

Certain import duties were altered in amending Customs Tariff Ordinances, with a view to increasing Imperial Preference on the articles concerned, and special Ordinances regulating the importation of textiles of foreign origin were readily accepted by the Council of Government in furtherance of the policy of imperial solidarity.

Lastly, both in the interest of labour and to minimize chances of accidents to workmen, as well as again to favour British manufacture, an important consolidated and amending Ordinance provides comprehensively for the control of boilers, their use and inspection, and cognate matters, while it imposes the gradual replacing of existing engines and pipes by material of standard British specification.

XV.—FINANCE.

Revenue and Expenditure.

The Revenue of the Colony for the financial year ended 30th June, 1934, amounted to Rs.16,567,110.18, being Rs.1,414,129.18 above the Estimates and Rs.13,633,308.12 below the Revenue of the previous year, which was Rs.30,200,418.30. The Revenue normally becoming due and collected during the previous year was Rs.14,503,504, and the increase in the amount shown for that year was due to special adjustments comprising, *inter alia*, the following transfers to Revenue :—

	Rs.
Widows' and Orphans' Fund	5,032,347.84
Government Scholarship Fund	539,769.17
Improvement and Development Fund ...	6,317,717.98
Mauritius Loan, 1922	1,362,678.99
Unexpected balance, Sugar Industry Loan, 1929...	7,315.90
	13,259,829.88

The Expenditure for the financial year 1933-34 amounted to Rs.14,634,338.98, being Rs.161,876.98 above the Estimates and Rs.823,749.71 above the Expenditure for the previous year.

The Revenue during the financial year 1933-34 exceeded the Expenditure by Rs.1,932,771.20, and the surplus balance on 30th June, 1934, amounted to Rs.14,876,571.13.

Of the Expenditure for 1933-34, Rs.4,906,498.89 were spent on "Personal Emoluments" and Rs.9,727,840.09 on "Other Charges." The corresponding figures for 1932-33 were Rs.4,741,399.51 for "Personal Emoluments" and Rs.9,069,189.76 on "Other Charges."

The following is a comparative statement of the Revenue and Expenditure for the last five years :—

Year.	*Revenue.* Rs.	*Expenditure.* Rs.
1929-30	14,483,467	15,575,001
1930-31	11,552,210	16,092,073
1931-32	12,160,278	17,704,574
1932-33	30,200,418	13,810,589
1933-34	16,567,110	14,634,339

The Colonial Government pays a Military contribution of 5½ per cent. of its Revenue (total Revenue exclusive of land sales, Irrigation—Mare aux Vacoas and other water works—revenue, contribution towards Loan 1922 charges and special export duty on sugar) as a contribution to the cost of the garrison maintained in the Colony by His Majesty's Government in the United Kingdom.

The annual contribution was reduced to £15,000 for the two years 1932-33 and 1933-34, and the amount paid for the year ended 30th June, 1934, was Rs.229,944.81.

Public Debt.

The Public Debt of the Colony on 30th June, 1934, was £3,246,994 7s. 7d. Against this liability there was an accumulated Sinking Fund of £1,699,669 11s. 1d., as compared with £1,652,076 7s. 8d. on 30th June, 1933.

Assets and Liabilities.

The Assets and Liabilities at the end of the year amounted to Rs.26,451,557.23 and Rs.11,574,986.10 showing a surplus of Rs.14,876,571.13.

STATEMENT OF ASSETS AND LIABILITIES AS AT 30TH JUNE, 1934.

Liabilities.	Rs. cs.	*Assets.*	Rs. cs.
Other Colonial Governments	16,143.94	Cash Balances	4,027,705.09
Deposits	2,160,586.84	Remittances in transit ...	31,939.81
Loan Funds unexpended ...	561,498.14	Surplus Funds No. 1 invested	2,413,804.15
Appropriated Funds ...	8,836,757.18	1922 Loan Funds invested	200,000.00
Balance: Surplus of Assets over Liabilities at 30th June, 1934.	14,876,571.13	1931 Loan Funds invested	249,968.67
		Other Colonial Governments.	12,207.12
		Advances	10,216,553.76
		Unallocated Stores ...	502,853.11
		Appropriated Funds invested.	8,793,525.52
	Rs. 26,451,557.23		Rs.26,451,557.23

Description of the Main Heads of Taxation and their Yield.

The main heads of taxation with their yield for the current year as compared with the preceding year are the following:—

	1932–33	*1933–34*
	Rs. cs.	Rs. cs.
Customs—Import duties	4,423,265.79	5,049,417.16
„ —Export duties*	906,251.76	978,443.38
Excise duty on rum issued for Home consumption	1,632,897.07	1,761,248.78
Licence duty	1,112,698.23	1,126,758.62
Tobacco excise	1,335,297.07	1,175,639.20
Taxes on vehicles and animals ...	371,992.07	402,866.01
House Tax	403,293.43	304,396.26

---

* Includes special export duty on sugar.

Customs Duties.

The revenue from Customs duties for the year 1934 was Rs.4,899,209 for imports and Rs.738,624 for exports. (Excluding amount levied on exports for specific purposes.)

The figures for the previous years were:—

	Import duty.	*Export duty.*
	Rs.	Rs.
1933	4,689,026	863,472
1932	3,935,135	752,832

Customs Tariff (Summarized).

The following shows the rates of duty on the principal imports and exports on the 31st December, 1934 :—

Imports.

Rice	R.0·63 per 100 kilos.	Wines in casks up to 14°.	Rs.22·00 per hectolitre.
Dholl	Rs.1·14 per 100 kilos.	Wines in cases up to 14° (still)	R.0·33 per litre.
Flour	R.0·94 per 100 kilos.	Spirits (proof) ...	Rs.6·87 per litre.
Fertilizers ...	R.0·11 to Rs.1·10 per 100 kilos.	Tobacco, manufactured.	Rs.15·00 per kilo.
Petroleum oil ...	Rs.5·28 per hectolitre.	Tobacco, cigarettes.	Rs.16·50 per kilo.
Petroleum spirits	Rs.14·00 per hectolitre.	Vegetable oil, other than olive.	Rs.5·50 to Rs. 9·00 per 100 kilos.
Soap, common ...	Rs.1·93 per 100 kilos.	Most manufactured articles.	5·5 to 55 per cent. *ad valorem.*

Exports.

*Sugar	R.0·46 per 100 kilos.	*Aloe fibre ...	Rs.4·0 per 1,000 kilos.

---

* NOTE—The duty on sugar is only for special purposes as under :—

R.0·03 per cent. kilos for destruction of *Phytalus Smithi ;*
0·03 ,, ,, ,, ,, College of Agriculture ;
0·04 ,, ,, ,, ,, Sugar Industry Reserve Fund ;
0·36 ,, ,, ,, ,, in refund of loans.

The duty on aloe fibre includes Rs.3 per 1,000 kilos in refund of loan to the hemp industry.

Principal preferential rates on imports.

	Preferential.	*General.*
Motor vehicles of all kinds, including tyres and tubes therefor.	5·5 per cent. *ad valorem*	36⅔ per cent. *ad valorem*
Silk manufactures (including art silk).	16·5 ,, ,, ,, ,, or R.0·55 per kilo	55 ,, ,, ,, ,, or R.1·75 per kilo
	whichever is the higher	
Indigo	R.1·10 per kilo.	Rs.2·75 per kilo.
Cement	R.0·30 per 100 kilos.	R 1·00 per 100 kilos.
Cinema films ...	Free	R.0·04 per metre.
Machinery, industrial	R.1·45 per 100 kilos.	5·5 per cent. *ad valorem.*
Cotton manufactures	13 per cent. *ad valorem.*	26 per cent. *ad valorem.*
	and also specific rates in certain cases.	
Hardware	11 per cent. *ad valorem.*	22 per cent. *ad valorem.*
Coal	R.0·8 per 100 kil.	R.0·42 per 100 kilos.

Excise and Stamp Duties.

The duty on rum for home consumption is Rs.2.75 per litre of 23 degrees Cartier and an additional duty of 12 cents per litre for every degree above 23 degrees Cartier.

The duty on spirits to be denaturated for heating and lighting purposes is 4 cents per litre at 36 degrees Cartier and an additional duty of 4 cents per hectolitre or fraction thereof for every degree above 36 degrees Cartier.

The duty on spirits to be denaturated for use as motor fuel is 4 cents per litre or fraction thereof at any degree Cartier.

The duty on alcohol for the preparation of medicinal tinctures and drugs is 10 cents per litre at any degree, but the duty on alcohol delivered for the preparation of " Alcoolats " in accordance with the formulae laid down in the British Pharmacopoeia or the French Codes or any other medicinal tinctures and drugs as notified in the Gazette is Rs.2.50 per litre at 23 degrees Cartier, with an additional duty of 10 cents per litre for every degree above 23 degrees Cartier.

The duty on vinegar is Rs.1.70 per hectolitre on vinegar not exceeding 8 degrees of strength and an additional duty of 18 cents per degree and per hectolitre on all vinegar above 8 degrees.

According to the Excise figures the number of litres of spirits distilled in 1933-1934 (July to June) was 1,126,437 litres as compared with an average of 900,332 litres for the past five years.

The duty on wine and other liquor (excepting rum and compounded rum) manufactured in the Colony which contain more than 4 degrees of alcohol according to Gay Lussac's alcoholometer is as follows :—

(i) on all such liquor not exceeding 14 degrees by Gay Lussac's alcoholometer, a duty of 15 cents per litre ;

(ii) on all such liquor exceeding 14 degrees a duty at the same rate and on the same scale as the Customs duty on wines payable under the Customs Tariff Ordinance.

An excise duty of Rs.4 per kilog. is charged on leaf tobacco used for the manufacture of tobacco for local consumption.

According to the official figures the quantity of tobacco manufactured in the year 1934 was 337,673.100 kilos as compared with 321,931.100 in 1933.

The excise duty collected on tobacco during the last two financial and calendar years respectively is given below :—

	Rs.
Financial year 1932-33	1,335,332.45
Financial year 1933-34	1,175,639.20
Calendar year 1933	1,182,074.35
Calendar year 1934	1,219,407.20

The Stamp Laws were amended and consolidated by the passing on 23rd November, 1926, of Ordinance 22 of 1926. This Ordinance was put into force on 23rd July, 1927, by Proclamation No. 32 of 1927.

Stamp duties are of three kinds :—

(1) A duty in proportion to the size of the paper used ;

(2) a fixed duty ; and

(3) an *ad valorem* duty.

The Stamp Ordinance No. 22 of 1926 was amended in 1932 by the passing of Ordinance No. 26 of 1932 to provide for the increase from 4 to 10 cents of the stamp duty on cheques drawn on banks in and out of the Colony and on receipts as defined in Article 2 (5) of the Stamp (Consolidated) Ordinance, 1926.

House Tax.

Rates.—1 per cent. per annum on any building assessed over Rs.500.

Yield.—The amount collected during the financial year 1933-34 was Rs.304,396.26.

Method of Assessment.—Any building liable to the house tax is assessed according to its full and fair value. In assessing the full and fair value, the valuer takes into consideration the actual or possible rent a tenant may be reasonably expected to pay for such building. This applies only to buildings whose basic value is above Rs.500 and on which the annual tax is 1 per cent. on the value.

Method of Collection.—For the purpose of collecting the house tax when the assessment arrived at is final for the year notices for payment are served upon owners of buildings and the tax is paid to the Cashier of the district in which it is levied or to the Chief Cashier, Treasury.

Graduated Poll Tax.

As from 1st July, 1931, a poll tax, graduated according to the taxpayer's income, was imposed in this Colony. The tax applies to persons resident in the Colony and also to non-residents, in respect of all income accruing in, derived from, or received in the Colony, the basis of assessment being the income of the year preceding the year of assessment. There are certain features which distinguish the tax very definitely from a normal income tax :—

(*a*) Tax is payable in two instalments, on 31st October and 30th April in the year of assessment, in accordance with a simple form of return consisting of a single total of income without any details whatever. Not later that 31st October, any taxpayer whose income exceeds Rs.5,000 is required to make his return and to pay the first instalment without any assessment being made upon him. Thereafter the Commissioner of Poll Tax has the right to refuse to accept the return and to make an estimated assessment. He also has the right to demand detailed returns from any person who has not already made a return and paid tax and to make estimated assessments upon such persons.

(*b*) Tax is imposed by reference to a graduated scale which applies to incomes exceeding Rs.5,000. There is no standard rate of tax, incomes being classified in categories to which fixed amounts of tax apply, the maximum tax being Rs.6,150 which applies to all incomes exceeding Rs.70,000.

(*c*) No personal allowances of any kind are in force.

(*d*) Depreciation is not allowed as a deduction.

(*e*) There is no provision for any carry forward of losses but as the tax is levied on aggregate income from all sources, a loss in any one year is set off against income of the same year.

(*f*) There is no deduction of tax at the source and with certain minor exceptions dividends and interest are allowable as deductions in computing taxable income.

In two respects the tax is noticeably different from the poll taxes levied in Kenya and Tanganyika :—

(*a*) Persons taxable include artificial legal entities as well as individuals.

(*b*) A consideration of the taxpayer's residence or ordinary residence is irrelevant as a test of liability to tax.

The tax is unique and is the result of local conditions peculiar to this Colony.

XVI.—MISCELLANEOUS.

A critical situation arose during the latter part of the year owing to low prices and the large reduction of the 1934 sugar crop consequent on the severe drought which prevailed during the period November, 1933, to April, 1934.

The sugar production was only 178·86 thousand tons for the year under review against 261·46 thousand tons for the previous year and an average of 235·53 thousand tons in respect of the years 1927-32, exclusive of 1931 when on account of a severe hurricane the output was reduced to 164·01 thousand tons.

This reduction in the sugar crop of 1934 and the low prices fetched for sugar caused a considerable depletion of the sterling usually available in London for the financing of the 1935-36 crop and, in response to representations made that financial assistance was urgently required, the Government agreed to guarantee the repayment up to a maximum of £450,000 to the London banks which would open credit by overdrafts to the local banks repayable after the sale of the 1935 crop.

The Colony continued to enjoy the benefit of the General Imperial Preference amounting to about 3s. 9d. per cwt. on all Colonial sugars consigned to the United Kingdom. Important changes were however introduced during the year in the system of special preference given in 1932 and instead of the special preference of 1s. 0d. per cwt. on the total crop exported and an additional preference of 1s. 0d. per cwt. on a prescribed quota, amounting to 104,000 tons in the case of Mauritius, it was decided by His Majesty's Government to grant a special preference of 3s. 0d. per cwt. on a quantity of Colonial sugars limited to 360,000 tons, the quota of Mauritius sugar entitled to such preference being fixed at 112,400 tons.

A certain proportion of the 1933 crop, amounting to 89,530 tons of sugar, which was still unsold or had been sold on the basis of the existing preference, was due to arrive in England after the date of announcement of the introduction of the new system of preference and, on representations made by the local producers that this state of things would result in severe losses and would nullify the benefit of the special quota for 1933, His Majesty's Government agreed, as a special case, that the quota allotted to Mauritius in respect of the year 1934 should be increased by 15,000 tons, equivalent in cash value to £45,000.

With a total production of about 179,000 tons of sugar for the year, the value of the preference amounted to roughly £1,100,000 in respect of the 1934-35 crop.

The Colony's contribution towards Imperial Funds in respect of military expenditure, which had been reduced to £15,000 a year for the financial years 1932-33 and 1933-34 with a view to assisting in the recovery of financial equilibrium, was fixed at £44,000 (Rs.586,520) during the year 1934-35 representing the actual cost of the garrison. Calculated on the statutory basis of 5½ per cent. of the revenue of the Colony liable to Military contribution, the amount to be paid to Imperial funds would have stood at about Rs.725,000, or a benefit of about Rs.140,000 to the Colony.

During the year 1934 radical changes were effected in the monetary system of the Colony comprising (*a*) the calling in of the Currency Notes in circulation and the issue of new Currency Notes by the enactment of Ordinance No. 13 of 1934, and (*b*) the abandonment of the Indian rupee, half-rupee and quarter-rupee silver coins, and their replacement by a silver rupee and its subdivisions of the Government of Mauritius (Ordinance No. 39 of 1934). The new coins were put into circulation during the year while the domonetization of the Indian rupee and its sub-divisions was postponed to a later date.

It was decided not to enforce the Ordinance which was passed in 1932 for the imposition of an income tax and provision was made by the enactment of Ordinance No. 32 of 1934 for the imposition of a so-called "poll tax" graduated according to the income of individuals and companies with increasing fixed amounts of tax for the several steps in the ladder of incomes between Rs.5,000 and Rs.70,000. In June, 1934, the Secretary of State for the Colonies granted an interview to three delegates chosen by a number of taxpayers of the Colony to proceed to England and protest against the imposition of this tax. After discussion the decision to introduce some measure of direct taxation in the form of the so-called " poll tax " was finally maintained by the Secretary of State.

In July, 1934, the Governor appointed a Committee to examine the extent and character of permanent unemployment in the Colony and to report whether any steps were practicable to mitigate the immediate effects thereof and whether any measures could be devised to deal with conditions which tend towards the increase of permanent unemployment.

The number of persons whose registration as unemployed was accepted by the Committee was 3,603. They were grouped into the following categories :—

Unskilled labour	909
Skilled labour	1,846
Clerks	848
Total	3,603

On the recommendation of the Committee steps were taken to put in hand various works of public utility calculated to give employment to as many persons as possible who were out of work.

A local Defence Force styled " The Mauritius Territorial Force " was established during the year by the enactment of Ordinance No. 19 of 1934. The Force is raised and maintained by the Governor and the whole of the expenditure on its maintenance is defrayed by the Revenues of the Colony. It is under the command of the Senior Military Officer Commanding the Regular Forces in the Colony.

The Island was visited in June, 1934, by H.M.S. *Hawkins* flying the flag of Vice-Admiral M. E. Dunbar Nasmith, V.C., C.B., Commander-in-Chief of the East Indies Station, and in July, 1934, by the French war vessel *Bougainville*.

APPENDIX I.

Forty-eight Ordinances were passed by the Council of Government and assented to by the Governor during the year 1934. Amongst them the following may be noted.

No.	*Title.*
13	**An Ordinance to make provision with respect to the Currency Notes of the Colony and to place the issue of such Currency Notes upon a permanent basis. (Mauritius Currency Notes.)**
19	**An Ordinance to provide for the establishment and regulation of a Local Defence Force in Mauritius (Mauritius Territorial Force).**
25	**An Ordinance to regulate the importation of textiles (Importation of Textiles (Quotas)).**
32	**An Ordinance to authorize the levy of a poll tax graduated according to the taxpayer's income (Graduated Poll Tax).**
39	**An Ordinance to provide for the issue and currency of Mauritius silver coins (Coinage).**

APPENDIX II.

I.—GEOGRAPHY, INCLUDING CLIMATE, AND HISTORY.

The island of Mauritius is of volcanic origin. It is situated in the South Indian Ocean at about 1,400 miles from the east coast of Africa and lies between 19° 50′ and 20° 35′ S. latitude and between 57° 18′ and 57° 48′ E. longitude. The greatest length from north to south is nearly 39 miles and the widest breadth from east to west is 29 miles. The area of the island is about 716 square miles, exclusive of that of several small islets round the coast which measure about four square miles.

The dependencies comprise a large number of small islands between 230 and 1,200 miles away. The largest, Rodrigues, which lies 350 miles to the north-east of Mauritius, had a population estimated at 9,425 on 31st December, 1935. The estimated population of the lesser dependencies on that date was 1,328.

Mauritius is situated just within the tropics and enjoys a climate free from extremes of weather except that tropical cyclones at times cause considerable damage to crops, but rarely to buildings. For a great part of the year south-east trade winds, heavily laden with moisture, blow gently over the island tempering the tropical heat. The rain falls mostly in showers. Particularly in the summer months, December-March, the south-east winds are replaced by the light variable winds of the doldrums, which cause discomfort to Europeans, although the temperatures are not high, whereas in the winter months in the residential districts at altitudes of 1,300 to 1,800 feet the temperature may fall to 50° F. The yearly rainfall varies from 30 inches on parts of the coast to 150 inches in the upland regions.

The Mascarene Archipelago was probably known to Arab navigators at an early date and was no doubt visited later by the Malays who colonized Madagascar in the 15th and 16th centuries.

The Portuguese rediscovered it in 1507. They only used Mauritius as a port of call for repairs and supplies, and let loose pigs, goats, deer, and monkeys. It seems probable that rats were introduced in this period as they were a serious pest to the succeeding Dutch colonists.

The Dutch took possession from 1598 and were employed chiefly in exploiting the ebony. They attempted to cultivate sugar-cane, but were frustrated by rats. Although they denuded the forests of ebony they later added to the economic resources of the island by introducing useful trees, plants, and cattle. Negroes were imported for labour, and, as escape into the forests was easy, bands of runaway slaves called Maroons were formed. The combination of the rats and this dangerous population of mixed, but mostly African, origin uncontrolled by any tribal or political system proved too much for the Dutch who abandoned the island in 1710.

The French annexed it in 1715, and by 1722 the population, apart from Maroons, amounted to 160 persons, soldiers, colonists, and slaves. Mahé de Labourdonnais was chosen to develop the Colony and arrived in 1735. In order to make the island self-supporting, he introduced manioc and maize from Brazil and promoted the extension of agriculture by introducing products from all parts of the tropical world. He especially encouraged the cultivation of sugar. He substituted animal draught for carriage by slaves, and to ensure an adequate supply of labour he brought slaves from Africa. From an encampment of straw huts he built up Port Louis into a town of public buildings, private houses, stores, shops and barracks. Labourdonnais laid the foundations of modern Mauritius.

In 1755, large herds of cattle were brought in from Madagascar. Pierre Poivre, Intendant in 1767, established the cultivation of cloves and nutmegs.

In 1810, when Mauritius became British, the population had grown from 160 to about 80,000, of whom 65,000 were slaves. Sugar was then, as now, the principal product, and when in 1825 the duty of ten shillings a hundredweight, levied on Mauritius sugar entering England (in order to protect the West Indian sugar), was remitted, cane plantations immediately developed to a large extent, fresh land was put under cultivation, roads were opened, and steam power was applied to mills. From 18,000,000 pounds the output of sugar rose to 41,000,000 pounds in 1827, and increased annually afterwards.

On the abolition of slavery, 68,613 slaves were freed, and the colonists received £2,112,632 in compensation.

In 1842, Indian immigration at the rate of 6,000 a year was approved, and this resulted in an entire change of the balance of the population.

After a terrible outbreak of malaria in 1866 the wealthier inhabitants of Port Louis moved to higher parts of the island. As a result the country towns expanded considerably and the roads were improved and extended. The railway, begun in 1859, became very popular. One of the most striking features of the progress made has been the social and economic development of the Indians who to-day own and cultivate more than two-fifths of the whole area under sugar-cane. Besides becoming gardeners and taxi-drivers, many Indians have taken to raising cows, goats, fruits and vegetables, and the supply of these essential foodstuffs is almost entirely in the hands of Indians. The section of the population they have displaced centres more and more in the towns, forming the clerk and artisan class.

From 1902 to 1909 the island suffered from severe financial depression owing to the low price of sugar. Matters were aggravated in 1902 by an outbreak of surra which caused great havoc among the draught animals, and necessitated the introduction of mechanical transport.

A Royal Commission was appointed in 1909 to investigate the resources and administration of the island and reported in 1910.

About 1911 the destructive beetle *Phytalus smithi* was discovered in the sugar-canes and more than 300 millions of these insects are now destroyed every year.

The great rise in the price of sugar which took place during and after the War brought prosperity, and both the Government and the general community were for a time far more prosperous than ever before.

As a result a number of important schemes were inaugurated, including the amelioration of sanitary conditions, the improvement of the harbour, the extension and improvement of water-supplies both for domestic purposes and for irrigation, the improvement of the railways, and the extension of education.

Unfortunately, however, from 1921 onwards the price of sugar fell, and the greatly lessened revenues of the Colony had to provide for the maintenance of many works undertaken in better times. In 1929 the state of the sugar industry was so bad that Sir Francis Watts was appointed, at the Colony's request, to visit the island, and to report on the economic situation. The Home Government was, however, unable to approve his recommendation that a subsidy should be given to sugar to supplement the preference granted on sugar imported into the United Kingdom, though a loan was made to the planters from local funds. Despite this loan, however, and an earlier loan granted in 1929, the condition of the sugar industry at the end of 1930 was extremely serious.

The position became worse in 1931 owing to a cyclone which caused considerable damage to property and reduced the year's output of sugar by about 33 per cent. The Imperial Government guaranteed a loan of £750,000 for planters, house owners, and repairs to Government property, on condition that a Financial Commission should visit Mauritius with a view to devising measures to bring about a balanced budget. The Commission's report was published at the beginning of 1932 and immediate steps were taken to carry out measures of retrenchment and economy. As a result it has been possible to balance the budgets for subsequent years.

The situation again became critical in 1934 after a severe drought which reduced the sugar crop by over 20 per cent. below its normal figure. This reduction of the crop coupled with the low prices fetched for sugar resulted in a considerable depletion of the sterling usually available in London for financing the following crop. To assist the sugar industry the Government decided to guarantee the repayment up to £450,000 to the London banks which agreed to open credit by overdrafts to the local banks repayable after the sale of the 1935 crop.

II.—GOVERNMENT.

The Government of Mauritius is vested in a Governor with an Executive Council and a Council of Government. The Council of Government was first established in 1825. It consisted of the Governor and four officials. The next year the Constitution was amended and a Council, including unofficial members, was introduced. This Constitution provided for a Council of Government composed of certain officers of the Crown and of an equal number of other persons to be taken from the chief landed population and principal merchants of the Colony; seven officials and seven unofficials were accordingly appointed.

The Constitution was again amended in October, 1885. The Council of Government, under the revised Constitution, was composed of the Governor, eight *ex-officio* members, nine members nominated by the Governor and 10 members elected by the population: of the latter, two represent the town of Port Louis, the capital of the island, and the remaining eight represent the rural districts. At least one-third of the nominated members were to be persons not holding any public office.

The Constitution was further amended in July, 1933, by fixing at two-thirds the proportion of the nominated members of the Council who are to be unofficials and, although no provision to that effect is made in the Letters Patent, the nominated unofficial members have been allowed a free vote on all occasions. The new Letters Patent, however, provide that the Governor shall have power to enact legislation considered by him to be essential in the interests of good government. Debates in the Council may be either in English or French.

The Constitution of the Executive Council which was hitherto composed of the Governor and four *ex-officio* members was amended at the same time, and the former practice of appointing two unofficial members to the Council was revived.

The number of registered electors on 31st December, 1935, was 9,459. Every male person who is qualified as follows is entitled to be registered as a voter:—

(1) has attained the age of 21 years;

(2) is under no legal incapacity, and is in possession of his civil rights;

(3) is a British subject by birth or naturalization;

(4) has resided in the Colony for three years at least previous to the date of registration, and possesses one of the following qualifications:—

(*a*) is the owner of an immovable property of the annual value of Rs.300;

(*b*) is paying rent at the rate of at least Rs.25 a month;

(*c*) is the owner of movable property within the Colony of the value of at least Rs.300;

(*d*) is the husband of a wife, or the eldest son of a widow, possessing any one of the above qualifications;

(*e*) is in receipt of a yearly salary of at least Rs.600 or of a monthly salary of at least Rs.50; and

(*f*) is paying licence duty to the amount of at least Rs.200 a year.

The ordinary duration of the sessions of the Council of Government is eight months, from May to December, and meetings are held on alternate Tuesdays or oftener when necessary The life of a Council is five years.

The town of Port Louis is administered by a Municipality, an institution which dates as far back as 1790. It was then called " Municipalité du Canton de Port Louis " and was instituted, as were other local Municipalities by the " Assemblée Coloniale." These institutions are mentioned in the law of the constitution of the Ile de France promulgated by the " Assemblée Coloniale," on 21st April, 1791. Sixteen prominent men of the town acted as Councillors of the " Municipalité du Canton de Port Louis " and were denominated the " Conseil des Notables." The " Conseil des Notables " was dissolved in 1792. It was reconstituted at the end of the 18th century under the denomination of the " Conseil des Communes " and was abolished on 10th February, 1820.

The present Municipal Corporation dates from 1850, the first elections taking place at the Masonic Lodge " La Triple Esperance " from 21st to 23rd February in that year. On 24th August, 1925, the Municipal Corporation celebrated the 75th anniversary of its foundation.

The administration of the other principal townships of the Colony, viz., Curepipe, Beau Bassin and Rose Hill, and Quatre Bornes is vested in Boards of Commissioners appointed annually by the Governor. These Boards are empowered to take measures within the prescribed limits of the townships for the making, maintenance, etc., of roads, sewers, bridges, canals, and other works of public utility, for the prevention of fires, and for the proper paving and lighting of the town, etc.

In addition to the Township Boards, District Boards are appointed annually for each district. These Boards are empowered to pass regulations for the making, maintenance, and improvement of branch roads and footpaths, and for the levying of taxes in the extra urban areas.

III.—POPULATION.

The population is divided for statistical purposes into (1) the general population, i.e., Europeans and descendants of Europeans and people of African, Chinese and mixed origin, and (2) the Indian population, i.e., Indian immigrants and their descendants.

The estimated population of the island and its dependencies on the 31st December, 1935, was 407,020 showing an increase of 2,830, the rate of increase being 7·0 per 1,000 living.

The geographical distribution of the population is shown in the following table :—

Districts.	*Area in Square Miles.*	*Census Population, 26th April, 1931.*			*Population on 31st December, 1935.*		
		General population.	*Indian population.*	*Total.*	*General population.*	*Indian population.*	*Total.*
Port Louis...	16½	29,832	24,603	54,435	30,895	24,299	55,194

The number of deaths of infants under one year was 1,847. The infantile mortality rate was 139·4 per thousand live births registered during the year as compared with 129·7 and 131·5 for 1934 and 1933 respectively.

The marriages during the year numbered 1,651 as compared with 1,767 in 1934. The marriage rate or number of persons married to every thousand of the entire population was 8·4 against 9·0 in 1934.

The departures exceeded the arrivals by 267.

IV.—HEALTH.

The present constitution of the Medical and Health Department dates back to 1895 when under Ordinance No. 32 of 1894-5 the powers vested in the General Board of Health were transferred to the Director, Medical and Health Department.

The headquarters staff of the Department consists of the Director, the Deputy Director and the clerical and accounting staffs of the correspondence, financial and storekeeping branches.

The administrative unit of Government is the district which is the political unit as well. Every district with the exception of Black River is provided with a hospital for the reception and treatment of the sick poor. Patients from the Black River district are treated in the Victoria Hospital, Quatre Bornes, or the Civil Hospital, Port Louis. The medical and sanitary administration of each of the rural districts is entrusted to a Government Medical Officer who is in charge of the district hospital and dispensaries and who is also the Health Officer for the district. To assist him, he has a number of subordinate officers; dispensers and sanitary officers and the staff necessary for the care of the patients in the hospital. In addition to his medical and sanitary duties he has also statutory duties of a medical or sanitary nature which he carries out on behalf of the Police and Poor Law Departments. The district dispensaries are visited at regular intervals by the Government Medical Officer.

The hospitals of the Colony are divided into two groups :—

(i) General hospitals, namely :—Civil, Victoria and Moka, totalling 637 beds, which are fully equipped for X-ray and major operative work ; and

(ii) district hospitals where only medical and midwifery cases are admitted and where minor surgery is carried out to a certain extent.

Patients who apply to the latter hospitals and require special treatment, surgical or other, are conveyed to the nearest general hospital by motor ambulance. A mental hospital and a leper hospital are also administered by the Department.

The general health of the population during 1935 has been reasonably good. There was an exceptionally good crop leading to a consequent increase in the amount of money circulating in the Colony. There has been no scarcity of food and the general economic condition of the people, though low, has not been bad.

The principal diseases affecting the population are hookworm disease and malaria.

The prevention of hookworm disease has ceased to be a matter in which the central government can usefully intervene. With the abolition of the system of preparing for agricultural use manure whose chief constituent was human excrement, the widespread infection with hookworm of the canefields ceased. Naturally, some years were required for the cleansing of the soil but it may now be safely presumed that hookworm disease is seldom contracted in the canefields. The problem has become one of personal hygiene, dependent upon a radical change in the personal habits of a very conservative and still ignorant people. The influence of education and propaganda on an agricultural population whose standard of living is definitely low is practically negligible. It is only when a man becomes fairly prosperous that he feels the need to modify his habits according to the new standards of living to which his increased prosperity has raised him. Thus, though the majority of the rural inhabitants have provided their premises with latrines the proper use of which would undoubtedly prevent hookworm infection, they have not yet habituated themselves to their use.

But though the prevention of the disease is now in the ineffectual hands of the rural population, the Government can still institute measures for its control. By the frequent and extensive treatment of the rural population with appropriate drugs the Government ensures that a large percentage of them are periodically released of the infestation to which their blind adherence to custom makes them liable. The hookworm-malaria branch of the Department undertakes mass treatment of the rural population and in this way ensures for those who are willing to take the treatment a certain degree of relief from the consequences of their hygienic shortcomings. Concurrently with the administration of treatment, the staff of the branch hammer home the principles of prevention, but this part of the campaign shows little sign of being effective so long as the general economic level of the population is low.

During the year 115,554 treatments were given.

Malaria.—In 1932 the malaria situation in the Colony was reviewed in the light of past colonial experience and of the new information which had become available through the labours of the Malaria Committee of the League of Nations in Europe. As a result of this review it became evident that much energy was being dissipated by the institution of inappropriate measures and the maintenance of old drainage works whose usefulness had disappeared, either on account of their having been established in areas where such treatment was uneconomic or inappropriate or because subsequent events had nullified their effectiveness. It was accordingly decided to apply to the different regions of the Colony the measures which in the light of the new experience were likely to produce the most effective return for the energy expended. In practice this has meant the virtual abandonment of anti-mosquito measures throughout the greater part of the rural areas lying below 600 feet altitude. Here the object of the Government is to make totaquina as widely available as possible so that sufferers may be able to obtain the treatment which they need. In a few populous places old drainage works of known effectiveness are maintained, but no new works are being undertaken in the meantime.

In most of the region lying higher than 600 feet anti-mosquito work is feasible, on account of the density of the population and of the effects of the cool season in restricting to practical numbers the permanent mosquito nurseries in the area. This area has now been the subject of close study for the past three years and it has been found that most of the mosquito nuisances are not such as require extensive permanent drainage works for their abatement. The problem on the central plateau is not the abolition or the treatment of large natural mosquito-breeding places but the abolition of innumerable small nuisances created and maintained by human agency. The area is strewn with gardens and small holdings on each of which there are maintained collections of water in the shape of watering tubs, barrels, tanks or pits. Of these the pits of the market gardens are the worst offenders as they have been repeatedly found to contain larvae of *A. Costalis.* Water receptacles of this kind are quite unnecessary in this area because practically every house or garden has a piped water supply. In fact most of the storage receptacles are filled from the pipe. The hookworm-malaria branch has been fully occupied in attempting to deal with this nuisance, but progress must necessarily be slow. Nevertheless control of such water collections is essential for control of malaria in this locality.

V.—HOUSING

The housing of the wage-earning population of the Colony may be considered in three categories: (*a*) housing on estates, (*b*) housing in rural areas not estates, and (*c*) housing in towns.

Estate labourers are, for the most part, adequately housed. They are accommodated in lines, or rows of huts, constructed either of stone or of wattle and daub, with roofs more commonly of thatch, but frequently of corrugated iron. Adequate provision is made for the ventilation and lighting of these quarters, but ventilation and lighting appear generally to be disliked by the occupants. At night, every accessible crevice is carefully closed, though the presence of ridge ventilation in many cases assures reasonable change of air in spite of the efforts of the occupants to exclude fresh air from their sleeping apartments. When the dwelling is thatched the problem of assuring adequate ventilation is difficult. The lines must be kept clear of weeds, and all houses are required to have a clear space of at least 10 feet round them. Each camp has adequate latrine accommodation and a supply of wholesome water is laid on, though in many cases the labourers prefer to use the polluted water of streams or nearby irrigation channels for their domestic purposes. As a general rule, the lines are not lit at night. Lighting is scarcely necessary as the occupants retire shortly after sunset.

The housing in rural areas other than estates is fairly satisfactory. The Indian labourer can himself with the aid of his friends construct a satisfactory hut. He generally owns the piece of land on which he builds his hut and what is not occupied by the hut is planted with sugar cane or other agricultural produce, while room is also found for a primitive byre or a shelter for goats. The amenities of life are few, and a locality settled by a number of such persons bristles with sanitary problems arising out of poverty. Fortunately, most of them are now on a pipe-line so that their water supply gives little cause for anxiety, though they may have to carry their water several hundred yards from the nearest public fountain.

In the towns and townships conditions vary. There are areas of overcrowding with its consequent insanitary conditions. Too many persons live in one room, though the climate is such as to obviate many of the evils attendant upon this practice.

VI.—PRODUCTION.

Meteorological Conditions and Sugar Production.

In so far as weather conditions have been concerned, the year 1935 was an exceptionally favourable one for the sugar industry of Mauritius. Temperature was generally above normal while rainfall was copious and well distributed. Two cyclones threatened danger: one, on 27th January and the other on 28th February; but, in both cases, these disturbances passed at a safe distance from the island and no winds of destructive violence were experienced.

As a result of the unusually propitious weather, the sugar outturn attained the record figure of 280,500 metric tons of sugar extracted from 2,501,529 metric tons of cane. The next best figure was recorded in 1914, with 277,300 metric tons of sugar extracted from 2,577,140 metric tons of cane. In view of the fact that the area under cane was, in 1935, about 20 per cent. below the area cultivated in 1914, the figure realized indicates a high standard of efficiency both in the field and in the factory.

The following table exhibits the comparative production for the past seven years:

Yields of Sugar in Thousand Metric Tons.

Districts.	*1935.*	*1934.*	*1933.*	*1932.*	*1931.*	*1930.*	*1929*
Pamplemousses and Riviere du Rempart.	69·97	30·13	57·77	62·73	41·81	43·00	54·68
Flacq...	44·15	30·87	41·37	35·97	27·91	37·81	38·91
Moka	35·76	29·30	40.08	34·12	20·83	32·10	35·97
Plaines Wilhems ...	20·62	11·54	18·22	17·05	11.64	14·62	15·66
Black River... ...	11·28	5·99	8·88	9·06	6·29	9·81	9·22
Grand Port ...	53·38	38·37	50·66	46·66	28·52	46·53	47·18
Savanne	45·34	32·66	44·48	41·63	27·01	37·09	36·41
Total	280·50	178.86	261·46	247·22	164·01	220·96	238·03

The figure for 1931 evinces a reduction, estimated at 34 per cent. due to a severe cyclone. In 1932, a moderate cyclone, passing centrally over the island, caused a reduction estimated at 7 per cent. In 1934, there was a severe drought.

Grades of Sugar.—The proportion of raws was, this year, 85·03 per cent. of the total sugar production; vesous (plantation white) were 14·63 per cent., while low sugars approximated to 0·34 per cent. Corresponding figures for 1934 were as follows: Raws 78·76 per cent.; vesous, 20·56 per cent. and lows, 0·68 per cent.

Area under Sugar Cane.—At the beginning of 1935, the area under cane was estimated at 138,309 acres—a figure practically the same as the one for the year previous. Estates with factory cultivated 61,190 acres; estates without factory, 36,789 acres, giving a total estate cultivation of 97,979 acres or 293 acres above last year's figure. The balance of 40,330 acres was cultivated mostly by Indian peasant proprietors.

Sugar Market.—The average net price for the crop reaped in 1934 approximated to Rs.6·06 per 50 kilos, including extra colonial preference. For 1935, the average net price realized so far (February, 1936), is about Rs. 5·82 per 50 kilos.

Owing to the slump in the sugar market, the Secretary of State for the Colonies consented to a partial remission of loan repayments for this year, so long as the average sale price did not exceed 10s. 6d. c.i.f. London.

Disposal of the 1934-5 Sugars.—The total quantity of sugar exported during the 1934-5 year (1st August, 1934 to 31st July, 1935) was 166,040 metric tons, distributed as follows:

	Metric tons.
Great Britain	158,726
Canada	6,401
Hong Kong	681
Other places	232
Total	166,040

The exportation for 1935-6, up to the end of December, 1935, was as follows:—

	Metric tons.
Great Britain	93,253
Canada	31,531
Hong Kong	51
Other places	118
Total	124,953

or more than twice the amount for the corresponding period last year.

The local consumption of sugar for the 1934-5 year was 11,211 metric tons, as against 10,381 for the year previous and 9,111 for 1932-3.

Labour.—No special difficulties were experienced during the year in regard to labour, although the harvested crop was the heaviest on record.

Sugar Machinery.—Machinery to the value of Rs.438,588 was imported during the year, as against Rs.397,700 last year. Tramway material to the value of Rs.194,666 was imported in 1935 as compared with Rs.280,557 in 1934.

Fertilizers.—The importation of fertilisers in 1935 totalled 15,589,852 kilos valued at Rs.1,754,425 as compared with 14,970,515 kilos valued at Rs.1,807,097 in 1934.

Pests and Diseases of the Sugar-Cane.—With regard to *Phytalus Smithi* Arrow, the major enemy of sugar-cane plantation in Mauritius, no new centre of infestation was recorded though, in certain localities, the general spread of the pest proceeds. The Phytalus Investigation Officer, Mr. W. F. Jepson, B.Sc., A.R.C.S., journeyed during the course of the year to Java, the Malay States and the Philippines and made a thorough investigation of the possibilities of supplying fresh enemies for Phytalus. In all, 14 new species of parasites were shipped and liberated. Of these, four species have already established themselves in Mauritius.

Minor Agricultural Industries.

Tobacco.—A reduction of the planted area to 404 acres, as compared with 1,080 for the previous year, was rendered necessary by the accumulated stocks of unsold leaf at the Government tobacco warehouse. On the whole, conditions were generally favourable but late rains caused secondary growth in late plantations and, whilst increasing yields, the quality suffered. The amount of leaf purchased by the Warehouse during 1935 was 275,710 kilos, of a value of Rs.268,321, as compared with 461,881 kilos of a value of Rs.541,403 in the previous year.

Attention is still being directed towards the possibility of establishing an export trade. The flue-cured and air-cured leaf shipped to London in 1934 was returned as unsuitable for the home market as regards flavour. Notwithstanding, enquiries were received as to whether Mauritius leaf could be obtained in commercial quantities and a small shipment is to be forwarded to England in 1936, for which sale is guaranteed.

Aloe Fibre.—Market conditions remained very poor throughout the year. The total export in 1935 was 446 metric tons as against 670 in 1934.

During the early months of the year, the factory of the Mauritius Spinning and Weaving Co. closed its doors and, at the present time, there is no particular prospect of the manufacture of fibre bags being resumed.

Pineapple.—There was a small extension of the area under cultivation. The canning factory is still, however, far from being able to work on full load, although prospects appear somewhat better; the production in 1934-5 was 2,188 cases of canned fruit and it is hoped to reach about 5,000 cases for the year 1935-6.

Tea.—Efforts to further progress in this industry are being maintained. The total production of the two principal tea gardens reached 40,480·5 kilos for 1935.

Coconut Industry.—The export of copra during the year 1935 amounted to 1,746 tons of a value of Rs.217,985 as against 1,565 tons of a value of Rs.161,687 in 1934. The export of coconut oil during the year was 2,652 litres valued at Rs.906 as compared with 15,324 litres valued at Rs.3,653 in 1934.

Alcohol.—The total quantity of alcohol distilled for human consumption amounted to 539,[illegible] litres, as against 510,232 litres during the previous year. The quantity distilled for industrial purposes was 360,670 litres as against 441,620 litres in 1934. The exportation of rum during the year was 18,155 litres, valued at Rs.5,299, as against 35,325 litres valued at Rs.10,177 in 1934.

Veterinary and Livestock.—Interest in cattle breeding and management continues to awaken but there is still plenty of room for further development. At the beginning of 1935, the horned cattle on estates totalled 14,615 head as compared with 14,247 at the beginning of 1934. This increase was confined entirely to milch cattle or cattle in herds (as opposed to draught oxen); motor transport continues to expand, and by doing so automatically decreases the number of burden cattle. Cattle importation from Madagascar and other places amounted to 4,406 head; of these, 4,403 were imported from Madagascar for beef and three from elsewhere for other purposes.

Other Manufacturing Industries.

Activity was well maintained in the subsidiary industries of the Colony. Engineering workshops numbered 47, employing about 500 people. During the year, there were in operation 75 bakeries, 40 lime kilns, nine cigarette factories, six distilleries, three hydro-electrical plants (for light and power), four salt-making establishments, four docks (landing, etc.) employing in all over 2,000 persons.

Cabinet-making firms numbered 130. In addition, leather tanning, boot and shoe making, aerated water works, ice works, etc., etc., provided means of livelihood to a large number of people and contributed, to a certain extent, in making the Colony more self-supporting.

Fisheries.

The island of Mauritius is almost entirely encircled by a coral reef the distance of which from the beach varies considerably. Between the reef and the shore lie the comparatively shallow waters of the lagoon in which many varieties of valuable fish are to be found.

These fish are caught principally by means of a locally made basket-trap known as " Casier ", but some varieties are taken regularly by professional and amateur fishermen on hook and line.

Outside the lagoon the professional concentrates on basket-trap fishing close to the reef and deep-sea hand-line fishing from sailing craft, while the amateur, with a motor boat at his disposal, "trails" for tunny, marlin, baracuda and other large surface-feeders which are taken in considerable numbers at certain seasons of the year.

In 1926, Mr. J. Hornell, F.L.S., F.R.A.I., formerly Director of Fisheries in Madras, visited the Colony and made a most valuable report upon the whole question of fisheries in Mauritius and his recommendations have as far as possible been given effect to during the past nine years by a Fisheries Advisory Committee and the local Government.

The most important matters that have been considered are the questions of net fishing and the salt fish trade, the Committee advocating the suppression of nets and increased protection for the local industry of preserving fish by drying and salting.

Fishing with large nets has been prohibited since 1st October, 1934, without prejudice to the quantity, quality or price of fish in the markets.

River fishing, which is strictly preserved, is confined to a sporting type of carp which takes a fly and a fish known as "Chite" which resembles a mullet and is found in the estuaries of the few local rivers.

The enforcement of the Fisheries Laws is carried out by the Fishery Control Sections of the Police Force who concentrate upon the prohibition of net fishing by patrols afloat and ashore and supervision of fish transport and markets.

VII.—COMMERCE.

Mauritius produces barely one-tenth of the foodstuffs required for its inhabitants, and imports practically all articles of food and drink (except sugar) and manufactured goods of all descriptions. The principal item of the Colony's export trade is sugar, though aloe fibre, copra, raw hides, etc., are also exported.

In 1935 economic conditions showed an improvement on 1934 but, on balance, imports exceeded exports by Rs.1,241,905. This situation was caused not by the smallness of the sugar crop but was solely due to the low price realized.

The total values of imports and exports for the last five years were :—

	Imports. *Rupees (c.i.f.)*	*Exports.* *Rupees (f.o.b.)*
1935	**29,891,160**	**28,649,255**
1934	**29,680,346**	**26,136,140**
1933	**29,035,237**	**32,176,743**
1932	**26,992,760**	**27,662,851**
1931	**32,064,074**	**23,829,884**

The declared value of exports in 1935 does not include the value of sugar quota certificates which in this year may amount to about Rs.4,858,000. The actual value of exports in 1935 may therefore be placed at Rs.33,507,255.

Imports of Merchandise.

Rice, which is the staple food of the population represented about 22 per cent. of the total imports in 1935 against 20 per cent. in 1934. The total quantity of rice and flour imported was equal to the annual average of normal years.

As a result of quotas imposed in 1934 on cotton and artificial silk piece-goods, the bulk of the trade in these goods which was shifting to Japan has reverted partially to the United Kingdom; India, however, has gained a large share of the importations of cheap grey and printed cottons. No quota has yet been imposed on the importations of woollen piece-goods and Japan continues to gain considerable increases in this line.

Previous to 1932 the greater proportion of manufactured tobacco and cigarettes consumed locally was imported, but, as a result of the increase of Customs duties combined with technical advice and control by the Agricultural Department, importations have decreased and a greater proportion of the tobacco consumed is now produced in the island.

The trade returns indicate a similar trend for wines, matches, salt and maize and there are indications that the local manufacture of common soap will increase.

The trade in edible oils which was formerly chiefly with India and China now shows an increase in favour of the United Kingdom, owing to the superior quality of the soya oil there obtained.

In addition to the above the Colony is also a large importer of chemical fertilizers for the cane fields; coal and motor spirits for rail and motor transport; machinery for sugar estates; vehicles of all description; bullocks for food and gunny bags for packing sugar. Other considerable items of importation are wearing apparel, drugs, provisions, timber, etc.

The following table shows some of the principal articles imported during the last two years :—

		Quantity.		*Value in Rupees (c.i.f.)*	
		1935.	*1934.*	*1935.*	*1934.*

Petrol	hectolitres	54,170	55,788	696,481	754,821
Saltpetre ...	kilos	4,846,508	3,533,177	694,957	664,763
Sulphate of Ammonia.	„	9,819,471	7,396,528	885,677	732,290
Soap	„	1,171,323	1,625,744	456,343	649,941

The proportion of food, drink and tobacco to manufactured articles imported is shown below :—

	Food, drink and tobacco. *Rs.*	*Manufactured articles.* *Rs.*	*Total imports including other articles.* *Rs.*
1935	12.900,047	14,745,275	29,891,160
1934	12,010,600	15,231,749	29,680,346

The figures indicate inability on the part of the consumer to purchase manufactured articles, but the higher price of most of the principal essential foodstuffs increased the total imports to slightly more than in 1934. On the other hand certain luxury articles such as silk and motor cars show increases.

Exports of Merchandise.

The sugar exports for the last two years were :—

	Metric tons.	*Value in Rupees f.o.b.*
1935	233,202	26,895,460
1934	185,616	24,510,185

Practically all sugar exported is consigned to the United Kingdom.

Apart from sugar other exports are comparatively insignificant in value. They are chiefly :—aloe fibre (445 tons valued Rs.83.141) ; copra and poonac (1,746 tons valued Rs.217,985) ; rum (182 hectolitres valued Rs.5,299) ; coconut oil (2,652 litres valued at Rs.906).

Domestic exports in 1935 amounted to Rs.28,008,615 and re-exports to Rs.640,640.

The re-exports are chiefly lentils, gunny bags, salted fish, old metals, etc., to the neighbouring islands of Reunion and Madagascar and also the Union of South Africa.

Bullion and Specie.

Apart from the trade in merchandise, bullion and specie were imported and exported to the total value of Rs.36,866 and Rs.1,275,622 respectively in 1935 against Rs.2,182,000 and Rs.2,419,834 in 1934.

Distribution of Imports.

The import trade is mainly from the United Kingdom (30⅓ per cent.) and India (36¾ per cent.). The United Kingdom is the source of most of the manufactured articles and India of grain, spices and gunny bags.

Other sources of supply are Australia (5 per cent.), France (3¾ per cent.), Japan (3⅓ per cent.), United States of America (3¼ per cent.).

Australia is the principal source of supply for flour and butter. Importations from France and Japan are declining. The United States and the Dutch East Indies are the principal sources of petroleum products.

Course of Prices of Imports.

It is to be deplored that the average price of rice was higher in 1935 than in 1934 and was nearing 11 cents per kilo c.i.f. The price of flour and of other essential foodstuffs also tended to increase. The price of petrol however decreased.

Development of Empire Trade.

Since 1924 the Colony has accorded preference to United Kingdom goods. This preferential tariff was extended from year to year and assumed in 1933 an Imperial character. As from 1934, quotas were imposed on artificial silk and cotton piece-goods and as a result both the United Kingdom and India benefited.

These factors caused the import trade from the Empire to increase from Rs.19,052,690 in 1932 to Rs.23,460,095 in 1935, whereas the imports from foreign countries fell from Rs.7,811,096 to Rs.6,358,009.

VIII.—WAGES AND COST OF LIVING.

No marked change was in evidence during the year. Labourers under monthly contract received, in cash, Rs.10 per month, with rations, free lodging, free medical help, etc., in all equivalent to Rs.18 to 20 per month.

Male day labourers received R.0·50 to R.0·60 per daily task, according to locality, during the intercrop season but, while the harvest is in progress, wages are about double these figures. Females, as a rule, receive half the wages of males.

Remuneration for piece-work was, on the average, as follows:—

	Per acre. *Rs.*
Clearing land	30–40
Digging cane holes	18–20
Manuring	15
Weeding	8
Cutting canes (20 tons/acre)	10–12

The wages of artizans were between Rs.1 and 2 per day according to nature of work, while those paid monthly received between Rs.35 and 75 according to circumstances.

The supply of domestic servants is abundant; but such servant may not always be efficient. Butlers, cooks, gardeners and other servants receive between Rs.10 and Rs.35 per month. Chauffeurs get, on the average, Rs.35 per month. Owing to better general conditions, labour is more abundant in the central districts than elsewhere.

No very great change occurred in rates of salaries in 1935. The following table indicates, in a general way, the ruling rates during the year :—

	Rs. per annum.
Managers of sugar estates and senior Government officials	8,000—13,000
Government, bank and commercial clerks (higher grade)	4,000— 7,000
Clerks and employees on sugar estates	1,500— 3,000
Junior clerks and employees	720— 1,500

In spite of occasional fluctuations, the cost of living in 1935 was perceptibly higher than during the year previous. Rice, the staple food of the population, was indexed at 72, as compared with 66 last year (and 100 in 1914). Other grains oscillated between 78 and 84. Flour rose from 35 during the first quarter to 63 during the last. Edible oils were between 78 and 85, while lard rose from 56 in the first quarter to 75 in the last. Tea and coffee remained about stationary: the former at 107 and the latter at 75. Articles of clothing oscillated between 158 and 139. The quarterly weighted index for the total cost of living (28 items) in 1935 was as follows (100 being the index for 1914) :

First quarter	114·5
Second „	119·2
Third „	117·2
Fourth „	112·7

The mean for the year was 115·9 as compared with 112·8 in 1934. As regards the labouring classes, the following table indicates the purchasing power of wages, in terms of rice, since 1927 :—

Year.	*Average daily wages of male labourer.*	*Average price of fair quality rice per lb.*	*Purchasing power of wages expressed in lb. of rice.*
	Rs.	Rs.	lb.
1927	1·25	0·13	9½
1928	1·25	0·10	12½
1929	1·00	0·10	10
1930	0·80	0·09	9
1931	0·75	0·08	9
1932	0·45	0·05½	8
1933	0·45	0·06	7½
1934	0·45	0·06	7½
1935	0·55	0·07	8

The official index numbers do not take into consideration the altered standard of living since 1914 nor those items such as housing, lighting, tuition of children, taxes, etc., which have either not been reduced or else actually increased. In consequence, the cost of living for Europeans and people living in European style is, in fact, higher than the official index would lead one to suppose.

IX.—EDUCATION AND WELFARE INSTITUTIONS.

Primary.—Primary education is not compulsory, but it is given free through Government and State-aided schools which are open to all children of the Colony. The following table shows the number of primary schools, the number of pupils on roll, and the staff of teachers during the year 1935:—

Schools.	*No. of Institutions.*	*No. of Teachers.*	*No. of Pupils on roll.*	*No. of Pupils in average attendance.*
Government	50	387	14,975	10,720
Aided	76	603	24,506	17,279
Total	126	990	39,481	27,999

State-aided schools are under the control of a Manager, and the Government contribution includes the salaries of the teachers together with recurrent grants to meet part of the expenditure on maintenance of school buildings and furniture.

Pupils must be at least five years old and must have been successfully vaccinated in order to be allowed admission to a primary school; when they are under five they undergo a preliminary training before being promoted to the lowest form.

The curriculum of studies includes the teaching of English, French and arithmetic. In the higher classes elementary history and geography are taught and girls study needlework. Regular instruction is also given in physical drill, nature study, hygiene and elementary principles of agriculture.

There are six primary school standards or classes, viz.:—

Standard I with pupils from 5 to 6 years of age.
Standard II with pupils from 6 to 7 years of age.
Standard III with pupils from 7 to 8 years of age.
Standard IV with pupils from 8 to 10 years of age.
Standard V with pupils from 9 to 11 years of age.
Standard VI with pupils from 10 to 12 years of age.

There are no fixed age limits for the different standards but no pupil may be entered on the attendance register who is under five years of age, and no pupil may be retained on the register after the annual examination which follows his or her fourteenth birthday, exception being made for pupils following the scholarship classes.

Examinations which were formerly held for all the classes are now limited to Standards V and VI. The new system allows educational officers to devote more time to inspection work proper with the result that teaching methods are gradually improving.

Fourteen apprenticeships are awarded annually to primary school pupils to encourage the study of needlework and handicraft. Twenty-six scholarships and exhibitions tenable at the secondary schools are awarded every year, through competitive examinations, to the best pupils attending primary schools.

There are thirty gardens attached to the primary schools and they are cultivated by the pupils of Standards III to VI. These gardens are regularly inspected by officers of the Agricultural Department who give advice as to proper cultivation.

Secondary.—There are two categories of secondary schools, viz. :—(1) Secondary aided schools, which are managed privately but are under Government control, and (2) the Royal College and the Royal College School which are managed by Government.

(1) *Secondary aided schools.*—Government grants to secondary aided schools are assessed with reference to attendance and efficiency, as tested by inspection and examination, and not, as in the case of primary aided schools, with reference to maintenance and salary charges.

The following table shows the number of institutions, the number of pupils on roll and in average attendance, and the staff of teachers during the year 1935 :—

Schools.	*No. of Institutions.*	*No. of Teachers.*	*No. of Pupils on roll.*	*No. of Pupil in average attendance.*
Aided	9	132	1,556	1,374

These schools provide not only for elementary education such as given in primary schools, but also for higher education leading up to the Cambridge School Certificate and the London Matriculation.

The curriculum of studies includes the teaching of English, French, mathematics, needlework (for girls), hygiene, history and geography. In addition to these, drawing and music are taught on a more moderate scale.

These schools are visited periodically by the Superintendent of Schools, who examines the lower forms. The middle and higher forms are examined partly by local examiners and partly through examinations conducted by the Syndicate of the University of Cambridge.

Working hours in both primary and secondary schools extend, as a general rule, from 10 a.m. to 3 p.m. no provision being made for evening classes.

(2) *Royal College.*—The Royal College is a Government School for the secondary and higher education of boys up to a standard equivalent to that of the Higher Certificate examinations conducted by Oxford and Cambridge Universities. It comprises two schools under the management of the Rector, the Royal College proper in Curepipe and the Royal College School in Port Louis, where pupils who live in or near the capital are educated on the same lines as in Curepipe up to School Certificate Standard. At the Royal College the teaching staff consists of the Rector, 12 Masters with degrees in Honours at British Universities, 11 Assistant Masters appointed locally, and a Physical Training and Gymnastic Instructor (who also attends once weekly at the school

to take classes); and at the Royal College School, of the Headmaster, one Master and eight Assistant Masters. Assistant Masters are encouraged to take the B.A. and B.Sc. examinations of London University. The College has well-equipped libraries and chemical, physical, and biological laboratories; almost as many pupils follow classical as scientific studies. The subjects taught are English, French, mathematics, Latin, Greek, chemistry, physics, biology, geography and history; and classes are held during school hours in physical training and gymnastics. Admission to the College and School is conditional upon passing an entrance examination or winning one of the 20 Annual Primary Schools Scholarships and Exhibitions or one of the two Secondary Schools Scholarships awarded annually. The boys are drawn from all classes and races in the Colony, and range in age from 10 to 20 years. The fees are from Rs.96 to Rs.192 per annum, and pupils may travel at quarter rate on the Government railways. About six scholarships and exhibitions tenable at the College are awarded annually to College and School pupils, besides four scholarships and four exhibitions open to other secondary schools as well, and also a Classical and a Modern Scholarship of the present value of £1,300 each (with first-class passage to and from England) tenable for four or five years at a British University or any other approved place of education in the United Kingdom. Besides the winners of these two scholarships, a few boys whose parents can afford it go to England or France to study for a profession, usually Medicine or Law, and almost always return to Mauritius to practise. Of the remaining pupils the majority on leaving the College find employment in the island.

The boys receive a training in classical and scientific subjects. Specialization begins at the Entrance class, and the division into modern and classical sides becomes complete in the Upper Middle class. At the School, pupils may undergo commercial training in place of classics or science.

Classes are held between 9.30 a.m. and 3.30 p.m. on five days weekly. In addition to the ordinary classes there are Saturday extension classes where candidates for Pharmaceutical Diplomas and other public science examinations are helped in their studies. The number of pupils on the roll of the Royal College in January, 1935, was 325, and of the School, 156. The average attendance at the College was 273 and at the School, 124. (The number of College pupils on the roll in May, 1935, after the publication of the School Certificate results, was 307.) One hundred and one pupils sat in December, 1934, for the Cambridge School Certificate, of whom 48 obtained certificates. In May, 1935, the number of pupils who had passed this examination and proceeded to the highest class of the College was 43.

Besides the regular Physical Training Classes encouragement is given to rugby and association football, hockey, boxing and gymnastics and athletics, in which, although by no means all the boys join, the standard of proficiency is high. As the pupils are all day-boys it is difficult to obtain much support for other social activities, but a school magazine is published thrice yearly.

Welfare Institutions.

There are six Roman Catholic infirmaries for men and women, and two orphanages for children under the management of Sisters of Mercy; also an orphanage for boys and one for girls under the control and management of the Church of England, and one "home" for men and women under the management of the Church of Scotland. These institutions receive from the Government a maintenance fee for each pauper maintained therein.

Under Ordinance No. 44 of 1932, subsequently amended by Ordinance No. 21 of 1934, a home, styled the Austin Wilson Home, has been instituted and incorporated to provide accommodation and subsistence for aged gentlefolk. The funds for the establishment of this home have been generously contributed by Mr. G. J. Wilson in memory of his son, the late Austin Wilson.

A Mohammedan orphanage was also established in Port Louis in 1932 for the maintenance and education of orphans of the Mohammedan creed. Funds for running the institution are obtained from voluntary subscriptions among the Mohammedans.

Outdoor assistance to paupers was being granted by the Poor Law Department partly in cash and partly in food provisions until the 31st of October, 1935, when the grant of relief in kind was discontinued.

Several private religious societies for the distribution of assistance in food and medical care are also in existence. The Société Française d'Assistance chiefly assists French nationals.

The Child Welfare Committee and the Oeuvre Pasteur de la Goutte de Lait, two philanthrophic Institutions in receipt of Government grants, deal especially with expectant and nursing mothers and their babies.

The Workmen Compensation Ordinance provides for the grant of compensation by employers to workmen who are injured in the course of their work.

Recreation, Music, Art and Drama.

Association football is the most popular form of sport. Golf, tennis, cricket, hockey and rugby footfall are played mostly by the wealthier classes. The Mauritius Turf Club and the Mauritius Jockey Club hold race meetings from May to September at the Champ de Mars in Port Louis and at Floreal in the district of Plaines Wilhems; and regattas are held by the Yacht clubs of Mahebourg and Tombeau Bay. "La Chasse" or the shooting of driven deer is a favourite sport of Mauritius. The season is from June to the beginning of September.

There are several flourishing companies of Girl Guides and Brownies; the latter are known locally as Blue Birds. The Boy Scouts have not been so successful as the Girl Guides, but efforts are being made to encourage the movement.

There is not much encouragement for any of the arts. Music is fostered principally by the parish churches whose amateur singers frequently give concerts. The Christian Brothers also provide musical training, and apart from the Police Band, which consists of a bandmaster and 30 bandsmen, a band styled the " Alliance Musicale " and comprising about 25 units was established in 1933.

The Municipality of Port Louis has instituted a drawing class, practically the only encouragement to local talent. The Institute has a collection of pictures presented by Mr. Rochecouste but there is no other art gallery.

Occasional dramatic performances are given by amateurs, but no permanent society has been formed. In better times the Municipality of Port Louis subsidizes a theatrical company from France, which plays in the theatre at Port Louis. The Chinese have their own theatre in the town, to which companies come from China when conditions are prosperous.

There exists a Royal Society of Arts and Sciences which was founded in 1829 under the title of Société d'Histoire Naturelle and was granted a Royal Charter in 1846. It interests itself in most branches of science and arts, especially those relating to questions of agriculture and the natural history of the Colony. The Society was incorporated with the Mauritius Institute in 1906 and its library has been transferred to the Institute.

X.—COMMUNICATIONS AND TRANSPORT.

Roads and Road Transport.

The Colony is well served with 500 miles of main roads maintained by Government and 188 miles of branch roads maintained by the District Boards. All roads are metalled and 165 miles of the main roads have been covered with bitumen.

Every visitor to Mauritius remarks upon the excellent roads which enable every point of interest in the Colony to be reached quickly and in comfort. The surfaces of all the main roads are tarred and a policy of systematic widening and improvement of bends and gradients has been steadily pursued for the past ten or more years with remarkable success.

At the close of the year 1935 there were 2,656 motor vehicles in use classified as under :—

Private cars	1,622
Taxi Cabs	364
Lorries	338
Motor Cycles	210
Omnibuses	122

Motor vehicles imported during the year totalled 332, of which 232 were of English make.

The general type and condition of motor cabs for hire in Port Louis and the townships is very good and fares are normally fixed at Rs.0.25 per mile for short distances while special terms can be arranged for long journeys or hire by the day.

The local motor bus carries from 20 to 26 passengers at fares averaging from 2 to 5 cents per mile and operates on all the main roads with considerable benefit to the travelling public. The retail price of petrol is usually Rs.10·00 per eight gallon case which is equivalent to about 1s. 10½d. per gallon.

The annual tax payable in respect of motor vehicles is Rs.4 per horse-power in respect of motor cycles and Rs.5 per horse-power in respect of other classes of vehicles. Lorries pay an additional tax of Rs.40 per ton gross weight and motor buses a licence duty varying from Rs.200 to Rs.500 per annum in accordance with their seating capacity. Motor lorries plying for hire pay a further licence of Rs.200 per annum. Motor cabs pay a licence duty of Rs. 30 per annum and the cost of a driving licence is Rs.5 a year.

Cars of visitors are subject to a tax at the rate of Rs.5 a month.

Railways.

The figures and remarks given in this report are for the financial year from 1st July, 1934, to 30th June, 1935.

The Mauritius Government Railways, not including 13⅓ miles of 75 cm. gauge track, known as the Bois Cheri Light Railway, are of the British standard 4 feet 8½ inch gauge, and comprise 110½ miles of main line, 30 miles of station lay-outs and Government sidings, as well as 15¼ miles of other sidings maintained by the Railway Department for planters and sugar estates. The railway is exceptional on account of its comparatively short length and very heavy gradients, much of it being 1 in 26. The most important section, the Midland Line, 35¼ miles long, rises to 1,800 feet above the terminals at Port Louis, the capital, on the north-west and Mahebourg, the old port, on the south-east coast of the island. A branch from Rose Belle on the Midland Line, 870 feet above sea-level, to the little creek and town of Souillac is 11 miles long. The North Line from Port Louis to Grand River south-east, 33½ miles long, is fairly level. The Moka Branch, from Rose Hill, on the Midland Line, 950 feet above sea-level, to Montagne Blanche, is 14¾ miles long and rises on this length to 1,500 feet. The Black River Branch, from Richelieu on the Midland Line to Tamarin, is 12½ miles long and the Montagne Longue Branch, from Terre Rouge on the North Line to Montagne Longue, is 3½ miles long. There are no heavy gradients on either of these lines.

The Railway Estimates for 1934-5 envisaged excess of expenditure over revenue of Rs.197,203. The year actually closed with an excess of expenditure over revenue of Rs.435,034 as shown below. This sum includes Rs.300,000 set aside for depreciation of wasting assets, the amount actually spent being Rs.59,558 for the year.

	Revenue				*Increase or Decrease of 1934-35 over 1933-34.*
	1931-32.	*1932-33.*	*1933-34.*	*1934-35.*	
	Rs.	Rs.	Rs.	Rs.	Rs.
Passengers ...	434,325	419,181	524,818	510,728	— 14,090
Parcels	63,466	62,163	65,776	61,019	— 4,757
General Goods ...	817,077	1,174,046	1,255,729	928,850	— 326,879
Miscellaneous ...	70,875	57,412	53,809	52,102	— 1,707
Net Revenue ...	187,938	63,554	36,738	43,809	+ 7,071
Total ...	1,573,681	1,776,356	1,936,870	1,596,508	— 340,362
Goods Tonnage	254,139	362,642	385,541	279,646	

	Expenditure				*Increase or Decrease of 1934-35 over 1933-34.*
	1931-32.	*1932-33.*	*1933-34.*	*1934-35*	
	Rs.	Rs.	Rs.	Rs.	Rs.
Working expenditure including renewals	1,945,113	1,516,631	1,606,730	1,808,354	+ 201,624
Net revenue expenditure	642,785	260,955	190,308	223,162	+ 32,854
Total ...	2,587,898	1,777,586	1,797,038	2,031,516	+ 234,478
Capital Expenditure	20,226	304	—	26	+ 26
	2,608,124	1,777,890	1,797,038	2,031,542	+ 234,504

The revenue of the railway varies annually in proportion to the volume of the sugar traffic. The estimates for the year were based on a crop of 230,000 tons, of which as in the previous year, it was assumed that 15·75 per cent. would be carried by road or by coasters. Unfortunately a drought prevailed so that the crop only amounted to 178,000 tons, and of this quantity, 25,039 tons or 14·07 per cent. were carried by road or by sea.

Passenger revenue, depending as it does in Mauritius upon the spending power of the public, shows a decrease of Rs.14,091 on last year's figure. This result is indirectly due to the failure of the sugar crop and not to any growing popularity of the rival road traffic. Railway passengers have decreased in the year under review by 87,596 (2·7 per cent.), i.e., to 3,200,118 journeys, the corresponding number of journeys in 1933-4 being 3,287,714.

Goods revenue, which again largely depends upon goods sent up country to sugar estates, shows a reduction of Rs.45,788 for the year.

Tramways.

In relation to the tramway lines established on sugar estates since 1901, it would seem that motor traffic is tending to bring about a reduction. During the year, the total extent of line approximated to 1,680 against 1,740 kilometres in 1934. The number of locomotives was reduced from 224 in 1934 to 214 in 1935 and the number of trucks from 7,500 to 7,400. Farm tractors numbered 80 in 1935 against 81 in 1934.

Post and Telegraphs.

The usual post office facilities in regard to correspondence, parcels and remittances are available in Mauritius. The island is served by 52 offices and postal agencies of which 47 are also telegraph offices where inland telegrams, cablegrams and radiograms are accepted for despatch and are received for delivery. With the exception of a few outposts in outlying localities, the offices are on the railway lines. The outlying offices and localities far from the railway stations are served by postmen or by mail contractors.

Oversea mails are received and despatched regularly twice every month by the French Messageries Maritimes steamers via Suez and twice in transit through South Africa by the Dutch K.P.M. steamers. The outward mails include correspondence for transmission by air via four routes: Johannesburg, Nairobi, Tananarive and Batavia. The time taken by these partial air mails varies between 16 and 28 days: via Johannesburg, 16-21 days; via Nairobi, 24-27 days; via Tananarive, 16-21 days; via Batavia, 23-28 days.

Mails to and from India, Ceylon, the far East and Australia are usually received and forwarded by the Messageries Maritimes steamers via Mombasa and Aden and by the Dutch K.P.M. steamers via Singapore or Batavia. There are also occasional opportunities for direct communication with Ceylon, India and Australia.

English parcel mails are not usually despatched through South Africa and are therefore less frequent than letter mails; the regular route is via Marseilles by the Messageries Maritimes steamers, and the irregular, direct route via the Cape by a Clan line or other steamer.

There is a regular monthly service by the Dutch K.P.M. steamers with Rodrigues, the largest dependency of Mauritius, and a regular four-monthly steamer service with the other dependencies. Occasional communications by sailing vessels are also available.

Remittances may be made by both money orders and postal orders. There are direct exchanges with the United Kingdom, South Africa, India, Ceylon, Mozambique, Australia, Seychelles and Hong Kong; and through the intermediary of these offices, remittances may be made to almost any place. Remittances may also be made by telegraph to the United Kingdom, South Africa, India, Mozambique and Seychelles.

The telephone service is managed by the Oriental Telephone Company whose main office is in Port Louis with which the rural districts are connected. Government offices are linked together by a Government owned telephone system which is connected with the Oriental Telephone Company's lines. Telegraphic communication is provided by cable and is maintained by the Eastern and South African Telegraph Company whose local station is in Port Louis. Cablegrams from and to the rural districts are transmitted over the Government lines. The Company maintains a station also at Port Mathurin in Rodrigues. All classes of traffic are accepted.

Communication with the outer world is also maintained by a wireless station. The station works mainly with ships at sea, but there is also a service with Reunion Island. The wireless station was built by the Admiralty in 1915 for communication with ships at sea and with the various naval bases in the Indian Ocean. It was closed for a short period in 1922-3 and was taken over by the Mauritius Government in June, 1923. There has been a 24 hour service since October, 1928.

During the cyclonic season from 1st November to 15th May, a detailed weather report including observations made at Seychelles, Rodrigues and Reunion is transmitted to all ships and stations within range at 0845 G.M.T. daily. The average yearly number of weather reports intercepted from ships at sea is 2,500. When a cyclone is in the vicinity, the Government tug *Maurice* stationed in the harbour at Port Louis is manned and inland weather reports are transmitted by wireless telegraphy from the tug to all vessels in port, for the guidance of their masters. The wireless apparatus in the *Maurice* also acts as a stand-by in the event of accident to the aerial system at the main wireless telegraphy station at Rose Belle. In June, 1935, the 3 kw. spark transmitter which had been in operation since the re-opening of the station in 1923 was dismantled and was replaced in conformity with the Telecommunication Convention by a modern valve set. The range of the station is now 1,000 miles.

There is a privately owned local broadcasting station licensed by Government. The station transmits on 952 K/cs. The programme consists mainly of reproductions of gramophone records.

Harbour.

Port Louis, the capital of the Colony, possesses the only navigable harbour for ocean-going ships, which is picturesquely situated on the north-west coast. A wide break in the ring of coral reefs surrounding the island, caused by the meeting of several rivers and streams, the Latanier, La Paix, Le Pouce, and Creole, gives access to the harbour, which had been dredged so as to provide deep-water accommodation for ten ships lying at berths in the channel and drawing from 24 to 31 feet of water. The harbour is flanked on the north by Fort George, a military post, and on the south by Fort William, which is abandoned. The mountains of the range behind Port Louis, including the Pouce, 2,661 feet, and Pieter Both, 2,690 feet, are guiding beacons to ships by day. The lighthouses of Flat Island, the Colony's quarantine station six miles north of Mauritius, and Caves Point, five miles south of Port Louis on the cliff's edge, and the gas buoy to the north of the outer harbour entrance, direct ships approaching Port Louis by night. A tide gauge has been in operation for four years. The maximum rise of tide at ordinary springs is three feet, which diminishes to two or three inches at ordinary neaps. Dredging of the berths and channel by the Government plant is continuously in progress.

The Government of Mauritius is the Harbour Authority. The Government has from time to time sold or let to two lighterage companies various areas of land bordering the harbour. These two companies, the New Mauritius Dock Company and the Albion Dock Company, each own about 45 lighters with the necessary tugs, and undertake all the storage and lighterage of sugar. The British India Steam Navigation Company also own 30 lighters and two tugs. This Company mainly handles grain from the East, the rest of the general cargo being shared fairly evenly between the British India Company and the other two lighterage companies. Five years ago the Government built a deep-water quay, 500 feet long, with 32 feet of water alongside, which is able to deal with 100,000 tons of cargo per annum. Actually only 40,000 to 50,000 tons, chiefly petroleum products, Government coal, etc., are discharged annually at the quay.

A Government granary, capable of storing 300,000 bags of rice, was completed five years ago as a protection against the spread of plague in the Colony, and is now working satisfactorily.

Shipping.

There are now three regular lines of passenger steamers connecting Mauritius with the United Kingdom.

The service between Marseilles and Mauritius, performed by the Messageries Maritimes Company has been reduced to a three weekly service for four months of the year and a fortnightly service for the remainder of the year; the average voyage takes from four to five weeks and includes a stay of about a week at Reunion either on the outward or homeward voyage.

Vessels of the K.P.M. (Dutch Line) leave Mauritius monthly from Durban and Cape Ports connecting with the Royal Mail steamers from the United Kingdom; and once a month for Mombasa via Beira. A vessel also leaves Durban once a month direct for Mauritius.

The K.P.M. Company proposes to put three new motor vessels of about 16,000 tons gross and a speed of about 17½ knots on the Java-Mauritius-Africa line. The voyage to England via K.P.M. and Union Castle lines averages 32 days. The same voyage by the British India Line via Colombo would take from 28 to 35 days.

Vessels of the Bullard King Company call occasionally from the United Kingdom via Durban and Cape Ports, with tourists.

Cheap passages to the United Kingdom can, as usual, be secured during the sugar shipping season—October to March—the voyage averaging 40 days.

The fares from Mauritius to England vary as follows :—

(i) per Messageries Maritimes steamers, from £92 to £38.

(ii) per Union Castle Intermediate steamers from £89 to £36.

(iii) per K.P.M. with transhipment at Durban from £117 and £92 to £48 and £46.

(iv) per Bullard King & Co.'s steamers from £53 to £43 according to classes and types of steamers.

Government servants are allowed a rebate of from 15 to 20 per cent. by all the above Companies.

The number of vessels and total tonnage entering and leaving the port during the past three years were as follows :—

XI.—BANKING, CURRENCY, AND WEIGHTS AND MEASURES.

Banking.

There are three private banks in the Colony, viz. :—

(a) The Mauritius Commercial Bank,

(b) The Mercantile Bank of India, and

(c) Barclays Bank (Dominion, Colonial and Overseas).

The Mauritius Commercial Bank was established in 1838, and has a paid up capital of Rs.2,000,000 made up of 10,000 shares of Rs.200 each. The total amount of deposits at 31st December, 1935, was Rs.7,452,573.

The Mercantile Bank of India, Limited, took over the business of the Bank of Mauritius, Limited, on 3rd May, 1916. The total paid up capital is £1,050,000. The deposits made locally on 31st December, 1935, amounted to Rs.2,898,067.

Barclays Bank (Dominion, Colonial and Overseas) has a paid up capital of £4,975,500. The total deposits of the local bank at 31st December, 1935, amounted to Rs.3,618,206. This bank which is affiliated with Barclays Bank, Limited, was founded in 1925 and represents the amalgamation of the Anglo-Egyptian Bank, Limited, the Colonial Bank (incorporated by Royal Charter in 1836), and the National Bank of South Africa, Limited. A branch of the last named bank was established in Mauritius in December, 1919. In February, 1926, its business was taken over by Barclays Bank (Dominion, Colonial and Overseas) following the amalgamation already mentioned.

Offices of the Government Savings Bank are established in the nine districts with a head office in Port Louis. The total number of depositors at 30th June, 1935, was 38,533 compared with 38,322 in the preceding year, with deposits amounting to Rs.6,236,739 as against Rs.5,401,710. Interest is paid at the rate of 3 per cent. per annum.

Currency.

In March, 1934, an Ordinance was enacted " to make provision with respect to the currency notes of the Colony and to place the issue of such Currency Notes upon a permanent basis ". By this Ordinance the Currency Commissioners are required to issue, on demand, currency notes in exchange for sterling lodged with the Crown Agents in London, and to pay on demand sterling in London in exchange for Currency Notes lodged with them. The rate at which these exchanges are to be made is fixed at one rupee for one shilling and sixpence sterling, and the minimum transaction is £5,000 or its equivalent.

The Currency Commissioners are entitled to charge commission not exceeding one and three-quarters per centum in addition to the cost of any telegram sent in connection with any transfer.

The effect has been to substitute for the Indian rupee a new paper rupee based on sterling and to limit official exchange fluctuations to a maximum spread of three and a-half per centum.

Local commercial practice is such that the effective rate of exchange is the rate at which the banks sell sterling and not the mean between the buying and selling rates. At the time the Ordinance was introduced the rate was Rs.13.70 for £1 by telegraphic transfer, or approximately one rupee for one shilling and fivepence halfpenny sterling. With a view to avoiding any sudden fluctuation in the actual rate of exchange, the commission which the Currency Commissioners were authorized to charge when selling sterling was fixed, in the first instance, at the maximum of one and three-quarters per cent., making the effective official exchange rate Rs.13.57 for £1 in respect of amounts of £5,000 or over.

The rate charged by the Currency Commissioners when buying sterling has been fixed at one-quarter per cent.

The value of the currency is maintained by a Note Security Fund held by the Crown Agents and invested in Government Securities (other than those of the Colony). Profits arising from currency transactions and income from the investments of the Note Security Fund must be applied in the first instance to maintaining the Security Fund at a value equal to the face value of currency notes in circulation. If the value of the Note Security Fund reaches one hundred and ten per cent. of the face value of notes in circulation, all profits then accrue to the revenue of the Colony.

Subsidiary silver coinage was introduced under an Ordinance passed in September, 1934. The coins are not normally redeemable but the seignorage on the issue is similarly invested.

The value of currency notes, which are of ten rupees and five rupees denominations, in circulation on 31st December, 1935, was Rs.8,182,500 and that of Mauritius silver coins on the same date Rs.1,700,000.

The local unit of currency is the Mauritius rupee, equivalent to 1s. 6d. sterling, divided into 100 cents.

The coinage in circulation is the silver rupee, half rupee, quarter rupee, and 20 cent and 10 cent pieces and the bronze 5 cent, 2 cent and 1 cent pieces.

Weights and Measures.

The metric system is in general use; the following special French and local measures are, however, still to be found:—

Measures of length and area:—

1 ligne Francaise = 2·258 millimetres or 0·088 inch.
12 lignes = 1 French inch.
12 French inches = 1 French foot.
1 French foot = 1·06 English feet.
1 lieue = 2½ English miles (approx.).
1 gaulette = 10 French feet.
1 arpent = 40,000 square French feet or 1·04 acres.
1 toise = 6 French feet or 2 yards 4 inches.

Measures of capacity:—

1 barrique = 50 gallons (cane juice, etc.).
1 tiercon = 190 to 192 litres (molasses).
1 velte = 7·45 litres (coconut oil).
1 bouteille = 800 cubic centimetres (liquid).
1 chopine = ½ bouteille.
1 corde = 80 French cubic feet or 96·82 English cubic feet (firewood).

Measures of weight:—

1 Gamelle = 5·250 kilogrammes.
1 livre = 500 grammes or 1·10 English pounds.

XII.—PUBLIC WORKS.

The Public Works Department is responsible for all Government buildings, the sewerage of Port Louis, roads and bridges, the survey of Crown Lands, water-supplies, and state irrigation.

Buildings.—Some of these, such as a time-ball tower in the Port Office, are of historical interest, dating from the time of the French Governor, Mahé de Labourdonnais, in 1740. Government House in Port Louis was then in project and was built between 1740 and 1767. Apart from the addition of a second storey, it now stands exactly as it was originally constructed. It contains the Governor's offices, in which are to be found the table on which the capitulation of the island was signed in 1810, a throne room, a council room, the council offices, a library, and quarters for the Governor and officials. The former and present residences of the Governors at "Mon Plaisir", Pamplemousses, and "Le Reduit", Moka respectively, also date back to the French occupation. The value of the Government buildings is approximately 15 million rupees.

There are in the island one mental and nine general hospitals. An old hospital, the Grand River North West Hospital, built in 1769 for seamen, is used when necessary as a quarantine station for plague.

Severe cyclones, which happily are not frequent, are responsible for a good deal of damage to water-works, roads and buildings.

Sewerage Works of Port Louis.—The sewerage works were begun in 1900. In 1922, the scheme was revised by Messrs Mansergh and Sons and the works have been carried out on the lines of their report. The construction works being now practically completed, present activities are concentrated on house service connexions, and a large portion of the town of Port Louis now has the water carriage system.

Bridges.—There exist 335 bridges on main and branch roads, the longest having spans of 150 feet. Only a few timber bridges remain and these are being gradually replaced by ferro concrete structures for double line of traffic and heavy loading.

Water Works.—The water supply of the town of Port Louis is obtained from the Grand River North West at a distance of about four miles from the town at a level of 250 feet. This supply was handed over by the Municipality to the Public Works Department in 1922. The water is passed through sand filters and chlorinated. The capacity of the mains leading to the filters is five million gallons a day. The water is distributed to the town from two covered service reservoirs of a total capacity of two million gallons.

The water supply of Plaines Wilhems and of parts of Moka and Black River districts is obtained from a storage reservoir called the Mare aux Vacoas, at an altitude of 1,825 feet. The capacity of the reservoir is now, after the raising of the dam, 1,641 million gallons. The catchment ground is entirely protected by forest lands. The whole of this water-supply is filtered through sand filters at " La Marie ", about two miles below the reservoir, whence the supply to the town of Curepipe is pumped by hydraulic power, the supply to the other towns being by gravity. The water is distributed from six covered service reservoirs situated in the various zones of supply, their aggregate capacity being 5½ million gallons. the population served by this supply is approximately 90,000 and the average daily consumption 3½ million gallons. The Mare aux Vacoas water supply has been extended to the town of Port Louis. The supply is limited to 900,000 gallons per day. In this connexion a covered service reservoir at Petite Riviere of 750,000 gallons was completed and put into operation in 1931.

At the beginning of 1934, a Committee was appointed to report on the quality of the water of the Mare aux Vacoas supply, and on measures that could be adopted to improve the quality. The report was received in June, 1934, and it concluded as follows :—

> " The purification of the Mare aux Vacoas waters by means of existing slow sand filtration is inefficacious and defective and does not constitute an adequate safeguard in the event, however unlikely, of harmful contamination of the raw water."

The main recommendations of the Committee were to the effect that (i) the raw water should be taken from the lake as near as possible from the surface (ii) the water should be aerated before the filters and (iii) the water chlorinated after filtration.

The works recommended by the Committee for the purification of the Mare aux Vacoas water have been proceeded with and at the end of 1935 were nearing completion.

The water supply to the villages and hamlets in the other districts comes from twenty-seven different springs or streams. These supplies are not filtered but they are generally protected in their catchment areas by reserves of forest. The population depending on these various supplies is about 200,000, and is comprised mostly of the poorer classes. A large proportion of the daily consumption is distributed by means of public fountains.

Irrigation Works.—Government storage irrigation works were begun in 1914 according to plans made by Mr. C. M. Harriott, C.S.I., C.I.E., M.Inst.C.E., Chief Engineer, Public Works Department, Central Provinces, India, and Consulting Engineer for Irrigation Works to the Government of Mauritius. The La Ferme scheme for the irrigation of the south-west of the island, between Grand River North West and River Dragon, has been completed, and the Nicoliere scheme to irrigate land in the north, was started in 1918. These two schemes cover 18,700 acres in the area below the level which enjoys 60 inches of rain and cannot be cultivated to the best advantage without irrigation water. The La Ferme scheme is dependent on a low-level reservoir of 2,500 million gallons, which was completed in 1918 and now irrigates 3,700 acres of land under sugar-cane plantation. The plans for the Nicoliere scheme include a high-level storage reservoir at 1,300 feet altitude at Midlands, of 4,400 million gallons capacity, intended to fill a low-level reservoir at Nicoliere of a capacity of about 250 million gallons.

Owing to financial conditions the plans were first curtailed and the works afterwards suspended. The Feeder Channel which measures 16¾ miles from Midlands to Nicoliere and which had been completed by the end of 1931 with a reduced section has now been built up to its full section and concreted. The area covered by the existing curtailed plan is only 11,000 as compared with 15,000 acres in the original plan.

XIII.—JUSTICE, POLICE AND PRISONS.

Justice.

Justice is administered in Mauritius by the Supreme Court and ten District Magistracies.

Supreme Court.—The Supreme Court sits in the capital (Port Louis) and is presided over by one Chief Judge and two Puisne Judges. It has jurisdiction in Civil and Criminal matters and also as a Court of Admiralty; it also decides appeals from the Supreme Court of Seychelles and the Inferior Courts of Mauritius. There is a Bankruptcy Division presided over by one of the Judges or by the Master and Registrar sitting as Judge in Bankruptcy. In 1935 the Supreme Court dealt with 238 civil matters out of 298 which were brought before it, as against 258 out of 308 in the year before. In 1935 twenty-four persons were brought before this Court and tried on criminal charges and of these seventeen were convicted. Criminal cases are tried by a Judge and a Jury. Divorce cases, bankruptcy matters, and civil actions in which the sum involved is less than Rs.3,000 are heard by one Judge. Civil actions in respect of claims over Rs.3,000 are heard by two Judges. Where, however, the magnitude of the interests at stake or the importance of the question of fact or law involved makes it desirable, a case is heard by three Judges.

Magistrates.—There is a Magistrate's Court in each of the nine districts, the Courts in Port Louis and in Plaines Wilhems each sitting in two divisions. A Magistrate has jurisdiction in nearly all civil matters involving not more than Rs.1,000 and in all criminal matters with power to inflict not more than one year's imprisonment and Rs.1,000 fine. A Bench of three Magistrates may be instituted by law for the trial of certain offences and also at the request of the Procureur General for nearly all offences, with jurisdiction extending to three years' penal servitude or imprisonment and fine possibly of Rs.3,000. An appeal lies of right to the Supreme Court within the limits stated above, both in fact and law, the several modes of reviewing the decisions being the same as in English Law. There is no system similar to the French Assistance Judiciaire but facilities are given to very poor litigants both before the Supreme and the Inferior Courts to obtain leave to sue *in forma pauperis*. In Supreme Court cases, counsel are ever ready to accept a pauper brief at the request of the Chief Judge, while in Assize cases counsel is always appointed without fee, for undefended prisoners. The dependencies are visited periodically by one of two Magistrates supernumerary to the District Magistrates, whose services are also available in Mauritius.

The dependency of Rodrigues is administered by a Magistrate who has the same jurisdiction in Rodrigues as a District Magistrate in Mauritius and whose duties are to a considerable extent administrative.

The Magistrates heard 10,502 civil cases and 11,848 ordinary criminal cases and petty offences, and held :—

141 coroners' inquests;

26 preliminary inquiries into crimes and serious misdemeanours.

Police.

Organization.—The Mauritius Police Force has an establishment of 20 Gazetted Officers and 595 other ranks. The personnel of the Force is almost entirely recruited locally, there being at present only 14 Officers and Warrant Officers classified as " Home-born " who were posted from England or transferred from other Forces.

The Force is organized mainly as a " Civil " as distinct from a " Military " Police Force but recruits are instructed in the use of the rifle, an Armed Detachment is maintained at headquarters and those who have qualified in preliminary tests fire a musketry course every year.

The establishment is divided into Headquarters Staff, Clerical Branch, Criminal Investigation Branch, Revenue and Motor Vehicle Control Branch, Training Depot, Harbour Police, District Police, Railway Police, Rodrigues Police and the Police Band.

Police Headquarters is situated in the historic Line Barracks of Port Louis and the District Police are distributed in 54 stations of varying size and importance.

Crime.—The total number of offences of all kinds reported to the Police during the year 1935 was 24,216 which shows a slight decrease on the figure for 1934 which was 24,281 and an increase on the average of 22,676 for the past three years.

More than half of these offences are of a minor character and refer to Statutory and Revenue contraventions.

The more serious offences are classified as follows :—

Offences against the person	—8,442 in 1935.
	—8,065 in 1934.
Offences against property	—2,929 in 1935.
	—3,060 in 1934.

The number of persons prosecuted in connexion with these 24,216 offences was 10,589 of whom 9,525 were convicted, 537 otherwise disposed of and 527 pending trial at the end of the year.

Corresponding figures for the previous year were 11,471 persons prosecuted, 10,519 convicted, 600 otherwise disposed of and 352 pending trial at the end of the year.

Prisons.

Organization.—The Mauritius Prisons Department has an establishment of four Gazetted Officers, who are appointed from England, and 108 other ranks recruited locally.

The Department is placed under the charge of the Inspector-General of Police, who holds the appointment of Superintendent of Prisons, and is responsible for the management and control of the two penal institutions of the Colony, Port Louis and Beau Bassin Prisons.

Port Louis Prison provides separate cell accommodation for 154 male prisoners, association cells for 40 women in a special block, and contains the offices of the Department and quarters for two Chief Officers and two matrons.

Every male convicted prisoner is sent to this prison and on admission is classified as (1) Adult Felon (2) Adult Hard Labour (3) Adult Misdemeanant (4) Juvenile Felon or Hard Labour (5) Juvenile Misdemeanant or (6) Special.

Felons are prisoners sentenced to Penal Servitude and Misdemeanants are those sentenced to imprisonment without hard labour or for failing to pay fines.

Groups 1, 2 and 4 are sub-divided into First Offenders and Recidivists.

Prisoners classified in Group (1) and recidivists of Group (2) sentenced to 14 days and upwards normally serve their sentences at Beau Bassin which contains 756 separate cells for males only while all misdemeanants, Special Class and well-conducted Adult and Juvenile First Offenders are accommodated at Port Louis.

Debtors, Women and Waiting Trial Prisoners are also given separate accommodation at Port Louis Prison.

Labour.—Hard labour consists of quarrying, stone breaking, cutting firewood, and agricultural work outside the prisons, and tailoring, boot, sail and mattress making, tin-smith work and blacksmithing, carpentry and cabinet making, blind, mat and basket making and baking inside the prisons workshops.

Population.—The number of persons admitted to Port Louis Prison during the year was 2,923 which is 13 less than in the previous year and 508 less than the average for the preceding five years.

Of the 2,923 persons, 1,850 were convicted, of whom 1,261 were sentenced to imprisonment for one month or less. The convicted prisoners comprised 1,781 men and 69 women. The daily average population was 444·89 compared with 458·05 in 1934 and the number of persons in prison on 31st December, 1935, was 417 compared with 424 in 1934 and 381 in 1933.

Of the 417 persons in prison 402 were serving sentences and comprised 390 men and 12 women.

The number of persons who served sentences of imprisonment in lieu of paying fines was 952, including 39 women.

Health.—There were 13 deaths in hospital, one suicide and two executions, during the year.

Industrial School.—The Barkly Industrial School for Boys is an institution for the training of juvenile offenders and vagrants, boys living in criminal surroundings, and those who cannot be controlled at home or in orphanages, etc.

The School, which is under the supervision of the Inspector-General of Police, and has a resident staff of a Chief Officer and 11 Instructors and Assistants, is located in a group of buildings formerly used as a hospital and is surrounded by large grounds which are fully cultivated as gardens, etc.

The number of boys in the School at the end of the year was 77, compared with 54 in 1934 and 46 in 1933. There were 32 admissions and 14 discharges during the year.

The increase in the school population is due to the improved care and interest taken in the treatment of young delinquents by the Magistrate of the recently established Juvenile Court which is located in the School buildings and is organized and conducted in accordance with modern principles.

The general welfare of the boys is looked after by a Visiting Committee, whose work and influence has proved most valuable.

XIV.—LEGISLATION.

A list of the more important Ordinances passed during the year under review is given in Appendix I to this Report. The following Social legislation may be noted :—

Industrial Schools.—(No. 8) provides for the establishment of schools for the detention and reformation of young offenders, who will receive therein ordinary and industrial education during their period of detention.

Sentence of Death passed on Expectant Mother.—(No. 9) brings the local law into line with the English law by prohibiting the passing of sentence of death on pregnant women.

Killing of Newly-born Children.—(No. 10) amends the Local Penal Code by importing into it the provisions of the English law in regard to offences connected with the killing of a newly-born child.

Juvenile Offenders.—(No. 11) institutes special Courts for the hearing of charges brought against juvenile offenders, defines the jurisdiction of such Courts and provides for the procedure in connexion with such charges.

XV.—PUBLIC FINANCE AND TAXATION.

Revenue and Expenditure.

The revenue of the Colony for the year ended 30th June, 1935, amounted to Rs.22,964,245, including special revenue amounting to Rs.7,882,381, being Rs.427,096 below the Estimate and Rs.6,397,135 above that of the previous year.

The revenue classified as special included the surplus funds of the Commissioners of Currency consequent upon the legislation in 1934, amounting to Rs.3,398,185, and a sum of Rs.3,821,043 representing expenditure incurred on behalf of the Sugar Industry and charged to an advance account for recovery by an export tax on sugar.

The expenditure for the same period was Rs.20,650,954, including special expenditure amounting to Rs.5,422,165, being Rs.236,134 above the Estimate and Rs.6,016,617 above that of the previous year.

Special expenditure included Rs.3,821,043 for the redemption of the Sugar Industry Loan, 1927, after applying the proceeds of the sinking fund.

The revenue during the financial year 1934-35 exceeded the expenditure by Rs.2,313,291, and the surplus balance on 30th June, 1935, amounted to Rs.17,189,861.

Of the expenditure for 1934-35, Rs.4,934,509 were spent on " Personal Emoluments " and Rs.15,716,445 on " Other Charges." The corresponding figures for 1933-34 were Rs.4,906,499 for " Personal Emoluments " and Rs. 9,727,840 on " Other Charges."

The following is a comparative statement of the revenue and expenditure for the last five years :—

Year.	*Revenue.* *Rs.*	*Expenditure.* *Rs.*
1930–31	11,552,211	16,092,073
1931–32	12,160,279	17,704,574
1932–33	30,200,418	13,810,589
1933–34	16,567,110	14,634,339
1934–35	22,964,245	20,650,954

The revenue normally becoming due and collected during the year 1932-3 was Rs.14,503,504, and the increase in the amount shown for that year was due to special adjustments comprising, *inter alia*, the following transfers to Revenue :—

	Rs.
Widows' and Orphans' Fund	5,032,347·84
Government Scholarship Fund	539,769·17
Improvement and Development Fund	6,317,717·98
Mauritius Loan, 1922	1,362,678·99
Unexpended balance, Sugar Industry Loan, 1929 ...	7,315·90
	13,259,829·88

The Colonial Government pays a Military contribution of 5½ per cent. of its revenue (total revenue exclusive of land sales, irrigation, Mare aux Vacoas and other works revenue, contribution towards loan 1922 charges and special export duty on sugar) as a contribution towards the cost of the garrison maintained in the Colony by His Majesty's Government in the United Kingdom.

The contribution was reduced to £44,000 for the year 1934-5 and the amount paid was Rs.586,667.

Public Debt.

The Public Debt of the Colony on 30th June, 1935, was £2,878,995. Against this liability, there was an accumulated Sinking Fund of £1,743,372 4s. 11d., as compared with £1,699,669 11s. 1d., on 30th June, 1934.

Assets and Liabilities.

The Assets and Liabilities at the end of the year amounted to Rs.27,952,178 and Rs.10,762,317 showing a surplus of Rs.17,189,861.

STATEMENT OF ASSETS AND LIABILITIES AS AT 30TH JUNE, 1935.

Liabilities.	Rs.	*Assets.*	Rs.
Other Colonial Governments	7,537	Cash Balances	5,699,045
Deposits	633,138	1922 Loan Funds invested	200,000
Loan Funds unexpended	421,757	Other Colonial Governments.	962
Appropriated Funds	9,699,885	Advances	12,683,469

Description of the Main Heads of Taxation and Their Yield.

The main heads of taxation with their yield for the current year as compared with the preceding year are the following :—

	1933–34 Rs.	*1934–35* Rs.
Customs—Import duties	5,049,417	4,422,207
„ —Export duties	978,443	648,314
Excise duty on rum issued for home consumption	1,761,249	1,590,107
Licence duty	1,126,759	1,111,627
Tobacco excise	1,175,639	1,200,427
Taxes on vehicles and animals	402,866	399,313
House Tax	304,396	225,425
Graduated personal tax	—	540,978

Customs Duties.

The revenue from Customs duties for the year 1935 was Rs.4,559,348 for imports and Rs.816,385 for exports.

The figures for the previous years were :—

	Import duty. *Rs.*	*Export duty.* *Rs.*
1934	4,899,209	738,624
1933	4,689,026	863,472

Customs Tariff (Summarized).

The following shows the rates of duty on the principal imports and exports on the 31st of December, 1935 :—

Imports.

Rice	R.0.63 per 100 kilos.	Wines in casks up to 14°.	Rs.22.00 per hectolitre.
Dholl	Rs.1.14 per 100 kilos.	Wines in cases up to 14° (still).	R.0.33 per litre.
Flour	R.0.94 per 100 kilos.	Spirits (proof) ...	Rs.6.87 per litre.
Fertilizers ...	R.0.11 to Rs.1.10 per 100 kilos.	Tobacco, manufactured.	Rs.15.00 per kilo.
Petroleum oil ...	Rs.5.28 per hectolitre.	Tobacco, cigarettes.	Rs.16.50 per kilo.
Petroleum spirits	Rs.14.00 per hectolitre.	Vegetable oil, other than olive.	Rs.5.50 to Rs. 9.00 per 100 kilos.
Soap, common ...	Rs.1.93 per 100 kilos.	Most manufactured articles.	5 to 55 per cent. *ad valorem*, with an average of about 15 per cent. *ad valorem*.

Exports.

*Sugar	R.0.10 per 100 kilos.	†Aloe fibre ...	Rs.4.0 per 1,000 kilos.

NOTE—* The duty on sugar is only for special purposes as under :—

R.0.03 per cent. kilos for destruction of *Phytalus Smithi;*
0.03 ,, ,, ,, ,, College of Agriculture;
0.04 ,, ,, ,, ,, Sugar Industry Reserve Fund;

† The duty on aloe fibre includes Rs.3 per 1,000 kilos in refund of loan to the hemp industry.

Principal Preferential Rates on Imports.

	Preferential.	*General.*
Motor vehicles of all kinds, including tyres and tubes	5.5 per cent. *ad valorem*	36⅔ per cent. *ad valorem*
Silk manufactures (including art silk).	16.5 ,, ,, ,, ,, or R.0.55 per kilo	55 ,, ,, ,, ,, or R.1.75 per kilo
	whichever is the higher	
Indigo	Rs.1.10 per kilo.	Rs.2.75 per kilo.
Cement	R.0.30 per 100 kilos.	R.1.00 per 100 kilos.
Cinema films ...	Free	R.0.04 per metre.
Machinery, industrial	Rs.1.45 per 100 kilos.	5.5 per cent. *ad valorem*.
Cotton manufactures	5 per cent. *ad valorem*.	26 per cent. *ad valorem*. and also specific rates in certain cases.
Hardware	11 per cent. *ad valorem*.	22 per cent. *ad valorem*.
Coal	8 cents per 100 kilos.	42 cents per 100 kilos.

Excise and Stamp Duties.

The duty on rum for home consumption for potable use is Rs.2·75 per litre of 23 degrees Cartier and an additional duty of 12 cents per litre for every degree above 23 degrees Cartier.

Four distilleries worked periodically during 1935. Three of these stills form an annex to sugar mills. In all cases spirits are distilled from molasses and the strength of the spirits produced varies from 30° to 42° Cartier. The bulk is produced at 39° Cartier or below and when broken down to 23° Cartier, is consumed locally as potable rum, though it has the general characteristics of a rectified spirit.

The remainder of the spirits produced is used after denaturation or compounding for lighting, heating and power purposes; for the preparation of medicinal tinctures, drugs, perfumed spirits and for the manufacture of vinegar. Attempts have been made to find an export market for locally produced alcohol but with little success. The quantity exported was 28,732 litres for the period July, 1934, to June, 1935, as compared with 39,326 litres for the previous period.

The duty on spirits to be denaturated for heating and lighting purposes is 4 cents per litre at 36 degrees Cartier and an additional duty of 4 cents per hectolitre or fraction thereof for every degree above 36 degrees Cartier.

Owing to the quantity of electrical power available and the organization for its distribution, comparatively little use is made of locally produced alcohol for lighting purposes. Where electrical power is not available kerosene is a more popular illuminant. The poorest classes, who require little illumination since they mostly retire at nightfall, use coconut oil or similar local product. There is little call for artificial heating of houses and most cooking is done by locally produced wood charcoal on charcoal stoves. Locally produced alcohol might be used largely for cooking purposes were a satisfactory type of stove available. The import duty on denaturated or methylated alcohol is R.0.33 cts per litre.

The quantity of spirits denaturated for heating and lighting purposes during the last two years is shown below :—

1933–34.		*1934–35.*	
	Excise Duty.		*Excise Duty.*
Litres.	*Rs.*	*Litres.*	*Rs.*
105,450	4,321.06	138,250	5,663.62

The duty on spirits to be denatured for use as motor fuel is four cents per litre or fraction thereof at any degree Cartier. Attempts on a commercial scale to utilize locally produced alcohol in various forms for power purposes have been in progress for about eighteen years but have had little success. The increasing use of heavy fuel oil and compression ignition type engines make any further development in the use of the local alcohol improbable in present circumstances. Protection is given to the local industry by imposing a Customs duty on imported motor spirits of Rs.14.00 per hectolitre.

The following statement shows the quantity of spirits denatured during the last two years for use as industrial alcohol :—

1933–34.		*1934–35.*	
Quantity. *Litres.*	*Excise duty.* *Rs.*	*Quantity.* *Litres.*	*Excise duty.* *Rs.*
344,237	13,769.48	268.010	10,720.40

The duty on alcohol for the preparation of medicinal tinctures and drugs is 10 cents per litre at any degree, but the duty on alcohol delivered for the preparation of "alcoolats" in accordance with the formulae laid down in the British Pharmacopoeia or the French Codex or any other medicinal tinctures and drugs as notified in *Gazette* is Rs.2·50 per litre at 23 degrees Cartier, with an additional duty of 10 cents per litre for every degree above 23 degrees Cartier.

With the exception of certain traditional local preparations, locally produced tinctures etc. have provided little competition to the imported articles which pay import duty at 13·2 per cent. *ad valorem*.

The following table shows the quantity of alcohol used during the last two years for the preparation of medicinal tinctures and drugs :—

1933–34.		*1934–35.*	
Quantity. *Litres.*	*Excise duty.* *Rs.*	*Quantity.* *Litres.*	*Excise duty.* *Rs.*
9,393	2,020.50	7,846	1,399.30

The duty on alcohol delivered for the manufacture of perfumed spirits is 50 cents per litre. The position as regards locally produced perfumed spirits is similar to that of medicinal tinctures. One or two preparations are in popular local demand but in spite of the fairly high protective import duty of 33 per cent. *ad valorem*, there is little demand for other products. Attempts have recently been made to find an export market by selling perfumery as ship's stores. It is too early yet to forecast whether this venture is likely to develop to any degree.

The quantity of spirits issued for the manufacture of perfumed spirits during the last two years was as follows :—

1933–34.		*1934–35.*	
Quantity. *Litres.*	*Excise duty.* *Rs.*	*Quantity.* *Litres.*	*Excise duty.* *Rs.*
8,539	4,269.50	3,966	7,932.00

The duty on vinegar is Rs.1.70 per hectolitre, on vinegar not exceeding 8° of strength by acidimeter and an additional duty of 18 cents per degree and per hectolitre on all vinegar above 8°.

Locally produced vinegar is manufactured exclusively by the slow oxidation of alcohol. This small industry gives indication of development. The production figures for the past two years were :—

	Litres.	*Amount of duty.* *Rs.*
July 1933 to June 1934	13,681	232.58
" 1934 " 1935	24,047	357.80

The corresponding import duty on vinegar is Rs.3.30 per hectolitre full rate and Rs.1.65 preferential rate.

According to the Excise figures the number of litres of spirits distilled in 1934-5 (July to June) was 864,397, as compared with an average of 891,623·85 litres for the past five years

The duty on wine and other liquor (excepting rum and compounded rum) manufactured in the Colony which contain more than 4° of alcohol according to Gay Lussac's alcoholometer is as follows :—

(i) on all such liquor not exceeding 14° by Gay Lussac's alcoholometer a duty of 15 cents per litre;

(ii) on all such liquor exceeding 14° duty, at the same rate and on the same scale as the Customs duty on wines payable under the Customs Tariff Ordinance.

Practically no grapes are grown in Mauritius and the local wine is produced from imported dried fruits, principally raisins, sugar and other ingredients. Attempts to produce wine from local fruits, such as pineapples, guavas, bananas, etc., have not been successful. There has been no development in the wine industry during the past year from the point of view of quantity but considerable research work has been done in the improvement of the quality of the produce and in studying the many variations in fermentation largely caused by differences in temperature, atmospheric humidity, etc.

Local wine produced :—

July, 1933, to June, 1934, was 273,988 litres.
July, 1934, to June, 1935, was 265,947 ,,

An excise duty of Rs.4 per kilog. is charged on leaf tobacco used for the manufacture of tobacco for local consumption.

According to the official figures the quantity of tobacco manufactured in the year 1935 was 337,378·975 kilos., compared with 337, 673·100 kilos. in 1934.

The excise duty collected on tobacco during the last two financial years is given below :—

	1933–34. *Rs.*	*1934–35.* *Rs.*
Tobacco	1,175,639.20	1,200,427.53

The figures for the calendar year were :—

	Year 1934. *Rs.*	*Year 1935.* *Rs.*
Tobacco excise	1,219,407.20	1,187,683.93

The Government tobacco warehouse, controlled by the Tobacco Board, has proved a most useful institution for the grading and general control of tobacco grown in the Colony. It ensures for the planters a ready market for their crop of graded leaf and for the manufacturers an assured source of supply at controlled prices. In spite of its efforts the Board has so far been unable to gain any export trade.

The Stamp Laws were amended and consolidated by the passing on 23rd November, 1926, of Ordinance 22 of 1926. This Ordinance was put into force on 23rd July, 1927, by Proclamation No. 32 of 1927.

Stamp duties are of three kinds :—

(1) A duty in proportion to the size of the paper used;
(2) A fixed duty; and
(3) An *ad valorem* duty.

The Stamp Ordinance No. 22 of 1926 was amended in 1932 by the passing of Ordinance No. 26 of 1932 to provide for the increase from 4 to 10 cents of the stamp duty on cheques drawn on banks in and out of the Colony and on receipts as defined in Article 2 (5) of the Stamp (Consolidated) Ordinance, 1926.

House Tax.

Rates.—1 per cent. per annum on any building assessed over Rs.500 up to 31st December, 1934, and 1 per cent. per annum on any building assessed over Rs.1,000 as from 1st January, 1935 (Ordinance No. 33 of 1934).

Yield.—The amount collected during the financial year 1934-35 was Rs.225,425.

Method of assessment.—Any building liable to the house tax is assessed according to its full and fair value. In assessing the full and fair value, the valuer takes into consideration the actual or possible rent a tenant may be reasonably expected to pay for such building. This applies only to buildings whose basic value is above Rs.500 up to 31st December, 1934, and above Rs.1,000 as from 1st January, 1935 (Ordinance No. 33 of 1934), and on which the annual tax is 1 per cent. on the value.

Method of Collection.—For the purpose of collecting the house tax when the assessment arrived at is final for the year, notices for payment are served upon owners of buildings and the tax is paid to the Cashier of the district in which it is levied or to the Chief Cashier, Treasury.

Graduated Poll Tax.

A Graduated Poll Tax was imposed in 1934 on all taxable income accruing in, derived from, or received in the Colony during the year preceding the year of assessment, subject to specified exemptions.

The tax, which falls on residents and non-residents, is peculiar to Mauritius and payable in half-yearly instalments by persons (including legal entities) whose income exceeds Rs.5,000.

The tax scale rises from Rs.50 (with marginal relief) on incomes exceeding Rs.5,000 but not exceeding Rs.7,000 to Rs.5,150 on incomes exceeding Rs.60,000 but not exceeding Rs.70,000. The tax on incomes exceeding Rs.70,000 is Rs.6,150.

The tax must be tendered with a return from the taxpayer, but the Commissioner may refuse the return and raise an assessment subject to a right of objection and appeal to the High Court.

No provision exists for :

(*a*) Losses to be carried forward.

(*b*) Personal or depreciation allowances.

(*c*) Dominion Income Tax Relief.

(*d*) Deduction of tax at source.

The Main Ordinance was amended in 1935 chiefly to facilitate an equitable administration of the tax as regards allowances for interests paid, and to provide for the reciprocal exemption of profits from shipping.

The administration of the tax has given rise to no inconvenience to the public and no recourse has yet been had to an appeal to the High Court against assessments by the Commissioner.

XVI.—MISCELLANEOUS.

The year 1935 was marked by the celebrations held on the occasion of His Late Majesty the King's Silver Jubilee on the 6th and 7th of May, and the commemoration, from the 19th August to the 8th September, of the Bicentenary Anniversary of the founding of the Town of Port Louis by the French Governor Mahé de Labourdonnais.

The programme of ceremonies for the King's Jubilee included thanksgiving services in the Anglican and Roman Catholic Cathedrals of Port Louis, a Levee and a State Banquet at Government House, Port Louis, a special race meeting at which a Gold Cup was presented by Government, fireworks, illuminations and sports meetings throughout the island, and a general distribution of Jubilee Medals and refreshments in which all school children took part. The Council of Government voted a sum of Rs.20,000 for expenditure in connexion with the celebrations.

The Bicentenary Anniversary festivities were organized by the Municipality of Port Louis. The chief feature was an Inter-Colonial Exhibition in which the neighbouring French Colonies of Madagascar and Reunion participated. Distinguished guests from these two Colonies, including the Governor of Reunion and Delegates of the Government of Madagascar, visited the island during the period of the Exhibition which lasted some twenty days. The celebrations also included a thanksgiving service and a special race meeting at the Champ de Mars, fireworks and illuminations in Port Louis, sports meetings in which athletes from the French Colonies took part, and a distribution of money to the poor of the Town. The cost of the celebrations was estimated at

Rs.100,000, of which Rs.50,000 was contributed by Government on the condition that half the gross proceeds of the Exhibition be paid into the Treasury.

The sugar crop reaped during the year 1935 was exceptionally good, the total sugar production for the year being about 280,500 tons against an average production of 242,000 tons for the years 1929 to 1934, exclusive of the years 1931 and 1934 when, on account of adverse climatic conditions, the crops were reduced to 164,010 and 178,860 tons respectively.

The price of sugar, however, continued to be extremely low, and in view of the heavy deficit from the reduced crop of the year 1934, and the extremely depressed market conditions which made it apparent that even the accounts of the year 1935 would not be balanced in spite of the large crop in prospect, the Home Government agreed to the postponement of the collection of a portion of the export duty on sugar of Rs.3.60 per ton levied in repayment of the Sugar Industry Loans referred to in Ordinance No. 15 of 1929. It was decided to collect only a fraction of that duty not exceeding Rs.367,000 which was necessary to cover the loan charges actually incurred by the Treasury in respect of the industry, and as the total yield of the tax on a crop of 280,500 tons would have amounted to roughly one million rupees, the concession offered to the Industry was about 643,000 rupees.

The Colony continued to enjoy the benefit of the General Imperial Preference amounting to about 3s. 9d. on all Colonial sugars entering the United Kingdom and of a special preference of 3s. per cwt. on a quantity of Colonial sugars limited to 360,000 tons, the quota of Mauritius sugars entitled to the latter preference being fixed at 112,400 tons. Sugars consigned to Canada also benefit by a preference which is at least as profitable to the producer as the general preference accorded by the United Kingdom.

As exports of sugar from Mauritius to countries other than the United Kingdom and Canada are insignificant and the quantity consumed locally is about 10 to 11 thousand tons annually, the portion of the 1935 crop available for export to the United Kingdom and Canada is about 269,000 tons. The total preference on this quantity of sugar, calculated at the rates given above, amounts to roughly £1,346,000.

On the recommendation of a Committee appointed by the Governor in 1934 to investigate the problem of unemployment in the Colony, various works of public utility were put in hand towards the end of that year in order to give employment to as many persons as possible who were then out of work.

Relief works continued in progress during the whole of the year 1935, chiefly in the districts of Port Louis and Plaines Wilhems where the pressure of unemployment is more severe. Towards the end of that year a scheme was drawn up and approved for the establishment of land allotments on a property owned by Government at Richelieu at a distance of four miles from Port Louis. The broad lines of the scheme are (1) the provision of accommodation on the spot for, and the partial maintenance of, a certain number of men willing to clear and cultivate with food crops about 2 acres of land each, and (2) the construction of houses, at a later stage, for the accommodation of the families of holders of allotments who have shown their suitability as settlers by satisfactory work.

The Island was visited in May by the Dutch submarine "K XVIII" of 777 tons register, and in June by the H.M.S. *Norfolk*, flying the flag of Rear-Admiral F. Forester Rose, C.B., D.S.O., Commander-in-Chief of the East Indies Station.

His Excellency the Governor, Sir Wilfrid E. F. Jackson visited the Dependency of Rodrigues from the 1st to the 28th September.

APPENDIX I.

Forty-six Ordinances were passed by the Council of Government and assented to by the Governor during the year 1935. Amongst them the following may be noted.

No.	*Title.*
2	To authorise the Governor to guarantee up to an aggregate amount of £450,000, credit obtained in London by Local Banks, for the purpose of financing the 1935-36 sugar crop.
8	To amend and consolidate the Laws relative to the establishment of Industrial Schools.
11	To make provisions for Proceedings in reference to Juvenile Offenders.
26	To amend the Co-operative Credit Societies Ordinance, 1913.
36	To amend the Graduated Poll Tax Ordinance, 1934.
37	To regulate the manufacture of perfumed spirits in the Colony.

APPENDIX II.

AN ECONOMIC SURVEY OF THE COLONIAL EMPIRE

In this volume an attempt has been made to assemble all the essential facts relating to the economic situation of the Colonial Empire (the Non-Self-Governing Colonies, the Dependencies of certain of those Colonies, the Protectorates, the Protected States in Malaya and Borneo, and the Mandated Territories administered under the authority of H.M. Government in the United Kingdom).

SURVEY FOR 1935.

THE WORK IS DIVIDED INTO TWO PARTS.

PART I contains a series of memoranda on the Economic Situation of the Individual Dependencies.

PART II contains a series of memoranda on the products of the Colonial Empire, both those which are produced for Export and those which are produced only for Internal Consumption.

F'cap Folio (Board Covers) 593 pp.

I.—GEOGRAPHY, CLIMATE, AND HISTORY.

The island of Mauritius is of volcanic origin. It is situated in the South Indian Ocean at about 1,400 miles from the east coast of Africa and lies between 19° 50′ and 20° 35′ S. latitude and between 57° 18′ and 57° 48′ E. longitude. The greatest length from north to south is nearly 39 miles and the widest breadth from east to west is 29 miles. The area of the island is about 716 square miles, exclusive of that of several small islets round the coast which measure about four square miles.

The dependencies comprise a large number of small islands between 230 and 1,200 miles away. The largest, Rodrigues, which lies 350 miles to the north-east of Mauritius, had a population estimated at 9,715 on 31st December, 1936. The estimated population of the lesser dependencies on that date was 1,327.

Mauritius is situated just within the tropics and enjoys a climate free from extremes of weather except that tropical cyclones at times cause considerable damage to crops, but rarely to buildings. For a great part of the year south-east trade winds, heavily laden with moisture, blow gently over the island tempering the tropical heat. The rain falls mostly in showers. Particularly in the summer months, December-March, the south-east winds are replaced by the light variable winds of the doldrums, which cause discomfort to Europeans, although the temperatures are not high, whereas in the winter months in the residential districts at altitudes of 1,300 to 1,800 feet the temperature may fall to 50° F. The yearly rainfall varies from 30 inches on parts of the coast to 150 inches in the upland regions.

The Mascarene Archipelago was probably known to Arab navigators at an early date and was no doubt visited later by the Malays who colonized Madagascar in the 15th and 16th centuries.

The Portuguese rediscovered it in 1507. They only used Mauritius as a port of call for repairs and supplies, and let loose pigs, goats, deer, and monkeys. It seems probable that rats were introduced in this period as they were a serious pest to the succeeding Dutch colonists.

The Dutch took possession from 1598 and were employed chiefly in exploiting the ebony. They attempted to cultivate sugar-cane, but were frustrated by rats. Although they denuded the forest of ebony they later added to the economic resources of the island by introducing useful trees, plants, and cattle. Negroes were imported for labour, and, as escape into the forests was easy, bands of runaway slaves called Maroons were formed. The combination of rats and this dangerous population of mixed, but mostly African, origin, uncontrolled by any tribal or political system, proved too much for the Dutch who abandoned the island in 1710.

The French annexed it in 1715, and by 1722 the population, apart from Maroons, amounted to 160 persons, soldiers, colonists, and slaves. Mahé de Labourdonnais was chosen to develop the Colony and arrived in 1735. In order to make the island self-supporting, he introduced manioc and maize from Brazil and promoted the extension of agriculture by introducing products from all parts of the tropical world. He especially encouraged the cultivation of sugar. He substituted animal draught for carriage by slaves, and to ensure an adequate supply of labour he brought slaves from Africa. From an encampment of straw huts he built up Port Louis into a town of public buildings, private houses, stores, shops and barracks. Labourdonnais laid the foundations of modern Mauritius.

In 1755, large herds of cattle were brought in from Madagascar. Pierre Poivre, Intendant in 1767, established the cultivation of cloves and nutmegs.

In 1810, when Mauritius became British, the population had grown from 160 to about 80,000, of whom 65,000 were slaves. Sugar was then, as now, the principal product, and when in 1825 the duty of ten shillings a hundredweight, levied on Mauritius sugar entering England (in order to protect the West Indian sugar), was remitted, cane plantations immediately developed to a large extent, fresh land was put under cultivation, roads were opened, and steam power was applied to mills. From 18,000,000 pounds the output of sugar rose to 41,000,000 pounds in 1827, and increased annually afterwards.

On the abolition of slavery, 68,613 slaves were freed, and the colonists received £2,112,632 in compensation.

In 1842, Indian immigration at the rate of 6,000 a year was approved, and this resulted in an entire change of the balance of the population.

After a terrible outbreak of malaria in 1866 the wealthier inhabitants of Port Louis moved to higher parts of the island. As a result the country towns expanded considerably and the roads were improved and extended. The railway, begun in 1859, became very popular. One of the most striking features of the progress made has been the social and economic development of the Indians who to-day own and cultivate more than two-fifths of the whole area under sugar-cane. Besides becoming gardeners and taxi-drivers, many Indians have taken to raising cows, goats, fruits and vegetables, and the supply of these essential foodstuffs is almost entirely in the hands of Indians. The section of the population they have displaced centres more and more in the towns, forming the clerk and artizan class.

From 1902 to 1909 the island suffered from severe financial depression owing to the low price of sugar. Matters were aggravated in 1902 by an outbreak of surra which caused great havoc among the draught animals, and necessitated the introduction of mechanical transport.

A Royal Commission was appointed in 1909 to investigate the resources and administration of the island and reported in 1910.

About 1911 the destructive beetle *Phytalus smithi* was discovered in the sugar-canes and more than 300 millions of these insects are now destroyed every year.

The great rise in the price of sugar which took place during and after the War brought prosperity, and both the Government and the general community were for a time far more prosperous than ever before.

As a result a number of important schemes were inaugurated, including the amelioration of sanitary conditions, the improvement of the harbour, the extension and improvement of water-supplies both for domestic purposes and for irrigation, the improvement of the railways, and the extension of education.

Unfortunately, however, from 1921 onwards the price of sugar fell, and the greatly lessened revenues of the Colony had to provide for the maintenance of many works undertaken in the better times. In 1929 the state of the sugar industry was so bad that Sir Francis Watts was appointed, at the Colony's request, to visit the island, and to report on the economic situation. The Home Government was, however, unable to approve his recommendation that a subsidy should be given to sugar to supplement the preference granted on sugar imported into the United Kingdom, though a loan was made to the planters from local funds. Despite this loan, however, and an earlier loan granted in 1929, the condition of the sugar industry at the end of 1930 was extremely serious.

The position became worse in 1931 owing to a cyclone which caused considerable damage to property and reduced the year's output of sugar by about 33 per cent. The Imperial Government guaranteed a loan of £750,000 for planters, house owners, and repairs to Government property, on condition that a Financial Commission should visit Mauritius with a view to devising measures to bring about a balanced budget. The Commission's report was published at the beginning of 1932 and immediate steps were taken to carry out measures of retrenchment and economy. The situation was again critical in 1934 owing to the effect of a severe drought on the sugar crop; but since then the Colony has had the benefit of a substantial crop in two successive years and the general situation and outlook have considerably improved.

II.—GOVERNMENT.

The Government of Mauritius is vested in a Governor with an Executive Council and a Council of Government. The Council of Government was first established in 1825. It consisted of the Governor and four officials. The next year the Constitution was amended and a Council, including unofficial members was introduced. This Constitution provided for a Council of Government composed of certain officers of the Crown and of an equal number of other persons to be taken from the chief landed population and principal merchants of the Colony; seven officials and seven unofficials were accordingly appointed.

The Constitution was again amended in October, 1885. The Council of Government, under the revised Constitution, was composed of the Governor, eight *ex-officio members*, nine members nominated by the Governor and ten members elected by the population: of the latter, two represent the town of Port Louis, the capital of the island, and the remaining eight represent the rural districts. At least one-third of the nominated members were to be persons not holding any public office.

The Constitution was further amended in July, 1933, by fixing at two-thirds the proportion of the nominated members of the Council who are to be unofficials and, although no provision to that effect is made in the Letters Patent, the nominated unofficial members have been allowed a free vote on all occasions. The new Letters Patent, however, provide that the Governor shall have power to enact legislation considered by him to be essential in the interests of good government. Debates in the Council may be either in English or French.

The Constitution of the Executive Council which was hitherto composed of the Governor and four *ex-officio* members was amended at the same time, and the former practice of appointing two unofficial members to the Council was revived.

The number of registered electors on 31st December, 1936, was 9,400. Every male person who is qualified as follows is entitled to be registered as a voter:—

(1) has attained the age of 21 years;

(2) is under no legal incapacity, and is in possession of his civil rights;

(3) is a British subject by birth or naturalization;

(4) has resided in the Colony for three years at least previous to the date of registration, and possesses one of the following qualifications:—

(*a*) is the owner of an immoveable property of the annual value of Rs.300;

(*b*) is paying rent at the rate of at least Rs.25 a month;

(*c*) is the owner of moveable property within the Colony of the value of at least Rs.300;

(*d*) is the husband of a wife, or the eldest son of a widow, possessing any one of the above qualifications;

(*e*) is in receipt of a yearly salary of at least Rs.600 or of a monthly salary of at least Rs.50; and

(*f*) is paying licence duty to the amount of at least Rs.200 a year.

The ordinary duration of the sessions of the Council of Government is eight months, from May to December, and meetings are held on alternate Tuesdays or oftener when necessary. The life of a Council is five years.

The town of Port Louis is administered by a Municipality, an institution which dates as far back as 1790. It was then called " Municipalité du Canton de Port Louis " and was instituted, as were other local Municipalities, by the " Assemblée Coloniale ". These institutions are mentioned in the law of the constitution of the Ile de France promulgated by the " Assemblée Coloniale ", on 21st April, 1791. Sixteen prominent men of the town acted as Councillors of the "Municipalité du Canton de Port Louis " and were denominated the " Conseil des Notables ". The " Conseil des Notables " was dissolved in 1792. It was reconstituted at the end of the 18th century under the denomination of the " Conseil des Communes " and was abolished on 10th February, 1820.

The present Municipal Corporation dates from 1850, the first elections taking place at the Masonic Lodge " La Triple Esperance " from 21st to 23rd February in that year. On 24th August, 1925, the Municipal Corporation celebrated the 75th anniversary of its foundation.

The administration of the other principal townships of the Colony, viz., Curepipe, Beau Bassin and Rose Hill, and Quatre Bornes is vested in Boards of Commissioners appointed annually by the Governor. These Boards are empowered to take measures within the prescribed limits of the townships for the making, maintenance, etc., of roads, sewers, bridges, canals, and other works of public utility, for the prevention of fires, and for the proper paving and lighting of the town, etc.

In addition to the Township Boards, District Boards are appointed annually for each district. These Boards are empowered to pass regulations for the making, maintenance, and improvement of branch roads and footpaths, and for the levying of taxes in the extra urban areas.

III.—POPULATION.

The population is divided for statistical purposes into (1) the general population, i.e., Europeans and descendants of Europeans and people of African, Chinese and mixed origins, and (2) the Indian population, i.e., Indian immigrants and their descendants.

The estimated population of the island and its dependencies on the 31st December, 1936, was 410,920, showing an increase of 3,900, the rate of increase being 9·6 per thousand.

The geographical distribution of the population is shown in the following table:—

Districts.	Area in square miles.	Census population, 26th April, 1931.			Population on 31st December, 1936.		
		General population.	Indian population.	Total.	General population.	Indian population.	Total.
Port Louis	16½	29,832	24,603	54,435	31,360	24,552	55,912

Whole Population ...	1,307	1,301	1,321	9·7	9·8	9·5

The number of deaths of infants under one year was 1,973. The infantile mortality rate was 142·3 per thousand live births registered during the year as compared with 139·4 and 129·7 for 1935 and 1934 respectively.

The marriages during the year numbered 1,991 as compared with 1,651 in 1935. The marriage rate or number of persons married to every thousand of the entire population was 10·0 against 8·4 in 1935.

The arrivals exceeded the departures by 244.

IV.—HEALTH.

The present constitution of the Medical and Health Department dates back to 1895 when under Ordinance No. 32 of 1894-5 the powers vested in the General Board of Health were transferred to the Director, Medical and Health Department.

The headquarters staff of the Department consists of the Director, the Deputy Director and the clerical and accounting staffs of the correspondence, financial and storekeeping branches.

The administrative unit of Government is the district which is the political unit as well. Every district with the exception of Black River is provided with a hospital for the reception and treatment of the sick poor. Patients from the Black River district are treated in the Victoria Hospital, Quatre Bornes, or the Civil Hospital, Port Louis. The medical and sanitary administration of each of the rural districts is entrusted to a Government Medical Officer who is in charge of the district hospital and dispensaries and who is also the Health Officer for the district. To assist him, he has a number of subordinate officers; dispensers and sanitary officers and the staff necessary for the care of the patients in the hospital. In addition to his medical and sanitary duties he has also statutory duties of a medical or sanitary nature which he carries out on behalf of the Police and Poor Law Departments. The district dispensaries are visited at regular intervals by the Government Medical Officer.

The hospitals of the Colony are divided into two groups:—

(i) General hospitals, namely:—Civil, Victoria and Moka, totalling 626 beds, which are fully equipped for X-ray and major operative work; and

(ii) district hospitals where only medical and midwifery cases are admitted and where minor surgery is carried out to a certain extent.

Patients who apply to the latter hospitals and require special treatment, surgical or other, are conveyed to the nearest general hospital by motor ambulance. A mental hospital and a leper hospital are also administered by the Department.

The general health of the population during 1936 has been reasonably good. There was an exceptionally good crop leading to a consequent increase in the amount of money circulating in the Colony. There has been no scarcity of food and the general economic condition of the people, though low, has not been bad.

The principal diseases affecting the population are hookworm disease and malaria.

The prevention of hookworm disease has ceased to be a matter in which the central government can usefully intervene. With the abolition of the system of preparing for agricultural use manure whose chief constituent was human excrement, the widespread infection with hookworm of the canefields ceased. Naturally, some years were required for the cleansing of the soil but it may now be safely presumed that hookworm disease is seldom contracted in the canefields. The problem has become one of personal hygiene, dependent upon a radical change in the personal habits of a very conservative and still ignorant people. The influence of education and propaganda on an agricultural population whose standard of living is definitely low is practically negligible. It is only when a man becomes fairly prosperous that he feels the need to modify his habits according to the new standards of living to which his increased prosperity has raised him. Thus, though the majority of the rural inhabitants have provided their premises with latrines the proper use of which would undoubtedly prevent hookworm infection, they have not yet habituated themselves to their use.

But though the prevention of the disease is now in the ineffectual hands of the rural population, the Government can still institute measures for its control. By the frequent and extensive treatment of the rural population with appropriate drugs the Government ensures that a large percentage of them are periodically released of the infestation to which their blind adherence to custom makes them liable. The hookworm-malaria branch of the Department undertakes mass treatment of the rural population and in this way ensures for those who are willing to take the treatment a certain degree of relief from the consequences of their hygienic shortcomings. Concurrently with the administration of treatment, the staff of the branch hammer home the principles of prevention, but this part of the campaign shows little sign of being effective so long as the general economic level of the population is low. During the year 84,683 treatments were given.

Malaria.—In 1932 the malaria situation in the Colony was reviewed in the light of past colonial experience and of the new information which had become available through the labours of the Malaria Committee of the League of Nations in Europe. As a result of this review it became evident that much energy was being dissipated by the institution of inappropriate measures and the maintenance of old drainage works whose usefulness had disappeared, either on account of their having been established in areas where such treatment was uneconomic or inappropriate or because subsequent events had nullified their effectiveness. It was accordingly decided to apply to the different regions of the Colony the measures which in the light of the new experience were likely to produce the most effective return for the energy expended. In practice this has meant the virtual abandonment of anti-mosquito measures throughout the greater part of the rural areas lying below 600 feet altitude. Here the object of the Government is to make totaquina as widely available as possible so that sufferers may be able to obtain the treatment which they need. In a few populous places old drainage works of known effectiveness are maintained, but no new works are being undertaken in the meantime.

In most of the region lying higher than 600 feet anti-mosquito work is feasible, on account of the density of the population and of the effects of the cool season in restricting to practical numbers the permanent mosquito nurseries in the area. This area has now been the subject of close study for the past three years and it has been found that most of the mosquito nuisances are not such as require extensive permanent drainage works for their abatement. The problem on the central plateau is not the abolition or the treatment of large natural mosquito-breeding places but the abolition of innumerable small nuisances created and maintained by human agency. The area is strewn with gardens and small holdings on each of which there are maintained collections of water in the shape of watering tubs, barrels, tanks or pits. Of these the pits of the market gardens are the worst offenders as they have been repeatedly found to contain larvae of *A. Costalis*. Water receptacles of this kind are quite unnecessary in this area because practically every house or garden has a piped water supply. In fact most of the storage receptacles are filled from the pipe. The hookworm-malaria branch has been fully occupied in attempting to deal with this nuisance, but progress must necessarily be slow. Nevertheless control of such water collections is essential for control of malaria in this locality.

V.—HOUSING.

The housing of the wage-earning population of the Colony may be considered in three categories: (*a*) housing on estates, (*b*) housing in rural areas not estates, and (*c*) housing in towns.

Estate labourers are, for the most part, adequately housed. They are accommodated in lines, or rows of huts, constructed either of stone or of wattle and daub, with roofs more commonly of thatch, but frequently of corrugated iron. Adequate provision is made for the ventilation and lighting of these quarters, but ventilation and lighting appear generally to be disliked by the occupants. At night, every accessible crevice is carefully closed, though the presence of ridge ventilation in many cases assures reasonable change of air in spite of the efforts of the occupants to exclude fresh air from their sleeping apartments. When the dwelling is thatched the problem of assuring adequate ventilation is difficult. The lines must be kept clear of weeds, and all houses are required to have a clear space of at least ten feet round them. Each camp has adequate latrine accommodation and a supply of wholesome water is laid on, though in many cases the labourers prefer to use the polluted water of streams or nearby irrigation channels for their domestic purposes. As a general rule, the lines are not lit at night. Lighting is scarcely necessary as the occupants retire shortly after sunset.

The housing in rural areas other than estates is fairly satisfactory. The Indian labourer can himself with the aid of his friends construct a satisfactory hut. He generally owns the piece of land on which he builds his hut and what is not occupied by the hut is planted with sugar cane or other agricultural produce, while room is also found for a primitive byre or a shelter for goats. The amenities of life are few, and a locality settled by a number of such persons bristles with sanitary problems arising out of poverty. Fortunately, most of them are now on a pipe-line so that their water supply gives little cause for anxiety, though they may have to carry their water several hundred yards from the nearest public fountain.

In the towns and townships conditions vary. There are areas of overcrowding with its consequent insanitary conditions. Too many persons live in one room though the climate is such as to obviate many of the evils attendant upon this practice.

VI.—PRODUCTION.

Meteorological Conditions and Sugar Production.

Weather conditions during the year were fairly satisfactory, except in the Northern districts, where a drought was in evidence from March till August. Nothing in the incidence of weather factors justified an expectation of the highest sugar production so far recorded in this Colony.

The total cane reaped approximated 2,547 thousand metric tons, in excess by 45 thousand tons on last year's production. The sucrose content of the cane surpassed all expectations, averaging 13·71, as compared with 13·14 in 1935 and 12·86 in 1934. The average extraction, for the whole Colony, reached 11·79 per cent., as against a previous maximum of 11·25 in 1933. As a result of the association of these two favourable factors, the output of sugar reached the record total of 300·34 thousand metric tons.

The following table exhibits the comparative production for the past seven years:—

YIELD OF SUGAR IN THOUSAND METRIC TONS.

Districts.	*1936.*	*1935.*	*1934.*	*1933.*	*1932.*	*1931.*	*1930.*
Pamplemousses and Riviere du Rempart	63·97	69·97	30·13	57·77	62·73	41·81	43·00
Flacq	49·98	44·15	30·87	41·37	35·97	27·91	37·81
Moka	43·42	35·76	29·30	40·08	34·12	20·83	32·10
Plaines Wilhems ...	21·89	20·62	11·54	18·22	17·05	11·64	14·62
Black River ...	12·85	11·28	5·99	8·88	9·06	6·29	9·81
Grand Port ...	56·10	53·38	38·37	50·66	46·66	28·52	46·53
Savanne	52·13	45·34	32·66	44·48	41·63	27·01	37·09
Total ...	300·34	280·50	178·86	261·46	247·22	164·01	220·96

The figure for 1931 evinces a reduction, estimated at 34 per cent., due to a severe cyclone. In 1934, there was a severe drought.

The large output for 1936 is probably the result of a number of different factors operating in the same direction: the high sucrose content, responsible for 12,000 to 15,000 tons of sugar extra, is probably due in part to the cool and sunny weather which obtained during the ripening season and, in part, to a higher percentage of sweet canes reaped (BH 10(12)).

The heavy yields obtained in the Central and Southern districts appear to result from (*a*) increase in the area cultivated, (*b*) improved cane varieties, (*c*) superior cultivation and fertilization, (*d*) enhanced irrigation, (*e*) total absence of cyclones, the whole associated with an excellent start of the crop made in November and December, 1935.

Grades of Sugar.—The proportion of raws was, this year, 77·85 per cent. as against 87·10 per cent. last year; vesous were 21·68 per cent. as against 12·60 per cent. in 1935, while low sugars approximated 0·47 per cent. as compared with 0·30 last year.

Area under Sugar Cane.—At the beginning of 1936 the area under cane was estimated at 139,341 acres, in excess by 1,032 on the corresponding figure for the year previous. Estates with factory cultivated 59,914 acres, estates without factory, 37,697, giving a total estate cultivation of 97,611. The balance of 41,730 acres was cultivated by small planters mostly Indian peasant proprietors.

Number of Factories.—In 1936, two more factories were closed down, the number in operation being reduced to 40. Two more factories will be dismantled in 1937 so that, for the 1937 crop there will be only 38 factories. They numbered 54 in 1921.

Varieties of Sugar Cane.—During the year an enquiry was conducted regarding the relative amount of cultivation of BH 10(12) on estates.

The results are as follows:—

Districts.	*Per cent of Total in BH 10 (12).*
Pamplemousses and Riviere du Rempart	32
Flacq	31
Moka	8
Plaines Wilhems	22
Black River	37
Grand Port	21
Savanne	29
Whole Island	26

It would thus appear that over one-fourth of the total estate cultivation or, approximately, 26,000 acres are, at present, under BH 10(12). As the richness of BH 10(12) markedly exceeds that of Tannas while, with favourable weather, the yield in the field of the first variety is generally in excess of that of the second, it would seem that, within the next few years, the Colony's output in sugar may be appreciably increased owing to the extension given to BH 10(12).

Sugar Market.—The market for sugar remained debased throughout the greater part of the year. By 31st December, the whole production had been disposed of at an average price approximating to Rs.5.50 net per 50 kilos on a basis of 99° of polarization and including the benefit of extra Colonial preference.

Disposal of the 1935-6 *Crop and Local Sugar Consumption.*—The total sugar exported from 1st August, 1935, to 31st July, 1936, was 273,898·6 metric tons distributed as follows:—

	Metric tons.
Great Britain	241,776·6
Canada	31,531·3
Hong Kong	355·6
Other places	235·1
Total	273,898·6

The exportation for the 1936-7 crop, up to December, 1936, was as follows:—

	Metric tons.
Great Britain	116,907·0
Canada	16,529·8
Other places	114·9
Total	133,551·7

The local consumption of sugar for 1935-6 was 9,327 metric tons, as compared with 11,211 for the year previous and 10,381 for 1933-4.

Sugar Machinery.—Machinery to the value of Rs.589,449 was imported during the year as against Rs.438,588 in 1935. Tramway material to the value of Rs.328,219 was imported as compared with Rs.194,666 the year previous.

Fertilizers.—The importation of chemical fertilizers in 1936 totalled 21,588 metric tons at Rs.2,078,332 as compared with 15,590 metric tons in 1935 valued at Rs.1,754,425.

Pests and Diseases of the Sugar Cane.—Conditions during the year were practically the same as during the year previous. Experiments have been started regarding the effect of hand collection of adults *Phytalus smithi* versus non collection. New parasites of the beetle have been introduced from Madagascar and Java and Porto Rico.

Minor Agricultural Industries.

Tobacco.—The area cultivated in 1936 was increased to 661 acres. Disease was little in evidence but weather conditions were not, upon the whole, entirely satisfactory.

The amount of leaf purchased by the warehouse during the year was 375,923 kilos of a value of Rs.475,326, as compared with 275,710 kilos and Rs.268,321 in 1935.

Fibre.—Conditions in 1936 were somewhat better. The total export was 1,213·8 metric tons as against 446 in 1935. Consideration is being given to the best means of furthering the interests of the fibre industry and, in particular, to the possibility of reopening the bag factory.

Pineapple.—Prospects are somewhat better as regards this industry. The Colonial Development Fund has sanctioned an advance of £2,000 to growers and a committee has been appointed for the control of the fund. The same fund has donated £1,000 for experiments in pineapple cultivation by the Department of Agriculture.

During the year 1935-36 the canning factory turned out 2,960 cases of canned fruit of a net total weight of 66,600 kilos.

Tea.—Progress is being maintained in this industry. The total production of the two principal tea gardens reached 31,250 kilos in 1936.

Coconut Industry.—The export of copra-produce of the dependencies of Mauritius amounted during the year to 1,331·5 tons valued at Rs.229,884 as against 1,746 tons, valued at Rs.217,985 in 1935. The export of coconut oil during the year was 7,113 litres valued at Rs.2,686.

Alcohol.—The total quantity of alcohol distilled for human consumption amounted to 651,727 litres as against 539,361 the year previous. The quantity distilled for industrial purposes was 453,820 litres as against 360,670 in 1935. The exportation of rum during the year was 39,619 litres, valued at Rs.8,776 as against 18,155 litres valued at Rs.5,299 in 1935.

Veterinary and Livestock.—Interest in cattle breeding and management was principally focused on the possibility of producing cattle for meat. The question of improving the quality of local pastures was investigated and Professor Lindsay Robb of Pretoria University, South Africa, has furnished a full report on this question.

At the beginning of the year, horned cattle on estates totalled 14,195 and the number of sheep was 1,961. Cattle importation from Madagascar amounted to 5,767 valued at Rs.362,000.

The question of cattle raising in certain dependencies of Mauritius received attention during the year and prospects are considered generally satisfactory. As regards sheep breeding, the introduction of black head Persian rams has met with great appreciation on the part of Mauritius breeders.

The pig industry has also received attention and some good quality boars have been introduced.

Other Manufacturing Industries.

There was no decline in the subsidiary industries during the year. The number of engineering establishments remained at 47, while bakeries rose to 75. The number of lime kilns licensed in 1936 was 32 and of cabinet makers 161. There were four docks (landing etc.), four distilleries, three hydro-electrical plants, eight cigarette factories, one match factory, four salt making establishments affording employment in all to about 2,000 people.

In addition, leather tanning, boot and shoe making, aerated water works, ice making, vinegar making, biscuit and jams etc., provided means of work to a large number of people and went some way towards rendering the Colony more self supporting.

Fisheries.

In 1926 the question of Fishery Control in Mauritius was thoroughly investigated by Mr. J. Hornell, F.L.S.,F.R.A.I., formerly Director of Fisheries in Madras, and his recommendations in the printed report on the subject have formed the basis of the work of the local Fisheries Advisory Committee formed in 1927. Special consideration has been given to the questions of control of net fishing, improvement of local methods of fish-curing, protection of the local dried fish trade against the imported article, and ensuring a plentiful supply of cheap fish in the markets without prejudice to the working fishermen. Careful study of the whole question led the Committee to recommend a suspension of the use of large nets in 1934 and this was approved and has been in force since 1st October of that year. The results have shown clearly that the experiment has been justified and steps are being taken to make the prohibition permanent.

The lagoons, between the coral reef surrounding the Island and the beach, are normally full of excellent fish of many varieties which are taken in large quantities by means of basket traps, cast net and line and in the open sea outside the reefs large fish can be taken at practically all times of the year by trolling or with deep sea lines.

All professional fishing is done from small sailing craft known as "peniches" and "pirogues" which are well built and sea-worthy but the business side of the industry is quite undeveloped owing to local preference for old-fashioned methods which ought to be replaced. Amateur fishermen are well supplied with locally built sea going motor boats which enable them to reach the remarkable fishing grounds round the rocky islets lying from two to fifteen miles off the northern coast of the Colony where good sport is certain at almost all seasons.

Fish-curing industries are established at Rodrigues and St. Brandon Islands and produce a considerable quantity of what is one of the staple foods of the poorer classes but the dried fish of South Africa and India still commands a large sale and is imported in increasing quantities at a very low price.

River fishing is confined to spinning for carp and chite—a fish very like a mullet—but fishing rights are strictly preserved and suitable stretches of water are scarce.

VII.—COMMERCE.

The value of the external trade of the Colony in Merchandise for the year 1936 was Rs.67,867,395, of which Rs.30,218,589 represented Imports and Rs.37,648,806 Exports. The balance in favour of Exports was therefore Rs.7,430,217. In comparison to that of recent years, the trade balance may be regarded as satisfactory. Economic conditions, on the whole, showed improvement over the preceding year.

The total values of Imports and Exports for the last five years were:—

	Imports. *Rupees (c.i.f.).*	*Exports.* *Rupees (f.o.b.).*
1936	30,218,589	37,648,806*
1935	29,891,160	28,649,255
1934	29,680,346	26,136,140
1933	29,035,237	32,176,743
1932	26,992,760	27,662,851

---

* Including the estimated value of sugar quota certificates, not included in previous year's figures.

The declared value of Exports in 1936 includes the value of sugar quota certificates which may be estimated at Rs.4,858,000 for the year.

Imports of Merchandise.

Mauritius produces barely one-tenth of the foodstuffs required for its inhabitants and imports practically all articles of food and drink, sugar excepted, and manufactured goods of all descriptions.

Rice, which is the staple food of the people, represented about 20 per cent. of the total imports in 1936, against 22 per cent. in 1935. The fall in the importation of rice is due, mainly, to the fact that an unusually large quantity was received in the closing months of 1935.

There was a decline in the importation of other essential foodstuffs chiefly wheat, flour, dholl, lentils, edible oils, with a corresponding rise in the importation of manufactured goods.

The proportion of food, drink and tobacco to manufactured articles imported is shown below:—

	Food, drink, and tobacco. *Rs.*	*Manufactured articles.* *Rs.*	*Total imports including other articles.* *Rs.*
1936	11,616,296	16,250,800	30,218,589
1935	12,900,047	14,745,275	29,891,160

Increases are noted mainly in earthenware and glassware, machinery and millwork, metals and manufactures thereof, petroleum lamp oil, petroleum motor spirits and chemicals for the preparation of manures.

The quota allotted in respect of Japanese cotton and artificial silk piece goods was the same as for the previous year. However, the trade in these goods with the United Kingdom and India showed a decrease of 20 per cent. and 12 per cent. respectively in comparison with last year's importations.

Japan continues to maintain her position with respect to woollen piece goods upon which no restriction has as yet been imposed.

In 1935, an enactment, which came into force on the 1st January, 1936, was passed by the Legislative Council with a view to ensuring an additional measure of control over the importation of quota cotton and artificial silk textiles (piece goods) from the United Kingdom.

A certificate of origin certifying that the goods have been spun, woven and finished in the United Kingdom, endorsed by certain Chambers of Commerce, must henceforth be produced in respect of importations of such goods from the United Kingdom.

Previous to 1932 the greater proportion of manufactured tobacco and cigarettes consumed locally was imported, but, as a result of the increase of customs duties combined with technical advice and control by the Agricultural Department, importations have decreased and a greater proportion of the tobacco consumed is now produced in the Island.

The trade returns indicate a similar trend for wines, matches, salt and maize.

The trade in edible oils which was formerly chiefly with India and China now shows an increase in favour of the United Kingom, owing to the superior quality of the soya oil there manufactured.

In addition to the above, the Colony is also a large importer of chemical fertilizers for the cane fields, coal and motor spirits for rail and motor transport; machinery for sugar estates; vehicles of all descriptions; bullocks for food and gunny bags for packing sugar.

Other considerable items of importation are wearing apparel, drugs, timber, provisions, etc.

The following table shows some of the principal articles imported during the last two years:—

		Quantity.		*Value in Rupees (c.i.f.).*	
		1936.	*1935.*	*1936.*	*1935.*
Rice...	kilos	54,482,152	60,589,845	6,035,237	6,585,730
Flour	,,	8,103,027	9,625,013	1,017,554	1,000,061
Coals	,,	40,261,876	36,861,763	463,615	439,048
Timber		—	—	464,801	260,489
Apparel		—	—	621,274	524,350
Gunny bags	number	4,004,610	3,251,800	1,129,275	974,600
Cotton, grey	metres	1,539,084	4,702,085	265,361	862,859

Soap, common	,,	1,558,929	1,171,323	530,669	456,343
Metals (iron and steel.		—	—	1,081,718	826,175
Metals (non-ferrous)		—	—	242,327	220,220

Exports of Merchandise.

Mauritius is almost entirely dependent on one industry—the sugar industry—and so long as efforts made to develop other industries do not meet with success the economic position will continue to be more or less insecure, especially on account of cyclones. The sugar exports in 1936 represented about 98 per cent. of the domestic exports. For the last two years they were:—

	Metric tons.	Value in Rupees. f.o.b.
1936	279,194	31,149,370*
1935	232,202	26,895,460

* Values of sugar quota certificates not included.

All sugar exported is consigned to the United Kingdom or Canada. Exports in 1936 were:—

	Tons.	Value in Rupees. f.o.b.
United Kingdom ...	262,351	29,462,107†
Canada	16,530	1,673,610
Hong Kong	305	12,624
Straits Settlements ...	8	1,029

† Values of sugar quota certificates not included.

Other exports are comparatively insignificant in value. They are chiefly:—aloe fibre (1,291 tons valued Rs.236,822); rum (39,159 litres valued Rs.8,776) copra and poonac (1,332 tons valued Rs.229,884); coconut oil (7,113 litres valued Rs.2,686).

Domestic Exports in the year amounted to Rs.31,842,308; Re-exports Rs.948,498.

The Re-exports are chiefly lentils, gunny bags, salted fish, old metals, cinema films consigned to the neighbouring Islands of Bourbon and Madagascar and also to the Union of South Africa, Japan and India.

Apart from the trade in merchandise, bullion and specie were imported and exported to the total value of Rs.50,000 and Rs.159,185 respectively in 1936 against Rs.36,866 and Rs.1,275,622 in 1935.

Distribution of Imports.

The import trade is mainly from the United Kingdom (31·65 per cent.) and India (33·04 per cent.), in 1936. The United Kingdom is the source of most of the manufactured articles and India of grain, spices and gunny bags.

Other sources of supply are Australia (4·28 per cent.); Japan (3·92 per cent.); France (3·62 per cent.) and the United States of America (3·17 per cent.).

Australia is the principal source of supply for wheat, flour and butter. Importations from Japan and United States of America increased slightly during the year.

The United States of America and the Dutch East Indies are the principal sources of petroleum products.

Course of Prices of Imports.

In 1936 there was a rise in the price of flour in comparison with the year previous. The price of rice and the other essential foodstuffs, however, remained unchanged.

Development of Empire Trade.

Since 1924 the Colony has accorded preference to the United Kingdom goods. This preferential tariff was extended from year to year and assumed, in 1933, an Empire character. As from 1934, quotas were imposed on artificial silk and cotton piece-goods and as a result both the United Kingdom and India have benefited.

The value of the import trade from the British Empire, in 1936, was Rs.22,802,528 against Rs.23,460,095 in 1935, while in respect of foreign countries it increased from Rs.358,009 in 1935 to Rs.7,375,447 in 1936. This is due to larger foreign importations of electric goods and apparatus, wearing apparel, glassware, metals, motor spirts, machinery.

VIII.—WAGES AND COST OF LIVING.

No change of importance occurred during the year. Labourers under monthly contract received, in cash Rs.10 per month, with rations, lodgings, medical attendance, etc., in all equivalent to about Rs.20 per month.

Male day labourers received R.0.50 to R.0.60 per daily task, during the intercrop season but, during harvest time, wages are about double these figures. Females, of whom a considerable number are employed, receive generally half the wages of males.

Remuneration for piece work was, on the average, as follows:—

	Per acre. *Rs.*
Clearing land	30–40
Digging cane holes	18–20
Manuring	15
Weeding	8
Cutting canes (20 tons/acre)	10–15

The wages of artizans were Rs.1 to 2 per day according to nature of work, while those paid monthly received Rs.35 to Rs.75 according to circumstances.

Domestic servants, especially in the Central and most populous districts, are easy to procure but well-trained servants are not so numerous on the market. Butlers, cooks, gardeners and other servants receive between Rs.10 and Rs.35 per month. Chauffeurs, on the average get Rs.35 per month.

No change in the rates of salaries occurred in 1935. The following table indicates the ruling rates:—

	Rs. per annum.
Managers of sugar estates and senior Government officials	8,000–13,000
Government, bank and commercial clerks (higher grade)	4,000– 7,000
Clerks and employees on sugar estates...	1,500– 3,000
Junior clerks and employees	720– 1,500

The cost of living in 1936 upon the whole decreased appreciably. Rice, the staple food of the population, was indexed at 74 during the first quarter and at 66 during the last (100 in 1914, as base). Other grains rose from 79 to 88. Flour remained about 60 during the first three quarters but rose to 120 during the last. Oils and fats were steady about 77 while tea and coffee decreased from 90 to 75. Articles of clothing decreased from 151 in the first quarter to 109 in the last.

The quarterly weighted index for the total cost of living (28 items) in 1936 was as follows (100 being the Index for 1914):—

First quarter	116·7
Second ,, ...	121·7
Third ,, ...	111·6
Fourth ,, ...	95·9

The mean for the year was 111·5 as compared with 115·9 in 1935. As regards the labouring classes, the following table indicates the purchasing power of wages, in terms of rice, since 1927:—

Year.	*Average daily wages of male labourer.*	*Average price of fair quality rice per lb.*	*Purchasing power of wages expressed in lb. of rice.*
	Rs.	*Rs.*	*lb.*
1927	1·25	0·13	9½
1928	1·25	0·10	12½
1929	1·00	0·10	10
1930	0·80	0·09	9
1931	0·75	0·08	9
1932	0·45	0·05½	8
1933	0·45	0·06	7½
1934	0·45	0·06	7½
1935	0·55	0·07	8
1936	0·55	0·06	9

The official index numbers do not take into consideration the improved standard of living since 1914, while such items as housing, lighting, tuition of children, taxes, etc., which have either not been reduced or else, actually increased. Consequently, the cost of living for Europeans and people living on the European standard is, generally, higher than the official index would lead one to suppose.

IX.—EDUCATION AND WELFARE INSTITUTIONS.

An Ordinance, enacted by the Governor with the advice and consent of the Council of Government, was introduced on the 18th of September, 1934, to amend and consolidate the Law on Education. It provides for the establishment of a Royal College Department and a Schools Department. The Regulations for the management of Government and Aided Primary Schools as well as Aided Secondary Schools are embodied in the Education Code.

Primary.—Primary Education is not compulsory, but it is given free through Government and State-aided schools which are open to all children of the Colony. The following table shows the number of primary schools, the number of pupils on roll, and the staff of teachers during the year 1936:—

Schools.	*No. of Institutions.*	*No. of Teachers.*	*No. of Pupils on roll.*	*No. of Pupils in average attendance.*
Government ...	50	393	15,192	10,987
Aided	77	659	24,774	17,837
Total ...	127	1,052	39,966	28,824

State-aided schools are under the control of a Manager, and the Government contribution includes the salaries of the teachers together with recurrent grants to meet part of the expenditure on maintenance of school buildings and furniture.

Pupils must be at least five years old and must have been successfully vaccinated in order to be allowed admission to a primary school; when they are under five they undergo preliminary training before being promoted to the lowest form.

The curriculum of studies includes the teaching of English, French, and arithmetic. In the higher classes elementary history and geography are taught and girls study needlework. Regular instruction is also given in physical drill, nature study, hygiene and elementary principles in agriculture.

There are six primary school standards or classes, viz.:—

Standard I with pupils from 5 to 6 years of age.
Standard II with pupils from 6 to 7 years of age.
Standard III with pupils from 7 to 8 years of age.
Standard IV with pupils from 8 to 10 years of age.
Standard V with pupils from 9 to 11 years of age
Standard VI with pupils from 10 to 12 years of age.

There are no fixed age limits for the different standards but no pupil may be entered on the attendance register who is under five years of age, and no pupil may be retained on the register after the annual examination which follows his or her fourteenth birthday, exception being made for pupils following the scholarship classes.

Examinations which were formerly held for all the classes are now limited to Standards V and VI. Experience has shown that the quality of the work put in, now that examinations have been restricted to the higher classes, is of a higher standard than it used to be. Much however is left to be done on this line and a definite scheme is being introduced for the benefit of the lower classes. The advantage gained by the primary schools through the methods of teaching introduced is positively proved by examination results.

Fourteen apprenticeships are awarded annually to primary school pupils to encourage the study of needlework and handicraft. Needlework apprenticeships which were formerly restricted to Government or aided primary school pupils, are now open to outsiders. The object in view was to encourage competition on this line but, unfortunately the result is far from being satisfactory. There is a noticeable abstention from the handicraft examinations, and the reason for this may be ascribable to the undoubted aversion professed for manual work of any kind. Twenty-six scholarships and exhibitions tenable at the secondary schools are awarded every year, through competitive examinations, to the best pupils attending primary schools.

It is interesting to note that a high percentage of candidates winning the English scholarships are junior scholars from the primary schools.

There are 30 gardens attached to the primary schools and they are cultivated by the pupils of Standards III to VI. These gardens are regularly inspected by officers of the Agricultural Department who give advice as to proper cultivation.

Secondary.—There are two categories of secondary schools, viz: (1) Secondary aided schools, which are managed privately but are under Government control, and (2) the Royal College and the Royal College School which are managed by the Government.

(1) *Secondary aided schools.*—Government grants to secondary aided schools are assessed with reference to attendance and efficiency, as tested by inspection and examination, and not, as in the case of primary aided schools with reference to maintenance and salary charges.

The following table shows the number of institutions, the number of pupils on roll and in average attendance, and the staff of teachers during the year 1936:—

Schools.	*No. of Institutions.*	*No. of Teachers.*	*No. of Pupils on roll.*	*No. of Pupils in average attendance.*
Aided	9	134	1,599	1,406

These schools provide not only for elementary education such as is given in primary schools, but also for higher education leading up to the Cambridge School Certificate and the London Matriculation.

The curriculum of studies includes the teaching of English, French, mathematics, needlework (for girls), hygiene, history, and geography. In addition to these, drawing and music are taught on a more moderate scale.

These schools are visited periodically by the Superintendent of Schools, who examines the lower forms. No advantage is gained from these examinations but it helps classification in view of prizes awarded for general proficiency. The middle and higher forms are examined partly by local examiners and partly through examinations conducted by the Syndicate of the University of Cambridge.

Working hours in both primary and secondary schools, extend as a general rule, from 10 a.m. to 3 p.m. no provision being made for evening classes.

(2) *Royal College.*—The Royal College is a Government school for the secondary and higher education of boys up to a standard equivalent to that of the Higher Certificate examinations conducted by Oxford and Cambridge Universities. It comprises two schools under the management of the Rector, the Royal College proper in Curepipe and the Royal College School in Port Louis, where pupils who live in or near the capital are educated on the same lines as in Curepipe up to School Certificate Standard. At the Royal College the teaching staff consists of the Rector, twelve Masters with degrees in Honours at British Universities, eleven Assistant Masters appointed locally, and a Physical Training and Gymnastic Instructor (who also attends once weekly at the school to take classes); and at the Royal College School, of the Head-master, two Masters and nine Assistant Masters. Assistant Masters are encouraged to take the B.A. and B.Sc. examinations of London University. The College has well-equipped libraries and chemical, physical, and biological laboratories; almost as many pupils follow classical as scientific studies. The subjects taught are English, French, mathematics, Latin, Greek, chemistry, physics, biology, geography and history; and classes are held during school hours in physical training and gymnastics. The pupils are drawn from all classes and races in the Colony, and range in age from 10 to 20 years. The fees are from Rs.96 to Rs.192 per annum, and pupils may travel at quarter rate on the Government railways. Admission to the Royal College is conditional upon passing an entrance examination or winning one of the 20 annual Primary Schools Scholarships and Exhibitions or one of the two Secondary

Schools Scholarships awarded annually, or one of the eight class scholarships and exhibitions, which are competed for annually, and are open to all boys in the Colony. Six further class scholarships and exhibitions are competed for annually by Royal College pupils. These 36 scholarships and exhibitions are tenable at the Royal College, and entitle the holders to free tuition, free railway travelling to and from College, and also to the purchase at half price of books and school requisities, for a period of three years except the primary schools awards, which carry these privileges for the whole period of the pupil's college education.

Two scholarships one on the Classical and one on the Modern Side, of the present value of £1,200 each (with first-class passage to and from England) tenable for four or five years at a British University or any other approved place of education in the United Kingdom are also awarded annually. Besides the winners of these two scholarships, a few boys whose parents can afford it go to England or France to study for a profession, usually Medicine or Law, and almost always return to Mauritius to practise. Of the remaining pupils the majority on leaving the College find employment in the island.

The boys receive a training in classical and scientific subjects. Specialization begins at the Entrance class, and the division into modern and classical sides becomes complete in the Upper Middle class. At the School, pupils may undergo commercial training in place of classics or science.

Classes are held between 9.30 a.m. and 3.30 p.m. on five days weekly. In addition to the ordinary classes there are Saturday extension classes where candidates for Pharmaceutical Diplomas and other public science examinations are helped in their studies. The number of pupils on the roll of the Royal College in January, 1935, was 325, and of the School, 156. The average attendance at the College was 273 and at the School, 124. (The number of College pupils on the roll in May, 1935, after the publication of the School Certificate results, was 307.) One hundred and one pupils sat in December, 1934, for the Cambridge School Certificate, of whom 48 obtained certificates. In May, 1935, the number of pupils who had passed this examination and proceeded to the highest class of the College was 43.

Besides the regular Physical Training Classes encouragement is given to rugby and association football, hockey, boxing and gymnastics and athletics, in which, although by no means all the boys join, the standard of proficiency is high. As the pupils are all day-boys it is difficult to obtain much support for other social activities, but a school magazine is published thrice yearly.

Welfare Institutions.

There are six Roman Catholic infirmaries for men and women, and two orphanages for children under the management of Sisters of Mercy; also an orphanage for boys and one for girls under the control and management of the Church of England, and one " home " for men and women under the management of the Church of Scotland. These institutions receive from the Government a maintenance fee for each pauper maintained therein.

Under Ordinance No. 44 of 1932, subsequently amended by Ordinance No. 21 of 1934, a home, styled the Austin Wilson Home, has been instituted and incorporated to provide accommodation and subsistence for aged gentlefolk. The funds for the establishment of this home have been generously contributed by Mr. A. J. Wilson in memory of his son, the late Austin Wilson.

A Mohammedan orphanage was also established in Port Louis in 1932 for the maintenance and education of orphans of the Mohammedan creed. Funds for running the institution are obtained from voluntary subscriptions among the Mohammedans.

Outdoor assistance to paupers was granted in cash by the Poor Law Department during the year.

Several private religious societies for the distribution of assistance in food and medical care are also in existence. The Société Francaise d'Assistance chiefly assists French nationals.

The Child Welfare Committee and the Oeuvre Pasteur de la Goutte de Lait, two philanthrophic Institutions in receipt of Government grants, deal especially with expectant and nursing mothers and their babies.

The Workmen Compensation Ordinance provides for the grant of compensation by employers to workmen who are injured in the course of their work.

Recreation, Music, Art and Drama.

Association football is the most popular form of sport. Golf, tennis, cricket, hockey and rugby football are played mostly by the wealthier classes. The Mauritius Turf Club and the Mauritius Jockey Club hold race meetings from May to September at the Champ de Mars in Port Louis and at Floreal in the district of Plaines Wilhems; and regattas are held by the Yacht clubs of Mahebourg and Tombeau Bay. " La Chasse " or the shooting of driven deer is a favourite sport of Mauritius. The season is from June to the beginning of September.

There are several flourishing companies of Girl Guides and Brownies; the latter are known locally as Blue Birds. The Boy

Scouts have not been so successful as the Girl Guides, but efforts are being made to encourage the movement.

There is not much encouragement for any of the arts. Music is fostered principally by the parish churches whose amateur singers frequently give concerts. The Christian Brothers also provide musical training, and apart from the Police Band, which consists of a bandmaster and 30 bandsmen, a band styled the " Alliance Musicale " and comprising about 25 units was established in 1933.

The Municipality of Port Louis has instituted a drawing class, practically the only encouragement to local talent. The Institute has a collection of pictures presented by Mr. Rochecouste but there is no other art gallery.

Occasional dramatic performances are given by amateurs, but no permanent society has been formed. In better times the Municipality of Port Louis subsidizes a theatrical company from France, which plays in the theatre at Port Louis. The Chinese have their own theatre in the town, to which companies come from China when conditions are prosperous.

There exists a Royal Society of Arts and Sciences which was founded in 1829 under the title of Société d'Histoire Naturelle and was granted a Royal Charter in 1846. It interests itself in most branches of science and arts, especially those relating to questions of agriculture and the natural history of the Colony. The Society was incorporated with the Mauritius Institute in 1906 and its library has been transferred to the Institute.

X.—COMMUNICATIONS AND TRANSPORT.

Roads and Road Transport.

The Colony is well served with 500 miles of main roads maintained by Government and 188 miles of branch roads maintained by the District Boards. All roads are metalled and 165 miles of the main roads have been covered with bitumen.

The excellent roads of Mauritius are a source of constant surprise and admiration to all visitors to the Colony who are in a position to draw comparisons between Mauritius and other outlying posts of the Empire. All the principal roads are tarred and a systematic policy of widening, grading and reducing curves has been pursued for some years with the result that the numerous places of beauty and interest in the Colony can be reached quickly and in comfort by tourists and visitors.

At the end of the year there were 2,831 motor vehicles in use classified as follows:—

Private cars	1,743
Taxi cabs	364
Lorries	368
Motor cycles	218
Omnibuses	138

Importations of motor vehicles during the year totalled 332 of which 272 were British made.

Taxi Cabs for hire in Port Louis and the principal towns are of modern type and are kept in excellent condition as regards safety and cleanliness and the charges for hire are reasonable—viz. R.0.20 per mile for short distance and special rates for long journeys or by the day. There is an excellent bus service on the 15 miles of main road from Port Louis to Curepipe and many subsidiary lines of less importance which radiate from the main system to every town and village in the Colony. The fares vary from 2 to 5 cents per mile and buses on the principal routes are well patronized and maintained in excellent condition for the safety and comfort of passengers. The retail price of petrol is normally Rs.11.00 per eight-gallon case, which is equivalent to about 2s. 1d. per gallon.

The annual tax payable in respect of motor vehicles is Rs.4 per horse-power in respect of motor cycles and Rs.5 per horse-power in respect of other classes of vehicles. Lorries pay an additional tax of Rs.40 per ton gross weight and motor buses a licence duty varying from Rs.200 to Rs.500 per annum in accordance with their seating capacity. Motor lorries plying for hire pay a further licence of Rs.200 per annum. Motor Cabs pay a licence duty of Rs.30 per annum and the cost of a driving licence is Rs.5 a year.

Cars of visitors are subject to a tax at the rate of Rs.5 a month.

Railways.

The Mauritius Government Railways comprise 110 miles of main line with 45½ miles of siding and station lay-outs of British standard 4 feet 8½ inch gauge, and 13½ miles of 75 cm. gauge track known as the Bois Cheri Light Railway. The exceptionally heavy gradient, much of it being 1 in 26, makes the operation of the Railways exceptional, restricting speed of the passenger service and limiting the weight of goods trains.

From the terminal at Port Louis, the most important section, the Midland line rises to 1,800 feet on its way to Mahebourg, the old port on the south-east coast of the island, 35¼ miles distant. A branch, 11 miles long, from this line, Rose Belle serves the fishing hamlet of Souillac. The North line, 33½ miles long, is fairly level and runs from Port Louis passing through the coastal districts to the little village of Grand River South-East, on the east coast. The Moka branch from Rose Hill, on the Middle line, 950 feet above sea-level, to Montagne Blanche, is 14¾ miles long and rises on this length to 1,500 feet. Tamarin and the Black River district are served by a branch off the Midland line at Richelieu, 12½ miles long, for goods traffic only. The Montagne Longue branch from Terre Rouge on the North line, is 3½ miles long, and in common with the Black River line has no heavy gradients.

Particulars of revenue and expenditure for five financial years are given below:—

Revenue.

	1931–32.	*1932–33.*	*1933–34.*	*1934–35.*	*1935–36.*	*Increase or Decrease of 1935–36 over 1934–35.*
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.

	2,608,124	1,777,890	1,797,038	2,031,542	2,077,755	+ 46,213

As a contrast with last year, the 1935-6 sugar crop was a record one, viz., 281,000 tons, and the financial results are reflected in the above statement.

In spite of the increased revenue from sugar, some of the more favourably placed estates have adopted Diesel motor lorries to transport their sugars to Port Louis, the effect of which would be to raise the rail transport costs to those factories less favourably situated for road access. Measures have therefore been placed before the Legislature to preserve all sugar traffic for the railway, the latter being at present in a general sense essential for the due transport of the crop. Passenger traffic continues to diminish and, although the early promise of reduced fares has not been fulfilled, there is as yet no urgency to curtail the passenger service. There can be no doubt however that road travel is increasing, due to the flexibility of the bus services and the size and comfort of the buses, which are not regulated by time tables and not tied down to fixed fares. In consequence the existing Rs.450,000 to Rs.500,000 of passenger revenue is in jeopardy.

Tramways.

Better economic conditions for the sugar industry resulted in a perceptible extension of tramways on estates, notwithstanding the greater extension of motor traffic. In 1936, the total extent of rail on estates approximated to 1,770 kilometres as against 1,680 in 1935. There were 220 locomotives and about 7,400 trucks. Farm tractors numbered 72 and motor lorries 99.

Posts, Telegraphs and Wireless.

The inland postal service is fairly well developed, the usual facilities in regard to correspondence, parcels and remittances being available. The island is served by 52 offices and postal agencies of which 47 are also telegraph offices. With the exception of a few outposts in outlying localities, the offices are on the railway lines. The outlying offices and localities far from the railway stations are served by postmen or by mail contractors.

Mails to and from Europe are received and despatched regularly twice every month by the French Messageries Maritimes Steamers via Suez, and twice in transit through South Africa by the Dutch K.P.M. Steamers. Other vessels are occasionally available. The time taken in transit for letters from Great Britain is about 32 days by the Messageries Maritimes Steamers and between 26 and 52 days via South Africa.

English parcel mails are not received by the Cape route unless a direct boat is available; the normal route is via Marseilles. Parcels from continental Europe are also received by this route.

Mails to and from India, Ceylon, the Far East and Australia are usually received and forwarded by the Messageries Maritimes Steamers via Mombasa or Aden, and by the K.P.M. Steamers via Singapore or Batavia.

There is a regular monthly service by the Dutch K.P.M. Steamers with Rodrigues, the largest dependency of Mauritius, and a regular four-monthly steamer service with the other dependencies. Occasional communications by sailing vessels are also available.

Remittances may be made by both money orders and postal orders. There are direct exchanges with the United Kingdom, South Africa, India, Ceylon, Mozambique, Australia, Seychelles and Hong Kong; and through the intermediary of these offices, remittances may be made to almost any place. Remittances may also be made by telegraph to the United Kingdom, South Africa, India, Mozambique and Seychelles.

There is a telephone service which is managed by the Oriental Telephone Company whose main office is in Port Louis with which the rural districts are connected. Government offices are linked together by a Government owned telephone system which is connected with the Oriental Telephone Company's lines.

Telegraphic communication is provided by cable and is maintained by the Eastern and South African Telegraph Company whose chief local station is at Port Louis; the Company has also a station at Port Mathurin in Rodrigues. Cablegrams are transmitted to and from the rural Post Offices on Government lines.

Communication with the outer world is also maintained by a wireless station. The station works mainly with ships at sea, but there is also a service with Reunion Island. The Station was built by the Admiralty in 1915 for communication with ships at sea and with various naval bases in the Indian Ocean. It was closed during a short period in 1922-3 and was taken over by the Mauritius Government in June, 1923. There has been a 24-hour service since October, 1928.

During the cyclonic season from 11th November to 15th May, the station transmits to all ships and stations within range, at 0845 G.M.T. daily, a detailed weather report including observations made at Seychelles, Rodrigues, Reunion and Durban. The average yearly number of weather reports intercepted from ships at sea is 2,500. When a cyclone is in the vicinity the Government tug *Maurice* stationed in the harbour at Port Louis is manned and inland weather reports are transmitted by wireless telegraphy from the tug to all vessels in port, for the guidance of their masters. The wireless apparatus in the *Maurice* also acts as a stand-by in the event of accident to the aerial system at the main wireless station at Rose Belle. The Rose Belle Station is provided with a modern valve set in conformity with the Telecommunication Convention. The range of the Station is 1,000 miles.

There is a privately-owned local broadcasting station licensed by Government. The station transmits between 1900 and 2000 G.M.T. programmes consisting mainly of gramophone records.

Harbour.

Port Louis, the capital of the Colony, possesses the only navigable harbour for ocean-going ships, which is picturesquely situated on the north-west coast. A wide break in the ring of coral reefs surrounding the island, caused by the meeting of several rivers and streams, the Latanier, La Paix, Le Pouce, and Creole, gives access to the harbour, which has been dredged so as to provide deep-water accommodation for ten ships lying at berths in the channel and drawing from 24 to 31 feet of water. The harbour is flanked on the north by Fort George, a military post, and on the south by Fort William, which is abandoned. The mountains of the range behind Port Louis, including the

Judicature.—Ordinances Nos. 9 and 10 amend the District Court Constitution Ordinance with reference to the jurisdiction of the District Magistrates.

Civil Service.—Ordinance No. 43 of 1936 provides for a total recast of the law governing the grant of pensions, gratuities and allowances to Civil Servants in the Colony.

A list of the more important Ordinances is given in Appendix I to this Report.

XV.—PUBLIC FINANCE AND TAXATION.

Revenue and Expenditure.

The revenue of the Colony for the year ended 30th June, 1936, amounted to Rs.15,350,986, including Rs.42,000, the unexpended balance of the 1922 Loan, and was Rs.92,564 less than the Estimate and Rs.7,613,258 less than that of the previous year.

The expenditure for the same period was Rs.14,694,644, being Rs.455,722 below the Estimate and Rs.5,956,310 below that of the previous year.

The revenue during the financial year 1935-36 exceeded expenditure by Rs.656,342 and the surplus of assets over liabilities on 30th June, 1936, amounted to Rs.17,846,203.

Of the expenditure for 1935-36, Rs.4,946,200 were spent on "Personal Emoluments" and Rs.9,748,444 on "Other Charges". The corresponding figures for 1934-35 were Rs.4,934,509 for "Personal Emoluments" and Rs.15,716,445 on "Other Charges".

The following is a comparative statement of the revenue and expenditure for the last five years.

Year.	*Revenue.* Rs.	*Expenditure.* Rs.
1931–32	12,160,279	17,704,574
1932–33	30,200,418	13,810,589
1933–34	16,567,110	14,634,339
1934–35	22,964,244*	20,650,954
1935–36	15,350,986	14,694,644

* Including Rs 7,882,380 Special Revenue.

The revenue normally becoming due and collected during the year 1932-33 was Rs.14,503,504, and the increase in the amount shown for that year was due to special adjustments comprising, *inter alia*, the following transfers to Revenue:—

	Rs.
Widows' and Orphans' Fund	5,032,347·84
Government Scholarship Fund	539,769·17
Improvement and Development Fund	6,317,717·98
Mauritius Loan, 1922	1,362,678·99
Unexpended balance, Sugar Industry Loan, 1929 ...	7,315·90
	13,259,829·88

Health.—There were eight deaths in hospital as compared with 13 in the preceding year.

Industrial School.

The Barkly Industrial School for boys is an institution for the training of juvenile offenders and vagrants, boys living in criminal surroundings, and those who cannot be controlled at home or in orphanages, etc.

The School is under the supervision of the Commissioner of Police and has a resident staff of one Chief Officer and 11 Instructors and Assistants. It occupies a group of buildings formerly used as a hospital and comprises large grounds which are fully cultivated as gardens, etc.

The number of boys in the School at the end of the year was 91, compared with 77 in 1935 and 54 in 1934. The number of admissions was 48 and discharges 26 for the whole year.

A Visiting Committee instituted by law looks after the general welfare of the inmates of the School and exercises a beneficent influence on the institution.

XIV.—LEGISLATION.

Forty-five Ordinances were passed by Council of Government and assented to by the Governor between the 3rd of April and the 3rd of November, 1936.

The majority of these Ordinances deal with matters of domestic importance amongst which the following are of considerable importance.

Public Health.—Ordinance No. 11 of 1936 provides for an extension of the sewerage area of the town of Port Louis with consequential improvement in the health conditions likely to be derived therefrom.

Law and Order.—(i) Ordinance 41 of 1936 provides for the prevention of riots and the better preservation of the public peace.

(ii) Ordinance No. 29 amends the Penal Code Ordinance No. 6 of 1838, with reference to the counterfeiting of coins, seals and similar offences.

(iii) Ordinances Nos. 14 and 15 of 1936 provide better and more adequate measures for the deportation of undesirable persons.

Finance.—(i) Ordinance No. 1 and Ordinance No. 7 of 1936 provide for the establishment and financing of a local Agricultural Bank.

(ii) Ordinance No. 13 provides for the better control of the Government Savings Bank.

(iii) Ordinance No. 35 provides for the transfer of the balance of the Mauritius General Improvement and Development Fund to the general revenue and assets of the Colony.

(iv) Ordinance No. 31 provides for the control of the transport of sugar and fertilizers.

Prisons.

Organization.—The Mauritius Prisons Department has an establishment of four Gazetted Officers, who are appointed from England, and 108 other ranks recruited locally.

The Department is placed under the charge of the Commissioner of Police, who holds the appointment of Superintendent of Prisons, and is responsible for the management and control of the two penal institutions of the Colony, Port Louis and Beau Bassin Prisons.

Port Louis Prison provides separate cell accommodation for 154 male prisoners, association cells for 40 women in a special block, and contains the offices of the Department and quarters for two Chief Officers and two matrons.

Every male convicted prisoner is sent to this Prison and on admission is classified as (1) Adult Felon, (2) Adult Hard Labour, (3) Adult Misdemeanant, (4) Juvenile Felon or Hard Labour, (5) Juvenile Misdemeanant or (6) Special.

Felons are prisoners sentenced to penal servitude and misdemeanants are those sentenced to imprisonment without Hard Labour or for failing to pay fines.

Groups (1), (2) and (4) are subdivided into First Offenders and Recidivists.

Prisoners classified in Group (1) and Recidivists of Group (2) sentenced to 14 days and upwards normally serve their sentence at Beau Bassin which contains 756 separate cells for males only while all misdemeanants, Special Class and well-conducted Adults and Juvenile First Offenders are accommodated at Port Louis.

Debtors, Women and Waiting Trial Prisoners are also given separate accommodation at Port Louis Prison.

Labour.—Hard labour consists of quarrying, stone breaking, cutting firewood, and agricultural work outside the Prisons, and tailoring, boot, sail and mattress making, tin-smith work and black-smithing, carpentry and cabinet making, blind, mat and basket making and baking inside the prison's workshop.

Population.—The number of persons admitted to Port Louis Prison during the year was 2,695, which is 228 less than in the previous year and 604 less than the average for the preceding five years. Of the 2,695 persons, 1,684 were convicted, of whom 1,179 were sentenced to imprisonment for one month or less. The convicted prisoners comprised 1,609 men and 75 women. The daily average population was 451·15 compared with 444·89 in 1935 and the number of persons in prison on 31st December, 1936, was 379 compared with 417 in 1935 and 424 in 1934.

Of the 379 persons in Prison, 355 were serving sentences and comprised 345 men and 10 women.

The number of persons who served sentences of imprisonment in lieu of paying fines was 854, including 39 women.

The Dependency of Rodrigues is administered by a Magistrate who has the same jurisdiction in Rodrigues as a District Magistrate in Mauritius and whose duties are to a considerable extent administrative.

The Magistrates heard 11,481 civil cases and 11,048 ordinary criminal cases and petty offences and held:—

165 coroners' inquests;
24 preliminiary inquiries into crimes and serious misdemeanours.

Police.

Organization.—The Mauritius Police Force has an establishment of 21 Gazetted Officers and 596 other ranks. The personnel of the Force is almost entirely recruited locally, there being at present only 13 Officers and Warrant Officers classified as "Home-born" who were posted from England or transferred from other Forces.

The Force is organized mainly as a "Civil" as distinct from a "Military" Police Force but recruits are instructed in the use of the rifle, an Armed Detachment is maintained at Headquarters and those who have qualified in preliminary tests fire a musketry course every year.

The establishment is divided into Headquarters Staff, Clerical Branch, Criminal Investigation Branch, Revenue and Motor Vehicle Control Branch, Training School, Harbour Police, Railway Police, District Police, Rodrigues Police and the Police Band.

Police Headquarters is situated in the historic Line Barracks of Port Louis and the District Police are distributed in 55 Stations of varying size and importance.

Crime.—The total number of offences of all kinds reported to the Police during the year 1936 was 23,986 which shows a slight decrease on the figure for 1935 which was 24,216 and also a decrease on the average of 24,000 for the past three years.

More than half of these offences are of a minor character or refer to Statutory and Revenue contraventions.

The more serious offences are classified as follows:—

Offences against the person	... ...	8,620 in 1936
" " "	... ...	8,442 in 1935
Offences against property	... ...	3,169 in 1936
" " "	... ...	2,929 in 1935

The number of persons prosecuted in connexion with these 23,986 offences was 9,946, of whom 8,918 were convicted, 591 otherwise disposed of and 437 pending trial at the end of the year.

Corresponding figures for the previous year were 10,589 persons prosecuted, 9,525 convicted, 537 otherwise disposed of and 527 pending trial at the end of the year.

XIII.—JUSTICE, POLICE, AND PRISONS.

Justice.

Justice is administered in Mauritius by the Supreme Court and ten District Magistracies.

Supreme Court.—The Supreme Court sits in the capital (Port Louis) and is presided over by one Chief Judge and two Puisne Judges. It has jurisdiction in Civil and Criminal matters and also as a Court of Admiralty; it also decides appeals from the Supreme Court of Seychelles and the Inferior Courts of Mauritius. There is a Bankruptcy Division presided over by one of the Judges or by the Master and Registrar sitting as Judge in Bankruptcy. In 1936 the Supreme Court dealt with 254 civil matters out of 320 which were brought before it, as against 238 out of 298 in 1935. In 1936 14 persons were brought before this Court and tried on criminal charges and of these 11 were convicted. Criminal cases are tried by a Judge and a Jury. Divorce cases, bankruptcy matters and civil actions in which the sum involved is less than Rs.3,000 are heard by one Judge. Civil actions in respect of claims over Rs.3,000 are heard by two Judges. Where, however, the magnitude of the interests at stake or the importance of the questions of fact or law involved make it desirable, a case is heard by three Judges.

Magistrates.—There is a Magistrate's Court in each of the nine districts, the Courts in Port Louis and in Plaines Wilhems each sitting in two divisions. A Magistrate has jurisdiction in nearly all civil matters involving not more than Rs.1,000 and in all criminal matters with power to inflict not more than one year's imprisonment and Rs.1,000 fine. A Bench of three Magistrates may be instituted by law for the trial of certain offences and also at the request of the Procureur-General for nearly all offences, with jurisdiction extending to three years' penal servitude or imprisonment and fine possibly of Rs.3,000. An appeal lies of right to the Supreme Court within the limits stated above, both in fact and law, the several modes of reviewing the decisions being the same as in English Law. There is no system similar to the French Assistance Judiciaire but facilities are given to very poor litigants both before the Supreme and the Inferior Courts to obtain leave to sue *in forma pauperis*. In Supreme Court cases, counsel are ready to accept a pauper brief at the request of the Chief Judge, while in Assize cases counsel is always appointed without fee, for undefended prisoners. The Dependencies are visited periodically by one of two Magistrates supernumerary to the District Magistrates, whose services are also available in Mauritius.

on measures that could be adopted to improve the quality. The report was received in June, 1934, and it concluded as follows :—

> "The purification of the Mare-aux-Vacoas waters by means of existing slow sand filtration is inefficacious and defective and does not constitute an adequate safeguard in the event, however unlikely, of harmful contamination of the raw water."

The main recommendations of the Committee were to the effect that (i) the raw water should be taken from the lake as near as possible from the surface, (ii) the water should be aerated before the filters and (iii) the water chlorinated after filtration.

The works recommended by the Committee of the Mare-aux-Vacoas water have been proceeded with and completed.

The water supply to the villages and hamlets in the other districts comes from 27 different springs or streams. These supplies are not filtered but they are generally protected in their catchment areas by reserves of forest. The population depending on these various supplies is about 200,000 and is comprised mostly of the poorer classes. A large proportion of the daily consumption is distributed by means of public fountains.

Irrigation works.—Government storage irrigation works were begun in 1914 according to plans made by Mr. C. M. Harriott, C.S.I., C.I.E., M.Inst.C.E., Chief Engineer, Public Works Department, Central Provinces, India, and Consulting Engineer for Irrigation Works to the Government of Mauritius. The La Ferme scheme for the irrigation of the south-west of the island, between Grand River North West and River Dragon, has been completed, and the Nicoliere scheme to irrigate land in the north, was started in 1918. These two schemes cover 18,700 acres in the area below the level which enjoys 60 inches of rain and cannot be cultivated to the best advantage without irrigation water. The La Ferme scheme is dependent on a low-level reservoir of 2,500 million gallons, which was completed in 1918 and now irrigates 3,700 acres of land under sugarcane plantation. The plans for the Nicoliere scheme include a high-level storage reservoir at 1,300 feet altitude at Midlands, of 4,400 million gallons capacity, intended to fill a low-level reservoir at Nicoliere of a capacity of about 250 million gallons.

Owing to financial conditions the plans were first curtailed and the works afterwards suspended. The Feeder Channel which measures 16¾ miles from Midlands to Nicoliere and which had been completed by the end of 1931 with a reduced section has now been built up to its full section and concreted. The area covered by the existing curtailed plan is only 11,000 as compared with 15,000 acres in the original plan.

Damage is caused to a considerable extent by white ants which are particularly active in the low-lying districts of the island.

Severe cyclones, which happily are not frequent, are responsible for a good deal of damage to water works, roads and buildings.

Sewerage Works of Port Louis.—The sewerage works were begun in 1900. In 1922, the scheme was revised by Messrs. Mansergh and Sons and the works have been carried out on the lines of their report. The construction works being now practically completed, present activities are concentrated on house service connexions, and a large portion of the town of Port Louis now has the water carriage system.

Bridges.—There exist 335 bridges on main and branch roads, the longest having spans of 150 feet. Only a few timber bridges remain and these are being gradually replaced by ferro concrete structures for double line of traffic and heavy loading.

Water Works.—The water supply of the town of Port Louis is obtained from the Grand River North-West at a distance of about four miles from the town at a level of 250 feet. This supply was handed over by the Municipality to the Public Works Department in 1922. The water is passed through sand filters and chlorinated. The capacity of the mains leading to the filters is 5 million gallons a day. The water is distributed to the town from two covered service reservoirs of a total capacity of 2 million gallons.

The water supply of Plaines Wilhems and of parts of Moka and Black River Districts is obtained from a storage reservoir called the Mare aux Vacoas, at an altitude of 1,825 feet. The capacity of the reservoir is now, after the raising of the dam, 1,641 million gallons. The catchment ground is entirely protected by forest lands. The whole of this water supply is filtered through sand filters at "La Marie", about two miles below the reservoir, whence the supply to the town of Curepipe is pumped by hydraulic power, the supply to the other towns being by gravity. The water is distributed from six covered service reservoirs situated in the various zones of supply, their aggregate capacity being 5¼ million gallons. The population served by this supply is approximately 90,000, and the average daily consumption 3¾ million gallons. The Mare aux Vacoas water supply has been extended to the town of Port Louis. The supply is limited to 900,000 gallons per day. In this connexion a covered service reservoir at Petite Riviere of 750,000 gallons was completed and put into operation in 1931.

At the beginning of 1934, a Committee was appointed to report on the quality of the water of the Mare aux Vacoas supply, and

Weights and Measures.

The metric system is in general use; the following special French and local measures are, however, still to be found:—

Measures of length and area:—

1 ligne Francaise = 2·258 millimetres or 0·088 inch.
12 lignes = 1 French inch.
12 French inches = 1 French foot.
1 French foot = 1·06 English feet.
1 lieue = 2½ English miles (approx.).
1 gaulette = 10 French feet.
1 arpent = 40,000 square French feet or 1·04 acres.
1 toise = 6 French feet or 2 yards 4 inches.

Measures of capacity:—

1 barrique = 50 gallons (cane juice, etc.).
1 tiercon = 190 to 192 litres (molasses).
1 velte = 7·45 litres (coconut oil).
1 bouteille = 800 cubic centimetres (liquid).
1 chopine = ½ bouteille.
1 corde = 80 French cubic feet or 96·82 English cubic feet (firewood).

Measures of weight:—

1 Gamelle = 5·250 kilogrammes.
1 livre = 500 grammes or 1·10 English pounds.

XII.—PUBLIC WORKS.

The Public Works Department is responsible for all Government buildings, the sewerage of Port Louis, roads and bridges, the survey of Crown Lands, water supplies, and State irrigation.

Buildings.—Some of these, such as a time-ball tower in the Port Office, are of historical interest, dating from the time of the French Governor, Mahé de Labourdonnais, in 1740. Government House in Port Louis was then in project and was built between 1740 and 1767. Apart from the addition of a second storey, it now stands exactly as it was originally constructed. It contains the Governor's offices, in which are to be found the table on which the instrument of capitulation of the island was signed in 1810, a throne room, a council room, the council offices, a library, and quarters for the Governor and officials. The former and present residences of the Governors at " Mon Plaisir ", Pamplemousses, and " Le Reduit ", Moka, respectively, also date back to the French occupation. The value of the Government buildings is approximately 15 million rupees.

There are in the island one mental and nine general hospitals. An old hospital, the Grand River North-West Hospital, built in 1769 for seamen, is used when necessary as a quarantine station for plague.

The Currency Commissioners are entitled to charge commission not exceeding one and three-quarters per centum in addition to the cost of any telegrams sent in connexion with any transfer.

The effect has been to substitute for the Indian rupee a new paper rupee based on sterling and to limit official exchange fluctuations to a maximum spread of three and a half per centum.

Local commercial practice is such that the effective rate of exchange is the rate at which the banks sell sterling and not the mean between the buying and selling rates. At the time the Ordinance was introduced the rate was Rs.13.70 for £1 by telegraphic transfer, or approximately one rupee for one shilling and five pence halfpenny sterling. With a view to avoiding any sudden fluctuation in the actual rate of exchange, the commission which the Currency Commissioners were authorized to charge when selling sterling was fixed, in the first instance, at the maximum of one and three-quarters per cent., making the effective official exchange rate Rs.13.57 for £1 in respect of amounts of £5,000 or over. The rate charged by the Currency Commissioners when buying sterling has been fixed at one-quarter per cent.

The value of the currency is maintained by a Note Security Fund held by the Crown Agents and invested in Government Securities (other than those of the Colony). Profits arising from currency transactions and income from the investments of the Note Security Fund must be applied in the first instance to maintaining the Security Fund at a value equal to the face value of currency notes in circulation. If the value of the Note Security Fund reaches one hundred and ten per cent. of the face value of notes in circulation, all profits then accrue to the revenue of the Colony.

With a view to facilitating transactions between the Banks and between the Banks and the Treasury, new notes of Rs.1,000 denomination were issued in November, 1936.

Subsidiary silver coinage was introduced under an Ordinance passed in September, 1934. The coins are not normally redeemable but the seignorage on the issue is invested.

The value of the currency notes of five rupees, ten rupees and one thousand rupees, in circulation on 31st December, 1936, was Rs. 9,227,500 and that of Mauritius silver coins on the same date Rs.1,875,000.

The local unit of currency is the Mauritius rupee, equivalent to 1s 6d. sterling, divided into 100 cents.

The coinage in circulation is the silver rupee, half rupee, quarter rupee and 20-cent and 10-cent pieces and the bronze 5-cent, 2-cent and 1-cent pieces.

XI.—BANKING, CURRENCY, AND WEIGHTS AND MEASURES.

Banking.

There are three private banks in the Colony, viz. :—

(a) The Mauritius Commercial Bank;

(b) The Mercantile Bank of India; and

(c) Barclays Bank (Dominion, Colonial and Overseas).

The Mauritius Commercial Bank was established in 1838, and has paid-up capital of Rs.2,000,000 made up of 10,000 shares of Rs.200 each. The total amount of deposits on 31st December, 1936, was Rs.7,015,671. The Mercantile Bank of India, Limited, took over the business of the Bank of Mauritius, Limited, on 3rd May, 1916. The total paid-up capital is £1,050,000. The deposits made locally on 31st December, 1936, amounted to Rs.2,931,523. Barclays Bank (Dominion, Colonial and Overseas) has a paid-up capital of £4,975,500. The total deposits of the local Bank on 31st December, 1936, amounted to Rs.3,511,721. This Bank which is affiliated with Barclays Bank, Limited, was founded in 1925 and represents the amalgamation of the Anglo-Egyptian Bank, Limited, the Colonial Bank (incorporated by Royal Charter in 1836), and the National Bank of South Africa Limited. A branch of the last-named bank was established in Mauritius in December, 1919. In February, 1926, its business was taken over by Barclays Bank (Dominion, Colonial and Overseas) following the amalgamation already mentioned.

Offices of the Government Savings Bank are established in the nine districts with a head office in Port Louis. The total number of depositors at 30th June, 1936, was 38,990 compared with 38,553 in the preceding year, with deposits amounting to Rs.6,495,031 as against Rs.6,236,739. Interest is paid at the rate of 3 per cent. per annum.

Currency.

In March, 1934, an Ordinance was enacted "to make provision with respect to the currency notes of the Colony and to place the issue of such currency notes upon a permanent basis". By this Ordinance the Currency Commissioners are required to issue, on demand, currency notes in exchange for sterling lodged with the Crown Agents in London, and to pay on demand sterling in London in exchange for currency notes lodged with them. The rate at which these exchanges are to be made is fixed at one rupee for one shilling and six pence sterling, and the minimum transaction is £5,000 or its equivalent.

K.P.M. and Union Castle lines averages 32 days. The same voyage by the Messageries Maritimes Line via Marseilles would take from 31 to 36 days.

Vessels of the Bullard King Company call occasionally from the United Kingdom via Durban and Cape Ports, with tourists.

Cheap passages to the United Kingdom may, as usual, be secured during the sugar shipping season—October to March—the voyage averaging 40 days.

The fares from Mauritius to England vary as follows:—

(i) per Messageries Maritimes steamers, from £76 to £32;

(ii) per Union Castle Intermediate steamers from £89 to £36;

(iii) per K.P.M. with transhipment at Durban from £117 and £92 to £48 and £44;

(iv) per Bullard King & Company's steamers from £30 to £43 according to classes and types of steamers.

Government servants are allowed a rebate of from 15 to 20 per cent. by all the above companies.

The number of vessels and total tonnage entering and leaving the port during the past three years were as follows:—

INWARDS.

		1934.		1935.		1936.	
		No.	*Tons.*	*No.*	*Tons.*	*No.*	*Tons.*

The Colonial Government pays a military contribution of 5½ per cent. of its revenue (total revenue exclusive of land sales, irrigation, Mare aux Vacoas and other water works revenue, and special export duty on sugar) towards the cost of the garrison maintained in the Colony by His Majesty's Government in the United Kingdom.

The contribution was, however, limited to £42,000 for the year 1935-36 to cover the actual cost of the garrison during the year.

Public Debt.

The Public Debt of the Colony on 30th June, 1936, was £2,878,995. Against this liability there was an accumulated Sinking Fund of £1,836,347 compared with £1,743,372 on 30th June, 1935.

Statement of Assets and Liabilities as at 30th June, 1936.

Description of the Main Heads of Taxation and their Yield.

The main heads of taxation with their yield for the current year as compared with the preceding year are the following:—

	1934–35. *Rs.*	*1935–36.* *Rs.*
Customs—Import duties	4,422,207	4,533,469
„ —Export duties	648,314	450,777
Excise duty on rum	1,590,107	1,680,232
Licence duties	1,111,627	1,099,124
Tobacco excise	1,200,427	1,247,492
Taxes on vehicles and animals ...	399,313	424,477
House tax	225,425	208,411
Poll tax	540,978	429,502

Customs Duties.

The Revenue from Customs duties for the year 1936 was Rs.4,640,335 for Imports and Rs.566,369 for Exports.

The figures for the two previous years were:—

	Import duty. *Rs.*	*Export duty.* *Rs.*
1935	4,650,711	816,385
1934	4,899,209	738,624

Customs Tariff (Summarized).

The following shows the rates of duty on the principal imports and exports on the 31st of December, 1936:—

IMPORTS.

Rice	R. 0·63 per 100 kilos.	Wines in casks up to 14°.	Rs. 22·00 per hectolitre.
Dholl	Rs. 1·14 per 100 kilos.	Wines in cases up to 14° (still).	R. 0·33 per litre.
Flour	R. 0·94 per 100 kilos.	Spirits (proof) ...	Rs. 6·87 per litre.
Fertilizers ...	R. 0·11 to Rs. 1·10 per 100 kilos.	Tobacco, manufactured.	Rs. 15·00 per litre.
Petroleum oil ...	Rs. 5·28 per hectolitre.	Tobacco, cigarettes.	Rs. 16·50 per kilo.
Petroleum spirits	Rs. 14·00 per hectolitre.	Vegetable oil, other than olive.	Rs. 5·50 to Rs. 9·00 per 100 kilos.
Soap, common...	Rs. 1·93 per 100 kilos.	Most manufactured articles.	5 to 55 per cent. *ad valorem*, with an average of about 15 per cent. *ad valorem*.

EXPORTS.

*Sugar	R. 0·46 per 100 kilos.	†Aloe fibre ...	Rs. 4·0 per 1,000 kilos.

NOTE.—*The duty on sugar is only for special purposes as under :—
R. 0·03 per cent. kilos for destruction of *Phytalis Smithi* ;
R. 0·03 ,, ,, ,, ,, College of Agriculture ;
R. 0·04 ,, ,, ,, ,, Sugar Industry Reserve Fund ;
R. 0·036 ,, ,, ,, ,, in refund of loans.

† The duty on aloe fibre includes Rs. 3 per 1,000 kilos in refund of loan to the hemp industry.

Principal Preferential Rates on Imports.

	Preferential.	*General.*
Motor vehicles of all kinds, including tyres and tubes.	5·5 per cent. *ad valorem*.	36·66 per cent. *ad valorem*.
Silk manufactures (including artificial silk).	16·5 ,, ,, ,, ,, or R. 0·55 per kilo whichever is the higher.	55 ,, ,, ,, ,, or R. 1·75 per kilo
Indigo	Rs. 1·10 per kilo.	Rs. 2·75 per kilo.
Cement	R. 0·30 per 100 kilos.	R. 1·00 per 100 kilos.
Cinema films	Free.	R. 0·04 per metre.
Machinery, industrial...	Rs. 1·45 per 100 kilos.	5·5 per cent. *ad valorem*.
Cotton manufactures ...	5 per cent. *ad valorem*.	26 per cent. *ad valorem*, and also specific rates in certain cases.
Hardware	11 per cent. *ad valorem*.	22 per cent. *ad valorem*.
Coal	8 cents per 100 kilos.	42 cents per 100 kilos.

Excise and Stamp Duties.

The duty on rum for home consumption for potable use is Rs.2.75 per litre of 23 degrees Cartier and an additional duty of 12 cents per litre for every degree above 23 degrees Cartier.

Four distilleries worked periodically during 1936. Three of these distilleries form an annexe to sugar mills; in all cases spirits are distilled from molasses and the strength of the spirits produced varies from 30 to 42 degrees Cartier. The bulk is produced at 39 degrees Cartier or below and when broken down to 23 degrees Cartier, is consumed locally as potable rum, though it has the general characteristics of rectified spirit.

The remainder of the spirits produced is used after denaturation or compounding for lighting and heating and power purposes; for the preparation of medicinal tinctures, drugs, perfumed spirits and for the manufacture of vinegar. Attempts have been made to find an export market for locally produced alcohol but with little success. The quantity exported was 22,267 litres for the period July, 1935, to June, 1936, as compared with 28,732 litres for the previous period.

The duty on spirits to be denaturated for heating and lighting is 4 cents per litre at 36 degrees Cartier and an additional duty of 4 cents per hectolitre or fraction thereof for every degree above 36 degrees Cartier.

Owing to the quantity of electrical power available and the organization for its distribution, comparatively little use is made of locally produced alcohol for lighting purposes. Where electrical power is not available kerosene is a more popular illuminant. The poorest classes, who require little illumination since they mostly retire at nightfall, use coconut oil or similar local product. There is little call for artificial heating of houses and most cooking is done by locally produced wood charcoal on charcoal stoves. Locally produced alcohol might be used largely for cooking purposes, were a satisfactory type of stove available. The import duty on denaturated or methylated alcohol is 0·33 cents per litre.

The quantity of spirits denaturated for heating and lighting purposes during the last two years is shown below:—

1934–35.		*1935–36.*	
Quantity.	*Excise duty.*	*Quantity.*	*Excise duty.*
Litres.	*Rs.*	*Litres.*	*Rs.*
138,250	5,663·62	141,410	5,764·13

The duty on spirits to be denaturated for use as motor fuel is 4 cents per litre or fraction thereof at any degree Cartier. Attempts on a commercial scale to utilize locally produced alcohol in various forms for power purposes have been in progress for about 19 years but have had little success. The increasing use of heavy fuel oil and compression ignition type engines make any further development in the use of the local alcohol improbable in present circumstances. Protection is given to the local industry by imposing a Customs duty on imported motor spirits of Rs.14·00 per hectolitre.

The following statement shows the quantity of spirits denaturated during the last two years for use as industrial alcohol:—

1934–35.		1935–36.	
Quantity. Litres.	*Excise duty. Rs.*	*Quantity. Litres.*	*Excise duty. Rs.*
268,010	10,720·40	243,800	9,752·0

The duty on alcohol for the preparation of medicinal tinctures and drugs is 10 cents per litre at any degree, but the duty on alcohol delivered for the preparation of "Alcoolats" in accordance with the formulae laid down in the British Pharmacopoeia or the French Codex or any other medicinal tinctures and drugs as notified in Gazette is Rs.2·50 per litre at 23 degrees Cartier, with an additional duty of 10 cents per litre for every degree above 23 degrees Cartier.

With the exception of certain traditional local preparations locally produced tinctures, etc., have provided little competition to the imported articles which pay an import duty at 13·2 per cent. *ad valorem.*

The following table shows the quantity of alcohol used during the last two years for the preparation of medicinal tinctures and drugs:—

1934–35.		1935–36.	
Quantity. Litres.	*Excise duty. Rs.*	*Quantity. Litres.*	*Excise duty. Rs.*
7,846	1,399·30	9,853	1,380·10

The duty on alcohol delivered for the manufacture of perfumed spirits is 50 cents per litre. The position as regards locally produced perfumed spirits is similar to that of medicinal tinctures. One or two preparations are in popular local demand but in spite of the fairly high protective import duty of 33 per cent. *ad valorem,* there is little demand for other products. Attempts have recently been made to find an export market by selling perfumery as ships' stores. It is too early yet to forecast whether this venture is likely develop to any degree.

The quantity of spirits issued for the manufacture of perfumed spirits during the last two years was as follows:—

1934–35.		1935–36.	
Quantity. Litres.	*Excise duty. Rs.*	*Quantity. Litres.*	*Excise duty. Rs.*
7,932	3,966·00	6,130	3,065·00

The duty on vinegar is Rs.1·70 per hectolitre, on vinegar not exceeding 8 degrees of strength by acidimeter and an additional duty of 18 cents per degree and per hectolitre on all vinegar above 8 degrees.

Locally-produced vinegar is manufactured exclusively by the slow oxidation of alcohol. This small industry gives indication of development. The production figures for the past years were:—

	Litres.	Amount of duty. Rs.
July 1934 to June 1935 ...	21,047	357·80
,, 1935 ,, ,, 1936 ...	24,500	419·96

The corresponding import duty on vinegar is Rs.3.50 per hectolitre, full rate and Rs.1.65 preferential rate.

According to the Excise figures the number of litres of spirits distilled in 1935-6 (July to June) was 966,627, as compared with an average of 961,254 litres for the past five years.

The duty on wine and other liquor (excepting rum and compounded rum) manufactured in the Colony which contain more than four degrees alcohol according to Gay Lussac's alcoholometer is as follows:—

(i) on all such liquor not exceeding 14 degrees Gay Lussac's alcoholometer a duty of 15 cents per litre;

(ii) on all such liquor exceeding 14 degrees a duty at the same rate and on the same scale as the Customs duty on wine payable under the Customs Tariff Ordinance.

Practically no grapes are grown in Mauritius and the local wine is produced from imported dried fruits, principally raisins, sugar and other ingredients. Attempts to produce wine from local fruits such as pineapples, guavas, bananas, etc., have not been successful. There has been a slight development in the wine industry during the past year from the point of view of quantity, and considerable research work is being done in the improvement of the quality of the produce and in studying the many variations in fermentation largely caused by differences in temperature, atmospheric humidity, etc.

Local wine issued:—

	Litres.
July, 1934 to June, 1935	265,947
,, 1935 ,, ,, 1936	325,366
For the calendar year, 1935	277,683
,, ,, ,, ,, 1936	350,678

An excise duty of Rs.4 per kilog. is charged on leaf tobacco for the manufacture of tobacco for local consumption.

According to the official figures, the quantity of tobacco manufactured in the year 1936 was 362,587 kilos. as compared with Ks.337,378·975 gms. in 1935.

The Excise duty collected on tobacco during the last two financial years is given below:—

	1934–35. Rs.	1935–36. Rs.
Tobacco	1,200,427·53	1,247,492·40

The figures for the calendar year are:—

	Year 1935. Rs.	Year 1936. Rs.
Tobacco Excise	1,187,683·93	1,281,086·00

The Government Tobacco Warehouse, controlled by the Tobacco Board is proving a most useful institution for the grading and general control of tobacco grown in the Colony. It ensures for the planters a ready market for their crop, and for the manufacturers an assured source of supply at controlled prices of graded leaf In spite of its efforts the Board has so far been unable to gain any export trade.

The Stamp Laws were amended and consolidated by the passing on 23rd November, 1926, of Ordinance 22 of 1926. This Ordinance was put into force on 23rd July, 1927, by Proclamation No. 32 of 1927.

Stamp duties are of three kinds:—

(1) A duty in proportion to the size of the paper used;
(2) A fixed duty; and
(3) An ***ad valorem*** duty.

The Stamp Ordinance No. 22 of 1926 was amended in 1932 by the passing of Ordinance No. 26 of 1932 to provide for the increase from 4 to 10 cents of the stamp duty on cheques drawn on banks in and out of the Colony and on receipts as defined in Article 2 (5) of the Stamp (Consolidated) Ordinance, 1926.

House Tax.

Rates.—One per cent. per annum on any building assessed over Rs.1,000.

Yield.—The amount collected during the financial year 1935-6 was Rs.208,411.

Method of assessment.—Any building liable to the house tax is assessed according to its full and fair value. In arriving at this figure, the valuer takes into consideration the actual or probable rent a tenant may be reasonably expected to pay for such building.

Method of collection.—For the purpose of collecting the house tax when the assessment arrived at is final for the year, notices for payment are served upon owners of buildings and the tax is paid to the Cashier of the district in which it is levied or to the Chief Cashier, Treasury.

Graduated Poll Tax.

A Graduated Poll Tax was imposed in 1934 on all taxable income accruing in, derived from, or received in the Colony during the year preceding the year of assessment, subject to specified exemptions.

The tax, which falls on residents and non-residents is peculiar to Mauritius and payable in half-yearly instalments by persons (including legal entities) whose income exceeds Rs.5,000.

The tax scale rises from Rs.50 (with marginal relief) on incomes exceeding Rs.5,000 but not exceeding Rs.7,000 to Rs.5,150 on incomes exceeding Rs.60,000 but not exceeding Rs.70,000. The tax on incomes exceeding Rs.70,000 is Rs.6,150.

The tax must be tendered with a Return from the Taxpayer, but the Commissioner may refuse the Return and raise an assessment subject to a right of objection and appeal to the High Court.

No provision exists for:—

(*a*) Losses to be carried forward.
(*b*) Personal or depreciation allowances.
(*c*) Dominion Income Tax Relief.
(*d*) Deduction of tax at source.

The main Ordinance was amended in 1935 chiefly to facilitate an equitable administration of the tax as regards allowances for interest paid, and to provide for reciprocation in exemption of profits from the business of Shipping.

Yield.—The amount collected for 1934-5 was Rs.540,566 but, as a result of the poor sugar crop in 1934, the Poll Tax collections for 1935-6 declined to Rs.429,502. The estimated yield for 1936-7 is Rs.580,000.

XVI.—MISCELLANEOUS.

The sugar crop reaped during the year was an exceptionally good one, the total sugar production for the year reaching the record figure of 300·34 thousand metric tons against an average production of 250 thousand metric tons for the years 1930 to 1935, exclusive of the years 1931 and 1934 when on account of adverse climatic conditions, the crops were reduced to 164,010 and 178,860 thousand metric tons respectively.

There was also an increase in sugar prices during the year, but the rise came too late to have much effect on the sale of the year's crop. The large yield was however an important set-off to the continued low prices obtained for sugar during recent years and made it possible to resume the collection of the export duty on sugar of Rs.3.60 per ton levied in repayment of the Sugar Industry Loans referred to in Ordinance No. 15 of 1929, of which only a fraction of about 35 per cent. was collected in 1935 in view of the heavy deficit from the reduced crop of the year 1934 and the extremely depressed market conditions of the industry.

The Colony continued to enjoy the benefit of the General Imperial Preference amounting to about 3s. 9d. on all Colonial sugars entering the United Kingdom and of a special preference of 3s. per cwt. on a quantity of Colonial sugars limited to 360,000 tons, the quota of Mauritius sugars entitled to the latter preference being fixed at 112,400 tons. Sugars consigned to Canada also benefit by a preference which is at least as profitable to the producer as the general preference accorded by the United Kingdom.

As exports of sugar from Mauritius to countries other than the United Kingdom and Canada are insignificant and the quantity consumed locally is about ten to eleven thousand tons annually, the portion of the 1936 crop available for export to the United Kingdom and Canada is about 290,000 tons. The total preference on this quantity of sugar, calculated at the rates given above, amounts to roughly £1,425,000.

On the recommendation of a Committee appointed by the Governor in 1934 to investigate the problem of unemployment in the Colony various works of public utility were undertaken towards the end of that year and during the year 1935 in order to give employment to as many persons as possible who were out of work. Relief works continued in progress during the whole of the year 1936, chiefly in the districts of Port Louis and Plaines Wilhems where the pressure of unemployment is more severe.

The island was visited by the French cruiser *Jeanne d'Arc* from the 25th to the 28th February, 1936, and by H.M.S. *Emerald* from the 7th to the 20th August, 1936.

His Excellency Sir W. E. F. Jackson, whose normal term of office as Governor of Mauritius was due to expire on the 30th August, 1936, left the Colony on leave of absence on the 7th April, 1936. While in England, the Governor was asked to extend his service in Mauritius in order to enable him to complete certain outstanding tasks of importance in the Colony with which he had been closely connected. He returned to Mauritius on the 3rd December, 1936.

APPENDIX I.

Forty-five Ordinances were passed by the Council of Government and assented to by the Governor during the year 1936, the more important to which are tabulated as follows:—

No.	*Title.*
1	For establishing and regulating the Mauritius Agricultural Bank.
7	To make provision for raising a loan for the purpose of financing the Mauritius Agricultural Bank.
9	To amend the District Courts Constitution Ordinance, 1888.
10	To amend the Lesser Dependencies Ordinance, 1904.
11	To amend the Port Louis Sewerage Ordinance, 1905.
13	To amend and consolidate the law relative to the Government Savings Bank.
14	To regulate the deportation of undesirable aliens.
15	To regulate the deportation of undesirable British subjects.
27	To amend Ordinance No. 6 of 1838 commonly called the Penal Code.
29	To amend Ordinance No. 6 of 1838 commonly called the Penal Code.
31	To control and restrict the transport of sugar and fertilizers.
35	To legalise the transfer to the General Revenue of the balance of the Mauritius General Improvement and Development Fund.
36	To provide that Railway rates for the conveyance of sugar and fertilizers shall not be increased during a certain period.
41	To provide for the prevention of riots.
43	For regulating Pensions, Gratuities and Allowances to be granted in respect of offices held in His Majesty's Civil Service in this Colony.

	MAP.	

I.—GEOGRAPHY, CLIMATE, AND HISTORY.

The island of Mauritius is of volcanic origin. It is situated in the South Indian Ocean at about 1,400 miles from the east coast of Africa and lies between 19° 50′ and 20° 35′ S. latitude and between 57° 18′ and 57° 48′ E. longitude. The greatest length from north to south is nearly 39 miles and the widest breadth from east to west is 29 miles. The area of the island is about 716 square miles, exclusive of that of several small islets round the coast which measure about four square miles.

The dependencies comprise a large number of small islands between 230 and 1,200 miles away. The largest, Rodrigues, which lies 350 miles to the north-east of Mauritius, had a population estimated at 9,977 on 31st December, 1937. The estimated population of the lesser dependencies on that date was 1,411.

Mauritius is situated just within the tropics and enjoys a climate free from extremes of weather except that tropical cyclones at times cause considerable damage to crops, but rarely to buildings. For a great part of the year south-east trade winds, heavily laden with moisture, blow gently over the island tempering the tropical heat. The rain falls mostly in showers. Particularly in the summer months, December-March, the south-east winds are replaced by the light variable winds of the doldrums, which cause discomfort to Europeans, although the temperatures are not high, whereas in the winter months in the residential districts at altitudes of 1,300 to 1,800 feet the temperature may fall to 50° F. The yearly rainfall varies from 30 inches on parts of the coast to 150 inches in the upland regions.

The Mascarene Archipelago was probably known to Arab navigators at an early date and was no doubt visited later by the Malays who colonized Madagascar in the 15th and 16th centuries.

The Portuguese rediscovered it in 1507. They only used Mauritius as a port of call for repairs and supplies, and let loose pigs, goats, deer, and monkeys. It seems probable that rats were introduced in this period as they were a serious pest to the succeeding Dutch colonists.

The Dutch took possession from 1598 and were employed chiefly in exploiting the ebony. They attempted to cultivate sugar-cane, but were frustrated by rats. Although they denuded the forests of ebony they later added to the economic resources of the island by introducing useful trees, plants, and cattle. Negroes were imported for labour, and, as escape into the forests was easy, bands of runaway slaves called maroons were formed. The combination of rats and this dangerous population of mixed, but mostly African, origin, uncontrolled by any tribal or political system, proved too much for the Dutch who abandoned the island in 1710.

The French annexed it in 1715, and by 1722 the population, apart from maroons, amounted to 160 persons, soldiers, colonists, and slaves. Mahé de Labourdonnais was chosen to develop the Colony and arrived in 1735. In order to make the island self-supporting, he introduced manioc and maize from Brazil and promoted the extension of agriculture by introducing products from all parts of the tropical world. He especially encouraged the cultivation of sugar. He substituted animal draught for carriage by slaves, and to ensure an adequate supply of labour he brought slaves from Africa. From an encampment of straw huts he built up Port Louis into a town of public buildings, private houses, stores, shops and barracks. Labourdonnais laid the foundations of modern Mauritius.

In 1755, large herds of cattle were brought in from Madagascar. Pierre Poivre, Intendant in 1767, established the cultivation of cloves and nutmegs.

In 1810, when Mauritius became British, the population had grown from 160 to about 80,000, of whom 65,000 were slaves. Sugar was then, as now, the principal product, and when in 1825 the duty of ten shillings a hundredweight, levied on Mauritius sugar entering England (in order to protect the West Indian sugar), was remitted, cane plantations immediately developed to a large extent, fresh land was put under cultivation, roads were opened, and steam power was applied to mills. From 18,000,000 pounds the output of sugar rose to 41,000,000 pounds in 1827, and increased annually afterwards.

On the abolition of slavery, 68,613 slaves were freed, and the colonists received £2,112,632 in compensation.

In 1842, Indian immigration at the rate of 6,000 a year was approved, and this resulted in an entire change of the balance of the population.

After a terrible outbreak of malaria in 1866 the wealthier inhabitants of Port Louis moved to higher parts of the island. As a result the country towns expanded considerably and the roads were improved and extended. The railway, begun in 1859, became very popular. One of the most striking features of the progress made has been the social and economic development of the Indians who at the beginning of 1937 owned 38·4 per cent. of the whole area under sugar-cane. Besides becoming gardeners and taxi-drivers, many Indians have taken to raising cows, goats, fruits and vegetables, and the supply of these essential foodstuffs is almost entirely in the hands of Indians. The section of the population they have displaced centres more and more in the towns, forming the clerk and artizan class.

From 1902 to 1909 the island suffered from severe financial depression owing to the low price of sugar. Matters were aggravated in 1902 by an outbreak of surra which caused great havoc among the draught animals, and necessitated the introduction of mechanical transport.

A Royal Commission was appointed in 1909 to investigate the resources and administration of the island and reported in 1910.

About 1911 the destructive beetle Phytalus Smithi was discovered in the sugar-cane.

The great rise in the price of sugar which took place during and after the war brought prosperity, and both the Government and the general community were for a time far more prosperous than ever before.

As a result a number of important schemes were inaugurated, including the amelioration of sanitary conditions, the improvement of the harbour, the extension and improvement of water-supplies both for domestic purposes and for irrigation, the improvement of the railways, and the extension of education.

Unfortunately, however, from 1921 onwards the price of sugar fell, and the greatly lessened revenues of the Colony had to provide for the maintenance of many works undertaken in the better times. In 1929 the state of the sugar industry was so bad that Sir Francis Watts was appointed, at the Colony's request, to visit the island, and to report on the economic situation. The Home Government was, however, unable to approve his recommendation that a subsidy should be given to sugar to supplement the preference granted on sugar imported into the United Kingdom, though a loan was made to the planters from local funds. Despite this loan, however, and an earlier loan granted in 1929, the condition of the sugar industry at the end of 1930 was extremely serious.

The position became worse in 1931 owing to a cyclone which caused considerable damage to property and reduced the year's output of sugar by about 33 per cent. The Imperial Government guaranteed a loan of £750,000 for planters, house owners, and repairs to Government property, on condition that a Financial Commission should visit Mauritius with a view to devising measures to bring about a balanced budget. The Commission's report was published at the beginning of 1932 and immediate steps were taken to carry out measures of retrenchment and economy. The situation was again critical in 1934 owing to the effect of a severe drought on the sugar crop; but since then the Colony has had the benefit of substantial crops and the general situation and outlook would have considerably improved were it not for the low price of sugar.

II.—GOVERNMENT.

The Government of Mauritius is vested in a Governor with an Executive Council and a Council of Government. The Council of Government was first established in 1825. It consisted of the Governor and four officials. The next year the Constitution was amended and a Council including unofficial members was introduced. This Constitution provided for a Council of Government composed of certain officers of the Crown and of an equal number of other persons to be taken from the chief landed population and principal merchants of the Colony; seven officials and seven unofficials were accordingly appointed.

The Constitution was again amended in October, 1885. The Council of Government, under the revised Constitution, was composed of the Governor, eight *ex-officio* members, nine members nominated by the Governor and ten members elected by the population: of the latter, two represent the town of Port Louis, the capital of the island, and the remaining eight represent the rural districts. At least one-third of the nominated members were to be persons not holding any public office.

The Constitution was further amended in July, 1933, by fixing at two-thirds the proportion of the nominated members of the Council who are to be unofficials and, although no provision to that effect is made in the Letters Patent, the nominated unofficial members have been allowed a free vote on all occasions. The new Letters Patent, however, provide that the Governor shall have power to enact legislation considered by him to be essential in the interests of good government. Debates in the Council may be either in English or French.

The Constitution of the Executive Council which was hitherto composed of the Governor and four *ex-officio* members was amended at the same time, and the former practice of appointing two unofficial members to the Council was revived.

The number of registered electors on 31st December, 1937, was 9,290. Every male person who is qualified as follows is entitled to be registered as a voter:—

(1) has attained the age of 21 years;

(2) is under no legal incapacity, and is in possession of his civil rights;

(3) is a British subject by birth or naturalization;

(4) has resided in the Colony for three years at least previous to the date of registration, and possesses one of the following qualifications:—

(*a*) is the owner of an immoveable property of the annual value of Rs.300;

(*b*) is paying rent at the rate of at least Rs.25 a month;

(*c*) is the owner of moveable property within the Colony of the value of at least Rs.3,000;

(*d*) is the husband of a wife, or the eldest son of a widow, possessing any one of the above qualifications;

(*e*) is in receipt of a yearly salary of at least Rs.600 or of a monthly salary of at least Rs.50 and

(*f*) is paying licence duty to the amount of at least Rs.200 a year.

The ordinary duration of the sessions of the Council of Government is eight months, from May to December, and meetings are held on alternate Tuesdays or oftener when necessary. The life of a Council is five years.

The town of Port Louis is administered by a Municipality, an institution which dates as far back as 1790. It was then called "Municipalité du Canton de Port Louis" and was instituted, as were other local Municipalities, by the "Assemblée Coloniale." These institutions are mentioned in the law of the constitution of the Ile de France promulgated by the "Assemblée Coloniale," on 21st April, 1791. Sixteen prominent men of the town acted as Councillors of the "Municipalité du Canton de Port Louis" and were denominated the "Conseil des Notables." The "Conseil des Notables" was dissolved in 1792. It was reconstituted at the end of the 18th century under the denomination of the "Conseil des Communes" and was abolished on 10th February, 1820.

The present Municipal Corporation dates from 1850, the first elections taking place at the Masonic Lodge "La Triple Esperance" from 21st to 23rd February in that year. On 24th August, 1925, the Municipal Corporation celebrated the 75th anniversary of its foundation.

The administration of the other principal townships of the Colony, viz., Curepipe, Beau Bassin and Rose Hill, and Quatre Bornes is vested in Boards of Commissioners appointed annually by the Governor. These Boards are empowered to take measures within the prescribed limits of the townships for the making, maintenance, etc., of roads, sewers, bridges, canals, and other works of public utility, for the prevention of fires, and for the proper paving and lighting of the town, etc.

In addition to the Township Boards, District Boards are appointed annually for each district. These Boards are empowered to pass regulations for the making, maintenance, and improvement of branch roads and footpaths, and for the levying of taxes in the extra urban areas.

III.—POPULATION.

The population is divided for statistical purposes into (1) the general population, i.e., Europeans and descendants of Europeans and people of African, Chinese and mixed origins, and (2) the Indian population, i.e., Indian immigrants and their descendants.

The estimated population of the island and its Dependencies on the 31st December, 1937, was 413,459, showing an increase of 2,539, the rate of increase being 6·2 per 1,000.

The geographical distribution of the population is shown in the following table:—

Districts.	*Area in square miles.*	*Census population, 26th April, 1931.*			*Population on 31st December, 1937*		
		General population.	*Indian population.*	*Total.*	*General population.*	*Indian population.*	*Total.*
Port Louis	16½	29,832	24,603	54,435	31,552	24,648	56,200
Pamplemousses	69	6,847	30,000	36,847	6,569	28,805	35,374

Whole population ...	1,301	1,321	1,305	9·8	9·5	9·3

The number of deaths of infants under one year was 2,178. The infantile mortality rate was 154·5 per thousand live births registered during the year as compared with 142·3 and 139·4 for 1936 and 1935 respectively.

The marriages during the year numbered 1,951 as compared with 1,991 in 1936. The marriage rate or number of persons married to every thousand of the entire population was 9·8 against 10·0 in 1936.

The departures exceeded the arrivals by 327.

IV.—HEALTH.

The present constitution of the Medical and Health Department dates back to 1895 when under Ordinance No. 32 of 1894-5 the powers vested in the General Board of Health were transferred to the Director, Medical and Health Department.

The headquarters staff of the Department consists of the Director, the Deputy Director and the clerical and accounting staffs of the correspondence, financial and storekeeping branches.

The administrative unit of Government is the district which is the political unit as well. Every district with the exception of Black River is provided with a hospital for the reception and treatment of the sick poor. Patients from the Black River district are treated in the Victoria Hospital, Quatre Bornes, or the Civil Hospital, Port Louis. The medical and sanitary administration of each of the rural districts is entrusted to a Government Medical Officer who is in charge of the district hospital and dispensaries and who is also the Health Officer for the district. To assist him, he has a number of subordinate officers; dressers and sanitary officers and the staff necessary for the care of the patients in the hospital. In addition to his medical and sanitary duties he has also statutory duties of a medical or sanitary nature which he carries out on behalf of the Police and Poor Law Departments. The district dispensaries are visited at regular intervals by the Government Medical Officer.

The hospitals of the Colony are divided into two groups:—

(i) General hospitals, namely:—Civil, Victoria and Moka, totalling 637 beds, which are fully equipped for X-ray and major operative work; and

(ii) district hospitals where only medical and midwifery cases are admitted and where minor surgery is carried out to a certain extent.

Patients who apply to the latter hospitals and require special treatment, surgical or other, are conveyed to the nearest general hospital by motor ambulance. A mental hospital and a leper hospital are also administered by the Department.

The general health of the population during 1937 has been reasonably good. There was again an exceptionally good crop leading to a consequent increase in the amount of money circulating in the Colony. There has been no scarcity of food and the general economic condition of the people, though low, has not been bad.

The principal diseases affecting the population are hookworm disease and malaria.

The prevention of hookworm disease has ceased to be a matter in which the central government can usefully intervene. With the abolition of the system of preparing for agricultural use, manure whose chief constituent was human excrement. the widespread infection with hookworm of the canefields ceased. Naturally, some years were required for the cleansing of the soil but it may now be safely presumed that hookworm disease is seldom contracted in the canefields. The problem has now become one of personal hygiene, dependent upon a radical change in the personal habits of a very conservative and still ignorant people. The influence of education and propaganda on an agricultural population whose standard of living is definitely low is practically negligible. It is only when a man becomes fairly prosperous that he feels the need to modify his habits according to the new standards of living to which his increased prosperity has raised him. Thus, though the majority of the rural inhabitants have provided their premises with latrines the proper use of which would undoubtedly prevent hookworm infection, they have not yet habituated themselves to their use.

But though the prevention of the disease is now in the ineffectual hands of the rural population, the Government can still institute measures for its control. By the frequent and extensive treatment of the rural population with appropriate drugs the Government ensures that a large percentage of them are periodically released from the infestation to which their blind adherence to custom makes them liable. The hookworm-malaria branch of the Department undertakes mass treatment of the rural population and in this way ensures for those who are willing to take the treatment a certain degree of relief from the consequences of their hygienic shortcomings. Concurrently with the administration of treatment, the staff of the branch hammer home the principles of prevention, but this part of the campaign shows little sign of being effective so long as the general economic level of the population is low. During the year 101,226 treatments were given.

Malaria.—In 1932 the malaria situation in the Colony was reviewed in the light of past colonial experience and of the new information which had become available through the labours of the Malaria Committee of the League of Nations in Europe. As a result of this review it became evident that much energy was being dissipated by the institution of inappropriate measures and the maintenance of old drainage works whose usefulness had disappeared, either on account of their having been established in areas where such treatment was uneconomic or inappropriate or because subsequent events had nullified their effectiveness. It was accordingly decided to apply to the different regions of the Colony the measures which in the light of the new experience were likely to produce the most effective return for the energy expended. In practice this has meant the virtual abandonment of anti-mosquito measures throughout the greater part of the rural areas lying below 600 feet altitude. Here the object of the Government is to make totaquina as widely available as possible so that sufferers may be able to obtain the treatment which they need. In a few populous places old drainage works of known effectiveness are maintained, but no new works are being undertaken in the meantime.

In most of the region lying higher than 600 feet anti-mosquito work is feasible, on account of the density of the population and of the effects of the cool season in restricting to practical numbers the permanent mosquito nurseries in the area. This area has now been the subject of close study for the past three years and it has been found that most of the mosquito nuisances are not such as require extensive permanent drainage works for their abatement. The problem on the central plateau is not the abolition or the treatment of large natural mosquito-breeding places but the abolition of innumerable small nuisances created and maintained by human agency. The area is strewn with gardens and small holdings on each of which there are maintained collections of water in the shape of watering tubs, barrels, tanks or pits. Of these the pits of the market gardens are the worst offenders as they have been repeatedly found to contain larvae of *A. costalis.* Water receptacles of this kind are quite unnecessary in this area because practically every house or garden has a piped water supply. In fact most of the storage receptacles are filled from the pipe. The hookworm-malaria branch has been fully occupied in attempting to deal with this nuisance, but progress must necessarily be slow. Nevertheless control of such water collections is essential for control of malaria in this locality.

V.—HOUSING.

The housing of the wage-earning population of the Colony may be considered in three categories: (*a*) housing on estates, (*b*) housing in rural areas not estates, and (*c*) housing in towns.

Estate labourers are, for the most part, adequately housed. They are accommodated in lines, or rows of huts, constructed either of stone or of wattle and daub, with roofs more commonly of thatch, but frequently of corrugated iron. Adequate provision is made for the ventilation and lighting of these quarters, but ventilation and lighting appear generally to be disliked by the occupants. At night, every accessible crevice is carefully closed, though the presence of ridge ventilation in many cases assures reasonable change of air in spite of the efforts of the occupants to exclude fresh air from their sleeping apartments. When the dwelling is thatched the problem of assuring adequate ventilation is difficult. The lines must be kept clear of weeds, and all houses are required to have a clear space of at least ten feet round them. Each camp has adequate latrine accommodation and a supply of wholesome water is laid on, though in many cases the labourers prefer to use the polluted water of streams or nearby irrigation channels for their domestic purposes. As a general rule, the lines are not lit at night. Lighting is scarcely necessary as the occupants retire shortly after sunset.

The housing in rural areas other than estates is fairly satisfactory. The Indian labourer can himself with the aid of his friends construct a satisfactory hut. He generally owns the piece of land on which he builds his hut and what is not occupied by the hut is planted with sugar cane or other agricultural produce, while room is also found for a primitive byre or a shelter for goats. The amenities of life are few, and a locality settled by a number of such persons bristles with sanitary problems arising out of poverty. Fortunately, most of them are now on a pipe-line so that their water supply gives little cause for anxiety, though they may have to carry their water several hundred yards from the nearest public fountain.

In the towns and townships conditions vary. There are areas of overcrowding with its consequent insanitary conditions. Too many persons live in one room though the climate is such as to obviate many of the evils attendant upon this practice.

VI.—NATURAL RESOURCES.

Weather conditions were, generally, very favourable to growth: high temperature and rainfall prevailed throughout the growing season. Unfortunately, the persistency of these conditions during the ripening season was detrimental to the sucrose content of the cane.

The industries of the Colony are, almost exclusively agricultural and sugar forms over 98 per cent. of its exports. Irrespective of sugar, the other industries comprise tobacco, fibre, pineapple, tea, coconut and, as by-product of the sugar industry, alcohol. Details regarding the various industries are reviewed below.

The total area of the Colony is 460,800 acres of which some 144,000 acres are in sugar cane, 35,000 acres in secondary crops. The area at present cultivated could with proper irrigation be increased by roughly 4 to 5 per cent.

Sugar Production.

The total cane reaped approximated 2,823 thousand metric tons, in excess by 276 thousand tons on last year's production: this year's output thus exceeds all previous records. The sucrose content of the cane was, however, considerably below last year's, averaging only 12·99 as against 13·71 in 1936.

The mean extraction of sugar per cent. of cane was 11·12 as against 11·79 last year. The total output of sugar was 313·82 thousand metric tons in excess by 4·5 per cent. on last year's.

The following table exhibits the comparative production for the past seven years.

YIELD OF SUGAR IN THOUSAND METRIC TONS.

Districts.	*1937.*	*1936.*	*1935.*	*1934.*	*1933.*	*1932.*	*1931.*
Pamplemousses and Riviere du Rempart	82·65	63·97	69·97	30·13	57·77	62·73	41·81
Flacq	48·16	49·98	44·15	30·87	41·31	35·97	27·91
Moka	37·72	43·42	35·76	29·30	40·08	34·12	20·83
Plaines Wilhems ...	22·49	21·89	20·62	11·54	18·22	17·05	11·64
Black River ...	13·81	12·85	11·28	5·99	8·88	9·06	6·29
Grand Port ...	57·23	56·10	53·39	38·37	50·66	46·66	28·52
Savanne	51·76	52·13	45·34	32·66	44·48	41·63	27·01
Totals ...	313·82	300·34	280·50	178·86	261·46	247·22	164·01

The deficit in 1931, due to a severe cyclone, was estimated at 34 per cent. In 1934, there was a severe drought.

Grades of Sugar.—The proportion of Raws was, this year, 83·7 per cent. of the total sugar production; granulated whites (Vesous) were 16·0 per cent.; while low sugars approximated 0·3 per cent.

Area under Sugar Cane.—While most of the alienated land of the Colony passed under private ownership by means of " concessions " during the French occupation, most of the land occupied by Indian small planters was acquired under the " metayage " and " morcellement " systems, whereby large estates were parcelled out to numbers of tenants who became, after a term of years, legal owners of their plots of land. The " metayage " or " morcellement " systems are still practised though on a much reduced scale.

At the beginning of 1937, the area under cane was estimated at 143,497 acres, in excess by 4,156 acres on the figure for 1936. Estates with factory cultivated 62,089 acres; estates without factory, 38,978 acres, giving a total estate cultivation of 101,067 acres, in excess by 3,456 acres on the corresponding figure for 1936.

The balance of 42,430 acres, which shows an increase of 700 acres on the corresponding figure for the year previous, was cultivated by smaller planters, mostly Indian peasant proprietors.

The total area under Indian cultivation at the beginning of 1937 was estimated at 55,053 acres or 38·4 per cent. of the total area under cane. This total was made up of (i) 35,730 acres belonging to Indian small planters off estates, (ii) 10,223 acres cultivated by Indians on estate lands and lastly, (iii) estates, belonging to Indians, comprising altogether 9,100 acres.

Number of Sugar Factories.—During the year, two more factories were dismantled, bringing the total, at the close of 1937, to 38. Sixteen factories were closed during the past 16 years.

Sugar Market.—Market conditions were, upon the whole, decidedly better in 1937 than in 1936, although, during the last months of the year quotations came down markedly. The average net price realised in 1936 was Rs.5.69 per 50 kilos; in 1937, the average net price realised by 31st December, on 243,892 metric tons sold by that date approximated to Rs. 6.20 per 50 kilos.

Sugar transactions are made through the " Mauritius Sugar Syndicate " which controls practically all the sugar of the Colony.

Disposal of the 1936-7 *Sugars and Local Consumption*.

The total sugar exported during the 1936-7 year (1st August, 1936, to 31st July, 1937) amounted to 289,010 metric tons, distributed as follows:—

	Metric tons.
Great Britain	271,820
Canada	16,530
Hong Kong	660
Total	289,010

The exportation of the 1937-8 crop, up to 3st December, 1937, was as follows:—

	Metric tons.
Great Britain	134,566
Canada	22,415
Hong Kong	457
Other places	119
Total	157,557

The local consumption of sugar for the 1936-7 year was 10,326 metric tons as compared with 9,327 in 1935-6 and 11,211 in 1934-5.

Sugar Machinery.—Machinery to the value of Rs.914,545 was imported during the year, as against Rs.589,449 in 1936. Tramway material to the value of Rs.128,059 was imported in 1937, as compared with Rs.328,219 the year previous.

General Agricultural Matters.

Fertilizers.—The importation of chemical fertilizers in 1937 totalled 19,818,236 kilos, valued at Rs.2,117,295 as compared with 21,588,262 kilos valued at Rs.2,078,332 in 1936.

Insect Pests.—Following the extension of the abolition of hand collection of *Phytalus smithi, Arr.* to more than 80 per cent. of the infested areas, efforts to increase the natural control of this pest have been redoubled. The Second Phytalus Officer has spent seven months in South Africa and the Assistant Entomologist has recently embarked upon a further mission to Zanzibar and North Africa, in order to discover sources of fresh parasite material.

Apart from these measures, efforts are also made to introducing parasite resistant cane varieties in the infested areas.

The Moth borer situation still causes anxiety and the Entomologist was requested to prepare a comprehensive scheme of borer control by biological means.

A serious outbreak of tobacco beetle was reported from the Government Tobacco Warehouse and fumigation with hydrocyanic acid was carried out successfully in the most affected part of the stores.

Coconut palms, in all parts of the Colony are suffering severely from the attacks of *Aspidiotus destructor Sign* and every effort is being made to increase the natural control of this pest.

Plant Diseases.—Bacterial diseases on maize and palm turned out this year to be of major importance as the plants mentioned have been proved to be natural hosts of the sugar cane gumming disease bacterium. The presence of these wild hosts complicate the problem of eradication of the gumming disease on cane from the Island.

Black shank and mosaic diseases of tobacco were somewhat less troublesome than in previous years. Wilt of the pineapple is apparently brought about in the Island by different causes, such as conditions of soil and climate; what may be another type of the disease is receiving attention.

Tobacco.—During the year, permits for 699 acres were issued and 661 acres were actually planted.

A general quota of 500 kilos per acre was allocated, which limited the crop to 349,625 kilos: but, in view of favourable conditions the quota had been, by the end of the year, exceeded by 128,000 kilos.

The amount of leaf purchased by the warehouse in 1937 was 391,435 kilos of a value of Rs.487,239 as compared with 375,923 kilos of a value of Rs.475,326 in the previous year. The above figures do not include the leaf delivered in excess of the quota: the total quantity of leaf actually received at the warehouse was 519,435 kilos.

The amount of leaf used by manufacturers was 329,233 kilos as compared with 321,544 kilos in 1936.

But little progress was made in obtaining a type of tobacco suitable for the export market. Trials with new varieties were continued and a more extensive research scheme considered and proposals put forward.

Fibre.—Market conditions were fairly satisfactory during the first half of 1937: but from July onwards they deteriorated until, in December, there was practically no market. The total exported in 1937 was 1,617 metric tons as against 1,214 in 1936 and 446 in 1935.

A committee has been appointed to investigate the conditions under which the bag factory might be reopened. The work of the committee is still in progress.

Pineapple Industry.—Appreciable progress is in evidence regarding this industry. At the end of the year 11 acres of experimental plantations had been carried out by the Department of Agriculture. A large amount of planting material will be available this year and it is expected that the area under pineapple will be increased. The Fruit Canning Factory anticipates for 1937-8 a total turn out of 4,500 cases or about 108 tons.

Tea Industry.—Conditions continue favourable concerning this industry. At the end of the year, the total area under tea approximated to 440 acres and the total produce for 1936-7 was about 50 thousand kilos (metric).

Coconut Industry.—The export of copra—produce of the Dependencies of Mauritius—amounted during the year to 1,507 tons valued at Rs.350,012 as against 1,331·5 tons valued at Rs.229.884 in 1936. The export of coconut oil during the year was 5,731 litres valued at Rs.2,353, as compared with 7,113 litres valued at Rs.2,686 in 1936.

Alcohol.—The total quantity of alcohol distilled for human consumption amounted to 593,396 litres as against 651,727 the year before. The quantity distilled for industrial purposes was 603,192 litres as against 483,820 in 1936. The exportation of rum during the year was 84,210 litres valued at Rs.27,181 as compared with 39,619 litres valued at Rs.8,776 in 1936.

Veterinary and Livestock.—At the beginning of 1937 the total horned cattle on estates numbered 13,646 as against 14,195 at the beginning of 1936.

Cattle importation from Madagascar amounted to 5,967 heads, valued at Rs.335,758, all of which was for beef.

An agreement between Government and the Stock Breeders' Association has been arrived at, following the recommendations of Professor Lindsay Robb, of Pretoria University, and steps are being taken for the importation of beef type bulls and heifers, with the idea of increasing the local meat production. Consideration is also being given to the improvement of pastures in the Colony.

The Agricultural College.—The Mauritius Agricultural College is administered as an integral part of the Department of Agriculture. Experimental fields and farms cover about 60 acres. Laboratories provide accommodation for teaching and research in Chemistry, Entomology, Botany, Mycology, Physics and Sugar Technology.

A three year course leads to the Diploma of the College. Short courses in the intercrop period are provided for estate employees and special courses for agricultural and sugar house chemists. The examinations of the City and Guilds of London Institute in sugar technology are held annually at the College and the full Technological Certificate of the Institute is awarded to graduates of the Agricultural College who pass successfully the final examination of the Institute in Sugar Technology.

Most past students of the College have been absorbed in the local sugar industry while a few have obtained situations abroad or in Government. The practical value of the training received at the College is now showing its effects and, on several estates, the Diploma of the College has been made a *sine qua non* condition for employment.

In 1937, the regular students on the books numbered 21, together with six part-time students. Present accommodation limits the total number to a maximum of 30. In recent years, the applications for studentships have been considerably in excess of the accommodation available and new entrants have been selected through a competitive examination, up to a total number limited to seven or eight.

The Sugar Cane Research Station.—This station was opened in 1930, with the objects of producing superior varieties of sugar cane, of investigating soil properties with a view to introducing improved cultivation and manurial methods and of conducting research into the physiology of the cane.

As a result of the cane breeding work, five varieties have been released for general distribution after being tested in varying conditions, and it is confidently expected that some of these will become commercial varieties in the near future.

Soil research has shown a clear correlation between climate and soil properties and manurial trials are conducted on the different soil types, to discover their fertilizer requirements.

The physiological investigations have been chiefly concerned with root systems of different commercial varieties under varying conditions. These results have been correlated with suitability of various kinds of environment, phytalus resistance and different cultural practices.

School Gardening and Nature Teaching in Primary Schools.—(See also Chapter X, page 34.) The work is entrusted to the officers of the Agricultural Division of the Department of Agriculture. There are at present 32 registered school gardens. Gardening classes are held regularly, when the Instructors visit the schools, i.e., about every fortnight. Classes are also held on the average twice weekly by one of the schoolteachers. While particular attention is given to practical work in the garden, care is also taken to get the pupils to record their observations in garden note books. Furthermore, short lectures are delivered to the pupils on the principle and practice of horticulture.

In order further to secure the interest of both pupils and schoolteachers, a prize scheme exists, prizes being given annually for the best gardens.

Co-operation.—The idea of establishing Co-operative Banks for the benefit of the small planter was introduced in the Colony by the Royal Commission who visited the island in 1909.

The form of the bank inaugurated is that of the agricultural type based on the main principles laid down by Raiffeissen. These principles were adopted with some slight variations found necessary to suit the ideas and necessities of the small planters, and are briefly the following:—

Each society must contain at least ten members and must operate in a small area. Every member must contribute at least one share fixed at Rs.10, and must be personally known to his fellow members. The liability of the members is unlimited, the services of the members are rendered gratuitiously, the profits are placed to a reserve fund and loans for short periods are granted only to members essentially for reproductive purposes. Shares contributed, deposits of members and non-members, Government advances and the reserve fund, if any, constitute the working capital of the society.

The facilities given by Government are briefly that a society is registered free of charge, the audit and inspection of its accounts are made by Government officers, it has a priority of claims as against crops, etc., over other creditors, the share or interest of a member is made not liable to attachment or sale under any decree, the instruments executed by or on behalf of the society are exempted from stamp duty and registration fees.

Co-operative Credit Societies were first registered in July, 1913. The following notes describe their position twenty-four and a half years later and show the progress achieved solely through Government's activities:—

On the 31st December, 1937, there were 35 societies in operation in the island and its dependencies (Rodrigues) with 2,041 members and a working capital amounting to Rs.269,650 made up of:—

(*a*) Share contribution Rs.61,133;

(*b*) Dividends undrawn by members and left in the societies as non-dividend bearing shares for strengthening their working capital Rs. 1,368;

(*c*) Deposits of members and non-members Rs.100 and Rs.2,400 respectively;

(*d*) Government advances held by six societies Rs.17,000;

(*e*) Reserve Fund Rs.187,649.

The total amount the societies disbursed as loans to their members was Rs.226,725. The rates of interest charged by the societies on loans to their members varied from 5 to 12 per cent. per annum.

Since the inception of the movement, Government advances totalling Rs.102,450 have been made to the societies of which Rs.85,450 have been refunded.

The movement is under the supervision and guidance of the Government and is run as a branch of the Department of Agriculture with a staff composed of:—(*a*) the Registrar who is also the Director of Agriculture; (*b*) the assistant Registrar, a whole-time officer who has undergone a training in co-operation in Ceylon; (*c*) a whole-time Inspector; and (*d*) a part-time Inspector with combined duties of Agricultural Instructor.

Apart from a small yearly contribution made by the societies towards their audit inspection, the cost of running the movement is borne by the Government.

Other Manufacturing Industries.

Conditions have been nearly stationary regarding subsidiary industries. In 1937, engineering establishments numbered 48. There were four docks (landing, etc.), three distilleries, three hydro-electrical plants, six cigarette factories, one match factory and four salt making establishments. Altogether, employment was afforded to about 2,000 people in these various concerns.

In addition, there exist, on a somewhat limited scale, leather tanning, boot and shoe making, aerated water works, ice making, vinegar making, biscuit and jam making, etc., together with the usual innumerable small handicrafts, which in an overpopulated island like Mauritius help to render the community less dependent on imported articles.

Fisheries.

In 1926 the question of fishery control in Mauritius was thoroughly investigated by Mr. J. Hornell, F.L.S., F.R.A.I., formerly Director of Fisheries in Madras, and his recommendations in the printed report on the subject have formed the basis of the work of the Local Fisheries Advisory Committee formed in 1927. Special consideration has been given to the questions of control of net fishing, improvement of local methods of fish-curing, protection of the local dried fish trade against the imported article, and ensuring a plentiful supply of cheap fish in the markets without prejudice to the working fishermen. Careful study of the whole question led the Committee to recommend a suspension of the use of large nets in 1934 and this was approved and has been in force since 1st October of that year. This measure, which was made permanent in the early part of the year under review, divided public opinion to such an extent that the Fisheries Advisory Committee have recommended a relaxation of prohibition, in consequence of which net fishing will very probably be reintroduced during 1938.

The lagoons, between the coral reef surrounding the Island and the beach, are normally full of excellent fish of many varieties which are taken in large quantities by means of basket traps, cast net and line and, in the open sea outside the reefs, large fish can be taken at practically all times of the year by trolling or with deep sea lines.

All professional fishing is done from small sailing craft known as " peniches " and " pirogues " which are well built and sea-worthy but the business side of the industry is quite undeveloped owing to local preference for old-fashioned methods which ought to be replaced. Amateur fishermen are well supplied with locally built sea-going motor boats which enable them to reach the remarkable fishing grounds round the rocky islets lying from two to fifteen miles off the northern coast of the Colony where good sport is certain at almost all seasons.

Fish-curing industries are established at Rodrigues and St. Brandon Islands and produce a considerable quantity of what is one of the staple foods of the poorer classes but the dried fish of South Africa and India still commands a large sale and is imported in increasing quantities at a very low price.

River fishing is confined to spinning for carp and chite—a fish very like a mullet—but fishing rights are preserved and suitable stretches of water are scarce.

Forestry.

The forest area consists of 110 square miles of Crown forest (forest and scrub) and about 60 square miles of private forest land (forest and scrub). Total about 170 square miles.

Those portions of Crown forest not carrying merchantable produce have a vegetative cover, important for catchment and for protection purposes, especially where situated on the central and southern plateaux, where the high rainfall and general humidity of the air ensures that any blanks are rapidly colonized. The same may be said of portions of the private forest lands, but others are at too low levels for this cover to have such effect.

As a subsidiary form of production, forest lands are utilized for shooting and fishing—Crown forests leased for this purpose returning Rupees 16,000 in a normal year.

A second subsidiary form of production consists in the grazing that is to be had on the four thousand five hundred acres of Pas Geometriques or Crown land strip 250 feet wide round the greater part of the coastline and islands leased on tree-planting conditions. This strip of plantations gives the island one of the finest coastlines in the world, and the combination of economic production (timber and grazing) with aesthetic value is worthy of special note.

The forests of indigenous species which produced the primary timbers have been and still are being superseded by the invasion of exotic vegetation due to the extensive removal of the over-forest in the past, the destruction of the regeneration by the burning of charcoal in conjunction with this operation, the exceptionally slow regeneration and aftergrowth of the indigenous species and the very favourable conditions of climate and rainfall and the physical soil conditions awaiting the invading species. In place of the whole island area, only some few square miles of this virgin forest now exist.

Following the foregoing general destruction, trials of many and varied exotic tree species were undertaken, many were planted between 1880 and 1918 on a large scale on Crown land, notably eucalypt and to a lesser extent the Chinese pine, but generally speaking, these plantations were formed to reconstitute the vegetative cover and were not laid out on commercial lines. The present stocks are sometimes scattered, irregular and often severely shaken and damaged, whilst there are many fallen trees due to the selection of unsuitable species, to cyclone damage and to lack of past thinning and other treatment. It is from these plantations that, what major production as is possible, has at present to be effected. From 1928 onwards, however, regular and vigorous plantations, on easy extraction routes, are being provided on a scale designed to abolish imports of the cheap woods of commerce and to provide a surplus of cabinet timbers worthy of export. These plantations are the result of a careful study of the results of the past and a selection of species has been made accordingly though the species composing the mixture are changed from time to time. Full financial records are available for these recent plantations.

(*a*) *Production:—*

Unmanufactured items.

From Crown forests (no figures available for private lands).

Product	*Volume, 1937* *Cu. ft.*	*Value, 1937* *Rs.*
Logs and round timber	96,000	33,000
Sawn timber	8,000	17,000
Fuel	690,000	46,000
Minor forest produce	—	2,000
Sales in Rodrigues...	—	1,600
		99,600

Manufactured items.

(i) Approximately 160,000 gross boxes of matches produced by the Mauritius Match Manufacturing Company. Total value, say, Rs.90,000 to 100,000.

(ii) The finished articles produced by cabinet-makers numbering about one hundred and sixty. The products of these craftsmen are of high quality.

Minor Forest Produce.

Grass for fodder, bamboos, palm salads, thatching material and fodder seeds.

The most notable features of production for 1937 were the further large advance in the production of matches by the Mauritius Match Manufacturing Company and the large and much increased demands for fuel from Crown land.

Much fuel is converted into charcoal. Few charcoal lorries, however, are at present working on the island.

(*b*) Logs and round timber supplied on forest roads or sometimes delivered to buyer.

Sawn timber: sawn by hand.
Fuel: sold standing or by the cord of forest roads.

The principle of limiting the outturn to ensure a sustained yield applies to Crown forests. At present the sale of pine has thus to be limited.

(*c*) All production is consumed locally.

VII.—COMMERCE.

Mauritius is an essentially agricultural Colony and yet, it barely produces one-tenth of the foodstuffs required for its inhabitants and imports practically all articles of food and drink, with the exception of sugar, and manufactured goods of all descriptions.

Of the principal articles of food and drink imported, rice, which is the staple food of the people as well as dholl, lentils and other grain, edible oil, spices and seeds, salted fish and ghee come from India, confectionery, preserved provisions, soya bean oil, whisky from the United Kingdom; wheat flour, fresh fruits and butter from Australia; salted fish, meat, fresh fruits from South Africa; wines from France and Spain; lard from Hong Kong; preserved provisions from China; margarine and cheese from Holland; tinned sardines from Japan, tea from Ceylon; and cattle, pistachio nuts and potatoes from Madagascar.

The main items of imports of manufactured goods are: heavy iron and steel goods for use on sugar estates in connexion with the manufacture of sugar; cotton and woollen goods, wearing apparel, patent fuel, fertilizers, hardware, paint, soap, motor vehicles from the United Kingdom; gunny bags for packing sugar, saltpetre, cotton piece goods come from India.

Other sources of supply are: France, apparel and haberdashery, perfumery and drugs; the Dutch East Indies supply petroleum products; the United States of America, machinery and petroleum products; Germany, toys and tramway materials; the Straits Settlements, timber and rattans; Belgium, chemical manures, glassware and tramway materials; Japan, cotton and silk manufactures, earthenware, glassware and wearing apparel.

Of the foodstuffs produced locally, may be mentioned fresh fruits and fresh vegetables.

Mauritius is almost entirely dependent on one industry—the sugar industry—and so long as efforts made to develop other industries do not meet with success its position will be more or less insecure especially on account of cyclones. In 1937 the sugar exports represented about 98 per cent. of the domestic exports. Other items of exportation are comparatively insignificant in value—they are: aloe fibre, copra, poonac, rum and coconut oil.

There has, as yet, been no market for the local tobacco industry, but as the result of the successful development of these industries during the past few years, imports of cigarettes and matches have considerably decreased.

The following table gives the total value of imports, domestic exports and re-exports for the year under review and each of the preceding four years.

	Imports. *Value* *c.i.f.* *(Rs.).*	*Domestic* *Exports.* *Value* *f.o.b.* *(Rs.).*	*Re-exports.* *Value* *f.o.b.* *(Rs.).*
1937	34,226,522	36,081,479*	832,542
1936	30,218,589	31,842,308	948,498
1935	29,891,160	28,008,615	640,640
1934	29,680,346	25,028,810	1,107,330
1933	29,035,237	31,428,394	748,349

* Excludes the value of Sugar Quota Certificates which in the year 1937 may be estimated at Rs. 4,900,000.

The following table gives the percentage of total imports provided by the British Empire and foreign countries respectively during the year 1937 and the four preceding years.

	1937. *Per cent.*	*1936.* *Per cent.*	*1935.* *Per cent.*	*1934.* *Per cent.*	*1933.* *Per cent.*

In the Table of Imports, Domestic Exports and Re-Exports above, the values for Bullion and Specie are not included. The imports in 1937 were Rs.121,333 and Re-Exports Rs.174,789 against Rs.50,000 and Rs.159,185 respectively in 1936; Rs.36,866 and Rs.1,275,622 in 1935; Rs.2,182,000 and Rs.2,419,834 in 1934.

In 1933 there were no imports, and re-exports amounted to Rs.213,030.

TOURIST TRAFFIC.

During the year 1937, five tourist ships called at Port Louis with 532 visitors. The number of tourists who arrived in the Colony by other ships amounted to 182. Good roads and taxi-cars at cheap rates render places of interest throughout the Colony easily accessible to visitors.

VIII.—LABOUR.

About 11,000 labourers mainly of the Indian population work on the sugar estates under verbal monthly contract and some 70,000 by the day or by the task. Casual labour is hired by Indian sirdars who go round the neighbouring villages and persuade their fellow-countrymen to work at a certain rate on estates where the sirdars have been entrusted with field work.

To all appearances, especially in crop time, demand is in excess of supply chiefly for the reason that a day labourer will not work more than six hours a day at most.

Serious unrest occurred during the year among labourers employed on sugar estates. The first indications of this unrest appeared at the end of July when the cane cutting season began. The principal grievance of the strikers at that time was that a

15 per cent. cut had been made in the price paid for " Uba " cane—an inferior type of cane which has a smaller sugar content than other varieties. The small planters, many of whom work as labourers, alleged that this cut in price had been made without due notice and that it would result in serious loss to themselves. Strikes continued to occur until September, the complaints of the labourers being:—

(1) Low wages.
(2) Inferior quality of rations.
(3) Low rates of overtime pay.
(4) Poor medical treatment.

During the course of the strikes several serious accidents occurred—in one case the staff of a sugar mill, fearing that they would be rushed by a hostile mob, opened fire, killing four persons and wounding six others. In another case a mob attacked a small party of police with stones and the police were obliged to fire, killing one person and slightly wounding another.

A considerable amount of intimidation occurred during the strike—arrests were made in some cases.

The Protector of Immigrants and his staff took all steps possible to enquire into and settle the strikes, and millers and employers agreed to a reduction in the cut in the price paid for " Uba " cane and to an increase in wages for labourers.

The series of strikes ended on the 8th of September.

On the 17th of August a Commission was appointed to hold a full enquiry into the causes of the unrest and to make such recommendations as it thought fit. This Commission had not yet reported when the year came to an end.

The problem of unemployment, which is practically non-existent in the labouring classes, was severely felt amongst skilled artisans and clerks. Certain works of public utility were again undertaken by Government during the year, providing employment for as many persons as possible who were without work.

IX.—WAGES AND COST OF LIVING.

Labourers under monthly verbal contracts receive in cash Rs.10 per month, together with rations, lodgings, medical assistance, etc. Furthermore, they have facilities for rearing chickens, goats, milch cattle and form the groundwork of the supply, through hawkers, of eggs, chickens and milk throughout the Island.

Male day labourers received R.0.60 to Rs.1.25 per daily task; females R.0.35 to R.0.70: in crop time agricultural wages being about double their wages in inter-crop.

Remuneration for piece work was, on the average, as follows:—

	Per acre. *Rs.*
Clearing land	20–40
Digging cane holes	18–20
Manuring	15
Weeding	8–10
Cutting canes (20 tons/acre)	12–16

The wages of artisans were R.1 to Rs.2 per day while those paid by the month received Rs.30 to Rs.90 according to the nature of work.

The supply of domestic servants, especially in the populous central districts, is abundant, if not altogether efficient. Butlers, cooks, gardeners, and other servants receive Rs.10 to Rs.35 per month, often with quarters. Chauffeurs, on the average get Rs.35 per month.

As regards salaries, conditions have not changed in 1937. The following gives a broad outline of the principal rates:—

	Rs. per annum.
Managers of sugar estates and senior Government officials	8,000–13,000
Government, bank and commercial clerks (higher grade)	4,000– 7,000
Clerks and employees on sugar estates	1,500– 3,000
Junior clerks and employees	720– 1,500

The cost of living in 1937 evinced an appreciable decrease, especially as regards foodstuffs. Rice, the staple food of the population, was indexed, throughout the year at 66 (100 in 1914). Other grains (lentil, dholl) fell from 80 to 77. Flour, which was 129 during the first quarter, fell to 113 during the last. Oils and fats fell from 69 to 66 while tea and coffee remained steady at 77 and 58 respectively. Articles of clothing remained steady about 112.

The quarterly weighted index for the total cost of living (28 items) in 1937 was as follows (100 being the Index for 1914):—

First quarter	98·0
Second ,,	98·2
Third ,,	97·0
Fourth ,,	97·9

The mean for the year was 97·8 as compared with 111·5 in 1936.

As regards the labouring classes, the following total indicates the purchasing power of wages, in terms of rice, since 1927:—

Year.	*Average daily wages of male labourer.*	*Average price of fair quality rice per lb.*	*Purchasing power of wages expressed in lb. of rice.*
	Rs.	*Rs.*	*lb.*
1927	1·25	0·13	9½
1928	1·25	0·10	12½
1929	1·00	0·10	10
1930	0·80	0·09	9
1931	0·75	0·08	9
1932	0·45	0·05½	8
1933	0·45	0·06	7½
1934	0·45	0·06	7½
1935	0·55	0·07	8
1936	0·55	0·06	9
1937	0·65	0·06	11

The official index numbers do not take into consideration the improved standard of living since 1914, while such items as housing, lighting, tuition of children, taxes and rates, etc., have either not been reduced or else, actually increased. Consequently the cost of living for Europeans and people living on the European standard is, generally, higher than the official index would lead one to suppose.

X.—EDUCATION AND WELFARE INSTITUTIONS.

An Ordinance, enacted by the Governor with the advice and consent of the Council of Government, was introduced on the 18th of September, 1934, to amend and consolidate the law on education. It provides for the establishment of a Royal College Department and a Schools Department. The Regulations for the management of Government and Aided Primary Schools as well as Aided Secondary Schools are embodied in the Education Code.

Primary.—Primary Education is not compulsory, but it is given free through Government and State-aided schools which are open to all children of the Colony. The following table shows the number of primary schools, the number of pupils on roll, and the staff of teachers during the year 1937:—

Schools.	*No. of Institutions.*	*No. of Teachers.*	*No. of Pupils on roll.*	*No. of Pupils in average attendance.*
Government ...	50	401	14,393	10,436
Aided	77	691	24,515	17,306
Totals ...	127	1,092	38,908	27,742

State-aided schools are under the control of a Manager, and the Government contribution includes the salaries of the teachers together with recurrent grants to meet part of the expenditure on maintenance of school buildings and furniture.

Pupils must be at least five years old and must have been successfully vaccinated in order to be allowed admission to a primary school; when they are under five they undergo a preliminary training before being promoted to the lowest form.

The curriculum of studies includes the teaching of English, French and arithmetic. In the higher classes elementary history and geography are taught and girls study needlework. Regular instruction is also given in physical drill, nature study, hygiene and elementary principles of agriculture.

There are six primary school standards or classes, viz.:—

Standard I with pupils from 5 to 6 years of age.
Standard II with pupils from 6 to 7 years of age.
Standard III with pupils from 7 to 8 years of age.
Standard IV with pupils from 8 to 10 years of age.
Standard V with pupils from 9 to 11 years of age.
Standard VI with pupils from 10 to 12 years of age.

There are no fixed age limits for the different standards but no pupil may be entered on the attendance register who is under five years of age, and no pupil may be retained on the register after the annual examination which follows his or her fourteenth birthday, exception being made for pupils following the scholarship classes.

Examinations which were formerly held for all the classes are now limited to Standards V and VI. Experience has shown that the quality of the work put in, now that examinations have been restricted to the higher classes, is of a higher standard than it used to be. A scheme of work was introduced recently for the benefit of the lower classes. It contains suggestions to teachers as to the methods to be employed with a view to acquiring a more gradual teaching of the elementary subjects. The advantage gained by the primary schools through this scheme is being gradually felt and it is hoped that in the near future the full effect of the system will be reaped.

Fourteen apprenticeships are awarded annually to primary school pupils to encourage the study of needlework and handicraft. Needlework apprenticeships which were formerly restricted to Government or aided primary school pupils, are now open to outsiders. The object in view was to encourage competition on this line but, unfortunately, the result is far from being satisfactory. There is, however, a noticeable increase in the number of candidates for these examinations. Mauritian youngsters profess an undoubted aversion for manual work of any kind, but being given the difficulty of finding employment of the clerical type, there is a passive acceptance of the condition imposed upon them and a momentary return to handicraft. A new scheme is on foot and the object in view is to render handicraft more attractive. Twenty-six scholarships and exhibitions tenable at the secondary schools are awarded every year, through competitive examinations, to the best pupils attending primary schools.

It is interesting to note that a high percentage of candidates winning the English scholarships are junior scholars from the primary schools.

There are 32 gardens attached to the primary schools and they are cultivated by the pupils of Standards III to VI. These gardens are regularly inspected by officers of the Agricultural Department who give advice as to proper cultivation. (See Chapter VI, page 19.)

Secondary.—There are two categories of secondary schools, viz.:—(1) secondary aided schools, which are managed privately but are under Government control, and (2) the Royal College and the Royal College School which are managed by Government.

(1) *Secondary Aided Schools.*—Government grants to secondary aided schools are assessed with reference to attendance and efficiency, as tested by inspection and examination, and not, as in the case of primary aided schools with reference to maintenance and salary charges.

The following table shows the number of institutions, the number of pupils on roll and in average attendance, and the staff of teachers during the year 1937:—

Schools.	*No. of Institutions.*	*No. of Teachers.*	*No. of Pupils on roll.*	*No. of Pupils in average attendance.*
Aided	9	139	1,632	1,471

These schools provide not only for elementary education such as is given in primary schools, but also for higher education leading up to the Cambridge School Certificate and the London Matriculation.

The curriculum of studies includes the teaching of English, French, mathematics, needlework (for girls), hygiene, history and geography. In addition to these, drawing and music are taught on a more moderate scale.

These schools are visited periodically by the Superintendent of Schools, who examines the lower forms. No advantage is gained from these examinations but it helps classification in view of prizes awarded for general proficiency. The middle and higher forms are examined partly by local examiners and partly through examinations conducted by the Syndicate of the University of Cambridge.

Working hours in both primary and secondary schools extend as a general rule from 10 a.m. to 3 p.m., no provision being made for evening classes.

(2) *Royal College.*—The Royal College is a Government school for the secondary and higher education of boys up to a standard equivalent to that of the Higher Certificate examinations conducted by Oxford and Cambridge Universities. It comprises two schools under the management of the Rector, the Royal College proper in Curepipe and the Royal College School in Port Louis, where pupils who live in or near the capital are educated on the same lines as in Curepipe up to School Certificate standard. At the Royal College the teaching staff consists of the Rector, twelve Masters with degrees in Honours at British Universities, eleven Assistant Masters appointed locally, and a Physical Training and Gymnastic Instructor (who also attends once weekly at the school to take classes); and at the Royal College School, of the Headmaster, two Masters and nine Assistant Masters. Assistant Masters are encouraged to take the B.A. and B.Sc. examinations of London University. The College has well-equipped libraries and chemical, physical, and biological laboratories; almost as many pupils follow classical as scientific studies. The subjects taught are English, French, mathematics, Latin, Greek, chemistry, physics, biology, geography and history; and classes are held during school hours in physical training and gymnastics. The pupils are drawn from all classes and races in the Colony, and range in age from 10 to 20 years. The fees are from Rs.96 to Rs.192 per annum, and pupils may travel at quarter rate on the Government railways. Admission to the Royal College is conditional upon passing an entrance examination or winning one of the 20 annual primary schools scholarships and exhibitions or one of the two secondary schools scholarships awarded annually, or one of the eight class scholarships and exhibitions, which are competed for annually, and are open to all boys in the Colony. Six further class scholarships and exhibitions are competed for annually by Royal College pupils. These 36 scholarships and exhibitions are tenable at the Royal College, and entitle the holders to free tuition, free railway travelling to and from College, and also to the purchase at half price of books and school requisites, for a period of three years except the primary schools awards, which carry these privileges for the whole period of the pupil's college education.

Two scholarships, one on the Classical and one on the Modern Side, of the present value of £1,100 each (with first-class passage to and from England), tenable for four or five years at a British University or any other approved place of education in the United Kingdom are also awarded annually. Besides the winners of these two scholarships, a few boys whose parents can afford it go to England or France to study for a profession, usually Medicine or Law, and almost always return to Mauritius to practise. Of the remaining pupils the majority on leaving the College find employment in the island.

The boys receive a training in classical and scientific subjects. Specialization begins at the Entrance class, and the division into modern and classical sides becomes complete in the Upper Middle class. At the school, pupils may undergo commercial training in place of classics or science.

Classes are held between 9.30 a.m. and 3.30 p.m. on five days weekly. In addition to the ordinary classes there are Saturday extension classes where candidates for Pharmaceutical Diplomas and other public examinations are helped in their studies. The number of pupils on the roll of the Royal College in January, 1937, was 334, and of the school, 176. The average attendance at the college was 313 and at the school 170. (The number of college pupils on the roll in May, 1937, after the publication of the School Certificate results, was 317.) Eighty-six pupils sat in December, 1936, for the Cambridge School Certificate, of whom 47 obtained certificates. In May, 1937, the number of pupils who had passed this examination and proceeded to the highest class of the college was 22.

Besides the regular physical training classes encouragement is given to rugby and association football, hockey, boxing and gymnastics and athletics, in which, although by no means all the boys join, the standard of proficiency is high. As the pupils are all day-boys it is difficult to obtain much support for other social activities, but a school magazine is published once yearly.

Welfare Institutions.

There are six Roman Catholic infirmaries for men and women, and two orphanages for children under the management of Sisters of Mercy; also an orphanage for boys and one for girls under the control and management of the Church of England, and one " home " for men and women under the management of the Church of Scotland. These institutions receive from the Government a maintenance fee for each pauper maintained therein.

Under Ordinance No. 44 of 1932, subsequently amended by Ordinance No. 21 of 1934, a home, styled the Austin Wilson Home, has been instituted and incorporated to provide accommodation and subsistence for aged gentlefolk. The funds for the establishment of this home have been generously contributed by Mr. A. J. Wilson in memory of his son, the late Austin Wilson.

A Mohammedan orphanage was established in Port Louis in 1932 for the maintenance and education of orphans and children of paupers of the Mohammedan creed. Funds for running the institution were up to February, 1937, obtained from voluntary subscriptions among the Mohammedans.

Consequent on an application from the Directors of the Orphanage for the grant of capitation fees out of public funds, the Orphanage is receiving from the Government, since the 1st March, 1937, a maintenance fee for each child maintained therein.

Outdoor assistance to paupers was granted in cash by the Poor Law Department during the year.

Several private religious societies for the distribution of assistance in food and medical care are also in existence. The Société Francaise d'Assistance chiefly assists French nationals.

The Child Welfare Committee and the Oeuvre Pasteur de la Goutte de Lait, two philanthropic institutions in receipt of Government grants, deal especially with expectant and nursing mothers and their babies.

The Workmen's Compensation Ordinance provides for the grant of compensation by employers to workmen who are injured in the course of their work.

Recreation, Music, Art and Drama.

Association football is the most popular form of sport. Golf, tennis, cricket, hockey and rugby football are played mostly by the wealthier classes.

The Mauritius Turf Club, founded by Colonel Edward A. Draper in 1812, and the Mauritius Jockey Club, which first ran horses in 1906, hold race meetings from May to October, at the Champ de Mars in Port Louis and at Floreal in the district of Plaines Wilhems. The large gathering of Indians in bright attire at the former place on the last Saturday of August, called " The Race Saturday," is a striking sight worth seeing.

Regattas are held by the Yacht Clubs of Mahebourg and Tombeau Bay generally on Empire Day, in August, and in December.

Fly and devon fishing, in rivers, for a sort of perch *Kuhlia* (Dules), *rupestris* (Lacp) called " Carpe," locally; and trailing for sail and sword fishes and other big game, out at sea, with heavier rods, afford excellent sport especially from October to January.

The " Chasse," or the shooting of deer, is a favourite sport in Mauritius. The season is from June to the beginning of September, and strangers of mark visiting the Island at this period are always treated to chasses, some of which, like those given to His Royal Highness the Duke of Edinburgh by Messrs. Currie and Pitot in 1871, to His Royal Highness the Duke of Cornwall and York (later King George the Fifth) by Mr. Leopold Antelme in 1901 and to His Royal Highness the Duke of York (now King George the Sixth) by Mr. Georges Antelme in 1927, are the occasion of splendid fetes. The " Chasse " affords to many poor people the only opportunity of eating meat during the year.

There are several flourishing companies of Girl Guides and Brownies, the latter known locally as Blue Birds. The Boy Scouts movement is becoming very popular and there are several companies of Scouts and Cubs. A Sea Scout Company has recently been organized and is promising.

There is not much chance of encouragement for any of the Arts. Music is fostered principally by the parish churches and amateur singers, who sometimes give concerts; there are but few professors now that the theatrical companies from France, which came over every year, and whose members generally gave lessons, sometimes remaining till the next season, have been driven away by the financial crisis and by the competition of the cinema, of which there are halls in every important village where excellent films are exhibited in record time after their appearance in Europe and in India. Censorship is exercised.

The Christian Brothers also provide musical training, and apart from the police band which consists of a bandmaster with 30 bandsmen, a band styled the " Alliance Musicale " and comprising about 25 units was established in 1933. The Chinese have their own theatre in the town, to which companies come from China when conditions are prosperous. The African Creoles are very fond of music and can pick up a tune in an amazingly short time.

The Municipality of Port Louis has instituted a drawing class, practically the only encouragement to local talent now that the post of drawing master has been abolished at the Royal College.

The Mauritius Institute was founded in 1900 (Ordinance No. 37 of 1900) to promote the intellectual advancement of the Colony and installed in a specially erected building whose first stone was laid by Sir George Bowen on 23rd November, 1880. The Natural History Collections bequeathed to the Colony by Mr. Julien Desjardins were transferred to it in 1885.

The Institute now consists of:—

(*a*) The Museum Desjardins, containing the natural history collections bequeathed to the Colony by Mr. N. Desjardins in 1842, to which important additions have since been made.

(*b*) An Art Gallery of some 60 paintings of which 47 were offered by Mr. Edgar de Rochecouste in 1921-2.

(*c*) A Public Library of about 20,000 volumes, which is increasing at an annual rate of 300 units and attended by some 1,200 readers.

(*d*) The following incorporated scientific bodies: The Société Médicale de l'Ile Maurice including among its members most of the medical practitioners of the Colony; the Societe des Chimistes, a technical body of the local sugar industry, reckoning over 120 members and studying questions of technique concerning the growing of sugar cane and the manufacture of cane sugar; the Royal Society of Arts and Sciences. This Society which was founded in 1829 under the title of Societe d'Histoire Naturelle was honoured with a Royal Charter in 1846. Its activities extend to most branches of natural history, science and art. Lectures are delivered by its members, now numbering 60, and also by visitors of mark under its auspices. Its valuable library has been transferred to the Institute.

Apart from the public Art Gallery at the Institute, many pictures from celebrated painters are privately owned, together with artistic collections of old china, glassware, lace, bronze and marble figures from the best artists including the Mauritian sculptor Prosper d'Epinay.

There is also a museum of naval relics, located in a building on the premises of Government House. Most of the exhibits were reclaimed by the Honourable H. C. M. Austen, C.B.E., from the wreck of battleships sunk in Mahebourg harbour in 1810.

Artistic photography and fine millinery and embroidery are also produced.

In addition to the Institute Library there are: at Port Louis, the Municipal, the Police and the Union Catholique libraries; and at Curepipe, the Carnegie Library.

XI.—COMMUNICATIONS AND TRANSPORT.

Roads and Road Transport.

The Colony is well served with 500 miles of main roads maintained by Government and 190 miles of branch roads maintained by the District Boards. All roads are metalled and 170 miles of the main roads have been covered with bitumen.

The excellent roads of Mauritius are a source of constant surprise and admiration to all visitors to the Colony who are in a position to draw comparisons between Mauritius and other outlying posts of the Empire. All the principal roads are tarred and a systematic policy of widening, grading and reducing curves has been pursued for some years with the result that the numerous places of beauty and interest in the Colony can be reached quickly and in comfort by tourists and visitors.

At the end of the year there were 2,866 motor vehicles in use classified as follows:—

Private cars	1,719
Taxi cars	402
Lorries	389
Motor cycles	224
Omnibuses	132

Importations of motor vehicles during the year totalled 350, of which 265 were British made.

Taxi-cars for hire in Port Louis and the principal towns are of modern type and are kept in excellent condition as regards safety and cleanliness and the charges for hire are reasonable, viz., R.0.20 per mile for short distance and special rates for long journeys or by the day. There is an excellent bus service on the 15 miles of main road from Port Louis to Curepipe and many subsidiary lines of less importance which radiate from the main system to every town and village in the Colony. The fares vary from 2 to 5 cents per mile and buses on the principal routes are well patronized and maintained in excellent condition for the safety and comfort of passengers. The retail price of petrol is normally Rs. 12.00 per eight gallon case, which is equivalent to about 2s. 2d. per gallon.

The annual tax payable in respect of motor vehicles is Rs.4 per horse-power in respect of motor cycles and Rs.5 per horse-power in respect of other classes of vehicles. Lorries pay an additional tax of Rs.40 per ton gross weight and motor buses a licence duty varying from Rs.200 to Rs.500 per annum in accordance with their seating capacity. Motor lorries plying for hire pay a further licence of Rs.200 per annum. Motor cars pay a licence duty of Rs.30 per annum and the cost of a driving licence is Rs.5 a year.

Cars of visitors are subject to a tax at the rate of Rs.10 a month.

Railways.

The Mauritius Government Railways comprise 110½ miles of main line with 45¾ miles of sidings and station lay-outs of British standard 4 feet 8½ inch gauge, and 13⅔ miles of 75 cm. gauge track known as the Bois Cheri Light Railway. The exceptionally heavy gradients, much of it being 1 in 26, makes the operation of the railways exceptional, restricting speed of the passenger service and limiting the weight of goods trains.

From the terminal at Port Louis, the most important section, the Midland Line, rises to 1,800 feet on its way to Mahebourg, the old port on the south-east coast of the island, 35¼ miles distant. A branch, 11 miles long, from this line, at Rose Belle, serves the fishing hamlet of Souillac. The North line, 33½ miles long, is fairly level and runs from Port Louis passing through the coastal districts to the little village of Grand River South-East, on the east coast. The Moka Branch from Rose Hill, on the Midland line, 950 feet above sea-level, to Montagne Blanche, is 14¾ miles long and rises on this length to 1,500 feet. Tamarin and the Black River district are served by a branch off the Midland line at Richelieu, 12½ miles long, for goods traffic only. The Montagne Longue branch from Terre Rouge on the North line, is 3½ miles long, and in common with the Black River line, has no heavy gradients.

Particulars of revenue and expenditure for six years are given below:—

REVENUE.

	1931–32.	*1932–33.*	*1933–34.*	*1934–35.*	*1935–36.*	*1936–37.*	*Increase or Decrease of 1936–37 over 1935–36.*

All previous records were broken in 1936 by the sugar crop reaching a total of 300,340 tons.

Of the total quantity of sugar produced in the Colony, 17,895 tons or 5·95 per cent. were carried otherwise than by the Railway Department, i.e., by road or by sea.

The increased size and speed of buses as well as the use of communal taxis has again reduced the passenger revenue of the Railway.

In March, 1937, the passenger services were reduced by the suppression of the little 3-mile Bel Air—Riviere Seche branch service, of two Midland line trains between Port Louis and Forest Side, of two Moka line trains between Rose Hill and Montagne Blanche and of four others between Montagne Blanche and Verdun. This step was rendered necessary by the need for economy and the paucity of passengers using these trains.

The Transport of Sugar and Fertilizers (Restriction) Ordinance became law on the 24th April, 1937. By this enactment about 98 per cent. of all the sugar produced in the Colony will be carried by rail and additional revenue from the transport of fertilizers should be realized. A slightly more equitable distribution of sugar rates has at the same time been made together with a remission of the 1 per cent. for cane fire and damp sugar risks and the one cent. per ton for sugar otherwise damaged in transit.

Tramways.

Greater extension of the network of tramway lines was in evidence. In 1937, over 1,800 kilometres of rail were in service as against 1,770 the year previous. There were 221 locomotives and about 7,700 trucks, as against 220 locomotives and 7,400 trucks in 1936. Farm tractors, on estates, numbered 69 and motor lorries 108.

Posts, Telegraphs and Wireless.

The usual facilities which the Post Office provides in regard to correspondence, parcels, and remittances are being extended to remote areas gradually as their postal needs can be firmly estimated. Of the 57 offices and postal agencies, 53 are telegraph offices. Mails from one office to another are carried by the Government Railways. With the exception of a few outposts in outlying localities the offices are on the railway lines. The offices and localities lying out far from the railway stations are served by bicycle postmen or by motor mail contractors.

A regular monthly service by the Dutch K.P.M. steamers is maintained with Rodrigues, the largest dependency of Mauritius. A connexion is made every four months with the other dependencies. Communications by occasional sailings are also available.

Mails to and from Europe are carried regularly twice every month by the French Messageries Maritimes steamers via Suez, and twice in transit through South Africa by the K.P.M. steamers.

Mails between Mauritius and India, Ceylon, the Far East and Australia are despatched by the Messageries Maritimes steamers via Mombasa or Aden and by the Dutch K.P.M. steamship lines via Singapore and Batavia, twice monthly.

Communications with Europe, Asia, and other places are occasionally provided by other ships.

The time taken for the transmission of first class mail to and from England by the Messageries Maritimes steamers via Dar-es-Salaam is 18 days, and by the Dutch K.P.M. steamers via South Africa 15 days. It takes about 32 days by the former route and between 26 and 50 days by the latter for second class mail. Letters by air are also despatched to Europe via Tananarive and Batavia. The average time of transmission is 18 and 25 days respectively .

The outstanding feature of the postal service for the year 1937 has been the introduction of the Empire Air Mail Scheme which has made it possible to send letters by air to Great Britain and certain British territories in Africa at the rate of 12 cents for 10 grammes.

Parcel mails from Great Britain are only received by the Cape route when direct despatch is not available. The other route is via Marseilles. Parcels from Continental Europe are as a rule received by the latter route.

Remittances are made by both money orders and postal orders. There are direct exchanges with the United Kingdom, South Africa, India, Ceylon, Aden, Seychelles, Hong Kong and Australia; remittances to almost any place may be made through these offices. Remittances by telegraph may be made to the United Kingdom, South Africa, India, Seychelles and Rodrigues.

There is also a remittance service with England and France in respect of Trade Charge Orders.

The Telephone service, owned and managed by the Oriental Telephone Company, has its headquarters in Port Louis with which the rural districts are connected. Government Offices are linked together by the Government telephone system which is connected to the Oriental Telephone Company's lines.

Overseas telecommunications are maintained by the Eastern and South African Company, whose local station is in Port Louis. Cablegrams to and from rural telegraph offices are transmitted on the Government telegraph lines. Rodrigues is connected to Mauritius by that Company's cable system.

Communication with the outside world is also provided by the Post Office wireless coast station. The station can transmit within a limited range to ships equipped with wireless. There is also a service with Reunion Island. The staff is in attendance day and night. Radiotelegrams can be handed in at any telegraph office for transmission. During the cyclonic season, from 11th November to 15th May, the station transmits to all ships and stations within the range at 08.45 G.M.T. daily a detailed weather report including observations made at Reunion, Rodrigues, Seychelles and Durban. A fairly large number of weather reports are intercepted from ships at sea. When a cyclone is in the vicinity, the Government tug *Maurice* stationed in the harbour at Port Louis is manned and inland weather reports are transmitted by wireless telegraphy from the tug to all vessels in the port for the guidance of their masters. The wireless apparatus in the *Maurice* also acts as a stand-by in the event of accident to the aerial system at the main wireless station at Rose Belle. The Rose Belle station is provided with a modern valve set in conformity with the Telecommunications Convention. The range of the station is 1,000 miles.

Harbour.

Port Louis, the capital of the Colony, possesses the only navigable harbour for ocean-going ships, which is picturesquely situated on the north-west coast. A wide break in the ring of coral reefs surrounding the island, caused by the meeting of several rivers and streams, the Latanier, La Paix, Le Pouce, and Creole, gives access to the harbour, which has been dredged so as to provide deep-water accommodation for ten ships lying at berths in the channel and drawing from 24 to 31 feet of water. The harbour is flanked on the north by Fort George, a military post, and on the south by Fort William, which is abandoned. The mountains of the range behind Port Louis, including the Pouce, 2,661 feet, and Pieterboth, 2,690 feet, are guiding beacons to ships by day. The lighthouses of Flat Island, the Colony's quarantine station six miles north of Mauritius, and Caves Point, five miles south of Port Louis on the cliff's edge, and the gas buoy to the north of the outer harbour entrance, direct ships approaching Port Louis by night. A tide gauge has been in operation for five years. The maximum rise of tide at ordinary springs is three feet, which diminishes to two or three inches at ordinary neaps. Dredging of the berths and channel by the Government plant is continuously in progress.

The Government of Mauritius is the Harbour Authority. The Government has from time to time sold or let to two lighterage companies various areas of land bordering the harbour. These two companies, the New Mauritius Dock Company and the

Albion Dock Company, each own about 45 lighters with the necessary tugs, and undertake all the storage and lighterage of sugar. The British India Steam Navigation Company also own 30 lighters and two tugs. This Company mainly handles grain from the East, the rest of the general cargo being shared fairly evenly between the British India Company and the other two lighterage companies. Seven years ago the Government built a deep-water quay, 500 feet long, with 32 feet of water alongside, which is able to deal with 100,000 tons of cargo per annum. Actually only 40,000 to 50,000 tons, chiefly petroleum products, Government coal, etc., are discharged annually at the quay.

A Government granary, capable of storing 300,000 bags of rice, was put into commission seven years ago as a protection against the spread of plague in the Colony. Under exceptional circumstances 414,000 bags were stored in the granary in 1937.

Shipping.

There are now three regular lines of passenger steamers connecting Mauritius with the United Kingdom.

The service between Marseilles and Mauritius, performed by the Messageries Maritimes Company has been reduced to a three-weekly service for four months of the year and a fortnightly service for the remainder of the year; the average voyage takes from four to five weeks and includes a stay of about a week at Reunion either on the outward or homeward voyage.

Vessels of the K.P.M. (Dutch Line) leave Mauritius monthly for Durban and Cape ports connecting with the Royal Mail steamers from the United Kingdom; and once a month for Mombasa via Durban.

Vessels also leave Durban once a month direct for Mauritius.

The K.P.M. Company have put three new motor vessels of about 16,000 tons gross and a speed of about 17½ knots on the Java-Mauritius-Africa Line. The voyage to England via K.P.M. and Union Castle Lines averages 32 days. The same voyage by the Messageries Maritimes Line via Marseilles would take from 31 to 36 days.

Vessels of the Bullard King Company call occasionally, from the United Kingdom via Durban and Cape ports, with tourists.

Cheap passages to the United Kingdom may, as usual, be secured during the sugar shipping season—October to March—the voyage averaging 40 days.

The fares from Mauritius to England vary as follows:—

(i) per Messageries Maritimes steamers, from £76 to £32;

(ii) per Union Castle Intermediate steamers from £89 to £36;

(iii) per K.P.M. with transhipment at Durban from £117 and £92 to £48 and £44;

(iv) per Bullard King and Company's steamers from £50 to £43 according to classes and types of steamers.

Government servants are allowed a rebate of from 15 to 20 per cent. by all the above companies.

The number of vessels and total tonnage entering and leaving the port during the past three years were as follows:—

Inwards.

XII.—PUBLIC WORKS.

The Public Works Department is responsible for all Government buildings, the sewerage of Port Louis, roads and bridges, the survey of Crown lands, water supplies, and State irrigation.

Buildings.—Some of these, such as a time-ball tower in the Port Office, are of historical interest, dating from the time of the French Governor, Mahé de Labourdonnais, in 1740. Government House in Port Louis was then in project and was built between 1740 and 1767. Apart from the addition of a second storey, it now stands exactly as it was originally constructed. It contains the Governor's offices, in which are to be found the table on which the instrument of capitulation of the island was signed in 1810, a throne room, a council room, the council offices, a library and quarters for the Governor and officials. The former and present residences of the Governors at " Mon Plaisir ", Pamplemousses, and " Le Reduit ", Moka, respectively, also date back to the French occupation. The value of the Government buildings is approximately 15 million rupees.

There are in the island one mental and eight general hospitals, and one leper asylum. An old hospital, the Grand River North-West Hospital, built in 1769 for seamen, is used when necessary as a quarantine station for plague.

Damage is caused to a considerable extent by white ants which are particularly active in the low-lying districts of the island.

Severe cyclones, which happily are not frequent, are responsible for a good deal of damage to water works, roads and buildings.

Sewerage Works of Port Louis.—The sewerage works were begun in 1900. In 1922, the scheme was revised by Messrs Mansergh and Sons and the works have been carried out on the lines of their report. The construction works being now practically completed, present activities are concentrated on house service connexions, and a large portion of the town of Port Louis now has the water carriage system.

Bridges.—There exist 335 bridges on main and branch roads, the longest having spans of 150 feet. Only a few timber bridges remain and these are being gradually replaced by ferro concrete structures for double line of traffic and heavy loading.

Water Works.—The water supply of the town of Port Louis is obtained from the Grand River North-West at a distance of about four miles from the town at a level of 250 feet. This supply was handed over by the Municipality to the Public Works Department in 1922. The water is passed through sand filters and chlorinated. The capacity of the mains leading to the filters is 5 million gallons a day. The water is distributed to the town from two covered service reservoirs of a total capacity of 2 million gallons. The revenue is approximately Rs.60,000 and goes to the Municipality of Port Louis.

The water supply of Plaines Wilhems and of parts of Moka and Black River Districts is obtained from a storage reservoir called the Mare aux Vacoas, at an altitude of 1,825 feet. The capacity of the reservoir is now, after the raising of the dam, 1,641 million gallons. The catchment ground is entirely protected by forest lands. The whole of this water supply is filtered through sand filters at " La Marie ", about 2 miles below the reservoir, whence the supply to the town of Curepipe is pumped by hydraulic power, the supply to the other towns being by gravity. The water is distributed from six covered service reservoirs situated in the various zones of supply, their aggregate capacity being 5½ million gallons. The population served by this supply is approximately 120,000 and the average daily consumption 4½ million gallons. The Mare-aux-Vacoas water supply has been extended to the town of Port Louis. The supply is limited to 900,000 gallons per day. The water is chlorinated after filtration. The revenue is approximately Rs.148,000.

The water supply to the villages and hamlets in the other districts comes from 27 different springs or streams. These supplies are not filtered but they are generally protected in their catchment areas by reserves of forest. The population depending on these various supplies is about 200,000 and is composed mostly of the poorer classes. A large proportion of the daily consumption is distributed by means of public fountains. The revenue is approximately Rs.90,000 and goes to the District Boards.

Irrigation Works.—There are no works in progress at present. The works executed up to now provide for the irrigation of about 3,000 acres under sugar cane plantation and tobacco in the district of Black River from La Ferme Reservoir, and for a few hundred acres in the District of Pamplemousses from La Nicoliere Reservoir.

XIII.—JUSTICE, POLICE, AND PRISONS.

Justice.

Justice is administered in Mauritius by the Supreme Court and 11 District Magistracies.

Supreme Court.—The Supreme Court which sits in the capital —Port Louis—consists of one Chief Judge and two Puisne Judges. It has jurisdiction in civil and criminal matters and also as a Court of Admiralty; it also decides appeals from the Supreme Court of Seychelles, the Judge in Bankruptcy, the Master and Registrar and the inferior Courts of Mauritius.

There is a Bankruptcy Division presided over by one of the Judges of the Supreme Court or by the Master and Registrar sitting as Judge in Bankruptcy.

In 1937, the Supreme Court dealt with 292 civil cases out of 336 which were brought before it. In the course of the same year, 20 persons were brought before this Court and tried on criminal charges, 16 of them being convicted to various terms of imprisonment, one released upon furnishing recognizance, two discharged and one remanded to the next Assizes. No sentence of death was pronounced.

Criminal cases are tried by a Judge and a Jury. Matrimonial cases, bankruptcy matters and civil actions in which the sum involved is less than Rs.3,000 are heard by one Judge. Civil actions in respect of claims over Rs.3,000 are heard by two

Judges. Where, however, the magnitude of the interests at stake or the importance of the question of fact or law involved make it desirable, a case is heard by three Judges.

Magistrates.—There is a Magistrate's Court in each of the nine districts, the Courts in Port Louis and in Plaines Wilhems each sitting in two divisions.

The jurisdiction of a Magistrate sitting alone is limited:—

(*a*) in civil cases, to actions wherein the sum of money or matters in dispute do not exceed Rs.1,000 in value;

(*b*) in criminal matters, to offences for whose punishment the penal and other laws of the Colony provide imprisonment with or without hard labour not exceeding one year or a fine not exceeding Rs.1,000 (except in particular cases expressly provided for in any special enactment).

Certain offences not triable by a Magistrate sitting alone and, at the request of the Procureur-General whenever he may consider it expedient to do so, nearly all offences triable by a Magistrate sitting alone, are tried by a Bench of three Magistrates, whose jurisdiction is made to extend to the imposition of penal servitude not exceeding three years and a fine not exceeding Rs.3,000.

An appeal lies of right to the Supreme Court within the limits stated above, both in fact and law, the several modes of reviewing the decisions being the same as in English Law. There is no system similar to the French Assistance Judiciaire, but facilities are given to very poor litigants, both before the Supreme and the Inferior Courts to obtain leave to sue in *forma pauperis*. In Supreme Court cases, counsel are ever ready to accept a pauper brief at the request of the Chief Judge, while in Assize cases counsel is always appointed without fee, for undefended prisoners. The Dependencies are visited periodically by a Magistrate.

The Dependency of Rodrigues is administered by a Magistrate, who has the same jurisdiction in Rodrigues as a District Magistrate in Mauritius, and whose duties are to a considerable extent administrative.

The Magistrates heard 6,444 civil cases and 10,326 ordinary criminal cases and petty offences, and held—

173 coroners' inquests;

28 preliminary inquiries into crimes and serious misdemeanours; and

1 inquiry under "Commission Rogatoire".

Police.

Organization.—The Mauritius Police Force has an establishment of 21 Gazetted Officers and 596 other ranks. The personnel of the Force is almost entirely recruited locally, there being at present only 11 Officers and Warrant Officers classified as " Home-born " who were posted from England or transferred from other Forces.

The Force is organized mainly as a " Civil " as distinct from a " Military " Police Force, but recruits are instructed in the use of the rifle, an armed detachment is maintained at Headquarters, and those who have qualified in preliminary tests fire a musketry course every year.

The establishment is divided into Headquarters Staff, Clerical Branch, Criminal Investigation Branch, Revenue and Motor Vehicle Control Branch, Training School, Harbour Police, Railway Police, District Police, Rodrigues Police and the Police Band.

Police Headquarters is situated in the historic Line Barracks of Port Louis, and the District Police are distributed in 55 Stations of varying size and importance.

Crime.—The total number of offences of all kinds reported to the police during the year 1937 was 23,052, which shows a decrease on the figure for 1936, which was 23,986, and also a decrease on the average of 24,161 for the past three years.

More than half of these offences are of a minor character or refer to statutory and revenue contraventions.

The more serious offences are classified as follows:—

Offences against the person	10,348 in 1937
Offences against the person	8,620 in 1936
Offences against property	3,713 in 1937
Offences against property	3,169 in 1936

The number of persons prosecuted in connexion with these 23,052 offences was 8,310, of whom 7,354 were convicted, 591 otherwise disposed of and 365 pending trial at the end of the year.

Corresponding figures for the previous year were 9,946 persons prosecuted, 8,918 convicted, 591 otherwise disposed of and 437 pending trial at the end of the year.

Prisons.

Organization.—The Mauritius Prisons Department has an establishment of four Gazetted Officers, who are appointed from England, and 108 other ranks recruited locally.

The Department is placed under the charge of the Commissioner of Police, who holds the appointment of Superintendent of Prisons, and is responsible for the management and control of the two penal institutions of the Colony, Port Louis and Beau Bassin Prisons.

Port Louis Prison provides separate cell accommodation for 154 male prisoners, association cells for 40 women in a special block, and contains the offices of the Department and quarters for two chief officers and two matrons.

Every male convicted prisoner is sent to this prison and on admission is classified as (1) Adult Felon, (2) Adult Hard Labour, (3) Adult Misdemeanant, (4) Juvenile Felon or Hard Labour, (5) Juvenile Misdemeanant, or (6) Special.

Felons are prisoners sentenced to penal servitude and misdemeanents are those sentenced to imprisonment without Hard Labour or for failing to pay fines.

Groups (1), (2) and (4) are subdivided into First Offenders and Recidivists.

Prisoners classified in Group (1) and Recidivists of Group (2) sentenced to 14 days and upwards normally serve their sentence at Beau Bassin which contains 756 separate cells for males only while all misdemeanants, Special Class and well-conducted Adults and Juvenile First Offenders are accommodated at Port Louis.

Debtors, women and waiting trial prisoners are also given separate accommodation at Port Louis Prison.

Labour.—Hard Labour consists of quarrying, stone breaking, cutting firewood, and agricultural work outside the prisons, and tailoring, boot, sail and mattress making, tin-smith work and black-smithing, carpentry and cabinet making, blind, mat and basket making and baking inside the prison's workshop.

Population.—The number of persons admitted to Port Louis Prison during the year was 2,559, which is 136 less than in the previous year and 524 less than the average for the preceding five years. Of the 2,559 persons, 1,562 were convicted of whom 1,072 were sentenced to imprisonment for one month or less. The convicted prisoners comprised 1,492 men and 70 women. The daily average population was 419·82 compared with 451·15 in 1936 and the number of persons in prison on 31st December, 1937, was 363 compared with 379 in 1936, and 417 in 1935.

Of the 363 persons in prison, 349 were serving sentence and comprised 342 men and seven women.

The number of persons who served sentence of imprisonment in lieu of paying fines was 651, including 18 women.

Health.—There were ten deaths in hospital as compared with eight in the preceding year.

Industrial School.

The Barkly Industrial School for boys is an institution for the training of juvenile offenders and vagrants, boys living in criminal surroundings, and those who cannot be controlled at home or in orphanages, etc.

The school is under the supervision of the Commissioner of Police and has a resident staff of one chief officer and 12 instructors and assistants. It occupies a group of buildings formerly used as an hospital and comprises large grounds which are fully cultivated as gardens, etc.

The number of boys in the school at the end of the year was 118, compared with 91 in 1936 and 77 in 1935. The number of admissions was 60 and discharges 28 for the whole year.

A visiting committee instituted by law looks after the general welfare of the inmates of the school and exercises a beneficient influence on the institution.

XIV.—LEGISLATION.

Fifty-one Ordinances were passed by the Council of Government and assented to by the Governor between the 15th of January and the 20th of December, 1937.

The majority of these Ordinances deals with matters of domestic concern amongst which the following are of considerable importance.

Law and Order.—(i) Ordinance No. 11 of 1937, brings up to date the Fisheries Laws of the Colony in a consolidated form.

(ii) Ordinance No. 14 of 1937, provides for the protection of human beings against the danger arising from the presence of game snares and wells over the countryside.

(iii) Ordinance No. 24 of 1937, amends the District Court (Jurisdiction) Ordinance, 1888.

(iv) Ordinance No. 36 of 1937, brings up to date the Distillery Laws of the Colony in a consolidated form.

Finance.—(i) Ordinance No. 5 of 1937, amends the Savings Bank Ordinance, 1936, and provides for the transfer of deposits from the Post Office Savings Banks of the British Empire to the local Government Savings Bank and *vice versa.*

(ii) Ordinance No. 15 of 1937, provides for the raising of the loan of Rs.2,000,000 by the Colonial Government for the purpose of financing the newly created Mauritius Agricultural Bank.

(iii) Ordinances Nos. 18, 19, 20 of 1937, amend the Beau Bassin and Rose Hill Ordinance, 1895, the Quatre Bornes Ordinance, 1895, and the Curepipe Ordinance, 1889, and provide for the grant by Government of a yearly contribution to the township Boards created under the latter Ordinances, whilst affording to Government some measure of control over the financial administration of these Boards.

(iv) Ordinance No. 39 of 1937, provides for the control of the export of sugar from the Colony in line with the International Sugar Agreement of 1937.

Labour.—(i) Ordinance No. 8 of 1937, provides for the protection of dockers from accidents whilst unloading ships in line with the International Labour Convention of 1932.

(ii) Ordinance No. 32 of 1937, amends the Workmen's Compensation Ordinance, 1931, and provides for the grant of compensation to workmen for occupational diseases.

(iii) Ordinance No. 38 of 1937, provides for the proper marking of deck lines and load lines on ships, to secure a greater margin of safety for life at sea.

All these Ordinances have in view the social and economic progress of the population of this Colony and attempt to work to that end.

A list of the more important Ordinances is given in Appendix I to this Report.

XV.—BANKING, CURRENCY, AND WEIGHTS AND MEASURES.

Banking.

There are three private banks in the Colony, viz.:—

(*a*) The Mauritius Commercial Bank;
(*b*) The Mercantile Bank of India; and
(*c*) Barclay's Bank (Dominion, Colonial and Overseas).

The Mauritius Commercial Bank was established in 1838, and has a paid-up capital of Rs.2,000,000 made up of 10,000 shares of Rs.200 each. The total amount of deposits on 31st December, 1937 was Rs.8,729,260. The Mercantile Bank of India, Limited, took over the business of the Bank of Mauritius, Limited, on 3rd May, 1916. The total paid-up capital is £1,050,000. The deposits made locally on 31st December, 1937, amounted to Rs.2,763,810. Barclay's Bank (Dominion, Colonial and Overseas) has a paid-up capital of £4,975,500. The total deposits of the local Bank on 31st December, 1937, amounted to Rs.3,248,294. This Bank which is affiliated with Barclay's Bank, Limited, was founded in 1925 and represents the amalgamation of the Anglo-Egyptian Bank, Limited, the Colonial Bank (incorporated by Royal Charter in 1836), and the National Bank of South Africa, Limited. A branch of the last named bank was established in Mauritius in December, 1919. In February, 1926, its business was taken over by Barclay's Bank (Dominion, Colonial and Overseas) following the amalgamation already mentioned.

Offices of the Government Savings Bank are established in the nine districts with a head office in Port Louis. The total number of depositors at 30th June, 1937, was 39,382, compared with 38, 990 in the preceding year, with deposits amounting to

Rs.6,554,221 as against Rs.6,495,031. Interest is paid at the rate of 3 per cent. per annum.

The Mauritius Agricultural Bank, which was established under Ordinance No. 1 of 1936, commenced operations on the 5th January, 1937. The Capital of the Bank (Rs.10,000,000) is provided by Government, which raised loans at 3½ per cent. per annum for this purpose. Of these loans, the sum of Rs.3,600,000 was raised locally, the balance being raised in London. The annual Interest and Sinking Fund Charges, amounting in all to Rs.368,740 for 1938-9, are met by the Bank.

The Bank, which is neither a Government institution nor a Government department, has been introduced to lower interest charges on agricultural advances which, it is considered, impose an undue burden on the sugar industry and unduly depress wages. Subject to the provisions of the ordinance which constituted it a corporate body, the bank has complete discretion as to the conduct of its business and the nature and account of its loans. The consent of the Managing Director, who is appointed by the Secretary of State, is necessary to the grant of any loan. A measure of Government control, however, exists and is exercised by the following methods:—

(*a*) The members of the Board of Directors, other than the Managing Director, are appointed by the Governor, who determines the amount of their fees;

(*b*) While the Board appoints its own servants the amount of their salary is subject to the approval of the Governor;

(*c*) The funds of the Board are derived exclusively from the Government;

(*d*) The methods of accounting, the books to be maintained and the nature of the auditor's certificates are prescribed by the Government, and the form of Balance Sheet is prescribed by the Treasurer.

Currency.

In March, 1934, an Ordinance was enacted to make provision with respect to the currency notes of the Colony, and to place the issue of such currency notes upon a permanent basis. By this Ordinance the Currency Commissioners are required to issue, on demand, currency notes in exchange for sterling lodged with the Crown Agents in London, and to pay on demand sterling in London in exchange for currency notes lodged with them. The rate at which these exchanges are to be made is fixed at one rupee for one shilling and six pence sterling, and the minimum transaction is £5,000 or its equivalent.

The Currency Commissioners are entitled to charge commission not exceeding one and three-quarters per centum in addition to the cost of any telegram sent in connexion with any transfer.

The effect has been to substitute for the Indian rupee a new paper rupee based on sterling, and to limit official exchange fluctuations to a maximum spread of three and a half per centum.

Local commercial practice is such that the effective rate of exchange is the rate at which the banks sell sterling, and not the mean between the buying and selling rates. At the time the Ordinance was introduced the rate was Rs.13·70 for £1 by telegraphic transfer, or approximately one rupee for one shilling and five pence half-penny sterling. With a view to avoiding any sudden fluctuation in the actual rate of exchange, the commission which the Currency Commissioners were authorized to charge when selling sterling was fixed, in the first instance, at the maximum of one and three-quarters per cent., making the effective official exchange rate Rs.13·57 for £1 in respect of amounts of £5,000 or over.

The rate charged by the Currency Commissioners when buying sterling has been fixed at one-quarter per cent.

The value of the currency is maintained by a Note Security Fund held by the Crown Agents and invested in Government Securities (other than those of the Colony). Profits arising from currency transactions and income from the investments of the Note Security Fund must be applied in the first instance to maintaining the Security Fund at the value equal to the face value of currency notes in circulation. If the value of the Note Security Fund reaches one hundred and ten per cent. of the face value of notes in circulation, all profits then accrue to the revenue of the Colony.

Subsidiary silver coinage was introduced under an Ordinance passed in September, 1934. The coins are not normally redeemable, but the seignorage on the issue is invested.

The value of the currency notes of five rupees, ten rupees and one thousand rupees, in circulation on 31st December, 1937, was Rs.9,417,485 and that of Mauritius silver coins on the same date Rs.2,055,000.

The local unit of currency is the Mauritius rupee, equivalent to 1s. 6d. sterling, divided into 100 cents.

The coinage in circulation is the silver rupee, half rupee, quarter rupee, and 20-cent and 10-cent pieces, and the bronze 5-cent, 2-cent and 1-cent pieces.

Weights and Measures.

The metric system is in general use; the following special French and local measures are, however, still to be found:—

Measures of Length and Area:—

1 ligne Francaise = 2·258 millimetres or 0·088 inch.
12 lignes = 1 French inch.
12 French inches = 1 French foot.
1 French foot = 1·06 English feet.
1 lieue = 2½ English miles (approx.).
1 gaulette = 10 French feet.
1 arpent = 40,000 square French feet or 1·04 acres.
1 toise = 6 French feet or 2 yards 4 inches.

Measures of Capacity:—

1 barrique = 50 gallons (cane juice, etc.).
1 tiercon = 190 to 192 litres (molasses).
1 velte = 7·45 litres (coconut oil).
1 bouteille = 800 cubic centimetres (liquid).
1 chopine = ½ bouteille.
1 corde = 80 French cubic feet or 96·82 English cubic feet (firewood).

Measures of Weight:—

1 gamelle = 5·250 kilogrammes.
1 livre = 500 grammes or 1·10 English pounds.

XVI.—PUBLIC FINANCE AND TAXATION.

Revenue and Expenditure.

The Revenue of the Colony for the year ended 30th June, 1937, amounted to Rs.15,923,784, and was Rs.766,084 more than the Estimate and Rs.572,798 more than that of the previous year.

The expenditure for the same period was Rs.15,506,431 being Rs.506,182 above the Estimate and Rs.811,787 above that of the previous year.

The revenue during the financial year 1936-7 exceeded expenditure by Rs.417,353 and the surplus of assets over liabilities on 30th June, 1937, amounted to Rs.18,263,556.

Of the expenditure for 1936-7, Rs.4,956,561 were spent on "Personal Emoluments" and Rs.10,549,870 on "Other Charges". The corresponding figures for 1935-6 were Rs.4,946,200 for "Personal Emoluments" and Rs.9,748,444 on "Other Charges".

The following is a comparative statement of the revenue and expenditure for the last five years.

Year.	*Revenue.* Rs.	*Expenditure.* Rs.
1932–33	30,200,418	13,810,589
1933–34	16,567,110	14,634,339
1934–35	22,964,244*	20,650,954
1935–36	15,350,986	14,694,644
1936–37	15,923,784	15,506,431

The revenue normally becoming due and collected during the year 1932-3 was Rs.14,503,504, and the increase in the amount shown for that year was due to special adjustments comprising, *inter alia,* the following transfers to Revenue.

	Rs.
Widows' and Orphans' Fund	5,032,348
Government Scholarship Fund	539,769
Improvement and Development Fund	6,317,718
Mauritius Loan, 1922	1,362,679
Unexpended balance, Sugar Industry Loan, 1929 ...	7,316
	Rs. 13,259,830

The Colonial Government pays a military contribution of 5½ per cent. of its total revenue (inclusive only of net excess of revenue on railways, irrigation, Mare aux Vacoas and other water works but exclusive of land sales and special export duty on sugar) towards the cost of the garrison maintained in the Colony by His Majesty's Government in the United Kingdom.

The amount paid as contribution in 1936-7 was £48,650, of which £41,000 was in respect of the estimated cost of the garrison for 1936-7 and £7,650, the difference between the actual and estimated cost of the garrison for 1934-5 and for 1935-6 £2,532 and £5,118, respectively.

Public Debt.

The Public Debt of the Colony on 30th June, 1937, was £2,977,871. Against this liability there was an accumulated Sinking Fund of £1,857,369 compared with £1,836,347 on 30th June, 1936.

Statement of Assets and Liabilities as at 30th June, 1937.

Liabilities.	*Rs.*	*Assets.*	*Rs.*
Other Colonial Governments.	43,687	Cash Balances	6,353,750
		Imprests	3,513
Joint Colonial Fund ...	453,333	Advances	13,092,378
Deposits	722,127	Unallocated Stores ...	452,815
Appropriated Funds ...	9,794,962	Appropriated Funds Invested.	9,375,209
Balance : Surplus of Assets over Liabilities at 30th June, 1937.	18,263,556		
	Rs. 29,277,665		Rs. 29,277,665

---

* Including Rs 7,882,380 Special Revenue.

Description of the Main Heads of Taxation and Their Yield.

The main heads of taxation with their yield for the current year as compared with the preceding year are the following:—

	1935–36. *Rs.*	*1936–37.* *Rs.*
Customs—Import duties	4,533,469	4,631,890
,, —Export duties	450,777	1,129,011
Excise duty on rum	1,680,232	1,728,393
Licence duties	1,099,124	1,078,375
Tobacco excise	1,247,492	1,306,227
Taxes on vehicles and animals ...	424,477	446,089
House tax	208,411	260,808
Poll tax	429,502	551,165

Customs Duties.

The Revenue from Customs duties for the year 1937 was Rs.4,925,422 for Imports and Rs.1,223,156 for Exports.

The figures for the two previous years were:—

	Import duty. *Rs.*	*Export duty.* *Rs.*
1936	4,640,335	566,369
1935	4,650,711	816,385

Customs Tariff (Summarized).

The following shows the rates of duty on the principal imports and exports on the 31st December, 1937:—

IMPORTS.

Rice	R. 0·63 per 100 kilos.	Wines in casks up to 14°.	Rs. 22·00 per hectolitre.
Dholl	Rs. 1·14 per 100 kilos.	Wines in cases up to 14° (still).	R. 0·33 per litre.
Flour	R. 0·94 per 100 kilos.	Spirits (proof) ...	Rs. 5·00 per litre.
Fertilizers ...	R. 0·11 to Rs. 1·10 per 100 kilos.	Tobacco, manufactured.	Rs. 15·00 per kilo.
Petroleum oil ...	Rs. 5·28 per hectolitre.	Tobacco, cigarettes.	Rs. 16·50 per kilo.
Petroleum spirits	Rs. 14·00 per hectolitre.	Vegetable oil, other than olive.	Rs. 5·50 to Rs. 9·00 per 100 kilos.
Soap, common...	Rs. 1·93 per 100 kilos.	Most manufactured articles.	5 to 55 per cent. *ad valorem*, with an average of about 15 per cent. *ad valorem*.

EXPORTS.

*Sugar	R. 0·46 per 100 kilos.	†Aloe fibre ...	Rs. 3·0 per 1,000 kilos.

NOTE.—*The duty on sugar is only for special purposes as under :—
R. 0·03 per cent. kilos for destruction of *Phytalus Smithi* ;
R. 0·03 ,, ,, ,, ,, College of Agriculture ;
R. 0·04 ,, ,, ,, ,, Sugar Industry Reserve Fund ;
R. 0·36 ,, ,, ,, ,, in refund of loans.

† The duty on aloe fibre is Rs. 3 per 1,000 kilos in refund of loan to the hemp industry.

Principal Preferential Rates on Imports.

	Preferential.	*General.*
Motor vehicles of all kinds, including tyres and tubes.	5·5 per cent. *ad valorem.*	36·66 per cent. *ad valorem.*
Silk manufactures (including artificial silk).	16·5 „ „ „ „ or R. 0·55 per kilo.	55 „ „ „ „ or Rs. 1·75 per kilo.
	whichever is the higher.	
Indigo	Rs. 1·10 per kilo.	Rs. 2·75 per kilo.
Cement	R. 0·30 per 100 kilos.	R. 1·00 per 100 kilos.
Cinema films	Free.	R. 0·04 per metre.
Machinery, industrial...	Rs. 1·45 per 1000 kilos.	5·5 per cent. *ad valorem.*
Cotton manufactures ...	5 per cent. *ad valorem.*	26 per cent. *ad valorem,* and also specific rates in certain cases.
Hardware	11 per cent. *ad valorem.*	22 per cent. *ad valorem.*
Coal	8 cents per 100 kilos.	42 cents per 100 kilos.

Excise and Stamp Duties.

The duty on rum for home consumption for potable use is Rs.2.75 per litre of 23 degrees Cartier and an additional duty of 12 cents per litre for every degree above 23 degrees Cartier.

Three distilleries worked periodically during 1937. These three distilleries form an annex to sugar mills; in all cases spirits are distilled from molasses and the strength of the spirits produced varies from 30 to 42 degrees Cartier. The bulk is produced at 39 degrees Cartier or below and when broken down to 23 degrees Cartier, is consumed locally as potable rum, though it has the general characteristics of rectified spirit.

The remainder of the spirits produced is either exported or used after denaturation or compounding for lighting and heating and power purposes, for the preparation of medicinal tinctures and drugs, perfumed spirits and for the manufacture of vinegar. The attempts made to find an export market for locally produced alcohol were more successful during the year under review. The quantity exported was 60,566 litres for the period July, 1936, to June, 1937, as compared with 22,267 litres for the previous corresponding period.

The duty on spirits to be denaturated for heating and lighting purposes is 4 cents per litre at 36 degrees Cartier and an additional duty of 4 cents per hectolitre or fraction thereof for every degree above 36 degrees Cartier.

Owing to the quantity of electrical power available and the organization for its distribution, comparatively little use is made of locally produced alcohol for lighting purposes. Where electrical power is not available kerosene is a more popular illuminant. The poorest classes, who require little illumination since they mostly retire at nightfall, use coconut oil or similar local product. There is little call for artificial heating of houses and most cooking is done by locally produced wood charcoal on charcoal stoves. Locally produced alcohol might be used largely for cooking purposes were a satisfactory type of stove available. The import duty on denaturated or methylated alcohol is R.0.30 per litre.

The quantity of spirits denaturated for heating and lighting during the last two years is shown below:—

	1935–36.	*1936–37.*
Litres	141,410	180,400
	Rs.	*Rs.*
Excise duty	5,764·13	7,406·16

The duty on spirits to be denaturated for use as motor fuel is 4 cents per litre or fraction thereof at any degree Cartier. Attempts on a commercial scale to utilize locally produced alcohol in various forms for power purposes have been in progress for about 20 years but have had comparatively little success. The increasing use of heavy fuel oil and compression ignition type engines make any further development in the use of the local alcohol improbable in present circumstances. Protection is given to the local industry by imposing a customs duty on imported motor spirits of Rs.14 per hectolitre.

The following statement shows the quantity of spirits denaturated during the last two years for use as industrial alcohol:—

	1935–36.	*1936–37.*
Litres	243,800	330,600
	Rs.	*Rs.*
Excise duty	9,752	13,224

The duty on alcohol for the preparation of medicinal tinctures and drugs is 10 cents per litre at any degree, but the duty on alcohol delivered for the preparation of "alcoholats " in accordance with the formulae laid down in the British Pharmacopoeia or the French Codex or any other medicinal tinctures and drugs as notified in Gazette is Rs. 2.50 per litre at 23 degrees Cartier, with an additional duty of 10 cents per litre for every degree above 23 degrees Cartier.

With the exception of certain traditional local preparations, locally produced tinctures, etc., have provided little competition to the imported articles which pay an import duty at 13·2 per cent. *ad valorem*.

The following table shows the quantity of alcohol used during the last two years for the preparation of medicinal tinctures and drugs:—

	1935–36.	*1936–37.*
	Litres.	*Litres.*
Quantity	9,853	5,487
	Rs.	*Rs.*
Excise duty	1,380·10	1,295·10

The duty of alcohol delivered for the manufacture of perfumed spirits is 18 cents per litre. The position as regards locally produced perfumed spirits is similar to that of medicinal tinctures. One or two preparations are in popular local demand, but in spite of the fairly high protective import duty of 33 per cent. *ad valorem* there is little demand for other products. Attempts have been made to find an export market but without success.

The quantity of spirits issued for the manufacture of perfumed spirits during the last two years was as follows:—

	1935–36.	*1936–37.*
	Litres.	*Litres.*
Quantity	6,130	4,901
	Rs.	*Rs.*
Excise duty	3,065	2,450·50

The duty on vinegar is Rs.1·70 per hectolitre, on vinegar not exceeding 8 degrees of strength by Salleron's acidimeter, and an additional duty of 18 cents per degree and per hectolitre on all vinegar above 8 degrees.

Locally produced vinegar is manufactured exclusively by the slow oxidation of alcohol. The production figures for the past years were:—

	Litres.	*Duty.*
July, 1935 to June, 1936 ...	24,500	Rs. 419·96
July, 1936 to June, 1937 ...	23,800	Rs. 411·45

The corresponding import duty on vinegar is Rs.3·50 per hectolitre full rate and Rs.1·65 preferential rate.

According to the Excise figures, the number of litres of spirits distilled in 1936-7 (July to June) was 1,092,298 litres, as compared with an average of 961,315 litres for the past five years.

The duty on wine and other liquors (excepting rum and compounded rum) manufactured in the Colony which contain more than 4 degrees of alcohol according to Gay-Lussac's alcoholometer is as follows:—

(i) On all such liquor not exceeding 14 degrees by Gay-Lussac's alcoholometer a duty of 15 cents per litre;

(ii) On all such liquor exceeding 14 degrees a duty at the same rate and on the same scale as the Customs duty on wine payable under the Customs Tariff Ordinance.

Practically no grapes are grown in Mauritius and the local wine is produced from imported dried fruits, principally raisins, sugar and other ingredients. Attempts to produce wine from local fruits such as pineapples, guavas, bananas, etc., have not been successful. There has been a substantial development in the wine industry during the past year from the point of view of quantity, and considerable research work is being done in the improvement of the quality of the produce and in studying the many variations in fermentation largely caused by difference in temperature, atmospheric humidity, etc.

Local wine issued:—

	Litres.
July, 1935 to June, 1936	325,366
„ 1936 „ „ 1937	536,876

An Excise duty of Rs. 4 per kilog. is charged on leaf tobacco used for the manufacture of tobacco for local consumption.

According to the official figures, the quantity of tobacco manufactured in the year 1937 was 372,652·4 kilos, as compared with 362,587 kilos in 1936.

The Excise duty collected on tobacco during the last two financial years is given below:—

	1935–36. *Rs.*	*1936–37.* *Rs.*
Tobacco	1,247,492·40	1,306,226·80

The figures for the calendar year are:—

	Year 1936. *Rs.*	*Year 1937.* *Rs.*
Tobacco Excise	1,281,086·00	1,319,380

The Government Tobacco Warehouse, controlled by the Tobacco Board, has proved a most useful institution for the grading and general control of tobacco grown in the Colony. It ensures for the planters a ready market for their crop, and for the manufacturers an assured source of supply at controlled prices of graded leaf. In spite of its efforts the Board has so far been unable to gain any export trade.

The Stamp Laws were amended and consolidated by the passing on 23rd November, 1926, of Ordinance No. 22 of 1926.

This Ordinance was put into force on 23rd July, 1927, by Proclamation No. 32 of 1927.

Stamp duties are of three kinds:—

(1) A duty in proportion to the size of the paper used;

(2) A fixed duty; and

(3) An *ad valorem* duty.

The Stamp Ordinance No. 22 of 1926 was amended in 1932 by the passing of Ordinance No. 26 of 1932 to provide for the increase from 4 to 10 cents of the stamp duty on cheques drawn on banks in and out of the Colony, and on receipts as defined in Article 2 (5) of the Stamp (Consolidated) Ordinance, 1926.

House Tax.

Rates.—One per cent. per annum on any building assessed over Rs.1,000.

Yield.—The amount collected during the financial year 1936-7 was Rs.260,808.

Method of Assessment.—Any building liable to the house tax is assessed according to its full and fair value. In arriving at this figure, the valuer takes into consideration the actual or probable rent a tenant may be reasonably expected to pay for such building.

Method of Collection.—For the purpose of collecting the house tax when the assessment arrived at is final for the year, notices for payment are served upon owners of buildings and the tax is paid to the Cashier of the district in which it is levied or to the Chief Cashier, Treasury.

Graduated Poll Tax.

A Graduated Poll Tax was imposed in 1934 on all taxable income accruing in, derived from, or received in the Colony during the year preceding the year of assessment, subject to specified exemptions.

The tax, which falls on residents and non-residents is peculiar to Mauritius. It is payable in half-yearly instalments by persons (including legal entities) whose income exceeds Rs.5,000.

The tax scale rises from Rs.50 (with marginal relief) on incomes exceeding Rs.5,000 but not exceeding Rs.7,000 to Rs.5,150 on incomes exceeding Rs.60,000 but not exceeding Rs.70,000. The tax on incomes exceeding Rs.70,000 is Rs.6,150.

The tax must be rendered with a Return from the taxpayer, but the Commissioner may refuse the Return and raise an assessment subject to a right of objection and appeal to the High Court.

No provision exists for:—

(*a*) Losses to be carried forward.

(*b*) Personal or depreciation allowances.

(*c*) Dominion income tax relief.

(*d*) Deduction of tax at source.

The main Ordinance was amended in 1935 chiefly to facilitate an equitable administration of the tax as regards allowances for interest paid, and to provide for reciprocation in exemption of profits from the business of Shipping.

Yield.—The amount collected since the inception of the tax has been as follows:—

	Rs.
1934–35	540,566
1935–36	429,502
1936–37	551,165

The estimated yield for 1937-8 is Rs. 550,000.

XVII.—MISCELLANEOUS.

The most noteworthy events of the year were the celebrations in the Colony of Their Majesties Coronation. The festivities organized by the Coronation Committee included a combined Navy and Military parade at the Champ de Mars, which was attended by large crowds and 1,000 school children from all parts of the Colony; religious services at the Anglican and Roman Catholic Cathedrals; a race meeting at the Champ de Mars and an open air fete at the "Pleasure Grounds" in Port Louis. On the occasion, a sum of Rs.24,000 was distributed to the poor in all districts of the Colony and sports meetings were also organized in all primary schools.

The island was visited on the 17th January, 1937, by three French Aviators who landed at Mon Choisy after having flown from France via the continent of Africa, Madagascar and Reunion Islands. They left the Colony on the 20th January by the same route, taking mails with them. The Colony was also visited by H.M.S. *Norfolk* from the 1st to the 13th May, 1937, and by the French sloop *Bougainville* from the 27th September to the 1st November, 1937.

His Excellency Sir W. E. F. Jackson left the Colony on the 7th June, 1937, to take up his new appointment in British Guiana, and Mr. E. W. Evans, C.M.G., Colonial Secretary, assumed the administration of the Colony on the same day. Sir Wilfrid Jackson's successor, the Honourable Sir Bede Edmund Hugh Clifford, K.C.M.G., C.B., M.V.O., arrived in the Colony on the 23rd October, 1937.

APPENDIX I

Fifty-one Ordinances were passed by the Council of Government and assented to by the Governor during the year 1937, the more important of which are tabulated as follows:—

No.	Title.
8.	An Ordinance to provide for the protection against accidents of workers employed in loading or unloading ships or at any dock, wharf or quay.
11.	An Ordinance to amend and consolidate the Law on Fisheries.
14.	An Ordinance to make provision for the protection of human beings against the danger arising from the presence of game snares and wells.
15.	An Ordinance to empower the Colonial Government to raise a loan not exceeding the sum of Rs.2,000,000 for the purpose of financing the Mauritius Agricultural Bank.
18.	An Ordinance to amend the Beau Bassin and Rose Hill Ordinance, 1895.
19.	An Ordinance to amend the Quatre Bornes Ordinance, 1895.
20.	An Ordinance to amend the Curepipe Ordinance, 1889.
24.	An Ordinance to amend the District Court (Criminal Jurisdiction) Ordinance, 1888.
29.	An Ordinance to amend the Deportation (Aliens) Ordinance, 1936.
30.	An Ordinance to amend the Deportation (British Subjects) Ordinance, 1936.

I.—GEOGRAPHY, CLIMATE, AND HISTORY.

The island of Mauritius is of volcanic origin. It is situated in the South Indian Ocean at about 1,400 miles from the east coast of Africa and lies between 19° 50′ and 20° 35′ S. latitude and between 57° 18′ and 57° 48′ E. longitude. The greatest length from north to south is nearly 39 miles and the widest breadth from east to west is 29 miles. The area of the island is about 716 square miles, exclusive of that of several small islets round the coast which measure about four square miles.

The dependencies comprise a large number of small islands between 230 and 1,200 miles away. The largest, Rodrigues, which lies 350 miles to the north-east of Mauritius, had a population estimated at 10,204 on 31st December, 1938. The estimated population of the lesser Dependencies on that date was 1,540.

Mauritius is situated just within the tropics and enjoys a climate free from extremes of weather except that tropical cyclones at times cause considerable damage to crops, but rarely to buildings. For a great part of the year south-east trade winds, heavily laden with moisture, blow gently over the island tempering the tropical heat. The rain falls mostly in showers. Particularly in the summer months, December-March, the south-east winds are replaced by the light variable winds of the doldrums, which cause discomfort to Europeans, although the temperatures are not high, whereas in the winter months in the residential districts at altitudes of 1,300 to 1,800 feet the temperature may fall to 50° F. The yearly rainfall varies from 30 inches on parts of the coast to 150 inches in the upland regions.

The Mascarene Archipelago, to which Mauritius belongs, was probably known to Arab navigators at an early date and was no doubt visited later by the Malays who colonised Madagascar in the 15th and 16th centuries.

The Portuguese rediscovered it in 1507. They only used Mauritius as a port of call for repairs and supplies, and let loose pigs, goats, deer and monkeys. It seems probable that rats were introduced in this period as they were a serious pest to the succeeding Dutch colonists.

The Dutch took possession from 1598 and were employed chiefly in exploiting the ebony. They attempted to cultivate sugar-cane, but were frustrated by rats. Although they denuded the forests of ebony they later added to the economic resources of the island by introducing useful trees, plants, and cattle. Negroes were imported for labour, and, as escape into the forests was easy, bands of runaway slaves called maroons were formed. The combination of rats and this dangerous population of mixed, but mostly African, origin, uncontrolled by any tribal or political system, proved too much for the Dutch who abandoned the island in 1710.

The French annexed it in 1715, and by 1722 the population apart from maroons, amounted to 160 persons, soldiers, colonists, and slaves. Mahé de Labourdonnais was chosen to develop the Colony and arrived in 1735. In order to make the island self-supporting, he introduced manioc and maize from Brazil and promoted the extension of agriculture by introducing products from all parts of the tropical world. He especially encouraged the cultivation of sugar. He substituted animal draught for carriage by slaves, and to ensure an adequate supply of labour he brought slaves from Africa. From an encampment of straw huts he built up Fort Louis into a town of public buildings, private houses, stores, shops, and barracks. Labourdonnais laid the foundations of modern Mauritius.

In 1755, large herds of cattle were brought in from Madagascar. Pierre Poivre, Intendant in 1767, established the cultivation of cloves and nutmegs.

In 1810, when Mauritius became British, the population had grown from 160 to about 80,000, of whom 65,000 were slaves. Sugar was then, as now, the principal product, and when in 1825 the duty of 10s. a hundredweight, levied on Mauritius sugar entering England (in order to protect the West Indian sugar), was remitted, cane plantations immediately developed to a large extent, fresh land was put under cultivation, roads were opened, and steam power was applied to mills. From 18,000,000 lbs. the output of sugar rose to 41,000,000 lbs. in 1827, and increased annually afterwards.

On the abolition of slavery, 68,613 slaves were freed, and the colonists received £2,112,632 in compensation.

In 1842, Indian immigration at the rate of 6,000 a year was approved, and this resulted in an entire change of the balance of the population.

After a terrible outbreak of malaria in 1866 the wealthier inhabitants of Port Louis moved to higher parts of the island. As a result the country towns expanded considerably and the roads were improved and extended. The railway, begun in 1859, became very popular. One of the most striking features of the progress made has been the social and economic development of the Indians who at the beginning of 1938 owned 38·6 per cent. of the whole area under sugar-cane. Besides becoming gardeners and taxi-drivers, many Indians have taken to raising cows, goats, fruits and vegetables, and the supply of these essential foodstuffs is almost entirely in the hands of Indians. The section of the population they have displaced centres more and more in the towns, forming the clerk and artizan class.

From 1902 to 1909 the island suffered from severe financial depression owing to the low price of sugar. Matters were aggravated in 1902 by an outbreak of surra which caused great havoc among the draught animals, and necessitated the introduction of mechanical transport.

A Royal Commission was appointed in 1909 to investigate the resources and administration of the island and reported in 1910.

About 1911 the destructive beetle Phytalus Smithi was discovered in the sugar-cane.

The great rise in the price of sugar which took place during and after the war brought prosperity, and both the Government and the general community were for a time far more prosperous than ever before.

As a result a number of important schemes were inaugurated, including the amelioration of sanitary conditions, the improvement of the harbour, the extension and improvement of water supplies both for domestic purposes and for irrigation, the improvement of the railways, and the extension of education.

Unfortunately, however, from 1921 onwards the price of sugar fell, and the greatly lessened revenues of the Colony had to provide for the maintenance of many works undertaken in the better times. In 1929 the state of the sugar industry was so bad that Sir Francis Watts was appointed, at the Colony's request, to visit the island, and to report on the economic situation. The Home Government was, however, unable to approve his recommendation that a subsidy should be given to sugar to supplement the preference granted on sugar imported into the United Kingdom, though a loan was made to the planters from local funds. Despite this loan, however, and an earlier loan granted in 1929, the condition of the sugar industry at the end of 1930 was extremely serious.

The position became worse in 1931 owing to a cyclone which caused considerable damage to property and reduced the year's output of sugar by about 33 per cent. The Imperial Government guaranteed a loan of £750,000 for planters, house owners, and repairs to Government property, on condition that a Financial Commission should visit Mauritius with a view to devising measures to bring about a balanced budget. The Commission's report was published at the beginning of 1932 and immediate steps were taken to carry out measures of retrenchment and economy. The situation was again critical in 1934 owing to the effect of a severe drought on the sugar crop; but since then the Colony has had the benefit of substantial crops and the general situation and outlook would have considerably improved were it not for the low price of sugar.

II.—GOVERNMENT.

The Government of Mauritius is vested in a Governor with an Executive Council and a Council of Government. The Council of Government was first established in 1825. It consisted of the Governor and four officials. The next year the Constitution was amended and a Council including unofficial members was introduced. This constitution provided for a Council of Government composed of certain officers of the Crown and of an equal number of other persons to be taken from the chief landed population and principal merchants of the Colony; seven officials and seven unofficials were accordingly appointed.

The Constitution was again amended in October, 1885. The Council of Government, under the revised Constitution, was composed of the Governor, eight *ex-officio* members, nine members nominated by the Governor and ten members elected by the population: of the latter, two represent the town of Port Louis, the capital of the island, and the remaining eight represent the rural districts. At least one-third of the nominated members were to be persons not holding any public office.

The Constitution was further amended in July, 1933, by fixing at two-thirds the proportion of the nominated members of the Council who are to be unofficials and, although no provision to that effect is made in the Letters Patent, the nominated unofficial members have been allowed a free vote on all occasions. The new Letters Patent, however, provide that the Governor shall have power to enact legislation considered by him to be essential in the interests of good government. Debates in the Council may be either in English or French.

The Constitution of the Executive Council which was then composed of the Governor and four *ex-officio* members was amended at the same time, and the former practice of appointing two unofficial members to the Council was revived.

The number of registered electors on 31st December, 1938, was 8,880. Every male person who is qualified as follows is entitled to be registered as a voter:—

(1) has attained the age of 21 years;

(2) is under no legal incapacity, and is in possession of his civil rights;

(3) is a British subject by birth or naturalisation;

(4) has resided in the Colony for three years at least previous to the date of registration, and possesses one of the following qualifications:—

(*a*) is the owner of an immoveable property of the annual value of Rs.300;

(*b*) is paying rent at the rate of at least Rs.25 a month;

(*c*) is the owner of moveable property within the Colony of the value of at least Rs.3,000;

(*d*) is the husband of a wife, or the eldest son of a widow, possessing any one of the above qualifications;

(*e*) is in receipt of a yearly salary of at least Rs.600 or of a monthly salary of a least Rs.50; and

(*f*) is paying licence duty to the amount of at least Rs.200 a year.

The ordinary duration of the sessions of the Council of Government is eight months, from May to December, and meetings are held on alternate Tuesdays or oftener when necessary. The life of a Council is five years.

The town of Port Louis is administered by a Municipality, an institution which dates as far back as 1790. It was then called " Municipalité du Canton de Port Louis " and was instituted as were other local Municipalities, by the " Assemblée Coloniale ". These institutions are mentioned in the law of the constitution of the Ile de France promulgated by the " Assemblée Coloniale " on 21st April, 1791. Sixteen prominent men of the town acted as Councillors of the " Municipalité du Canton de Port Louis " and were denominated the "Conseil des Notables". The " Conseil des Notables " was dissolved in 1792. It was reconstituted at the end of the 18th century under the denomination of the " Conseil des Communes " and was abolished on 10th February, 1820.

The present Municipal Corporation dates from 1850, the first elections taking place at the Masonic Lodge " La Triple Esperance " from 21st to 23rd February in that year. On 24th August, 1925, the Municipal Corporation celebrated the 75th anniversary of its foundation.

The administration of the other principal townships of the Colony, viz., Curepipe, Beau Bassin and Rose Hill, and Quatre Bornes is vested in Boards of Commissioners appointed annually by the Governor. These Boards are empowered to take measures within the prescribed limits of the townships for the making, maintenance, etc., of roads, sewers, bridges, canals, and other works of public utility, for the prevention of fires, and for the proper paving and lighting of the town, etc.

In addition to the Township Boards, District Boards are appointed annually for each district. These latter Boards are now concerned only with the provision, maintenance and improvement of water supplies.

III.—POPULATION.

The population is divided for statistical purposes into: (1) The General population, i.e., Europeans and descendants of Europeans and people of African, Chinese and mixed origins; and (2) the Indian population, i.e., Indian immigrants and their descendants.

The estimated population of the island and its dependencies on the 31st December, 1938, was 415,462 showing an increase of 2,003, the rate of increase is 4·8 per 1,000.

The geographical distribution of the population is shown in the following table:—

Districts.	*Area in square miles.*	*Census population, 28th April, 1931.*			*Population on 31st December, 1938.*		
		General population.	*Indian population.*	*Total population.*	*General population.*	*Indian population.*	*Total population.*

Whole population ...	1,321	1,305	1,246	9·5	9·3	9·3

The number of deaths of infants under one year was 2,181. The infantile mortality rate was 162.5 per thousand live-births registered during the year as compared with 154.5 and 142.3 for 1937 and 1936 respectively.

The marriages during the year numbered 2,113 as compared with 1,951 in 1937. The marriage rate or number of persons married to every thousand of the entire population was 10.5 against 9.8 in 1937.

The arrivals exceeded the departures by 158.

IV.—HEALTH.

The present constitution of the Medical and Health Department dates back to 1895 when under Ordinance No. 32 of 1894-95 the powers vested in the General Board of Health were transferred to the Director, Medical and Health Department.

The headquarters staff of the Department consists of the Director, the Deputy Director and the clerical and accounting staffs of the correspondence, financial and storekeeping branches.

The administrative unit of Government is the district, which is the political unit as well. Every district, with the exception of Black River is provided with a Government hospital for the reception and treatment of the sick poor. Patients from the Black River District are treated in the Victoria Hospital, Quatre Bornes, or the Civil Hospital, Port Louis. There are also situated in each district a number of dispensaries at which ambulant patients may receive free consultations and treatment. These dispensaries are visited on set days by the Government Medical Officer and, together with the District Hospitals, form the means of providing throughout the Colony medical relief to the sick poor.

The Medical and Sanitary Administration of each of the rural districts is entrusted to a Government Medical Officer who is in charge of the district hospital and dispensaries and is also the Health Officer for the district. To assist him he is provided with a number of subordinate officers, dressers and sanitary officers and the staff necessary for the care of the patients in the district hospital. In addition to his general medical and sanitary duties he has also statutory duties to carry out on behalf of the Police and Labour Departments.

The Government hospitals of the Colony are divided into two groups:—

(i) General hospitals, namely:—Civil, Victoria and Moka, totalling 637 beds, which are fully equipped for X-ray and major operative work; and

(ii) district hospitals where only medical and midwifery cases are admitted and where minor surgery is carried out to a certain extent.

Patients who apply to the latter hospitals and require special treatment, surgical or other, are conveyed to the nearest general hospital by motor ambulance. A mental hospital and a leper hospital are also administered by the Department.

In addition to the Government hospitals there are, in the rural districts 39 estate hospitals maintained by owners of estates under the provisions of the Labour Ordinance. These hospitals, though staffed privately, are visited from time to time by officers of the Medical and Health and Labour Departments.

The diseases responsible for major epidemics, e.g., cholera, plague, smallpox or yellow fever, have not occurred in the Colony during the year. With the exception of malaria, persons in the Colony suffer from much the same diseases as do the inhabitants of temperate climates though the Colony is fortunate in not experiencing outbreaks of acute anterior poliomyelitis, cerebro-spinal meningitis, scarlet fever or diphtheria. The first three of these are extremely rare—the last seldom shows dangerous features.

Tetanus (lockjaw) would account for an appreciable number of deaths were it not the routine practice to submit to preventive inoculation for this disease every patient suffering from wounds of the type known to be liable to this infection.

The principal diseases affecting the general health of the population are malaria and hookworm disease.

Malaria.—The means adopted by the Government for the control of malaria differ according to the region of the Colony. In the central plateau the main measure is the prevention of mosquito breeding. This is done by the institution of drainage and by a system of inspection of private premises for the detection and abatement of mosquito nuisances. The free issue of quinine and related preparations of cinchona is also widely made.

In the rural districts anti-mosquito works are uneconomic and reliance is placed principally upon making available to all sufferers from the disease appropriate remedies. These are obtainable free of charge at all Government hospitals and dispensaries, and police stations. A number of private retailers keep those drugs in their shops for sale or gift to their customers. School children may have prophylactic totaquina administered to them during the hot season, when malaria is common. By this means the debilitating effects of this condition are mitigated without at the same time destroying the personal immunity to the infection which is the ultimate protection of the rural dweller.

Hookworm Disease.—Suitable preventive action has been taken by the Government in so far as this can be done. In other words, owners of dwellings have been required to provide their property with latrines, the intelligent and consistent use of which would eradicate the disease from every member of the household. But there is evidence that the habitual use of latrines is by no means as widely practiced by the people as would ensure a marked improvement in the general situation. The infection is still practically universal in rural districts and is being maintained because the majority of the inhabitants in those areas persist in easing themselves on the surface of the ground. This causes the ground so used to be heavily infected with young hookworms which make their way through the soles of the feet of persons passing over the contaminated surface and develop into adult hookworms in due course. In order to mitigate the effects of this, mass treatments for hookworm infection are administered free to all persons willing to undergo them and during 1938 112,697 treatments were so given.

During the cool season inflammation of the kidneys and pneumonia are responsible for a fair proportion of the annual deaths. Occasional outbreaks of influenza occur during this season. One which occurred during the year under review was responsible for an appreciably greater number of deaths than have been ascribed to this disease for some years past.

V.—HOUSING.

The housing of the wage-earning population of the Colony may be considered in three categories: (*a*) housing on estates, (*b*) housing in rural areas not estates, and (*c*) housing in towns.

Estate labourers are, for the most part, adequately housed. They are accommodated in lines, or rows of huts, constructed either of stone or of wattle and daub, with roofs more commonly of thatch, but frequently of corrugated iron. Adequate provision is made for the ventilation and lighting of these quarters, but ventilation and lighting appear generally to be disliked by the occupants. At night, every accessible crevice is carefully closed, though the presence of ridge ventilation in many cases assures reasonable change of air in spite of the efforts of the occupants to exclude fresh air from their sleeping apartments. When the dwelling is thatched the problem of assuring adequate ventilation is difficult. The lines must be kept clear of weeds, and all houses are required to have a clear space of at least 10 feet round them. Each camp has adequate latrine accommodation and a supply of wholesome water is laid on, though in many cases the labourers prefer to use the polluted water of streams or nearby irrigation channels for their domestic purposes. As a general rule, the lines are not lit at night. Lighting is scarcely necessary as the occupants retire shortly after sunset.

The housing in rural areas other than estates is fairly satisfactory. The Indian labourer can himself with the aid of his friends construct a satisfactory hut. He generally owns the piece of land on which he builds his hut and what is not occupied by the hut is planted with sugar cane or other agricultural produce, while room is also found for a primitive byre or a shelter for goats. The amenities of life are few, and a locality settled by a number of such persons bristles with sanitary problems arising out of poverty. Fortunately, most of them are now on a pipe-line, so that their water supply gives little cause for anxiety, though they may have to carry their water several hundred yards from the nearest public fountain.

In the towns and townships conditions vary. There are areas of overcrowding with its consequent insanitary conditions. Too many persons live in one room, though the climate is such as to obviate many of the evils attendant upon this practice.

VI.—NATURAL RESOURCES.

The total area of the Colony is 460,800 acres, of which some 180,000 acres, or 39 per cent. of the total area, is under cultivation and 81,000 acres approximately under forest. The area at present cultivated could, with proper irrigation, be increased by roughly 4 to 5 per cent.

The industries of the Colony are almost entirely agricultural and sugar forms 98 per cent. of its exports. Other industries comprise tobacco, fibre, pineapple, tea, coconut and, as by-product of the sugar industry, alcohol. Details regarding the various industries are reviewed below.

Sugar Industry.

The year was not a particularly favourable one for cane growth, and the total tonnage reaped was 5 per cent. below last year's. On the other hand, the sucrose content was very high and more than offset the deficit in cane. The Colony's production of sugar for 1938 was 321,372 metric tons, the highest on record. The distribution, by districts, and comparison with previous years is as follows:—

Sugar production in thousand metric tons.

Districts.	*1938.*	*1937.*	*1936.*	*1935.*	*1934.*	*1933.*	*1932.*
Pamplemousses and Riviere du Rempart	76·60	82·65	63·97	69·97	30·13	57·77	62·73
Flacq	50·09	48·16	49·98	44·15	30·87	41·31	35·97
Moka	42·08	37·72	43·42	35·76	29·30	40·08	34·12
Plaines Wilhems ...	24·30	22·49	21·89	20·62	11·54	18·22	17·05
Black River ...	13·36	13·81	12·85	11·28	5·99	8·88	9·06
Grand Port ...	59·45	57·23	56·10	53·38	38·37	50·66	46·66
Savanne	55·49	51·76	52·13	45·34	32·66	44·48	41·63
Total ...	321·37	313·82	300·34	280·50	178·86	261·46	247·22

The deficit in 1934 was due to a severe drought. In 1938, the proportion of raws was 87·2 per cent. of the total; granulated whites (vesous) comprised 12·5 per cent., while low sugars approximated 0·3 per cent.

Area under Sugar Cane.—The total alienated land in the Colony is nearly 381 thousand acres or, roughly 83 per cent. of the total area of the island.

Whilst most of the alienated land of the Colony passed under private ownership by means of " concessions " during the French occupation, most of the land at present occupied by Indian small planters was acquired under the " metayage " and " morcellement " systems, whereby large estates were parcelled out to numbers of tenants who became, after a term of years, legal owners of their land. The metayage or morcellement systems are still practised, though on a much reduced scale.

At the beginning of 1938, the area under cane was estimated at 145,096 acres in excess by 1,599 acres on the figure for 1937. Estates with factory cultivated 60,331 acres; estates without factory, 44,935 acres, giving a total estate cultivation of 102,266 acres, or an increase of 1,199 acres on the figure for the previous year.

The balance of 42,830 acres, which shows an increase of 400 acres on 1937, was cultivated by small planters.

The total area under cane cultivation by Indians at the beginning of 1938 was 56,025 acres, or 38·6 per cent. of the total cane cultivation. This total is made up as follows: (1) small planters off estates, 42,830 acres; (ii) small planters, cultivating lands belonging to estates, 11,264; (iii) estates owned by Indians, 9,100 acres.

Sugar Factories.—During the year 1938 there was no change in the number of factories operating in the island, which remains at 38.

Sugar Market.—In 1938, the market for sugar was generally weak and the average price obtained at the end of December for a total sale of 183,514 metric tons approximated Rs.5.65 net per 50 kilos. The average sale price for the 1937 sugar production was Rs.6.103 net per 50 kilos.

All sugar transactions are made through the Mauritius Sugar Syndicate which controls the export of practically all the sugar of the Colony.

Disposal of the 1937-38 Sugars and Local Consumption.

The total sugar exported during the 1937-38 year (1st August, 1937, to 31st July, 1938), amounted to 303,100.2 metric tons, distributed as follows:—

	Metric tons.
Great Britain	279,300·7
Canada	22,415·4
Hong Kong	1,130·8
Other places	253·3
Total	303,100·2

The exportation for the 1938-39 crop totalled up to 31st December 1938, 147,377·3 metric tons.

The local sugar consumption for the 1937-38 year was 11,367 metric tons, as against 10,326 the year previous.

Sugar Machinery.—Machinery to the value of Rs.1,162,726 was imported during the year as compared with Rs.914,545 in 1937. The value of the tramway material imported in 1938 was Rs.237,666 as against Rs.128,059 last year.

Eleven farm-tractors and 27 ploughs to the aggregate value of Rs.41,540 were also imported in 1938.

General Agricultural Matters.

Fertilizers.—A total of 17,726,935 kilos of chemical fertilizers valued at Rs.2,127,974 was imported in 1938, as against 19,818,236 kilos, valued at Rs.2,117,295 the year previous. Of the total importation, 63 per cent. consisted in ammonium sulphate and 25 per cent. in potassium nitrate.

Insect Pests.—Hand collection of beetles of *Phytalus Smithi* has been terminated and is being replaced by intensified biological control. This will result, in the first instance, in the saving of over Rs.50,000 annually to the Planters.

To help in the biological control work, the giant toad, *Bufo marinus,* was imported from Puerto Rico and after long quarantine in greenhouses, liberation was commenced in December.

The problem of providing adequate food plants for the various parasites in the cane fields is also receiving consistent attention.

In the search for varieties of cane showing economic resistance to heavy infestation of *Phytalus,* close collaboration was maintained with the Sugar-cane Research Station.

Infestation of cane fields by Moth borers has remained nearly constant, though the abormal dry period from August to November caused severe losses in the Northern Districts. A grant from the Colonial Development Fund is being utilized to organize biological control of cane-borers.

Plant Diseases.—The main diseases of the sugar-cane continue to be Gummosis, Leaf Scald, Smut and Red Rot. There was a mild outbreak of the first in the south of the island and a more severe one on a central estate. The other diseases appeared in sporadic form and did not at any time cause anxiety. Experiment and research have been continued during the year in the Division of Plant Pathology on methods of control in the field and in the Laboratory.

Tobacco.—In 1938, the area under this crop was 302 acres. Under the law, all the leaf produced is purchased by the Government Warehouse and the amount for 1938 was 162,676 kilos of a value of Rs.149,014 as compared with 391,435 kilos valued at Rs.487,239 in 1937. The amount of leaf used by local manufacturers was 366,325 kilos as compared with 329,233 kilos, the year previous.

No export trade is as yet in existence. Experiments are still in progress with a view to producing a variety of leaf with a flavour acceptable for the export market.

Fibre.—Sale is controlled by the Mauritius Fibre Syndicate. In 1938, the market was practically non-existent: the total export was only 242 tons, as against 1,617 in 1937.

Pineapple.—During the year the area under this crop has been markedly increased and now totals 125 acres approximately. Owing to unfavourable weather conditions the yield in fruit has been below anticipation.

The anticipated turn-out of the Fruit Canning Factory for 1938-39 is 3,000 cases or, approximately, 75,000 kilos as against 3,145 in 1937-38.

The exportation in 1938 was valued at Rs.35,762 against Rs.32,451 in 1937.

Tea.—Progress continues to be satisfactory, especially in regard to the quality of the tea produced. The total production for 1938 was 64,518 kilos, as against 50,000 last year. Practically the whole production is locally consumed.

Coconut.—The export of copra-produce of the dependencies of Mauritius amounted in 1938 to 1,482 metric tons, valued at Rs.213,765 as against 1,507 tons, valued at Rs.350,012 in 1937. The export of coconut oil during the year was 1,476 litres valued at Rs.550 as compared with 5,731 litres valued at Rs.2,383 in 1937.

Alcohol.—The total quantity of alcohol distilled for human consumption amounted in 1938 to 841,610 litres as against 593,396 litres in 1937. The quantity distilled for industrial purposes was 572,380 litres as against 603,192 the year previous.

The exportation of rum during the year was 144,982 litres valued at Rs.45,264 as compared with 84,210 litres valued at Rs.27,181 in 1937.

The question of further utilization of power alcohol has been receiving consideration during the year.

Veterinary and Livestock.—Owing to scarcity of rain and consequent lack of fodder, cattle in herds have been doing rather poorly and, towards the close of the year, numerous deaths occurred, especially of old and very young animals.

The animals imported in connection with the beef improvement campaign have been received. The application of fertilizers to pastures is also being seriously considered. The plans for an experimental station in connection with beef production have now matured and the scheme will be put into force early in 1939.

At the beginning of 1938 the total bovines on estates numbered 13,121 as against 13,646 the year previous.

Importation of bullocks from Madagascar for food amounted to 3,579 head valued at Rs.238,458.

The Agricultural College.— The Agricultural College is administered as an integral part of the Department of Agriculture. Laboratories provide accommodation for teaching and research in Agriculture, Chemistry, Physics, Entomology, Botany, Mycology and Sugar Technology.

A three year course leads to the Diploma of the College. Short courses in the intercrop are given for estate employees and special courses for agricultural and sugar-house chemists.

Most of the past students of the College have been absorbed in the local sugar industry. Some have obtained situations in the local Government or abroad. The practical value of the training received at the College is now appreciated by the local sugar industry and, on several estates, the Diploma of the College has been made a *sine qua non* condition for employment.

In 1938, regular students numbered eighteen, together with seven part-time students and generally two or three research workers from estates.

The Sugarcane Research Station.—The staff of the Sugarcane Research Station, which is housed in the buildings of the Mauritius Agricultural College, has been increased by the appointment of two Field Assistants. By their help, it has been possible to lay down an increased number of field experiments, dealing particularly with cultural methods.

The chief work of the Geneticist's Division has been the raising and testing of new sugar-cane varieties. No new varieties have been released during the year, but it is gratifying to be able to record that three of the varieties already released continue to find favour with the planting community.

In the Chemical Division, further experiments have been conducted with foliar diagnostic methods. Interesting results have been obtained with potash in the field experiments, in one case the application of potash resulting in an increased yield of over 20 tons per arpent, the canes from no potash plots being much poorer in sucrose. In some lands cultivated by small planters largely increased yields have followed applications of phosphatic guano.

The Botanist is continuing his work on drought resistance of canes, together with their resistance to the phytalus pest. Other points under investigation include methods of tillering and the best time and method of application of fertilizers.

School Gardening and Nature Teaching in Primary Schools.—The work is entrusted to officers of the Agricultural Division of the Department of Agriculture. There are at present thirty-two registered school gardens. Gardening classes are held regularly when the Instructors visit the schools, i.e., about every fortnight. Classes are also held on the average twice weekly by one of the school teachers. While particular attention is given to practical work in the garden, care is also taken to see that the pupils record their observations in garden note-books. Furthermore, short lectures are delivered to the pupils on the principle and practice of horticulture.

In order to secure the interests of both pupils and school teachers, a prize scheme exists; prizes being given annually for the best gardens.

Co-operation.—During the year under review, three new societies were registered. Inclusive of the Trefles (Rodrigues) Co-operative Credit Society, there were thirty-eight societies in the Colony and its dependencies, established under Ordinance No. 4 of 1913.

The total number of members on the 31st December, 1938, was 2,178 and the total share capital Rs.68,625. But the working capital which is made up of (*a*) share contribution; (*b*) dividends undrawn by members and left in the societies as non-dividend bearing shares; (*c*) deposits of members and non-members; (*d*) Government advances; and (*e*) Reserve Fund; amounted to Rs.275,116.

The movement is under the supervision and guidance of the Government, and is run as a branch of the Department of Agriculture. The staff entrusted with the supervision of the societies is composed of: (*a*)The Registrar who is also the Director of Agriculture; (*b*) The Assistant Registrar, a whole-time officer who has undergone a training in co-operation in Ceylon; (*c*) a whole-time Inspector; (*d*) a part-time Inspector with combined duties of Agricultural Instructor; and (*e*) a Clerical Assistant.

The accounts of all the societies are regularly inspected late in the afternoon, when the members are taught co-operative principle and practice. The audit inspection is made in the months of May and June by the Assistant Registrar.

Apart from a small contribution made by the societies towards their inspection, which last year amounted to Rs.750, the cost of running the movement is borne by Government.

Other Manufacturing Industries.

No important change occurred in 1938. Engineering establishments numbered forty-nine; distilleries, four; cigarette factories, six. There were four docks (landing, etc.), three hydro-electric plants, four salt-making establishments and one match factory. Altogether, about 2,000 people found employment in the above mentioned concerns.

In addition, there exist, on a small scale, leather tanning, boot and shoe making, aerated water works, ice-making, cabinet-making, biscuit and jam making, etc., which, with the usual innumerable small handicrafts, help to render the large population of the island in some way more self-supporting and help to reduce the importation of manufactured articles.

Fisheries.

In 1926 the question of fishery control in Mauritius was thoroughly investigated by Mr. J. Hornell, F.L.S., F.R.A.I., formerly Director of Fisheries in Madras, and his recommendations in the printed report on the subject have formed the basis of the work of the Local Fisheries Advisory Committee formed in 1927. Special consideration has been given to the questions of control of net fishing, improvement of local methods of fish-curing, protection of the local dried fish trade against the imported article, and ensuring a plentiful supply of cheap fish in the markets without prejudice to the working fishermen. Net fishing with large-seines was reintroducd in December and forty licences were issued. The daily average quantity of fish on the market has increased by 75 per cent. as a result and the price decreased in about the same proportion.

The lagoons, between the coral reef surrounding the island and the beach, are normally full of excellent fish of many varieties which are taken in large quantities by means of basket traps, cast nets and lines and in the open sea outside the reefs large fish can be taken at practically all times of the year by trolling or with deep sea lines.

All professional fishing is done from small sailing craft known as " peniches " and " pirogues " which are well built and seaworthy but the business side of the industry is quite undeveloped owing to local preference for old-fashioned methods which ought to be replaced. Amateur fishermen are well supplied with locally-built sea-going motor-boats which enable them to reach the remarkable fishing-grounds round the rocky islets lying from two to fifteen miles off the northern coast of the Colony where good sport is certain at almost all seasons.

Fish-curing industries are established at Rodrigues and St. Brandon islands and produce a considerable quantity of what is one of the staple foods of the poorer classes but the dried fish of South Africa and India still commands a large sale and is imported in increasing quantities at a very low price.

Many of the rivers hold a species of gray perch (known locally as " carpe ") and in the fast water good sport may be obtained with wet fly or light spinning tackle. Fresh water mullet (known as " chite ") are abundant in some rivers.

Forestry.

This now consists of about 110 square miles of Crown Forest (forest and scrub) and about 60 square miles of private forest land (forest and scrub). Total about 170 square miles.

Those portions of Crown Forest not carrying merchantable produce have a vegetative cover, important for catchment and for protection purposes, especially where situated on the central and southern plateaux, where the high rainfall and general humidity of the air ensures that any blanks are rapidly colonized. The same may be said of portions of the private forest lands, but others are at too low levels for this cover to have such effect.

As a subsidiary form of production, forest lands are utilized for shooting and fishing—Crown forests leased for this purpose returning Rupees 16,000 in a normal year.

A second subsidiary form of production consists in the grazing that is to be had on the 4,500 acres of Pas Géométriques, or Crown land strip, 250 feet wide round the greater part of the coastline and islands, leased on tree-planting conditions. This strip of plantations gives the island one of the finest coast-lines in the world, and the combination of economic production (timber and grazing) with aesthetic value is worthy of special note.

The forest of indigenous species which produced the primary timbers have been and still are being superseded by the invasion of exotic vegetation due in the the past to the extensive removal of the overforest coupled with the destruction of the regeneration by the burning of charcoal in conjunction with this operation, the exceptionally slow regeneration and aftergrowth of the indigenous species and the very favourable conditions of climate and rainfall and the physical soil conditions awaiting the invading species. In place of the whole island area, only some few square miles of this virgin forest now exist.

Following the aforementioned general destruction, trials of many and varied exotic tree species were undertaken, many were planted between 1880 and 1918 on a large scale on Crown land, notably Eucalypts (*Eucalyptus rostrata, E. tereticornis* and a *hybrid*) and to a lesser extent the Chinese pine and Eugenias, but generally speaking these plantations were formed to reconstitute the vegetative cover and were not laid out on commercial lines. The present stocks are sometimes scattered irregular and often severely shaken and damaged whilst there are many fallen trees due to the selection of unsuitable species, to cyclone damage and to lack of past thinning and other treatment. It is from these plantations that, what major production as is possible, has at present to be effected. From 1928 onwards, however, regular and vigorous plantations, on easy extraction routes, are being provided on a scale designed to abolish imports of the cheap woods of commerce and to provide a surplus of cabinet timbers worthy of export. These plantations are the result of a careful study of the results of the past and a selection of species has been made accordingly though the species composing the mixture are changed from time to time. Full financial records are available for these recent plantations.

The chief species used by cabinet-makers are:—

(*a*) Indigenous:—*Imbricaria* (Mimusops) *petiolaris and maxima, Labourdonnaisia saxophloia, Canarium colophana* and others when available.

(*b*) Exotics:—*Tabebuia pallida, Swietenia mahagoni, Pterocarpus marsupium* and *indicus, Albizzia lebbek, Cassia siamea, Juniperus, Bermudiana, Cinnamomum camphora, Terminalia catappa* and others.

Following some falling off in regular supplies from private lands Crown forests are supplying much increased volumes of fuel and charcoal, provision being made for sustained yields. Meanwhile, plantations of softwoods are being laid down by Government, which should, in due course, supply the greater part of the timber now imported. Full use is being made by the Forest Department of private enterprise in the sale of final crops and in the first clearing of scrub land. Taungya operations or the raising of crops of trees in conjunction with agricultural crops is effected by the Forest Department, wherever possible. Crops of valuable hardwoods are being raised as far as suitable land is available. The introduction of new species for trial is a regular practice. The limiting factor to crops is the probable effects of cyclone damage. Markets for thinnings from plantations are generally available.

As large quantities of charcoal are available, consideration is being given to the importation of a modern charcoal lorry both as a matter of economy and as an example to transporters to make the island community more self-contained.

In conjunction with the Agricultural Department and the resident Magistrate, conservation of catchment areas and tree-cum-pasture shade plantations, as well as commercial tree plantations are being advanced in the island of Rodrigues. In this connection a visit by a staff officer of the Forestry Department was made, advice given and valuable plans advocated for future management and land economy.

(a) *Production*:—

Unmanufactured items.

From Crown forests (no figures available for private lands).

Product.	*Volume 1938.* Cu. ft.	*Value 1938.* Rs.
(i) Logs and Round Timber	122,510	41,033
(ii) Sawn Timber	9,547	19,665
(iii) Fuel	652,872	43,650
(iv) Minor Forest Produce	—	2,195
(v) Sales in Rodrigues	—	1,784
		Rs. 108,327

Manufactured items.

(i) Approximately 160,000 gross boxes of matches are produced by the Mauritius Match Manufacturing Company. The total value is say Rs.90,000 to Rs.100,000.

(ii) The finished articles produced by cabinet-makers numbering about 160. The products of these craftsmen are of high quality.

Minor Forest Produce.

Grass for fodder, bamboos, palm salads, thatching material and fodder seeds.

(b) *Conversion and Sales.*

Logs and round timber supplied on forest roads or sometimes delivered to buyer.

Sawn timber: sawn by hand.

Fuel: sold standing or by cord on forest roads.

The principle of limiting the out-turn to ensure a sustained yield applies to Crown forests. At present the sale of pine has thus to be limited.

(c) *Consumption of Products.*

All production is consumed locally.

VII.—COMMERCE.

The Colony is essentially an agricultural one, and yet it barely produces one-tenth of the foodstuffs required for its inhabitants and imports manufactured goods of all descriptions and practically all articles of food and drink, with the exception of sugar.

Of the principal articles of food and drink imported, rice which is the staple food of the people, as well as dholl, lentils and other grain, edible oils, spices and seeds, salted fish and ghee come from India; confectionery, preserved provisions, soya bean oil, whisky from the United Kingdom, wheat flour, fresh fruits and butter from Australia: salted fish, meat, fresh fruits from South Africa; wines from France and Spain; lard from Hong Kong; preserved provisions from China; margarine and cheese from Holland; sardines from Japan; tea from Ceylon and cattle, pistachio nuts and potatoes from Madagascar.

The main items of imports of manufactured goods are: heavy iron and steel goods for use in connection with the manufacture of sugar; cotton and woollen goods; wearing apparel, patent fuel, fertilizers, hardware, paint, soap, motor vehicles from the United Kingdom. Gunny bags for packing sugar, saltpetre, and cotton piece goods come from India.

Of the foodstuffs produced locally may be mentioned fresh fruits and fresh vegetables.

Mauritius is almost entirely dependent on one industry—the sugar industry—and so long as efforts made to develop other industries do not meet with success, its position will be more or less insecure; especially on account of cyclones or drought. In 1938 the sugar exports represented about 98 per cent. of the domestic exports. Other items of exportation are comparatively insignificant in value. They are aloe fibre, copra, poonac, rum, and coconut oil.

There has, as yet, been no outside market for local tobacco and matches. As a result of the successful development of these industries during the past few years, imports of cigarettes and matches have decreased considerably, matches almost entirely.

The following table gives the total value of imports, domestic exports and re-exports for the year under review and each of the preceding four years:—

	Imports. Value c.i.f. Rs.	*Domestic Exports. Value f.o.b. Rs.*	*Re-exports. Value f.o.b. Rs.*
1938	33,830,015	33,249,199*	778,366
1937	34,226,522	36,081,479*	832,542
1936	30,218,589	31,842,308	948,498
1935	29,891,160	28,008,615	640,640
1934	29,680,346	25,028,810	1,107,330

* Excludes the value of sugar quota certificates which, in the years 1937 and 1938 may be estimated at Rs. 4,900,000.

The following table gives the percentage of total imports provided by the British Empire and foreign countries respectively during the year 1938 and the four preceding years:—

	1938. Per cent.	*1937. Per cent.*	*1936. Per cent.*	*1935. Per cent.*	*1934. Per cent.*
Empire	76	77	75·5	78·6	74·4
Foreign countries	24	23	24·5	21·4	25·6

In the following table is given the percentage of total imports provided by the six principal countries from which our commodities are imported, for the year under review and the four previous years:—

	1938.	*1937.*	*1936.*	*1935.*	*1934.*

In the table of imports, domestic exports and re-exports above, the values for bullion and specie are not included. The imports in 1938 were Rs.167,120 and re-exports Rs.98,990 against Rs.121,333 and Rs.174,789 respectively in 1937; Rs.50,000 and Rs.159,185 in 1936; Rs.36,866 and Rs.1,275,622 in 1935 and Rs.2,182,000 and Rs.2,419,834 in 1934.

Tourist Traffic.

During the year 1938, seven tourist ships called at Port Louis with 1,008 visitors. The number of tourists who arrived in the Colony by other ships amounted to 287. Good roads and taxi-cars at cheap rates render places of interest throughout the Colony easily accessible to visitors.

VIII.—LABOUR.

Historical.

Labourers in Mauritius fall into two groups—the Creoles and the Indians or, as the latter are frequently called, the Indo-Mauritians.

The Creoles are of African origin and consist partly of descendants of slaves who were employed on estates in the old days—and partly of descendants of other persons who came from Africa or Madagascar.

The Indians or Indo-Mauritians, who outnumber the Creoles by about three to one, consist of Indians or their descendants who were recruited from India to supply the labour requirements of the Colony. The last assisted immigration from India took place in 1922.

By religion the Creoles are Christians while the Indians are usually Hindus or Mohammedans and, although there has been some intermixture of blood, the two groups are on the whole (as far as the labouring population is concerned) clearly defined and each has its distinctive customs and habits.

The Creole is more of a town dweller than the Indian who is mainly an agriculturist and while the majority of dock labourers, mechanics, masons, carpenters, etc., are Creoles—the vast majority of workers on the land are Indians. No hard and fast line can be drawn however.

Reorganisation of Labour Department and Legislation.

Until the year 1938 the duties of the Labour Department were chiefly concerned with Indian immigrants—the head of the department being styled " Protector of Immigrants "—and its powers were limited accordingly.

As a result, however, of the labour unrest on sugar estates which occurred in 1937 it was decided that this department should be strengthened and reorganised.

To carry out this reorganisation an officer with long experience of labour in the tropics was temporarily seconded to Mauritius from the Malayan Civil Service.

This officer, who is styled " Director of Labour ", arrived in April and after studying local conditions recommended that a Deputy and an Assistant Director of Labour should be recruited from Europe and that six Labour Inspectors should be appointed locally.

These recommendations were approved and the Labour Inspectors were appointed in June, but the higher appointments had not been filled at the end of the year.

Another important step which was taken in connection with labour matters was the passing of the Industrial Associations Ordinance.

This Ordinance gives the right to employers or labourers in certain industries to form associations to enable them to protect and further their interests. Important provisions in this Ordinance are those dealing with the settling of disputes by means of conciliation boards which may be set up at the request of either party to a dispute or which may be convened by the Director of Labour on his own initiative if he considers that a dispute is likely to result in a stoppage of work.

A strike or lockout is illegal unless the conciliation board has been unable to settle the dispute within thirty days.

The Director of Labour is Registrar of Industrial Associations of which one employer's and twenty-four labourers' Associations were registered during the year.

A further important measure passed during the year was the Labour Ordinance.

This Ordinance includes within its scope all " labourers " (i.e., persons performing manual labour) and while omitting a number of provisions of the Labour Ordinance of 1922—such as those relating to assisted immigration—includes many new provisions.

The most important of these new provisions may be briefly summarised as follows:—

(i) Control by the Labour Department over all classes of labourers,

(ii) establishment of an eight-hour day,

(iii) regulations for overtime,

(iv) maternity benefits for working women,

(v) establishment of nurseries on estates in certain circumstances,

(vi) records to be kept by employers of wages paid to all labourers whether working directly under their control or not,

(vii) allotments for labourers.

Review of the work of the Labour Department.

The appointment of Labour Inspectors in the Districts provided a much needed want, and every labourer now knows that he has in his district an officer of the Labour Department to whom he can refer any complaint he wishes to make and who will investigate it without delay.

A very large number of complaints, many of which were trivial, were dealt with by the Labour Inspectors, and work during the sugar crop, with the exception of a few minor stoppages, proceeded normally.

At the end of August however the labourers employed at the docks and by the stevedores struck work and made a claim for higher wages. Although every effort was made by the Labour Department to bring home to these men (who were members of the Dockers' Association) that their action was illegal and that if they would resume work a conciliation board would consider their claims they continued on strike.

As a result paralysis of the whole sugar-industry was threatened and it was decided to declare a state of emergency. Arrangements were then made to carry on the work at the docks and after a few days the strikers resumed work. Subsequently a conciliation board was held and the dock workers obtained substantial improvements in pay and working conditions.

During the year another conciliation board was held as a result of which certain increases of pay were given to labourers employed on a certain sugar estate.

There is no doubt that the largely increased activities of the Labour Department and the result of these conciliation boards have had a considerable effect in impressing upon labourers that their claims can be put forward and if reasonable can be granted without recourse to a strike.

Wages and Employment.

On estates, wages vary very considerably according to the season, the nature of the work, the capacity of the workers, etc. During the intercrop daily paid men earn from 50 cents to R.1. daily—though the work may not be continuous—and during the crop season rates are very much higher and earnings vary from 80 cents to Rs.1.80 a day—or even more.

Labourers employed on monthly agreement earn from Rs.15 to Rs.20 a month and are entitled to free housing and medical treatment.

Skilled workmen earn from Rs.1.50 to Rs.4 a day.

There is employment for all manual workers during most of the year but the supply and demand for labour are so nearly balanced that anything in the nature of a drought or a cyclone, which reduces the amount of work available on estates, almost immediately causes unemployment.

Economic and Social.

The Commission appointed to enquire into the unrest among labour on sugar estates in 1937 recommended that a 10 per cent. increase in wages should be given and although the continued low price of sugar has caused embarrassment to many companies this recommendation has on the whole been carrried out.

Whether a further increase in wages is feasible or reasonable is under investigation but the fact remains that the earnings of agricultural labourers in Mauritius compare favourably with those of similar labourers in India.

Although there is considerable scope for improvement in the economic and social conditions of labourers in Mauritius it would not be correct to say that distress and hardship are widespread—in fact a large number of labourers own land on which they reside and keep cattle or grow vegetables.

There are cinemas in all large villages which show Indian and other films and these are very well patronized. The race meetings which are held from May to October are also attended by large numbers of labourers—in fact the vivid and picturesque colouring of the clothes worn by their womenfolk is a well known feature of these meetings.

Football has many devotees and, although the game is not organized among labourers, it is common to find a football ground near a village or an estate camp—it is clearly popular and any important match is attended by many spectators.

With regard to more serious matters such as his status in the community and his civil rights the labourer, whether Creole or Indian, is on the whole, sophisticated. He is no longer content to be told that certain things are so—he wishes to know why they are so and how they affect him.

This attitude of mind is encouraging because it shows that the reasoning and intellectual powers of the labouring classes are developing and with proper guidance will enable them to take an increasingly important part in the life of the Colony.

Statistics.

It has not been possible as yet to prepare reliable statistics regarding the number of labourers in employment, rates of wages, etc., though steps are now being taken, under the new Labour Ordinance, to obtain the necessary information.

It may be said however that approximately 11,000 labourers live on estates, and work on monthly agreement, and 70,000 work as day labourers—the majority of these are Indians.

The Ordinances dealing with labour matters, which were enacted during the year, are as follows:—

(*a*) Ordinance No. 7 of 1938 introduces for the first time in this Colony legislation intended to promote and further the formation of employers' and employees' associations with a view to settling industrial disputes and other matters affecting the relations between employers and employees and the relation of employers and employees *inter se*.

(*b*) Ordinance No. 47 of 1938 brings the law on labour up to date and provides for a Labour Code in line with modern requirements, whilst doing away with former legislation on the matter which had become antiquated.

IX.—WAGES AND COST OF LIVING.

Labourers under monthly verbal contracts receive in cash Rs.10 per month, together with rations, lodgings, medical assistance. On estates, they have considerable facilities for and are encouraged in, rearing chickens, goats, milch cows. This small farming forms the most important source of supply in eggs, chickens and milk, through the medium of hawkers who act as intermediaries between the producers and the consumers.

In 1938, male labourers received during the slack season R.0.50-0.75 per day, females, R.0.30-0.40. When work was abundant, the daily rate of pay rose to Rs.1.25 or Rs.1.50 for males and R.0.50 to R.0.75 for females and "chocras". On the average for the year, the daily wages amounted to about R.0.70 for males and R.0.40 for females.

Remuneration for piecework being naturally very variable, oscillated between the same limits.

	Per acre. *Rs.*
Clearing land	20–40
Digging cane holes	18–20
Manuring	15
Weeding	8–10
Cutting canes (20 tons/acre)	12–16

The wages of artisans varied between Rs.1 and 2 per day. Those artisans paid by the month received Rs.30 to Rs.90 according to the nature of work.

The supply of domestic servants is generally abundant. Butlers, cooks, gardeners and other servants receive between Rs.10 and Rs.35 per month, with quarters generally.

Chauffeurs get on the average Rs.35 per month.

As regards salaries, conditions in 1938 have shown no appreciable change. The following indicate in broad outlines the ruling rates:—

	Rs. per annum.
Managers of sugar estates and senior Government officials	8,000–13,000
Government, bank and commercial clerks (higher grade)	4,000–7,000
Clerks and employees on sugar estates...	1,500–3,000
Junior clerks and employees	720–1,500

The demand for employment, coming from the educated classes, is at present out of proportion with the offer and the number of young men of education and promise who find themselves without work or have to content themselves with drudgery, is very large.

The cost of living in 1938 was practically the same as the year previous. Rice, the staple food of the population was indexed at 65 (100 in 1914). Other grains were about 80. Flour remained steady at 121. Oils and fats decreased from 64 to 61. Clothing oscillated between 110 and 111.

The quarterly weighted index for the total cost of living (28 items) in 1938 was as follows:—(100 being the index for 1914).

First quarter	99·2
Second quarter	96·8
Third quarter	97·6
Fourth quarter	99·0

The mean for the year was 98·1 as compared with 97·8 in 1937.

As regards the labouring classes, the following table indicates the purchasing power of wages in terms of rice since 1927:—

Year.	*Average daily wages of male labourer.*	*Average price of fair quality rice per lb.*	*Purchasing power of wages expressed in lb. of rice.*
	Rs.	*Rs.*	*lb.*
1927	1·25	0·13	9½
1928	1·25	0·10	12½
1929	1·00	0·10	10
1930	0·80	0·09	9
1931	0·75	0·08	9
1932	0·45	0·05½	8
1933	0·45	0·06	7½
1934	0·45	0·06	7½
1935	0·55	0·07	8
1936	0·55	0·06	9
1937	0·65	0·06	11
1938	0·70	0·06	12

The official index numbers do not take into consideration the improved standard of living since 1914; many items which did not exist then or were then considered as exceptional, have now becomes necessities of life. Consequently, the cost of living is generally higher than the official index would lead one to suppose.

X.—EDUCATION AND WELFARE INSTITUTIONS.

In the first half of the last century, it was enacted by an Order in Council that all the citizens in Mauritius could open schools for the purpose of providing education for " children of school-going age ". The position was revised shortly after 1850 and a " Council of Education " became responsible for the educational policy in the Colony. The head of the Schools Department was a Superintendent or Chief Inspector. There were then primary schools which were under the direct control of Government and Church schools which received grants-in-aid out of public funds but were under the control of Managers appointed by the owners of these institutions. In 1899, an Ordinance enacted by the Governor with the advice and consent of the Legislative Council was passed to make better provision for education.

In 1932, in accordance with the recommendations of Commissioners appointed by the Secretary of State for the Colonies to enquire into the finances of the Colony, the Training College, the Technical School and the Trade School, which were branches of the Schools Department, were closed down in order to reduce the expenditure on education. With the same aim in view a policy of centralizing schools was also adopted.

The Education Ordinance was again revised in September, 1934, to introduce certain changes which it had been advisable to make in connection with the duties and powers of the Managers of aided primary schools. The regulations for the management of Government and aided primary schools as well as aided secondary schools which were embodied in the Education Code and which heretofore had been made by the Schools Committee were henceforth made by the Governor in Executive Council and the new law provided for the establishment of a Royal College Department and Schools Department.

Primary.—Though attendance at elementary schools is not compulsory, education is provided free for all the children of the Colony and by comparing numbers in attendance at official and private schools with the number of children of school-going age, it can be inferred that if education was made compulsory in Mauritius there would be no substantial increase in attendance. Every section of the population takes full advantage of the educational facilities and parents heartily co-operate with teachers to educate their children.

The following table shows the number of primary schools, the number of pupils on roll, and the staff of teachers during the year 1937-8.

Schools.	*No. of Institutions.*	*No. of Teachers.*	*No. of Pupils on roll.*	*No. of Pupils in average attendance.*
Government ...	51	400	15,345	11,115
Aided	75	682	24,607	17,453
Total ...	126	1,082	39,952	28,568

State-aided schools are under the control of individual Managers and the Government contribution includes the salaries of the teachers together with recurrent grants to meet part of the expenditure on maintenance of school buildings and furniture.

Pupils must be at least five years old and must have been successfully vaccinated in order to be allowed admission at a primary school; when they are under five they undergo a preliminary training before being admitted to the lowest form.

In addition to English, French and arithmetic, regular instruction is given to all pupils in hygiene, physical drill, Nature study or elementary biology and principles of agriculture and gardening. History and geography are optional subjects taught in the higher standards for the benefit of candidates wishing to sit for scholarship examinations. Religious instruction is given to every pupil by a minister of his religion, unless there is a written objection from the pupil's responsible party. The local vernacular which is a corrupted form of French, and even Indian dialects may be used as mediums of instruction in the elementary and middle forms of primary schools. In the higher classes the teaching is conducted in English, but the use of French and " vernaculars " is allowed whenever this is found to be necessary.

There are six primary school standards or classes, viz.:—

Standard I with pupils on an average from 5 to 6 years of age.
Standard II with pupils on an average from 6 to 7 years of age.
Standard III with pupils on an average from 7 to 8 years of age.
Standard IV with pupils on an average from 8 to 10 years of age.
Standard V with pupils on an average from 9 to 11 years of age.
Standard VI with pupils on an average from 10 to 12 years of age.

There are no fixed age limits for the different standards but no pupil may be entered on the attendance registers who is under five years of age, and no pupil may be retained on the registers after the annual examination which follows his or her fourteenth birthday, exception being made for pupils following the scholarship classes.

A regular annual examination in every primary school of the Colony is held for the pupils of Standards V and VI. The lower classes are examined by way of inspection. Experience has shown that the quality of the work put in, now that examinations have been restricted to the higher classes is of a higher standard than it used to be. Much, however, is left to be done in this line. A guide or " scheme of work " was recently introduced for the teaching in the lower classes and the results obtained seem to prove its general utility. The advantage gained by the primary schools through the methods of teaching thus introduced is positively proved by the work presented by the candidates at official examinations.

So far as primary education is concerned there is no difference between the provisions made for boys and girls. In the academic subjects of the curricula for the various forms, pupils of both sexes follow the same courses and while boys do gardening work, the girls follow needlework classes.

Apprenticeships are awarded annually to primary school pupils to encourage the study of needlework and handicraft but these are not, however, popular. The reasons for such unpopularity is often ascribed to the local aversion for manual work of any kind. Though it must be admitted that it has become traditional in Mauritius to regard office work as more " respectable " than manual work, it cannot be denied that artisans experience great difficulty in finding employment locally.

To allay the prejudice against manual work and to develop a class of well educated artisans, it is proposed to introduce manual training in primary schools under the form of practical agriculture, woodwork and metal work. It is hoped that it will thus be possible to eradicate the current heresy that manual work is synonymous with illiteracy.

Scholarships and exhibitions tenable at the secondary schools are awarded every year, through competitive examinations, to the best pupils attending primary schools. It is interesting to note that the majority of primary school scholars and exhibitioners take a real interest in their secondary school course.

There are gardens attached to primary schools in rural areas and they are cultivated by the elder pupils. These gardens are regularly inspected by officers of the Agricultural Department who give advice as to proper cultivation.

Secondary.—There are two categories of secondary schools, viz.:—(1) Secondary aided schools, which are managed privately but are under Government control, and (2) the Royal College and the Royal College School which are managed by Government.

(1) *Secondary Aided Schools.*—Government grants to aided secondary schools are assessed with reference to attendance and efficiency, as tested by inspection and examination, and not, as in the case of primary schools, with reference to maintenance and salary charges.

The following table shows the number of institutions, the number of pupils on roll and in average attendance, and the staff of teachers during the year 1937-8.

Schools.	*No. of Institutions.*	*No. of Teachers.*	*No. of Pupils on roll.*	*No. of Pupils in average attendance.*
Aided	9	135	1,630	1,491

These institutions are classified into three grades and provide not only for elementary education such as is given in the primary schools, but also for education of such standard as may lead to the Cambridge School Certificate. They are attended by those pupils who fail to obtain admission at the Royal College or the Port Louis school.

The curriculum of studies includes the teaching of English, French, mathematics, needlework (for girls), hygiene, history and geography. In addition to these, drawing and music are taught on a more moderate scale.

There is no difference in the elementary departments of secondary schools between courses for boys and girls but in the higher forms, girls are decidedly at a disadvantage and such subjects as science, mathematics and classics are not taught on a large scale in girls' schools. Girls cannot reach a standard higher than that of the First School Certificate whereas boys can qualify for external degrees of the London University. The question of the higher education of girls is at present receiving the careful consideration of the Education Authorities.

Aided secondary schools are visited periodically by the Superintendent of Schools who also examines the lower forms with a view to assessing the quality of the teaching and the general efficiency of these institutions. Examinations conferring proficiency certificates are held in the middle and higher forms and are conducted by local examiners selected from the teaching staff of the Royal College and the inspecting staff of the schools department.

Working hours in both primary and secondary schools extend, as a general rule, from 10 a.m. to 3 p.m., no provision being made for evening classes.

(2) *Royal College.*—The Royal College is a Government school for the secondary and higher education of boys up to a standard equivalent to that of the Higher Certificate examinations conducted by Oxford and Cambridge Universities. It comprises two schools under the management of the Rector, the

Royal College proper in Curepipe and the Royal College School in Port Louis, where pupils who live in or near the capital are educated on the same lines as in Curepipe up to School Certificate standard. At the Royal College the teaching staff consists of the Rector, 12 Masters with degrees in Honours at British Universities, 11 Assistant Masters appointed locally, and a Physical Training and Gymnastic Instructor (who also attends once weekly at the school to take classes); and at the Royal College School, of the Headmaster, two Masters and 12 Assistant Masters. Assistant Masters are encouraged to take the B.A. and B.Sc. examinations of London University. The College has well-equipped libraries and chemical, physical, and biological laboratories; almost as many pupils follow classical as scientific studies. The subjects taught are English, French, mathematics, Latin, Greek, chemistry, physics, biology, geography and history; and classes are held during school hours in physical training and gymnastics. The pupils are drawn from all classes and races in the Colony, and range in age from 10 to 20 years. The fees are from Rs.96 to Rs. 192 per annum, and pupils may travel at quarter rate on the Government railways. Admission to the Royal College is conditional upon passing an entrance examination or winning one of the 20 annual primary schools scholarships and exhibitions or one of the two secondary schools scholarships awarded annually, or one of the eight class scholarships and exhibitions, which are competed for annually, and are open to all boys in the Colony. Six further class scholarships and exhibitions are competed for annually by Royal College pupils. These 36 scholarships and exhibitions are tenable at the Royal College, and entitle the holders to free tuition, free railway travelling to and from College, and also to the purchase at half price of books and school requisites, for a period of three years except the primary schools awards, which carry these privileges for the whole period of the pupil's college education.

Two scholarships, one on the Classical and one on the Modern Side, of the present value of £1,100 each (with second-class passage to and from England), tenable for four or five years at a British University or any other approved place of education in the United Kingdom are also awarded annually. Besides the winners of these two scholarships a few boys whose parents can afford it go to England or France to study for a profession, usually Medicine or Law, and almost always return to Mauritius to practise. Of the remaining pupils the majority on leaving the College find employment in the island.

The boys receive a training in classical and scientific subjects. Specialization begins at the Entrance class, and the division into modern and classical sides becomes complete in the Upper Middle class. At the school, pupils may undergo commercial training in place of classics or science.

Classes are held between 9.30 a.m. and 3.30 p.m. on five days weekly. In addition to the ordinary classes there are Saturday extension classes where candidates for Pharmaceutical Diplomas and other public examinations are helped in their studies. The number of pupils on the roll of the Royal College in January, 1938, was 313, and of the school 190 (the number of College pupils on the roll in May 1938, after the publication of the School Certificate results, was 306). 100 pupils sat in December, 1937, for the Cambridge School Certificate, of whom 70 obtained certificates. In May, 1938, the number of pupils who had passed this examination and proceeded to the highest class of the College was 38.

Besides the regular physical training classes encouragement is given to rugby and association football, hockey, boxing and gymnastics and athletics, in which, although by no means all the boys join, the standard of proficiency is high. As the pupils are all day-boys it is difficult to obtain much support for other social activities, but a school magazine is published once yearly.

Welfare Institutions.

There are six Roman Catholic infirmaries for men and women and two orphanages for children under the management of Sisters of Mercy; there are also one orphanage for boys and one for girls under the management of the Church of England and a " home " for men and women under the management of the Church of Scotland.

The " Austin Home," established by Mr. A. J. Wilson in memory of his son, provides accommodation and subsistence for aged gentlefolk.

A Mohammedan orphanage was established in Port Louis in 1932 for the maintenance and education of orphans of that creed. Until 1937 this orphanage was entirely maintained by voluntary contributions but it now receives from public funds a capitation fee for the maintenance of each orphan.

There are no public Poor Law Institutions in the Colony but grants for the maintenance of aged and infirm paupers and orphans are paid to private institutions from public funds—these grants amounted to Rs.99,747·77 for the year 1938, for 1,382 persons.

Outdoor relief is granted to destitute persons whose relatives are unable to support them.

Such relief is usually of a temporary nature only and is regarded as " part relief "—persons requiring " full relief " generally being sent to an Institution.

The number of persons so relieved in 1938 was 14,103 and the amount disbursed to them was Rs.496,617.14.

The administration of relief—both indoor and outdoor is carried out by the Poor Law Commissioner who is assisted by a staff of Medical Officers, Poor Law Officers and Visiting Officers.

All institutions in which paupers or orphans are maintained are frequently inspected by officers of the Department and all applications for relief are investigated and scrutinized by the Department before relief is given.

The Poor Law Commissioner also has under his immediate control a clothing department and a laundry where 50 and 24 women respectively are employed. These women, although not all of them are entirely destitute, are all in need of assistance to maintain themselves and their families.

The clothing department supplies uniforms for a number of Government Departments and also clothing for hospital patients while the laundry does all the washing for four Government hospitals.

Relief is also provided for paupers by the Poor Law Department by way of free housing accommodation at Bell Village—a model village on the outskirts of Port Louis where there are cottages of various types and sizes available at a low rental for the poorer classes.

There are also a number of private organizations devoted to the relief of poverty—among which may be mentioned the Société de St. Vincent de Paul, the Societe Francaise d'Assistance, the Semaine de Bonté and the Oeuvre des Malades Pauvres.

The Child Welfare Committee and the Oeuvre Pasteur de la Goutte de Lait, which receive Government grants, deal especially with expectant and nursing mothers and their babies.

The amount of devoted work performed by private persons in the cause of charity and the large amounts of money subscribed for charity are a notable feature of the social life of the Colony.

Recreation, Music, Art and Drama.

Association football is the most popular form of sport. Golf, tennis, cricket, hockey and rugby football are played mostly by the wealthier classes.

The Mauritius Turf Club, founded by Colonel Edward A. Draper in 1812, and the Mauritius Jockey Club, which first ran horses in 1906, hold race meetings from May to October, at the Champ de Mars in Port Louis and at Floreal in the district of Plaines Wilhems. The large gathering of Indians in bright attire at the former place on the last Saturday of August, called " The Race Saturday," is a striking sight.

Regattas are held by the yacht clubs of Mahebourg and Tombeau Bay generally on Empire Day, in August, and in December.

Fly and devon fishing, in rivers, for a sort of perch *Kuhlia rupestris* (Lacp.) called " Carpe " locally; and trailing for sail and sword fish and other big game, out at sea, with heavier rods, afford excellent sport especially from October to January.

The " chasse," or the shooting of deer, is a favourite sport in Mauritius. The season is from June to the beginning of September, and strangers of mark visiting the island at this period are always treated to chasses, some of which, like those given to His Royal Highness the Duke of Edinburgh by Messrs. Currie and Pitot in 1871, to His Royal Highness the Duke of Cornwall and York (later King George the Fifth) by Mr. Leopold Antelme in 1901 and to His Royal Highness the Duke of York (now King George the Sixth) by Mr. Georges Antelme in 1927, are the occasion of splendid fetes.

There are several flourishing companies of Girl Guides and Brownies, the latter known locally as Blue Birds. The Boy Scouts movement is becoming very popular and there are several companies of Scouts and Cubs. A Sea Scout company was organized in 1937.

There is not much chance of encouragement for any of the Arts. Music is fostered principally by the parish churches and amateur singers, who sometimes give concerts. A theatrical company from France came over this year and gave performances in the towns of Port Louis and Rose Hill, which were greatly appreciated by the public. The company was assisted financially by the Municipality of Port Louis and the Township Boards. There are also cinema halls in every important village where excellent films are exhibited soon after their appearance in Europe and in India. Censorship is exercised.

The Christian Brothers also provide musical training, and apart from the police band which consists of a bandmaster and 30 bandsmen, a band styled the " Alliance Musicale " and comprising about 25 units was established in 1933. The Chinese have their own theatre in the town, to which companies come from China when conditions are prosperous. The African Creoles are very fond of music and can pick up a tune in an amazingly short time.

The Municipality of Port Louis has instituted a drawing class, practically the only encouragement to local talent now that the post of drawing master has been abolished at the Royal College.

Scientific Societies, Museums and Libraries.

The Mauritius Institute was founded in 1900 (Ordinance No. 37 of 1900) to promote the intellectual advancement of the Colony and installed in a specially erected building whose first stone was laid by Sir George Bowen on 23rd November, 1880. The Natural History Collections bequeathed to the Colony by Julien Desjardins were transferred to it in 1885. The Institute is governed by a Board of Directors appointed annually by His Excellency the Governor. It is open to the public daily, except on Sundays and Public Holidays, admission free, from 10 a.m. to 4 p.m. and is visited during the course of the year by more than 25,000 people.

The Institute now comprises—

(*a*) *The Museum Desjardins.*—For the purpose of technical organization the Museum is divided into a number of sections each of which is in charge of a voluntary helper or a member of the Board of Directors. Since the report of the Museum Reorganization Committee was published in 1928, the collections have been radically overhauled and every effort is being made to assemble as complete material as possible of the fauna and flora of the Mascarene Islands and the surrounding ocean. In arranging the exhibits their economic and ecological significance is being carefully considered.

There are now on view advanced collections of Crustacea, Echinodermata and Mollusca both land and marines. The sea-urchins have recently been enriched by the acquisition of two superb specimens of the beautiful and rare *Chondrocidaris gigantea*. The Mascarene shells include some recently described new species. A collection of tropical fish, many painted in their natural colours is also of noteworthy interest.

In the avian section there are two skeletons of the Dodo and one of the Solitaire as well as a complete collection of the endemic birds of Mauritius including the extinct Dutch pigeon Alectroenas nitidissima.

A special show case is devoted to the fauna of Round Island, a small islet 12 miles north of Mauritius.

The Botanical Section includes a herbarium of over 2,000 sheets of specimens from Mauritius, Rodrigues and some of the small Indian Ocean islands. Native and exotic timber specimens are displayed and a special section is devoted to diseases and pests of economic plants.

The Museum publishes a Bulletin from time to time containing original papers on the fauna and flora of the Mascarenes. Copies may be obtained on application to the Librarian and Curator.

(*b*) *An Art Gallery* of some 60 paintings of which 47 were offered by Mr. Edgar de Rochecouste in 1921-2.

(*c*) *A Public Library* of about 22,000 volumes classified according to the Dewey system, which is increasing at an annual rate of about 300 books. The Library also receives over 50 English and French periodicals. Books may be borrowed from the library under certain conditions.

(*d*) *The following incorporated scientific bodies.*—The Société Medicale de l'Ile Maurice including among its members most of the medical practitioners of the Colony; the Société des Chimistes, a technical body of the local sugar industry, reckoning over 120 members and studying questions of technique concerning the growing of sugar-cane and the manufacture of cane sugar; the Royal Society of Arts and Sciences. This Society, which was founded in 1829 under the title of Société d'Histoire Naturelle, was honoured with a Royal Charter in 1846. Its activities extend to most branches of natural history, science and art. Lectures are delivered by its members, now numbering 60, and also by visitors of mark under its auspices. Its valuable library has been transferred to the Institute.

Apart from the public Art Gallery at the Institute, many pictures from celebrated painters are privately owned, together with artistic collections of old china, glassware, lace, bronze and marble figures from the best artists including the Mauritian sculptor Prosper d'Epinay.

There is also a museum of naval relics, located in a building on the premises of Government House. Most of the exhibits were reclaimed by the Honourable H. C. M. Austen, C.B.E., from the wreck of battleships sunk in Mahebourg Harbour in 1810.

On the initiative of Lady Clifford the creation of a historical museum has been started in the top floor of Government House, Port Louis.

This museum already contains certain pieces of furniture having belonged to Mahe de Labourdonnais. The Mauritius Institute has loaned all their objects of a historical or educational character to that museum and members of the public have made gifts and loans of interesting articles.

Artistic photography and fine millinery and embroidery are also produced.

In addition to the Institute Library there are, at Port Louis, the Municipal, the Police and the Union Catholique libraries; and at Curepipe, the Carnegie Library.

XI.—COMMUNICATIONS AND TRANSPORT.

Roads and Road Transport.

The Colony is well served with 500 miles of main roads maintained by Government and 192 miles of branch roads maintained by District Boards up to the 30th June, 1938. As from 1st July, 1938, Branch Road Boards have been abolished and the powers hitherto vested in, and the duties hitherto assigned to such Boards, have been transferred to Government. All roads are metalled and 177 miles of the main roads have been covered with bitumen.

The excellent roads of Mauritius are a source of constant surprise and admiration to all visitors to the Colony who are in a position to draw comparisons between Mauritius and other outlying parts of the Empire. All the principal roads are tarred and systematic steps are taken every year by the local authorities to have them widened, graded and improved by reducing dangerous curves so that the numerous places of beauty and interest in the Colony can be reached quickly and in comfort by tourists and visitors.

At the end of the year there were 3,063 motor vehicles in use classified as follows:—

Private cars	1,833
Lorries	442
Taxi-cars	422
Motor cycles	230
Omnibuses	136

Importation of motor vehicles during the year totalled 389 of which 303 were British-made.

Taxi-cars for hire in Port Louis and in the principal towns are of modern type and are kept in excellent condition as regards safety and cleanliness and the charges for hire are reasonable—viz., R.0.20 cs. per mile for short distances and special rates for long journeys or by the day. There is an excellent bus service on the 15 miles of main roads from Port Louis to Curepipe and many subsidiary lines of less importance which radiate from the main system to every town and village in the Colony. The fares vary from 2 to 5 cents per mile and buses on the principal routes are well patronized and maintained in good condition for the safety and comfort of passengers. The retail price of petrol is normally Rs.12.00 per eight-gallon case, which is equivalent to about 2s. 2d. per gallon.

The annual tax payable in respect of motor vehicles is Rs.4 per horse-power in respect of motor cycles and Rs.5 per horse-power in respect of other classes of vehicles. Lorries pay an additional tax of Rs.40 per ton gross weight and motor buses a licence duty varying from Rs.200 to Rs.500 per annum in accordance with seating capacity. Motor lorries plying for hire pay a further licence of Rs.200 per annum. Motor cars pay a licence duty of Rs.60 per annum and the cost of a driving licence Rs.5 a year.

Cars of visitors are subject to a tax at the rate of Rs.10 a month.

Railways.

The Mauritius Government Railways comprise 110¾ miles of main line with 45¾ miles of sidings and station lay-outs of British standard 4 ft. 8½ in. gauge, and 13⅓ miles of 75-cm. gauge track known as the Bois Cheri Light Railway. The exceptional heavy gradients much of it being 1 in 26, makes the operation of the railways exceptional, restricting speed of the passenger service and limiting the weight of goods trains.

From the terminal at Port Louis, the most important section, the Midland Line rises to 1,800 ft. on its way to Mahebourg, the old port on the south-east coast of the island, 35¼ miles distant. A branch, 11 miles long, from this line, Rose Belle serves the fishing hamlet of Souillac. The North Line, 33½ miles long, is fairly level and runs from Port Louis passing through the coastal districts to the little village of Grand River South-East, on the east coast. The Moka Branch from Rose Hill, on the Midland Line, 950 ft. above sea-level to Montagne Blanche, is 14¾ miles long and rises on this length to 1,500 ft. Tamarin and the Black River district are served by a branch off the Midland Line at Richelieu, 12¼ miles long, for goods traffic only. The Montagne Longue branch from Terre Rouge on the North Line, is 3½ miles long, and in common with the Black River Line has no heavy gradients.

Particulars of revenue and expenditure for six years are given below:—

REVENUE.

	1932–33.	1933–34.	1934–35.	1935–36.	1936–37.	1937–38.	Increase or Decrease of 1937–38 over 1936–37.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Passengers	419,181	524,818	510,728	466,307	433,446	416,479	– 16,967
Parcels	62,163	65,776	61,019	63,515	59,954	59,235	– 719
General goods	1,174,046	1,255,729	928,850	1,288,120	1,375,022	1,424,877	+ 49,855
Road traffic (railway lorries) ...	—	—	—	400	7,548	57,012	+ 49,464
Miscellaneous	57,412	53,809	52,102	52,886	50,556	59,017	+ 8,461
Net revenue	63,554	36,738	43,809	47,204	32,187	23,215	– 8,972
Total	1,776,356	1,936,870	1,596,508	1,918,432	1,958,713	2,039,835	+ 81,122

Total	1,777,586	1,797,038	2,041,369	2,095,965	2,103,631	2,124,322	+ 20,691
Capital expenditure	304	—	26	11,604	25,711	—	– 25,711
	1,777,890	1,797,038	2,041,395	2,107,569	2,129,342	2,124,322	– 5,020

All previous records were again broken in 1937 by the sugar crop reaching a total of 313,820 tons.

Of the total quantity of sugar produced in the Colony, 12,630 tons or 4·02 per cent. were carried otherwise than by the Railway Department, i.e., by road or by sea.

The increased size and speed of buses as well as the use of communal taxis has again reduced the normal passenger revenue of the railway by about Rs.3,000.

The fleet of railway lorries consists of four 6-ton lorries and trailers and three 3-ton lorries.

The revenue accruing to the railway from the transport of sugar and general goods to and from the factories and for the transport of Government goods by railway lorries amounted to Rs.57,012 and represents 34,534 tons of traffic, and the transport of all Government goods is now undertaken by the Railway Department either by road or by rail. After paying all expenses including 12½ per cent. on the earnings of the contractor, the gross profit from railway lorries (excluding depreciation) amounted to Rs.26,032 as compared with Rs.7,548 earned during the previous year.

Tramways.

In 1938, 1,755 kilometres of rail were in use on estates. There were 216 locomotives and about 8,000 trucks. Farm tractors numbered 68 and motor-lorries 117.

Posts, Telegraphs and Wireless.

The usual facilities in regard to correspondence, parcels and remittances are available. Of the 57 offices and postal agencies, 53 are telegraph offices. With the exception of a few outposts in outlying localities, the offices are on the railway lines. The outlying offices and localities far from the railway stations are served by postmen on bicycles or by motor mail contractors.

There is a regular monthly service from Rodrigues, the largest dependency of Mauritius, by K.P.M. steamers; the service to Rodrigues is every two months. A connection is made every four months with the other dependencies; communications by other sailings are also available.

Mails to and from Europe are carried regularly twice every month by the French Messageries Maritimes steamers and twice in transit through South Africa by the Dutch K.P.M. steamers. Irregular sailings by Clan Line and Union-Castle Line steamers are also available.

Mails between Mauritius and India, Ceylon, the Far East and Australia are despatched by the Messageries Maritimes steamers via Dar-es-Salaam or Aden, or by K.P.M. and other steamers via Durban.

The average time taken for the transmission of first-class mail by air transport and ship to and from England by the M.M. steamers via Dar-es-Salaam is 18 days, and by the Dutch K.P.M. steamers via South Africa 15 days. It takes about 32 days by the former route and between 26 and 50 days by the latter route for second-class mail. First-class mail is also despatched to Europe via Tananarive and Batavia by air transport and ship. The average time of transmission is 18 and 25 days respectively.

Parcel mails from Great Britain are only received by the Cape route when direct despatch is not available. The other route is via Marseilles. Parcels for continental Europe are as a rule received by the latter route.

Remittances are made by both money-orders and postal-orders. There are direct exchanges with the United Kingdom, South Africa, India, Ceylon, Aden, Seychelles, Hong Kong and Australia. Remittances to almost any place may be made through these offices. Remittances by telegraph may be made to the United Kingdom, South Africa, India, Seychelles and Rodrigues.

The telephone service is owned and managed by Government. The headquarters are in Port Louis with which the rural districts are connected.

Overseas telecommunications is maintained by Cable and Wireless, Limited, whose local station is in Port Louis. Cablegrams to and from rural telegraph offices are transmitted on the Government telegraph lines. Rodrigues is communicated to Mauritius by that Company's cable system.

Communication with the outside world is also provided by a Government wireless station. The station can transmit within a limited range to ships. There is also a service with Reunion Island. The station has a 24-hour watch. Radio-telegrams are received for transmission at every telegraph office. During the cyclonic season, from the 11th November to the 15th May, the station transmits to all ships and stations within its range at 08.45 G.M.T. daily a detailed weather report including observations made at Reunion, Rodrigues, Seychelles and Durban. A fairly large number of weather reports are intercepted from ships at sea and sent to the Director of the Observatory. When a cyclone is in the vicinity, the Government tug *Maurice* stationed in the harbour, is manned and inland weather reports are transmitted by wireless telegraphy from the tug to all vessels in the port for the guidance of their masters. The wireless apparatus in the *Maurice* also acts as a stand-by in the event of an accident to the aerial system of the Rose Belle wireless station. The Rose Belle station is provided with a modern valve set in conformity with the Telecommunication Convention. The range of the station is 1,000 miles.

Harbour.

Port Louis, the capital of the Colony, lies on the north-west coast of the island, and provides a safe and convenient harbour for ocean-going ships. Grand Port Harbour on the south coast is very much larger and deeper, though more exposed to the prevalent winds, and, being nearly 40 miles distant from the capital, is seldom used. A wide break in the ring of coral reefs that surround the island, caused by the meeting of several rivers and streams, the Lataniers, La Paix, Le Pouce and Creole, has created a natural entrance channel into Port Louis Harbour. The harbour has now been dredged so as to provide deep-water accommodation for 9 ships lying at open berths and drawing from 24 to 31 feet of water. The widening and deepening by dredging of the berths and channel by Government plant are in continuous progress. The harbour is flanked on the north by Fort George, a military post, and on the south by Fort William, now abandoned. The mountain peaks in the range behind Port Louis are named: Pouce, 2,661 feet, and Pieter Both, 2,690 feet, and are guiding beacons to ships by day. The lighthouses at Flat Island, the Colony's quarantine station, 6 miles north of Mauritius, and Caves Point, 5 miles south of Port Louis on the cliff's edge, and the gas buoy to the north of the outer entrance, direct ships approaching the port by night. A tide gauge has been in operation for 6 years. The maximum rise of tide at ordinary springs is 3 feet. At ordinary neap tides, the rise is seldom more than 2 or 3 inches.

In 1930 the Government completed the contruction of a deep-water quay, 500 feet long with 32 feet of water alongside. This quay is capable of discharging about 100,000 tons of cargo per annum, though actually only about 45,000 tons, chiefly petroleum products, railway coal and sleepers, etc., are discharged by Government annually at the quay.

Another quay, 300 feet long with 15 feet of water alongside but capable of providing 25 feet, has also been built for the landing of cattle. So far this quay has been used mainly by small vessels discharging guano and salt fish from the dependencies.

The Government of Mauritius is the Harbour Authority. The Government has from time to time sold or leased to two lighterage companies various areas of land bordering the harbour. These two companies, the New Mauritius Dock Co. Ltd. and the Albion Dock Co. Ltd., own between them 93 lighters of a total capacity of 2,645 tons, with the necessary tugs, and *inter alia* undertake the storage and lighterage of all the sugar produced in the island. The British India Steam Navigation Co. Ltd. also own 31 lighters and two tugs. This company mainly handles grain from the east, though the discharge of general cargo is fairly evenly shared between the British India Company and the two other dock companies.

A Government granary, capable of storing 300,000 bags of rice, was put into commission in 1932 mainly as a protection against the spread of plague in the Colony. The average monthly stock in the granary is about 200,000 bags, but a total of 414,000 bags have been stored under exceptional circumstances in 1937.

Shipping.

There are three lines of passenger steamers connecting Mauritius with the United Kingdom.

The Messageries Maritimes steamers perform the service between Marseilles and Mauritius and give a three weekly service for four months of the year and a fortnightly service for the remainder of the year; the time taken over the voyage varies between four and five weeks, on an average, including a stay of about a week in Reunion either on the outward or the homeward voyage.

Vessels of the K.P.M. (Dutch Line) leave Mauritius monthly for Durban and Cape Ports, connecting with the Union-Castle Line steamers from the United Kingdom, and once a month for Mombasa.

Vessels also leave Durban once a month direct for Mauritius, a 4-day voyage.

In 1938, the K.P.M. Company introduced three new motor vessels on the Java-Mauritius-Africa Line; these vessels have a gross tonnage of about 16,000 and a speed of about $17\frac{1}{2}$ knots. The voyage to England via K.P.M. and Union-Castle Lines averages 30 days. The same voyage by the Messageries Maritimes Line via Marseilles takes from 31 to 36 days. The outward voyage via the Cape can be done in 3 weeks.

Vessels of the Bullard King Company call occasionally, from the United Kingdom, via Durban and Cape ports with tourists.

During the sugar shipping season, from October to March, cheap passages to the United Kingdom may be secured, the voyage averaging 40 days.

Fares from Mauritius to England vary as follows:—

(i) per Messageries Maritimes steamers from £32 to £76;

(ii) per Union Castle Intermediate steamers from £40 to £92;

(iii) per K.P.M., with transhipment at Durban from £44 and £48 to £92 and £117;

(iv) per Bullard King & Coy's steamers from £53 to £59, according to classes and types of steamers.

Government servants are allowed a rebate of from 15 to 20 per cent. by all the above companies.

A free ticket from Marseilles to London is granted by the Messageries Maritimes Company to Government servants.

The number of vessels and total tonnage entering and leaving the port during the past three years were as follows:—

Inwards.

XII.—PUBLIC WORKS.

The Public Works Department is responsible for all Government buildings, the sewerage of Port Louis, roads and bridges, the survey of Crown lands, water supplies and State irrigation.

Buildings.—Some of these, such as a time-ball tower in the Port Office, are of historical interest, dating from the time of the French Governor, Mahé de Labourdonnais, in 1740. The Government House in Port Louis was then in project and was built between 1740 and 1767. Apart from the addition of a second storey, it now stands exactly as it was originally constructed. It contains the Governor's offices, in which are to be found the table on which the instrument of capitulation of the island was signed in 1810, a throne room, a council room, the council offices, a library and quarters for the Governor and officials. The former and present residences of the Governors at "Mon Plaisir," Pamplemousses, and "Le Reduit," Moka, respectively, also date back to the French occupation. The value of the Government buildings is approximately 15 million rupees.

There are in the island one mental and eight general hospitals and one leper asylum. An old hospital, the Grand River North-West Hospital, built in 1769 for seamen, is used when necessary as a quarantine station for plague.

Damage is caused to a considerable extent by white ants which are particularly active in the low-lying districts of the island. An experiment is now being made in Mauritius by Mr. D. Ignace, the Representative of Messrs. Thomas Cowan & Co. of Hong Kong, with a view to testing the efficacy of his treatment for the destruction of white ants.

Severe cyclones, which happily are not frequent, are responsible for a good deal of damage to water works, roads and buildings.

Sewerage Works of Port Louis.—The sewerage works were begun in 1900. In 1922, the scheme was revised by Messrs. Mansergh & Sons, and the works have been carried out on the lines of their report. The construction works being now practically completed, present activities are concentrated on house service connections, and a large portion of the town of Port Louis now has the water carriage system.

Bridges.—There exists 335 bridges on main and branch roads, the longest having spans of 150 feet. Only a few timber bridges remain and these are being gradually replaced by ferro-concrete structures for double line of traffic and heavy loading.

Water Works.—The water supply of the town of Port Louis is obtained from Grand River North-West at a distance of about 4 miles from the town at a level of 250 feet. This supply was handed over by the Municipality to the Public Works Department in 1922. The water is passed through sand filters and chlorinated. The capacity of the main leading to the filters is 5 million gallons a day. The water is distributed to the town from two covered service reservoirs of a total capacity of two million gallons. The revenue is approximately Rs.60,000 and goes to the Municipality of Port Louis.

The water supply of Plaine Wilhems and of part of Moka and Black River districts is obtained from a storage reservoir called the Mare-aux-Vacoas, at an altitude of 1,825 feet. The capacity of the reservoir is now, after the raising of the dam, 1,641 million gallons. The catchment ground is entirely protected by forest lands. The whole of this water supply is filtered through sand filters at "La Marie," about two miles below the reservoir, whence the supply to the town of Curepipe is pumped by hydraulic power, the supply to the other towns being effected by gravity. The water is distributed from six covered service reservoirs situated in the various zones of supply, their aggregate capacity being 5½ million gallons. The population served by this supply is approximately 120,000 and the average daily consumption 4½ million gallons.

The Mare-aux-Vacoas water supply has been extended to the town of Port Louis. The supply is limited to 900,000 gallons per day. The water is chlorinated after filtration and the revenue is approximately Rs.156,000.

The water supply to the villages and hamlets in the other districts comes from 27 different springs or streams. These supplies are not filtered but they are generally protected in their catchment areas by reserves of forest. The population depending on these various supplies is about 200,000 and is comprised mostly of the poorer classes. A large proportion of the daily consumption is distributed by means of public fountains. The revenue is approximately Rs.90,000 and goes to the District Boards.

Irrigation Works.—There are no works in progress at present. The works executed up to now provide for the irrigation of about 2,500 acres under sugar cane and tobacco plantations in the district of Black River from La Ferme Reservoir, and for a few hundred acres in the district of Pamplemousses from La Nicoliere Reservoir.

The question of developing the irrigation scheme in Mauritius has been revived and Mr. Hutchinson of the Irrigation Department of India visited the island in June with a view to exploring the possibilities of successful irrigation. The question is, however, still under consideration.

XIII.—JUSTICE, POLICE, AND PRISONS.

Justice.

The Supreme Court, which sits in the Capital, Port Louis, consists of one Chief Judge and two Puisne Judges. It has jurisdiction in civil and criminal matters and also as a Court of Admiralty; it also decides appeals from the Supreme Court of Seychelles, the Judge in Bankruptcy, the Master and Registrar and the inferior Courts of Mauritius.

In 1938, the Supreme Court dealt with 249 civil cases out of 301 entered before or during the year 1938. In the course of the same year, twenty-six persons were brought before this Court and tried on criminal charges, eighteen of them being convicted to various terms of imprisonment, two sentenced to death, one released upon furnishing recognisance and one remanded to the next Session.

Criminal cases are tried by a Judge and a Jury. Civil actions in which the sum involved does not exceed Rs.3,000, matrimonial causes and bankruptcy matters are heard by one

Judge. Civil actions in respect of claims over Rs.3,000 are heard by two Judges. Where, however, the magnitude of the interests at stake or the importance of the questions of fact or law involved make it desirable, a case is heard by three Judges. The full Bench of three Judges sit on a *proprio motu* decision of the Judges or on motion by interested parties.

There is a Bankruptcy Division presided over by one of the Judges of the Supreme Court or by the Master and Registrar sitting as Judge in Bankruptcy.

In 1938, trade conditions remained unfavourable and 67 cases were entered before the Bankruptcy Court. Of these 59 were actually heard. Twelve traders were adjudged bankrupt and two absconded.

The total liabilities appearing on the balance sheets produced in Court amounted to Rs.138,813.23.

After enquiry in open Court, six traders who had committed offences against the Bankruptcy Laws, were, on the recommendation of the Accountant in Bankruptcy, referred by the presiding Judge to the Procureur General for prosecution. They were either fined or sentenced to terms of imprisonment varying from seven days to six months.

It is noticeable that very nearly 50 per cent. of the traders against whom bankruptcy proceedings were entered are Chinese. The apparent reason for this is that the retail trade of the island is almost entirely in the hands of that section of the population.

Magistrates.—There is a Magistrates Court in each of the nine Districts, the Courts in Port Louis and in Plaines Wilhems each sitting in two divisions.

The jurisdiction of a Magistrate sitting alone is limited:—

(*a*) in civil cases, to actions wherein the sum of money or matters in dispute, do not exceed Rs.1,000 in value;

(*b*) in criminal matters, to offences for whose punishment the penal and other laws of the Colony provide imprisonment with or without hard labour not exceeding one year or a fine not exceeding Rs.1,000 (except in particular cases expressly provided for in any special enactment).

Certain offences not triable by a Magistrate sitting alone, and at the request of the Procureur-General whenever he may consider it expedient to do so, nearly all offences triable by a Magistrate sitting alone, are tried by a Bench of three Magistrates, whose jurisdiction is made to extend to the imposition of penal servitude not exceeding 3 years and a fine not exceeding Rs.3,000.

An appeal lies of right to the Supreme Court within the limits stated above, both in fact and law, the several modes of reviewing the decisions being the same as in English Law. There is no system similar to the French Assistance Judiciaire but facilities are given to very poor litigants, both before the Supreme and the Inferior Courts to obtain leave to sue in *forma pauperis*. In supreme Court cases, counsel are ever ready to accept a pauper brief at the request of the Chief Judge, while in Assize cases counsel is always appointed without fee, for undefended prisoners. The Dependencies are visited periodically by a Magistrate.

The Dependency of Rodrigues is administered by a Magistrate who has the same jurisdiction in Rodrigues as a District Magistrate in Mauritius and whose duties are to a considerable extent administrative.

The Magistrates heard 6,524 civil cases and 11,107 ordinary criminal cases and petty offences, and held:—

181 coroners' inquests;

33 preliminary enquiries into crimes and serious misdemeanours.

Police.

Organization.—The Mauritius Police Force has an establishment of 21 Gazetted Officers and 596 other ranks most of whom are locally-born, and there are at present only 9 members classified as " Home-born " serving in the Force. The majority of the latter are officers posted from England or transferred from other Colonial forces.

As a result of increased responsibility in the maintenance of internal order the Department has been reorganized and is gradually being converted into a semi-military Force. A large proportion of the strength has been trained in the use of arms and there is also a Gas section, in consequence of which a certain number of the personnel have been taught the use of gas masks. In addition to the above and owing to the introduction of local wireless communication a unit of selected details has been trained in the use of wireless telegraphy. Each District is now provided with sections of armed police which may be mobilized at short notice.

The establishment is divided into Headquarters Staff, District Police, Criminal Investigation Branch, Revenue and Motor Vehicle Control Branch, Fisheries Branch, Clerical Branch, Training School, Harbour Police, Railway Police, Rodrigues Police and the Police Band.

Police Headquarters is situated at Line Barracks, Port Louis, and the District Police are distributed in 55 Stations of varying size and importance.

Crime.—The total number of offences of all kinds reported to the police during the year 1938 was 24,351 which shows an increase on the figure for 1937 which was 23,052 and also on the average of 23,751 for the past three years.

More than half of these offences are of a minor character or refer to statutory and revenue contraventions.

The more serious offences are classified as follows:—

Offences against the person	11,120 in 1938
Offences against the person	10,348 in 1937
Offences against property	3,510 in 1938
Offences against property	3,713 in 1937

The number of persons prosecuted in connexion with these 24,351 offences was 8,969 of whom 7,949 were convicted, 514 otherwise disposed of and 506 pending trial at the end of the year.

Corresponding figures for the previous year were 8,310 persons prosecuted, 7,354 convicted, 591 otherwise disposed of and 365 pending trial at the end of the year.

Prisons.

Organisation.—The Mauritius Prisons Department has an establishment of four Gazetted Officers, who are appointed from England, and 108 other ranks recruited locally.

The Department is placed under the charge of the Commissioner of Police, who holds the appointment of Superintendent of Prisons, and is responsible for the management and control of the two penal institutions of the Colony, Port Louis and Beau Bassin Prisons.

Port Louis Prison provides separate cell accommodation for 154 male prisoners, association cells for 40 women in a special block, and contains the offices of the Department and quarters for two chief officers and two matrons.

Every male convicted prisoner is sent to this prison and on admission is classified as (1) adult felon, (2) adult hard labour, (3) adult misdemeanant, (4) juvenile felon or hard labour, (5) juvenile misdemeanant, or (6) special.

Felons are prisoners sentenced to penal servitude and misdemeanants are those sentenced to imprisonment without hard labour or for failing to pay fines.

Groups (1), (2) and (4) are subdivided into first offenders and recidivists.

Prisoners classified in group (1) and recidivists of group (2) sentenced to 14 days and upwards normally serve their sentence at Beau Bassin which contains 756 separate cells for males only while all misdemeanants, special class and well-conducted adults and juvenile first offenders are accommodated at Port Louis.

Debtors, women and waiting trial prisoners are also given separate accommodation at Port Louis Prison.

Labour.—Hard labour consists of quarrying, stone breaking, cutting firewood, and agricultural work outside the prisons, and tailoring, boot, sail and mattress making, tin-smith work and black-smithing, carpentry and cabinet-making, blind, mat and basket making and baking inside the prison's workshop.

Population.—The number of persons admitted to Port Louis Prison during the year was 2,824, which is 265 more than in the previous year and 41 less than the average for the preceding five years. Of the 2,824 persons, 1,568 were convicted, of whom 1,050 were sentenced to imprisonment for one month or less. The convicted prisoners comprised 1,514 men and 54 women. The daily average population was 412·29 compared with 419·82 in 1937 and the number of persons in prison on 31st December, 1938, was 401 compared with 363 in 1937 and 379 in 1936.

Of the 401 persons in prison 389 were serving sentences and comprised 381 men and 8 women.

The number of persons who served sentences of imprisonment in lieu of paying fines was 672 including 19 women.

Health.—There were nine deaths in hospital as compared with ten in the preceding year.

Industrial School.

The Barkly Industrial School for boys is an institution for the training of juvenile offenders and vagrants, boys living in criminal surroundings, and those who cannot be controlled at home or in orphanages, etc.

The school is under the supervision of the Commissioner of Police and has a resident staff of one chief officer and 12 instructors and assistants. It occupies a group of buildings formerly used as a hospital and comprises large grounds which are fully cultivated as gardens, etc.

The number of boys in the school at the end of the year was 143, compared with 118 in 1937 and 91 in 1936. The number of admissions was 55 and discharges 30 for the whole year.

A visiting committee, established by law, looks after the general welfare of the inmates of the school and exercises a beneficent influence on the institution. The committee concerns itself especially with the difficult question of the employment of adult boys on discharge and the problem of after care of juveniles.

XIV.—LEGISLATION.

Fifty-two Ordinances were passed by the Council of Government and assented to by the Governor between the 3rd of May and 31st of December, 1938.

The majority of these Ordinances deals with matters of domestic concern amongst which the following are of considerable importance.

Law and Order.—(i) Ordinance No. 8 of 1938 amends Ordinance No. 22 of 1874 and gives to the Governor additional powers of supervision over the affairs of Friendly Societies.

(ii) Ordinance No. 12 of 1938 amends the Conditional Release of Offenders Ordinance 1934 (No. 22) by excluding from the operation of the latter cases of violence against police officers, so as to ensure a greater measure of respect for members of the local police.

(iii) Ordinance No. 13 of 1938 gives the Governor in Council power to decree the total or partial cessation of lighting in the Colony on occasions of emergency or public danger.

(iv) Ordinance No. 17 of 1938 provides for the protection of the public against the inconvenience of unnecessary noise.

(v) Ordinance No. 21 of 1938 provides for measures of control over indiscriminate collection of funds where the persons collecting are remunerated for their services.

(vi) Ordinance No. 24 of 1938 amends the Gun Ordinance, 1922, and provides for the stricter control over firearms in the Colony, and more especially over their use in times of strikes or industrial unrest.

(vii) Ordinance No. 36 of 1938 provides for measures of protection for the members of the legal profession from disloyal and unfair competition of touts and other unauthorised persons.

(viii) Ordinance No. 43 of 1938 gives the Medical and Health Department a complete control over the stocks of dangerous drugs existing in the Colony.

Finance.—(1) Ordinance No. 14 of 1938 provides for the raising of an additional loan of Rs.1,600,000 for the purpose of further financing the Mauritius Agricultural Bank.

(2) Ordinance No. 42 of 1938 amends the Port Louis Sewerage Ordinance, 1905, and substitutes a definite rate of annual contribution to be paid by owners of premises in the town of Port Louis for the rate which heretofore varied in each particular case.

All these Ordinances have in view the social and economic progress of the population of this Colony and attempt to work to that end.

A list of the more important Ordinances is given in Appendix I to the report.

XV.—BANKING, CURRENCY, AND WEIGHTS AND MEASURES.

Banking.

There are three private banks in the Colony, viz.:—

(*a*) The Mauritius Commercial Bank,
(*b*) The Mercantile Bank of India, and
(*c*) Barclays' Bank (Dominion, Colonial and Overseas).

The Mauritius Commercial Bank was established in 1838, and has a paid-up capital of Rs.2,000,000 made up of 10,000 shares of Rs.200 each. The total amount of deposits on 31st December, 1938, was Rs.7,194,660. The Mercantile Bank of India Limited took over the business of the Bank of Mauritius Limited on 3rd May, 1916. The total paid-up capital is £1,050,000. The deposits made locally on 31st December, 1938, amounted to Rs.2,765,084. Barclays' Bank (Dominion, Colonial and Overseas) has a paid-up capital of £4,975,500. The total deposits of the local Bank on 31st December, 1938, amounted to Rs.2,881,722. This Bank which is affiliated with Barclays' Bank, Limited was founded in 1925 and represents the amalgamation of the Anglo-Egyptian Bank, Limited, the Colonial Bank (incorporated by Royal Charter in 1836) and the National Bank of South Africa Limited. A branch of the last named bank was established in Mauritius in December, 1919. In February, 1926, its business was taken over by Barclays' Bank (Dominion, Colonial and Overseas) following the amalgamation already mentioned.

Offices of the Government Savings Bank are established in the nine districts with a head office in Port Louis. The total number of depositors at 30th June, 1938 was 40,551 compared with 39,382 in the preceding year, with deposits amounting to Rs.6,815,120 as against Rs.6,554,221. Interest is paid at the rate of 3 per cent. per annum.

The Mauritius Agricultural Bank, which was established under Ordinance No. 1 of 1936, commenced operations on the 5th January, 1937. The capital of the Bank (Rs.10,000,000) is provided by Government which raised loans at 3½ per cent. per annum for this purpose. Of these loans, the sum of Rs.3,600,000 was raised locally, the balance being raised in London. On the 15th April, 1938, a sum of Rs.20,000 as drawn bonds was refunded out of the Rs.3,600,000 raised locally. The annual interest and sinking fund charges amounting in all to Rs.368,740 for 1938-39 are met by the Bank.

The Bank, which is neither a Government institution nor a Government department, has been introduced to lower interest charges on agricultural advances which, it is considered, impose an undue burden on the sugar industry and unduly depress wages. Subject to the provisions of the ordinance which constituted it a corporate body, the Bank has completed discretion as to the conduct of its business and the nature and account of its loans. The consent of the Managing Director, who is appointed by the Secretary of State, is necessary to the grant of any loan. A measure of Government control, however, exists and is exercised by the following methods:—

(*a*) The members of the Board of Directors, other than the Managing Director, are appointed by the Governor, who determines the amount of their fees.

(*b*) While the Board appoints its own servants the amount of their salary is subject to the approval of the Governor.

(*c*) The funds of the Board are derived exclusively from the Government.

(*d*) The methods of account, the books to be maintained and the nature of the auditor's certificates are prescribed by the Government and the form of balance sheet is prescribed by the Treasurer.

Currency.

In March, 1934, an Ordinance was enacted to make provision with respect to the currency notes of the Colony and to place the issue of such currency notes upon a permanent basis. By this Ordinance the Currency Commissioners are required to issue, on demand, currency notes in exchange for sterling lodged with the Crown Agents in London, and to pay on demand sterling in London in exchange for currency notes lodged with them. The rate at which these exchanges are to be made is fixed at one rupee for one shilling and sixpence sterling, and the minimum transaction is £5,000 or its equivalent.

The Currency Commissioners are entitled to charge commission not exceeding one and three quarters per centum in addition to the cost of any telegram sent in connection with any transfer.

The effect has been to substitute for the Indian rupee a new paper rupee based on sterling and to limit official exchange fluctuations to a maximum spread of three and half per centum.

Local commercial practice is such that the effective rate of exchange is the rate at which the banks sell sterling and not the mean between the buying and selling rates. At the time the Ordinance was introduced the rate was Rs.13·70 for £1 by telegraphic transfer, or approximately one rupeee for one shilling and five pence halfpenny sterling. With a view to avoiding any sudden fluctuation in the actual rate of exchange, the commission which the Currency Commissioners were authorised to charge when selling sterling was fixed, in the first instance, at the maximum of one and three quarters per cent.

making the effective official exchange rate Rs.13·57 for £1 in respect of amounts of £5,000 or over. The rate charged by the Currency Commissioners when buying sterling has been fixed at one quarter per cent.

The value of the currency is maintained by a Note Security Fund held by the Crown Agents and invested in Government Securities (other than those of the Colony). Profits arising from currency transactions and income from the investments of the Note Security Fund must be applied in the first instance to maintaining the Security Fund at the value equal to the face value of currency notes in circulation. If the value of the Note Security Fund reaches one hundred and ten per cent. of the face value of notes in circulation, all profits then accrue to the revenue of the Colony.

Subsidiary silver coinage was introduced under an Ordinance passed in September, 1934. The coins are not normally redeemable but the seignorage on the issue is invested.

The value of the currency notes of five rupees, ten rupees and one thousand rupees, in circulation on 31st December, 1938, was Rs.8,547,485 and that of Mauritius silver coins on the same date Rs.2,255,000.

The local unit of currency is the Mauritius rupee, equivalent to 1s. 6d. sterling, divided into 100 cents.

The coinage in circulation is the silver rupee, half rupee, quarter rupee and 20-cent and 10-cent pieces and the bronze 5-cent, 2-cent and 1-cent pieces.

Weights and Measures.

The metric system is in general use; the following special French and local measures are, however, still to be found:—

Measures of Length and Area:—

1 ligne Francaise = 2·258 millimetres or 0·088 inch.
12 lignes = 1 French inch.
12 French inches = 1 French foot.
1 French foot = 1·06 English feet.
1 lieu = 2½ English miles (approx.).
1 gaulette = 10 French feet.
1 arpent = 40,000 square French feet or 1·04 acres.
1 toise = 6 French feet or 2 yards 4 inches.

Measures of Capacity:—

1 barrique = 50 gallons (cane juice, etc.).
1 tiercon = 190 to 192 litres (molasses).
1 velte = 7·45 litres (coconut oil).
1 bouteille = 800 cubic centimetres (liquid).
1 chopine = ½ bouteille.
1 corde = 80 French cubic feet or 96·82 English cubic feet (firewood).

Measures of Weight:—

1 gamelle = 5·250 kilogrammes.
1 livre = 500 grammes or 1·10 English pounds.

XVI.—PUBLIC FINANCE AND TAXATION.

Revenue and Expenditure.

The revenue of the Colony for the year ended 30th June, 1938, amounted to Rs.17,259,849 and was Rs.1,699,249 more than the Estimates and Rs.1,336,065 more than that of the previous year.

The expenditure for the same period was Rs.26,640,996. Of this total, a sum of Rs.10,790,721 represents special expenditure in the form of stocks and advances written off, not foreseen at the time of the preparation of the Estimates. A sum of Rs.15,850,275 remains for comparison: this amount was Rs.265,010 more than the original estimate and Rs.343,843 more than the expenditure 1936-37.

The revenue during the financial year 1937-38 exceeded the normal expenditure by Rs.1,409,574. Taking into consideration the amount of stocks and advances written off as special expenditure and the depreciation on investments (Rs.28,599) the General Revenue balance was Rs.8,853,809.

Of the expenditure for 1937-38, Rs.5,012,242 was spent on "Personal Emoluments" and Rs.21,628,754 on "Other Charges". The corresponding figures for 1936-37 were Rs.4,956,561 for "Personal Emoluments" and Rs.10,549,870 for "Other Charges".

The following is a comparative statement of the revenue and expenditure for the last five years:—

Year.	*Revenue.* *Rs.*	*Expenditure.* *Rs.*
1933-34	16,567,110	14,634,339
1934-35	(*a*)22,964,244	20,650,954
1935-36	15,350.986	14,694,644
1936-37	15,923,784	15,506,431
1937-38	17,259,849	(*b*)26,640,996

(*a*) including Rs. 7,382,380—Special Revenue.
(*b*) including Rs. 10,790,721—Special Expenditure.

The Colonial Government pays a military contribution of 5½ per cent. of its total revenue (inclusive only of net excess of revenue on railways, irrigation, Mare aux Vacoas and other water works but exclusive of land sales and special export duty on sugar) towards the cost of the garrison maintained in the Colony by His Majesy's Government in the United Kingdom.

The amount paid as contribution in 1937-38 was £57,818 of which £48,000 was in respect of the estimated cost of the garrison for 1937-38 and £9,818 arrears of contribution of 1936-37.

Public Debt.

The Public Debt of the Colony on 30th June, 1938, was £3,093,768. Against this liability there was an accumulated Sinking Fund of £1,481,028 compared with £1,857,369 on 30th June, 1937.

Statement of Balances as at 30th June, 1938.

Liabilities.	*Rs.*	*Assets.*	*Rs.*	*Rs.*
Other Governments ...	41,784	Advances ...		497,318

				9,136,014
	Rs. 9,633,332			Rs. 9,633,332

Description of the Main Heads of Taxation and their Yield.

The main heads of taxation with their yield for the current year as compared with the preceding year are the following:—

	1936–37. *Rs.*	*1937–38.* *Rs.*
Customs—Import duties	4,631,890	5,132,278
„ —Export duties	1,129,011	1,183,376
Excise duty on rum	1,728,393	2,023,520
Licence duties	1,078,375	1,094,929
Tobacco excise	1,306,227	1,340,729
Taxes on vehicles and animals ...	446,089	414,126
Poll tax	551,165	562,087

Customs Duties.

The revenue from Customs duties for the year 1938 was Rs.4,848,716 for imports and Rs.1,143,427 for exports. The figures for the previous years were:—

	Import duty. *Rs.*	*Export duty.* *Rs.*
1937	4,925,422	1,223,156
1936	4,640,335	556,369

Customs Tariff (Summarised).

The following shows the rates of duty on the principal imports and exports on the 31st December, 1938:—

IMPORTS.

Rice	R. 0·63c per 100 kilos.	Wines in casks up to 14°.	Rs. 10 to Rs. 15 per hectolitre.
Dholl	R. 1·— per 100 kilos.	Wines in cases up to 14° (still).	R. 0·30c per litre.
Flour	R. 1·— per 100 kilos.	Spirits (proof) ...	Rs. 5·— per litre.
Fertilizers ...	R. 0·10c to 1·— per 100 kilos.	Tobacco, manufactured.	Rs. 15·— per kilo.
Petroleum oil ...	Rs. 5·25 per hectol.	Tobacco, cigarettes.	Rs. 16·— per kilo.
Petroleum motor spirit	Rs. 14·—per hectol	Vegetable oil, other than olive.	Rs. 5·—to Rs. 10·— per 100 kilos.
Soap, common...	Rs. 2· to 3·— per 100 kilos.	Most manufactured articles.	5 to 50 per cent. *ad valorem*, with an average of about 15 per cent.

EXPORTS.

*Sugar ... R. 0·46c per 100 kilos.

†Aloe fibre ... Rs. 3·— per 1,000 kilos.

NOTE.—*The duty on sugar is only for special purposes as under :—
R. 0·03 per 100 kilos for destruction of *Phytalus Smithi* ;
R. 0·03 ,, ,, ,, ,, the College of Agriculture ;
R. 0·04 ,, ,, ,, ,, the Sugar Industry Reserve Fund ;
R. 0·36 ,, ,, ,, in refund of loans.

† The duty on aloe fibre is in refund of loan to the hemp industry.

Principal Preferential Rates on Imports.

	Duty.	
Articles.	*Preferential.*	*General.*
Motor vehicles of all kinds, excluding tyres and tubes.	6 per cent. *ad valorem.*	36 per cent. *ad valorem.*
Tyres and tubes of all kinds.	5 ,, ,,	33⅓ ,, ,,
Silk manufactures, including artificial silk.	15 ,, ,, Or 50 cents per kilo. whichever is the higher.	50 ,, ,, Or R.1·50 per kilog, whichever is the higher.
Indigo	R.1 per kilo.	Rs. 2·50 per kilo.
Cement	R. 0·30 per 100 kilos.	R. 1 per 100 kilo.
Cinema films	Free.	R. 0·04 per metre.
Machinery, Industrial	Free.	5 per cent. *ad valorem.*
Cotton manufactures	5 per cent. *ad valorem.*	25 per cent. *ad valorem,* and also specific rates in certain cases.
Hardware	5 ,, ,,	30 per cent. *ad valorem.*
Coal	10 cents per 100 kilos.	50 cents per 100 kilos.

The margin of preference on the following goods has been conventionalized:—

Asphaltum and bitumen ;

Disinfectants, when proved to the satisfaction of the Collector of Customs to have been imported for use as such ;

Electrical :—

(*a*) Stoves and household appliances ;

(*b*) Wireless apparatus and parts and electrical goods of every other description except bulbs ;

Fruits :—

(*a*) Apples and Pears ;

(*b*) Other dried fruits ;

(*c*) Bottled, tinned, canned or otherwise preserved, except dried or crystallized, but including pulp and candied peel (not in sugar) ;

Fungicides, when proved to the satisfaction of the Collector of Customs to have been imported for use as such ;

Blacking and Polish ;

Clay, pipe and fire (unprepared).

Rosin ;

Insecticides, when proved to the satisfaction of the Collector of Customs to have been imported for use as such.

Typewriters ;

Amophos ;

Bacon and Hams (not tinned) ;

Accessories, component parts and spare parts other than tyres and tubes for motor vehicles and chassis (except tractors, motor cycles and side-cars) ;

Mineral Oils :—

(*a*) Oils, lubricating ;

(*b*) Lubricating greases ;

Rubber, other manufactures of ;

Tobacco :—

Unmanufactured, not butted or stemmed ;

Varnish ;

Motor tractors, spare parts and accessories thereof, when proved to the satisfaction of the Collector of Customs to have been imported exclusively for agricultural purposes.

Excise and Stamp Duties.

The duty on rum for home consumption for potable use is Rs.2·75 per litre of 23 degrees Cartier and an additional duty of 12 cents. per litre for every degree above 23 degrees Cartier.

A new distillery opened in September, 1938. Four distilleries worked periodically during the year. These four distilleries form annexes to sugar-mills; in all cases spirits are distilled from molasses and the strength of the spirits produced varies from 30 to 42 degrees Cartier. The bulk is produced at 39 degrees Cartier or below and reduced to 23 degrees Cartier, and is consumed locally as potable rum, though it has the general characteristics of rectified spirits. The remainder of the spirits produced is either exported or used after having been denatured and compounded for lighting, heating and power purposes; for the preparation of medicinal tinctures, drugs, perfumed spirits or for the manufacture of vinegar. The attempts made to find an export market for the locally-prepared alcohol were more successful during the year under review.

The quantity exported was 96,923 litres for the period July, 1937 to June, 1938, as compared with 60,556 litres for the previous period.

The duty on spirits to be denatured for heating and lighting purposes is 4 cents per litre at 36 degrees Cartier, and an additional duty of 4 cents per hectolitre or fraction thereof for every degree above 36 degrees Cartier.

Owing to the quantity of electrical power available and the organization for its distribution, comparatively little use is made of locally produced alcohol for lighting purposes. Where electrical power is not available kerosene is a more popular illuminant. The poorest classes, who require little illumination since they mostly retire at nightfall, use coconut oil or similar local product. There is little call for artificial heating of houses and most cooking is done by locally-produced wood charcoal on charcoal stoves. Locally-produced alcohol might be used largely for cooking purposes were a satisfactory type of stove available.

The import duty on denatured or methylated alcohol is R.0·30 cents per litre.

The quantity of spirits denatured for heating and lighting purposes during the last two years is shown below:—

1936–37.		*1937–38.*	
Litres.	*Excise duty.* *Rs.*	*Litres.*	*Excise duty.* *Rs.*
180,400	7,406·16c.	199,600	8,227·48c.

The duty on spirits to be denatured for use as motor fuel is 4 cents per litre at any degree Cartier. Attempts on a commercial scale to utilize locally-produced alcohol in various forms for power purposes have been in progress for about twenty years but have had comparatively little success. The increasing use of heavy fuel oil and compression ignition type engines make any further development in the use of the local alcohol improbable in present circumstances. Protection is given to the local industry by imposing a customs duty on imported motor spirits of Rs.14 per hectolitre.

The following statement shows the quantity of spirits denatured during the last two years for use as industrial alcohol:—

1936–37.		*1937–38.*	
Litres.	*Excise duty.* *Rs.*	*Litres.*	*Excise duty.* *Rs.*
330,600	13,224	417,200	16,688

The duty on alcohol for the preparation of medicinal tinctures and drugs is 10 cents per litre at any degree, but the duty on alcohol delivered for the preparation of " alcoholats " in accordance with the formulae laid down in the British Pharmacopoeia or the French Codex or any other medicinal tinctures and drugs as notified in Gazette is Rs.2.50 per litre at 23 degrees Cartier, with an additional duty of ten cents per litre for every degree above 23 degrees Cartier.

With the exception of certain traditional local preparations locally-produced tinctures, etc., have provided little competition with the imported articles which pay an import duty at 12·5 per cent. *ad valorem*.

The following table shows the quantity of alcohol used during the last two years for the preparation of medicinal tinctures and drugs:—

1936–37.		*1937–38.*	
Quantity.	*Excise duty.* *Rs.*	*Quantity.*	*Excise duty.* *Rs.*
Litres 5,487	1,295·10c.	Litres 4,831	1,823·30c.

The duty on alcohol delivered for the manufacture of perfumed spirits is fifty cents per litre. The position as regards locally-produced perfumed spirits is similar to that of medicinal tinctures. One or two preparations are in popular local demand but in spite of the fairly high protective import duty of 30 per cent. *ad valorem* there is little demand for other products. Attempts have been made to find an export market but without success.

The quantity of spirits issued for the manufacture of perfumed spirits during the last two years was as follows:—

1936–37.		*1937–38.*	
Litres.	*Excise duty.* *Rs.*	*Litres.*	*Excise duty.* *Rs.*
4,901	2,450·50c.	5,415	2,707·50c.

The duty on vinegar is Rs.1.70 per hectolitre on vinegar not exceeding 8 degrees of strength by Salleron's acidimeter, and an additional duty of 18 cents per degree and per hectolitre on all vinegar above 8 degrees.

Locally produced vinegar is manufactured exclusively by the low oxidation of alcohol. The production for the past years were:—

	Litres.	*Amount of duty.* *Rs.*
July, 1936 to June, 1937	23,800	411·45c.
„ 1937 „ 1938	18,938	321·96c.

The corresponding import duty on vinegar is Rs.5 per hectolitre full rate and Rs.2 preferential rate.

The number of litres of spirits distilled in 1937-38 (July to June) was 1,337,923 litres, as compared with 1,092,298 litres in 1936-37.

The duty on wine and other liquor (excepting rum and compounded rum) manufactured in the Colony, which contain more than 4 degrees of alcohol according to Gay-Lussac's alcoholometer is as follows:—

> On all such liquor exceeding 14 degrees a duty at the same rate and on the same scale as the Customs duty on wine payable under the Customs Tariff Ordinance. Practically no grapes are grown in Mauritius and the local wine is produced from imported dried fruits principally raisins, sugar and other ingredients. Attempts to produce wine from local fruits such as pineapples, guavas, bananas, etc., have not been successful. The wine industry has not prospered to the extent anticipated two years ago on accocunt of too keen competition, resulting in inferior quality, and this together with the increased spending power of the populace has resulted in a transfer of popular taste from wine to rum. Efforts continue to be made in order to improve the quality and in studying the many variations in fermentation largely caused by difference in temperature, atmospheric humidity, etc.

Local Wine Issued:—

	Litres.
July, 1936 to June, 1937	536,876
" 1937 " 1938	355,647

An excise duty of Rs.4 per kilo is charged on leaf tobacco used for the manufacture of tobacco for local consumption.

The quantity of tobacco manufactured in the year 1938 was 385,020·2 kilos as compared with 372,752·4 kilos in 1937.

The excise duty collected on tobacco during the last two financial years is given below:—

1936–37. *Rs.*	*1937–38.* *Rs.*
1,306,226·80	1,340,729·40

The Tobacco Warehouse, controlled by the Tobacco Board, has proved a most useful institution for the grading and general control of tobacco grown in the Colony. It ensures for the planters a ready market for their crop, and for the manufacturers an assured source of supply at controlled prices, of graded leaf. In spite of its efforts, the Board has so far been unable to gain an export trade.

The Stamp Laws were amended and consolidated by the passing on 23rd November, 1926, of Ordinance No. 22 of 1926.

This Ordinance was put into force on 23rd July, 1927, by Proclamation No. 32 of 1927.

Stamp duties are of three kinds:—

(1) A duty in proportion to the size of the paper used;
(2) A fixed duty; and
(3) An *ad-valorem* duty.

The Stamp Ordinance No. 22 of 1926 was amended in 1932 by the passing of Ordinance No. 26 of 1932 to provide for the increase from 4 to 10 cents of the stamp duty on cheques drawn on banks in and out of the Colony, and on receipts as defined in Article 2 (5) of the Stamp (Consolidated) Ordinance, 1926.

House Tax

In June, 1937, an Ordinance was passed to abolish as from the 1st of January, 1938, the House Tax of 1 per centum per annum levied on all buildings assessed over Rs.1,000.

The tax was abolished in order to afford some measure of relief from direct taxation to a number of tax-payers.

The amount of tax collected from the 1st of July to the 31st of December, 1937, was Rs.60,540.

When the law imposing the tax ceased to operate on the 1st of January, 1938, arrears amounting to Rs.153,157 were still outstanding and it was accordingly decided to retain the organization necessary for the collection of these arrears of which a sum of Rs.76,462 was written off as irrecoverable in May, 1938. The amount collected from the 1st of January to the 30th of June, 1938, amounted to Rs.21,454.

Graduated Poll Tax

A Graduated Poll Tax was first imposed in 1934-35 on all incomes derived from or received in the Colony, a non-resident being therefore chargeable to the extent that his income is derived from the Colony. It is an unusual form of tax but similar in many respects to an income tax. The amount payable is graduated according to income on a scale set out in the Ordinance. It rises from Rs.50 on incomes exceeding Rs.5,000 but not exceeding Rs.7,000 to Rs.5,150 on incomes exceeding Rs.60,000 but not exceeding Rs.70,000. The tax on all incomes exceeding Rs.70,000 is Rs.6,150.

The law regarding the computation of the assessable income is largely based on English Income Tax Law but no allowance is made for wear and tear nor can losses be carried forward and set off against profits of succeeding years. The basis of assessment is the income arising in the year preceding the year of assessment.

Companies are treated as persons and pay tax on the same scale as is applicable to individuals but dividends paid are allowed as an expense in computing the taxable profits of local companies.

No additional allowance is made for wife, children or for similar personal allowances.

One-half of the tax must be tendered with a return from the tax-payer on the 31st of October of each year, the other half being payable six months later. The Commissioner may refuse the return and raise an assessment subject to a right of appeal to the Supreme Court.

Yield.—The amount collected in each year of assessment since the inception of the tax has been as follows:—

	Rs.
1934–35	540,565
1935–36	429,502
1936–37	551,165
1937–38	562,087

For 1938-39 the estimated yield is Rs.665,000.

XVII.—MISCELLANEOUS

The Marquess of Dufferin and Ava, Parliamentary Under-Secretary of State for the Colonies, accompanied by Mr. J. W. D. Locker, M.B.E., of the Colonial Office, paid a short visit to Mauritius from the 28th January to the 8th February, 1938.

The island was also visited on the 23rd February by the Fourth Division of Cruisers of the French Navy composed of the *Georges Leygues, Montcalm* and *La Gloire* under the command of Rear-Admiral R. E. Godefroy. The division left the Colony on the 26th February.

The Colony participated in a " Foire-Exposition " held in the neighbouring French island of Reunion during the months of September and October, 1938. Four delegates under the leadership of the Chief Judge were appointed by the Governor to represent the Colony at the exhibition.

During the year, His Majesty the King was graciously pleased to approve of the award of the King's Police Medal for gallantry to Mr. E. E. Cesar, Superintendent of Police, and Mr. A. E. Stafford, Assistant Superintendent of Police. The insignia of Member of the Civil Division of the Order of the British Empire was also conferred upon Mrs. Maingard de la Ville-es-Offrans.

APPENDIX I

Fifty-two Ordinances were passed by the Council of Government and assented to by the Governor during the year 1938, the more important of which are tabulated as follows:—

No.	Title.
7.	To make provision for the formation, registration and regulation of employers' and employees' Industrial Associations; for the prevention and settlement of disputes between such associations; for the remuneration and regulation of conditions of employment, and for the formation, registration and regulation of associations of Government employees.
8.	To amend Ordinance No. 22 of 1874.
12.	To amend the Conditional Release Offenders Ordinance, 1934.
13.	To provide for the total or partial cessation of lighting in the Colony by Regulation of the Governor in Council on occasions of emergency or public danger or by way of experiment or practice for such occasions.
14.	To empower the Colonial Government to raise a loan not exceeding the sum of Rs.1,600,000 for the purpose of financing the Mauritius Agricultural Bank.
17.	To secure the protection of the Public from the inconvenience of unnecessary noise.
19.	To provide for the protection and preservation of ancient monuments.
22.	To consolidate and amend the law regulating the importation of textiles.
24.	To amend the Gun Ordinance No. 36 of 1922.
27.	To regulate the manufacture of Medicinal Tinctures and Drugs in the Colony.
28.	To amend the Law on Fisheries.
30.	To provide for the establishment and organisation of a Department of Electricity and Telephones.
31.	To control the use of Telephones in the Colony.
33.	To consolidate the laws on Vinegar.
34.	To regulate the law as to Perfumed Spirits.
35.	To consolidate the law on Denatured Spirits.
36.	To prohibit the practice of touting and intermeddling with justice.
43.	To control and regulate the maintenance and disposal of stocks in respect of Dangerous Drugs in the Colony.
47.	To consolidate and amend the law on Labour.
49.	To amend the Pensions Ordinance, 1936.
52.	To prescribe the Tariff under which duties are now levied on goods imported into or exported from the Colony.
